Title: EXTERIOR PANELS / TRIM: NAME PLATE: INSTALLATION (2013 FR-S)		

INSTALLATION

HINT:

When installing the name plates or emblem, heat the vehicle body and name plates or emblem using a heat light.

Heating Temperature:

ITEM	TEMPERATURE
Vehicle Body	40 to 60°C (104 to 140°F)
Name Plate or Emblem	20 to 30°C (68 to 86°F)

NOTICE:

Do not heat the vehicle body, name plates or emblem excessively.

1. INSTALL RADIATOR GRILLE EMBLEM (for Front Side)

(a) Clean the vehicle body surface.

(1) Using an infrared light, heat the double-sided tape remaining on the front bumper cover.

Heating Temperature:

ITEM	TEMPERATURE
Front Bumper Cover	40 to 60°C (104 to 140°F)

CAUTION:

Do not burn yourself with the hot front bumper cover or with the infrared light.

NOTICE:

Do not heat the front bumper cover excessively.

(2) Using a piece of cloth, rub the remaining double-sided tape off the front bumper cover while it is hot from the infrared light.

NOTICE:

Installing the radiator grille emblem while any double-sided tape remains on the front bumper cover may cause adhesion failure. Therefore, completely remove the double-sided tape.

(3) Using a non-residue solvent, clean the attachment surface.

(b) Using an infrared light, heat the radiator grille emblem installation surface of the front bumper cover and new radiator grille emblem.

Heating Temperature:

ITEM	TEMPERATURE
Front Bumper Cover	40 to 60°C (104 to 140°F)
Radiator Grille Emblem	20 to 30°C (68 to 86°F)

CAUTION:

Do not burn yourself with the hot front bumper cover and radiator grille emblem or with the infrared light.

NOTICE:

Do not heat the front bumper cover and radiator grille emblem excessively.

(c) Insert the 2 pins into the front bumper cover and install a new radiator grille emblem with the new 2 push nuts.

Text in Illustration

*1	Location Pin
----	--------------

2. INSTALL FRONT BUMPER COVER

INFO

3. INSTALL RADIATOR GRILLE EMBLEM (for Rear Side)

(a) Clean the vehicle body surface.

(1) Using an infrared light, heat the double-sided tape remaining on the luggage compartment door panel.

Heating Temperature:

ITEM	TEMPERATURE
Luggage Compartment Door Panel	40 to 60°C (104 to 140°F)

CAUTION:

Do not burn yourself with the hot luggage compartment door panel or with the infrared light.

NOTICE:

Do not heat the luggage compartment door panel excessively.

(2) Using a piece of cloth, rub the remaining double-sided tape off the luggage compartment door panel while it is hot from the infrared light.

NOTICE:

Installing the radiator grille emblem while any double-sided tape remains on the luggage compartment door panel may cause adhesion failure. Therefore, completely remove the double-sided tape.

(3) Using a non-residue solvent, clean the attachment surface.

(b) Using an infrared light, heat the radiator grille emblem installation surface of the luggage compartment door panel and new radiator grille emblem.

Heating Temperature:

ITEM	TEMPERATURE
Luggage Compartment Door Panel	40 to 60°C (104 to 140°F)
Radiator Grille Emblem	20 to 30°C (68 to 86°F)

CAUTION:

Do not burn yourself with the hot luggage compartment door panel and radiator grille emblem or with the infrared light.

NOTICE:

Do not heat the luggage compartment door panel and radiator grille emblem excessively.

(c) Insert the 2 pins into the luggage compartment door panel and install a new radiator grille emblem.

Text in Illustration

*1	Location Pin
----	--------------

4. INSTALL LUGGAGE COMPARTMENT DOOR NAME PLATE

(a) Clean the attachment surface.

(1) Using an infrared light, heat the double-sided tape remaining on the luggage compartment door panel.

Heating Temperature:

ITEM	TEMPERATURE
Luggage Compartment Door Panel	40 to 60°C (104 to 140°F)

CAUTION:

Do not burn yourself with the hot luggage compartment door panel or with the infrared light.

NOTICE:

Do not heat the luggage compartment door panel excessively.

(2) Using a piece of cloth, rub the remaining double-sided tape off the luggage compartment door

panel while it is hot from the infrared light.

NOTICE:

Installing the luggage compartment door name plate while any double-sided tape remains on the luggage compartment door panel may cause adhesion failure. Therefore, completely remove the double-sided tape.

- (3) Using a non-residue solvent, clean the attachment surface.
- (b) Using an infrared light, heat the luggage compartment door name plate installation surface of the luggage compartment door panel and new luggage compartment door name plate.

Heating Temperature:

ITEM	TEMPERATURE
Luggage Compartment Door Panel	40 to 60°C (104 to 140°F)
Luggage Compartment Door Name Plate	20 to 30°C (68 to 86°F)

CAUTION:

Do not burn yourself with the hot luggage compartment door panel and luggage compartment door name plate or with the infrared light.

NOTICE:

Do not heat the luggage compartment door panel and luggage compartment door name plate excessively.

- (c) Install a new luggage compartment door name plate as shown in the illustration.
 - (1) Using a heat light, heat the vehicle body and luggage compartment door name plate.
 - (2) Install the enclosed bracket with luggage compartment door name plate, to the luggage compartment door panel.
 - (3) Remove the release paper from the luggage compartment door name plate.

HINT:

After removing the release paper, keep the exposed adhesive free from foreign matter.

- (4) Using the bracket, install the luggage compartment door name plate.

Text in Illustration

*1	Luggage Compartment Door Name Plate
*2	Luggage Compartment Door Panel
*3	Bracket

- (5) Remove the bracket from luggage compartment door panel.

Model Year: 2013	Model: FR-S	Doc ID: RM0000036EK01NX
Title: EXTERIOR PANELS / TRIM: ROOF DRIP SIDE FINISH MOULDING: INSTALLATION (2013 FR-S)		

INSTALLATION

HINT:

- Use the same procedure for both the RH and LH sides.
- The following procedure is for the LH side.

1. INSTALL NO. 1 ROOF DRIP SIDE FINISH MOULDING CLIP

NOTICE:

- If reusing the clips, do not remove the double-sided tape remaining on the clips and where the clips will be installed on the body.
- If installing new clips, remove the double-sided tape remaining where the clips will be installed on the body and clean the body with a non-residue solvent.

- (a) Apply a 2 to 3 mm (0.0787 to 0.118 in.) bead of adhesive (3M DP-105 or equivalent) to new NO. 1 roof drip side finish moulding clip.

Text in Illustration

*1	Adhesive
*a	2 to 3 mm (0.0787 to 0.118 in.) Bead of Adhesive

HINT:

Adhesive strength (tensile strength): 13.7 MPa (140 kgf/cm², 1987 psi) or more (when the temperature is 23°C (73°F)).

- (b) Press and install the NO. 1 roof drip side finish moulding clip.
- (c) Install the clips to the positions on the roof panel shown in the illustration. Determine the locations and firmly press and install the NO. 1 roof drip side finish moulding clip after lightly applying adhesive (3M DP-105 or equivalent).

Standard Dimension:

AREA	DIMENSION
A	2.0 mm (0.0787 in.)

Text in Illustration

*1	Out Side Panel	*2	Roof Panel
----	----------------	----	------------

(d) Install the roof drip center side finish moulding when 40 minutes or more have elapsed after pressing and installing the NO. 1 roof drip side finish moulding clips.

HINT:

- Initial hardening time: 40 minutes
- Complete hardening time: 24 hours

2. INSTALL CENTER ROOF DRIP SIDE FINISH MOULDING

(a) Engage the 2 clips and install the center roof drip side finish moulding as shown in the illustration.

Title: LIGHTING (EXT): FRONT SIDE MARKER LIGHT ASSEMBLY: REASSEMBLY (2013 FR-S)		

REASSEMBLY

HINT:

- Use the same procedure for both the RH and LH sides.
- The procedure described below is for the LH side.

1. INSTALL FRONT MARKER LIGHT BULB

- (a) Install the front marker light bulb to the front marker light socket and wire.

2. INSTALL FRONT MARKER LIGHT SOCKET AND WIRE

- (a) Turn the front marker light socket and wire with the front marker light bulb in the direction indicated by the arrow shown in the illustration and install them as a unit.

Last Modified: 3-27-2012	6.4 A	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000003MVK01VX
Title: LIGHTING (EXT): FRONT SIDE MARKER LIGHT ASSEMBLY: REMOVAL (2013 FR-S)		

REMOVAL

HINT:

- Use the same procedure for both the RH and LH sides.
- The procedure described below is for the LH side.

1. SEPARATE FRONT FENDER LINER

(a) Steer the front tire right most.

(b) Remove the 4 clips and partially remove the front fender liner.

2. REMOVE FRONT MARKER LIGHT ASSEMBLY

(a) Using a screwdriver wrapped with protective tape, disengage the claw from service hole.

Text in Illustration

*1	Protective Tape
*2	Service Hole

HINT:

Insert screwdriver on the level.

(b) Disconnect the connector to remove the front marker light assembly.

Last Modified: 3-27-2012	6.4 A	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000003MVK01VX

Title: LIGHTING (EXT): HEADLIGHT ASSEMBLY: ADJUSTMENT (2013 FR-S)		

ADJUSTMENT

HINT:

It is possible that a bulb is incorrectly installed, affecting headlight aim. Bulb installation should be considered prior to performing the adjustment procedure.

1. PREPARE VEHICLE FOR HEADLIGHT AIM ADJUSTMENT

(a) Prepare the vehicle:

- Ensure there is no damage or deformation to the body around the headlights.
- Fill the fuel tank.
- Make sure that the oil is filled to the specified level.
- Make sure that the coolant is filled to the specified level.
- Inflate the tires to the appropriate pressure.
- Unload the trunk and vehicle, ensuring that the spare tire, tools and jack are in their original positions.
- Sit a person of average weight (68 kg, 150 lb) in the driver's seat.

2. PREPARE FOR HEADLIGHT AIMING (Using a headlight aim test machine)

(a) Adjust the headlight aim in accordance with the headlight aim test machine instructions.

3. PREPARE FOR HEADLIGHT AIMING (Using a screen)

(a) Prepare the vehicle:

Text in illustration

*a	7.62 or 3 m (25 or 9.84 ft.)
*b	90°

- Place the vehicle in a location that is dark enough to clearly observe the cutoff line. The cutoff line is a distinct line, below which light from the headlights can be observed and above which it cannot.
- Place the vehicle at a 90° angle to the wall.
- Create a 7.62 m (25 ft.) distance between the vehicle (headlight bulb center) and the wall.
- Make sure that the vehicle is on a level surface.
- Position the front wheels straight ahead.
- Bounce the vehicle up and down to settle the suspension.

NOTICE:

A distance of 7.62 m (25 ft.) between the vehicle (headlight bulb center) and the wall is necessary for proper aim adjustment. If sufficient space is not

available, secure a distance of exactly 3 m (9.84 ft.) to allow for checking and adjustment of headlight aim. (The size of the target zone will change with the distance, so follow the instructions in the illustration.)

- (b) Prepare a piece of thick white paper (approximately 2 m (6.6 ft.) (height) x 4 m (13.1 ft.) (width)) to use as a screen.
- (c) Draw a vertical line down the center of the screen (V line).
- (d) Set the screen as shown in the illustration.

Text in illustration

*A	Aligning distance 7.62 m (25 ft.)	*B	Aligning distance 3 m (9.84 ft.)
*a	V RH Line	*b	V LH Line
*c	H Line	*d	V Line
*e	90°	*f	7.62 m (25 ft.)
*g	3 m (9.84 ft.)	-	-

HINT:

- Stand the screen perpendicular to the ground.
- Align the V line on the screen with the center of the vehicle.

- (e) Draw base lines (H, V LH, and V RH lines) on the screen as shown in the illustration.

HINT:

- The base lines differ for "low beam inspection" and "high beam inspection".
- Mark the headlight bulb center marks on the screen. If the center mark cannot be observed on the headlight, use the center of the headlight bulb or the manufacturer's name marked on the headlight as the center mark.

(1) H Line (Headlight height):

Draw a horizontal line across the screen so that it passes through the center marks. The H line should be at the same height as the headlight bulb center marks of the low beam headlights.

(2) V LH Line, V RH Line (Center mark position of left-hand (LH) and right-hand (RH) headlights):

Draw 2 vertical lines so that they intersect the H line at each center mark (aligned with the center of the low beam headlight bulbs).

Text in illustration

*a	V LH Line
*b	V Line
*c	V RH Line
*d	H Line
*e	Ground

4. INSPECT HEADLIGHT AIMING

- (a) Cover the headlight or disconnect the connector of the headlight on the opposite side to prevent light from the headlight that is not being inspected from affecting the headlight aiming inspection.

NOTICE:

Do not keep the headlight covered for more than 3 minutes. The headlight lens is made of synthetic resin, which may melt or be damaged due to excessive heat.

HINT:

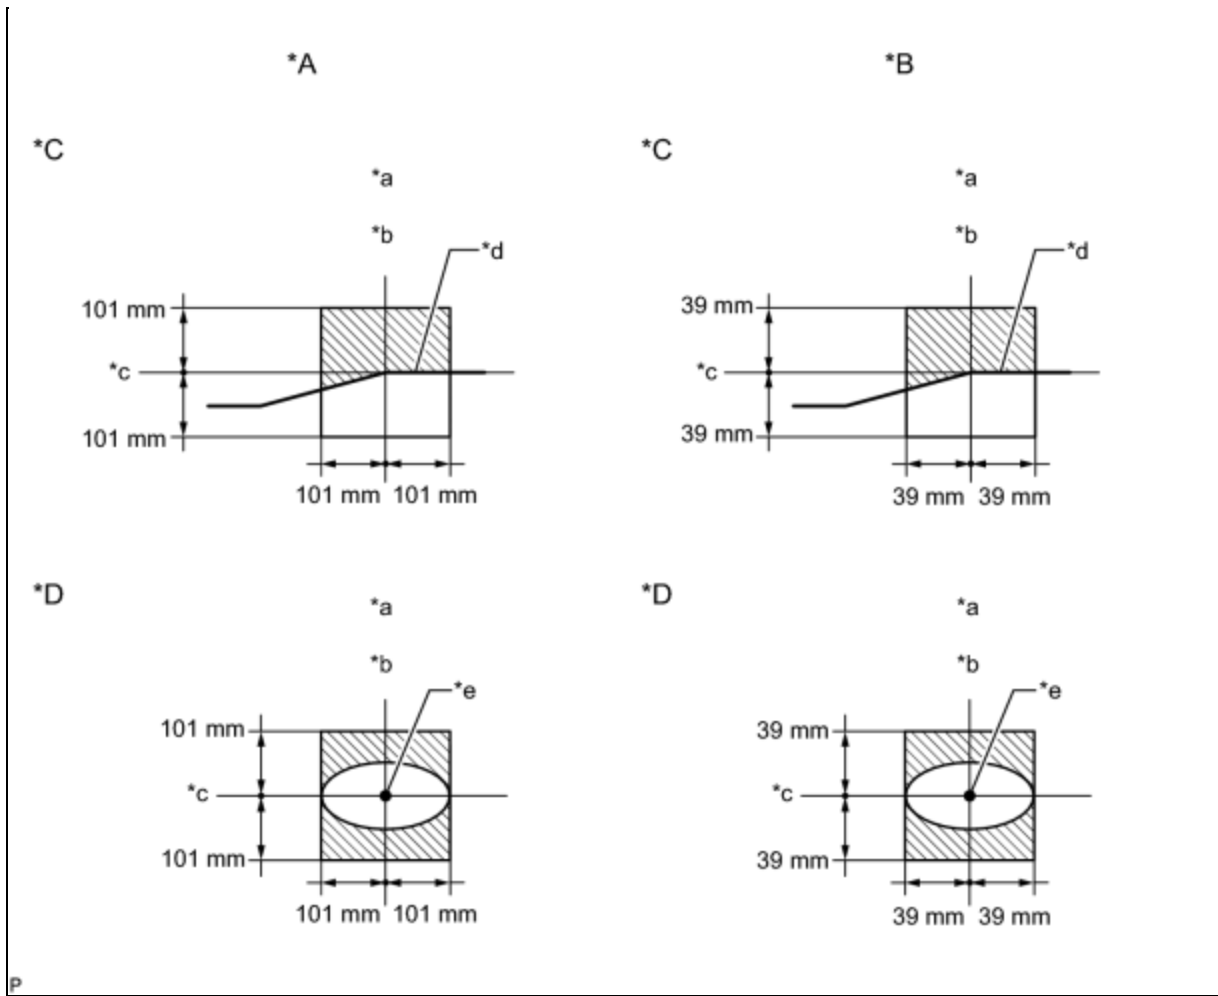

When checking the aim of the high beam, cover the low beam or disconnect the connector.

- (b) Start the engine.
 (c) Turn on the headlights and check the aiming of each beam.

HINT:

Preferred position for the low beam: Matches preferred cutoff line shown in the illustration

Preferred position for the high beam: Matches center of intensity shown in the illustration

Text in illustration

*A	Aligning distance 7.62 m (25 ft.)	*B	Aligning distance 3 m (9.84 ft.)
*C	Low Beam	*D	High Beam
*a	V LH Line	*b	V RH Line
*c	H Line	*d	Preferred Cutoff Line
*e	Center of Intensity	-	-

HINT:

- Since the low beam light and the high beam light are a unit, if the aim on the low beam is correct, the high beam should also be correct. However, check both beams just to make sure.
- If the alignment distance is 7.62 m (25 ft.):
 - The low beam cutoff line should be within 101 mm (3.97 in.) above or below the H line as well as 101 mm (3.97 in.) left or right of the V line (SAE J599).
- If the alignment distance is 3 m (9.84 ft.):
 - The low beam cutoff line should be within 39 mm (1.56 in.) above or below the H line as well as 39 mm (1.56 in.) left or right of the H line (SAE J599).
- If the alignment distance is 7.62 m (25 ft.):
 - The high beam center of intensity should be within 101 mm (3.97 in.) above or below the H line as well as 101 mm (3.97 in.) left or right of the V LH or V RH line (SAE J599).
- If the alignment distance is 3 m (9.84 ft.):

The high beam center of intensity should be within 39 mm (1.56 in.) above or below the H line as well as 39 mm (1.56 in.) left or right of the V LH or V RH line (SAE J599).

5. ADJUST HEADLIGHT AIMING

(a) Remove any covers necessary to access the headlight adjusters.

(b) Adjust the aim vertically:

Adjust the aim of each headlight to the specified range by turning each aiming screw with a screwdriver.

Text in Illustration

*1	Aiming Screw A
----	----------------

NOTICE:

- The high beam light and low beam light aim move in the diagonal direction when aiming screw A is turned. Remember the turning direction and the number of turns of aiming screw A to correct the horizontal position in the next step.
- The final turn of the aiming screw should be made in the clockwise direction. If the screw is tightened excessively, loosen it and then retighten it, so that the final turn of the screw is in the clockwise direction.

(c) Turn aiming screw B the same number of turns and in the same direction as aiming screw A.

Text in Illustration

*1	Aiming Screw B
----	----------------

NOTICE:

The final turn of the aiming screw should be made in the clockwise direction. If the screw is tightened excessively, loosen it and then retighten it, so that the final turn of the screw is in the clockwise direction.

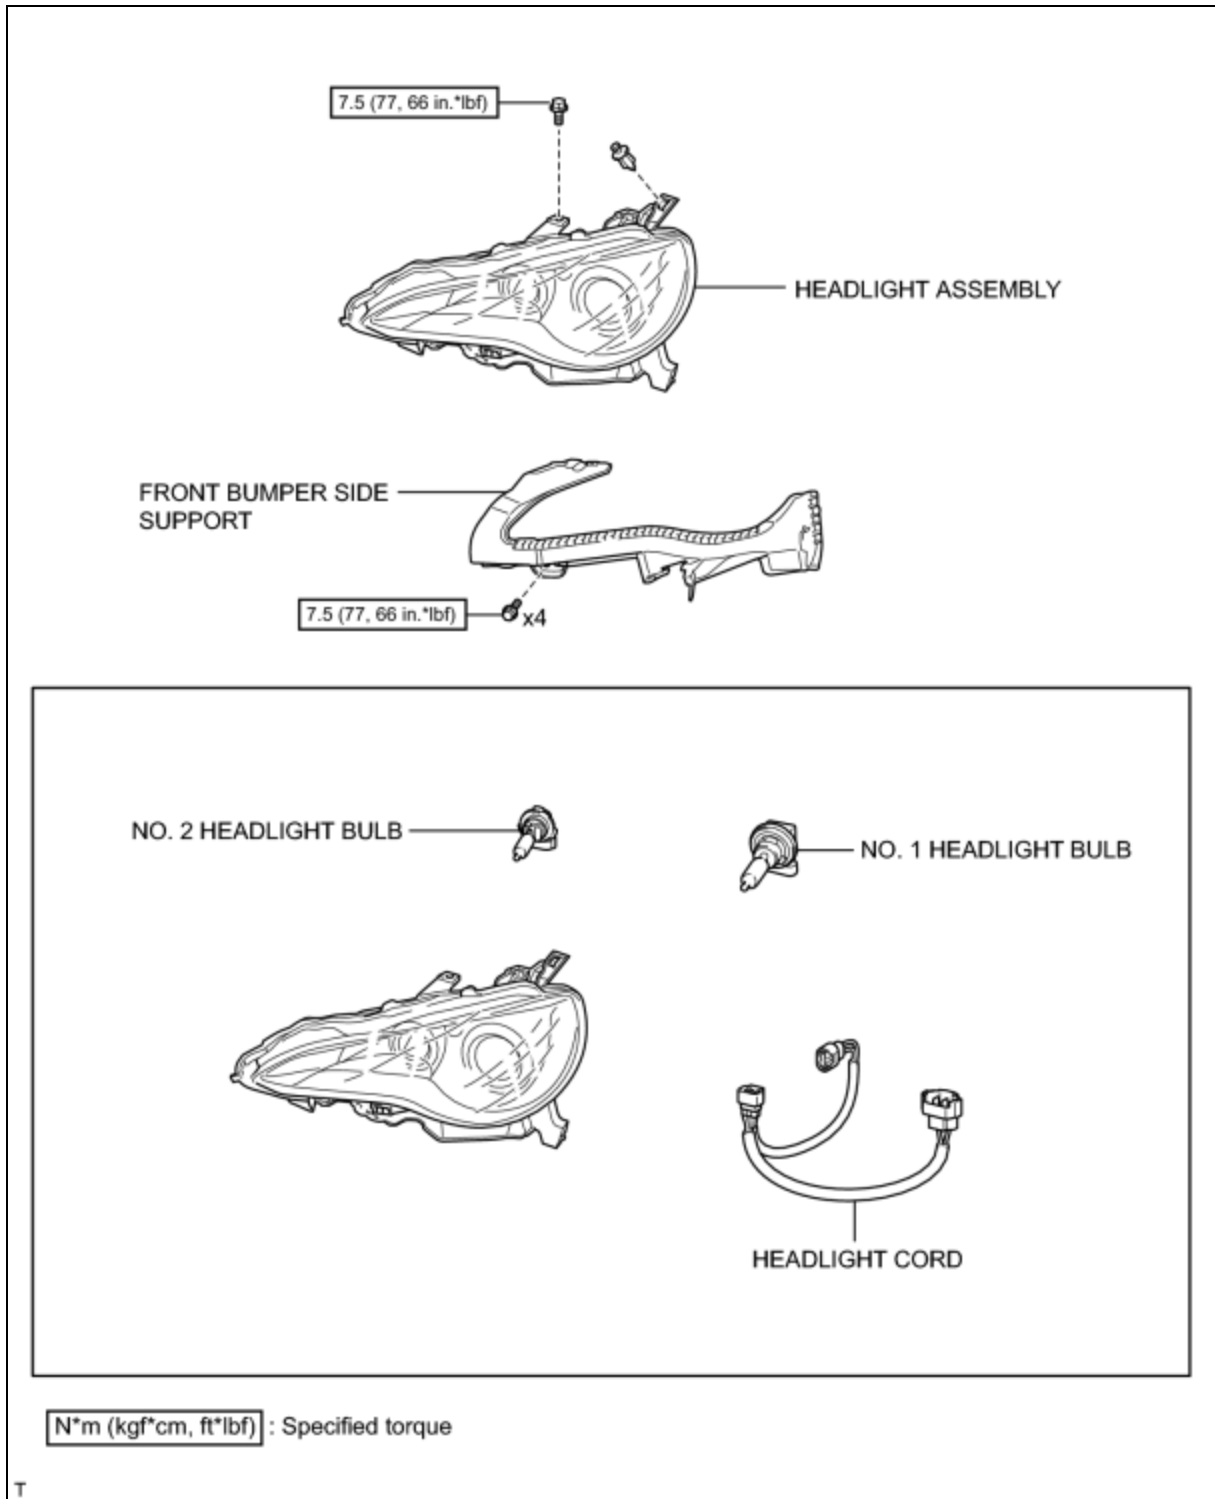

HINT:

- The low beam light and the high beam light are a unit. Adjusting the aim on the low beam to the correct position should also result in the high beam adjustment being correct.
- If it is not possible to correctly adjust headlight aim, check bulb, headlight unit, and headlight unit reflector installation.

Title: LIGHTING (EXT): LICENSE PLATE LIGHT ASSEMBLY: INSTALLATION (2013 FR-S)		

INSTALLATION

1. INSTALL LICENSE PLATE LIGHT BULB

- (a) Install the license plate light bulb to the license plate light socket and wire.

- (b) Turn the license plate light socket and wire with the license plate light bulb in the direction indicated by the arrow shown in the illustration and install them as a unit.

HINT:

Use the same procedure as for the other side.

2. INSTALL LICENSE PLATE LIGHT ASSEMBLY

- (a) Engage the 2 claws to install the license plate light assembly.
(b) Connect the connector.

HINT:

Use the same procedure as for the other side.

3. INSTALL LUGGAGE COMPARTMENT DOOR OUTSIDE GARNISH SUB-ASSEMBLY

INFO

Last Modified: 3-27-2012	6.4 A	From: 201203

Title: LIGHTING (EXT): LICENSE PLATE LIGHT ASSEMBLY: REMOVAL (2013 FR-S)		

REMOVAL

1. REMOVE LUGGAGE COMPARTMENT DOOR OUTSIDE GARNISH SUB-ASSEMBLY

INFO

2. REMOVE LICENSE PLATE LIGHT ASSEMBLY

(a) Disconnect the connector.

(b) Disengage the 2 claws to remove the license plate light assembly.

HINT:

Use the same procedure as for the other side.

3. REMOVE LICENSE PLATE LIGHT BULB

(a) Turn the license plate light socket and wire with the license plate light bulb in the direction indicated by the arrow shown in the illustration to remove them as a unit.

(b) Remove the license plate light bulb from the license plate light socket and wire.

HINT:

Use the same procedure as for the other side.

Title: LIGHTING (EXT): LIGHTING SYSTEM: CUSTOMIZE PARAMETERS (2013 FR-S)		

CUSTOMIZE PARAMETERS

1. CUSTOMIZE LIGHTING SYSTEM (EXT)

HINT:

The following items can be customized.

NOTICE:

- When the customer requests a change in a function, first make sure that the function can be customized.
- Be sure to make a note of the current settings before customizing.
- When troubleshooting a function, first make sure that the function is set to the default setting.

(a) Customizing with the Techstream

- (1) Connect the Techstream to the DLC3.
- (2) Turn the ignition switch to ON.
- (3) Turn the Techstream on.
- (4) Enter the following menus: Body Electrical / Main Body / Utility / Customize / Light Control.
- (5) Select the setting by referring to the table below.

Light Control

DISPLAY	DEFAULT	CONTENT	SETTING	RELEVANT ECU
Response Time	Normal	Changes the delay timing of lighting the taillights when going into a tunnel when the light control switch is in the AUTO position.	Normal or Long	Main Body ECU (Network Gateway ECU)
Light Auto OFF Delay	30 s	Keeps the headlights on for a certain period of time after turning the ignition switch off and closing all doors with the low beam headlights on.	OFF, 30 s, 60 s or 90 s	
DRL Function	ON	ON/OFF of the DRL function	ON or OFF	
Follow Me Home Lighting Time	30 s	Changes the low beam headlight lighting time when ignition switch is off and dimmer switch is pulled to flash headlights once.	30 s, 60 s, 90s, or 120s	

HINT:

Items for which there are no settings do not appear on the Techstream, or do not operate.

Title: LIGHTING (EXT): LIGHTING SYSTEM: DATA LIST / ACTIVE TEST (2013 FR-S)		

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuator and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

- Connect the Techstream to the DLC3.
- Turn the ignition switch to ON.
- Turn the Techstream on.
- Enter the following menus: Body Electrical / Main Body / Data List.
- Read the Data List according to the display on the Techstream.

Main Body

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
IG SW	Ignition switch ON signal / ON or OFF	ON: Ignition switch ON OFF: Ignition switch off	-

HINT:

Items for which there are no settings do not appear on the Techstream, or do not operate.

2. ACTIVE TEST

HINT:

Using the Techstream to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Main Body / Active Test.
- (e) Perform the Active Test according to the display on the Techstream.

Main Body

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Daytime Running Light	Daytime running lights	ON/OFF	-
Taillight Relay	Taillight relay	ON/OFF	-
Headlight Relay	Headlight relay	ON/OFF	-
Headlight Hi	Headlight (high beam headlights)	ON/OFF	-
Front Fog Light Relay	Front fog light relay	ON/OFF	-
Rear Fog Light Relay	Rear fog light relay	ON/OFF	-

HINT:

Items for which there are no settings do not appear on the Techstream, or do not operate.

Title: LIGHTING (EXT): LIGHTING SYSTEM: DIAGNOSIS SYSTEM (2013 FR-S)		

DIAGNOSIS SYSTEM

1. DESCRIPTION

- (a) Lighting system data and the Diagnostic Trouble Codes (DTCs) can be read from the Data Link Connector 3 (DLC3) of the vehicle. When the system seems to be malfunctioning, use the Techstream to check for malfunctions and to repair it.

2. CHECK DLC3

- (a) Check the DLC3  .

3. INSPECT BATTERY VOLTAGE

- (a) Measure the battery voltage with the ignition switch off.

Standard Voltage:

11 to 14 V

If the voltage is below 11 V, recharge or replace the battery.

Title: LIGHTING (EXT): LIGHTING SYSTEM: Headlight Dimmer Switch Circuit (2013 FR-S)		

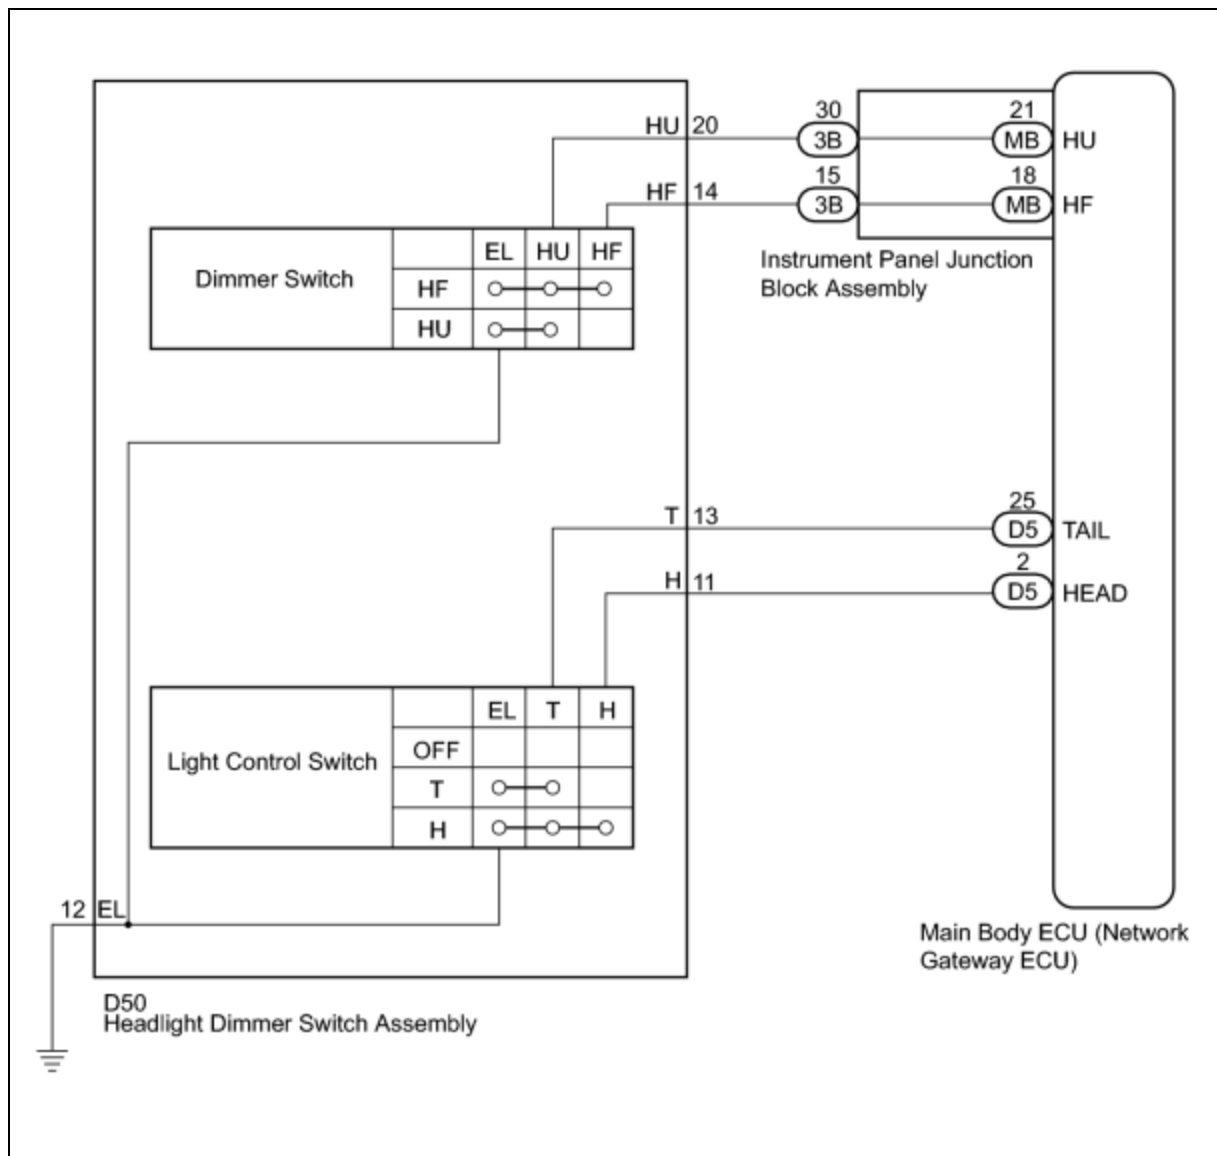

Headlight Dimmer Switch Circuit

DESCRIPTION

The main body ECU (network gateway ECU) receives the following switch information:

- Light control switch is in off, tail or head position
- Headlight dimmer switch is in high, low or high flash position

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	READ VALUE USING TECHSTREAM (HEADLIGHT DIMMER SWITCH ASSEMBLY)
-----------	---

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Main Body / Data List.
- (e) Read the display on the Techstream.

Main Body

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Dimmer SW	Dimmer switch high position signal / ON or OFF	ON: Dimmer switch in high or high flash position OFF: Dimmer switch in low position	-
Passing Light SW	Dimmer switch high flash position (pass) signal / ON or OFF	ON: Dimmer switch in high flash position OFF: Dimmer switch not in high flash position	-
Head Light SW (Head)	Light control switch head position signal / ON or OFF	ON: Light control switch in head position OFF: Light control switch not in head position	-
Head Light SW (Tail)	Light control switch tail position signal / ON or OFF	ON: Light control switch in tail or head position OFF: Light control switch in neither tail nor head position	-
Lighting Hi	Light control switch head (Hi) position signal / ON or OFF	ON: Headlight high beam on OFF: Normal	-

OK:

The display is as specified in the normal condition column.

Result :

RESULT	PROCEED TO
OK	A

Title: LIGHTING (EXT): LIGHTING SYSTEM: High Beam Headlight Circuit (2013 FR-S)		

High Beam Headlight Circuit

DESCRIPTION

The main body ECU (network gateway ECU) receives headlight dimmer switch information signals, and illuminates the high beam headlight.

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

Inspect the fuses and bulbs for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1. PERFORM ACTIVE TEST USING TECHSTREAM (HEAD LIGHT HI)

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Main Body / Active Test

(e) Check that the relay operates.

Title: LIGHTING (EXT): LIGHTING SYSTEM: Low Beam Headlight Circuit (2013 FR-S)		

Low Beam Headlight Circuit

DESCRIPTION

The main body ECU (network gateway ECU) receives headlight dimmer switch assembly information signals, and illuminates the low beam headlight.

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

Inspect the fuses and bulbs for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1.	PERFORM ACTIVE TEST USING TECHSTREAM (H-LP RELAY)
----	--

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Main Body / Active Test
- (e) Check that the relay operates.

Main Body

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Headlight Relay	Low beam headlight relay	ON/OFF	-

OK:

Headlight relay operates (low beam headlights illuminate).

Result:

RESULT	PROCEED TO
NG	A
OK	B

B ▶ REPLACE MAIN BODY ECU (NETWORK GATEWAY ECU)

A

2.	INSPECT H-LP RELAY
-----------	---------------------------

(a) Remove the H-LP relay from the engine room relay block.

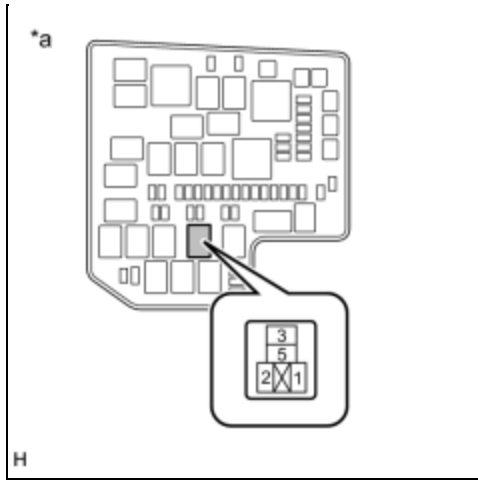

(b) Inspect the H-LP relay  .

NG ▶ REPLACE H-LP RELAY

OK

3.	CHECK HARNESS AND CONNECTOR (H-LP RELAY - BATTERY)
-----------	---

(a) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Relay terminal 5 - Body ground	Always	11 to 14 V

Text in Illustration

*a	Engine Room Relay Block (H-LP Relay Terminal)
----	--

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR

OK
▼

4. CHECK HARNESS AND CONNECTOR (H-LP RELAY - MAIN BODY ECU (NETWORK GATEWAY ECU))

(a) Disconnect the A73 main body ECU (network gateway ECU) connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Relay terminal 2 - A73-11 (DIM)	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A73-11 (DIM) - Body ground	Always	10 kΩ or higher

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR

OK
▼

5.	CHECK HARNESS AND CONNECTOR (H-LP RELAY - INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY)
-----------	--

(a) Disconnect the 3C instrument panel junction block assembly connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Relay terminal 1 - 3C-17	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3C-17 - Body ground	Always	10 k Ω or higher

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

6.	CHECK HARNESS AND CONNECTOR (INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY - MAIN BODY ECU (NETWORK GATEWAY ECU))
-----------	---

(a) Disconnect the 3A and 3C instrument panel junction block assembly connector.

(b) Disconnect the D5 and A73 main body ECU (network gateway ECU) connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3A-29 - D5-1	Always	Below 1 Ω
3C-30 - A73-2 (HRLY)	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D5-1 - Body ground	Always	10 k Ω or higher

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

7. INSPECT INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY

- (a) Remove the instrument panel junction block assembly **INFO** .
- (b) Remove the main body ECU (network gateway ECU) from the instrument panel junction block assembly.
- (c) Measure the resistance according to the value(s) in the table below.

Text in Illustration

*a	Component without harness connected (Instrument Panel Junction Block Assembly)	-	-
----	---	---	---

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3C-17 - 3A-29	Always	Below 1 Ω
3C-17 - 3C-30	Always	Below 1 Ω

NG ► REPLACE INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY

OK ► PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE

Title: LIGHTING (EXT): LIGHTING SYSTEM: SYSTEM DESCRIPTION (2013 FR-S)		

SYSTEM DESCRIPTION

1. DAYTIME RUNNING LIGHT SYSTEM

(a) The daytime running light system is designed to automatically illuminate the high beam headlights*1, taillights, clearance lights and license plate lights during the daytime to make the vehicle more visible to other vehicles.

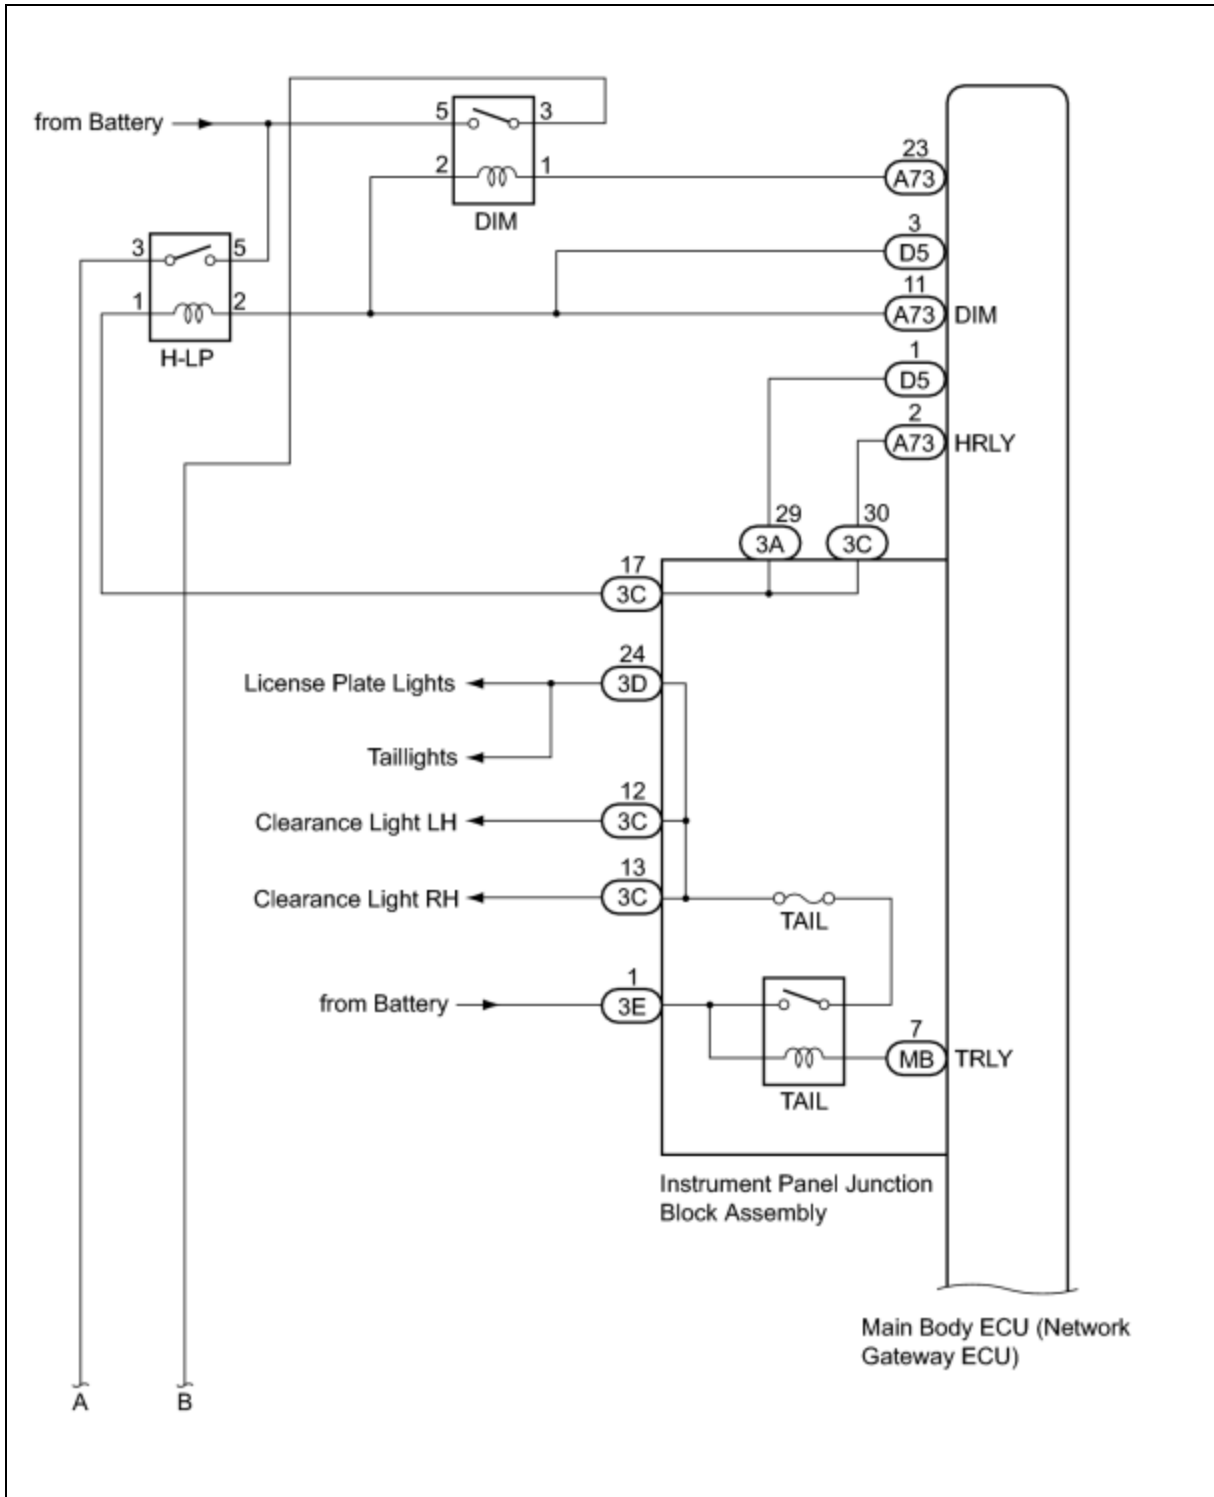

- This system is controlled by the main body ECU (network gateway ECU).
- This system is enabled when the following conditions are met:
 - Ignition switch is ON.
 - Shift lever is other than in P*2.
 - Parking brake switch is off.
 - Engine speed signal is input (engine running).
 - The light control switch is in off or the tail position (when the light control switch is in off, the taillights, clearance lights and license plate lights do not come on).
 - Ignition switch is ACC.
 - *1: Brightness of the headlights is decreased.
 - *2: for Automatic Transmission

Title: LIGHTING (EXT): LIGHTING SYSTEM: Taillight Relay Circuit (2013 FR-S)		

Taillight Relay Circuit

DESCRIPTION

The main body ECU (network gateway ECU) receives headlight dimmer switch assembly information signals, and illuminates the clearance lights, taillights and license plate lights.

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

Inspect the fuses and bulbs for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1.	PERFORM ACTIVE TEST USING TECHSTREAM (TAIL RELAY)
----	--

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Main Body / Active Test
- (e) Check that the relay operates.

Main Body

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Taillight Relay	Taillight relay	ON/OFF	-

OK:
Taillight relay operates (taillights illuminate).
Result:

RESULT	PROCEED TO
NG	A
OK	B

B ▶ REPLACE MAIN BODY ECU (NETWORK GATEWAY ECU)

A

2.	CHECK HARNESS AND CONNECTOR (BATTERY - INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY)
-----------	---

- (a) Disconnect the 3E instrument panel junction block assembly connector.

- (b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3E-1 - Body ground	Always	11 to 14 V

Text in Illustration

*a	Component without harness connected (Instrument Panel Junction Block Assembly)
----	--

OK

3. INSPECT INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY

- (a) Remove the instrument panel junction block assembly INFO.
- (b) Remove the main body ECU (network gateway ECU) from the instrument panel junction block assembly.
- (c) Measure the voltage according to the value(s) in the table below.

Text in Illustration

*a	Component without harness connected (Instrument Panel Junction Block Assembly)	-	-
----	---	---	---

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3C-12 - Battery negative (-) terminal	Connect a positive (+) lead from the battery → 3E-1 Connect a negative (-) lead from the battery → MB-7 (TRLY)	11 to 14 V
3C-13 - Battery negative (-) terminal	Connect a positive (+) lead from the battery → 3E-1 Connect a negative (-) lead from the battery → MB-7 (TRLY)	11 to 14 V

3D-24 - Battery negative (-) terminal	Connect a positive (+) lead from the battery → 3E-1 Connect a negative (-) lead from the battery → MB-7 (TRLY)	11 to 14 V
---------------------------------------	---	------------

(d) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3E-1 - 3C-12	Always	10 kΩ or higher
3E-1 - 3C-13	Always	10 kΩ or higher
3E-1 - 3D-24	Always	10 kΩ or higher

NG ▶ **REPLACE INSTRUMENT PANEL JUNCTION
BLOCK ASSEMBLY**

OK ▶ **PROCEED TO NEXT SUSPECTED AREA
SHOWN IN PROBLEM SYMPTOMS TABLE**

Title: LIGHTING (EXT): LIGHTING SYSTEM: TERMINALS OF ECU (2013 FR-S)		

TERMINALS OF ECU

1. CHECK MAIN BODY ECU (NETWORK GATEWAY ECU)

Text in Illustration

*1	Instrument Panel Junction Block Assembly	*2	Main Body ECU (Network Gateway ECU)
----	--	----	-------------------------------------

- (a) Remove the main body ECU (network gateway ECU) from the instrument panel junction block assembly.
- (b) Disconnect the A73 and D6 main body ECU (network gateway ECU) connectors.
- (c) Measure the resistance and voltage according to the value(s) in the table below.

TERMINAL NO.	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
A73-4 (GND) - Body ground	B-Y - Body ground	Ground	Always	Below 1 Ω
D6-1 (GND) - Body ground	B - Body ground	Ground	Always	Below 1 Ω
3C-4 - Body ground	None - Body ground	Ignition switch power supply	Ignition switch ON	11 to 14 V
			Ignition switch off	Below 1 V
3C-7 - Body ground	None - Body ground	Battery power supply	Always	11 to 14 V
3E-1 - Body ground	None - Body ground	Battery power supply	Always	11 to 14 V

If the result is not as specified, there may be a malfunction in the wire harness.

- (d) Reconnect the instrument panel junction block assembly and main body ECU (network gateway ECU) connectors.
- (e) Measure the voltage or check for pulses according to the value(s) in the table below.

TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
MB-21 (HU) - Body ground	None - Body ground	Dimmer switch high signal	Dimmer switch in high position	Below 1 V
			Dimmer switch in low position	11 to 14 V
MB-18 (HF) - Body ground	None - Body ground	Dimmer switch high flash signal	Dimmer switch in high flash position	Below 1 V
			Dimmer switch not in high flash position	11 to 14 V
D5-2 (HEAD) - Body ground	W - Body ground	Light control switch head signal	Light control switch in head position	Below 1 V
			Light control switch not in head position	11 to 14 V
D5-25 (TAIL) - Body ground	BE - Body ground	Light control switch tail signal	Light control switch in tail or head position	Below 1 V
			Light control switch in neither tail nor head position	11 to 14 V
A73-2 (HRLY) - Body ground	L - Body ground	Headlight relay drive output	Light control switch in head	Below 1 V

			Light control switch not in head	11 to 14 V
A73-11 (DIM) - Body ground	G - Body ground	Dimmer relay drive output	Dimmer switch in high or high flash position	Below 1 V
			Dimmer switch in low position	11 to 14 V

HINT:

If the result is not as specified, the main body ECU (network gateway ECU) may have a malfunction.

Title: LIGHTING (EXT): REAR COMBINATION LIGHT ASSEMBLY: DISASSEMBLY (2013 FR-S)		

DISASSEMBLY

HINT:

- Use the same procedure for both the RH and LH sides.
- The procedure described below is for the LH side.

1. REMOVE REAR COMBINATION LIGHT GASKET LH

(a) Remove the rear combination light gasket LH.

HINT:

- Be sure to remove all the traces of the old rear combination light gasket from the body.
- Do not reuse the removed packing. Be sure to install a new rear combination light gasket to prevent water ingress.

2. REMOVE REAR TURN SIGNAL LIGHT BULB

(a) Turn the rear combination light socket and wire sub-assembly with the rear turn signal light bulb in the direction indicated by the arrow shown in the illustration, and remove them as a unit.

(b) Remove the rear turn signal light bulb from the rear combination light socket and wire sub-assembly.

3. REMOVE REAR SIDE MARKER LIGHT BULB

(a) Turn the rear combination light socket and wire sub-assembly with the rear side marker light bulb in the direction indicated by the arrow shown in the illustration, and remove them as a unit.

(b) Remove the rear side marker light bulb from the rear combination light socket and wire sub-assembly.

4. REMOVE REAR COMBINATION LIGHT SOCKET AND WIRE SUB-ASSEMBLY

(a) Disengage the clamp.

(b) Disconnect the connector.

(c) Disengage the 2 clamps to remove the rear combination light socket and wire sub-assembly.

Title: LIGHTING (EXT): REAR COMBINATION LIGHT ASSEMBLY: INSPECTION (2013 FR-S)		

INSPECTION

HINT:

- Use the same procedure for both the RH and LH sides.
- The procedure described below is for the LH side.

1. INSPECT REAR COMBINATION LIGHT SOCKET AND WIRE SUB-ASSEMBLY

(a) Apply battery voltage to the connector and check the light comes on.

Standard Voltage:

CONDITION	SPECIFIED CONDITION
Battery positive (+) → 4 (B) Battery negative (-) → 2 (E)	Turn signal light comes on
Battery positive (+) → 3 (STP) Battery negative (-) → 2 (E)	Stop light comes on
Battery positive (+) → 1 (TL) Battery negative (-) → 2 (E)	Tail and Side marker light comes on

Title: LIGHTING (EXT): REAR COMBINATION LIGHT ASSEMBLY: INSTALLATION (2013 FR-S)		

INSTALLATION

HINT:

- Use the same procedure for both the RH and LH sides.
- The procedure described below is for the LH side.

1. INSTALL REAR COMBINATION LIGHT ASSEMBLY

- (a) Engage the guide to temporarily install the rear combination light assembly.
- (b) Install the rear combination light assembly with the 4 nuts.

Torque: 4.5 N·m (46 kgf·cm, 40in·lbf)

- (c) Engage the 2 grommets to connect the rear combination light socket and wire sub-assembly.
- (d) Connect the connector.

2. INSTALL LUGGAGE COMPARTMENT INNER TRIM COVER LH INFO

3. INSTALL REAR FLOOR FINISH PLATE

- (a) Engage the 4 claws to install the rear floor finish plate.
- (b) Install the 3 clips.

4. INSTALL LUGGAGE COMPARTMENT FLOOR MAT

Last Modified: 3-27-2012	6.4 A	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000003N8Z01CX
Title: LIGHTING (EXT): REAR COMBINATION LIGHT ASSEMBLY: REASSEMBLY (2013 FR-S)		

REASSEMBLY

HINT:

- Use the same procedure for both the RH and LH sides.
- The procedure described below is for the LH side.

1. INSTALL REAR COMBINATION LIGHT SOCKET AND WIRE SUB-ASSEMBLY

- (a) Engage the 2 clamps to install the rear combination light socket and wire sub-assembly.

- (b) Connect the connector.

- (c) Engage the clamp.

2. INSTALL REAR SIDE MARKER LIGHT BULB

- (a) Install the side marker light bulb to the rear combination light socket and wire sub-assembly.

- (b) Turn the rear combination light socket and wire sub-assembly with the side marker light bulb in the direction indicated by the arrow shown in the illustration to install them as a unit.

3. INSTALL REAR TURN SIGNAL LIGHT BULB

(a) Install the rear turn signal light bulb to the rear combination light socket and wire sub-assembly.

(b) Turn the rear combination light socket and wire sub-assembly with the rear turn signal light bulb in the direction indicated by the arrow shown in the illustration to install them as a unit.

4. INSTALL REAR COMBINATION LIGHT GASKET LH

(a) Install a new rear combination light gasket LH.

HINT:

- Be sure to remove all the traces of the old rear combination light gasket from the body.
- Do not reuse the removed packing. Be sure to install a new rear combination light gasket to prevent water ingress.

Title: LIGHTING (EXT): RELAY: ON-VEHICLE INSPECTION (2013 FR-S)		

ON-VEHICLE INSPECTION

1. INSPECT H-LP RELAY

(a) Remove the H-LP relay from the engine room relay block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3 - 5	Voltage is not applied between terminals 1 and 2	10 k Ω or higher
3 - 5	Voltage is applied between terminals 1 and 2	Below 1 Ω

Text in Illustration

*a	Component without harness connected (H-LP Relay)
----	---

If the result is not as specified, replace the H-LP relay.

2. INSPECT DIM RELAY

(a) Remove the DIM relay from the engine room relay block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3 - 5	Voltage is not applied between terminals 1 and 2	10 k Ω or higher
3 - 5	Voltage is applied between terminals 1 and 2	Below 1 Ω

Text in Illustration

*a	Component without harness connected (DIM Relay)
----	--

If the result is not as specified, replace the DIM relay.

3. INSPECT DRL RELAY

(a) Remove the DRL relay from the engine room relay block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3 - 4	Battery voltage not applied	Below 1 Ω
3 - 4	Battery voltage applied to terminals 1 and 2	10 k Ω or higher
3 - 5	Battery voltage not applied	10 k Ω or higher
3 - 5	Battery voltage applied to terminals 1 and 2	Below 1 Ω

Title: MIRROR (EXT): OUTER MIRROR SWITCH: INSPECTION (2013 FR-S)		

INSPECTION

1. INSPECT OUTER MIRROR SWITCH ASSEMBLY

(a) Check the switch functions.

(1) Turn the mirror select switch to the L position.

(2) Measure the resistance according to the value(s) in the table below.

Text in Illustration

*1	Mirror Select Switch
*2	Mirror Surface Adjust Switch
*a	Component without harness connected (Outer Mirror Switch Assembly)

Standard Resistance (for left side):

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
1 (B) - 14 (ML+) 10 (VL) - 7 (E)	UP	Below 1 Ω
1 (B) - 10 (VL) 14 (ML+) - 7 (E)	DOWN	Below 1 Ω
1 (B) - 8 (HL) 14 (ML+) - 7 (E)	LEFT	Below 1 Ω
1 (B) - 14 (ML+) 8 (HL) - 7 (E)	RIGHT	Below 1 Ω

(3) Turn the mirror select switch to the R position.

(4) Measure the resistance according to the value(s) in the table below.

Standard Resistance (for right side):

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
1 (B) - 12 (MR+) 11 (VR) - 7 (E)	UP	Below 1 Ω
1 (B) - 11 (VR) 12 (MR+) - 7 (E)	DOWN	Below 1 Ω
1 (B) - 9 (HR)		

12 (MR+) - 7 (E)	LEFT	Below 1 Ω
1 (B) - 12 (MR+) 9 (HR) - 7 (E)	RIGHT	Below 1 Ω

If the result is not as specified, replace the outer mirror switch assembly.

Title: DOOR LOCK: DOOR CONTROL TRANSMITTER: COMPONENTS (2013 FR-S)		

COMPONENTS

ILLUSTRATION

H

Last Modified: 3-27-2012	6.4 G	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM0000010DZ022X
Title: DOOR LOCK: DOOR CONTROL TRANSMITTER: INSPECTION (2013 FR-S)		

INSPECTION

1. INSPECT DOOR CONTROL TRANSMITTER ASSEMBLY

(a) Inspect the operation of the door control transmitter assembly.

- (1) Remove the transmitter battery (lithium battery: CR2016) from the door control transmitter assembly.

NOTICE:

When replacing the transmitter battery, before starting work, remove static electricity that has built up in the body by touching, for example, the vehicle to prevent the door control transmitter from being damaged.

- (2) Install a new or normal transmitter battery (lithium battery: CR2016).

NOTICE:

When replacing the transmitter battery, before starting work, remove static electricity that has built up in the body by touching, for example, the vehicle to prevent the door control transmitter from being damaged.

- (3) If a new or normal transmitter battery is not available, connect 2 new dry cell batteries (1.5 V) in series. Connect the positive (+) battery electrode to the battery receptacle side terminal, and the negative (-) battery electrode to the bottom terminal, and apply a voltage of 3 V to the transmitter.

Text in Illustration

*1	Battery
----	---------

- (4) In a location that is approximately 1 m (3.28ft.) away from the driver door outside handle, point the transmitter at the vehicle and check the operation of the transmitter by pressing the transmitter switches on the transmitter body.

OK:

The door lock/unlock can be operated via remote control. The LED illuminates when each switch is pressed.

HINT:

- The minimum operational distance differs depending on the way the transmitter is held and the location.
- Since the transmitter uses faint electric waves, the operational distance might be shortened if noise or strong electric waves occur in the area.

- (5) Install the battery (lithium battery: CR2016).

(b) Inspect the battery charge.

- (1) Remove the battery from the door control

transmitter assembly that does not operate. Attach a lead wire (0.6 mm (0.0236 in.) or less in diameter including wire sheath) with tape or equivalent to the negative terminal.

NOTICE:

- Do not wrap the lead wire around the terminal, wedge it between terminals, or solder it. The terminal may be deformed or damaged, and the battery will not be able to be installed correctly.
- When replacing the transmitter battery, before starting work, remove static electricity that has built up in the body by touching, for example, the vehicle to prevent the door control transmitter from being damaged.

Text in Illustration

*1	Wire
----	------

(2) Carefully pull the lead wire out from the position shown in the illustration and install the previously removed transmitter battery.

NOTICE:

When replacing the transmitter battery, before starting work, remove static electricity that has built up in the body by touching, for example, the vehicle to prevent the electrical key transmitter from being damaged.

(3) Check the transmitter battery voltage.

HINT:

Measure the transmitter battery voltage while pressing the lock or unlock switch on the door control transmitter assembly set sub-assembly.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Battery positive (+) - Battery negative (-)	Ignition switch off, all doors closed and lock or unlock switch is pressed	2.2 to 3.2 V

Title: DOOR LOCK: KEY REMINDER WARNING SYSTEM: CUSTOMIZE PARAMETERS (2013 FR-S)		

CUSTOMIZE PARAMETERS

1. CUSTOMIZE KEY REMINDER WARNING SYSTEM

(a) Customizing with the Techstream

NOTICE:

- When the customer requests a change in a function, first make sure that the function can be customized.
- Record the current settings before customizing.
- When troubleshooting a function, first make sure that the function is set to the default setting.

HINT:

The following items can be customized.

- (1) Connect the Techstream to the DLC3.
- (2) Turn the ignition switch to ON.
- (3) Turn the Techstream on.
- (4) Enter the following menus: Body Electrical / Combination Meter / Utility / Customize / Warning.
- (5) Select the setting by referring to the table below.

Warning

DISPLAY	DEFAULT	FUNCTION	SETTING	RELEVANT ECU
Key Remind Sound	Normal	Function to change cycle of the key reminder warning buzzer.	Normal, Slow or Fast	Combination meter assembly

Last Modified: 3-27-2012	6.4 U	From: 201203

Title: DOOR LOCK: KEY REMINDER WARNING SYSTEM: DATA LIST / ACTIVE TEST (2013 FR-S)		

[DATA LIST / ACTIVE TEST](#)

1. READ DATA LIST

NOTICE:

In the following table, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

- (a) Turn the ignition switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the ignition switch to ON.
- (d) Turn the Techstream on.
- (e) Enter the following menus: Body Electrical / Main Body / Data List.
- (f) Read the Data List according to the display on the Techstream.

Main Body

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
IG SW	Ignition switch on signal / OFF or ON	OFF: Ignition switch off ON: Ignition switch ON	-
ACC SW	Ignition switch ACC signal / OFF or ON	OFF: Ignition switch off ON: Ignition switch ACC	-
Key Unlock Warning SW	Unlock warning switch / OFF or ON	OFF: Ignition key is not inserted ON: Ignition key is inserted	-
D Door Courtesy SW	Driver side door courtesy light switch signal / ON or OFF	ON: Driver side door opened OFF: Driver side door closed	-

Title: DOOR LOCK: KEY REMINDER WARNING SYSTEM: Key Reminder Buzzer does not Sound (2013 FR-S)		

Key Reminder Buzzer does not Sound

DESCRIPTION

The key reminder warning buzzer sounds when the driver side door is opened while the ignition switch is in the LOCK or ACC positions. The key reminder warning buzzer is activated when the main body ECU (network gateway ECU) sends a buzzer sound request signal to the combination meter assembly.

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

Since the key reminder warning system has functions that use CAN communication, first confirm that there is no malfunction in the communication system by inspecting the CAN communication

functions in accordance with **How to Proceed with Troubleshooting**. Then conduct the following troubleshooting procedure.

PROCEDURE

1.	READ VALUE USING TECHSTREAM (D DOOR COURTESY SW)
-----------	---

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Main Body / Data List.
- (e) Read the Data List according to the display on the Techstream.

Main Body

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
D Door Courtesy SW	Driver side door courtesy light switch signal / ON or OFF	ON: Driver side door opened OFF: Driver side door closed	-

OK:

ON or OFF appears on the screen according to the driver door condition.

NG ► **GO TO LIGHTING SYSTEM (DOOR COURTESY LIGHT SWITCH CIRCUIT)**

OK

2.	READ VALUE USING TECHSTREAM (KEY UNLOCK WARNING SW)
-----------	--

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Main Body / Data List.
- (e) Read the Data List according to the display on the Techstream.

Main Body

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
----------------	------------------------	------------------	-----------------

Key Unlock Warning SW	Unlock warning switch signal / OFF or ON	OFF: Ignition key is not inserted ON: Ignition key is inserted	-
-----------------------	--	---	---

OK:

When the un-lock warning switch assembly is operated, the display changes as shown in the table.

NG ▶ **INSPECT UN-LOCK WARNING SWITCH ASSEMBLY**

OK

3.	CHECK COMBINATION METER ASSEMBLY (BUZZER OPERATION)
-----------	--

(a) Remove the key from the key cylinder, turn the light control switch on the headlight dimmer switch assembly to the tail position, and open the driver door.

OK:

The light reminder warning buzzer sounds.

HINT:

The key reminder warning system sounds the buzzer built in to the combination meter for key reminder warnings. This buzzer is also used for the light reminder warning system. Therefore, check the operation of the combination meter buzzer by checking if the buzzer sounds to inform that the lights are still on.

NG ▶ **REPLACE COMBINATION METER ASSEMBLY**

OK ▶ **REPLACE MAIN BODY ECU (NETWORK GATEWAY ECU)**

4.	INSPECT UN-LOCK WARNING SWITCH ASSEMBLY
-----------	--

(a) Remove the un-lock warning switch assembly INFO .

(b) Inspect the un-lock warning switch assembly INFO .

NG ▶ **REPLACE UN-LOCK WARNING SWITCH ASSEMBLY**

OK

5.	CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - UN-LOCK WARNING SWITCH ASSEMBLY)
----	--

(a) Disconnect the D53 un-lock warning switch assembly connector.

(b) Disconnect the D5 main body ECU (network gateway ECU) connector.

(c) Measure the voltage and resistance according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D53-1 (UN+) - Body ground	Always	11 to 14 V

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D53-2 (UN-) - D5-22 (KSW)	Always	Below 1 Ω
D53-2 (UN-) - Body ground	Always	10 k Ω or higher

Text in Illustration

*a	Front view of wire harness connector (to Un-lock Warning Switch Assembly)
----	--

NG **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK **REPLACE MAIN BODY ECU (NETWORK GATEWAY ECU)**

Title: DOOR LOCK: KEY REMINDER WARNING SYSTEM: OPERATION CHECK (2013 FR-S)		

OPERATION CHECK

1. CHECK FUNCTION

- (a) Check that the key reminder warning buzzer sounds.
- (1) With the driver side door closed, insert the key into the ignition key cylinder and then turn the key to LOCK or ACC.
 - (2) Check that the buzzer sounds intermittently when the driver side door is open.
- (b) Check that the key reminder warning buzzer stops.
- (1) Check that the buzzer stops sounding if any of the following operations are performed while the buzzer is sounding:
 - Close the driver side door (front door courtesy light switch is off).
 - Turn the ignition switch to ON.
 - Pull the key out from the ignition key cylinder.

Title: DOOR LOCK: LUGGAGE COMPARTMENT DOOR LOCK: INSPECTION (2013 FR-S)		

INSPECTION

1. INSPECT LUGGAGE COMPARTMENT DOOR LOCK ASSEMBLY

(a) Check the operation of the door lock motor.

- (1) Move the door lock to the closed (lock) position.
- (2) Apply battery voltage to the door lock motor and check the operation of the door lock motor.

OK:

MEASUREMENT CONDITION	SPECIFIED CONDITION
Battery positive (+) → 1 (B) Battery negative (-) → 2 (E)	Luggage compartment door lock motor open (unlock) operation

If the result is not as specified, replace the back door lock assembly.

(b) Check the operation of the door courtesy switch.

- (1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2 (E) - 3 (D+)	Locked	10 k Ω or higher
2 (E) - 3 (D+)	Unlocked	Below 1 Ω

Title: DOOR LOCK: LUGGAGE COMPARTMENT DOOR LOCK: INSTALLATION (2013 FR-S)		

INSTALLATION

1. INSTALL LUGGAGE COMPARTMENT DOOR LOCK CABLE

- (a) Engage the clamp to install the luggage compartment door lock cable.

2. INSTALL LUGGAGE COMPARTMENT DOOR LOCK CYLINDER PACKING

- (a) Install the new luggage compartment door lock cylinder packing.

NOTICE:

Do not reuse the removed packing. Be sure to install a new luggage compartment door lock cylinder packing to prevent water ingress.

3. INSTALL LUGGAGE COMPARTMENT DOOR LOCK CYLINDER ASSEMBLY

- (a) Connect the luggage compartment door lock cable to the luggage compartment door lock cylinder assembly.
- (b) Install the luggage compartment door lock cylinder assembly with the 2 nuts.

Torque: 4.5 N·m (46 kgf·cm, 40in·lbf)

4. INSTALL LUGGAGE COMPARTMENT DOOR LOCK ASSEMBLY

- (a) Install the luggage compartment door lock assembly with the 2 bolts.

Torque: 7.5 N·m (77 kgf·cm, 66in·lbf)
- (b) Connect the luggage compartment door lock cable to the luggage compartment door lock assembly.
- (c) Engage the claw to close the cover.
- (d) Connect the connector.

Title: DOOR LOCK: POWER DOOR LOCK CONTROL SYSTEM: All Doors LOCK/UNLOCK Functions do not Operate Via Door Control Switch (2013 FR-S)		

All Doors LOCK/UNLOCK Functions do not Operate Via Door Control Switch

DESCRIPTION

The main body ECU (network gateway ECU) receives switch signals from the door control switch, activates the door lock motor on each door accordingly.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	CHECK DOOR LOCK OPERATION
-----------	----------------------------------

(a) Proceed to the next step according to the symptom listed in the table below.

Result

RESULT	PROCEED TO
Doors cannot be locked through power window regulator master switch assembly	A
Doors cannot be locked through power window regulator switch assembly	B

B ▶ READ VALUE USING TECHSTREAM (DOOR LOCK SW-LOCK AND DOOR LOCK SW-UNLOCK)

A

2.	READ VALUE USING TECHSTREAM (DOOR LOCK SW-LOCK AND DOOR LOCK SW-UNLOCK)
-----------	--

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Main Body / Data List.
- (e) Read the Data List according to the display on the Techstream.

Main Body

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Door Lock SW-Lock	Door control switch (power window regulator master switch assembly) lock signal / OFF or ON	OFF: OFF: Lock side of door control switch (power window regulator master switch assembly) not pushed ON: Lock side of door control switch (power window regulator master switch assembly) pushed	-
Door Lock SW-Unlock	Door control switch (power window regulator master switch assembly) unlock signal / OFF or ON	OFF: Unlock side of door control switch (power window regulator master switch assembly) not pushed ON: Unlock side of door control switch (power window regulator master switch assembly) pushed	-

OK:

The Techstream indicates ON or OFF according to the switch operation shown in the table above.

NG ▶ INSPECT POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY

OK ▶ REPLACE MAIN BODY ECU (NETWORK GATEWAY ECU)

3.	INSPECT POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY
-----------	--

(a) Remove the power window regulator master switch assembly **INFO** .

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E8-16 - E8-5	Lock switch pushed	Below 1 Ω
	off	10 k Ω or higher
E8-15 - E8-5	Unlock switch pushed	Below 1 Ω
	off	10 k Ω or higher

Text in Illustration

*a	Component without harness connected (Power Window Regulator Master Switch Assembly (Door Control Switch))
----	--

NG ► **REPLACE POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY**

OK

4.	CHECK HARNESS AND CONNECTOR (POWER WINDOW MASTER SWITCH - JUNCTION BLOCK AND BODY GROUND)
-----------	--

(a) Disconnect the 3A instrument panel junction block assembly connector.

(b) Disconnect the E8 power window regulator master switch assembly (door control switch) connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3A-51 - E8-16	Always	Below 1 Ω

3A-30 - E8-15	Always	Below 1 Ω
E8-5 - Body ground	Always	Below 1 Ω
3A-51 or E8-16 - Body ground	Always	10 kΩ or higher
3A-30 or E8-15 - Body ground	Always	10 kΩ or higher

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR

OK
▼

5. INSPECT INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY

- (a) Remove the instrument panel junction block assembly **INFO** .
- (b) Remove the main body ECU (network gateway ECU) from the instrument panel junction block assembly.
- (c) Measure the resistance according to the value(s) in the table below.

Text in Illustration

*a	Component without harness connected (Instrument Panel Junction Block Assembly)	-	-
----	---	---	---

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
MB-17 - 3A-51	Always	Below 1 Ω
MB-19 - 3A-30	Always	Below 1 Ω

NG ▶ REPLACE INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY

OK ► **REPLACE MAIN BODY ECU (NETWORK GATEWAY ECU)**

6.	READ VALUE USING TECHSTREAM (DOOR LOCK SW-LOCK AND DOOR LOCK SW-UNLOCK)
-----------	--

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Main Body / Data List.
- (e) Read the Data List according to the display on the Techstream.

Main Body

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Door Lock SW-Lock	Door control switch (power window regulator switch assembly) lock signal / OFF or ON	OFF: OFF: Lock side of door control switch (power window regulator switch assembly) not pushed ON: Lock side of door control switch (power window regulator switch assembly) pushed	-
Door Lock SW-Unlock	Door control switch (power window regulator switch assembly) unlock signal / OFF or ON	OFF: Unlock side of door control switch (power window regulator switch assembly) not pushed ON: Unlock side of door control switch (power window regulator switch assembly) pushed	-

OK:

The Techstream indicates ON or OFF according to the switch operation shown in the table above.

NG ► **INSPECT POWER WINDOW REGULATOR SWITCH ASSEMBLY**

OK ► **REPLACE MAIN BODY ECU (NETWORK GATEWAY ECU)**

7.	INSPECT POWER WINDOW REGULATOR SWITCH ASSEMBLY
-----------	---

- (a) Remove the power window regulator switch

assembly **INFC** .

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
F6-16 - F6-5	Lock switch pushed	Below 1 Ω
	off	10 k Ω or higher
F6-15 - F6-5	Unlock switch pushed	Below 1 Ω
	off	10 k Ω or higher

Text in Illustration

*a	Component without harness connected (Power Window Regulator Master Switch Assembly (Door Control Switch))
----	--

NG **REPLACE POWER WINDOW REGULATOR SWITCH ASSEMBLY**

OK

8.	CHECK HARNESS AND CONNECTOR (POWER WINDOW SWITCH - JUNCTION BLOCK AND BODY GROUND)
-----------	---

- (a) Disconnect the 3A and 3B instrument panel junction block assembly connector.
- (b) Disconnect the F6 power window regulator switch assembly (door control switch) connector.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3A-41 - F6-16	Always	Below 1 Ω
3B-20 - F6-15	Always	Below 1 Ω

F6-5 - Body ground	Always	Below 1 Ω
3A-41 or F6-16 - Body ground	Always	10 k Ω or higher
3B-20 or F6-15 - Body ground	Always	10 k Ω or higher

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

9. INSPECT INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY

- (a) Remove the instrument panel junction block assembly  .
- (b) Remove the main body ECU (network gateway ECU) from the instrument panel junction block assembly.
- (c) Measure the resistance according to the value(s) in the table below.

Text in Illustration

*a	Component without harness connected (Instrument Panel Junction Block Assembly)	-	-
----	---	---	---

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
MB-17 - 3A-41	Always	Below 1 Ω
MB-19 - 3B-20	Always	Below 1 Ω

REPLACE INSTRUMENT PANEL JUNCTION

NG ▶ BLOCK ASSEMBLY

OK ▶ REPLACE MAIN BODY ECU (NETWORK GATEWAY ECU)

All Unlock	Status of all doors unlock signal output / OFF or ON	OFF: All doors unlock operation is not performed ON: All doors unlock operation is performed	-
Driver Unlock	Status of driver side door unlock / OFF or ON	OFF: Driver side door locked ON: Driver side door unlocked	-
Rear Gate/Trunk Output	Luggage compartment door unlock signal output / OFF or ON	OFF: Luggage compartment door open operation is not performed ON: Luggage compartment door open operation is performed	-

2. ACTIVE TEST

HINT:

Using the Techstream to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus:
Body Electrical / Main Body / Active Test.
- (e) Perform the Active Test according to the display on the Techstream.

Main Body

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Door Lock	Door lock motor	OFF / Unlock / Lock	-
D-Door Unlock	Driver door lock motor	OFF / ON	-
Trunk and Back-Door Open	Back door lock motor	OFF / ON	-
Door Open/Close State	Main body ECU (network gateway ECU)	OFF / ON	-

Title: DOOR LOCK: POWER DOOR LOCK CONTROL SYSTEM: OPERATION CHECK (2013 FR-S)		

OPERATION CHECK

1. CHECK POWER DOOR LOCK OPERATION

NOTICE:

The operation check below is based on the noncustomized initial condition of the vehicle.

- (a) Check the basic function.
 - (1) Check that all doors lock when the door lock control switch (for manual operation) is turned to lock and all doors unlock when turned to unlock.
- (b) Check the key lock-in prevention function.

NOTICE:

In order to prevent the key from being actually locked-in, the following inspection should be performed with the driver side door window open.

- (1) Turn the ignition switch to ON or ACC.
- (2) With the driver door open, check that all doors unlock immediately after the lock side of the door control switch (for manual operation) is pressed.
- (c) Check the security function of the door lock control system.
 - (1) Close all doors and leave the driver door window open so that the door lock knob can be operated from outside the vehicle. (Step 1)
 - (2) Starting from Step 1, with the key outside the vehicle, close and lock the driver door using wireless door lock operation. Then, check that the doors do not unlock when the unlock side of the door control switch (for manual operation) is pressed from outside the vehicle.

HINT:

Check that the security function of the door lock control system is canceled under the following conditions:

- Turn the ignition switch to ON.
- The doors are unlocked by a wireless operation.

Title: DOOR LOCK: POWER DOOR LOCK CONTROL SYSTEM: PROBLEM SYMPTOMS TABLE (2013 FR-S)		

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

Title: DOOR LOCK: POWER DOOR LOCK CONTROL SYSTEM: SYSTEM DESCRIPTION (2013 FR-S)		

SYSTEM DESCRIPTION

1. POWER DOOR LOCK CONTROL SYSTEM DESCRIPTION

(a) The power door lock system locks/unlocks all the doors.

The main body ECU (network gateway ECU) receives lock/unlock request signals from a door control switch. Then, the main body ECU (network gateway ECU) sends these request signals to the door lock motors in each door to lock/unlock each door in response to the inputs.

2. FUNCTION OF MAIN COMPONENTS

COMPONENTS	FUNCTION
Power window regulator master switch assembly <ul style="list-style-type: none"> Door control switch 	The door control switch on the power window regulator master switch assembly locks/unlocks all doors.
Power window regulator switch assembly <ul style="list-style-type: none"> Door control switch 	The door control switch on the power window regulator switch assembly locks/unlocks all doors.
Door courtesy light switch assembly	<ul style="list-style-type: none"> Placed on each door. Detects door status (open or closed) and outputs a signal to main body ECU (network gateway ECU). Turns on when door is opened and turns off when door is closed.
Front door Lock assembly LH Front door Lock assembly RH	The built-in motor locks/unlocks the door.
Luggage compartment door lock assembly	<ul style="list-style-type: none"> Built-in motor unlatches door latch. Built-in courtesy switch detects luggage compartment door status (open or closed) and outputs a signal to main body ECU (network gateway ECU). This switch turns on when luggage compartment door is opened and turns off when luggage compartment door is closed

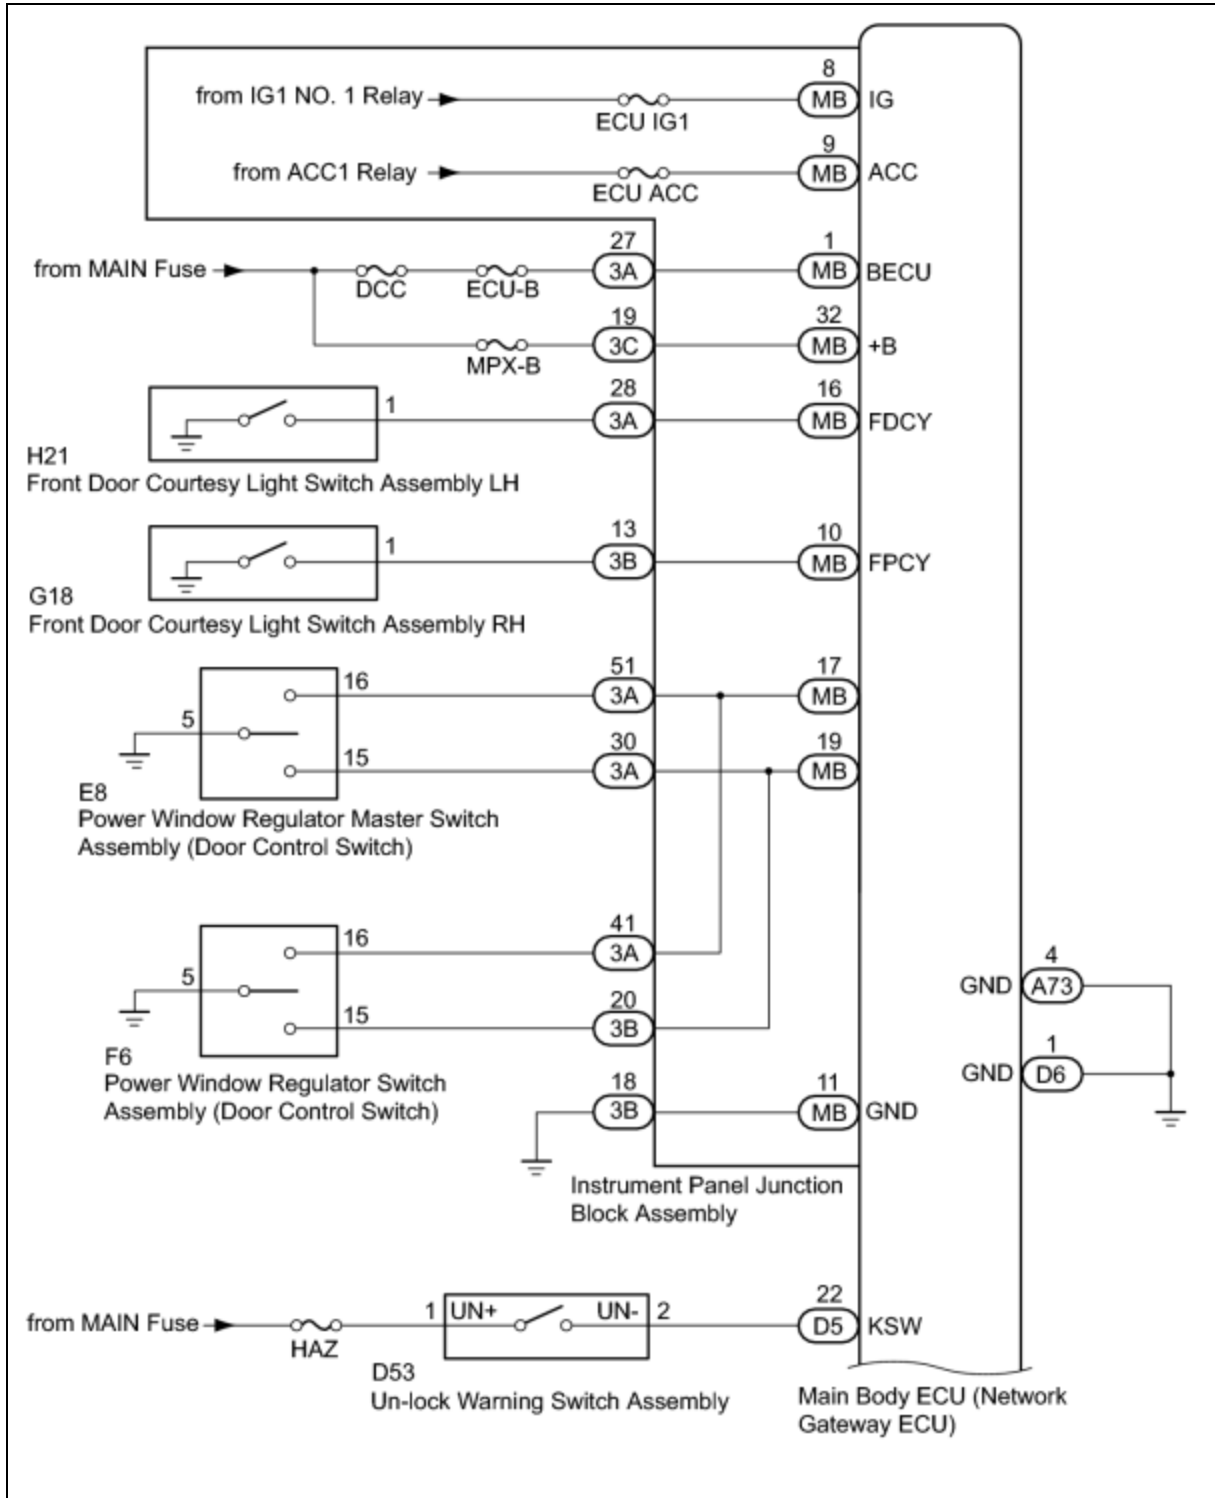

3. SYSTEM FUNCTION

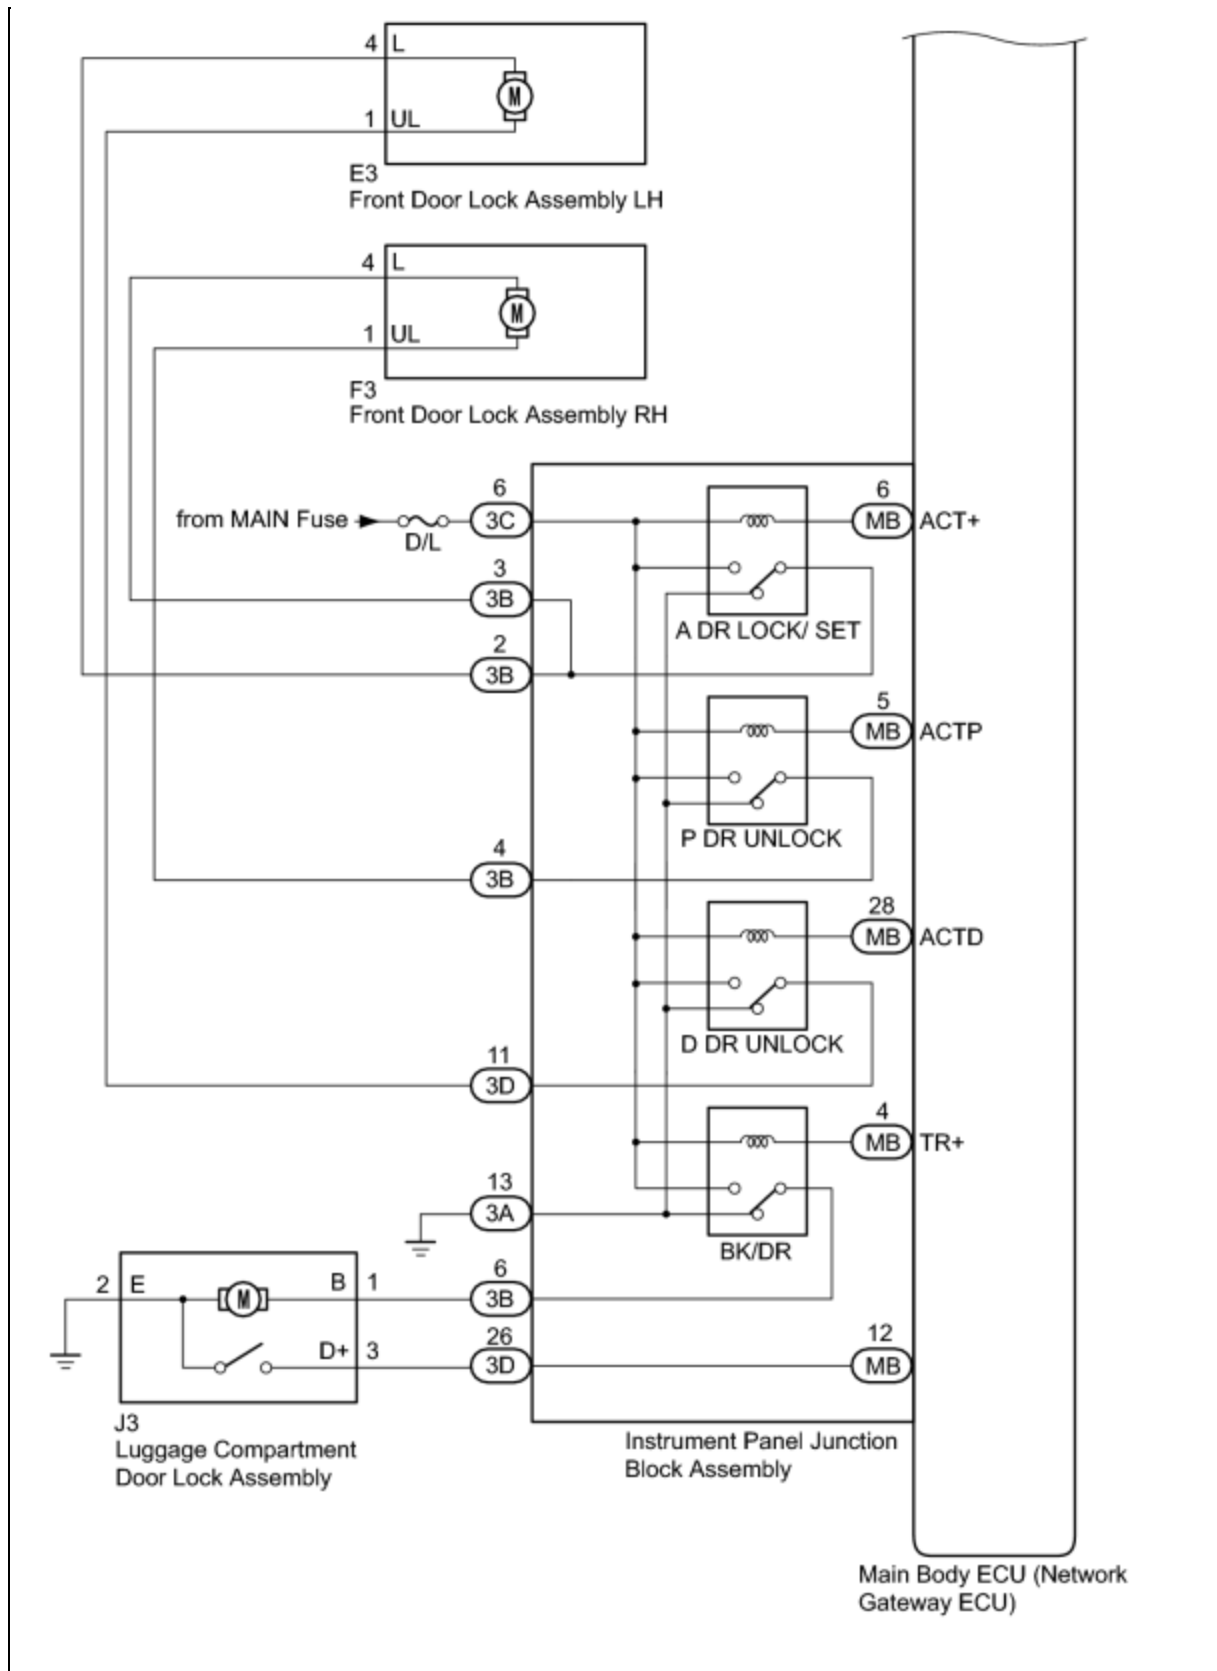

(a) This system is controlled by the main body ECU (network gateway ECU). The main body ECU (network gateway ECU) outputs signals to each door lock motor. The power door lock control system has the following functions:

FUNCTION	OUTLINE
Manual lock and unlock function	This function can lock or unlock all doors by the door control switch operation.
Key lock-in prevention function	When the door lock operation is performed with the ignition key in the ignition key cylinder, door will be locked once and immediately unlocked.
Manual unlock prohibition function	<p>When the condition below is met, unlocking the vehicle using the door control switch will be prohibited:</p> <ul style="list-style-type: none"> • The doors are locked using a wireless key operation with all doors closed.

Title: DOOR LOCK: POWER DOOR LOCK CONTROL SYSTEM: TERMINALS OF ECU (2013 FR-S)		

TERMINALS OF ECU

1. CHECK INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY AND MAIN BODY ECU (NETWORK GATEWAY ECU)

Text in Illustration

*1	Instrument Panel Junction Block Assembly	*2	Main Body ECU (Network Gateway ECU)
----	--	----	-------------------------------------

- (a) Remove the main body ECU (network gateway ECU) from the instrument panel junction block assembly.
- (b) Disconnect the D5, D6 and A73 main body ECU (network gateway ECU) connectors.
- (c) Measure the resistance and voltage between each terminal of the wire harness side connectors and body ground.

TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
MB-1 (BECU) - Body ground	None - Body ground	Battery power supply	Always	11 to 14 V
MB-8 (IG) - Body ground	None - Body ground	Ignition switch power supply	Ignition switch ON	11 to 14 V
			Ignition switch off	Below 1 V
MB-9 (ACC) - Body ground	None - Body ground	ACC power supply	Ignition switch ACC	11 to 14 V
			Ignition switch off	Below 1 V
MB-11 (GND) - Body ground	None - Body ground	Ground	Always	Below 1 Ω
MB-32 (+B) - Body ground	None - Body ground	Battery power supply	Always	11 to 14 V
D5-22 (KSW) - Body ground	BR - Body ground	Unlock warning switch input	No key in ignition key cylinder (off)	Below 1 V
			Key inserted ignition key cylinder (on)	11 to 14 V
D6-1 (GND) - Body ground	B - Body ground	Ground	Always	Below 1 Ω
A73-4 (GND) - Body ground	B-Y - Body ground	Ground	Always	Below 1 Ω

- (d) Reconnect the D5, D6 and A73 main body ECU (network gateway ECU) connectors.
- (e) Install the main body ECU (network gateway ECU) to the instrument panel junction block assembly.
- (f) Measure the voltage and resistance, according to the valve(s) in the table below.

TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
3A-28 - Body ground	Y - Body ground	Driver side door courtesy light switch input	Driver side door open	Below 1 V
			Driver side door closed	11 to 14 V
3B-13 - Body ground	L - Body ground	Passenger side door courtesy light switch input	Passenger side door open	Below 1 V
			Passenger side door closed	11 to 14 V
			Door control switch not	Below 1 V

3B-2 - Body ground	Y - Body ground	Door lock motor lock drive output (for driver side)	pushed	
			Lock side of door control switch pushed	11 to 14 V
3B-3 - Body ground	L - Body ground	Door lock motor lock drive output (for passenger side)	Door control switch not pushed	Below 1 V
			Lock side of door control switch pushed	11 to 14 V
3D-11 - Body ground	R-G - Body ground	Door lock motor unlock drive output (for driver side)	Door control switch not pushed	Below 1 V
			Unlock side of door control switch pushed	11 to 14 V
3B-4 - Body ground	L-W - Body ground	Door lock motor unlock drive output (for passenger side)	Door control switch not pushed	Below 1 V
			Unlock side of door control switch pushed	11 to 14 V
3D-26 - Body ground	SB - Body ground	Luggage compartment door courtesy light switch input	Luggage compartment door open	Below 1 V
			Luggage compartment door closed	11 to 14 V

Title: DOOR LOCK: TRANSMITTER BATTERY: REPLACEMENT (2013 FR-S)		

REPLACEMENT

NOTICE:

Take extra care when handling these precision electronic components.

1. REMOVE TRANSMITTER HOUSING COVER INFO

2. REMOVE DOOR CONTROL TRANSMITTER ASSEMBLY INFO

3. REMOVE TRANSMITTER BATTERY

(a) Disengage the hook and remove the transmitter battery cover.

(b) Remove the transmitter battery (lithium battery: CR2016).

NOTICE:

- Do not push the terminals with your finger.
- Do not use excessive force when prying up the battery (lithium battery: CR2016) as this may damage the terminals.
- Do not touch the battery with wet hands. Water may cause it to rust.
- Do not touch or move any components inside the transmitter as this may interfere with its proper operation.
- When replacing the transmitter battery, before starting work, remove static electricity that has built up in the body by touching, for example, the vehicle to prevent the door control transmitter from being damaged.

HINT:

Tape the screwdriver tip before use.

4. INSTALL TRANSMITTER BATTERY

- (a) Install a battery (lithium battery: CR2016) with the positive (+) side up, as shown in the illustration.

NOTICE:

- Make sure that the positive (+) side and the negative (-) side of the transmitter battery are correctly matched with the transmitter terminals.
- Do not bend the transmitter battery electrode during insertion.
- Keep the transmitter cover interior free of dust and oil.
- When replacing the transmitter battery, before starting work, remove static electricity that has built up in the body by touching, for example, the vehicle to prevent the door control transmitter from being damaged.

- (b) Engage the hook and install the transmitter battery cover.

NOTICE:

Securely engage the claws of the cover to prevent the poor contact between the battery and terminal.

5. INSTALL DOOR CONTROL TRANSMITTER ASSEMBLY INFO

6. INSTALL TRANSMITTER HOUSING COVER INFO

Title: DOOR LOCK: WIRELESS DOOR LOCK CONTROL SYSTEM: B1242: Wireless Door Lock Tuner Circuit Malfunction (2013 FR-S)		

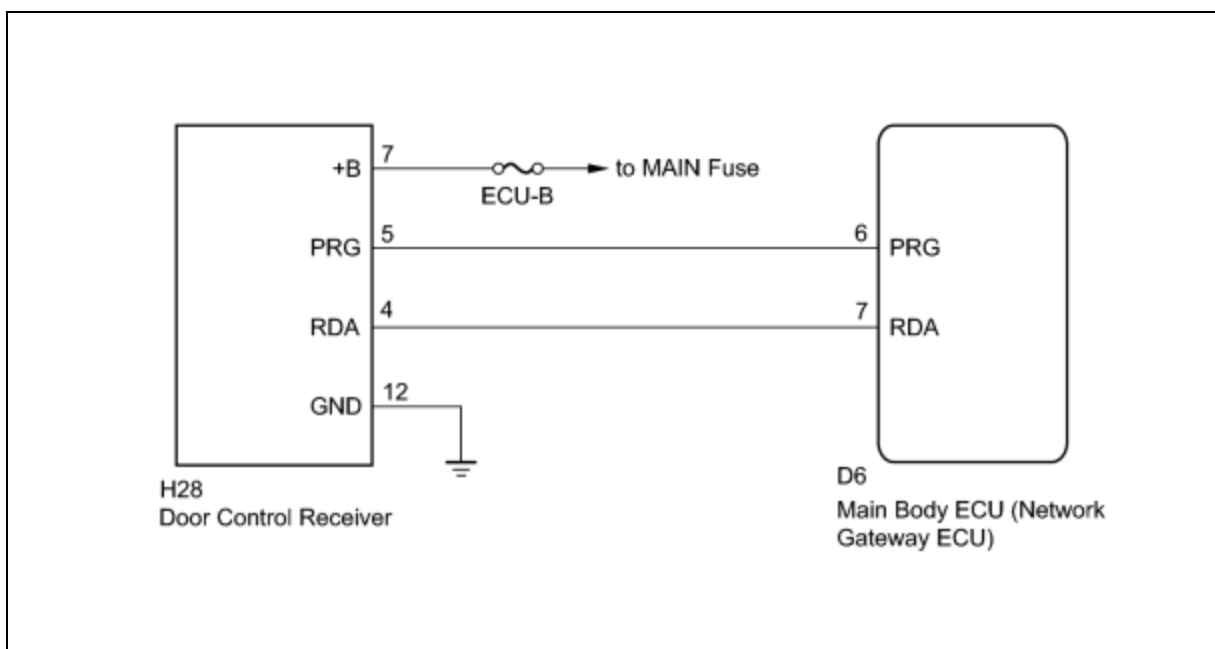

DTC	B1242	Wireless Door Lock Tuner Circuit Malfunction
------------	--------------	---

DESCRIPTION

This door control receiver receives signals from the transmitter and sends these signals to the main body ECU (network gateway ECU).

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B1242	In diagnostic mode, applicable RDA signal cannot be received 3 times in succession after the PRG signal is output from the main body ECU (network gateway ECU).	<ul style="list-style-type: none"> • Wire harness or connector • Door control receiver • Main body ECU (network gateway ECU)

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1.	CHECK HARNESS AND CONNECTOR (MAIN BODY ECU (NETWORK GATEWAY ECU) - DOOR CONTROL RECEIVER)
-----------	--

- (a) Disconnect the D6 main body ECU (network gateway ECU) connector.
- (b) Disconnect the H28 door control receiver connector.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D6-6 (PRG) - H28-5 (PRG)	Always	Below 1 Ω
D6-7 (RDA) - H28-4 (RDA)	Always	Below 1 Ω
D6-6 (PRG) - Body ground	Always	10 k Ω or higher
D6-7 (RDA) - Body ground	Always	10 k Ω or higher

**REPAIR OR REPLACE HARNESS OR
NG  CONNECTOR**

OK

2.	INSPECT DOOR CONTROL RECEIVER (POWER SOURCE, GROUND)
-----------	---

- (a) Measure the voltage and resistance according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
H28-7 (+B) - Body ground	Always	11 to 14 V

Standard Resistance:

--	--	--

--	--	--

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
H28-12 (GND) - Body ground	Always	Below 1 Ω

Text in Illustration

*a	Front view of wire harness connector (to Door Control Receiver)
----	---

**REPAIR OR REPLACE HARNESS OR
NG ► CONNECTOR**

OK

3.	REPLACE DOOR CONTROL RECEIVER
-----------	--------------------------------------

(a) Temporarily replace the door control receiver with a new or normally functioning one

INFO .

NEXT

4.	REGISTER RECOGNITION CODE
-----------	----------------------------------

(a) Perform the Registration procedures **INFO** .

HINT:

If a new or normal functioning door control receiver is available, connect it and check if the wireless door lock function is normal or the DTC is output. If the alternative receiver functions normally, replace the original door control receiver.

NEXT

5.	CLEAR DTC
-----------	------------------

(a) Clear the DTC  .

NEXT

6.	CHECK FOR DTC
-----------	----------------------

(a) Check for DTCs  .

OK:

DTC is not output.

HINT:

Reinstall the parts, such as sensors and connectors, and restore the vehicle to its previous conditions before rechecking for DTCs.

NG ► REPLACE MAIN BODY ECU (NETWORK GATEWAY ECU)

OK ► END (DOOR CONTROL RECEIVER IS DEFECTIVE)

Last Modified: 3-27-2012	6.4 A	From: 201203

Title: DOOR LOCK: WIRELESS DOOR LOCK CONTROL SYSTEM: CUSTOMIZE PARAMETERS (2013 FR-S)		

CUSTOMIZE PARAMETERS

1. CUSTOMIZE WIRELESS DOOR LOCK CONTROL SYSTEM

(a) Customizing with the Techstream

NOTICE:

- When the customer requests a change in a function, first make sure that the function can be customized.
- Record the current settings before customizing.
- When troubleshooting a function, first make sure that the function is set to the default setting.

HINT:

The following items can be customized.

- (1) Connect the Techstream to the DLC3.
- (2) Turn the ignition switch to ON.
- (3) Turn the Techstream on.
- (4) Enter the following menus: Body Electrical / Main Body / Utility / Customize / Wireless Door Lock or Others.
- (5) Select the setting by referring to the table below.

Wireless Door Lock

DISPLAY	DEFAULT	FUNCTION	SETTING	RELEVANT ECU
Wireless Control	ON	Function that turns wireless door lock function / OFF or ON	OFF or ON	Main body ECU (network gateway ECU)
Wireless Buzzer Resp	ON	Wireless door lock buzzer response	OFF or ON	Main body ECU (network gateway ECU)
Hazard Answer Back	ON	When wireless lock switch on transmitter pressed, illuminate all hazard warning lights once. When unlock switch pressed, all hazard warning lights illuminate twice.	OFF or ON	Main body ECU (network gateway ECU)

Title: DOOR LOCK: WIRELESS DOOR LOCK CONTROL SYSTEM: DATA LIST / ACTIVE TEST (2013 FR-S)		

DATA LIST / ACTIVE TEST

1. READ DATA LIST

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Main Body / Data List.
- (e) Read the Data List according to the display on the Techstream.

Main Body

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Wireless Control	Wireless door lock control function / OFF or ON	Customized setting displayed	-
Wireless Buzzer Resp	Wireless buzzer response / OFF or ON	Customized setting displayed	-
Hazard Answer Back	Hazard answer-back of wireless / OFF or ON	Customized setting displayed	-
Open Door Warning	Open door warning / OFF or ON	Customized setting displayed	-
Unlock 2 Operation	2 times operation of wireless unlock / OFF or ON	Customized setting displayed	-
Panic Function	Panic function / OFF or ON	Customized setting displayed	-

D Door Courtesy SW	Driver side door courtesy light switch signal / ON or OFF	ON: Driver side door opened OFF: Driver side door closed	-
P Door Courtesy SW	Passenger side door courtesy light switch signal / ON or OFF	ON: Passenger side door opened OFF: Passenger side door closed	-
Luggage Courtesy SW	Luggage compartment door courtesy switch signal / OFF or ON	ON: Luggage compartment door is open OFF: Luggage compartment door is closed	-
IG SW	Ignition switch IG signal / ON or OFF	ON: Ignition switch ON OFF: Ignition switch off	-
ACC SW	Ignition switch ACC signal / ON or OFF	ON: Ignition switch ACC OFF: Ignition switch off	-
Key Unlock Warning SW	Unlock warning switch / OFF or ON	OFF: Ignition key is not inserted ON: Ignition key is inserted	-
Hazard Output	Hazard warning light output / OFF or ON	OFF: Not during hazard answer-back operation ON: During hazard answer-back operation	-
Wireless Buzzer Output	Wireless door lock buzzer output / OFF or ON	OFF: Not during wireless door lock buzzer answer-back operation ON: During wireless door lock buzzer answer-back operation	-

2. PERFORM ACTIVE TEST

HINT:

Using the Techstream to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in troubleshooting is one way to save diagnostic time. Data List information can

be displayed while performing Active Tests.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Main Body / Active Test.
- (e) Perform the Active Test according to the display on the Techstream.

Main Body

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Door Lock	Door lock motor	Unlock / Lock	-
D-Door Unlock	Driver side door lock motor	OFF / ON	-

Title: DOOR LOCK: WIRELESS DOOR LOCK CONTROL SYSTEM: DIAGNOSIS SYSTEM (2013 FR-S)		

DIAGNOSIS SYSTEM

1. CHECK DLC3

- (a) Check the DLC3  .

2. INSPECT BATTERY VOLTAGE

- (a) Measure the battery voltage.

Standard Voltage:

11 to 14 V

If the voltage is below 11 V, recharge or replace the battery.

3. SELF-DIAGNOSTIC MODE (OPERATING IGNITION KEY CYLINDER)

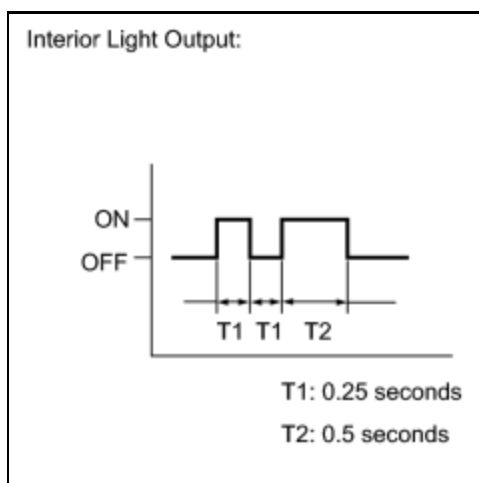

- (a) Switch to self-diagnostic mode.
- (1) Insert the key into the ignition key cylinder and remove it.
 - (2) Within 5 seconds after the key is removed, insert it into the ignition key cylinder and then turn the ignition switch to ON then off once. (End in off)
 - (3) Within 30 seconds after turning the ignition switch off, perform the following 9 times: Turn the ignition switch to ON then off. (End in off)

HINT:

Turning the ignition switch to ON after the procedure above has been completed will end the self-diagnostic mode.

NOTICE:

If the system fails to enter self-diagnostic mode, the system will return to normal mode.

- (b) Check that the system has switched to self-diagnostic mode by checking the interior light output pattern.

Wireless Door Lock Buzzer Output:

(c) Check that the system has switched to self-diagnostic mode by checking the wireless door lock buzzer output pattern.

(d) Check the diagnostic outputs when the door control transmitter module set sub-assembly switch is held down. The diagnostic outputs can be checked by the interior light and wireless door lock buzzer patterns.

Interior Light and Wireless Door Lock Buzzer Output:

Normal Wave

(LOCK / UNLOCK / LUGGAGE OPEN / PANIC Switch):

- T1: 0.25 seconds (Interior Light)
0.125 seconds (Wireless Door Lock Buzzer)
- T2: 0.5 seconds (Interior Light)
0.25 seconds (Wireless Door Lock Buzzer)

Unmatching Recognition Code:

No Diagnostic Output:

Title: DOOR LOCK: WIRELESS DOOR LOCK CONTROL SYSTEM: DTC CHECK / CLEAR (2013 FR-S)		

DTC CHECK / CLEAR

1. CHECK DTC

(a) DTC check

- (1) Connect the Techstream to the DLC3.
- (2) Turn the ignition switch to ON.
- (3) Turn the Techstream on.
- (4) Enter the following menus: Body Electrical / Main Body / Trouble Codes.
- (5) Check for DTCs.

(b) DTC clear

- (1) Connect the Techstream to the DLC3.
- (2) Turn the ignition switch to ON.
- (3) Turn the Techstream on.
- (4) Enter the following menu: Body Electrical / Main Body / Trouble Codes.
- (5) Clear the DTCs by following the directions on the Techstream display.

Title: DOOR LOCK: WIRELESS DOOR LOCK CONTROL SYSTEM: No Answer-Back (2013 FR-S)		

[No Answer-Back](#)

DESCRIPTION

In some cases, wireless door lock control functions are normal but the hazard warning light and/or wireless door lock buzzer answer-back function(s) does not operate. In such cases, hazard warning light and wireless door lock buzzer signal outputs from the main body ECU (network gateway ECU) may be malfunctioning.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	READ VALUE USING TECHSTREAM (ANSWER-BACK OPERATION)
-----------	--

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Main Body / Utility / Customize / Wireless Door Lock.

(e) Select the setting by referring to the table below.

DISPLAY	DEFAULT	CONTENT	SETTING	RELEVANT ECU
Hazard Answer Back	ON	When the doors are locked by wireless operation, the hazard warning lights flash once. When the doors are unlocked by wireless operation, the hazard warning lights flash twice.	OFF or ON	Main body ECU (network gateway ECU)
Wireless Buzzer Resp	ON	Wireless door lock buzzer response	OFF or ON	Main body ECU (network gateway ECU)
Wireless Buzzer Vol	Level 5	Wireless door lock buzzer volume	Level 7, Level 6, Level 5, Level 4, Level 3, Level 2, Level 1 or Level 0	Main body ECU (network gateway ECU)

Result:

RESULT	PROCEED TO
Both items are ON and except Level 0	A
Either item is OFF or Level 0	B

B ► **PERFORM CUSTOMIZE FUNCTION**

A

2.	CHECK WIRELESS DOOR LOCK CONTROL FUNCTIONS
-----------	---

(a) Check the wireless door lock control function using the door control transmitter module set sub-assembly.

Result:

RESULT	PROCEED TO
Wireless door lock/unlock operates normally.	A
Wireless door lock/unlock does not operate normally.	B

B ► **GO TO PROBLEM SYMPTOMS TABLE**

A

3.	CHECK WIRELESS ANSWER-BACK OPERATION
-----------	---

(a) Check the wireless answer-back operation using the door control transmitter module set sub-assembly.

Result:

RESULT	PROCEED TO
Only wireless door lock buzzer answer-back does not occur.	A
Only hazard warning light answer-back does not occur.	B

B ▶ HAZARD WARNING LIGHTS OPERATION

A
▼

4.	PERFORM ACTIVE TEST USING TECHSTREAM (WIRELESS DOOR LOCK BUZZER)
-----------	---

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Main Body / Active Test.
- (e) Perform the Active Test according to the display on the Techstream.

Main Body

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Wireless Buzzer	Turns the wireless door lock buzzer	ON/OFF	-

Result:

RESULT	PROCEED TO
Wireless door lock buzzer does not turn on/off.	A
Wireless door lock buzzer turns on/off.	B

B ▶ REPLACE MAIN BODY ECU (NETWORK GATEWAY ECU)

A

5.	CHECK HARNESS AND CONNECTOR (WIRELESS DOOR LOCK BUZZER - MAIN BODY ECU)
-----------	--

- (a) Disconnect the A63 wireless door lock buzzer connector.
- (b) Disconnect the A73 main body ECU (network gateway ECU) connector.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A63-1 (+) - A73-1 (BZR)	Always	Below 1 Ω
A63-2 (-) - Body ground	Always	Below 1 Ω
A63-1 (+) - Body ground	Always	10 k Ω or higher

NG **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

6.	REPLACE WIRELESS DOOR LOCK BUZZER
-----------	--

- (a) Temporarily replace the wireless door lock buzzer with a new one .

NEXT

7.	CHECK WIRELESS DOOR LOCK BUZZER OPERATION
-----------	--

- (a) Check the operation of the wireless answer-back function.

OK:

Wireless answer-back function operates normally.

NG **REPLACE MAIN BODY ECU (NETWORK GATEWAY ECU)**

OK ► END (WIRELESS DOOR LOCK BUZZER WAS DEFECTIVE)

8. HAZARD WARNING LIGHTS OPERATION

(a) Check that the hazard warning light blinks when the hazard warning signal switch is pressed.

OK:
Hazard warning light signal is normally.

NG ► GO TO LIGHTING SYSTEM (PROBLEM SYMPTOMS TABLE)

OK
▼

9. INSPECT INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY

- (a) Remove the instrument panel junction block assembly INFO.
- (b) Remove the main body ECU (network gateway ECU) from the instrument panel junction block assembly.
- (c) Measure the resistance according to the value(s) in the table below.

Text in Illustration

*a	Component without harness connected (Instrument Panel Junction Block Assembly)	-	-
----	---	---	---

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3B-14 - MB-3 (HZR)	Always	Below 1 Ω
3B-16 - MB-3 (HZR)	Always	Below 1 Ω

NG ▶ REPLACE INSTRUMENT PANEL JUNCTION
BLOCK ASSEMBLY

OK ▶ REPLACE MAIN BODY ECU (NETWORK
GATEWAY ECU)

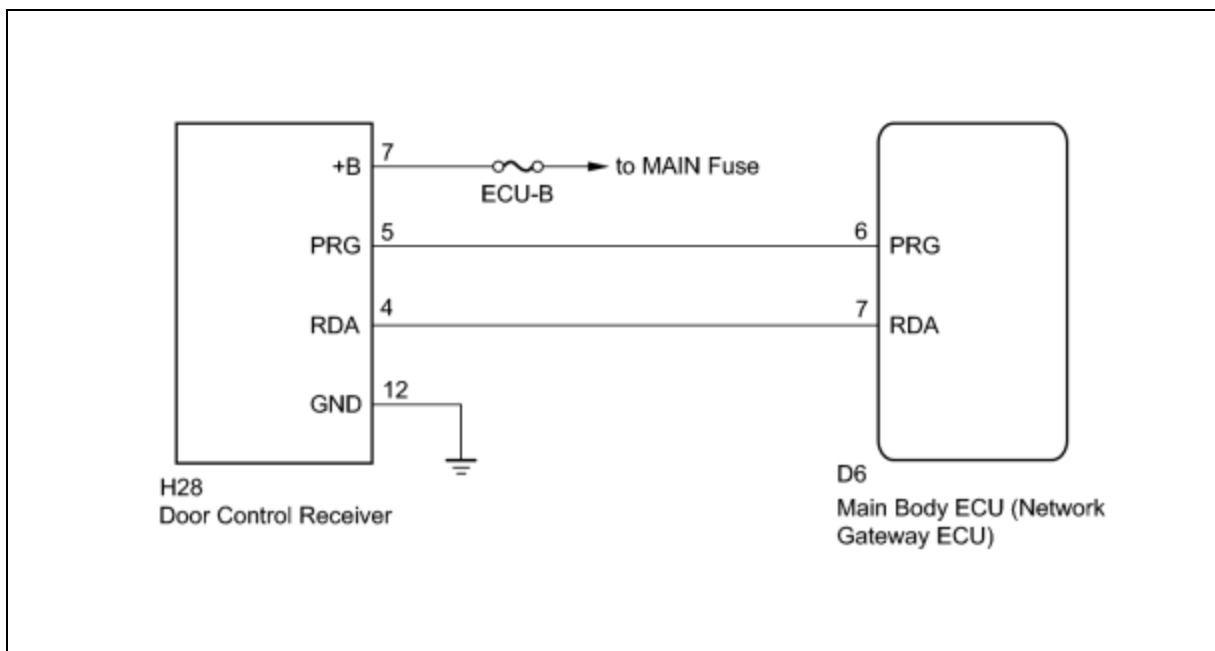

Last Modified: 3-27-2012	6.4 J	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000Z4T03ZX
Title: DOOR LOCK: WIRELESS DOOR LOCK CONTROL SYSTEM: Only Wireless Control Function is Inoperative (2013 FR-S)		

Only Wireless Control Function is Inoperative

DESCRIPTION

The door control receiver receives signals from the transmitter and sends these signals to the main body ECU (network gateway ECU). The main body ECU (network gateway ECU) then controls all doors by sending lock/unlock signals to each door.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1. CHECK POWER DOOR LOCK OPERATION

(a) When the door control switch on the power window regulator master switch assembly is operated, check that the locked doors unlock INFO.

OK:

Locked doors unlock.

NG ► GO TO POWER DOOR LOCK CONTROL SYSTEM

OK

2.	CHECK KEY REMINDER WARNING SYSTEM
-----------	--

(a) Check that the key reminder warning buzzer operates normally  .

OK:

Key reminder warning buzzer operates normally.

NG ► GO TO KEY REMINDER WARNING SYSTEM

OK

3.	SWITCH TO SELF DIAGNOSTIC MODE
-----------	---------------------------------------

(a) Switch to self-diagnostic mode by operating the ignition key cylinder.

- (1) Insert the key into the ignition key cylinder and remove it.
- (2) Within 5 seconds after the key is removed, insert it into the ignition key cylinder and then turn the ignition switch to ON then off once. (End in off)
- (3) Within 30 seconds after turning the ignition switch off, perform the following 9 times:
Turn the ignition switch to ON then off. (End in off)

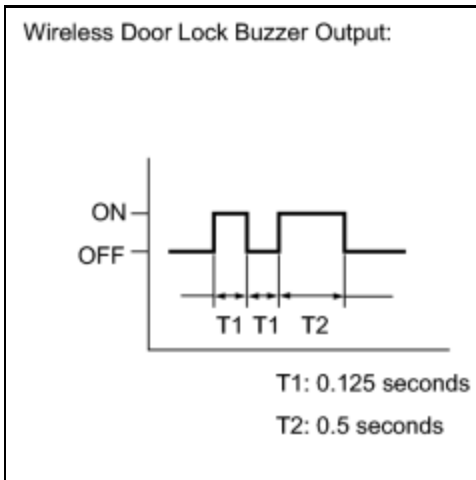

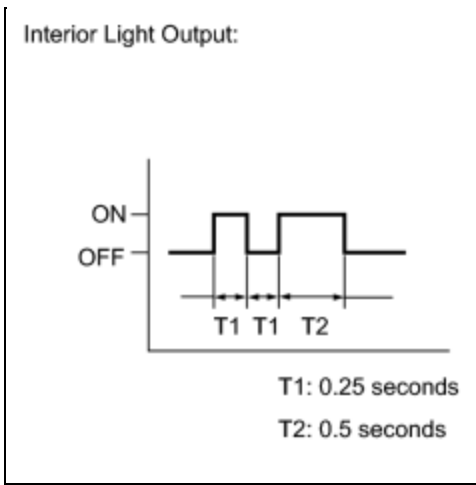

NOTICE:

If the system fails to enter self-diagnostic mode, the system will return to normal mode.

HINT:

Turning the ignition switch to ON after the procedure above has been completed will end the self-diagnostic mode.

(b) Check that the system has switched to self-diagnostic mode by checking the interior light output pattern.

(c) Check that the system has switched to self-diagnostic mode by checking the wireless door lock buzzer output pattern.

OK:
Flash pattern is same as illustration on left.

NEXT

4.	CHECK BY SELF DIAGNOSTIC MODE
-----------	--------------------------------------

(a) Check the diagnostic outputs when the door control transmitter module set sub-assembly switch is held down. The diagnostic outputs can be checked by the interior light and wireless door lock buzzer patterns.

Interior Light and Wireless Door Lock Buzzer Output:

Normal Wave

(LOCK / UNLOCK / LUGGAGE OPEN / PANIC Switch):

- T1: 0.25 seconds (Interior Light)
0.125 seconds (Wireless Door Lock Buzzer)
- T2: 0.5 seconds (Interior Light)
0.25 seconds (Wireless Door Lock Buzzer)

Unmatching Recognition Code:

No Diagnostic Output:

N

Result

RESULT	PROCEED TO
Normal wave (light flash pattern and buzzer pattern) is output.	A
Unmatching recognition code is output.	B
No diagnosis outputs	C

- B** ▶ REGISTER RECOGNITION CODE
- C** ▶ CHECK RESPONSE OF DOOR CONTROL RECEIVER (RESPONSE)
- A** ▶ REPLACE MAIN BODY ECU (NETWORK GATEWAY ECU)

5. REGISTER RECOGNITION CODE

(a) Check that the system can be switched to rewrite mode or add mode, and that a recognition code can be registered.

OK:

Recognition code can be registered.

- NG** ▶ REPLACE DOOR CONTROL TRANSMITTER MODULE SET SUB-ASSEMBLY

OK ► END

6. CHECK RESPONSE OF DOOR CONTROL RECEIVER (RESPONSE)

- (a) Prepare the door control transmitter from another vehicle.
- (b) Press and hold down the door control transmitter switch.
- (c) Check that an unmatching recognition code is output.

OK:

Unmatching recognition code is output.

NG ► CHECK WAVE ENVIRONMENT

OK

7. INSPECT TRANSMITTER BATTERY (VOLTAGE)

- (a) Remove the battery from the door control transmitter module that does not operate. Attach a lead wire (0.6 mm (0.0236 in.) or less in diameter including wire sheath) with tape or equivalent to the negative terminal INFO.

NOTICE:

Do not wrap the lead wire around the terminal, wedge it between terminals, or solder it. The terminal may be deformed or damaged, and the battery will not be able to be installed correctly.

Text in Illustration

*1	Lead Wire
----	-----------

- (b) Carefully pull the lead wire out from the position shown in the illustration and install the previously removed transmitter battery.

NOTICE:

When replacing the transmitter battery, before starting work, remove any static electricity that has built up by touching, for example, the vehicle to prevent the door control transmitter

module set from being damaged.

(c) Measure the voltage according to the value(s) in the table below.

HINT:

When measuring the battery voltage, press one of the transmitter switches.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
Battery positive (+) - Battery negative (-)	Ignition switch off, all doors closed and lock or unlock switch pushed	2.5 to 3.2 V

Text in Illustration

*a	GND
----	-----

NG ► REPLACE TRANSMITTER BATTERY

OK ► REPLACE DOOR CONTROL TRANSMITTER MODULE SET SUB-ASSEMBLY

8.	REPLACE TRANSMITTER BATTERY
-----------	------------------------------------

(a) Replace the transmitter battery [INFO](#) .

NEXT

9.	CHECK BY SELF DIAGNOSTIC MODE
-----------	--------------------------------------

(a) Inspect the diagnostic outputs when the door control transmitter module set sub-assembly switch is held down. The diagnostic outputs can be checked by the flash patterns of the interior lights and the buzzer patterns of the wireless door lock buzzer.

Interior Light and Wireless Door Lock Buzzer Output:

Normal Wave

(LOCK / UNLOCK / LUGGAGE OPEN / PANIC Switch):

- T1: 0.25 seconds (Interior Light)
0.125 seconds (Wireless Door Lock Buzzer)
- T2: 0.5 seconds (Interior Light)
0.25 seconds (Wireless Door Lock Buzzer)

Unmatching Recognition Code:

No Diagnostic Output:

N

Result

RESULT	PROCEED TO
Normal wave (light flash pattern and buzzer pattern) is output.	A
Unmatching recognition code is output	B
No diagnosis outputs	

B ▶ REPLACE DOOR CONTROL TRANSMITTER MODULE SET SUB-ASSEMBLY

A ▶ END (TRANSMITTER BATTERY IS DEFECTIVE)

10. CHECK WAVE ENVIRONMENT

(a) Bring the transmitter near the door control receiver, and perform a wireless operation check.

OK:
Wireless functions operate normally.

HINT:

- When the transmitter is brought near the door control receiver, the possibility of wave interference decreases, and it can be determined if wave interference is causing the problem symptom.

- If the inspection result is that the problem only occurs in certain locations or times of day, the possibility of wave interference is high. Also, added vehicle components may cause wave interference. If installed, remove them and perform the operation check.

NG  **AFFECTED BY WAVE INTERFERENCE**

OK

11.	INSPECT DOOR CONTROL RECEIVER (POWER SOURCE, GROUND)
------------	---

(a) Disconnect the H28 door control receiver connector.

(b) Measure the resistance and voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
H28-7 (+B) - Body ground	Always	11 to 14 V

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
H28-12 (GND) - Body ground	Always	Below 1 Ω

Text in Illustration

*a	Front view of wire harness connector (to Door Control Receiver)
----	---

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

12. INSPECT DOOR CONTROL RECEIVER (OUTPUT)

- Reconnect the H28 door control receiver connector.
- Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
H28-4 (RDA) - Body ground	Ignition switch off, all doors closed and door control transmitter switch off	11 to 14 V
	Ignition switch off, all doors closed and door control transmitter switch on	pulse generation

Text in Illustration

*a	Component with harness connected (Door Control Receiver)
----	---

NG ▶ REPLACE DOOR CONTROL RECEIVER

OK

13. CHECK HARNESS AND CONNECTOR (MAIN BODY ECU (NETWORK GATEWAY ECU) - DOOR CONTROL RECEIVER)

- Disconnect the D6 main body ECU (network gateway ECU) connector.
- Disconnect the H28 door control receiver connector.
- Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D6-7 (RDA) - H28-4 (RDA)	Always	Below 1 Ω
D6-6 (PRG) - H28-5 (PRG)	Always	Below 1 Ω
D6-7 (RDA) or H28-4 (RDA) - Body ground	Always	10 k Ω or higher
D6-6 (PRG) or H28-5 (PRG) - Body ground	Always	10 k Ω or higher

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

14.	REPLACE DOOR CONTROL RECEIVER
------------	--------------------------------------

(a) Temporarily replace the door control receiver with a new or normally functioning one

INFO .

NEXT

15.	REGISTER RECOGNITION CODE
------------	----------------------------------

(a) Perform the Registration procedures **INFO** .

NEXT

16.	CHECK DOOR CONTROL RECEIVER (OPERATION)
------------	--

(a) Check that the doors can be locked and unlocked by using the transmitter LOCK and UNLOCK switches.

OK:

Doors can be locked and unlocked with transmitter.

NG ▶ REPLACE MAIN BODY ECU (NETWORK GATEWAY ECU)

OK ▶ END (DOOR CONTROL RECEIVER IS DEFECTIVE)

Last Modified: 3-27-2012	6.4 D	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000003WRD00FX
Title: DOOR LOCK: WIRELESS DOOR LOCK CONTROL SYSTEM: OPERATION CHECK (2013 FR-S)		

OPERATION CHECK

1. FUNCTIONS AND OPERATING CONDITIONS

- (a) This wireless door lock control function operates only when the following 3 conditions are met:
- (1) There is no key in the ignition key cylinder.
 - (2) The power door lock system is functioning normally.
 - (3) The function is not disabled by customization.
- (b) The operating range differs depending on the situation.
- (1) The operating range differs depending on the user, the way the transmitter is held and the location.
 - (2) In certain areas, the operating range will be reduced due to the vehicle body shape and the influence of the surrounding environment.
 - (3) The transmitter's faint electric waves may be affected if the area has strong electric waves or noise. The transmitter's operating range may be reduced or the transmitter may not function.
 - (4) When the battery weakens, the operating range is reduced or the transmitter may not function.

HINT:

If the transmitter has had prolonged exposure to direct sunlight, such as being left on the instrument panel, the battery may weaken or other problems may occur.

2. CHECK WIRELESS DOOR LOCK CONTROL FUNCTIONS

HINT:

- The switches described below transmit signals and are built into the door control transmitter.
 - The transmitter's operating range must be taken into account while checks are being made.
- (a) Make sure that the vehicle is in a condition in which the wireless control functions can be operated (see above).
- (b) Check basic functions.
- (1) Check that all doors lock when lock switch is pressed.
 - (2) Check that the driver door unlocks when the unlock switch is pressed once, and unlocks all doors when pressed twice within 5 seconds.
 - (3) Check that the luggage compartment door opens when the luggage open switch is held down for 0.8 seconds or more.
- (c) Check the chattering prevention function.
- (1) When a switch is pressed, check that the corresponding operation occurs only once. When the switch is held down, check that the corresponding operation occurs only once and does not repeatedly activate. When the switch is pressed at 1-second intervals, check that the corresponding operation activates once for each press of the switch.
- (d) Check the automatic locking function.
- (1) When all doors are unlocked with the unlock switch and none of the doors are opened or

locked within 30 seconds, check that the doors are relocked automatically.

(e) Check the switch operation fail-safe function.

(1) If the key is in the ignition key cylinder, check that the doors cannot be locked by the lock switch. However, this does not apply when the system is in recognition code registration mode.

(f) Check the door ajar warning function.

(1) Check that the wireless door lock buzzer sounds for approximately 5 seconds when the lock switch is pressed with any of the doors ajar or open.

(g) Check the answer-back (hazard warning light) function.

(1) When the lock switch is pressed, check that the hazard warning lights flash once and all doors are locked.

(2) When the unlock switch is pressed, check that the hazard warning lights flash twice and all doors are unlocked.

(h) Check the answer-back (wireless door lock buzzer) function.

(1) When the lock switch is pressed, check that the buzzer sounds once simultaneously with the locking operation of all doors.

(2) When the unlock switch is pressed once, check that the buzzer sounds twice simultaneously with the unlocking operation of the driver door.

(3) When the luggage compartment door is opened by wireless operation, the wireless door lock buzzer sounds.

(i) Check the panic alarm control function

(1) Check that the horn sounds, the headlights and taillights flash and the interior lights remain on (when the light switch is turned to the door position) for 60 seconds by the theft alarm function when the panic switch is held down for 0.8 seconds or more. Also, check that the horn stops sounding and the lights stop flashing when any switch of the transmitter is pressed.

(j) Check the vehicle position sensing function

(1) If the following conditions are met 3 times within 5 seconds, the vehicle position sensing function will sound the horn once and flash the hazard warning lights 3 times.

- Ignition switch off
- Key is not inserted into the ignition key cylinder
- All doors and luggage compartment door closed
- Door control transmitter lock switch pressed

(k) Check the illuminated entry function.

(1) When all doors are locked and the unlock switch is pressed, check that the map light illuminates (when the light switch is in the DOOR position) and all doors are unlocked.

Title: DOOR LOCK: WIRELESS DOOR LOCK CONTROL SYSTEM: REGISTRATION (2013 FR-S)		

REGISTRATION

HINT:

- Register the recognition code when replacing the door control transmitter or the door control receiver.
- The Add mode is used to retain the already registered codes while registering a new recognition codes. This mode is used when adding a transmitter. If the number of registered codes exceeds 7 the previously registered code will be cleared in order, starting from the code registered first.
- Rewrite mode is used to clear all the previously registered codes and register only new recognition codes. This mode is used when exchanging the transmitter or the door control receiver for new one.
- Confirmation mode is used to confirm how many recognition codes have already been registered before an additional registration of a recognition code.
- Prohibition mode is used to clear all the registered codes and cancel the wireless door lock function. Use this mode when the transmitter is lost.
- All of the following registration procedures must be performed in order.

1. REGISTRATION OF RECOGNITION CODE (USING TECHSTREAM)

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Main Body / Utility / Wireless Code Registration.
- (e) Press both lock and unlock switches within 1 to 1.5 seconds.
- (f) Press either switch for more than 1 second within 3 seconds.
- (g) Perform either of the following to complete the registration of recognition codes:
 - Use a Techstream to send a completion command.
 - Disconnect the Techstream.
- (h) Perform the following after registration is completed.
 - (1) Perform the wireless door lock control operation check  .

HINT:

If the wireless door lock control does not operate, perform the registration procedure again.

Title: DOOR LOCK: WIRELESS DOOR LOCK CONTROL SYSTEM: SYSTEM DESCRIPTION (2013 FR-S)		

SYSTEM DESCRIPTION

1. WIRELESS DOOR CONTROL SYSTEM DESCRIPTION

(a) This system locks and unlocks the vehicle doors remotely. The wireless control system has the following features:

- The door control receiver performs the code identification procedure and the main body ECU (network gateway ECU) operates the door lock control. A serial data link is provided for communication between the receiver and main body ECU (network gateway ECU).
- A key-integrated type transmitter is used and it contains the following 4 switches: the door lock switch, door unlock switch, luggage open switch and panic switch.

2. FUNCTION OF MAIN COMPONENTS

COMPONENT	FUNCTION
Door control transmitter module set sub-assembly	<ul style="list-style-type: none"> • Has lock, unlock, luggage open and panic switches. • Transmits weak radio waves (recognition codes and function codes) to the door control receiver. • Illuminates indicator light (LED) during transmission.
Door control receiver	Receives weak radio waves from the door control transmitter module set sub-assembly and sends them to the main body ECU (network gateway ECU).
<ul style="list-style-type: none"> • Front door courtesy light switch LH/RH • Luggage door courtesy light switch 	<ul style="list-style-type: none"> • Turns on when a door is opened and turns off when it is closed. • Outputs door status signals (open or closed) to the main body ECU (network gateway ECU).
<ul style="list-style-type: none"> • Front door lock assembly LH • Front door lock assembly RH 	Built-in motor locks or unlocks door.
Main body ECU (network gateway ECU)	Sends wireless door lock control signals in response to the code data from the door control receiver and signals from each ECU.

3. SYSTEM FUNCTION

(a) The door control transmitter module set sub-assembly has door lock switch, door unlock switch, luggage open switch and panic switch. Operating these switches activates each function. The wireless door lock control system has the following functions:

HINT:

The default setting of the functions are on. Some of these functions can be customized

FUNCTION	OUTLINE
All door lock function	Pressing the lock switch locks all doors.
All door unlock function (Unlock 2 operation)	Pressing the unlock switch twice within 5 seconds unlocks all the doors after the driver door is unlocked.
Luggage compartment door open	Pressing the luggage door open switch of the door control transmitter module set sub-assembly for longer than about 0.8 seconds opens the luggage compartment door.
Answer-back function (Hazard warning light)	Hazard warning lights flash once when doors are locked, and flash twice when doors are unlocked to indicate that the request has been completed.
Answer-back function (Wireless door lock buzzer)	Wireless door lock buzzer sound once when doors are locked, and sound twice when doors are unlocked to indicate that the request has been completed.
Panic alarm function	<p>Pressing the panic switch of the door control transmitter module set sub-assembly for longer than about 0.8 seconds causes the following alarms to activate:</p> <ul style="list-style-type: none"> • Sound the vehicle horns. • Blinks the headlights, hazard warning lights and taillights. • Illuminates the interior lights (when the interior light door switch on). <p>While the panic alarm is operating, pressing any switch of the door control transmitter cancels the alarm operation.</p>
Vehicle Position Sensing Function	The vehicle position sensing function is a function that sounds the vehicle horn and flashes the hazard warning lights by operating the door control transmitter module set sub-assembly in order to indicate the vehicle's position to the user.
Door ajar warning function	The buzzer sounds when the lock switch is pressed when any of the doors are ajar, and it sounds for 10 seconds continuously. The buzzer stops when all doors are closed or the unlock switch is pressed.
Automatic locking function	If no doors are opened within 30 seconds after being unlocked by wireless door lock control, all doors are locked again automatically.
Illuminated entry function	When all the doors are locked, pressing unlock causes the interior light to come on simultaneously with the unlock operation.
Self-diagnostic function	<p>The system enters self-diagnostic mode under the following conditions.</p> <ul style="list-style-type: none"> • If the door control receiver receives normal radio waves from the door control transmitter module set sub-assembly when the system is in diagnostic mode, it flashes the interior light in a normal pattern that corresponds to the function of each switch.
Transmitter	

recognition code registration function	Enables 4 modes for registering (writing and storing) transmitter recognition codes in EEPROM, built into door control receiver.
--	--

4. TRANSMITTER RECOGNITION CODE REGISTRATION FUNCTION

(a) The table below shows the 4 ID registration function modes by which up to 7 different codes can be registered. The codes are electronically registered (written and stored) in the EEPROM that is contained in the door control receiver.

MODE	FUNCTION
Add mode	Adds a newly received code while preserving any previously registered codes. This mode is used when adding a new transmitter. If the number of registered codes exceeds 7 the oldest registered code is cleared first.
Rewrite mode	Clears all previously registered codes and registers only newly input codes.
Confirmation mode	Confirms how many codes are currently registered. When adding a new code, this mode is used to check how many codes already are stored.
Prohibition mode	Clears all the registered codes and disables the wireless door lock function. This mode is used when the transmitter is lost.

5. CONDITIONS THAT WIRELESS FUNCTIONS DO NOT OPERATE

(a) Lock function will not operate when either of the following conditions is met:

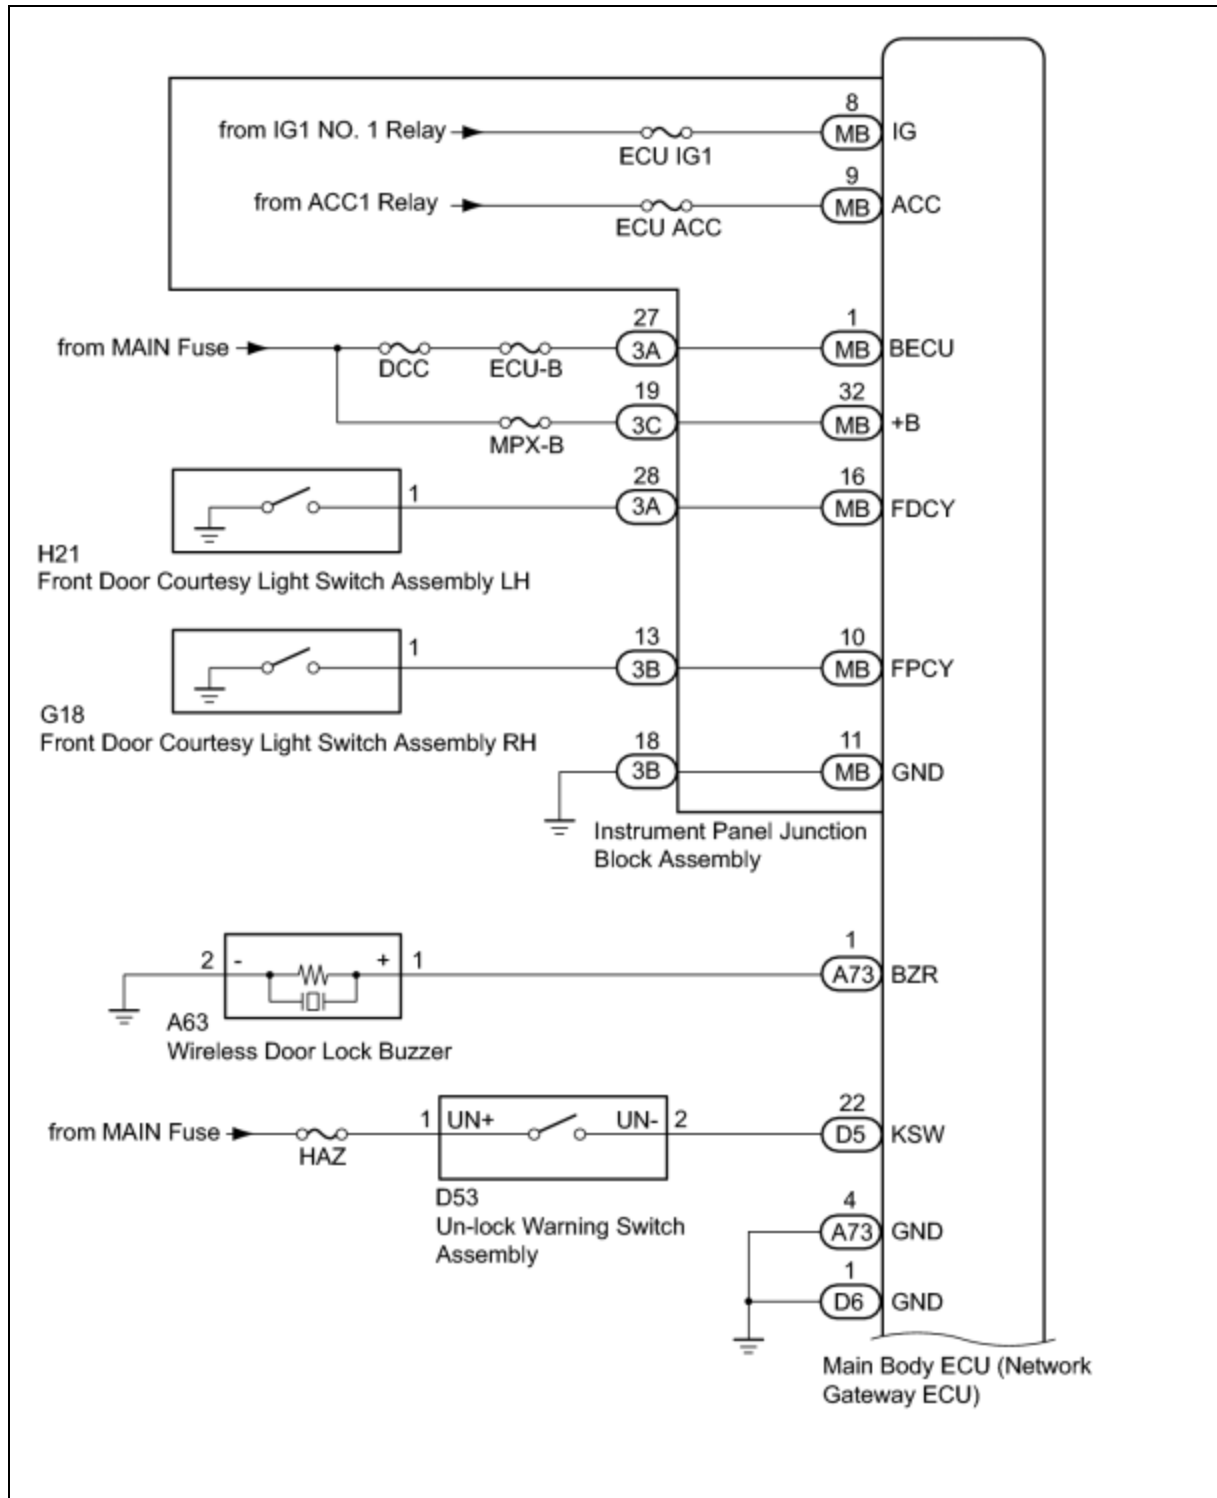

- Any of the doors is open.
- The key is inserted in the ignition key cylinder.

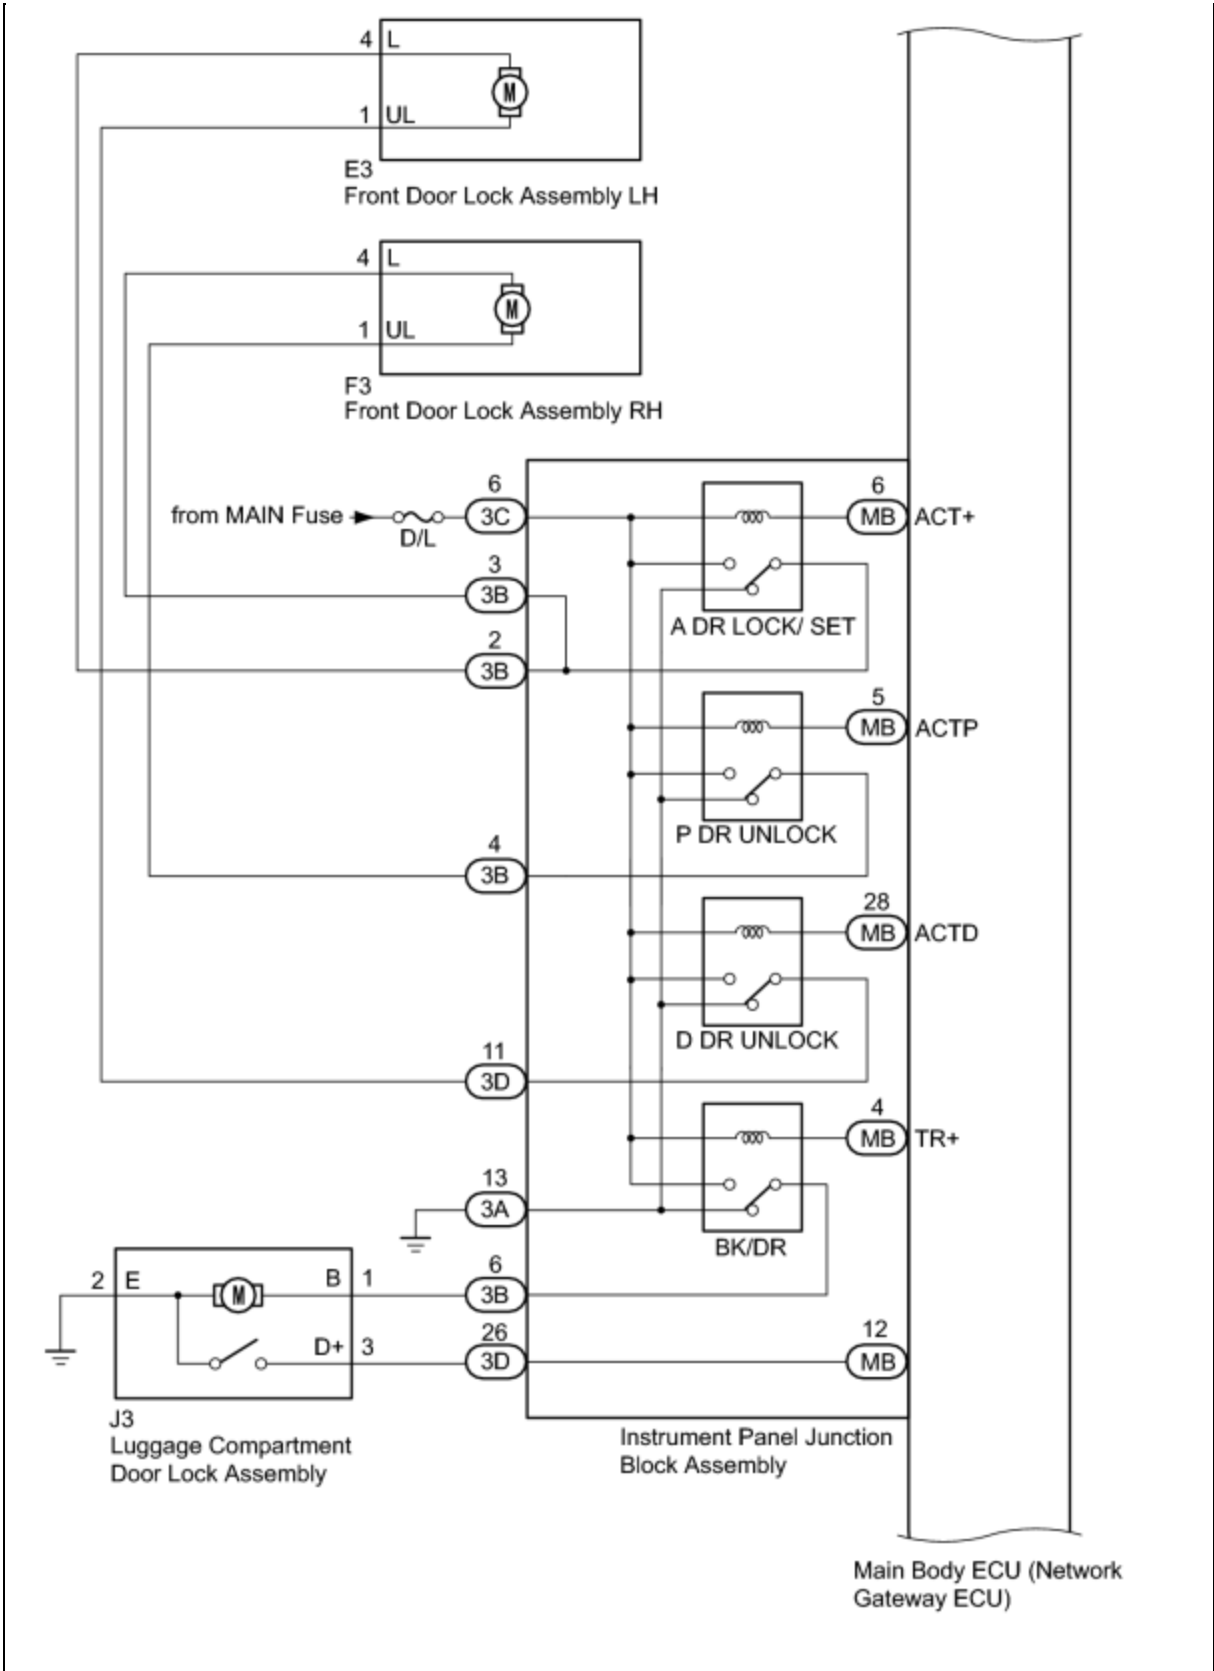

(b) Unlock function will not operate when the following condition is met:

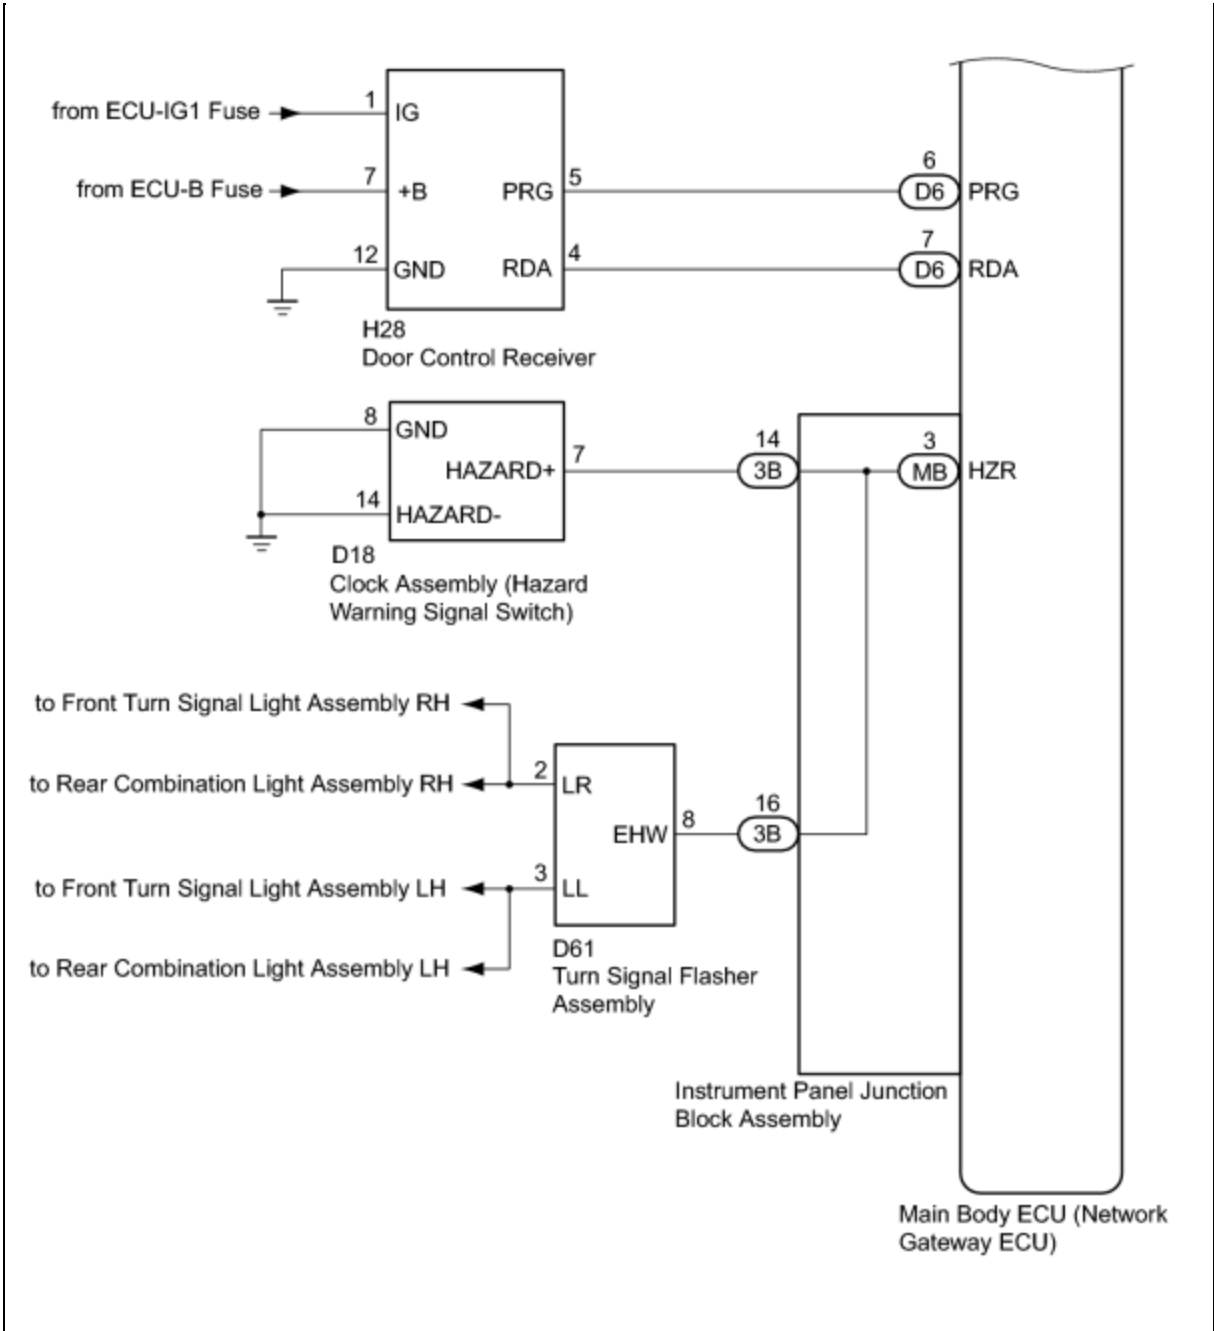

- The key is inserted in the ignition key cylinder.

Title: DOOR LOCK: WIRELESS DOOR LOCK CONTROL SYSTEM: TERMINALS OF ECU (2013 FR-S)		

TERMINALS OF ECU

1. CHECK INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY AND MAIN BODY ECU (NETWORK GATEWAY ECU)

Text in Illustration

*1	Instrument Panel Junction Block Assembly	*2	Main Body ECU (Network Gateway ECU)
----	--	----	-------------------------------------

- (a) Remove the main body ECU (network gateway ECU) from the instrument panel junction block assembly.
- (b) Disconnect the D5, D6 and A73 main body ECU (network gateway ECU) connectors.
- (c) Measure the resistance and voltage between each terminal of the wire harness side connectors and body ground.

TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
MB-1 (BECU) - Body ground	None - Body ground	Battery power supply	Always	11 to 14 V
MB-8 (IG) - Body ground	None - Body ground	Ignition switch power supply	Ignition switch ON	11 to 14 V
			Ignition switch off	Below 1 V
MB-9 (ACC) - Body ground	None - Body ground	ACC power supply	Ignition switch ACC	11 to 14 V
			Ignition switch off	Below 1 V
MB-11 (GND) - Body ground	None - Body ground	Ground	Always	Below 1 Ω
MB-32 (+B) - Body ground	None - Body ground	Battery power supply	Always	11 to 14 V
D5-22 (KSW) - Body ground	BR - Body ground	Unlock warning switch input	No key in ignition key cylinder (off)	Below 1 V
			Key inserted ignition key cylinder (on)	11 to 14 V
D6-1 (GND) - Body ground	B - Body ground	Ground	Always	Below 1 Ω
A73-4 (GND) - Body ground	B-Y - Body ground	Ground	Always	Below 1 Ω

- (d) Reconnect the D5, D6 and A73 main body ECU (network gateway ECU) connectors.
- (e) Install the main body ECU (network gateway ECU) to the instrument panel junction block assembly.
- (f) Measure the voltage and resistance, according to the valve(s) in the table below.

TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
3A-28 - Body ground	Y - Body ground	Driver side door courtesy light switch input	Driver side door open	Below 1 V
			Driver side door closed	11 to 14 V
3B-13 - Body ground	L - Body ground	Passenger side door courtesy light switch input	Passenger side door open	Below 1 V
			Passenger side door closed	11 to 14 V
3D-26 -	SB -	Luggage compartment	Luggage compartment door open	Below 1 V

Body ground	Body ground	door courtesy light switch input	Luggage compartment door closed	11 to 14 V
3B-2 - Body ground	Y - Body ground	Door lock motor lock drive output (for driver side)	Door control switch not pushed	Below 1 V
			Lock side of door control switch pushed	11 to 14 V
3B-3 - Body ground	L - Body ground	Door lock motor lock drive output (for passenger side)	Door control switch not pushed	Below 1 V
			Lock side of door control switch pushed	11 to 14 V
3D-11 - Body ground	R-G - Body ground	Door lock motor unlock drive output (for driver side)	Door control switch not pushed	Below 1 V
			Unlock side of door control switch pushed	11 to 14 V
3B-4 - Body ground	L-W - Body ground	Door lock motor unlock drive output (for passenger side)	Door control switch not pushed	Below 1 V
			Unlock side of door control switch pushed	11 to 14 V
3B-6 - Body ground	G - Body ground	Door lock motor lock drive output (for luggage compartment door)	Luggage door open button of door control transmitter module set sub-assembly not pressed	Below 1 V
			Luggage door open button of door control transmitter module set sub-assembly pressed	11 to 14 V
A73-1 - Body ground	V - Body ground	Wireless door lock buzzer signal	Wireless door lock buzzer off	Below 1 V
			Wireless door lock buzzer on	Pulse generation
D6-6 (PRG) - Body ground	R - Body ground	Signal output to door control receiver	Key inserted in ignition key cylinder → Key pulled out of ignition key cylinder	11 to 14 V → Pulse generation → 11 to 14 V
D6-7 (RDA) - Body ground	V - Body ground	Signal input from door control receiver	Ignition switch off, all doors closed and transmitter switch not pressed	11 to 14 V
			Ignition switch off, all doors closed and transmitter switch pressed	Pulse generation

2. CHECK DOOR CONTROL RECEIVER

- (a) Disconnect the H28 door control receiver connector.
- (b) Measure the resistance and voltage according to the value(s) in the table below.

--	--	--	--

TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
H28-1 (IG) - Body ground	W - Body ground	Ignition switch power supply	Ignition switch ON	11 to 14 V
			Ignition switch off	Below 1 V
H28-7 (+B) - Body ground	Y-R - Body ground	Battery power supply	Always	11 to 14 V
H28-12 (GND) - Body ground	B - Body ground	Ground	Always	Below 1 Ω

(c) Reconnect the H28 door control receiver connector.

(d) Measure the voltage according to the value(s) in the table below.

TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
H28-5 (PRG) - Body ground	P - Body ground	Signal input from main body ECU (network gateway ECU)	Key inserted in ignition key cylinder → Key pulled out of ignition key cylinder	11 to 14 V → Pulse generation → 11 to 14 V
H28-4 (RDA) - Body ground	R - Body ground	Signal output to main body ECU (network gateway ECU)	Ignition switch off, all doors closed and door control transmitter switch not pressed	11 to 14 V
			Ignition switch off, all doors closed and door control transmitter switch pressed	Pulse generation

Title: HEATING / AIR CONDITIONING: AIR CONDITIONING PANEL: INSPECTION (2013 FR-S)		

INSPECTION

1. INSPECT NO. 3 HEATER CONTROL SUB-ASSEMBLY

(a) Check the heater control assembly resistance.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
2(B) - 3(A/C)	A/C switch OFF	10 k Ω or higher
2(B) - 4(LED-)	A/C switch OFF	10 k Ω or higher
3(A/C) - 4(LED-)	Always	Below 1 Ω
2(B) - 3(A/C)	A/C switch ON	Below 1 Ω
2(B) - 4(LED-)	A/C switch ON	Below 1 Ω
5 - 6	Always	Below 1 Ω

Text in Illustration

*1	A/C Switch
*a	Component without harness connected (No. 3 heater control sub-assembly)

(c) Check that the A/C Switch illumination.

OK:

MEASUREMENT CONDITION	SPECIFIED CONDITION
Battery positive (+) → 5	

Battery negative (-) → 6	illuminates
--------------------------	-------------

(d) Check that the indicator light.

Standard:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
Battery positive (+) → 2 Battery negative (-) → 4	A/C switch OFF	go out
Battery positive (+) → 2 Battery negative (-) → 4	A/C switch ON	come on

2. INSPECT HEATER CONTROL SUB-ASSEMBLY

(a) Check the heater control assembly resistance.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
each terminal - 5(E)	A/C switch OFF	10 k Ω or higher
10(L) - 5(E)	A/C switch LO	Below 1 Ω
10(L) - 5(E) - 3(M&M1)	A/C switch LO - M1	Below 1 Ω
10(L) - 5(E) - 3(M&M1)	A/C switch M1	Below 1 Ω
10(L) - 5(E) - 3(M&M1) - 6(M2)	A/C switch M1 - M2	Below 1 Ω
10(L) - 5(E) - 6(M2)	A/C switch M2	Below 1 Ω
10(L) - 5(E) - 6(M2) - 1(H)	A/C switch M2 - HI	Below 1 Ω

Text in Illustration

*a	OFF
*b	LO

*c	M1
*d	M2
*e	HI
*f	Component without harness connected (heater control sub-assembly)

(d) Check the heater control assembly resistance.

(e) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
2(RDEF+) - 4(RDEF-)	Rr DEF switch OFF	10 k Ω or higher
2(RDEF+) - 4(RDEF-)	Rr DEF switch ON	Below 1 Ω

Text in Illustration

*1	Rr DEF switch
*a	Component without harness connected (heater control sub-assembly)

(f) Check that the Rr DEF switch illumination.

OK:

MEASUREMENT CONDITION	SPECIFIED CONDITION
Battery positive (+) \rightarrow 7 Battery negative (-) \rightarrow 5	illuminates

(g) Check that the indicator light.

Standard:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
Battery positive (+) \rightarrow 6(IND+) Battery negative (-) \rightarrow 8(IND-)	Rr DEF switch OFF	go out

Battery positive (+) → 6(IND+) Battery negative (-) → 8(IND-)	Rr DEF switch ON	come on
--	------------------	---------

3. INSPECT NO. 1 HEATER CONTROL SUB-ASSEMBLY

(a) Check that the FRS switch illumination.

OK:

MEASUREMENT CONDITION	SPECIFIED CONDITION
Battery positive (+) → 7 Battery negative (-) → 6	illuminates

Text in Illustration

*1	FRS switch
*a	Component without harness connected (No. 1 heater control sub-assembly)

(b) Check that the indicator light.

Title: HEATING / AIR CONDITIONING: AIR CONDITIONING PRESSURE SENSOR: ON-VEHICLE INSPECTION (2013 FR-S)		

ON-VEHICLE INSPECTION

1. INSPECT AIR CONDITIONER TUBE AND ACCESSORY ASSEMBLY

(a) Check the wire harness.

(1) Disconnect the air air conditioner tube and accessory assembly connector.

(2) Using an ohmmeter, measure the resistance of the wire harness side connector.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2(E) - Body ground	Always	Below 1 Ω
2(E) - 4(B)	Ignition switch ON	Below 1 Ω

Text in Illustration

*a	Component without harness connected (air conditioner tube and accessory assembly)
----	--

(b) Check the air conditioning pressure sensor.

(1) Install a manifold gauge set.

(2) Apply pressure on the sensor as indicated in the table below, and check the resistance between the terminals.

Text in Illustration

*1	Sensor Part
----	-------------

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1(AC) - 4(B)	0 kPa (No Pressure applied)	10 k Ω or higher
1(AC) - 4(B)	1520 kPa (15.5 kgf/cm ² , 221 psi)	Below 1 Ω

2(E) - 3(ACP)	0 kPa (No Pressure applied)	10 kΩ or higher
2(E) - 3(ACP)	22.5 kPa (0.23 kgf/cm ² , 33.0 psi) or more and below 3140 kPa (32 kgf/cm ² , 455 psi)	Below 1 Ω
2(E) - 3(ACP)	3140 kPa (32 kgf/cm ² , 455 psi) or more	10 kΩ or higher

Title: HEATING / AIR CONDITIONING: AIR CONDITIONING SYSTEM: Air Conditioning Compressor Magnetic Clutch Circuit (2013 FR-S)		

Air Conditioning Compressor Magnetic Clutch Circuit

DESCRIPTION

When the No. 3 heater control sub-assembly is turned on, a magnetic clutch on signal is sent from the AC terminal of the ECM. Then, the engine room junction block assembly turns on to operate the magnetic clutch assembly.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1.	READ VALUE USING TECHSTREAM
----	------------------------------------

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Powertrain / Engine and ETC / Data List.
- (e) Check the value(s) by referring to the table below.

Engine

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
A/C Signal	A/C switch status / ON or OFF	ON: A/C switch on OFF: A/C switch off	The air conditioning control assembly sends the A/C switch signal to the ECM via CAN communication.

OK:
The display is as specified in the normal condition column.

NG ▶ **INSPECT NO. 3 HEATER CONTROL SUB-ASSEMBLY**

OK
▼

2.	READ VALUE USING TECHSTREAM
-----------	------------------------------------

- (a) Enter the following menus: Body Electrical/ Air Conditioner/ Data List.
- (b) Check the value(s) by referring to the table below.

Air Conditioner

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Pressure Switch Operation	Pressure Switch status / Normal or Abnormal	Normal	-

OK:
The display is as specified in the normal condition column.

NG ▶ **CHECK REFRIGERANT VOLUME**

OK
▼

3. INSPECT HEATER RELAY

- (a) Remove the heater relay from the engine room relay block and junction block.
- (b) Inspect the heater relay NFC.

NG ▶ REPLACE HEATER RELAY

OK
▼

4. CHECK HARNESS AND CONNECTOR (HEATER RELAY - POWER SOURCE)

(a) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
5 - Body ground	Ignition switch off	Below 1 V
	Ignition switch on	11 to 14V

Text in Illustration

*1	Component without relay installed (Engine Room Relay Block)
----	---

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR

OK
▼

5. CHECK HARNESS AND CONNECTOR (HEATER RELAY - COMPRESSOR WITH

MAGNET CLUTCH)

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
C17-1(MG+) - 3	Always	Below 1 Ω
C17-1(MG+) - Body ground	Always	10 k Ω or higher

NG  REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

6. INSPECT COMPRESSOR WITH MAGNET CLUTCH

(a) Inspect the compressor with magnet clutch  .

NG  REPLACE COMPRESSOR WITH MAGNET CLUTCH

OK

7. CHECK HARNESS AND CONNECTOR (HEATER RELAY - AIR CONDITIONER TUBE AND ACCESSORY ASSEMBLY)

(a) Disconnect the A7 air conditioning tube and accessory assembly connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2 - A7-1(AC)	Always	Below 1 Ω
2 - Body ground	Always	10k Ω or higher

NG  REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

8. CHECK HARNESS AND CONNECTOR (HEATER RELAY - ECM)

(a) Disconnect the A33 ECM connector.

(b) Measure the resistance according to the valve(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - A35-35(AC)	Always	Below 1 Ω
1 - Body ground	Always	10k Ω or higher

Text in Illustration

*1	Component without relay installed (Engine Room Relay Block)
----	--

NG REPAIR OR REPLACE HARNESS OR CONNECTOR

OK REPLACE ECM

9.	INSPECT NO. 3 HEATER CONTROL SUB-ASSEMBLY
-----------	--

- (a) Remove the No. 3 heater control sub-assembly INFO.
- (b) Inspect the No. 3 heater control sub-assembly INFO.

NG ▶ **REPLACE NO. 3 HEATER CONTROL SUB-ASSEMBLY**

OK
▼

10.	CHECK HARNESS AND CONNECTOR (NO. 3 HEATER CONTROL SUB-ASSEMBLY - POWER SOURCE)
------------	---

- (a) Measure the voltage according to the valve(s) in the table below.
Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D21-2(B) - Body ground	<ul style="list-style-type: none"> Ignition switch on Blower switch: on 	11 to 14 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK
▼

11.	CHECK HARNESS AND CONNECTOR (NO. 3 HEATER CONTROL SUB-ASSEMBLY - MAIN BODY ECU (NETWORK GATEWAY ECU))
------------	--

- (a) Disconnect the D6 main body ECU (network gateway ECU) connector.
- (b) Measure the resistance according to the value(s) in the table below.
Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D6-17 - D21-3(A/C)	Always	Below 1 Ω
D6-17 - Body ground	Always	10 kΩ or higher

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ▶ REPLACE ECM

12.	CHECK REFRIGERANT VOLUME
------------	---------------------------------

(a) Check the refrigerant volume INFO

NG ▶ CHARGE REFRIGERANT

OK
▼

13.	CHECK HARNESS AND CONNECTOR (AIR CONDITIONER TUBE AND ACCESSORY ASSEMBLY - POWER SOURCE)
------------	---

(a) Disconnect the A7 air conditioning tube and accessory assembly connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A7-4(B) - Body ground	Ignition switch on	11 to 14 V

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR

OK
▼

14.	CHECK HARNESS AND CONNECTOR (AIR CONDITIONER TUBE AND ACCESSORY ASSEMBLY - BODY GROUND)
------------	--

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A7-2(E) - Body ground	Always	Below 1 Ω

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

15.	CHECK HARNESS AND CONNECTOR (AIR CONDITIONER TUBE AND ACCESSORY ASSEMBLY - ECM)
------------	--

- (a) Disconnect the A33 ECM connector.
- (b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A7-3(ACP) - A33-8(ACP)	Always	Below 1 Ω
A7-3(ACP) - Body ground	Always	10 k Ω or higher

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

16.	CHECK HARNESS AND CONNECTOR (AIR CONDITIONER TUBE AND ACCESSORY ASSEMBLY - HEATER RELAY)
------------	---

- (a) Remove the heater relay from the engine room relay block and junction block.
- (b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A7-1(AC) - 2	Always	Below 1 Ω

NG ▶ REPAIR OR REPLACE HARNESS OR
CONNECTOR

OK

17. INSPECT AIR CONDITIONER TUBE AND ACCESSORY ASSEMBLY

(a) Inspect the air conditioning tube and accessory assembly 

NG ▶ REPLACE AIR CONDITIONER TUBE AND
ACCESSORY ASSEMBLY

OK ▶ REPLACE ECM

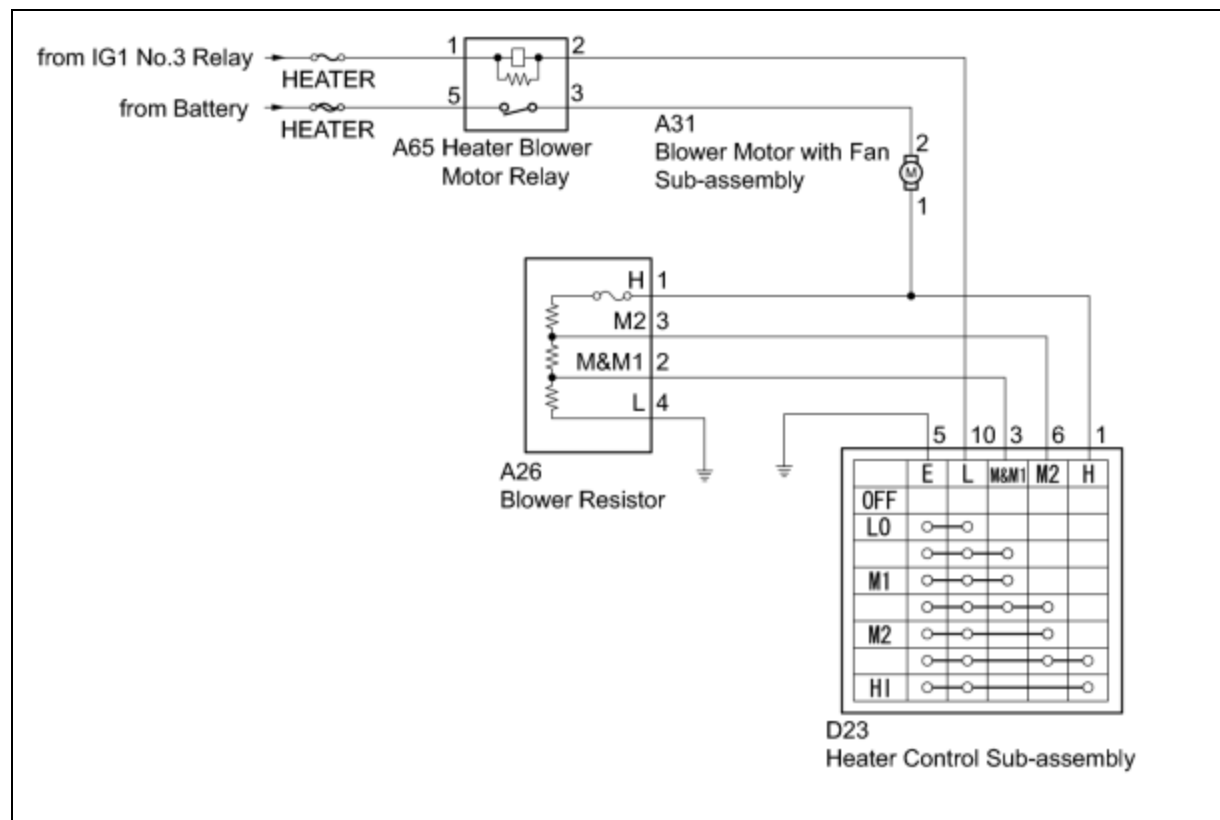

Last Modified: 3-27-2012	6.4 J	From: 201203

Title: HEATING / AIR CONDITIONING: AIR CONDITIONING SYSTEM: Blower Motor Circuit (2013 FR-S)		

Blower Motor Circuit

DESCRIPTION

When the heater control Sub-assembly is operated, the Heater relay will turn on to allow current to flow to the blower motor and then the motor will start rotating. Operating the heater control Sub-assembly switches the current flow between the blower resistor and body ground, thus, shifting the operating speed of the blower motor.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1.	INSPECT HEATER BLOWER MOTOR RELAY
----	-----------------------------------

(a) Remove the heater blower motor relay.

(b) Inspect the heater blower motor relay  .

NG  **REPLACE HEATER BLOWER MOTOR RELAY**

OK

2.	INSPECT BLOWER MOTOR WITH FAN SUB-ASSEMBLY
-----------	---

(a) Disconnect the A31 blower motor with fan sub-assembly connector.

(b) Inspect the blower motor with fan sub-assembly  .

NG  **REPLACE BLOWER MOTOR WITH FAN SUB-ASSEMBLY**

OK

3.	CHECK HARNESS AND CONNECTOR (HEATER BLOWER MOTOR RELAY - BLOWER MOTOR WITH FAN SUB-ASSEMBLY)
-----------	---

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A65-3 - A31-2	Always	Below 1 Ω
A65-3 - Body ground	Always	10 k Ω or higher

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4.	INSPECT HEATER CONTROL SUB-ASSEMBLY
-----------	--

- (a) Remove the heater control sub-assembly  .
- (b) Inspect the heater control sub-assembly  .

NG  **REPLACE HEATER CONTROL SUB-ASSEMBLY**

OK

5.	CHECK HARNESS AND CONNECTOR (HEATER BLOWER MOTOR RELAY - HEATER CONTROL SUB-ASSEMBLY)
-----------	--

- (a) Disconnect the D23 heater control sub-assembly connector.
- (b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A65-2 - D23-10	Always	Below 1 Ω
A65-2 - Body ground	Always	10 kΩ or higher

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

6.	CHECK HARNESS AND CONNECTOR (BLOWER MOTOR WITH FAN SUB-ASSEMBLY - HEATER CONTROL SUB-ASSEMBLY)
-----------	---

- (a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A31-1 - D23-1	Always	Below 1 Ω
A31-1 - Body ground	Always	10 kΩ or higher

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR

OK
▼

7.	CHECK HARNESS AND CONNECTOR (HEATER CONTROL SUB-ASSEMBLY - BODY GROUND)
-----------	--

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D23-5(E) - Body ground	Always	Below 1 Ω

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR

OK
▼

8.	INSPECT BLOWER RESISTOR
-----------	--------------------------------

(a) Remove the blower resistor INFO .

(b) Inspect the blower resistor INFO .

NG ▶ REPLACE BLOWER RESISTOR

OK
▼

9.	CHECK HARNESS OR CONNECTOR (HEATER CONTROL SUB-ASSEMBLY - BLOWER RESISTOR)
-----------	---

(a) Disconnect the A26 blower resistor connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D23-3(M&M1) - A26-2(M&M1)	Always	Below 1 Ω
D23-6(M2) - A26-3(M2)	Always	Below 1 Ω
D23-3(M&M1) - Body ground	Always	10 k Ω or higher
D23-6(M2) - Body ground	Always	10 k Ω or higher

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

10.	CHECK HARNESS OR CONNECTOR (BLOWER MOTOR WITH FAN SUB-ASSEMBLY - BLOWER RESISTOR)
------------	--

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A31-1 - A26-1(H)	Always	Below 1 Ω
A31-1 - Body ground	Always	10 k Ω or higher

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

11.	CHECK HARNESS AND CONNECTOR (BLOWER RESISTOR - BODY GROUND)
------------	--

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
-------------------	-----------	---------------------

A26-4(L) - Body ground	Always	Below 1 Ω
------------------------	--------	------------------

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ► PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE

Last Modified: 3-27-2012	6.4 U	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000001GFL04DX
Title: HEATING / AIR CONDITIONING: AIR CONDITIONING SYSTEM: DATA LIST / ACTIVE TEST (2013 FR-S)		

DATA LIST / ACTIVE TEST

1. DATA LIST

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

- Connect the Techstream to the DLC3.
- Turn the ignition switch to ON.
- Turn the Techstream on.
- Enter the following menus: Body Electrical / Main Body ECU / Data List.
- Check the value(s) by referring to the table below.

Main Body ECU

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Evaporator Fin Sensor Voltage	Evaporator temperature sensor / Min.: 0V Max.: 21.4V	Actual evaporator temperature displayed Sensor Voltage	-
A/C SW Input	A/C Switch Input OFF or ON	-	-
A/C SW Output	A/C Switch Output OFF or ON	-	-

Engine

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
A/C Pressure Normal SW	A/C Pressure Normal Switch OFF or ON	-	-
A/C Signal	A/C Signal / OFF or ON	A/C switch operated: ON (when switch is pressed)	-
		A/C switch not operated: OFF (when switch is not pressed)	-
A/C			

Magnetic Clutch Relay	A/C Magnetic Clutch Relay / OFF or ON	-	-
Air Conditioner FB Val	Compensation flow rate according to air conditioner load / Min.: -150 Max.: 149.99	-	For use when engine stall, starting problems or rough idle is present.

2. ACTIVE TEST

Using the Techstream to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Powertrain / Engine / Active Test.
- (e) Check the operation by referring to the table below.

Engine

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
A/C Magnetic Clutch Relay	A/C system operation	OFF, ON	-

Title: HEATING / AIR CONDITIONING: AIR CONDITIONING SYSTEM: HOW TO PROCEED WITH TROUBLESHOOTING (2013 FR-S)		

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedure to troubleshoot the air conditioning system.
- *: Use the Techstream.

1.	VEHICLE BROUGHT TO WORKSHOP
-----------	------------------------------------

NEXT

2.	INSPECT BATTERY VOLTAGE
-----------	--------------------------------

(a) Inspect the battery voltage.

Standard Voltage:

11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

NEXT

3.	CHECK COMMUNICATION FUNCTION OF CAN COMMUNICATION SYSTEM*
-----------	--

(a) Use the Techstream to check if the CAN communication system is functioning normally.

Result:

RESULT	PROCEED TO
CAN DTC is not output	A
CAN DTC is output	B

B **GO TO CAN COMMUNICATION SYSTEM**

A

4.	PROBLEM SYMPTOMS TABLE

Title: HEATING / AIR CONDITIONING: AIR CONDITIONING SYSTEM: PRECAUTION (2013 FR-S)		

PRECAUTION

1. DO NOT HANDLE REFRIGERANT IN AN ENCLOSED AREA OR NEAR AN OPEN FLAME

Text in Illustration

*a	Charging Cylinder
----	-------------------

2. ALWAYS WEAR EYE PROTECTION

3. BE CAREFUL NOT TO GET LIQUID REFRIGERANT IN YOUR EYES OR ON YOUR SKIN

If liquid refrigerant gets in your eyes or on your skin:

- (a) Wash the area with lots of cold water.

CAUTION:

Do not rub your eyes or skin.

- (b) Apply clean petroleum jelly to the skin.
- (c) Go immediately to a hospital or see a physician for professional treatment.

4. NEVER HEAT CONTAINER OR EXPOSE THE CONTAINER TO AN OPEN FLAME

5. BE CAREFUL NOT TO DROP CONTAINER OR APPLY PHYSICAL SHOCKS TO IT

6. DO NOT OPERATE COMPRESSOR WITHOUT ENOUGH REFRIGERANT IN REFRIGERANT SYSTEM

If there is not enough refrigerant in the A/C system, oil lubrication will be insufficient and the compressor may be damaged.

Necessary care should be taken to avoid this.

7. DO NOT OPEN HIGH PRESSURE MANIFOLD VALVE WHILE COMPRESSOR IS OPERATING

- (a) Open and close only the low pressure valve.

If the high pressure valve is opened, refrigerant flows in the reverse direction causing the charging cylinder to rupture.

Text in Illustration

*a	Wrong
*b	Okay

8. BE CAREFUL NOT TO OVERCHARGE SYSTEM WITH REFRIGERANT

If the system is overcharged with refrigerant, it causes problems such as insufficient cooling, poor fuel economy, engine overheating, etc.

9. DO NOT OPERATE ENGINE AND COMPRESSOR WITH NO REFRIGERANT

CAUTION:

Doing so may damage inside the compressor because the compressor parts always move regardless of whether the A/C system is turned on or off.

10. SUPPLEMENTAL RESTRAINT SYSTEM (SRS)

- (a) This vehicle is equipped with a Supplemental Restraint System (SRS) such as the driver, front passenger, side, and curtain shield airbags. Failure to carry out service operations in the correct sequence could cause the SRS to unexpectedly deploy during servicing, possibly leading to a serious accident. Before servicing (including removal or installation of parts, inspection or replacement), be sure to read the precautionary notices [INFO](#).

11. GENERAL PRECAUTION

- (a) While using the battery during inspection, do not bring the positive (+) and negative (-) tester probes too close to each other as a short circuit may occur.

Title: HEATING / AIR CONDITIONING: AIR CONDITIONING SYSTEM: PROBLEM SYMPTOMS TABLE (2013 FR-S)		

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

Title: HEATING / AIR CONDITIONING: AIR CONDITIONING SYSTEM: SYSTEM DESCRIPTION (2013 FR-S)		

SYSTEM DESCRIPTION

1. GENERAL

(a) The air conditioning system has the following controls.

CONTROL	OUTLINE
Manual Control	The air conditioning control assembly controls the damper positions and blower speed in accordance with the positions of the switches and dials (temperature control dial, blower switch, mode control dial and inlet control switch).
Defroster Control	Defroster control logic is used to improve defroster performance.
Diagnosis	A Diagnostic Trouble Code (DTC) is stored in memory when the air conditioning amplifier detects a problem with the air conditioning system.

2. MODE POSITION AND DAMPER OPERATION

(a) Mode Position and Damper Operation

Text in Illustration

	FOOT AND DEFROSTER	—	○	○	○	○
	F/D	—	○	—	○	○

- The size of each circle ○ indicates the ratio of airflow volume.

4. COMPRESSOR

(a) General:

(1) A compact and high performance scroll compressor with separator has been adopted.

(2) The scroll compressor with oil separator consists of a spirally wound fixed scroll and rotating scroll that form a pair, and oil separator, and a magnetic clutch.

The fixed scroll is integrated with the housing. Because the rotation of the shaft causes the rotating scroll to revolve while maintaining the same posture, the volume of the space that is partitioned by both scrolls varies to perform the suction, compression, and the discharge of the refrigerant gas.

A pin is attached behind the rotating scroll to prevent the autorotation of the rotating scroll, allowing it only to revolve.

Locating the suction port directly above the scrolls enables direct suction, thus realizing improved suction efficiency.

Containing a built-in oil separator, this compressor is able to separate the compressor oil that is intermixed with the refrigerant and circulates in the refrigeration cycle, thus realizing a reduction in the oil circulation rate.

Text in Illustration

*1	Fixed Scroll	*2	Rotating Scroll
*3	Pins	*4	Shaft

- (3) A CS (Centrifugal with Shutter) type oil separator has been adopted to reduce the circulation rate of the compressor oil that is intermixed with the refrigerant and circulates in the refrigeration cycle.

This oil separator is provided with a cylindrical pipe in the separator case, enabling the refrigerant gas that has been discharged through the discharge gas inlet to be separated into refrigerant gas and oil through centrifugal force, and minimizing the outflow of the oil to the discharge service port. As a result, the oil circulation rate has been reduced and makes energy savings possible.

*5	Oil	*6	Compressor Assembly
*7	Oil Separator	-	-
*a	Oil Circulation Ratio of 4%	*b	Oil Circulation Ratio of 1%

(b) Compressor with Magnet Clutch Operation

- (1) As the capacity of the compression chamber, which is created between the rotating scroll and the fixed scroll, increases in accordance with the revolution of the rotating scroll, refrigerant gas is drawn in from the intake port.
- (2) From the state at which the suction process has been completed, as the revolution of the rotating scroll advances further, the capacity of the compression chamber decreases gradually. Consequently, the refrigerant gas that has been drawn in becomes compressed gradually and is sent to the center of the fixed scroll. The compression of the refrigerant gas is completed when the rotating scroll completes approximately 2 revolutions.
- (3) When the compression of the refrigerant gas is completed and the refrigerant pressure becomes high, the refrigerant gas discharges through the discharge port located in the center of the fixed scroll by pushing the discharge valve.

Text in Illustration

*1	Suction	*2	Discharge
*3	Compression	*4	Discharge Port
*5	Rotating Scroll	*6	Fixed Scroll
*7	Intake Port	-	-

(4) The refrigerant gas that is discharged from the discharge port flows by rotating around the cylindrical pipe in the oil separator. At this time, the centrifugal force that is created during the rotation separates the refrigerant gas and the compressor oil due to the difference in their specific gravity. The refrigerant gas with the lighter specific gravity passes through the inside of the pipe and travels from the discharge service port to the outside of the compressor. The compressor oil with the heavier specific gravity is discharged through the oil discharge hole in the shutter and is stored in the oil storage chamber. Then, the

compressor oil is fed again into the compressor and circulates inside the compressor.

*3	Refrigerant and Compressor Oil	*4	Compressor Oil
*5	Valve Chamber D	*6	Service Port
*7	Pipe	*8	Case
*9	Oil Discharge Hole	*10	Oil Storage Chamber

5. EVAPORATOR TEMPERATURE SENSOR (NO. 1 COOLER THERMISTOR)

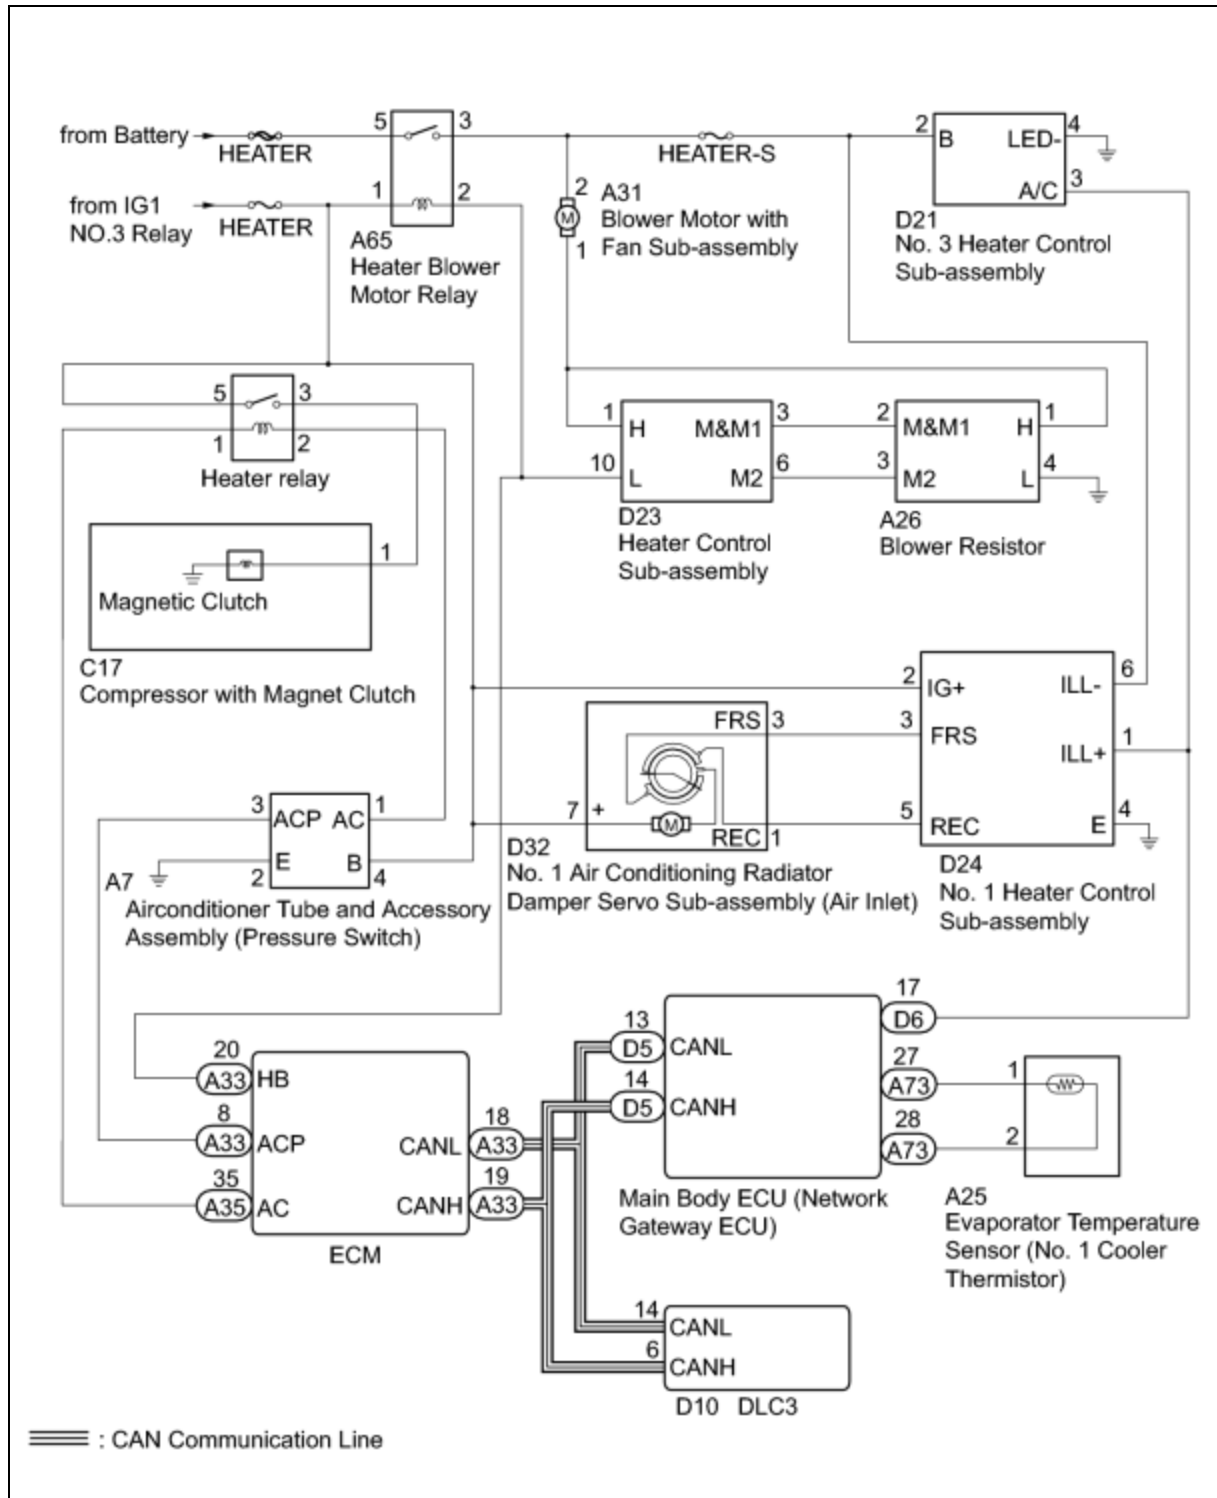

The evaporator temperature sensor (No. 1 cooler thermistor) detects the temperature of the cooled air immediately past the evaporator in the form of resistance changes, and outputs this data to the main body ECU (network gateway ECU).

6. Air Conditioning Pressure Switch (Airconditioner Tube Assembly)

The air conditioning pressure switch (airconditioner tube assembly) uses refrigerant pressure to output an on/off signal to the ECM to control the compressor with magnet clutch.

Title: HEATING / AIR CONDITIONING: AIR CONDITIONING UNIT: DISASSEMBLY (2013 FR-S)		

DISASSEMBLY

1. REMOVE NO. 1 AIR CONDITIONING RADIATOR DAMPER SERVO SUB-ASSEMBLY

(a) Remove the 2 screws and No. 1 air conditioning radiator damper servo sub-assembly.

2. REMOVE HEATER COVER

(a) Remove the 3 screws and heater cover.

3. REMOVE HEATER RADIATOR UNIT SUB-ASSEMBLY

(a) Remove the screw and the clamp.

(b) Remove the heater radiator unit sub-assembly as shown in the illustration.

4. REMOVE AIR FILTER CASE

(a) Disengage the 2 claws and remove the air filter case.

5. REMOVE CLEAN AIR FILTER

(a) Remove the clean air filter as shown in the illustration.

6. REMOVE COOLING UNIT CASE

(a) Remove the 2 screws.

(b) Disengage the 4 claws and remove the cooling unit case.

7. REMOVE COOLER EXPANSION VALVE

(a) Remove the gasket.

(b) Using a 4 mm hexagon socket wrench, remove the 2 hexagon bolts and cooler expansion valve.

(c) Remove the 2 O-rings from the evaporator pipe.

8. REMOVE COVER

(a) Remove the 3 screws.

(b) Disengage the 2 claws and remove the cover.

9. REMOVE NO. 1 COOLER UNIT DRAIN HOSE

(a) Remove the No. 1 cooler unit drain hose.

10. REMOVE NO. 1 AIR DUCT SUB-ASSEMBLY

(a) Remove the 2 screws and remove the No. 1 air duct sub-assembly.

11. REMOVE BLOWER MOTOR WITH FAN SUB-ASSEMBLY

(a) Remove the 3 screws and remove the blower motor with fan sub-assembly.

12. REMOVE NO. 2 AIR DUCT SUB-ASSEMBLY

- (a) Remove the 3 screws and remove the No. 2 air duct sub-assembly.

13. REMOVE AIR INLET DAMPER CONTROL CABLE SUB-ASSEMBLY

- (a) Disengage the 3 claws and remove the air inlet damper control cable sub-assembly.

NOTICE:

Hold the control cable and remove the drive gear on the unit side slowly, without pulling it.

14. REMOVE HEATER CONTROL CABLE SUB-ASSEMBLY

- (a) Disengage the 3 claws and remove the heater control cable sub-assembly.

NOTICE:

Hold the control cable and remove the drive gear on the unit side slowly, without pulling it.

15. REMOVE COOLING UNIT CASE SUB-ASSEMBLY

- (a) Disengage the clamp.

H

H

(b) Remove the 7 screws.

(c) Disengage the 2 claws and remove the cooling unit case sub-assembly.

16. REMOVE NO. 1 COOLER EVAPORATOR SUB-ASSEMBLY

H

(a) Remove the No. 1 cooler evaporator sub-assembly with evaporator pipe as a unit.

17. REMOVE NO. 1 COOLER THERMISTOR

H

(a) Remove the No. 1 cooler thermistor.

18. REMOVE AIR CONDITIONER TUBE ASSEMBLY

(a) Using a 4 mm hexagon socket wrench, remove the 2 hexagon bolts and air conditioner tube assembly.

19. REMOVE BLOWER RESISTOR

(a) Remove the 2 screws and remove the blower resistor.

20. REMOVE COOLER BLOWER CASE

(a) Remove the 4 screws and disengage the 2 claws.

(b) Remove the cooler blower case from the lower heater case.

21. REMOVE COOLER UNIT CASE PACKING

(a) Remove the cooler unit case packing.

22. REMOVE COVER PLATE

(a) Remove the cover plate.

Title: HEATING / AIR CONDITIONING: AIR CONDITIONING UNIT: INSTALLATION (2013 FR-S)		

INSTALLATION

1. INSTALL AIR CONDITIONING UNIT ASSEMBLY

- (a) Install the 3 bolts and 3 nuts.

Torque: 7.5 N·m (77 kgf·cm, 66in·lbf)

- (b) Engage the drain cooler hose.

- (c) Connect each connector and engage each clamp and install the air conditioning unit assembly.

2. INSTALL INSTRUMENT PANEL REINFORCEMENT ASSEMBLY

Text in Illustration

*1	"TORX" Bolt	-	-
----	-------------	---	---

- (a) Using a 4 mm "TORX" wrench, install the 4 "TORX" Bolts in the order shown in the illustration.

Torque: 25 N·m (255 kgf·cm, 18ft·lbf)

- (b) Install the instrument panel reinforcement assembly with the 5 bolts in the order shown in the illustration.

Torque: 25 N·m (255 kgf·cm, 18ft·lbf)

- (c) Connect each connector and engage each clamp.

(d) Connect the 2 earth wires with the 2 bolts.

3. INSTALL COWL SIDE TRIM BOARD LH INFO

4. INSTALL COWL SIDE TRIM BOARD RH INFO

5. INSTALL FRONT DOOR SCUFF PLATE LH INFO

6. INSTALL FRONT DOOR SCUFF PLATE RH INFO

7. INSTALL STEERING COLUMN ASSEMBLY

INFO

8. INSTALL LOWER INSTRUMENT PANEL REINFORCEMENT SUB-ASSEMBLY

(a) Install the lower instrument panel reinforcement sub-assembly with the 2 bolts.

Torque: 7.5 N·m (77 kgf·cm, 66in·lbf)

9. INSTALL INSTRUMENT PANEL SUB-ASSEMBLY

INFO

10. CONNECT AIR CONDITIONER TUBE AND ACCESSORY ASSEMBLY

(a) Remove the vinyl tape from the pipe.

(b) Sufficiently apply compressor oil to a new O-ring and fitting surface of the air conditioner tube and accessory assembly.

Compressor oil:

for HFC-134a (R134a)

ND-OIL 8 or equivalent

(c) Install the O-ring to the air conditioner tube and accessory assembly.

(d) Install the air conditioner tube and accessory assembly.

11. CONNECT SUCTION HOSE SUB-ASSEMBLY

(a) Remove the vinyl tape from the pipe.

(b) Sufficiently apply compressor oil to a new O-ring and the fitting surface of the suction hose sub-assembly.

Compressor oil:

for HFC-134a (R134a)

ND-OIL 8 or equivalent

(c) Connect the O-ring to the suction hose sub-assembly.

(d) Connect the suction hose sub-assembly.

(e) Rotate the hook connector in the direction indicated by the arrow in the illustration.

(f) Insert the pipe joint into the cooler expansion valve securely and tighten the bolt.

Torque: 7.5 N·m (77 kgf·cm, 66in·lbf)

12. CONNECT OUTLET HEATER WATER HOSE A

- (a) Install the outlet heater water hose A and attach the clip.

HINT:

Install the outlet heater water hose A while aligning it with the matching marks made when it was removed.

13. CONNECT INLET HEATER WATER HOSE A

- (a) Install the inlet heater water hose A and attach the clip.

HINT:

Install the inlet heater water hose A while aligning it with the matching marks made when it was removed.

14. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

Torque: 6.0 N·m (61 kgf·cm, 53in·lbf)

Model Year: 2013	Model: FR-S	Doc ID: RM000001HLY057X
Title: HEATING / AIR CONDITIONING: AIR CONDITIONING UNIT: REASSEMBLY (2013 FR-S)		

REASSEMBLY

1. INSTALL COVER PLATE

(a) Install the cover plate.

2. INSTALL COOLER UNIT CASE PACKING

(a) Install the cooler unit case packing.

3. INSTALL COOLER BLOWER CASE

(a) Install the cooler blower case from the lower heater case.

(b) Engage the 2 claws.

(c) Install the blower case assembly with the 4 screws.

4. INSTALL BLOWER RESISTOR

(a) Install the blower resistor with the 2 screws.

5. INSTALL AIR CONDITIONER TUBE ASSEMBLY

(a) Using a 4 mm hexagon wrench, install the air conditioner tube assembly with the 2 hexagon bolts.

Torque: 3.5 N·m (36 kgf·cm, 31in·lbf)

6. INSTALL NO. 1 COOLER THERMISTOR INFO

7. INSTALL NO. 1 COOLER EVAPORATOR SUB-ASSEMBLY

(a) Install the No. 1 cooler evaporator sub-assembly with evaporator pipe as a unit.

8. INSTALL COOLING UNIT CASE SUB-ASSEMBLY

(a) Engage the 2 claws.

(b) Install the cooling unit case sub-assembly with the 7 screws.

(c) Engage the clamp.

9. INSTALL HEATER CONTROL CABLE SUB-ASSEMBLY

NOTICE:

- When working, take care not to get dirt or dust in the gear grease.
- Do not hold gear sections while wearing cotton work gloves.

(a) Turn the pin on the cable side as far as possible in the direction of the arrow, and position it so that it matches the hole in the gear.

HINT:

Set the temperature adjustment dial to MAX HOT.

(b) Hold the protrusion on the drive gear, and rotate the gear until the protrusion is aligned with the cylindrical section of the case.

Text in Illustration

*1	Drive gear hole
*2	Control cable positioning pin

HINT:

Temperature adjustment dial: MAX HOT

(c) Push the control cable positioning pin in slowly until it matches the drive gear hole, and install the heater control cable sub-assembly.

(d) Replacing the drive gear.

(1) When replacing the drive gear, pull the resin portion of the control cable forward slowly and remove it.

Text in Illustration

*1	Shaft Gear
*2	Drive Gear
*a	Reference Position
*b	Drive gear protrusion
*c	Cylindrical section of the case
*d	Resin portion of the control cable

NOTICE:

Do not pull the drive gear.

- (2) Pull the drive gear forward slowly and remove it.
- (3) Rotate the shaft gear clockwise slowly until it stops.

NOTICE:

Be sure not to turn too forcefully.

- (4) Match the shaft gear and the drive gear with their specified positions, and insert the drive gear slowly into the heater case.

10. INSTALL AIR INLET DAMPER CONTROL CABLE SUB-ASSEMBLY

NOTICE:

- When working, take care not to get dirt or dust in the gear grease.
- Do not hold gear sections while wearing cotton work gloves.

- (a) Turn the pin on the cable side as far as possible in the direction of the arrow, and position it so that it matches the hole in the gear.

HINT:

Set the blower dial to FACE.

- (b) Hold the protrusion on the drive gear, and rotate the gear clockwise until it stops.

Text in Illustration

*1	Drive gear hole
*2	Control cable positioning pin

HINT:

Temperature control position: VENT

(c) Push the control cable positioning pin in slowly until it matches the drive gear hole, and install the air inlet damper control cable sub-assembly.

(d) Replacing the drive gear.

(1) When replacing the drive gear, pull the resin portion of the control cable forward slowly and remove it.

Text in Illustration

*1	Mode Main Link
*2	Drive Gear
*a	Reference Position
*b	Drive gear protrusion
*c	Resin portion of the control cable

NOTICE:

Do not pull the drive gear.

(2) Pull the drive gear forward slowly and remove it.

(3) Match the mode main link and the drive gear with their specified positions, and insert the drive gear slowly into the heater case.

11. INSTALL NO. 2 AIR DUCT SUB-ASSEMBLY

(a) Install the No. 2 air duct sub-assembly with the 3 screws.

12. INSTALL BLOWER MOTOR WITH FAN SUB-ASSEMBLY

(a) Install the blower motor with fan sub-assembly with the 3 screws.

13. INSTALL NO. 1 AIR DUCT SUB-ASSEMBLY

- (a) Install the No. 1 air duct sub-assembly with the 2 screws.

14. INSTALL NO. 1 COOLER UNIT DRAIN HOSE

- (a) Install the No. 1 cooler unit drain hose as shown in the illustration.

Text in Illustration

*1	Case
*2	Hose
*a	Rib
*b	Notched section

HINT:

Align the notched section of the hose with the rib on the case.

15. INSTALL COVER

- (a) Engage the 2 claws.

- (b) Install the cover with the 3 screws.

16. INSTALL COOLER EXPANSION VALVE

- (a) Sufficiently apply compressor oil to 2 new O-rings and

the fitting surfaces. Install the 2 O-rings to the No. 1 cooler evaporator sub-assembly.

Compressor oil:

for HFC-134a (R134a)

ND-OIL 8 or equivalent

(b) Using a 4 mm hexagon wrench, install the cooler expansion valve with packing with the 2 hexagon bolts.

Torque: 3.5 N·m (36 kgf·cm, 31 in·lbf)

(c) Install the new gasket.

17. INSTALL COOLING UNIT CASE

(a) Engage the 4 claws.

(b) Install the cooling unit case with the 2 screws.

18. INSTALL CLEAN AIR FILTER

(a) Install the clean air filter as shown in the illustration.

19. INSTALL AIR FILTER CASE

(a) Engage the 2 claws to install the air filter case.

20. INSTALL HEATER RADIATOR UNIT SUB-ASSEMBLY

(a) Install the heater radiator unit sub-assembly as shown in the illustration.

(b) Install the clamp with the screw.

21. INSTALL HEATER COVER

(a) Install the heater cover with the 3 screws.

22. INSTALL NO. 1 AIR CONDITIONING RADIATOR DAMPER SERVO SUB-ASSEMBLY

(a) Turn the air mix shaft slowly in the direction of the arrow until it stops.

Text in Illustration

*1	Air Mix Shaft
*2	Drive Gear
*a	Reference Position

NOTICE:

Be sure not to turn the air mix shaft too strongly.

(b) Turn the mix shaft so that section A of the air mix shaft matches the reference position of the case.

(c) Match the air mix damper server gear B section and the shaft gear A section.

(d) Install the No. 1 air conditioning radiator damper servo sub-assembly with the 2 screws.

Model Year: 2013	Model: FR-S	Doc ID: RM000001HLWOW7X
Title: HEATING / AIR CONDITIONING: AIR CONDITIONING UNIT: REMOVAL (2013 FR-S)		

REMOVAL

1. PRECAUTION

CAUTION:

Be sure to read Precaution thoroughly before servicing  .

NOTICE:

After turning the ignition switch off, waiting time may be required before disconnecting the cable from the negative (-) battery terminal. Therefore, make sure to read the disconnecting the cable from the negative (-) battery terminal notices before proceeding with work  .

2. RECOVER REFRIGERANT FROM REFRIGERATION SYSTEM

3. DRAIN ENGINE COOLANT

4. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

- The power window system utilizes a mechanism that the door glass moves down slightly when the door is opened, and that the glass moves up when closing the door in order to prevent the door molding from being damaged. When the battery negative (-) terminal needs to be disconnected for servicing, fully open the driver and passenger door glasses in advance.

5. DISCONNECT INLET HEATER WATER HOSE A

- (a) Using pliers, grip the claws of the clip and slide the clip to disconnect the inlet heater water hose A.

NOTICE:

- Do not apply excessive force to the inlet heater water hose A.
- Prepare a drain pan or cloth in case the coolant leaks.
- Since the inlet heater water hose A must be installed in a predefined position, apply matching marks before removing it.

6. DISCONNECT OUTLET HEATER WATER HOSE A

- (a) Using pliers, grip the claws of the clip and slide the clip to disconnect the outlet heater water hose A.

NOTICE:

- Do not apply excessive force to the outlet heater water hose A.
- Prepare a drain pan or cloth in case the coolant leaks.
- Since the outlet heater water hose A must be installed in a predefined position, apply matching marks before removing it.

7. DISCONNECT SUCTION HOSE SUB-ASSEMBLY

- (a) Remove the bolt and slide the hook connector.

(b) Disconnect the suction hose sub-assembly.

(c) Remove the O-ring from the suction hose sub-assembly.

NOTICE:

Seal the openings of the disconnected parts using vinyl tape to prevent entry of moisture and foreign matter.

8. DISCONNECT AIR CONDITIONER TUBE AND ACCESSORY ASSEMBLY

(a) Disconnect the air conditioner tube and accessory assembly.

(b) Remove the O-ring from the air conditioner tube and accessory assembly.

NOTICE:

Seal the openings of the disconnected parts using vinyl tape to prevent entry of moisture and foreign matter.

9. REMOVE INSTRUMENT PANEL SUB-ASSEMBLY

INFO

10. REMOVE LOWER INSTRUMENT PANEL REINFORCEMENT SUB-ASSEMBLY

- (a) Remove the 2 bolts and lower instrument panel reinforcement sub-assembly.

Title: HEATING / AIR CONDITIONING: AMBIENT TEMPERATURE SENSOR: INSPECTION (2013 FR-S)		

INSPECTION

1. INSPECT THERMISTOR ASSEMBLY

(a) Disconnect the connector from the thermistor assembly.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	10°C (50°F)	3.00 to 3.73 kΩ
	15°C (59°F)	2.45 to 2.88 kΩ
	20°C (68°F)	1.95 to 2.30 kΩ
	25°C (77°F)	1.60 to 1.80 kΩ
	30°C (86°F)	1.28 to 1.47 kΩ
	35°C (95°F)	1.00 to 1.22 kΩ
	40°C (104°F)	0.80 to 1.00 kΩ
	45°C (113°F)	0.65 to 0.85 kΩ
	50°C (122°F)	0.50 to 0.70 kΩ
	55°C (131°F)	0.44 to 0.60 kΩ
	60°C (140°F)	0.36 to 0.50 kΩ

NOTICE:

- Even slightly touching the sensor may change the resistance value. Be sure to hold the connector of the sensor.
- When measuring, the sensor temperature must be the same as the thermistor assembly.

HINT:

As the temperature increases, the resistance decreases (see the graph).

If the resistance is not as specified, replace the thermistor assembly.

Model Year: 2013	Model: FR-S	Doc ID: RM000002XUK01YX
Title: HEATING / AIR CONDITIONING: COMPRESSOR: INSTALLATION (2013 FR-S)		

INSTALLATION

1. ADJUST COMPRESSOR OIL LEVEL

- (a) When replacing the compressor with motor assembly with a new one, gradually discharge the refrigerant gas from the service valve, and drain the following amount of oil from the new compressor with motor assembly before installation.

Standard:

Drain oil from the new compressor assembly, and then add new oil so that the amount of oil in the new compressor assembly is the same as that in the compressor assembly to be replaced.

HINT:

The drain bolt and washer can be reused.

NOTICE:

- When checking the compressor oil level, observe the precautions on the cooler removal/installation.
- If a new compressor is installed without removing some oil remaining in the pipes of the vehicle, the oil amount will be excessive. This prevents heat exchange in the refrigerant cycle and causes refrigeration system failure.
- If the volume of oil remaining in the removed compressor is too small, check for oil leaks.
- Be sure to use ND-OIL 8 or equivalent for compressor oil.

2. INSTALL COMPRESSOR WITH MAGNET CLUTCH

- (a) Install the compressor with magnet clutch with the 3 bolts.

HINT:

Tighten the bolts in the order shown in the illustration.

Torque: 36 N·m (367 kgf·cm, 27ft·lbf)

(b) Connect the connector.

3. CONNECT NO. 1 COOLER REFRIGERANT DISCHARGE HOSE

(a) Remove the attached vinyl tape from the hose.

(b) Apply sufficient compressor oil to a new O-ring and the fitting surface of the compressor with magnet clutch.

Compressor oil:

for HFC-134a (R134a)

ND-OIL 8 or equivalent

(c) Install the O-ring onto the No. 1 cooler refrigerant discharge hose.

(d) Install the No. 1 cooler refrigerant discharge hose onto the compressor with magnet clutch with the bolt.

Torque: 10 N·m (102 kgf·cm, 7ft·lbf)

4. CONNECT SUCTION HOSE SUB-ASSEMBLY

(a) Remove the attached vinyl tape from the hose.

(b) Apply sufficient compressor oil to a new O-ring and the fitting surface of the compressor with magnet clutch.

Compressor oil:

for HFC-134a (R134a)

ND-OIL 8 or equivalent

(c) Install the O-ring onto the suction hose sub-assembly.

(d) Install the suction hose sub-assembly onto the compressor with magnet clutch with the bolt.

Title: HEATING / AIR CONDITIONING: CONDENSER: REASSEMBLY (2013 FR-S)		

REASSEMBLY

1. INSTALL NO. 1 COOLER CONDENSER BRACKET

(a) Install the 2 No. 1 cooler condenser bracket with the 2 bolts.

- Torque: 6.0 N·m (61 kgf·cm, 53in·lbf)

HINT:

Install the bracket in parallel (horizontally).

2. INSTALL NO. 2 COOLER CONDENSER BRACKET

(a) Install the 2 No. 2 cooler condenser bracket with the 2 bolts.

- Torque: 6.0 N·m (61 kgf·cm, 53in·lbf)

HINT:

Install the bracket in parallel (horizontally).

Title: HEATING / AIR CONDITIONING: CONDENSER: REMOVAL (2013 FR-S)		

REMOVAL

1. RECOVER REFRIGERANT FROM REFRIGERATION SYSTEM

INFO

2. REMOVE FRONT BUMPER COVER

INFO

3. DISCONNECT NO. 1 COOLER REFRIGERANT DISCHARGE HOSE

- (a) Remove the bolt and disconnect the No. 1 cooler refrigerant discharge hose from the condenser.

- (b) Remove the O-ring from the No. 1 cooler refrigerant discharge hose.

NOTICE:

Seal the openings of the disconnected parts using vinyl tape to prevent entry of moisture and foreign matter.

4. DISCONNECT AIR CONDITIONER TUBE AND ACCESSORY ASSEMBLY

- (a) Remove the bolt and disconnect the air conditioning tube and accessory assembly from the condenser.

- (b) Remove the O-ring from the air conditioning tube and accessory assembly.

NOTICE:

Seal the openings of the disconnected parts using vinyl tape to prevent entry of moisture and foreign matter.

5. REMOVE COOLER CONDENSER ASSEMBLY

(a) Disconnect the connector.

(b) Remove the 4 bolts and the cooler condenser assembly.

INSTALLATION

NOTICE:

When removing the cooler expansion valve by itself, be sure to install a new cooler expansion valve and new bolt for suction hose sub-assembly.

1. INSTALL COOLER EXPANSION VALVE

- (a) Apply sufficient compressor oil to 2 new O-rings and the fitting surfaces of the cooler expansion valve.

Compressor oil:

for HFC-134a (R134a)

ND-OIL 8 or equivalent

- (b) Install the 2 new O-rings onto the No. 1 cooler evaporator sub-assembly.
- (c) Using a 4 mm hexagon wrench, install the new cooler expansion valve with the new 2 hexagon bolts.

Torque: 3.5 N·m (36 kgf·cm, 31in·lbf)

Title: HEATING / AIR CONDITIONING: FRONT EVAPORATOR TEMPERATURE SENSOR: INSPECTION (2013 FR-S)		

INSPECTION

1. INSPECT NO. 1 COOLER THERMISTOR

(a) Disconnect the connector from the No. 1 cooler thermistor.

Text in Illustration

*a	Component without harness connected (No. 1 cooler thermistor)	*b	Sensing Portion
*c	Resistance (kΩ)	*d	Allowable Range
*e	Temperature (°C (°F))	-	-

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	-10°C (14°F)	7.30 to 9.10 kΩ
	-5°C (23°F)	5.65 to 6.95 kΩ
	0°C (32°F)	4.40 to 5.35 kΩ
	5°C (41°F)	3.40 to 4.15 kΩ
	10°C (50°F)	2.70 to 3.25 kΩ
	15°C (59°F)	2.14 to 2.58 kΩ
	20°C (68°F)	1.71 to 2.05 kΩ
	25°C (77°F)	1.38 to 1.64 kΩ
	30°C (86°F)	1.11 to 1.32 kΩ

NOTICE:

- Even slightly touching the sensor may change the resistance value. Be sure to hold the connector of the sensor.
- When measuring, the sensor temperature must be the same as the ambient temperature.

HINT:

As the temperature increases, the resistance decreases (see the graph).

If the resistance is not as specified, replace the No. 1 cooler thermistor.

Title: HEATING / AIR CONDITIONING: FRONT EVAPORATOR TEMPERATURE SENSOR: REMOVAL (2013 FR-S)		

REMOVAL

1. PRECAUTION

CAUTION:

Be sure to read Precaution thoroughly before servicing. INFO

NOTICE:

After turning the ignition switch off, waiting time may be required before disconnecting the cable from the negative (-) battery terminal. Therefore, make sure to read the disconnecting the cable from the negative (-) battery terminal notices before proceeding with work INFO.

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

- The power window system utilizes a mechanism that the door glass moves down slightly when the door is opened, and that the glass moves up when closing the door in order to prevent the door molding from being damaged. When the battery negative (-) terminal needs to be disconnected for servicing, fully open the driver and passenger door glasses in advance.

3. REMOVE AIR CONDITIONING UNIT ASSEMBLY

INFO

4. REMOVE AIR INLET DAMPER CONTROL CABLE SUB-ASSEMBLY INFO

Title: HEATING / AIR CONDITIONING: REFRIGERANT: ON-VEHICLE INSPECTION (2013 FR-S)		

ON-VEHICLE INSPECTION

1. INSPECT REFRIGERANT PRESSURE WITH MANIFOLD GAUGE SET

(a) This method uses a manifold gauge set to locate problem areas. Read the manifold gauge pressure when the test conditions are established.

Test conditions:

- Temperature at the air inlet with the air recirculation switch set at RECIRC is 30 to 35°C (86 to 95°F).
- Engine is running at 1500 rpm.
- All doors are fully open.
- Blower speed control switch is set to HI.
- A/C switch is on.

Gauge readings (Reference):

Text in Illustration

*a	Pressure on low-pressure side	*b	Blower HI Zone
*c	Blower LO Zone	*d	Pressure on high-pressure side

(1) Normally functioning refrigeration system.

Gauge Reading:

PRESSURE SIDE	REFRIGERANT VOLUME
Low	0.15 to 0.25 MPa (1.5 to 2.5 kgf/cm ²)
High	1.37 to 1.57 MPa (14 to 16 kgf/cm ²)

(2) The A/C system periodically changes between normal and improper function due to moisture in the refrigerant system.

SYMPTOM	PROBABLE CAUSE	DIAGNOSIS	CORRECTIVE ACTION
During operation, pressure on low pressure side cycles between normal and vacuum	Moisture in refrigeration system freezes at expansion valve orifice, causing temporary stop of cycle. However, when melted, normal state is restored.	<ul style="list-style-type: none"> • Dryer is overly saturated • Moisture in refrigeration system freezes at expansion valve orifice and blocks refrigerant circulation 	<ol style="list-style-type: none"> 1. Replace cooler dryer 2. Remove moisture from cycle by repeatedly evacuating air 3. Supply appropriate volume of new refrigerant

(3) The A/C system does not function effectively due to insufficient refrigerant.

SYMPTOM	PROBABLE CAUSE	DIAGNOSIS	CORRECTIVE ACTION
<ul style="list-style-type: none"> • Pressure low on both low and high pressure sides • Cooling performance insufficient 	Gas leakage from refrigeration system	<ul style="list-style-type: none"> • Insufficient refrigerant • Refrigerant leakage 	<ol style="list-style-type: none"> 1. Check for gas leakage and repair if necessary 2. Supply appropriate volume of new refrigerant 3. If indicated pressure value close to 0 with gauge connected, create vacuum after inspecting and repairing location of leakage

(4) The A/C system does not function effectively due to poor circulation of the refrigerant.

SYMPTOM	PROBABLE CAUSE	DIAGNOSIS	CORRECTIVE ACTION
<ul style="list-style-type: none"> • Pressure low on both low and high pressure sides • Frost exists on piping from condenser to A/C unit 	Refrigerant flow obstructed by dirt in condenser	Condenser clogged	Replace condenser

(5) The A/C system does not function or functions intermittently because the refrigerant does not circulate.

H

SYMPTOM	PROBABLE CAUSE	DIAGNOSIS	CORRECTIVE ACTION
<ul style="list-style-type: none"> • Vacuum indicated on low pressure side, and extremely low pressure indicated on high pressure side • Frost or condensation seen on piping on both sides of condenser or expansion valve 	<ul style="list-style-type: none"> • Refrigerant flow obstructed by moisture or dirt in refrigeration system • Refrigerant flow obstructed by gas leakage from expansion valve 	<p>Refrigerant does not circulate</p>	<ol style="list-style-type: none"> 1. Check expansion valve refrigerant 2. Clean expansion valve using compressed air 3. Replace condenser 4. Evacuate air and charge system with appropriate volume of new refrigerant 5. For gas leakage from expansion valve, replace expansion valve

(6) The A/C system does not function effectively due to the system being overcharged with refrigerant or insufficient cooling of the condenser.

H

SYMPTOM	PROBABLE CAUSE	DIAGNOSIS	CORRECTIVE ACTION
			<ol style="list-style-type: none"> 1. Clean condenser

Pressure extremely high on both low and high-pressure sides	<ul style="list-style-type: none"> Excessive refrigerant Cooling performance of condenser insufficient 	<ul style="list-style-type: none"> Condenser is dirty Condenser fan motor is malfunctioning Excessive refrigerant 	<ol style="list-style-type: none"> Check condenser fan motor operation If actions taken in 1 and 2 do not solve problem, check amount of refrigerant and adjust amount of refrigerant to appropriate amount
---	--	--	---

(7) The A/C system does not function due to air in the refrigeration system.

CAUTION:

The low-pressure piping may be very hot and cause serious burns.

NOTICE:

These gauge indications occur when the refrigeration system opens and the system is charged with refrigerant without vacuum purging.

SYMPTOM	PROBABLE CAUSE	DIAGNOSIS	CORRECTIVE ACTION
<ul style="list-style-type: none"> Pressure extremely high on both low and high-pressure sides Low-pressure piping is too hot to touch 	Air in refrigeration system	<ul style="list-style-type: none"> Air in refrigeration system Vacuum purging insufficient 	<ol style="list-style-type: none"> Check if compressor oil is dirty or insufficient Evacuate air and charge system with new refrigerant

(8) The A/C system does not function effectively due to an expansion valve malfunction.

SYMPTOM	PROBABLE CAUSE	DIAGNOSIS	CORRECTIVE ACTION
<ul style="list-style-type: none"> • Pressure extremely high on both low and high-pressure sides • Frost or condensation on piping on low-pressure side 	Problem with expansion valve	<ul style="list-style-type: none"> • Excessive refrigerant in low pressure piping • Expansion valve open too widely 	Replace expansion valve

(9) The A/C system does not function due to a defective compressor.

SYMPTOM	PROBABLE CAUSE	DIAGNOSIS	CORRECTIVE ACTION
<ul style="list-style-type: none"> • Pressure extremely high on both low and high-pressure sides • Pressure extremely low on high pressure side 	Internal leakage in compressor	<ul style="list-style-type: none"> • Compression failure • Leakage from damaged valve or broken sliding parts 	Repair or replace compressor

Title: HEATING / AIR CONDITIONING: REFRIGERANT: REPLACEMENT (2013 FR-S)		

REPLACEMENT

1. RECOVER REFRIGERANT FROM REFRIGERATION SYSTEM

- (a) Start the engine.
- (b) Operate the cooler compressor under the conditions shown below:

ITEM	CONDITION
Engine Speed	Idling
Operating Time	3 minutes or more
A/C Switch Status	On
Blower Switch Status	HI
Set Temperature	MAX COOL

This causes most of the compressor oil from the various components of the A/C system to collect in the A/C compressor.

NOTICE:

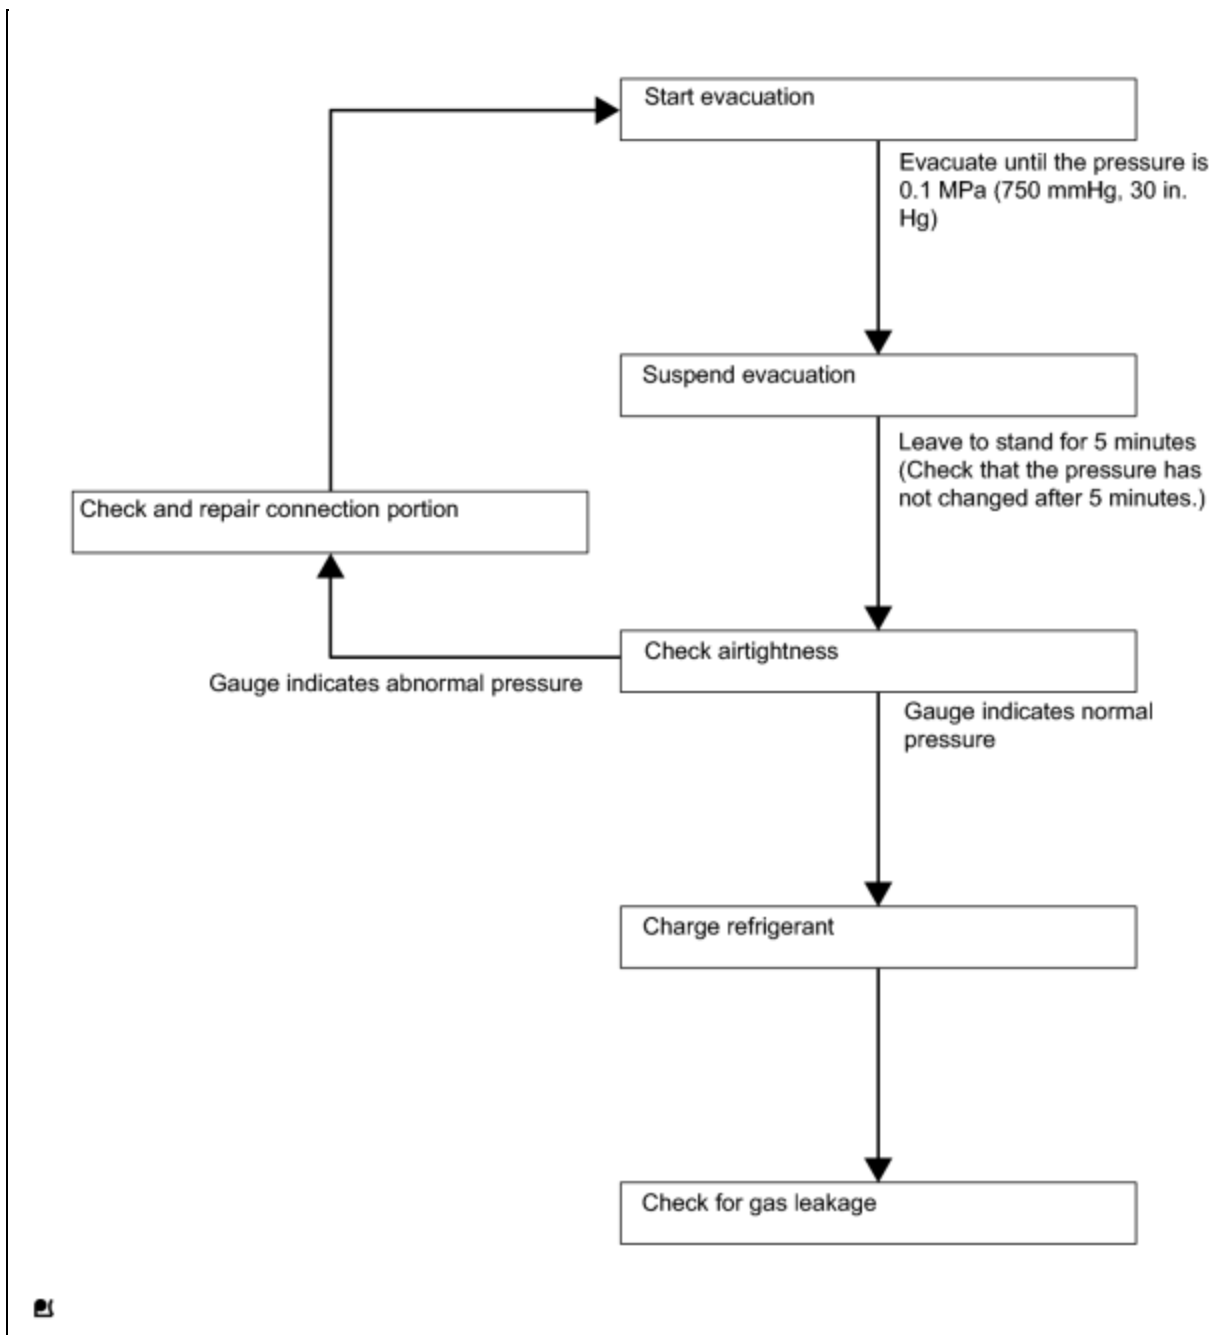

It is not necessary to operate the cooler compressor if the A/C does not operate because of compressor lock, etc.

- (c) Stop the engine.
- (d) Recover the refrigerant from the A/C system using a refrigerant recovery unit.

HINT:

Use the refrigerant recovery unit in accordance with the manufacturer's instruction manual.

2. CHARGE REFRIGERANT

HINT:

Charge refrigerant in accordance with the equipment manual.

- (a) Perform vacuum purging using a vacuum pump.
- (b) Charge refrigerant HFC-134a (R134a).

SST: 09985-20010

09985-02130

09985-02150

09985-02090

09985-02110

09985-02010

09985-02050

09985-02060

09985-02070

Standard:
390 +/-50 g (13.8 +/-1.8 oz)

Text in Illustration

*a	Amount to be charged	*b	Charge 100 g (3.53 oz)
*c	Mean value in proper range	*d	Point where bubbles disappear
*e	Overcharged	*f	Pressure
*g	Sub-cool system	*h	Refrigerant amount

NOTICE:

- Do not operate the cooler compressor before charging refrigerant as the cooler compressor will not work properly without any refrigerant, and will overheat.
- The system may need to be charged with approximately 100 g (3.53 oz) of refrigerant after bubbles disappear. The refrigerant amount should be checked by measuring its quantity, and not with the sight glass.

3. WARM UP ENGINE

(a) Warm up the engine at less than 1640 rpm for 2 minutes or more after charging the refrigerant.

NOTICE:

Be sure to warm up the compressor by turning the A/C switch on after removing and installing the cooler refrigerant lines (including the compressor) to prevent damage to the compressor.

4. CHECK FOR REFRIGERANT GAS LEAK

(a) After recharging the refrigerant, check for refrigerant gas leakage using a halogen leak detector.

(1) Perform the operation observing the following instructions:

- Stop the engine.
- Secure good ventilation (the halogen leak detector may react to volatile gases other than refrigerant, such as evaporated gasoline or exhaust gas).
- Repeat the test 2 or 3 times.

- Make sure that some refrigerant remains in the refrigeration system.

HINT:

When the compressor is off: approximately 392 to 588 kPa (4.0 to 6.0 kgf/cm² , 57 to 85 psi).

(2) Using a halogen leak detector, check the refrigerant line for leakage.

(3) If a gas leak is not detected from the drain hose, remove the blower motor control (blower resistor) from the cooling unit. Insert the halogen leak detector sensor into the unit and check for gas leakage.

(4) Disconnect the pressure switch connector and wait for approximately 20 minutes. Bring the halogen leak detector close to the pressure switch and check for gas leakage.

Title: HEATING / AIR CONDITIONING: RELAY: ON-VEHICLE INSPECTION (2013 FR-S)		

ON-VEHICLE INSPECTION

1. INSPECT HEATER RELAY

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3 - 5	Battery voltage not applied	10 k Ω or higher
3 - 5	Battery voltage applied to terminals 1 and 2	Below 1 Ω

If the result is not as specified, replace the heater relay.

2. INSPECT HEATER BLOWER MOTOR RELAY ASSEMBLY

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

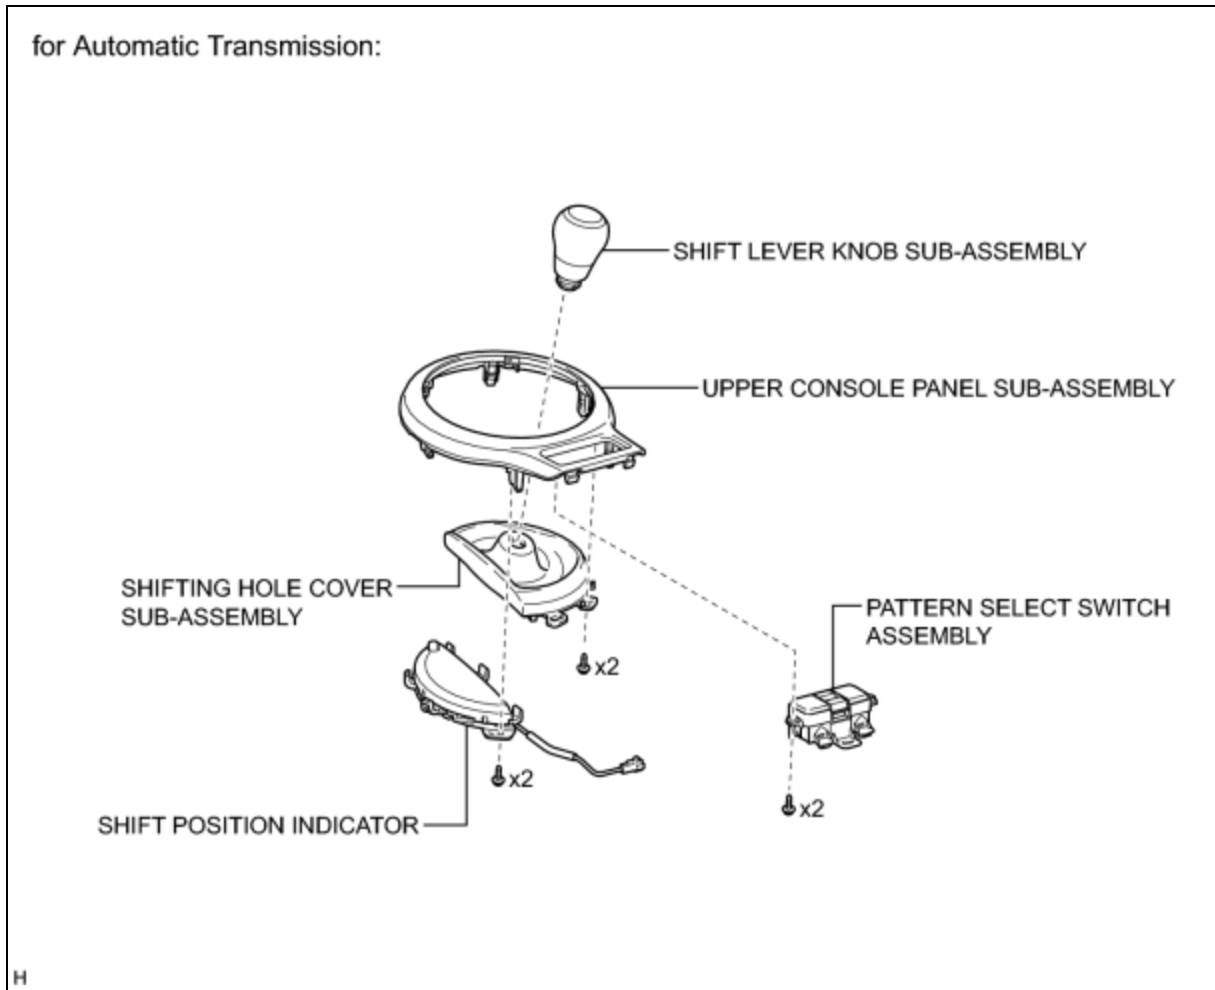

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3 - 4	Battery voltage not applied	Below 1 Ω
3 - 4	Battery voltage applied to terminals 1 and 2	10 k Ω or higher
3 - 5	Battery voltage not applied	10 k Ω or higher
3 - 5	Battery voltage applied to terminals 1 and 2	Below 1 Ω

If the result is not as specified, replace the heater relay.

Title: INTERIOR PANELS / TRIM: FRONT CONSOLE BOX: INSTALLATION (2013 FR-S)		

INSTALLATION

1. INSTALL CONSOLE BOX ASSEMBLY

- (a) Connect the connector.
- (b) Install the console box assembly with the 4 screws and 2 bolts.

Bolt - Torque: 6.5 N·m (66 kgf·cm, 58in·lbf)

2. INSTALL INSTRUMENT PANEL FINISH PANEL END LH

- (a) Engage the 4 claws to install the instrument panel finish panel end LH.

3. INSTALL INSTRUMENT PANEL FINISH PANEL END RH

HINT:

Use the same procedure as for the LH side.

4. INSTALL PARKING BRAKE HOLE COVER

- (a) Engage the 5 claws to install the parking brake hole cover.

5. INSTALL CUP HOLDER CUSHION

- (a) Install the cup holder cushion.

6. INSTALL INSTRUMENT PANEL CUP HOLDER

- (a) Install the instrument panel cup holder.

7. INSTALL PATTERN SELECT SWITCH ASSEMBLY (for Manual Transmission)

INFO

8. INSTALL SHIFTING HOLE COVER SUB-ASSEMBLY (for Manual Transmission)

- (a) Install the shifting hole cover sub-assembly with the 4 screws.

9. INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (for Manual Transmission)

- (a) Connect the connector.
- (b) Engage the 2 clips and 4 claws to install the upper console panel sub-assembly.

10. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transmission)

- (a) Turn the knob clockwise to install the shift lever knob sub-assembly.

Text in Illustration

*1

Pull collar

NOTICE:

- Tighten the shift lever knob until the tightening on the shift lever knob stiffens.

Check that the transmission moves into reverse when the pull collar is pulled.

11. INSTALL PATTERN SELECT SWITCH ASSEMBLY (for Automatic Transmission)

3. REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Automatic Transmission)

(a) Turn the knob counterclockwise and remove the shift lever knob sub-assembly.

4. REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (for Automatic Transmission)

(a) Disengage the 2 clips and 4 claws.

(b) Disconnect each connector and remove the upper console panel sub-assembly.

5. REMOVE SHIFT POSITION INDICATOR (for Automatic Transmission)

(a) Remove the 2 screws.

(b) Disengage the clamp to remove the shift position indicator.

6. REMOVE SHIFTING HOLE COVER SUB-ASSEMBLY (for Automatic Transmission)

(a) Remove the 2 screws.

(b) Disengage the claw to remove the shifting hole cover sub-assembly.

7. REMOVE PATTERN SELECT SWITCH ASSEMBLY (for Automatic Transmission)

INFO

8. REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transmission)

(a) Turn the knob counterclockwise and remove the shift lever knob sub-assembly.

9. REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (for Manual Transmission)

(a) Disengage the 2 clips and 4 claws.

(b) Disconnect each connector and remove the upper console panel sub-assembly.

10. REMOVE SHIFTING HOLE COVER SUB-ASSEMBLY (for Manual Transmission)

(a) Remove the 4 screws and the shifting hole cover sub-assembly.

11. REMOVE PATTERN SELECT SWITCH ASSEMBLY (for Manual Transmission)

INFO

12. REMOVE INSTRUMENT PANEL CUP HOLDER

(a) Remove the instrument panel cup holder.

13. REMOVE CUP HOLDER CUSHION

(a) Remove the cup holder cushion.

14. REMOVE PARKING BRAKE HOLE COVER

- (a) Disengage the 5 claws to remove the parking brake hole cover.

NOTICE:

Remove the parking brake hole cover by pulling straight it up to disengage the claws, If not claws may be broken.

15. REMOVE INSTRUMENT PANEL FINISH PANEL END LH

- (a) Disengage the 4 claws to remove the instrument panel finish panel end LH.

16. REMOVE INSTRUMENT PANEL FINISH PANEL END RH

HINT:

Use the same procedure described for the LH side.

17. REMOVE CONSOLE BOX ASSEMBLY

- (a) Remove the 4 screws.

- (b) Remove the 2 bolts.

(c) Disconnect each connector and remove the console box assembly.

Title: INTERIOR PANELS / TRIM: LOWER INSTRUMENT PANEL: INSTALLATION (2013 FR-S)		

INSTALLATION

1. INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY

- (a) Connect the connectors.
- (b) Engage the 12 claws.
- (c) Install the lower instrument panel sub-assembly with the 2 screws and nut.

2. INSTALL GLOVE COMPARTMENT DOOR DAMPER

- (a) Engage the claw to install the glove compartment door damper.

3. INSTALL GLOVE COMPARTMENT DOOR ASSEMBLY

- (a) Horizontally engage the 2 hinges of the outer glove compartment door.

NOTICE:

Make sure to install the glove compartment door assembly hinges horizontally.

- (b) Engage the 2 stoppers to install the glove compartment door assembly.
- (c) Engage the claw to install the glove compartment door damper.

4. INSTALL NO. 1 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY

INFO

5. INSTALL UPPER INSTRUMENT PANEL METER ORNAMENT

- (a) Connect the connector.
- (b) Engage the 2 claws that are holding the upper instrument panel meter ornament and steering column cover together.
- (c) Engage the 2 clips and 6 claws.
- (d) Install the upper instrument panel meter ornament with the screw.

6. INSTALL METER HOOD SUB-ASSEMBLY

- (a) Engage the 12 claws.
- (b) Install the meter hood sub-assembly with the screw.

7. INSTALL INSTRUMENT SIDE PANEL RH

- (a) Engage the 4 clips and claw to install the instrument side panel RH.

8. INSTALL INSTRUMENT SIDE PANEL LH

HINT:

Use the same procedure as for the RH side.

9. INSTALL AIR CONDITIONING CONTROL ASSEMBLY

INFO

10. INSTALL UPPER INSTRUMENT PANEL FINISH PANEL SUB-ASSEMBLY (for LH Side)

- (a) Engage the 3 claws.

(b) Install the upper instrument panel finish panel sub-assembly with the screw.

11. INSTALL NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH

(a) Engage the 6 claws.

(b) Install the No. 1 instrument cluster finish panel garnish with the screw.

12. INSTALL UPPER INSTRUMENT PANEL FINISH PANEL SUB-ASSEMBLY (for RH Side)

HINT:

Use the same procedure as for the LH side.

13. INSTALL NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH

HINT:

Use the same procedure as for the LH side.

14. INSTALL STEREO OPENING COVER WITH BRACKET

(a) Install the stereo opening cover with bracket with the 4 screws.

15. INSTALL CENTER INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY

(a) Engage the 4 clips and 2 claws to install the center instrument cluster finish panel sub-assembly.

16. INSTALL CONSOLE BOX ASSEMBLY

INFO

17. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

Title: INTERIOR PANELS / TRIM: LOWER INSTRUMENT PANEL: REMOVAL (2013 FR-S)		

REMOVAL

1. TABLE OF BOLT, SCREW AND NUT

- (a) All bolts, screws and nuts relevant to installing and removing the instrument panel are shown along with an alphabetical code in the table.

Code	Shape	Code	Shape
<A>	 <p>$\varphi=11.5$ (0.453 in) Length=16 (0.630 in)</p>		 <p>$\varphi=10$ (0.394 in) Length=7 (0.276 in)</p>

2. PRECAUTION

NOTICE:

After turning the ignition switch off, waiting time may be required before disconnecting the cable from the negative (-) battery terminal. Therefore, make sure to read the disconnecting the cable from the negative (-) battery terminal notices before proceeding with work INFO.

3. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL INFO

4. REMOVE CONSOLE BOX ASSEMBLY

INFO

5. REMOVE CENTER INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY

- (a) Using a moulding remover, disengage the 2 claws and 4 clips to remove the center instrument cluster finish panel sub-assembly.

Text in Illustration

*1	Moulding Remover
----	------------------

6. REMOVE STEREO OPENING COVER WITH BRACKET

(a) Remove the 4 screws to remove the stereo opening cover with bracket.

7. REMOVE NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH

(a) Remove the screw.

(b) Disengage the 6 claws to remove the No. 2 instrument cluster finish panel garnish.

8. REMOVE UPPER INSTRUMENT PANEL FINISH PANEL SUB-ASSEMBLY (for LH Side)

(a) Remove the screw.

(b) Disengage the 3 claws to remove the upper instrument panel finish panel sub-assembly.

9. REMOVE NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH

HINT:

Use the same procedure as for the LH side.

10. REMOVE UPPER INSTRUMENT PANEL FINISH PANEL SUB-ASSEMBLY (for RH Side)

HINT:

Use the same procedure as for the LH side.

11. REMOVE AIR CONDITIONING CONTROL ASSEMBLY INFO

12. REMOVE INSTRUMENT SIDE PANEL RH

(a) Using a moulding remover, disengage the claw and 4 clips and remove the instrument side panel RH.

Text in Illustration

*1	Moulding Remover
----	------------------

13. REMOVE INSTRUMENT SIDE PANEL LH

HINT:

Use the same procedure as for the RH side.

14. REMOVE METER HOOD SUB-ASSEMBLY

(a) Remove the screw.

- (b) Disengage the 12 claws, and then pull out the meter hood sub-assembly diagonally upwards to remove it.

15. REMOVE UPPER INSTRUMENT PANEL METER ORNAMENT

- (a) Remove the screw.

- (b) Disengage the 6 claws and 2 clips.

- (c) Disengage the 2 claws that are holding the upper instrument panel meter ornament and steering column cover together.

- (d) Disconnect the connector and remove the upper instrument panel meter ornament.

16. REMOVE NO. 1 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY INFO

17. REMOVE GLOVE COMPARTMENT DOOR ASSEMBLY

- (a) Disengage the claw and release the glove compartment door damper.

Text in Illustration

*1	Glove Compartment Door Damper
----	-------------------------------

--	--

- (b) Release the 2 stoppers and open the glove compartment door assembly until it is horizontal.

Text in Illustration

*1	Stopper
----	---------

- (c) Pull the glove compartment door assembly horizontally backward to disengage the 2 hinges and remove the glove compartment door assembly.

NOTICE:

Be sure to pull the glove compartment door assembly horizontally to remove it.

18. REMOVE GLOVE COMPARTMENT DOOR DAMPER

- (a) Disengage the claw and remove the glove compartment door damper.

19. REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY

- (a) Remove the 7 screws.

(b) Remove the 2 screws and nut.

(c) Disconnect the connectors.

(d) Disengage the 12 claws to remove the lower instrument panel sub-assembly.

Title: INTERIOR PANELS / TRIM: ROOF HEADLINING: INSTALLATION (2013 FR-S)		

INSTALLATION

1. INSTALL ROOF HEADLINING ASSEMBLY

- (a) Put the roof headlining assembly into the vehicle through the front passenger side door.

NOTICE:

Do not damage the roof headlining assembly or body interior.

- (b) Engage the clip at the front of the roof headlining, and install the roof headlining assembly.
(c) Connect the antenna cord sub-assembly connectors.
(d) Install the 3 clips at the rear of the roof headlining.
(e) Engage the 2 clamps and connect the connector from the front pillar LH.
(f) Engage the 3 clamps and connect the connector from the front pillar RH.

2. INSTALL VISOR HOLDER

- (a) Engage the 2 claws install the 2 visor holders.

3. INSTALL VISOR ASSEMBLY LH

- (a) Install the visor assembly LH with the 2 screws.

4. INSTALL VISOR ASSEMBLY RH

HINT:

Use the same procedure as for the LH side.

5. INSTALL MAP LIGHT ASSEMBLY INFO

6. INSTALL CENTER PILLAR GARNISH LH

- (a) Engage the 2 guides and clip.
(b) Install the center pillar garnish LH with the 2 bolts and clip.

Torque: 7.5 N·m (76 kgf·cm, 66in·lbf)

7. INSTALL CENTER PILLAR GARNISH RH

HINT:

Use the same procedure as for the LH side.

8. INSTALL REAR QUARTER TRIM FRONT GARNISH LH

- (a) Engage the claw and clip.
- (b) Install the rear quarter trim front garnish LH with the 2 bolts.

Torque: 7.5 N·m (76 kgf·cm, 66in·lbf)

9. INSTALL REAR QUARTER TRIM FRONT GARNISH RH

HINT:

Use the same procedure as for the LH side.

10. INSTALL REAR WINDOW SIDE GARNISH LH

- (a) Engage the guide and 2 clips.
- (b) Install the rear window side garnish LH with the bolt.

Torque: 7.5 N·m (76 kgf·cm, 66in·lbf)

11. INSTALL REAR WINDOW SIDE GARNISH RH

HINT:

Use the same procedure as for the LH side.

12. INSTALL QUARTER TRIM LID SUB-ASSEMBLY LH

- (a) Install the 2 lid cover clips from the quarter trim lid sub-assembly LH.

NOTICE:

If there is any damage, be sure to replace the lid cover clip with a new one.

- (b) Engage the 2 guides and 6 claws and install the quarter trim lid sub-assembly LH.

Text in Illustration

*1	Lid Cover Clip
----	----------------

13. INSTALL QUARTER TRIM LID SUB-ASSEMBLY RH

HINT:

Use the same procedure as for the LH side.

14. INSTALL LUGGAGE COMPARTMENT TRIM COVER LH

- (a) Engage the 7 clips install the quarter trim panel assembly LH.
- (b) Install the clip.

15. INSTALL LUGGAGE COMPARTMENT TRIM COVER RH

HINT:

Use the same procedure as for the for LH side.

16. INSTALL LUGGAGE COMPARTMENT INNER TRIM COVER LH

- (a) Fold down the rear seatback assembly.
- (b) Engage the 2 clips install the luggage compartment inner trim cover LH.

17. INSTALL LUGGAGE COMPARTMENT INNER TRIM COVER RH

HINT:

Use the same procedure as for the LH side.

18. INSTALL SEPARATE TYPE REAR SEAT CUSHION ASSEMBLY LH INFO

19. INSTALL SEPARATE TYPE REAR SEAT CUSHION ASSEMBLY RH INFO

----	----------------

(d) Remove the 2 lid cover clips from the lid cover LH.

NOTICE:

If there is any damage, be sure to replace the lid cover clip with a new one.

22. REMOVE QUARTER TRIM LID SUB-ASSEMBLY RH

HINT:

Use the same procedure described for the LH side.

23. REMOVE REAR WINDOW SIDE GARNISH LH

(a) Remove the bolt.

(b) Disengage the 2 clips and guide remove the rear window side garnish LH.

24. REMOVE REAR WINDOW SIDE GARNISH RH

HINT:

Use the same procedure described for the LH side.

25. REMOVE REAR QUARTER TRIM FRONT GARNISH LH

(a) Remove the 2 bolts.

(b) Disengage the clip and claw remove the rear quarter trim front garnish LH.

26. REMOVE REAR QUARTER TRIM FRONT GARNISH RH

HINT:

Use the same procedure described for the LH side.

27. REMOVE CENTER PILLAR GARNISH LH

(a) Remove the 2 bolts and clip.

(b) Disengage the clips and 2 guides remove the center pillar garnish LH.

28. REMOVE CENTER PILLAR GARNISH RH

HINT:

Use the same procedure described for the LH side.

29. REMOVE MAP LIGHT ASSEMBLY INFO

30. REMOVE VISOR ASSEMBLY LH

(a) Remove the 2 screws.

31. REMOVE VISOR ASSEMBLY RH

HINT:

Use the same procedure described for the LH side.

32. REMOVE VISOR HOLDER

(a) Disengage the 2 claws remove the 2 visor holders.

33. REMOVE ROOF HEADLINING ASSEMBLY

(a) Disengage the 3 clamps and disconnect the connector from the front pillar RH.

(b) Disengage the 2 clamps and disconnect the connector from the front pillar LH.

(c) Remove the 3 clips at the rear of the roof headlining.

(d) Disconnect the antenna cord sub-assembly connector.

(e) Disengage the clip at the front of the roof headlining, and remove the roof headlining assembly.

(f) Remove the roof headlining assembly from the vehicle through the front passenger side door.

NOTICE:

Do not damage the roof headlining assembly or body interior.

Title: INTERIOR PANELS / TRIM: UPPER INSTRUMENT PANEL: REASSEMBLY (2013 FR-S)		

REASSEMBLY

1. INSTALL INSTRUMENT PANEL CUSHION

(a) Install a new instrument panel cushion.

2. INSTALL NO. 1 DEFROSTER NOZZLE GARNISH

(a) Engage the 16 claws and 8 guides to install the No. 1 defroster nozzle garnish .

3. INSTALL INSTRUMENT PANEL REGISTER BEZEL (for LH Side)

(a) Engage the 3 claws to install the instrument panel register bezel.

4. INSTALL INSTRUMENT PANEL REGISTER BEZEL (for RH Side)

HINT:

Use the same procedure as for the LH side.

5. INSTALL NO. 2 INSTRUMENT PANEL REGISTER SUB-ASSEMBLY

(a) Engage the 3 claws to install the No. 2 instrument panel register sub-assembly.

6. INSTALL NO. 1 INSTRUMENT PANEL REGISTER SUB-ASSEMBLY

HINT:

Use the same procedure as for the No. 2 instrument panel register sub-assembly.

7. INSTALL CENTER INSTRUMENT PANEL REGISTER ASSEMBLY

(a) Engage the 2 clips.

(b) Install the center instrument panel register assembly with the 2 screws.

8. INSTALL NO. 3 DEFROSTER NOZZLE GARNISH

(a) Engage the 2 claws to install the No. 3 defroster nozzle garnish.

9. INSTALL NO. 2 DEFROSTER NOZZLE GARNISH

HINT:

Use the same procedure as for the No. 3 defroster nozzle garnish.

10. INSTALL NO. 2 SIDE DEFROSTER NOZZLE DUCT

(a) Engage the 2 claws to install the No. 2 side defroster nozzle duct.

11. INSTALL NO. 1 SIDE DEFROSTER NOZZLE DUCT

HINT:

Use the same procedure as for the No. 2 side defroster nozzle duct.

12. INSTALL DEFROSTER NOZZLE ASSEMBLY

(a) Engage the 5 claws.

(b) Install the defroster nozzle assembly, No. 2 side defroster nozzle duct, and No. 1 side defroster nozzle duct as a single unit with the screws.

13. INSTALL NO. 2 HEATER TO REGISTER DUCT

(a) Engage the claw.

(b) Install the No. 2 heater to register duct with the 3 screws.

14. INSTALL NO. 1 HEATER TO REGISTER DUCT

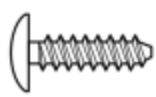

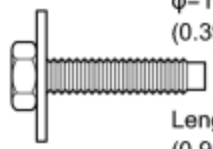

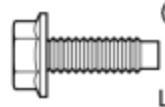

HINT:

Use the same procedure as for the No. 2 heater to register duct.

Title: INTERIOR PANELS / TRIM: UPPER INSTRUMENT PANEL: REMOVAL (2013 FR-S)		

REMOVAL

1. TABLE OF BOLT, SCREW AND NUT

Code	Shape	Code	Shape	Code	Shape
<A>	 <p>$\varphi=11.5$ (0.453 in) Length=16 (0.630 in)</p>		 <p>$\varphi=10$ (0.394 in) Length=25 (0.984 in)</p>	<C>	 <p>$\varphi=10$ (0.394 in) Length=16 (0.630 in)</p>

(a) All bolts, screws and nuts relevant to installing and removing the instrument panel are shown along with their alphabetical code in the table.

2. PRECAUTION

CAUTION:

Be sure to read Precaution thoroughly before servicing.

INFO

NOTICE:

After turning the ignition switch off, waiting time may be required before disconnecting the cable from the negative (-) battery terminal. Therefore, make sure to read the disconnecting the cable from the negative (-) battery terminal notices before proceeding with work.

INFO

3. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

- The power window system utilizes a mechanism that the door glass moves down slightly when the door is opened, and that the glass moves up when closing the door in order to prevent the door molding from being damaged. When the battery negative (-) terminal needs to be disconnected for servicing, fully open the driver and passenger door glasses in advance.

4. REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY

INFO

5. REMOVE NO. 2 INSTRUMENT PANEL SPEAKER PANEL SUB-ASSEMBLY

(a) Apply protective tape to the area shown in the illustration.

Text in Illustration

*1	Protective Tape
----	-----------------

(b) Using a moulding remover, disengage the 6 claws and remove the No. 2 instrument panel speaker panel sub-assembly.

Text in Illustration

*1	Moulding Remover
----	------------------

(c) Disconnect the connector.

6. REMOVE FRONT NO. 2 SPEAKER ASSEMBLY (for LH Side) INFO

7. REMOVE FRONT NO. 3 SPEAKER ASSEMBLY (for LH Side) INFO

8. REMOVE NO. 1 INSTRUMENT PANEL SPEAKER PANEL SUB-ASSEMBLY

HINT:

Use the same procedure described for the LH side.

9. REMOVE FRONT NO. 2 SPEAKER ASSEMBLY (for RH Side) INFO

10. REMOVE FRONT NO. 3 SPEAKER ASSEMBLY (for RH Side) INFO

11. REMOVE FRONT PILLAR GARNISH LH

(a) Pull the upper part of the front pillar garnish LH in the direction of the arrow (1), and disengage the 2 clips and the front pillar garnish clip.

Text in Illustration

*1	Front Pillar Garnish Clip
----	---------------------------

HINT:

The front pillar garnish clip should be remained on the front pillar garnish LH.

(b) Pull the front pillar garnish LH in the direction of the arrow (2) and disengage the 2 guides.

(c) Turn the front pillar garnish LH in the direction of the arrow.

NOTICE:

While turning, be careful not to damage the curtain shield airbag.

(d) Disengage the tip of the front pillar garnish clip and remove the front pillar garnish LH.

NOTICE:

- Do not use any tools to disengage the tip of the front pillar garnish clip.
- Be careful not to damage the front pillar garnish clip.

Text in Illustration

*1	front pillar garnish clip
----	---------------------------

(e) Protect the curtain shield airbag assembly (w/curtain shield airbag).

Text in Illustration

*1	Curtain Shield Airbag Assembly
*2	Adhesive Tape
*3	Protective Cover

(f) Cover the airbag with a piece of cloth or nylon and secure the edges of the cover with tape as shown in the illustration.

NOTICE:

Cover the curtain shield airbag with a protective cover as soon as the front pillar garnish LH is removed.

12. REMOVE FRONT PILLAR GARNISH RH

HINT:

Use the same procedure described for the LH side.

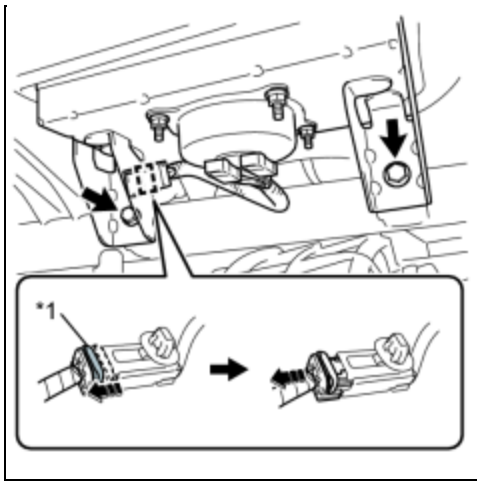

13. REMOVE COMBINATION METER ASSEMBLY INFO

14. REMOVE INSTRUMENT PANEL ORNAMENT

(a) Disengage the 3 clips and 3 claws to remove the instrument panel ornament.

15. REMOVE INSTRUMENT PANEL PASSENGER AIRBAG ASSEMBLY

(a) Disengage the clamp.

(b) Slide the slider and disconnect the passenger airbag connector.

Text in Illustration

*1	Slider
----	--------

(c) Remove the 2 bolts and the instrument panel passenger airbag assembly.

16. REMOVE INSTRUMENT PANEL SUB-ASSEMBLY

(a) Remove the 2 bolts and 7 screws to remove the instrument panel sub-assembly.

Title: LIGHTING (INT): LIGHTING SYSTEM: ACC Signal Circuit (2013 FR-S)		

ACC Signal Circuit

DESCRIPTION

This circuit detects the ignition switch ACC or off condition, and sends it to the main body ECU (network gateway ECU).

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1.	READ VALUE USING TECHSTREAM
-----------	------------------------------------

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Main Body / Data List.

(e) Read the display on the Techstream.

OK:

Normal conditions listed above are displayed.

Main Body

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
ACC SW	Ignition switch ACC signal/ON or OFF	ON: Ignition switch ACC OFF: Ignition switch off	-

NG ► **CHECK HARNESS AND CONNECTOR (INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY - BATTERY AND BODY GROUND)**

OK ► **PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE**

2.	CHECK HARNESS AND CONNECTOR (INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY - BATTERY AND BODY GROUND)
-----------	---

(a) Disconnect the 3A and 3E instrument panel junction block assembly connectors.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3E-1 - Body ground	Always	11 to 14 V
3A-20 - Body ground	Ignition switch ACC	11 to 14 V

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3A-12 - Body ground	Always	Below 1 Ω

3A-13 - Body ground	Always	Below 1 Ω
---------------------	--------	-----------

Text in Illustration

*a	Front view of wire harness connector (to instrument panel junction block assembly)
----	---

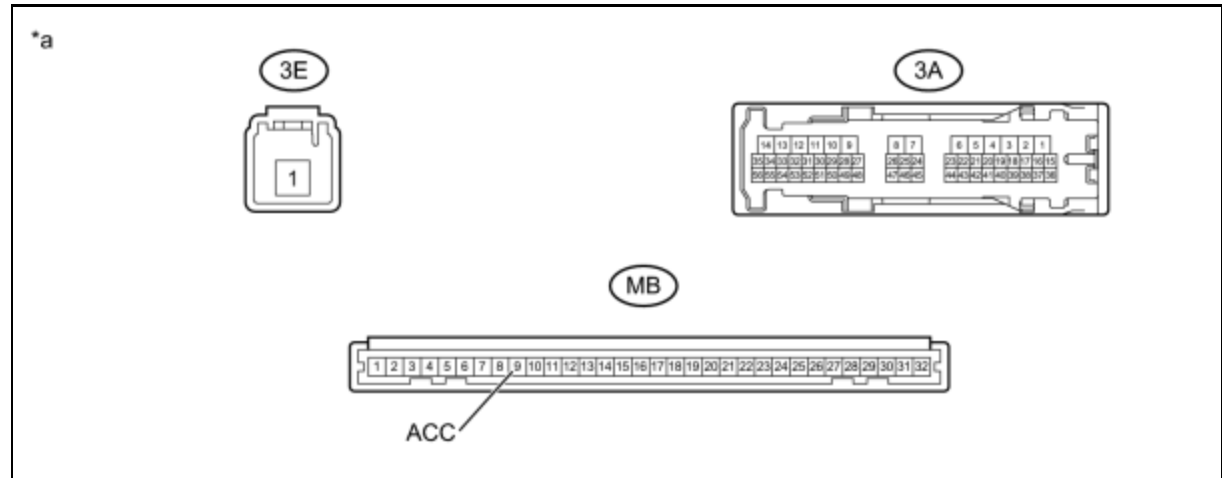

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

3. INSPECT INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY (ACC1 RELAY)

- (a) Remove the instrument panel junction block assembly **INFO** .
- (b) Remove the main body ECU (network gateway ECU) from the instrument panel junction block assembly.
- (c) Measure the resistance according to the value(s) in the table below.

Text in Illustration

*a	Component without harness connected (Instrument panel junction block assembly)	-	-
----	---	---	---

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3E-1 - MB-9 (ACC)	Always	10 kΩ or higher
	Battery positive (+) → 3A-20	

3E-1 - MB-9 (ACC)

Battery negative (-) → 3A-12 or 3A-13

Below 1 Ω

NG ▶ REPLACE INSTRUMENT PANEL JUNCTION
BLOCK ASSEMBLY

OK ▶ REPLACE MAIN BODY ECU (NETWORK
GATEWAY ECU)

TOYOTA

Title: LIGHTING (INT): LIGHTING SYSTEM: CUSTOMIZE PARAMETERS (2013 FR-S)		

CUSTOMIZE PARAMETERS

1. CUSTOMIZE LIGHTING SYSTEM (INT)

(a) Customizing using the Techstream

HINT:

The following items can be customized.

NOTICE:

- When the customer requests a change in a function, first make sure that the function can be customized.
- Be sure to make a note of the current settings before customizing.
- When troubleshooting a function, first make sure that the function is set to the default setting.

- (1) Connect the Techstream to the DLC3.
- (2) Turn the ignition switch to ON.
- (3) Turn the Techstream on.
- (4) Enter the following menus: Customize Setting / Illuminated Entry.
- (5) Select the setting by referring to the table below.

Illuminated Entry

TESTER DISPLAY	DEFAULT	CONTENT	SETTING	RELEVANT ECU
Lighting Time	15 s	Changes the lighting time after closing all of the doors. (It will fade out immediately in case of turning the ignition switch from off to ACC or ON.)	7.5 s, 15 s or 30 s	Main body ECU (Network gateway ECU)
I/L when ACC OFF	ON	Lights up the ignition key cylinder light and map light when the ignition switch is turned from ACC or ON to off.	ON or OFF	
I/L ON W/Door Key Unlock	ON	Lights up the ignition key cylinder light and map light when doors are unlocked using a mechanical key or door control transmitter.	ON or OFF	
Interior Light Control	ON	Lights up the ignition key cylinder light and map light when the illuminated entry function is operating.	ON or OFF	

Last Modified: 3-27-2012	6.4 U	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000PKVOA8X
Title: LIGHTING (INT): LIGHTING SYSTEM: DATA LIST / ACTIVE TEST (2013 FR-S)		

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the following table, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

- Connect the Techstream to the DLC3.
- Turn the ignition switch ON.
- Turn the Techstream on.
- Enter the following menus: Body Electrical / Main Body / Data List.
- Read the Data List according to the display on the Techstream.

Main Body

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
D Door Courtesy SW	Driver side door courtesy light switch signal/ON or OFF	ON: Driver side door closed OFF: Driver side door open	-
P Door Courtesy SW	Passenger side door courtesy light switch signal/ON or OFF	ON: Passenger side door closed OFF: Passenger side door open	-
Luggage Courtesy SW	Luggage compartment door courtesy switch signal/ON or OFF	ON: Luggage compartment door open OFF: Luggage compartment door closed	-
IG SW	Ignition switch ON signal/ON or OFF	ON: Ignition switch ON OFF: Ignition switch off	-
ACC SW	Ignition switch ACC signal/ON or OFF	ON: Ignition switch ACC OFF: Ignition	-

		switch off	
Room Light Output	Map light assembly output signal/ON or OFF	ON: Map light assembly on OFF: Map light assembly off	-
Key Illumination Output	Ignition key cylinder light output signal/ON or OFF	ON: Ignition key cylinder light on OFF: Ignition key cylinder light off	-
Lighting Time	Lighting time of the delay control function (illuminated entry system)/15s, 7.5s or 30s	15s: 15 seconds 7.5s: 7.5 seconds 30s: 30 seconds	Customized value is displayed
I/L when ACC OFF	Function that lights up the interior lights when the ignition switch is turned from on (ACC or IG) to off/OFF or ON	OFF: Function disabled ON: Function enabled	Customized value is displayed
I/L ON W/Door Key Unlock	Function that lights up the interior lights when the doors are unlocked/OFF or ON	OFF: Function disabled ON: Function enabled	Customized value is displayed
Interior Light Control	Operation of the illuminated entry system/OFF or ON	OFF: System not operated ON: System operated	Customized value is displayed

2. ACTIVE TEST

HINT:

Using the Techstream to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Main Body / Active Test.
- (e) Perform the Active Test according to the display on the Techstream.

Main Body

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Illuminated Entry System	<ul style="list-style-type: none"> • Map light assembly • Ignition key cylinder light 	ON/OFF	Map light assembly switch in DOOR position

Key Ring Light	Ignition key cylinder light	ON/OFF	-

Title: LIGHTING (INT): LIGHTING SYSTEM: Ignition Key Cylinder Light Circuit (2013 FR-S)		

Ignition Key Cylinder Light Circuit

DESCRIPTION

The main body ECU (network gateway ECU) controls the operation of the transponder key amplifier (ignition key cylinder light).

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1. PERFORM ACTIVE TEST USING TECHSTREAM

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Main Body / Active Test.

(e) Check that the light operates.

ON:

Ignition key cylinder light comes on

Main Body

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Key Ring Light	Ignition key cylinder light	ON/OFF	-

NG ▶ **INSPECT TRANSPONDER KEY AMPLIFIER**

OK ▶ **PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE**

2. INSPECT TRANSPONDER KEY AMPLIFIER

(a) Remove the transponder key amplifier **INFO** .

(b) Inspect the transponder key amplifier **INFO** .

OK:

Transponder key amplifier is normal.

NG ▶ **REPLACE TRANSPONDER KEY AMPLIFIER**

OK

3. CHECK HARNESS AND CONNECTOR (TRANSPONDER KEY AMPLIFIER - BATTERY)

(a) Disconnect the D54 transponder key amplifier connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D54-2 (ILL+) - Body ground	Always	11 to 14 V

Text in Illustration

Front view of wire harness connector

*a (to transponder key amplifier)

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR

OK
▼

4. CHECK HARNESS AND CONNECTOR (TRANSPONDER KEY AMPLIFIER - MAIN BODY ECU (NETWORK GATEWAY ECU))

- (a) Disconnect the D54 transponder key amplifier connector.
- (b) Disconnect the D5 main body ECU (network gateway ECU) connector.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D54-6 (ILL-) - D5-28 (ILL)	Always	Below 1 Ω
D5-28 (ILL) - Body ground	Always	10 k Ω or higher

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ► REPLACE MAIN BODY ECU (NETWORK GATEWAY ECU)

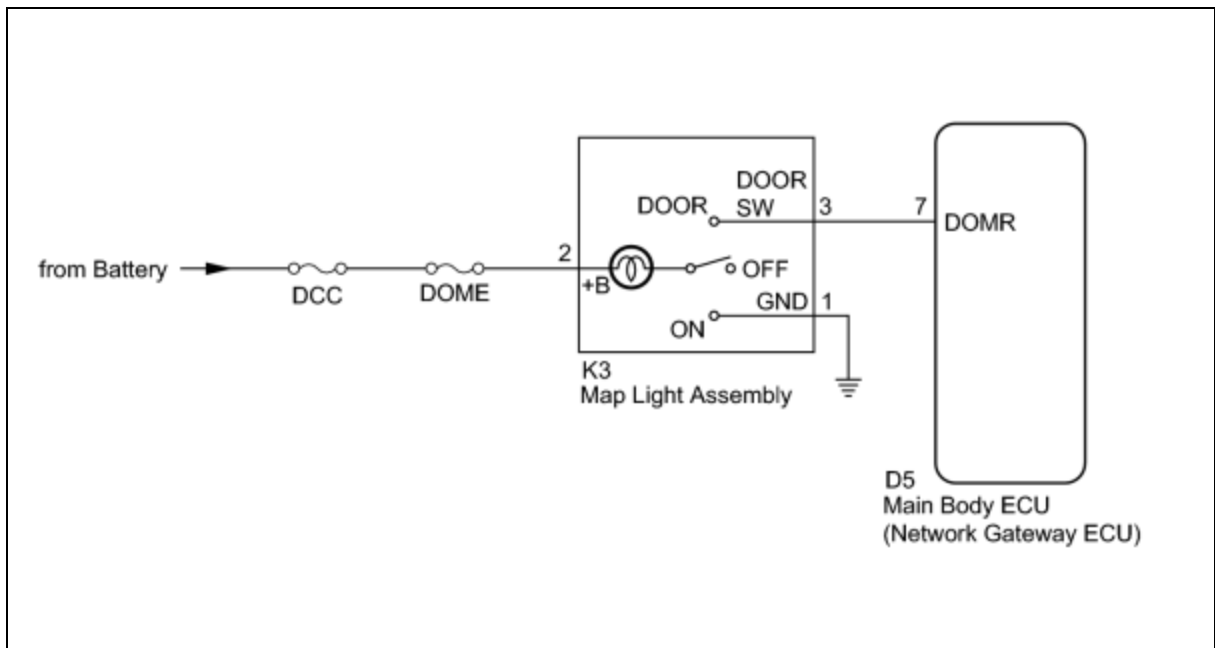

Last Modified: 3-27-2012	6.4 J	From: 201203

Title: LIGHTING (INT): LIGHTING SYSTEM: Interior Light Circuit (2013 FR-S)		

Interior Light Circuit

DESCRIPTION

The main body ECU (network gateway ECU) controls the operation of the map light assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1.	PERFORM ACTIVE TEST USING TECHSTREAM
-----------	---

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Main Body / Active Test.

(e) Check that the lights operate.

OK:

Map light fades in.

Main Body

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Illuminated Entry System	Map light assembly	ON/OFF	-

NG ► INSPECT MAP LIGHT ASSEMBLY

OK ► PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE

2. INSPECT MAP LIGHT ASSEMBLY

(a) Remove the map light assembly **INFO** .

(b) Inspect the map light assembly **INFO** .

OK:

Map light assembly is normal.

NG ► REPLACE MAP LIGHT ASSEMBLY

OK

3. CHECK HARNESS AND CONNECTOR (BATTERY - MAP LIGHT ASSEMBLY)

(a) Disconnect the K3 map light assembly connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
K3-2 (+B) - Body ground	Always	11 to 14 V

Text in Illustration

*a	Front view of wire harness connector (to map light assembly)
----	--

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR

OK
▼

4. CHECK HARNESS AND CONNECTOR (MAP LIGHT ASSEMBLY - MAIN BODY ECU (NETWORK GATEWAY ECU))

- (a) Disconnect the K3 map light assembly connector.
- (b) Disconnect the D5 main body ECU (network gateway ECU) connector.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
K3-3 (DOOR SW) - D5-7 (DOMR)	Always	Below 1 Ω
D5-7 (DOMR) - Body ground	Always	10 k Ω or higher

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ▶ REPLACE MAIN BODY ECU (NETWORK GATEWAY ECU)

Title: LIGHTING (INT): LIGHTING SYSTEM: Luggage Compartment Door Courtesy Switch Circuit (2013 FR-S)		

Luggage Compartment Door Courtesy Switch Circuit

DESCRIPTION

The main body ECU (network gateway ECU) detects the condition of the luggage compartment door lock assembly using this circuit.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	READ VALUE USING TECHSTREAM
-----------	------------------------------------

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Main Body / Data List.
- (e) Read the display on the Techstream.

OK:

Normal conditions listed above are displayed.

Main Body

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Luggage Courtesy SW	Luggage compartment door courtesy switch signal/ON or OFF	ON: Luggage compartment door open OFF: Luggage compartment door closed	-

NG ▶ **INSPECT LUGGAGE COMPARTMENT DOOR LOCK ASSEMBLY**

OK ▶ **PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE**

2. INSPECT LUGGAGE COMPARTMENT DOOR LOCK ASSEMBLY

(a) Remove the luggage compartment door lock assembly **INFO** .

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	DOOR LOCK CONDITION	SPECIFIED CONDITION
3 (D+) - 2 (E)	Open (Unlock)	Below 1 Ω
3 (D+) - 2 (E)	Close (Lock)	10 kΩ or higher

Text in Illustration

*a	Component without harness connected (Luggage Compartment Door Lock Assembly)
*b	Close (Lock)
*c	Open (Unlock)

NG ▶ **REPLACE LUGGAGE COMPARTMENT DOOR LOCK ASSEMBLY**

OK
▼

3. CHECK HARNESS AND CONNECTOR (LUGGAGE COMPARTMENT DOOR LOCK ASSEMBLY - INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY)

- (a) Disconnect the 3D instrument panel junction block assembly connector.
- (b) Disconnect the J3 luggage compartment door lock assembly connector.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
J3-3 (D+) - 3D-26	Always	Below 1 Ω
J3-3 (D+) - Body ground	Always	10 kΩ or higher
J3-2 (E) - Body ground	Always	Below 1 Ω

NG REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

4. INSPECT INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY

- (a) Remove the instrument panel junction block assembly **INFO**.
- (b) Remove the main body ECU (network gateway ECU) from the instrument panel junction block assembly.
- (c) Measure the resistance according to the value(s) in the table below.

Text in Illustration

*a	Component without harness connected (Instrument Panel Junction Block Assembly)	-	-
----	--	---	---

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3D-26 - MB-12	Always	Below 1 Ω

NG ► REPLACE INSTRUMENT PANEL JUNCTION
BLOCK ASSEMBLY

OK ► REPLACE MAIN BODY ECU (NETWORK
GATEWAY ECU)

Title: LIGHTING (INT): LIGHTING SYSTEM: OPERATION CHECK (2013 FR-S)		

OPERATION CHECK

1. INSPECT INTERIOR LIGHT CONTROL OPERATION

NOTICE:

Perform this inspection with the customize parameters at the initial settings.

HINT:

The interior light control illuminates the lights below.

- Ignition Key Cylinder Light
- Map Light

(a) The operation and conditions of this control are described below.

OPERATION	CONDITION
Fade in and illuminate constantly	Any door is opened when all doors are closed.
Illuminate for 15 seconds, and then fade out	When any of the following conditions is met, the lights illuminate for 15 seconds, and then fade out: <ul style="list-style-type: none"> • Any door is unlocked when the ignition switch is off with all doors closed and locked. • The ignition switch is turned from ON to off when all doors are closed. • All doors are closed after any door is opened and the ignition switch off.
Fade out immediately	When any of the following conditions is met, the lights fade out immediately: <ul style="list-style-type: none"> • The ignition switch is turned from off to ACC when all doors are closed. • All doors are locked when the ignition switch is off, all doors are closed and any door is unlocked. • All doors are locked again when all doors are already closed and locked.

2. BATTERY SAVING CONTROL OPERATION

NOTICE:

Perform this inspection with the customize parameters at the initial settings.

HINT:

The lights controlled by battery saving control are as follows:

- Ignition Key Cylinder Light
- Map Light
- Luggage Compartment Light

(a) The operation and conditions of this control are described below.

OPERATION	CONDITION
Battery saving	<p>When 20 minutes elapse after the ignition switch is turned from ACC or ON to off and the lights that operate remain on, the lights are turned off.</p> <p>HINT:</p> <p>Battery saving control is canceled when any of the following operations is performed before the lights are turned off by battery saving control. After the operation is performed, the lights remain on for another 20 minutes and then the lights are turned off.</p> <ul style="list-style-type: none">• The ignition switch is turned ACC or ON• Any door is opened and closed• The luggage compartment door is opened and closed• Any door is unlocked

Title: LIGHTING (INT): LIGHTING SYSTEM: PRECAUTION (2013 FR-S)		

PRECAUTION

1. PRECAUTIONS WHEN USING TECHSTREAM

(a) When using the Techstream with the ignition switch off to troubleshoot:

Connect the Techstream to the vehicle, and turn the courtesy light switch on and off at 1.5-second intervals until communication between the Techstream and the vehicle begins.

(b) After all DTCs are cleared, check if the trouble occurs again 6 seconds after the ignition switch is turned to ON.

Title: LIGHTING (INT): LIGHTING SYSTEM: TERMINALS OF ECU (2013 FR-S)		

TERMINALS OF ECU

1. CHECK INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY AND MAIN BODY ECU (NETWORK GATEWAY ECU)

Text in Illustration

*1	Instrument Panel Junction Block Assembly	*2	Main Body ECU (Network Gateway ECU)
----	--	----	-------------------------------------

(a) Disconnect the 3A, 3C, 3E, A73 and D6 instrument panel junction block assembly and main body ECU (network gateway ECU) connectors.

(b) Measure the voltage according to the value(s) in the table below.

TERMINAL NO.	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
3A-15 - Body ground	W - Body ground	IG power supply	Ignition switch ON	11 to 14 V
			Ignition switch off	Below 1 V
3A-20 - Body ground	SB - Body ground	ACC power supply	Ignition switch ACC	11 to 14 V
			Ignition switch off	Below 1 V
3A-27 - Body ground	G-R - Body ground	Battery power supply	Always	11 to 14 V
3C-19 - Body ground	L-R - Body ground	Battery power supply	Always	11 to 14 V
3E-1 - Body ground	B-R - Body ground	Battery power supply	Always	11 to 14 V

If the result is not as specified, there may be a malfunction in the wire harness.

(c) Measure the resistance according to the value(s) in the table below.

TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
3A-12 - Body ground	B - Body ground	Ground	Always	Below 1 Ω
3A-13 - Body ground	B - Body ground	Ground	Always	Below 1 Ω
A73-4 (GND) - Body ground	B-Y - Body ground	Ground	Always	Below 1 Ω
D6-1 (GND) - Body ground	B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction in the wire harness.

(d) Reconnect the 3A, 3C, 3E, A73 and D6 instrument panel junction block assembly and main body ECU (network gateway ECU) connectors.

(e) Measure the voltage and check for pulses according to the value(s) in the table below.

TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
3A-28 - Body	V - Body	Front door courtesy	Front door LH open	Below 1 V

ground	ground	light switch LH input	Front door LH closed	11 to 14 V
3B-13 - Body ground	GR - Body ground	Front door courtesy light switch RH input	Front door RH open	Below 1 V
			Front door RH closed	11 to 14 V
3D-26 - Body ground	SB - Body ground	Luggage compartment door courtesy light switch input	Luggage compartment door open	Below 1 V
			Luggage compartment door closed	11 to 14 V
D5-7 (DOMR) - Body ground	L - Body ground	Illuminated entry drive output (to map light assembly)	Map light switch in DOOR position and map light assembly on	Below 1 V
			Map light switch in DOOR position and map light assembly off	11 to 14 V
D5-28 (ILL) - Body ground	Y - Body ground	Ignition key cylinder light drive output	Ignition switch off, ignition key cylinder light off (when operated by illuminated entry system)	11 to 14 V
			Ignition switch off, ignition key cylinder light on (when operated by illuminated entry system)	Below 1 V

If the result is not as specified, the main body ECU (network gateway ECU) or instrument panel junction block assembly may have a malfunction.

DISASSEMBLY

1. REMOVE COMBINATION METER GLASS

- (a) Disengage the 7 claws and remove the combination meter glass.

NOTICE:

- Do not touch the pointer and the dial plate when removing the combination meter glass and combination meter cover.
- Do not allow any dirt (fingerprints, grease, etc.) to adhere to the combination meter glass or meter display panel. If they are dirty, wipe them clean with a soft cloth.

2. REMOVE COMBINATION METER COVER

- (a) Disengage the 6 claws and remove the combination meter cover.

NOTICE:

Do not touch the pointer and the dial plate when removing the combination meter glass and combination meter cover.

4. INSPECT NO. 2 FUEL SENDER GAUGE ASSEMBLY

- (a) Remove the No. 2 fuel sender gauge assembly INFO .
- (b) Inspect the No. 2 fuel sender gauge assembly INFO .

NG ▶ **REPLACE NO. 2 FUEL SENDER GAUGE ASSEMBLY**

OK

5. INSPECT FUEL TANK RETURN TUBE SUB-ASSEMBLY

- (a) Remove the fuel tank return tube sub-assembly INFO .

- (b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTOR	CONDITION	SPECIFIED CONDITION
G6-1 (L) - 3	Always	Below 1 Ω
G6-2 (FS+) - 2	Always	Below 1 Ω

Text in Illustration

*a	Component without harness connected (Fuel Tank Return Tube Sub-assembly)
----	---

NG ▶ **REPLACE FUEL TANK RETURN TUBE SUB-ASSEMBLY**

OK

6. CHECK HARNESS AND CONNECTOR (COMBINATION METER ASSEMBLY - FUEL SUCTION TUBE ASSEMBLY WITH PUMP AND GAUGE)

- (a) Disconnect the D7 combination meter assembly connector.
- (b) Disconnect the G7 fuel suction tube assembly with pump and gauge connector.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTOR	CONDITION	SPECIFIED CONDITION
D7-28 (FS-) - G7-2 (FS-)	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTOR	CONDITION	SPECIFIED CONDITION
D7-28 (FS-) or G7-2 (FS-) - Body ground	Always	10 kΩ or higher

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

7. CHECK HARNESS AND CONNECTOR (FUEL SUCTION TUBE ASSEMBLY WITH PUMP AND GAUGE - FUEL TANK RETURN TUBE SUB-ASSEMBLY)

- (a) Disconnect the G7 fuel suction tube assembly with pump and gauge connector.
- (b) Disconnect the G6 fuel tank return tube sub-assembly connector.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTOR	CONDITION	SPECIFIED CONDITION
D7-1 (FS+) - G6-2 (FS+)	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTOR	CONDITION	SPECIFIED CONDITION
D7-1 (FS+) or G6-2 (FS+) - Body ground	Always	10 kΩ or higher

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

8.	CHECK HARNESS AND CONNECTOR (COMBINATION METER ASSEMBLY - FUEL TANK RETURN TUBE SUB-ASSEMBLY)
-----------	--

- (a) Disconnect the D7 combination meter assembly connector.
- (b) Disconnect the G6 fuel tank return tube sub-assembly connector.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTOR	CONDITION	SPECIFIED CONDITION
D7-27 (L) - G6-1 (L)	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTOR	CONDITION	SPECIFIED CONDITION
D7-27 (L) or G6-1 (L) - Body ground	Always	10 k Ω or higher

NG **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK **REPLACE COMBINATION METER ASSEMBLY**

Title: METER / GAUGE / DISPLAY: METER / GAUGE SYSTEM: B1509: Open in Ambient Temperature Sensor Circuit (2013 FR-S)		

DTC	B1509	Open in Ambient Temperature Sensor Circuit
------------	--------------	---

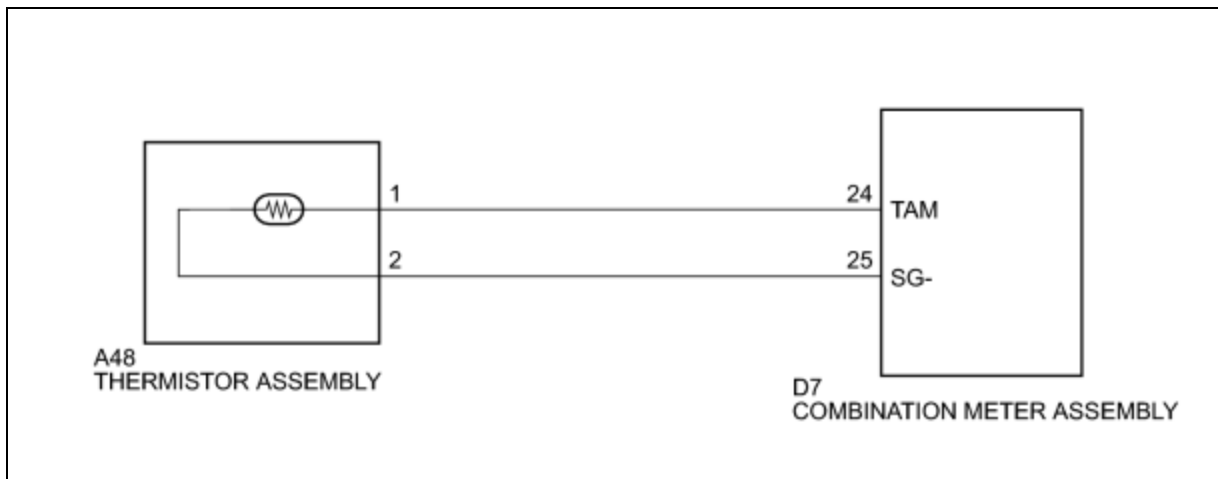

DESCRIPTION

The thermistor assembly is installed in the front part of the cooler condenser assembly to display the ambient temperature on the multi-information display in the combination meter assembly and to control the air conditioning auto mode. As the temperature decreases, the resistance increases. As the temperature increases, the resistance decreases.

The air conditioning amplifier assembly applies a voltage (5 V) to the thermistor assembly and reads the voltage changes as changes in the resistance of the thermistor assembly.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B1509	An open or short in the thermistor assembly circuit.	<ul style="list-style-type: none"> • Thermistor assembly • Harness or connector • Combination meter assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	READ VALUE USING TECHSTREAM (AMBIENT TEMPERATURE SENSOR)
-----------	---

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Combination Meter / Data List.
- (e) According to the display on the Techstream, read the Data List.

Combination Meter

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Ambient Temperature	Thermistor assembly / Min: -40.0°C (-40.0°F) Max: 87.5°C (189.5°F)	Actual ambient temperature displayed	Open in the circuit: -40.0°C (-40.0°F) Short in the circuit: 87.5°C (189.5°F)

OK:

The display is as specified in the normal condition column.

Title: METER / GAUGE / DISPLAY: METER / GAUGE SYSTEM: DATA LIST / ACTIVE TEST (2013 FR-S)		

[DATA LIST / ACTIVE TEST](#)

1. DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Combination Meter / Data List.
- (e) According to the display on the tester, read the Data List.

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
ODO/TRIP Change SW	ODO/TRIP change switch ON or OFF	ON: ODO/TRIP switch pushed OFF: ODO/TRIP switch not pushed	-
Tail Cancel SW	Light control rheostat switch (cancel switch) ON or OFF	ON: Light control rheostat switch (cancel switch) → TAIL OFF: Light control rheostat switch (cancel switch) → OFF	-
P-Seatbelt Buckle SW	Buckle switch (Front passenger side) ON or OFF	ON: Front passenger side seat belt is fastened OFF: Front passenger side seat belt is unfastened	-
Multi Display Select Switch	Multi Display Select Switch ON or OFF	ON: DISP switch pushed OFF: DISP switch not pushed	-
+B Voltage Value	+B voltage Min.: 0 Max.: 25.5	Below 1 to 14	Unit: V
Vehicle Speed Meter	Vehicle speed Min.: 0 (0) Max.: 255 (158)	Approximately same as actual vehicle speed (When vehicle is being driven)	Unit: km/h (mph)
Engine Rpm	Engine speed Min.: 0 Max.: 12750	Approximately same as actual engine speed (when engine is running)	Unit: rpm
	Engine coolant		

Coolant Temperature	temperature Min.: 0 Max.: 127.5	After warming up: 80 to 108 (176 to 226)	Unit: °C (°F)

Ambient Temperature	Ambient temperature Min.: -40 (-40) Max.: 87.5 (189.5)	Same as outside temperature	Unit: °C (°F)
Rheostat value	Light control rheostat switch input Min.: 0 Max.: 100	Displays rheostat volume figure 0 to 100	Unit: %
Quantity of Outside Light	Light control rheostat switch output Min.: 0 Max.: 100	Displays rheostat volume figure 0 to 100	Unit: %
Key Remind Sound	Key remind sound FAST, NORMAL or SLOW	Display key reminder buzzer speed setting	-
Tail Remind Buzzer	Tail remind buzzer ON or OFF	ON: Tail remind buzzer ON OFF: Tail remind buzzer OFF	-
Driver Side Seatbelt Warning Buzzer	Driver seat belt warning buzzer ON or OFF	ON: Driver side seat belt warning buzzer ON OFF: Driver side seat belt warning buzzer OFF	-
P-Seatbelt Warning Buzzer	Front passenger seat belt warning buzzer ON or OFF	ON: Front passenger side seat belt warning buzzer ON OFF: Front passenger side seat belt warning buzzer OFF	-
Number of Trouble Code	The DTC number which is currently output	-	-

HINT:

Items for which there are no settings do not appear on the Techstream, or do not operate.

2. PERFORM ACTIVE TEST

HINT:

Using the Techstream to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Combination Meter / Active Test.

(e) According to the display on the tester, perform the Active Test.

Combination Meter

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE

Title: METER / GAUGE / DISPLAY: METER / GAUGE SYSTEM: DTC CHECK / CLEAR (2013 FR-S)		

DTC CHECK / CLEAR

1. CHECK DTC

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Combination Meter / DTC.
- (e) Check DTCs and then write them down.

HINT:

Refer to the Techstream operator's manual for further details.

- (f) Confirm the details of the DTCs.

2. CLEAR DTC

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON (do not start the engine).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Combination Meter / DTC / Clear.

HINT:

Refer to the Techstream operator's manual for further details.

- (e) Clear DTCs by pressing the YES button on the tester.

HINT:

Refer to the Techstream operator's manual for further details.

Title: METER / GAUGE / DISPLAY: METER / GAUGE SYSTEM: Entire Combination Meter does not Operate (2013 FR-S)		

Entire Combination Meter does not Operate

DESCRIPTION

This circuit is the power source circuit for the combination meter assembly.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1.	CHECK HARNESS AND CONNECTOR (COMBINATION METER ASSEMBLY - BATTERY AND BODY GROUND)
----	---

(a) Disconnect the D7 combination meter assembly connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
D7-1 (B) - Body ground	Always	11 to 14 V
D7-2 (IG+) - Body ground	Ignition switch ON	11 to 14 V

(c) Measure the resistance according to the value in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D7-20 (ES1) - Body ground	Always	Below 1 Ω
D7-40 (ES2) - Body ground	Always	Below 1 Ω

Text in Illustration

*a	Front view of wire harness connector (to Combination Meter Assembly)
----	---

(d) Reconnect the D7 combination meter assembly connector.

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ► REPLACE COMBINATION METER ASSEMBLY

Title: METER / GAUGE / DISPLAY: METER / GAUGE SYSTEM: Odo/Trip Switch Malfunction (2013 FR-S)		

Odo/Trip Switch Malfunction

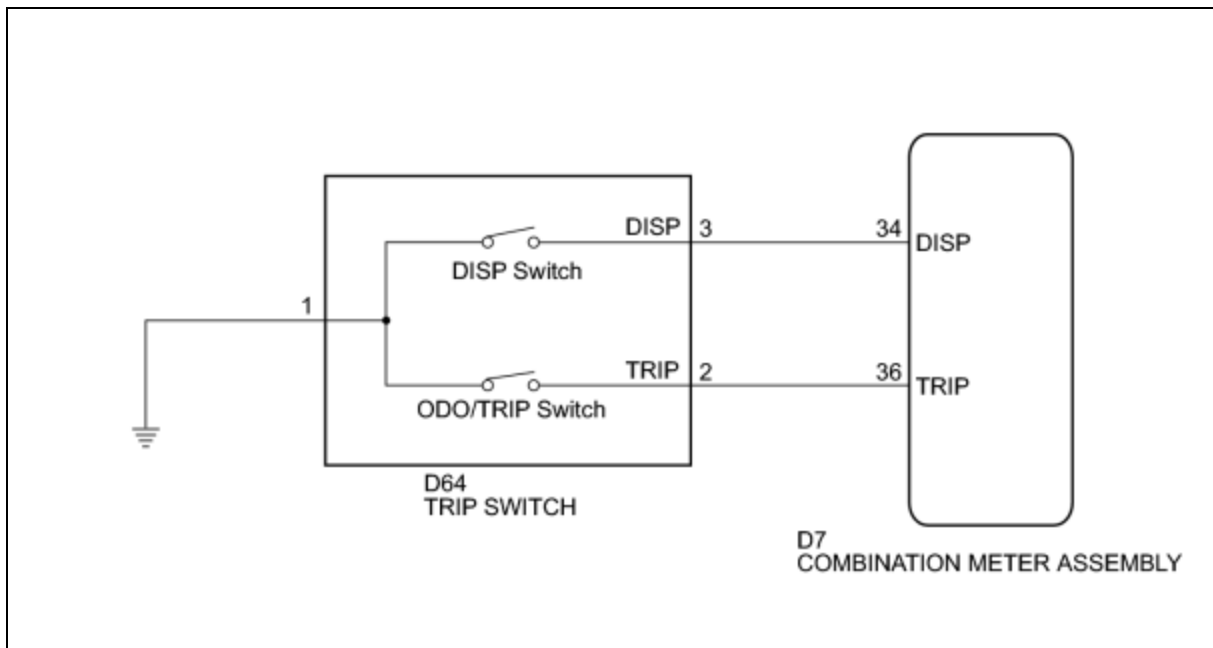

DESCRIPTION

The ODO/TRIP display of the combination meter changes each time the trip switch is pressed.

HINT:

For more information about switching between displays, refer to the owner's manual.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	READ VALUE USING TECHSTREAM (MULTI DISPLAY SELECT SWITCH, ODO/TRIP CHANGE SW)
-----------	--

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Combination Meter / Data List.

(e) According to the display on the tester, read the Data List.

Combination Meter

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
ODO/TRIP Change SW	ODO/TRIP switch / OFF or ON	OFF: ODO/TRIP switch not pushed	-
		ON: ODO/TRIP switch pushed	
Multi Display Select Switch	Multi Display Select Switch / OFF or ON	OFF: DISP switch not pushed	-
		ON: DISP switch pushed	

OK:

The value displayed on the Techstream changes in accordance with the actual ODO/TRIP change switch and multi display select switch operation.

NG ▶ **INSPECT TRIP SWITCH**

OK ▶ **REPLACE COMBINATION METER ASSEMBLY**

2. INSPECT TRIP SWITCH

(a) Remove the trip switch INFO.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
2 (TRIP) - 1	ODO/TRIP switch on (pushed)	Below 1 Ω

2 (TRIP) - 1	ODO/TRIP switch off (not pushed)	10 k Ω or higher
3 (DISP) - 1	DISP switch on (pushed)	Below 1 Ω
3 (DISP) - 1	DISP switch off (not pushed)	10 k Ω or higher

Text in Illustration

*a	Component without harness connected (Trip Switch)
----	--

NG  **REPLACE TRIP SWITCH**

OK

3.	CHECK HARNESS AND CONNECTOR (COMBINATION METER - TRIP SWITCH AND BODY GROUND)
-----------	--

- (a) Disconnect the D7 combination meter assembly connector.
- (b) Disconnect the D64 trip switch connector.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D7-34 (DISP) - D64-3 (DISP)	Always	Below 1 Ω
D7-36 (TRIP) - D64-2 (TRIP)	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D7-34 (DISP) or D64-3 (DISP) - Body ground	Always	10 k Ω or higher
D7-36 (TRIP) or D64-2 (TRIP) - Body ground	Always	10 k Ω or higher

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK  **REPLACE COMBINATION METER ASSEMBLY**

Title: METER / GAUGE / DISPLAY: METER / GAUGE SYSTEM: ON-VEHICLE INSPECTION (2013 FR-S)		

ON-VEHICLE INSPECTION

1. INSPECT SPEEDOMETER

(a) Check the operation.

- (1) Using a speedometer tester (calibrated chassis dynamometer), check the speedometer indication according to the table below.

Indicator Type: km/h

CHASSIS DYNAMOMETER INDICATION (KM/H)	ACCEPTABLE RANGE (KM/H)
20	19.3 to 22.7
40	39.1 to 42.9
60	58.8 to 63.2
80	78.8 to 83.2
100	98.8 to 103.2
120	118.8 to 123.2
140	138.8 to 143.2
160	158.8 to 163.2
180	178.8 to 183.2
200	198.8 to 203.2
220	218.8 to 223.2
240	238.8 to 243.2

Indicator Type: MPH

CHASSIS DYNAMOMETER INDICATION (MPH)	ACCEPTABLE RANGE (MPH)
20	19.4 to 21.8
40	39.3 to 41.9
60	59.3 to 61.9
80	79.3 to 81.9
100	99.3 to 101.9
120	119.3 to 121.9
140	139.3 to 141.9

NOTICE:

Tire wear, over inflation, or under inflation will cause errors.

- (2) Check the deviation from the acceptable range of the speedometer indication.

Reference:
Less than 0.5 km/h (0.3 mph)

HINT:

If the indication is not as specified, go to the problem symptoms table  .

2. INSPECT TACHOMETER

- (a) Connect a tune-up tachometer, and start the engine.
- (b) Compare the test results with the tachometer indications.

TUNE-UP TACHOMETER INDICATION (RPM)	ACCEPTABLE RANGE (RPM)
1000	933 to 1067
2000	1923 to 2077
3000	2913 to 3088
4000	3913 to 4088
5000	4913 to 5088
6000	5913 to 6088
7000	6913 to 7088
8000	7913 to 8088

HINT:

If the indication is not as specified, go to the Problem Symptoms Table  .

3. INSPECT INDICATOR AND WARNING LIGHTS

- (a) Check the illumination function of the warning or indicator lights listed below when turning the ignition switch to ON.

OK:

WARNING OR INDICATOR LIGHT	SPECIFIED CONDITION
LOW FUEL	Warning or indicator light comes on for about 2 seconds after turning the ignition switch to ON.
A/T OIL TEMP*	Warning or indicator light comes on for about 2 or 3 seconds after turning the ignition switch to ON.
TPMS	Warning or indicator light comes on for about 3 seconds after turning the ignition switch to ON.
Brake	
TRAC OFF	
VSC OFF	
VSC SPORT	
SRS	Warning light comes on for about 6 seconds after turning the ignition switch to ON.
Charge	
Oil pressure	

MIL (Check engine warning light)	The light goes off right after the engine starts.
EPS	
SLIP	The light goes off 3 minutes after starting the engine.
ABS

Title: METER / GAUGE / DISPLAY: METER / GAUGE SYSTEM: Operating Light Control Rheostat does not Change Light Brightness (2013 FR-S)		

[Operating Light Control Rheostat does not Change Light Brightness](#)

DESCRIPTION

The brightness of the combination meter assembly is controlled by rotating the light control rheostat knob in upward and downward.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	READ VALUE USING TECHSTREAM (RHEOSTAT SWITCH)
-----------	--

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Combination Meter / Data List.
- (e) According to the display on the tester, read the Data List.

Combination Meter

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Tail Cancel SW	Taillight relay / OFF or ON	OFF: Headlight dimmer switch (Light control switch) → OFF	-
		ON: Headlight dimmer switch (Light control switch) → TAIL	
Rheostat value	Light control rheostat switch input / Min.: 0 Max.: 100	The volume value of the rheostat is displayed. 0 to 100	-

OK:

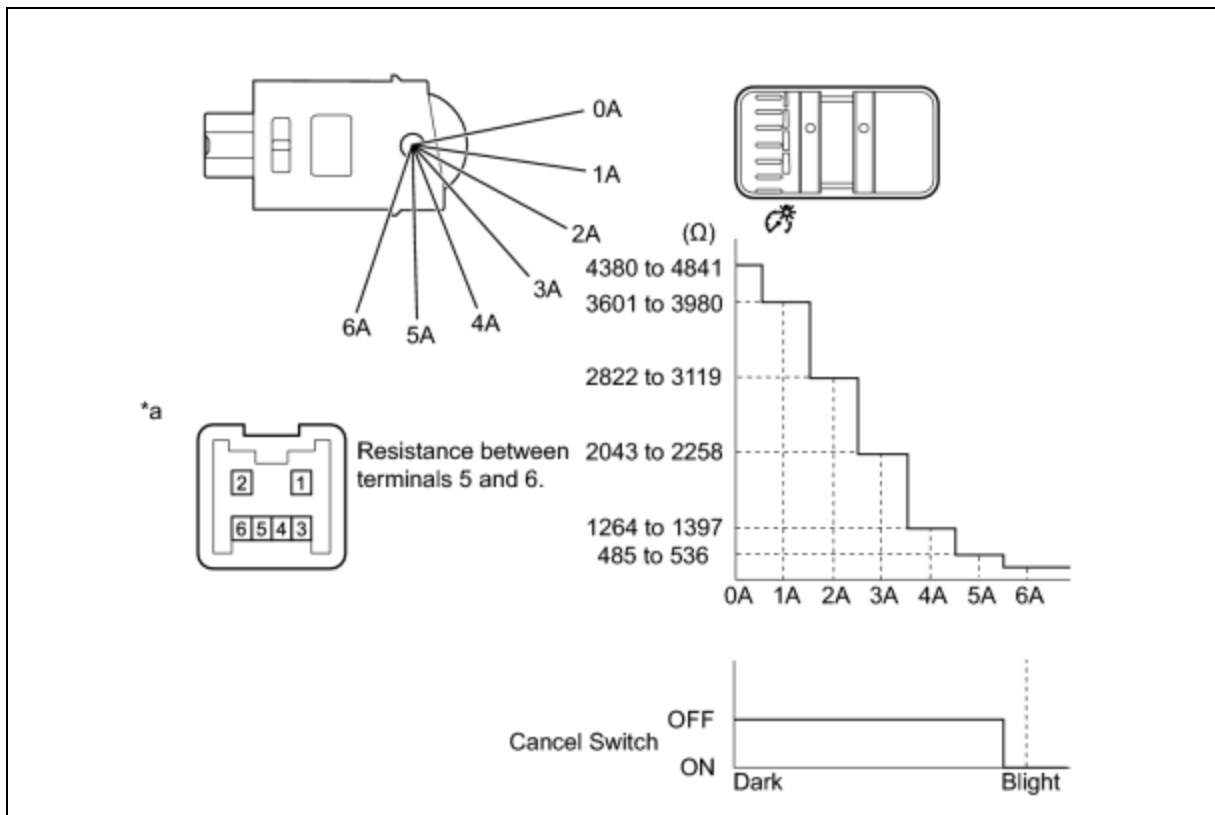

The value displayed on the Techstream changes in accordance with the actual rheostat switch operation.

NG ▶ **INSPECT LIGHT CONTROL RHEOSTAT**

OK ▶ **REPLACE COMBINATION METER ASSEMBLY**

2. INSPECT LIGHT CONTROL RHEOSTAT

(a) Remove the light control rheostat INFO.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
1 - 6	Cancel switch off → on	10 kΩ or higher → Below 1 Ω
4 - 6	Always	4475 to 4946 Ω
5 - 6	Light control rheostat fully up → Light control rheostat fully down	485 to 536 Ω → 4380 to 4841 Ω

Text in Illustration

*a	Component without harness connected (Light Control Rheostat)
----	---

NG  **REPLACE LIGHT CONTROL RHEOSTAT**

OK

3.	CHECK HARNESS AND CONNECTOR (COMBINATION METER ASSEMBLY - LIGHT CONTROL RHEOSTAT)
-----------	--

(a) Disconnect the D7 combination meter assembly connector.

(b) Disconnect the D2 light control rheostat connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D7-30 (E) - D2-6	Always	Below 1 Ω
D7-31 (TR) - D2-5	Always	Below 1 Ω
D7-32 (T) - D2-4	Always	Below 1 Ω
D7-33 (TC) - D2-1	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D7-30 (E) or D2-6 - Body ground	Always	10 kΩ or higher
D7-31 (TR) or D2-5 - Body ground	Always	10 kΩ or higher

D7-32 (T) or D2-4 - Body ground	Always	10 k Ω or higher
D7-33 (TC) or D2-1 - Body ground	Always	10 k Ω or higher

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ▶ REPLACE COMBINATION METER ASSEMBLY

Title: METER / GAUGE / DISPLAY: METER / GAUGE SYSTEM: Speedometer Malfunction (2013 FR-S)		

Speedometer Malfunction

DESCRIPTION

The combination meter assembly controls the speedometer in accordance with the vehicle speed signals from the skid control ECU (brake actuator assembly) through the CAN communication system.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	CHECK CAN COMMUNICATION SYSTEM
-----------	---------------------------------------

(a) Check if CAN communication DTCs are output INFO.

Result

RESULT	PROCEED TO
DTCs are not output.	A
DTCs are output.	B

A

2.	PERFORM ACTIVE TEST USING TECHSTREAM (SPEED METER OPERATION)
-----------	---

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Combination Meter / Active Test.
- (e) According to the display on the tester, perform the Active Test.

Combination Meter

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Speed Meter Operation	Speedometer	0, 40, 80, 120, 160, 200, 240 km/h	-

OK:

The vehicle speed displayed on the tester is approximately the same as that of the speedometer reading.

NG  **REPLACE COMBINATION METER ASSEMBLY**

OK

3.	READ VALUE USING TECHSTREAM (VEHICLE SPEED METER)
-----------	--

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Combination Meter / Data List.
- (e) According to the display on the tester, read the Data List.

Combination Meter

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE

Vehicle Speed Meter	Vehicle speed / Min.: 0 (0) Max.: 255 (158)	Approximately same as actual vehicle speed (when vehicle is being driven)	Unit km/h (mph)
---------------------	---	---	--------------------

OK:

The vehicle speed displayed on the tester is approximately the same as the actual vehicle speed.

NOTICE:

Determine whether the value displayed on the tester is within the acceptable range by referring to the reference values described in "On-Vehicle Inspection"  .

NG  **REPLACE COMBINATION METER ASSEMBLY**

OK

4.	CHECK VEHICLE STABILITY CONTROL SYSTEM
-----------	---

(a) Check if the vehicle stability control system outputs DTCs  .

Result

RESULT	PROCEED TO
DTCs are not output.	A
DTCs are output.	B

B  **GO TO VEHICLE STABILITY CONTROL SYSTEM**

A

5.	READ VALUE USING TECHSTREAM (VEHICLE SPEED)
-----------	--

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Chassis / ABS/VSC/TRAC / Data List.

(e) According to the display on the tester, read the Data List.

Combination Meter

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Vehicle Speed	Vehicle speed / Min.: 0 (0) Max.: 326.4 (202.8)	Approximately same as actual vehicle speed (when vehicle is being driven)	Unit km/h (mph)

OK:

The vehicle speed displayed on the tester is approximately the same as the actual vehicle speed.

NOTICE:

Determine whether the value displayed on the tester is within the acceptable range by referring to the reference values described in "On-Vehicle Inspection" .

B ▶ **GO TO VEHICLE STABILITY CONTROL SYSTEM**

A

6.	REPLACE COMBINATION METER ASSEMBLY
-----------	---

(a) Replace the combination meter assembly with a new or a normal one .

OK:

The operation of the speedometer returns to normal.

NG ▶ **REPLACE SKID CONTROL ECU (BRAKE ACTUATOR ASSEMBLY)**

OK ▶ **END**

4. DIRECT LINE SIGNAL

5. METER GAUGE AND WARNING INDICATOR

Meter/Gauge

ITEM	SIGNAL DESCRIPTION
Speedometer	Indicates the vehicle speed based on signals received from the skid control ECU (brake actuator assembly) and the gauge needle operates (CAN).
Tachometer	Indicates the engine speed based on signals from ECM and the gauge needle operates (CAN).
	Indicates the fuel level in accordance with signals received from fuel sender

Fuel Gauge	gauge assembly and the gauge needle operates (Direct line).
Engine coolant temperature gauge	The combination meter assembly receives an engine coolant temperature signal from the ECM and the gauge needle operates (CAN).

Warning/Indicator

ITEM	SIGNAL DESCRIPTION
TURN	Receives turn signal from turn signal flasher assembly (Direct line).
SET*1	Receives cruise control switch signal from the ECM (CAN).
CRUISE (green)*1	Receives cruise control switch signal from the ECM (CAN).
CRUISE (yellow)*1	Receives cruise control switch signal from the ECM (CAN).
DOOR	Open door indicator illuminates when receiving signal from main body ECU (network gateway ECU) (CAN).
HI BEAM	Receives high beam signal from main body ECU (network gateway ECU) (CAN).
TPMS	Receives TPMS signal from main body ECU (network gateway ECU) (CAN).
SECURITY	Receives security signal from main body ECU (network gateway ECU) (CAN).
REV*2	Receives engine speed signal from the ECM (CAN).
SLIP	Receives VSC control signal or malfunction signal from brake actuator assembly (skid control ECU) (CAN).
ABS	Receives malfunction signal from brake actuator assembly (skid control ECU) (CAN).
D SEAT BELT	Receives driver seat belt warning signal (unfastened) from main body ECU (network gateway ECU) (Direct line).
CHARGE	Receives malfunction signal from generator assembly (Direct line).
OIL PRESSURE	Receives engine oil pressure warning signal from engine oil pressure switch assembly (Direct line).
MIL	Receives malfunction check engine warning signal from ECM (CAN).
SPORT*3	Receives sport indicator signal from TCM (CAN).
SNOW*3	Receives snow indicator signal from TCM (CAN).
AT OIL TEMP*3	Receives malfunction signal from TCM (CAN).
BRAKE	<ul style="list-style-type: none"> Receives brake fluid level warning signal from brake level switch (Direct line). Receives parking brake switch signal from main body ECU (network gateway ECU) (CAN). Receives malfunction signal from brake actuator assembly (skid control ECU) (CAN).
TRAC OFF	Receives TRAC control off signal from brake actuator assembly (skid control ECU) (CAN).
VSC OFF	Receives VSC control off signal from brake actuator assembly (skid control ECU)

	(CAN).
VSC SPORT	Receives VSC sport signal from brake actuator assembly (skid control ECU) (CAN).
AIRBAG	Receives malfunction signal from airbag sensor assembly (CAN).
EPS	Receives malfunction signal from power steering ECU assembly (CAN).
LOW FUEL	Receives low fuel signal from fuel sender gauge assembly (Direct line).

Buzzer

ITEM	SIGNAL DESCRIPTION
SEAT BELT (driver seat belt)	Buzzer ON: When ignition switch is ON, driver seat belt is unfastened, and vehicle speed is 20 km/h (12.4 mph) or more.
EPS	Buzzer ON: Receives malfunction signal from the power steering ECU assembly.
KEY REMINDER	Buzzer ON: Receives signal from main body ECU (network gateway ECU).
IMMOBILISER	Buzzer ON: Receives signal from main body ECU (network gateway ECU).
SPORTS SHIFT REJECT*1	Buzzer ON: Receives signal from the ECM.
REV*2	Buzzer ON: Receives engine speed signal from the ECM.
LIGHT REMINDER	Buzzer ON: When ignition switch is off, receives signal from main body ECU (network gateway ECU).

Title: METER / GAUGE / DISPLAY: METER / GAUGE SYSTEM: Tachometer Malfunction (2013 FR-S)		

Tachometer Malfunction

DESCRIPTION

The combination meter assembly controls the tachometer in accordance with the engine speed signals from the ECM through the CAN communication system.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	CHECK CAN COMMUNICATION SYSTEM
-----------	---------------------------------------

(a) Check if CAN communication DTCs are output INFO .

Result

RESULT	PROCEED TO
DTCs are not output	A
DTCs are output	B

A

2.	PERFORM ACTIVE TEST USING TECHSTREAM (TACHOMETER OPERATION)
-----------	--

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Combination Meter / Active Test.
- (e) According to the display on the tester, perform the Active Test.

Combination Meter

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Tachometer Operation	Tachometer	0, 1000, 2000, 3000, , 4000, 5000, 6000, 7000 rpm	-

OK:

The engine speed displayed on the tester is approximately the same as that of the tachometer reading.

NG  **REPLACE COMBINATION METER ASSEMBLY**

OK

3.	READ VALUE USING TECHSTREAM (ENGINE RPM)
-----------	---

- (a) Connect the Techstream to the DLC3.
- (b) Start the engine.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Combination Meter / Data List.
- (e) According to the display on the tester, read the Data List.

Combination Meter

--	--	--	--

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Engine Rpm	Engine speed Min.: 0 Max.: 12750	Approximately same as actual engine speed (when engine is running)	Unit: rpm

OK:

The engine speed displayed on the tester is approximately the same as that displayed on the combination meter assembly.

NOTICE:

Determine whether the value displayed on the tester is within the acceptable range by referring to the reference values described in "On-Vehicle Inspection"  .

NG  **REPLACE COMBINATION METER ASSEMBLY**

OK

4.	CHECK SFI SYSTEM
-----------	-------------------------

(a) Check if the SFI system outputs DTCs  .

Result

RESULT	PROCEED TO
DTCs are not output	A
DTCs are output	B

B  **GO TO SFI SYSTEM**

A

5.	READ VALUE USING TECHSTREAM (ENGINE SPEED)
-----------	---

(a) Connect the Techstream to the DLC3.

(b) Start the engine.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine / Data List.

(e) According to the display on the tester, read the Data List.

Combination Meter

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Engine Speed	Engine speed Min.: 0 Max.: 16383.75	Approximately same as actual engine speed (when engine is running)	Unit: rpm

OK:

The engine speed displayed on the tester is approximately the same as that displayed on the combination meter assembly.

NOTICE:

Determine whether the value displayed on the tester is within the acceptable range by referring to the reference values described in "On-Vehicle Inspection" .

B  **GO TO SFI SYSTEM**

A

6.	REPLACE COMBINATION METER ASSEMBLY
-----------	---

(a) Replace the combination meter assembly with a new or a normal one .

NG  **REPLACE ECM**

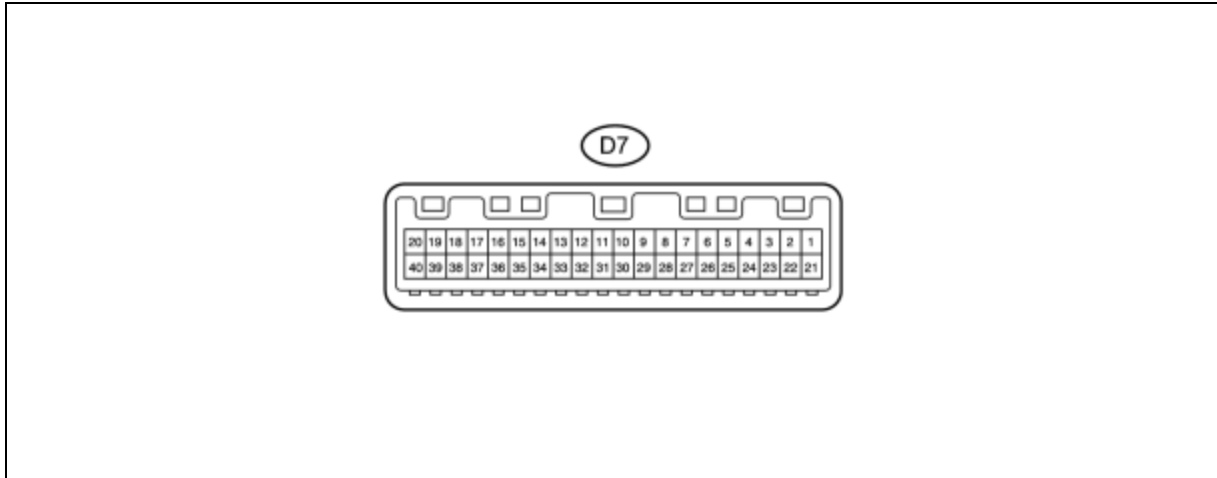

OK  **END**

Use the same procedure as for the LH side.

3. REMOVE BENCH TYPE REAR SEATBACK ASSEMBLY INFO

4. REMOVE FRONT DOOR SCUFF PLATE LH INFO

5. REMOVE FRONT DOOR SCUFF PLATE RH

HINT:

Use the same procedure as for the LH side.

6. DISCONNECT FRONT DOOR OPENING TRIM WEATHERSTRIP LH

HINT:

Disconnect the front door opening trim weatherstrip to the extent that allows the removal of the luggage compartment trim cover.

7. DISCONNECT FRONT DOOR OPENING TRIM WEATHERSTRIP RH

HINT:

Use the same procedure as for the LH side.

8. REMOVE LUGGAGE COMPARTMENT TRIM COVER LH INFO

9. REMOVE LUGGAGE COMPARTMENT TRIM COVER RH

HINT:

Use the same procedure as for the LH side.

10. REMOVE QUARTER TRIM LID SUB-ASSEMBLY LH INFO

11. REMOVE QUARTER TRIM LID SUB-ASSEMBLY RH

HINT:

Use the same procedure as for the LH side.

12. REMOVE REAR WINDOW SIDE GARNISH LH INFO

13. REMOVE REAR WINDOW SIDE GARNISH RH

HINT:

Use the same procedure as for the LH side.

14. REMOVE PACKAGE TRAY TRIM PANEL ASSEMBLY INFO

15. REMOVE CHILD RESTRAINT SEAT TETHER ANCHOR BRACKET

- (a) Remove the bolt and disengage the hook to remove the child restraint seat tether anchor bracket.

HINT:

Use the same procedure for the 2 child restraint seat tether anchor brackets.

Title: SEAT BELT: FRONT SEAT OUTER BELT ASSEMBLY: DISPOSAL (2013 FR-S)		

DISPOSAL

CAUTION:

Before performing pre-disposal deployment of any SRS component, review and closely follow all applicable environmental and hazardous material regulations. Pre-disposal deployment may be considered hazardous material treatment.

HINT:

When scrapping vehicles equipped with a seat belt pretensioner or disposing of a front seat outer belt assembly (with a seat belt pretensioner), always deploy the procedures described below. If any abnormality occurs during deployment of the seat belt pretensioner, contact the SERVICE DEPARTMENT of TOYOTA MOTOR SALES, U.S.A., INC.

1. DISPOSE OF FRONT SEAT OUTER BELT ASSEMBLY (When Installed in Vehicle)

CAUTION:

- Use gloves and safety glasses when handling a front seat outer belt assembly with a deployed pretensioner.
- Always wash your hands with water after completing the operation.
- Do not apply water, etc. to a front seat outer belt assembly with a deployed pretensioner.
- When deploying a seat belt pretensioner, always use the specified SST (SRS airbag deployment tool). Perform the operation in a place away from electrical interference.
- When disposing of a front seat outer belt assembly with a pretensioner, never deploy the pretensioner in the customer's vehicle.

NOTICE:

- Never dispose of a front seat outer belt assembly with a pretensioner that has not been deployed.
- The front seat outer belt assembly produces an exploding sound when the pretensioner deploys, so perform the operation outdoors where it will not disturb local residents.
- When deploying a seat belt pretensioner, perform the operation at least 10 m (32.8 ft.) away from the front seat outer belt assembly.
- Be sure to follow the procedure listed below when deploying a seat belt pretensioner.

(a) Disconnect the seat belt pretensioner connector.

(1) Disconnect the cable from the negative (-) battery terminal.

(2) Remove the front door scuff plate  .

(3) Disconnect the front door opening trim weatherstrip  .

(4) Remove the quarter trim panel  .

(5) Using a screwdriver with the tip wrapped with protective tape, release the pretensioner connector lock and disconnect the pretensioner connector.

Text in Illustration

*1	Protective Tape
*2	Pretensioner Connector
*3	Pretensioner Connector Lock

HINT:

Tape the screwdriver tip before use.

(b) Connect SST.

(1) Short the clip and terminal of SST.

SST: 09082-18010

SST: 09082-18020

Text in Illustration

*a	Short the clip and terminal
----	-----------------------------

(2) Connect 2 SST, and then connect them to the seat belt pretensioner.

NOTICE:

To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the pretensioner connector.

(3) Move SST at least 10 m (32.8 ft.) away from the front of the vehicle.

Text in Illustration

*a	10 m or more
----	--------------

(4) Close all the doors and windows of the vehicle.

NOTICE:

Do not damage the SST wire harness.

(c) Deploy the seat belt pretensioner.

(1) Confirm that no one is inside the vehicle or within a 10 m (32.8 ft.) radius of the vehicle.

(2) Connect the clip of SST to the battery positive (+) terminal.

- (3) Connect the terminal of SST to the battery (-) terminal to the deploy the seat belt pretensioner.
- (d) Dispose of the front seat outer belt assembly.
 - (1) Remove the front seat outer belt assembly and SST.
 - (2) Place the front seat outer belt assembly in a plastic bag, tie the end tightly, and dispose of it in the same way as other general parts.

CAUTION:

- The front seat outer belt assembly becomes very hot when the pretensioner is deployed, so leave it untouched for at least 40 minutes after the pretensioner is deployed.
- Use gloves and safety glasses when handling a front seat outer belt assembly with a deployed pretensioner.
- Always wash your hands with water after completing the operation.
- Do not apply water, etc. to a front seat outer belt assembly with a deployed pretensioner.

HINT:

When scrapping a vehicle, deploy the seat belt pretensioner, and then scrap the vehicle with the front seat outer belt assembly installed.

2. DISPOSE OF FRONT SEAT OUTER BELT ASSEMBLY (When not Installed in Vehicle)

CAUTION:

- Use gloves and safety glasses when handling a front seat outer belt assembly with a deployed pretensioner.
- Always wash your hands with water after completing the operation.
- Do not apply water, etc. to a front seat outer belt assembly with a deployed pretensioner.
- When deploying a seat belt pretensioner, always use the specified SST (SRS airbag deployment tool). Perform the operation in a place away from electrical interference.

NOTICE:

- When disposing of a front seat outer belt assembly with a pretensioner, never deploy the pretensioner in the customer's vehicle.
- Never dispose of a front seat outer belt assembly with a pretensioner that has not been deployed.
- The front seat outer belt assembly produces an exploding sound when the pretensioner deploys, so perform the operation outdoors where it will not disturb local residents.
- When deploying a seat belt pretensioner, perform the operation at least 10 m (32.8 ft.) away from the front seat outer belt assembly.
- Be sure to follow the procedure listed below when deploying a seat belt pretensioner.

- (a) Remove the front seat outer belt assembly INFO.

- (b) Wind the seat belt webbing with the retractor.

Text in Illustration

*a	Cut
*b	100 mm

- (c) When the seat belt webbing is sufficiently wound, cut the seat belt webbing approximately 100 mm (3.94 in.) from the retractor, as shown in the illustration.

HINT:

The retractor resistance increases in correlation with how much the seat belt webbing is wound.

- (d) Connect SST.

- (1) Short the clip and terminal of SST.

SST: 09082-18010

SST: 09082-18020

Text in Illustration

*a	Short the clip and terminal
----	-----------------------------

- (2) Connect 2 SST, and then connect them to the seat belt pretensioner.

NOTICE:

To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the pretensioner connector.

- (3) Place the front seat outer belt assembly on the ground and cover it with a tire and wheel assembly.

Text in Illustration

*a	10 m or more
----	--------------

NOTICE:

- Position the front seat outer belt assembly as shown in the illustration.
- Use a scrap tire and wheel assembly when disposing of a seat belt pretensioner.

- (4) Position and hold SST at least 10 m (32.8 ft.) away from the wheel.

NOTICE:

Do not damage the SST wire harness.

- (e) Deploy the seat belt pretensioner.

- (1) Check that no one is within a 10 m (32.8 ft.) radius of the wheel.

- (2) Connect the clip of SST to the battery positive (+) terminal.

- (3) Connect the terminal of SST to the battery (-) terminal to the deploy the seat belt pretensioner.

- (f) Dispose of the front seat outer belt assembly.

- (1) Remove the tire and wheel assembly and SST.

- (2) Place the front seat outer belt assembly in a plastic bag, tie the end tightly, and dispose of it in the same way as other general parts.

CAUTION:

- The front seat outer belt assembly becomes very hot when the pretensioner is deployed, so leave it untouched for at least 40 minutes after the pretensioner is deployed.
- Use gloves and safety glasses when handling a front seat outer belt assembly with a deployed pretensioner.
- Always wash your hands with water after completing the operation.
- Do not apply water, etc. to a front seat outer belt assembly with a deployed pretensioner.

Title: SEAT BELT: FRONT SEAT OUTER BELT ASSEMBLY: INSPECTION (2013 FR-S)		

INSPECTION

1. INSPECT FRONT SEAT OUTER BELT ASSEMBLY

- (a) Before installing the front seat outer belt assembly, check the ELR function.

NOTICE:

Do not disassemble the retractor.

- (1) When the inclination of the retractor is 12° or less, check that the belt can be pulled from the retractor. When the inclination of the retractor is over 27°, check that the belt locks.

Text in Illustration

*1	Retractor
*a	Unlocked
*b	Locked
*c	27°

If the result is not as specified, replace the front seat outer belt assembly.

Title: SEAT BELT: FRONT SEAT OUTER BELT ASSEMBLY: INSTALLATION (2013 FR-S)		

INSTALLATION

HINT:

- Use the same procedure for the RH side and LH side.
- The procedure listed below is for the LH side.

1. INSPECT FRONT SEAT OUTER BELT ASSEMBLY INFO

2. INSTALL FRONT SEAT OUTER BELT ASSEMBLY

- (a) Engage the hook and install the front seat outer belt assembly with the 2 bolts.

Bolt A - Torque: 7.5 N·m (76 kgf·cm, 66in·lbf)

Bolt B - Torque: 30 N·m (306 kgf·cm, 22ft·lbf)

- (b) Connect the pretensioner connector.

Text in Illustration

*1	Pretensioner Connector
*2	Pretensioner Connector Lock

NOTICE:

When connecting any pretensioner connector, take care not to damage the pretensioner wire harness.

- (c) Push in the lock to install the pretensioner connector.
- (d) Install the shoulder anchor of the front seat outer belt assembly with the bolt.

Torque: 30 N·m (306 kgf·cm, 22ft·lbf)

3. INSTALL CENTER PILLAR GARNISH INFO

4. CONNECT FRONT SEAT OUTER BELT ASSEMBLY

(a) Install the floor anchor of the front seat outer belt assembly with the bolt.

Torque: 30 N·m (306 kgf·cm, 22ft·lbf)

(b) Check if the ELR locks.

NOTICE:

The check should be performed with the front seat outer belt assembly installed.

(1) With the front seat outer belt assembly installed, check that the belt locks when it is pulled out quickly.

(c) Install the floor anchor cover.

5. INSTALL REAR QUARTER TRIM FRONT GARNISH INFO

6. INSTALL REAR WINDOW SIDE GARNISH INFO

7. INSTALL QUARTER TRIM LID SUB-ASSEMBLY INFO

8. INSTALL LUGGAGE COMPARTMENT TRIM COVER INFO

9. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP INFO

10. INSTALL FRONT DOOR SCUFF PLATE INFO

11. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

Torque: 6.0 N·m (61 kgf·cm, 53in·lbf)

12. INSPECT SRS WARNING LIGHT

Title: SEAT BELT: FRONT SEAT OUTER BELT ASSEMBLY: ON-VEHICLE INSPECTION (2013 FR-S)		

ON-VEHICLE INSPECTION

CAUTION:

Be sure to correctly follow the removal and installation procedures for the front seat outer belt assembly.

1. INSPECT FRONT SEAT OUTER BELT ASSEMBLY (for Vehicle not Involved in Collision)

- (a) Perform a diagnostic system check  .
- (b) Visually check for defects with the front seat outer belt assembly installed on the vehicle.
- (1) The defects are as follows:
- Cuts on the front seat outer belt assembly
 - Small cracks on the front seat outer belt assembly
 - Significant discoloration on the front seat outer belt assembly

OK:

No defects are found.

HINT:

If any of the defects is found, replace the front seat outer belt assembly with a new one.

2. INSPECT FRONT SEAT OUTER BELT ASSEMBLY (for Vehicle Involved in Collision)

- (a) Perform a diagnostic system check  .
- (b) Visually check for defects with the front seat outer belt assembly removed from the vehicle.
- (1) The defects are as follows:
- Cuts on the front seat outer belt assembly
 - Small cracks on the front seat outer belt assembly
 - Significant discoloration on the front seat outer belt assembly
 - Cracks or other damage to the connector

OK:

No defects are found.

HINT:

If any of the defects is found, replace the front seat outer belt assembly with a new one.

Last Modified: 3-27-2012	6.4 L	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000001228064X
Title: SEAT BELT: FRONT SEAT OUTER BELT ASSEMBLY: PRECAUTION (2013 FR-S)		

PRECAUTION

CAUTION:

Replace any faulty parts of the seat belt systems (outer belt, inner belt, bolts, nuts, tether anchor hardware and other related parts). When inspecting a vehicle that was in a collision, be sure to check all of the seat belt systems regardless of whether or not the system was activated in the collision. Replace any damaged or malfunctioning systems.

1. ROAD TEST (IN SAFE AREA)

CAUTION:

Conduct this test in a safe area.

- (a) Fasten the front seat belts.
- (b) Drive the vehicle at 16 km/h (10 mph) and firmly depress the brake pedal. Check that the belts lock and cannot be extended at this time.

If a belt does not lock, replace the seat belt assembly [INFO](#) .

HINT:

Inspect the seat belt assembly before installing it [INFO](#) .

Model Year: 2013	Model: FR-S	Doc ID: RM00000120B06LX
Title: SEAT BELT: FRONT SEAT OUTER BELT ASSEMBLY: REMOVAL (2013 FR-S)		

REMOVAL

1. PRECAUTION

NOTICE:

After turning the ignition switch off, waiting time may be required before disconnecting the cable from the negative (-) battery terminal. Therefore, make sure to read the disconnecting the cable from the negative (-) battery terminal notices before proceeding with work INFO.

HINT:

- Use the same procedure for the RH side and LH side.
- The procedure listed below is for the LH side.

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

The power window system utilizes a mechanism that the door glass moves down slightly when the door is opened, and that the glass moves up when closing the door in order to prevent the door molding from being damaged. When the battery negative (-) terminal needs to be disconnected for servicing, fully open the driver and passenger door glasses in advance.

3. REMOVE FRONT DOOR SCUFF PLATE INFO

4. DISCONNECT FRONT DOOR OPENING TRIM WEATHERSTRIP

HINT:

Disconnect the front door opening trim weatherstrip to the extent that allows the removal of the luggage compartment trim cover.

5. REMOVE LUGGAGE COMPARTMENT TRIM COVER INFO

6. REMOVE QUARTER TRIM LID SUB-ASSEMBLY INFO

7. REMOVE REAR WINDOW SIDE GARNISH INFO

8. REMOVE REAR QUARTER TRIM FRONT GARNISH INFO

9. DISCONNECT FRONT SEAT OUTER BELT ASSEMBLY

(a) Turn back the floor anchor cover.

Text in Illustration

*1	Floor Anchor Cover
----	--------------------

(b) Loosen the bolt and disconnect the floor anchor of the front seat outer belt assembly.

10. REMOVE CENTER PILLAR GARNISH INFO

11. REMOVE FRONT SEAT OUTER BELT ASSEMBLY

(a) Loosen the bolt and disconnect the shoulder anchor of the front seat outer belt assembly.

(b) Using a screwdriver with the tip wrapped with protective tape, release the pretensioner connector lock and disconnect the pretensioner connector.

Text in Illustration

*1	Protective Tape
*2	Pretensioner Connector
*3	Pretensioner Connector Lock

HINT:

Tape the screwdriver tip before use.

(c) Remove the 2 bolts and disengage the hook to remove the front seat outer belt assembly.

- The procedure listed below is for the LH side.

1. REMOVE SEPARATE TYPE REAR SEAT CUSHION ASSEMBLY INFO

2. REMOVE FRONT DOOR SCUFF PLATE INFO

3. DISCONNECT FRONT DOOR OPENING TRIM WEATHERSTRIP

HINT:

Disconnect the front door opening trim weatherstrip to the extent that allows the removal of the luggage compartment trim cover.

4. REMOVE LUGGAGE COMPARTMENT TRIM COVER INFO

5. REMOVE QUARTER TRIM LID SUB-ASSEMBLY INFO

6. REMOVE REAR WINDOW SIDE GARNISH INFO

7. REMOVE REAR SEAT 3 POINT TYPE OUTER BELT ASSEMBLY

- (a) Remove the bolt and disconnect the floor anchor of the rear seat 3 point type outer belt assembly.

- (b) Remove the bolt A.

(c) Loosen the bolt B and remove the rear seat 3 point type outer belt assembly.

TOYOTA

Last Modified: 3-27-2012	6.4 A	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000004N7R00UX
Title: SEAT BELT: SEAT BELT WARNING SYSTEM: CUSTOMIZE PARAMETERS (2013 FR-S)		

CUSTOMIZE PARAMETERS

1. CUSTOMIZE SEAT BELT WARNING SYSTEM

HINT:

The following items can be customized.

NOTICE:

- When the customer requests a change in a function, first make sure that the function can be customized.
- Be sure to make a note of the current settings before customizing.
- When troubleshooting a function, first make sure that the function is set to the default setting.
- These buzzers should be ON for safe driving. Perform this procedure only if it is necessary to set the buzzer to OFF (disabled).

(a) Customizing with the Techstream

- (1) Connect the Techstream to the DLC3.
- (2) Turn the ignition switch to ON.
- (3) Turn the Techstream on.
- (4) Enter the following menus: Customize Setting / Warning.
- (5) Select the setting by referring to the table below.

Warning

DISPLAY	DEFAULT	CONTENT	SETTING	RELEVANT ECU
Driver Side Seatbelt Warning Buzzer	ON	Function to sound the driver seat belt warning buzzer	ON/OFF	Combination meter assembly
Front Passenger Side Seatbelt Warning Buzzer	ON	Function to sound the front passenger seat belt warning buzzer	ON/OFF	

HINT:

This setting is only valid when the vehicle is driven at 20 km/h (12 mph) or more.

Last Modified: 3-27-2012	6.4 U	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM0000012G70C1X
Title: SEAT BELT: SEAT BELT WARNING SYSTEM: DATA LIST / ACTIVE TEST (2013 FR-S)		

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the following table, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Combination Meter, Occupant Detection or SRS Airbag / Data List.
- (e) Read the Data List according to the display on the Techstream.

Combination Meter (Combination Meter Assembly)

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Driver Side Seatbelt Warning Buzzer	Driver seat belt warning buzzer/ON or OFF	Customized value displayed	-
P-Seatbelt Warning Buzzer	Front passenger seat belt warning buzzer/ON or OFF	Customized value displayed	-

Occupant Detection (Occupant Detection ECU)

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Status of Passenger Side Buckle SW	Front passenger buckle switch/ON or OFF	Unset: Seat belt not fastened Set: Seat belt fastened NG: Data is not determined	-

SRS Airbag (Airbag ECU Assembly)

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE

Driver Buckle SW	Driver buckle switch/Unset, Set or NG	Unset: Seat belt not fastened Set: Seat belt fastened NG: Data is not determined	-
------------------	---------------------------------------	--	---

2. ACTIVE TEST

Using the Techstream to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Combination Meter / Active Test.
- (e) Perform the Active Test according to the display on the Techstream.

Combination Meter (Combination Meter Assembly)

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Driver Side Seat Belt	Seat belt warning light	OFF/ON	-
Front passenger Side Seat Belt	Seat belt warning light	OFF/ON	-

Title: SEAT BELT: SEAT BELT WARNING SYSTEM: Driver Side Seat Belt Warning Light does not Operate (2013 FR-S)		

Driver Side Seat Belt Warning Light does not Operate

DESCRIPTION

The combination meter assembly illuminates, blinks or turns off the seat belt warning light on the combination meter assembly in accordance with the state of the front seat inner belt assembly LH.

HINT:

The seat belt warning light on the combination meter assembly is used for both the driver seat and front passenger seat.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	PERFORM ACTIVE TEST USING TECHSTREAM (DRIVER SIDE SEAT BELT WARNING LIGHT)
-----------	---

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Combination Meter / Active Test.
- (e) Perform the Active Test according to the display on the Techstream.

OK:

Driver side seat belt warning light condition can be switched by Active Test.

Combination Meter

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Driver Side Seat Belt	Driver side seat belt warning light	ON/OFF	-

NG ▶ REPLACE COMBINATION METER ASSEMBLY

OK

2.	INSPECT FRONT SEAT INNER BELT ASSEMBLY LH
-----------	--

(a) Remove the front seat inner belt assembly LH .

(b) Inspect the front seat inner belt assembly LH .

NG ▶ REPLACE FRONT SEAT INNER BELT ASSEMBLY LH

OK

3.	CHECK HARNESS AND CONNECTOR (FRONT SEAT INNER BELT ASSEMBLY LH - COMBINATION METER ASSEMBLY - BODY GROUND)
-----------	---

(a) Disconnect the H19 front seat inner belt assembly LH connector.

(b) Disconnect the D7 combination meter assembly connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D7-37 (DBKL) - H19-1	Always	Below 1 Ω
H19-1 - Body ground	Always	10 k Ω or higher
H19-2 - Body ground	Always	Below 1 Ω

REPAIR OR REPLACE HARNESS OR CONNECTOR

NG ▶

OK ▶ REPLACE COMBINATION METER
ASSEMBLY

Title: SEAT BELT: SEAT BELT WARNING SYSTEM: Front Passenger Side Seat Belt Warning Light Malfunction (2013 FR-S)		

Front Passenger Side Seat Belt Warning Light Malfunction

DESCRIPTION

When the ignition switch is ON, the occupant detection ECU sends a signal to the airbag sensor assembly to indicate the state of the front seat inner belt assembly RH and also whether the front passenger seat is occupied. The airbag sensor assembly sends those signals to the combination meter assembly. The telltale light assembly illuminates, blinks or turns off the seat belt warning light on the combination meter assembly in accordance with these signals.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- Inspect the fuses for circuits related to this system before performing the following inspection

- procedure.
- The seat belt warning system uses the CAN communication system. First, confirm that there is no malfunction in the CAN communication system. Refer to the How to Proceed with Troubleshooting procedure  .

PROCEDURE

1.	CHECK DTC OUTPUT (OCCUPANT CLASSIFICATION SYSTEM)
-----------	--

(a) Clear DTCs  .

(b) Recheck for DTCs  .

Result:

RESULT	PROCEED TO
DTC is not output	A
DTC is output	B

B  **GO TO OCCUPANT CLASSIFICATION SYSTEM**

A

2.	CHECK DTC OUTPUT (AIRBAG SYSTEM)
-----------	---

(a) Clear DTCs  .

(b) Recheck for DTCs  .

Result:

RESULT	PROCEED TO
DTC is not output	A
DTC is output	B

B  **GO TO AIRBAG SYSTEM**

A

3. READ VALUE USING TECHSTREAM

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Occupant Detection / Data List.
- (e) Read the Data List according to the display on the Techstream.

Occupant Detection (Occupant Detection ECU)

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Status of Passenger Side Buckle SW	Front passenger buckle switch/Set, Unset or NG	Set: Seat belt fastened Unset: Seat belt not fastened NG: Data is not determined	-

Result

RESULT	PROCEED TO
Unset or Set is displayed on the Techstream screen according to the front passenger seat belt condition	A
Unset or Set is not displayed normally on the Techstream screen according to the front passenger seat belt condition	B
NG is displayed on the Techstream screen	C

B ► REPLACE FRONT SEAT INNER BELT ASSEMBLY RH

C ► REPLACE FRONT SEAT ASSEMBLY RH

A

4. READ VALUE USING TECHSTREAM

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Combination Meter / Data List.

(e) Read the Data List according to the display on the Techstream.

SRS Airbag (Airbag Sensor Assembly)

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
P-Seatbelt Buckle SW	Front passenger buckle switch/ON or OFF	ON: Seat belt is not fastened OFF: Seat belt is fastened	-

Result

RESULT	PROCEED TO
ON or OFF is displayed on the Techstream screen according to the front passenger seat belt condition	A
ON or OFF is not displayed normally on the Techstream screen according to the front passenger seat belt condition	B

B ▶ REPLACE COMBINATION METER ASSEMBLY

A

5. INSPECT CLOCK ASSEMBLY

(a) Remove the clock assembly  .

(b) Apply battery voltage to the connector and check the illumination condition.

Result:

CONDITION	SPECIFIED CONDITION
Battery positive (+) → 10 (LAPB) Battery negative (-) → 6 (LAPL)	Front passenger side seat belt warning light comes on

Text in Illustration

*a	Component without harness connected
----	-------------------------------------

NG ▶ REPLACE CLOCK ASSEMBLY

OK

6.	CHECK HARNESS AND CONNECTOR (BATTERY - CLOCK ASSEMBLY - COMBINATION METER ASSEMBLY)
-----------	--

- (a) Disconnect the D18 clock assembly connector.
- (b) Disconnect the D7 combination meter assembly connector.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
D18-6 (LAPL) - D7-13 (P/SB)	Always	Below 1 Ω
D18-6 (LAPL) - Body ground	Always	10 k Ω or higher

- (d) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
D18-10 (LAPB) - Body ground	Ignition switch ON	11 to 14 V

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ▶ USE SIMULATION METHOD TO CHECK

Model Year: 2013	Model: FR-S	Doc ID: RM000002N53029X
Title: SEAT BELT: SEAT BELT WARNING SYSTEM: OPERATION CHECK (2013 FR-S)		

OPERATION CHECK

1. INSPECT DRIVER SIDE SEAT BELT WARNING LIGHT

- (a) Turn the ignition switch to ON.
- (b) When the driver seat belt is not fastened, check that the front seat belt warning light in the combination meter assembly blinks.

2. INSPECT PASSENGER SIDE SEAT BELT WARNING LIGHT

- (a) Turn the ignition switch to ON.
- (b) When the front passenger side seat belt is not fastened with the front passenger seat occupied, check that the front passenger side seat belt warning light in the telltale light assembly blinks.
- (c) When the front passenger seat belt is fastened with the front passenger seat occupied, check that the front seat belt warning light in the telltale light assembly turns off.

3. INSPECT SEAT BELT WARNING BUZZER

HINT:

If the buzzer does not sound, the buzzer cancel setting may be set to on  .

- (a) Lift up the vehicle using a swing arm type lift  .
- (b) Turn the ignition switch to ON.
- (c) Place a weight of 20 kg (44.0 lb) on the front passenger seat.

NOTICE:

Place the weight on the seat cushion and do not allow it to come into contact with the seatback.

- (d) When the vehicle is driven at approximately 20 km/h (12.5 mph) or more while the driver or front passenger seat belt is not fastened, check that the buzzer in the combination meter assembly sounds at an interval of 1.2 seconds for 30 seconds, and then sounds at an interval of 0.4 seconds for 90 seconds.
- (e) Check that the buzzer stops 2 minutes after the buzzer starts sounding.
- (f) After the buzzer stops, turn the ignition switch off and then start the engine again. Then drive the vehicle at approximately 20 km/h (12.5 mph) or more while the driver or front passenger seat belt is not fastened, and check that the buzzer sounds again.
- (g) After the buzzer stops, fasten the driver and front passenger seat belts. Drive the vehicle at approximately 20 km/h (12.5 mph) or more and unfasten the driver or front passenger seat belt, and then check that the buzzer sounds again.
- (h) After the buzzer stops, move the shift lever to R, and then move it to D. Drive the vehicle at approximately 20 km/h (12.5 mph) or more, and then check that the buzzer sounds again.

Title: SEAT BELT: SEAT BELT WARNING SYSTEM: SYSTEM DESCRIPTION (2013 FR-S)		

SYSTEM DESCRIPTION

1. SEAT BELT WARNING SYSTEM DESCRIPTION

(a) Driver seat belt warning light:

When the driver seat belt is not fastened with the ignition switch ON, the front seat belt warning light in the combination meter assembly blinks to inform the driver. The combination meter assembly displays the driver seat belt status and vehicle speed.

(b) Front passenger seat belt warning light:

When the front passenger seat belt is not fastened with the ignition switch ON and the front passenger seat occupied, the front seat belt warning light in the telltale light assembly blinks. The combination meter assembly detects the front passenger seat belt status and whether the front passenger seat is occupied.

(c) Seat belt warning buzzer:

After turning the ignition switch to ON, if the driver seat belt is not fastened within 1.8 seconds, check that the seat belt warning buzzer in the combination meter assembly sounds at 1.2 second intervals for 6 seconds.

When the vehicle is driven at 20 km/h (12 mph) or more with the front passenger seat occupied and the driver or front passenger seat belt not fastened, the seat belt warning buzzer in the combination meter assembly sounds once.

When 30 seconds have passed after the buzzer sounded, the seat belt warning buzzer in the combination meter assembly sounds at an interval of 1.2 seconds for 30 seconds.

After that, the seat belt warning buzzer in the combination meter assembly sounds at an interval of 0.4 seconds for 90 seconds.

2. FUNCTION OF MAIN COMPONENTS

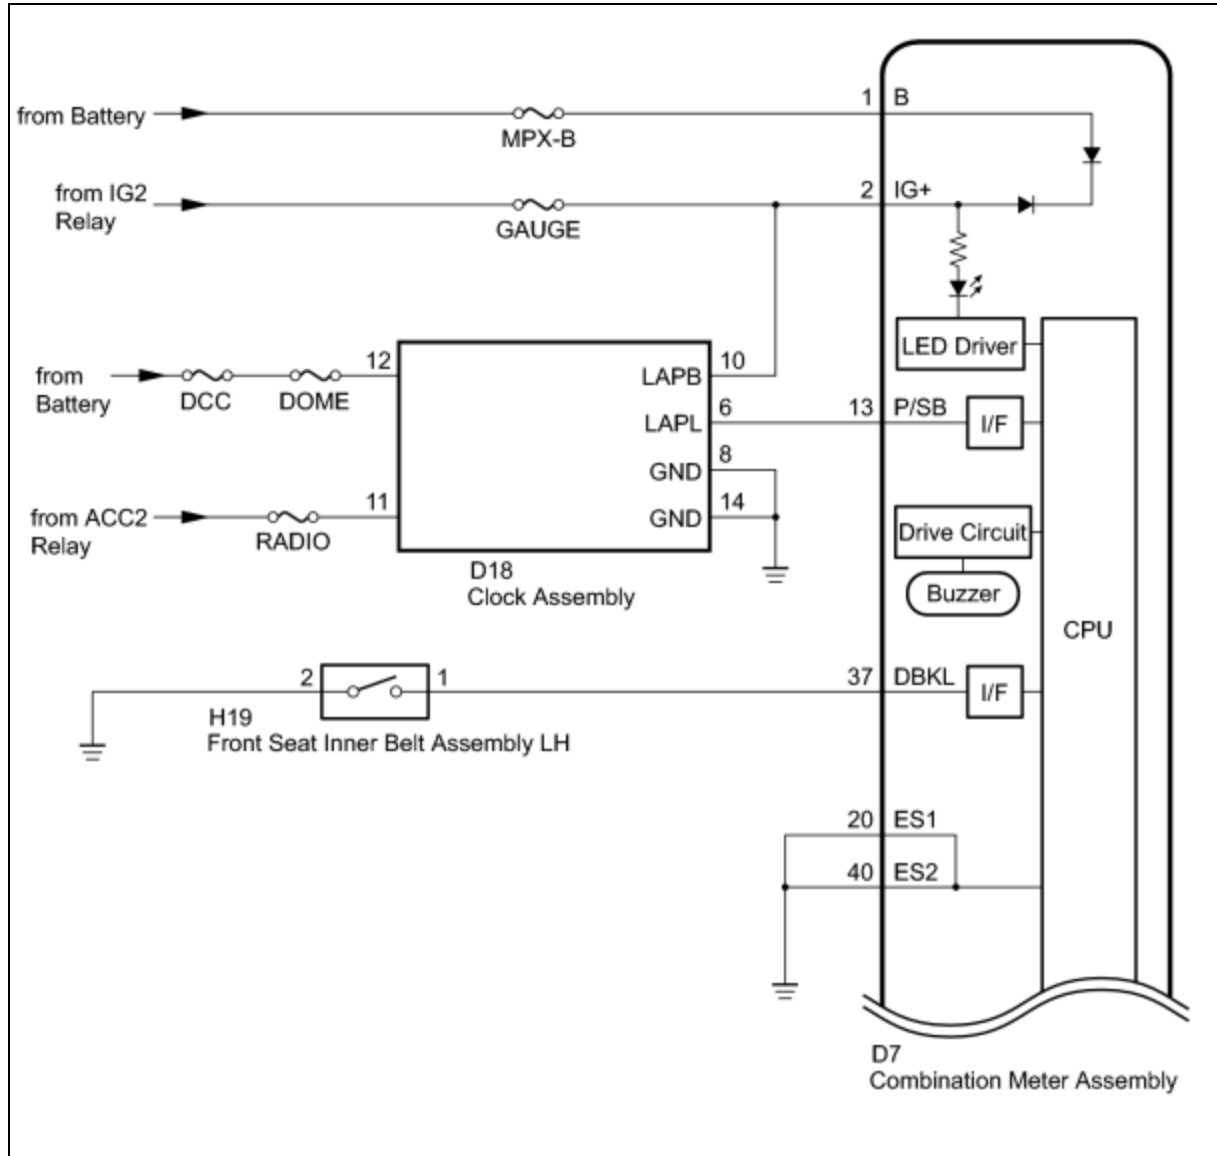

COMPONENT	FUNCTION
Front seat inner belt (driver side buckle switch)	Informs the combination meter assembly of the driver seat belt condition (fastened or unfastened).
Front seat inner belt (front passenger side buckle switch)	Informs the occupant detection ECU of the front passenger seat belt condition (fastened or unfastened).
Occupant detection sensor	Informs the occupant detection ECU of the front passenger seat condition (occupied or unoccupied).
Occupant detection ECU	Sends the front passenger seat belt buckle switch signal and occupant detection signal to the Airbag ECU assembly.
Airbag ECU assembly	Sends the front passenger seat belt buckle switch signal to the combination meter assembly.
Driver side seat belt warning light	If driver seat belt is unfastened and ignition switch is ON, combination meter flashes seat belt warning light in combination meter assembly as reminder.

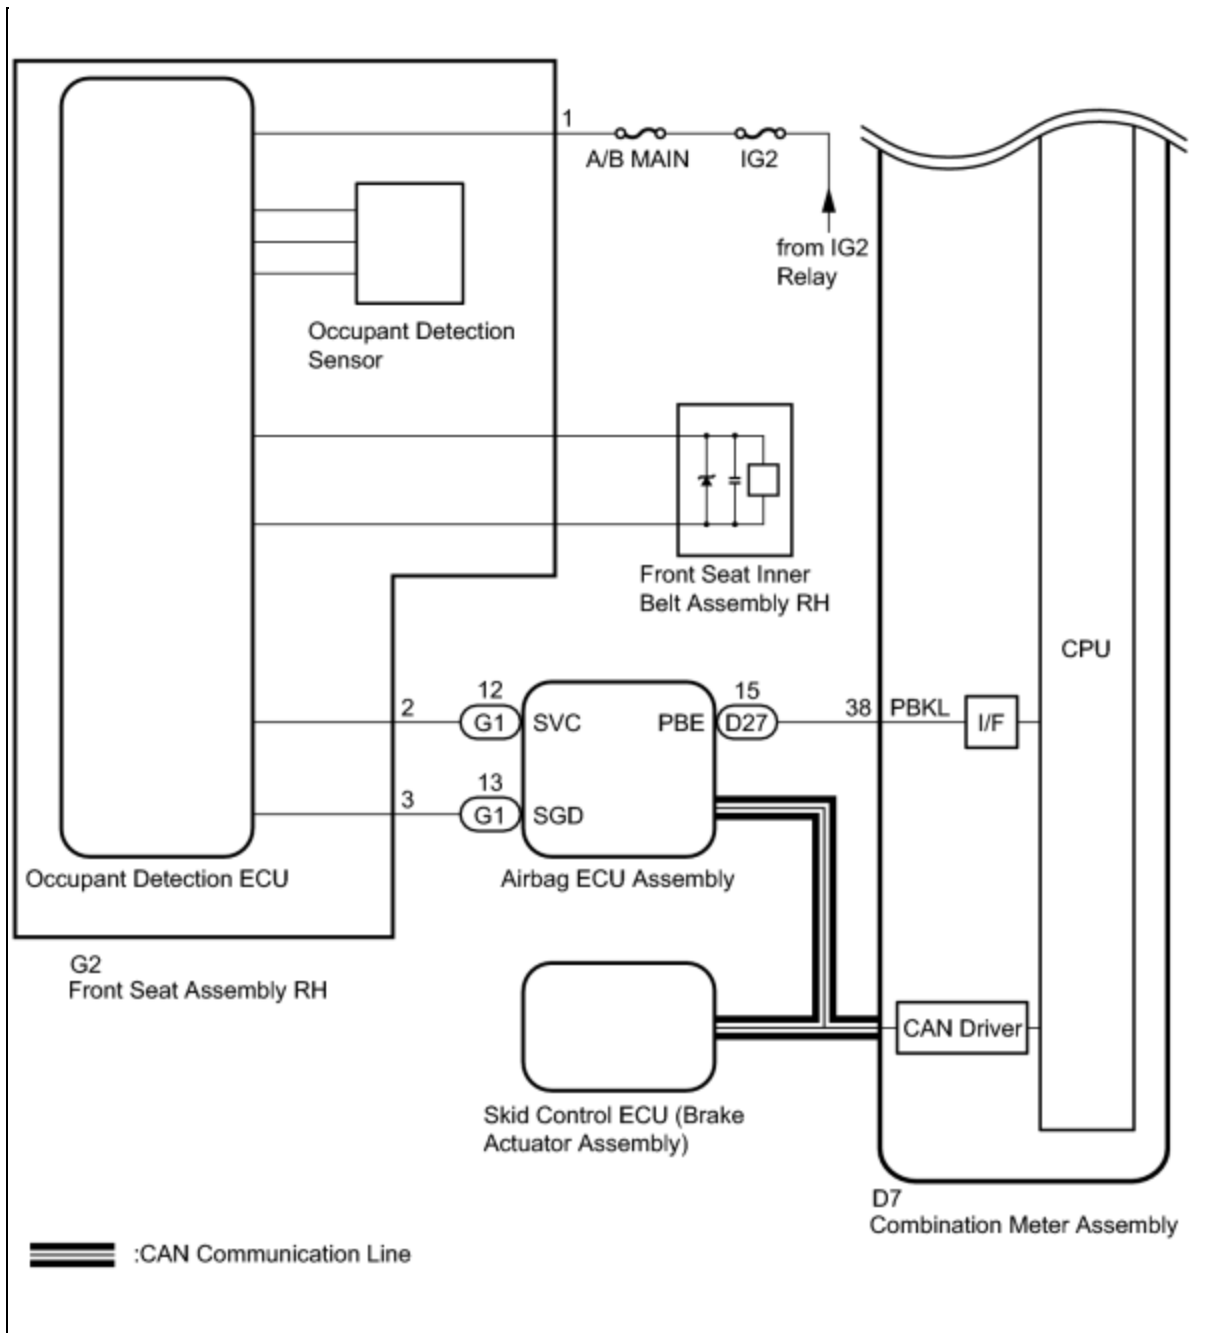

Front passenger side seat belt warning light	When front passenger seat is occupied and ignition switch is ON, if front passenger seat belt is unfastened, combination meter flashes seat belt warning light in the telltale light assembly as reminder.
Seat belt warning buzzer	If vehicle is driven at approximately 20 km/h (12.5 mph) or more with any of following conditions met, combination meter sounds buzzer as reminder: 1) driver seat belt is unfastened, 2) front passenger seat belt is unfastened with front passenger seat occupied.
Skid control ECU	Sends the vehicle speed signal to the combination meter assembly via CAN communication.

Title: SEAT BELT: SEAT BELT WARNING SYSTEM: TERMINALS OF ECU (2013 FR-S)		

TERMINALS OF ECU

1. CHECK COMBINATION METER ASSEMBLY

(a) Disconnect the D7 combination meter assembly connector.

(b) Measure the resistance and voltage according to the value(s) in the table below.

HINT:

Measure the values on the wire harness side with the connector disconnected.

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
D7-1 (+B)- Body ground	R-W - Body ground	Combination meter +B line	Always	11 to 14 V
D7-2 (IG+) - Body ground	W-G - Body ground	Combination meter IG line	Ignition switch ON	11 to 14 V
			Ignition switch off	Below 1 V
D7-20 (ES1) - Body ground	B-Y - Body ground	Ground	Always	Below 1 Ω
D7-37 (DBKL) - Body ground	R-B - Body ground	Driver seat belt signal	Driver seat belt fastened	10 k Ω or higher
			Driver seat belt unfastened	Below 1 Ω
D7-40 (ES2) - Body ground	B-Y - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction in the wire harness.

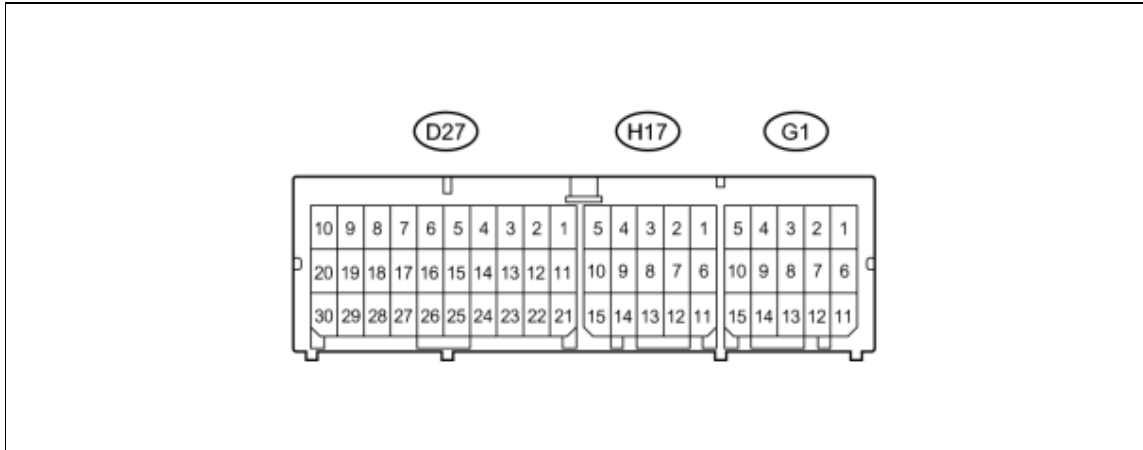

(c) Reconnect the D7 combination meter assembly connector.

(d) Measure the voltage according to the value(s) in the table below.

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
D7-13 (P/SB) - Body ground	BR-R - Body ground	Front passenger seat belt warning signal	Front passenger seat occupied, seat belt fastened	Below 1 V
			Front passenger seat occupied, seat belt unfastened	11 to 14 V

If the result is not as specified, the combination meter assembly may have a malfunction.

2. CHECK AIRBAG ECU ASSEMBLY

TERMINAL NO.	TERMINAL SYMBOL	DESTINATION
G1-12	SVC	Occupant detection ECU
G1-13	SGD	Occupant detection ECU

3. CHECK OCCUPANT DETECTION ECU

(a) Measure the voltage according to the value(s) in the table below.

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFICATION
G2-1 - Body ground	G - Body ground	Occupant detection ECU IG line	Ignition switch ON	11 to 14 V
G2-2 - G2-3	Y-G - Y	Airbag ECU assembly communication line	Ignition switch ON	Pulse generation

If the result is not as specified, the occupant detection ECU may have a malfunction.

Title: SEAT: FRONT SEAT ASSEMBLY: DISASSEMBLY (2013 FR-S)		

DISASSEMBLY

1. REMOVE RECLINING ADJUSTER RELEASE HANDLE

- (a) Using a screwdriver with its tip wrapped with protective tape, disengage the claw and remove the reclining adjuster release handle.

Text in Illustration

*1	Protective Tape
----	-----------------

2. REMOVE VERTICAL ADJUSTING HANDLE (for Driver Side)

- (a) Remove the screw and vertical adjusting handle.

3. REMOVE FRONT SEAT CUSHION SHIELD

- (a) Remove the 2 screws.

(b) Disengage the 4 claws, 5 guides and clip to remove the front seat cushion shield.

4. REMOVE FRONT SEAT INNER CUSHION SHIELD

(a) Disengage the 2 claws and 4 guides to remove the front seat inner cushion shield.

5. REMOVE FRONT SEAT INNER BELT ASSEMBLY (for Driver Side) INFO

6. REMOVE FRONT SEAT INNER BELT ASSEMBLY (for Front Passenger Side) INFO

7. REMOVE SEPARATE TYPE FRONT SEATBACK ASSEMBLY

(a) Disengage the 2 hooks.

(b) Disconnect the rubber band of the separate type front seatback cover.

(c) Disengage the fastener and separate the front seat airbag assembly wire harness.

(d) Disconnect the front seat heater connector and disengage the clamp. (w/ Seat Heater System)

(e) Disengage the claw and 4 clamps to separate the front seat airbag assembly wire harness.

(f) Using a T40 "TORX" socket wrench, remove the 4 bolts and separate type front seatback assembly.

8. REMOVE SEPARATE TYPE FRONT SEATBACK COVER WITH PAD

(a) Remove the 5 hog rings.

(b) Open the 2 fasteners.

(c) Turn back the separate type front seatback cover.

(d) Disengage the 2 hooks.

(e) Remove the nut and the 3 brackets.

(f) Disengage the 4 claws and remove the 2 front seat

headrest supports.

(g) Remove the separate type front seatback cover with pad from front seatback frame assembly.

9. REMOVE FRONT SEAT AIRBAG ASSEMBLY INFO

10. REMOVE SEPARATE TYPE FRONT SEATBACK COVER

(a) Remove the 14 hog rings and separate type front seatback cover from the separate type front seatback pad.

11. REMOVE SEPARATE TYPE FRONT SEAT CUSHION COVER WITH PAD

(a) Disconnect the occupant classification sensor connector. (for passenger side)

(b) Disengage the claw and 3 clamps to separate the front seat heater wire harness. (w/ Seat Heater System)

(c) Disengage each hook and remove the separate type front seat cushion cover with pad from separate type front seat cushion frame assembly. (for Driver Side)

(d) Disengage each hook and remove the separate type front seat cushion cover with pad from separate type front seat cushion frame assembly. (for Passenger Side)

12. REMOVE SEPARATE TYPE FRONT SEAT CUSHION COVER

(a) Remove the 2 hog rings.

(b) Remove the 12 hog rings and the separate type front seat cushion cover from the separate type front seat cushion pad.

13. REMOVE FRONT SEAT LOWER CUSHION SHIELD LH (for Driver Side)

(a) Remove the screw.

(b) Disengage the hook.

(c) Disengage the clip and remove the front seat lower cushion shield LH.

14. REMOVE FRONT SEAT LOWER CUSHION SHIELD RH (for Driver Side)

HINT:

Use the same procedure as for the LH side.

15. REMOVE FRONT SEAT CUSHION EDGE PROTECTOR LH

(a) Remove the screw.

(b) Disengage the 3 claws to remove the front seat cushion edge protector LH.

16. REMOVE FRONT SEAT CUSHION EDGE PROTECTOR RH

HINT:

Use the same procedure as for the LH side.

17. REMOVE SEAT TRACK ADJUSTING HANDLE

- (a) Using a screwdriver, disengage the 2 springs to remove the seat track adjusting handle from separate type front seat cushion frame assembly.

18. REMOVE RECLINING ADJUSTER RELEASE BAND

- (a) Remove the screw and reclining adjuster release band.

19. REMOVE SEAT CUSHION EDGE PROTECTOR

- (a) Disengage the 2 claws to remove the seat cushion edge protector.

HINT:

Use the same procedure for both the 2 seat cushion edge protectors.

20. REMOVE SEAT TRACK LOWER RAIL PROTECTOR

- (a) Disengage the 2 claws to remove the seat track lower rail protector.

HINT:

Use the same procedure for both the 2 seat track lower rail protectors.

Last Modified: 3-27-2012	6.4 A	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000001WAX01DX
Title: SEAT: FRONT SEAT ASSEMBLY: INSTALLATION (2013 FR-S)		

INSTALLATION

1. INSTALL FRONT SEAT ASSEMBLY

- (a) Place the front seat assembly in the cabin.

NOTICE:

Be careful not to damage the vehicle body.

- (b) Operate the reclining adjuster release handle and move the seatback to the upright position.
(c) Lift up the seat track adjusting handle and move the seat to the rearmost position.
(d) Temporarily install the 2 bolts on the front side of the front seat assembly.
(e) Connect each connector and clamp under the seat.
(f) Engage the hook of the separate type front seat cushion cover.
(g) Lift up the seat track adjusting handle and move the seat to the foremost position.
(h) Temporarily install the 2 bolts on the rear side of the front seat assembly.
(i) Lift up the seat track adjusting handle and move the seat to the rearmost position.

- (j) Using a E10 "TORX" socket wrench, tighten the 2 bolts on the front side of the seat.

Torque: 53 N·m (540 kgf·cm, 39ft·lbf)

NOTICE:

Tighten the bolts in the order indicated in the illustration.

- (k) Lift up the seat track adjusting handle and move the seat to the foremost position.

- (l) Using a E10 "TORX" socket wrench, tighten the 2 bolts on the rear side of the seat.

Torque: 53 N·m (540 kgf·cm, 39ft·lbf)

NOTICE:

Tighten the bolts in the order indicated in the illustration.

2. INSPECT SEAT SLIDE ADJUSTER LOCKS

- (a) During the sliding operation of the front seat, check that the left and right adjusters move together smoothly and lock simultaneously. If the seat adjusters do not lock simultaneously, loosen the seat installation bolts to adjust the adjuster position.

3. INSTALL FRONT SEAT HEADREST ASSEMBLY

4. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

Torque: 6.0 N·m (61 kgf·cm, 53in·lbf)

5. INSPECT SRS WARNING LIGHT

INFO

Last Modified: 3-27-2012	6.4 A	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000001WB1028X
Title: SEAT: FRONT SEAT ASSEMBLY: REASSEMBLY (2013 FR-S)		

REASSEMBLY

1. INSTALL SEAT TRACK LOWER RAIL PROTECTOR

- (a) Engage the 2 claws to install the seat track lower rail protector.

HINT:

Use the same procedure for both the 2 seat track lower rail protectors.

2. INSTALL SEAT CUSHION EDGE PROTECTOR

- (a) Engage the 2 claws to install the seat cushion edge protector.

HINT:

Use the same procedure for both the 2 seat cushion edge protectors.

3. INSTALL RECLINING ADJUSTER RELEASE BAND

- (a) Install the reclining adjuster release band with the screw.

4. INSTALL SEAT TRACK ADJUSTING HANDLE

- (a) Engage the 2 springs to install the seat track adjusting handle to the separate type front seat cushion frame assembly.

NOTICE:

- Springs must be securely engaged.
- Install the rear end of seat track adjusting handle on the seat track lever.

5. INSTALL FRONT SEAT CUSHION EDGE PROTECTOR LH

- (a) Engage the 3 claws to install the front seat cushion edge protector LH.
(b) Install the screw.

6. INSTALL FRONT SEAT CUSHION EDGE PROTECTOR RH

HINT:

Use the same procedure as for the LH side.

7. INSTALL FRONT SEAT LOWER CUSHION SHIELD LH (for Driver Side)

- (a) Engage the clip to install the front seat lower cushion shield LH.

(b) Engage the hook as shown in the illustration.

(c) Install the screw.

8. INSTALL FRONT SEAT LOWER CUSHION SHIELD RH (for Driver Side)

HINT:

Use the same procedure as for the LH side.

9. INSTALL SEPARATE TYPE FRONT SEAT CUSHION COVER

(a) Using hog ring pliers, install the separate type front seat cushion cover to the separate type front seat cushion pad with 12 new hog rings.

NOTICE:

- Be careful not to damage the separate type front seat cushion cover.
- When installing the hog rings, take care to minimize wrinkles as much as possible.

Text in Illustration

*1	Hog Ring
*2	Hog Ring Pliers

(b) Using hog ring pliers, install 2 new hog rings.

NOTICE:

- Be careful not to damage the separate type front seat cushion cover.
- When installing the hog rings, take care to minimize wrinkles as much as possible.

Text in Illustration

*1	Hog Ring
*2	Hog Ring Pliers

10. INSTALL SEPARATE TYPE FRONT SEAT CUSHION COVER WITH PAD

- (a) Temporarily install the separate type front seat cushion cover with pad to the separate type front seat cushion frame assembly
- (b) Engage each hook.
- (c) Engage the claw and 3 clamps to install the front seat cushion heater wire harness. (w/ Seat Heater System)
- (d) Connect the occupant classification sensor connector. (for Passenger Side)

11. INSTALL SEPARATE TYPE FRONT SEATBACK COVER

- (a) Using hog ring pliers, install the separate type front seatback cover to the separate type front seatback pad with 14 new hog rings.

NOTICE:

- Be careful not to damage the separate type front seatback cover.
- When installing the hog rings, take care to minimize wrinkles as much as possible.

Text in Illustration

*1	Hog Ring
*2	Hog Ring Pliers

12. INSTALL FRONT SEAT AIRBAG ASSEMBLY INFO

13. INSTALL SEPARATE TYPE FRONT SEATBACK COVER WITH PAD

- (a) Temporarily install the separate type front seatback cover with pad to the separate type front seatback frame assembly.
- (b) Install the 3 brackets with the nut.

Torque: 5.5 N·m (56 kgf·cm, 49in·lbf)

CAUTION:

- For vehicles with a front seat airbag assembly, the separate type front seatback cover must be securely installed. Otherwise, the front seat airbag assembly may not deploy properly.
 - Make sure that the strap is not twisted after installing the nut.
 - Install the bracket securely.
- (c) Engage the 4 claws to install the 2 front seat headrest supports.
 - (d) Engage the 2 hooks.
 - (e) Turn back the separate type front seatback cover.
 - (f) Close the 2 fasteners.

(g) Using hog ring pliers, install 5 new hog rings.

NOTICE:

- Be careful not to damage the separate type front seatback cover.
- When installing the hog rings, take care to minimize wrinkles as much as possible.

Text in Illustration

*1	Hog Ring
*2	Hog Ring Pliers

14. INSTALL SEPARATE TYPE FRONT SEATBACK ASSEMBLY

(a) Using a T40 "TORX" socket wrench, install the separate type front seatback assembly with the new 4 bolts.

Torque: 42 N·m (428 kgf·cm, 31ft·lbf)

- (b) Engage the claw and 4 clamps to install the front seat airbag assembly wire harness.
 (c) Engage the fastener to secure the front seat airbag assembly wire harness.
 (d) Engage the clamp and connect the front seat heater connector. (w/ Seat Heater System)
 (e) Connect the rubber band of the separate type front seatback cover.
 (f) Engage the 2 hooks.

15. INSTALL FRONT SEAT INNER BELT ASSEMBLY (for Driver Side) INFO

16. INSTALL FRONT SEAT INNER BELT ASSEMBLY (for Front Passenger Side) INFO

17. INSTALL FRONT SEAT INNER CUSHION SHIELD

(a) Engage the 2 claws and 4 guides to install the front seat inner cushion shield.

18. INSTALL FRONT SEAT CUSHION SHIELD

- (a) Engage the 4 claws, 5 guides and clip to install the front seat inner cushion shield.
 (b) Install the 2 screws.

19. INSTALL VERTICAL ADJUSTING HANDLE (for Driver Side)

(a) Install the vertical adjusting handle with the screw.

20. INSTALL RECLINING ADJUSTER RELEASE HANDLE

(a) Engage the claw to install the reclining adjuster release handle.

Last Modified: 3-27-2012	6.4 A	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000001WAZ01DX
Title: SEAT: FRONT SEAT ASSEMBLY: REMOVAL (2013 FR-S)		

REMOVAL

1. PRECAUTION

CAUTION:

- Be sure to read Precaution thoroughly before servicing. INFO
- If the side airbag was deployed, replace the front seat assembly,

NOTICE:

After turning the ignition switch off, waiting time may be required before disconnecting the cable from the negative (-) battery terminal. Therefore, make sure to read the disconnecting the cable from the negative (-) battery terminal notices before proceeding with work INFO.

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

The power window system utilizes a mechanism that the door glass moves down slightly when the door is opened, and that the glass moves up when closing the door in order to prevent the door molding from being damaged. When the battery negative (-) terminal needs to be disconnected for servicing, fully open the driver and passenger door glasses in advance.

3. REMOVE FRONT SEAT HEADREST ASSEMBLY

4. REMOVE FRONT SEAT ASSEMBLY

- (a) Operate the reclining adjuster release handle and move the seatback to the upright position.
- (b) Lift up the seat track adjusting handle and move the seat to the foremost position.

- (c) Disengage the hook of the separate type front seat cushion cover.

- (d) Disconnect each connector and clamp under the seat.

- (e) Using a E10 "TORX" socket wrench, remove the 2

bolts on the rear side of the seat.

(f) Lift up the seat track adjusting handle and move the seat to the rearmost position.

(g) Using a E10 "TORX" socket wrench, remove the 2 bolts on the front side of the seat.

(h) Remove the front seat assembly.

NOTICE:

- Be careful not to damage the vehicle body.
- Always work in teams of multiple people when removing seats from the vehicle.

Title: SEAT: FRONT SEAT CUSHION HEATER: INSPECTION (2013 FR-S)		

INSPECTION

1. INSPECT FRONT SEAT CUSHION HEATER ASSEMBLY LH

(a) Measure the resistance according to the value(s) in the table below.

Text in Illustration

*a	Component without harness connected (Separate Type Front Seat Cushion Pad LH)
----	--

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A-1 - B-1	Always	Below 1 Ω
A-2 - A-3	Always	3.21 to 3.85 Ω
A-2 - B-2	Always	3.21 to 3.85 Ω
A-3 - B-2	Always	Below 1 Ω

If the result is not as specified, replace the separate type front seat cushion pad LH.

2. INSPECT FRONT SEAT CUSHION HEATER ASSEMBLY RH

(a) Measure the resistance according to the value(s) in the table below.

Text in Illustration

*a	Component without harness connected (Separate Type Front Seat Cushion Pad RH)
----	--

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A-1 - B-1	Always	Below 1 Ω
A-2 - A-3	Always	3.21 to 3.85 Ω
A-2 - B-2	Always	3.21 to 3.85 Ω
A-3 - B-2	Always	Below 1 Ω

If the result is not as specified, replace the separate

type front seat cushion pad RH.

Title: SEAT: FRONT SEATBACK HEATER: INSPECTION (2013 FR-S)		

INSPECTION

1. INSPECT FRONT SEAT BACK HEATER ASSEMBLY LH

(a) Measure the resistance according to the value(s) in the table below.

Text in Illustration

*a	Component without harness connected (Separate Type Front Seatback Pad LH)
----	--

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	Always	3.26 to 4 Ω

If the result is not as specified, replace the separate type front seatback pad LH.

2. INSPECT FRONT SEAT BACK HEATER ASSEMBLY RH

(a) Measure the resistance according to the value(s) in the table below.

Text in Illustration

*a	Component without harness connected (Separate Type Front Seatback Pad RH)
----	--

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	Always	3.26 to 4 Ω

If the result is not as specified, replace the separate type front seatback pad RH.

Title: SEAT: REAR SEAT ASSEMBLY: DISASSEMBLY (2013 FR-S)		

DISASSEMBLY

1. REMOVE REAR SEATBACK LOCK COVER

- (a) Disengage the 3 claws and guide to remove the rear seatback lock cover.

HINT:

Use the same procedure as for both the LH side and RH side.

2. REMOVE BENCH TYPE REAR SEATBACK COVER WITH PAD

- (a) Remove the 4 clips.

- (b) Disengage the hook and roll up the bench type rear seatback cover.

- (c) Disengage the 6 hooks and remove the bench type

rear seatback cover with pad from rear seatback frame assembly.

3. REMOVE BENCH TYPE REAR SEATBACK COVER

(a) Remove the 10 hog rings and bench type rear seatback cover from the bench type rear seatback pad.

4. REMOVE REAR SEATBACK LOCK ROD LH

(a) Disengage the claw.

(b) Remove the rear seatback lock rod LH from rear seatback lock sub-assembly LH as shown in the illustration.

5. REMOVE REAR SEATBACK LOCK ROD RH

HINT:

Use the same procedure as for the LH side.

6. REMOVE REAR SEATBACK LOCK RELEASE KNOB

(a) Rotate the rear seatback lock release knob counterclockwise to remove them from the rear seatback lock rod LH.

HINT:

Use the same procedure as for both the LH side and RH side.

7. REMOVE REAR SEATBACK LOCK SUB-ASSEMBLY LH

(a) Remove the 2 bolts and rear seatback lock sub-assembly LH.

8. REMOVE REAR SEATBACK LOCK SUB-ASSEMBLY RH

HINT:

Use the same procedure as for the LH side.

9. REMOVE REAR SEATBACK LOCK RELEASE BAND

(a) Remove the screw and rear seatback lock release band from rear seatback lock sub-assembly LH.

HINT:

Use the same procedure as for both the LH side and RH side.

10. REMOVE REAR SEAT CUSHION BRACKET

(a) Remove the screw and rear seat cushion bracket from separate type rear seat cushion assembly LH.

HINT:

Use the same procedure as for both the LH side and RH

side.

11. REMOVE SEPARATE TYPE REAR SEAT CUSHION COVER LH

(a) Remove the 40 hog rings.

(b) Remove the 3 hog rings and separate type rear seat cushion cover LH from the separate type rear seat cushion pad LH.

12. REMOVE SEPARATE TYPE REAR SEAT CUSHION COVER RH

HINT:

Use the same procedure as for both the LH side.

Title: SEAT: REAR SEAT ASSEMBLY: INSTALLATION (2013 FR-S)		

INSTALLATION

1. INSTALL REAR SEATBACK LOCK STRIKER SUB-ASSEMBLY LH

- (a) Install the rear seat back lock striker sub-assembly LH with the 2 bolts.

Torque: 33 N·m (337 kgf·cm, 24ft·lbf)

2. INSTALL REAR SEATBACK LOCK STRIKER SUB-ASSEMBLY RH

HINT:

Use the same procedure as for the LH side.

3. INSTALL REAR SEATBACK LOCK STRIKER COVER LH

- (a) Engage the 3 clips to install the rear seat back lock striker cover LH.

4. INSTALL REAR SEATBACK LOCK STRIKER COVER RH

HINT:

Use the same procedure as for the LH side.

5. INSTALL PACKAGE TRAY TRIM PANEL ASSEMBLY

6. INSTALL REAR WINDOW SIDE GARNISH LH INFO

7. INSTALL REAR WINDOW SIDE GARNISH RH

HINT:

Use the same procedure as for the LH side.

8. INSTALL QUARTER TRIM LID SUB-ASSEMBLY LH INFO

9. INSTALL QUARTER TRIM LID SUB-ASSEMBLY RH

HINT:

Use the same procedure as for the LH side.

10. INSTALL LUGGAGE COMPARTMENT TRIM COVER LH

- (a) Engage the 7 clips to install the quarter trim panel LH.
(b) Install the 3 clips.

11. INSTALL LUGGAGE COMPARTMENT TRIM COVER RH

HINT:

Use the same procedure as for the LH side.

12. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH INFO

13. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH

HINT:

Use the same procedure as for the LH side.

14. INSTALL FRONT DOOR SCUFF PLATE LH

INFO

15. INSTALL FRONT DOOR SCUFF PLATE RH

HINT:

Use the same procedure as for the LH side.

16. INSTALL BENCH TYPE REAR SEATBACK ASSEMBLY

(a) Install the bench type rear seatback assembly with the 2 bolts.

Torque: 33 N·m (337 kgf·cm, 24ft·lbf)

(b) Install the 3 clips and bench type rear seatback cover.

17. INSTALL REAR SEAT CUSHION ASSEMBLY CENTER

(a) Install the rear seat cushion assembly center with the 2 clips.

18. INSTALL SEPARATE TYPE REAR SEAT CUSHION ASSEMBLY LH

(a) Engage the hook to install the separate type rear seat cushion assembly LH.

(b) Install the bolt.

Torque: 13 N·m (133 kgf·cm, 10ft·lbf)

19. INSTALL SEPARATE TYPE REAR SEAT CUSHION ASSEMBLY RH

HINT:

Use the same procedure as for the LH side.

Last Modified: 3-27-2012	6.4 A	From: 201203

Title: SEAT: REAR SEAT ASSEMBLY: REASSEMBLY (2013 FR-S)		

REASSEMBLY

1. INSTALL SEPARATE TYPE REAR SEAT CUSHION COVER LH

- (a) Using hog ring pliers, install the separate type rear seat cushion cover LH to the separate type rear seat cushion pad with 3 new hog rings.

NOTICE:

- Be careful not to damage the cover.
- When installing the hog rings, take care to minimize wrinkles as much as possible.

Text in Illustration

*1	Hog Ring
*2	Hog Ring Pliers

- (b) Using hog ring pliers, install 40 new hog rings.

Text in Illustration

*1	Hog Ring	*2	Hog Ring Pliers
----	----------	----	-----------------

NOTICE:

- Be careful not to damage the cover.
- When installing the hog rings, take care to minimize wrinkles as much as possible.

2. INSTALL SEPARATE TYPE REAR SEAT CUSHION COVER RH

HINT:

Use the same procedure as for the LH side.

3. INSTALL REAR SEAT CUSHION BRACKET

- (a) Install the rear seat cushion bracket to the rear seat cushion assembly LH with the screw.

HINT:

Use the same procedure as for both the LH side and RH side.

4. INSTALL REAR SEATBACK LOCK RELEASE BAND

- (a) Install the rear seatback lock release band with the screw to rear seatback lock assembly LH.

HINT:

Use the same procedure as for both the LH side and RH side.

5. INSTALL REAR SEATBACK LOCK SUB-ASSEMBLY LH

- (a) Install the rear seatback lock sub-assembly LH with the 2 bolts.

Torque: 25 N·m (250 kgf·cm, 18ft·lbf)

6. INSTALL REAR SEATBACK LOCK SUB-ASSEMBLY RH

HINT:

Use the same procedure as for the LH side.

7. INSTALL REAR SEATBACK LOCK RELEASE KNOB

- (a) Rotate the rear seatback lock release knob clockwise to install it to the rear seatback lock rod LH.

HINT:

Use the same procedure as for both the LH side and RH side.

8. INSTALL REAR SEATBACK LOCK ROD LH

- (a) Connect the rear seatback lock rod LH to the rear seatback lock sub-assembly LH as shown in the illustration.

(b) Engage the claw to install the rear seatback lock rod LH.

9. INSTALL REAR SEATBACK LOCK ROD RH

HINT:

Use the same procedure as for the LH side.

10. INSTALL BENCH TYPE REAR SEATBACK COVER

(a) Using hog ring pliers, install the bench type rear seatback cover to the bench type rear seatback pad with 10 new hog rings.

NOTICE:

- Be careful not to damage the cover.
- When installing the hog rings, take care to minimize wrinkles as much as possible.

Text in Illustration

*1	Hog Ring
*2	Hog Ring Pliers

11. INSTALL BENCH TYPE REAR SEATBACK COVER WITH PAD

- Temporarily install the bench type rear seatback cover with pad to the rear seatback frame assembly.
- Engage the 6 hooks to the rear seatback frame assembly.
- Engage the hook.
- Install the bench type rear seatback cover with pad with the 4 clips.

12. INSTALL REAR SEATBACK LOCK COVER

- Engage the guide and 3 claws to install the rear seatback lock cover.

HINT:

Use the same procedure as for both the LH side and RH side.

Title: SEAT: REAR SEAT ASSEMBLY: REMOVAL (2013 FR-S)		

REMOVAL

1. REMOVE SEPARATE TYPE REAR SEAT CUSHION ASSEMBLY LH

(a) Remove the bolt.

(b) Disengage the hook and remove the separate type rear seat cushion assembly LH.

2. REMOVE SEPARATE TYPE REAR SEAT CUSHION ASSEMBLY RH

HINT:

Use the same procedure as for the LH side.

3. REMOVE REAR SEAT CUSHION ASSEMBLY CENTER

(a) Remove the 2 clips and rear seat cushion assembly center.

4. REMOVE BENCH TYPE REAR SEATBACK ASSEMBLY

(a) Remove the 3 clips and turn back rear seatback cover.

(b) Remove the 2 bolts and bench type rear seatback assembly.

NOTICE:

Be careful not to damage the vehicle body.

5. REMOVE FRONT DOOR SCUFF PLATE LH INFO

6. REMOVE FRONT DOOR SCUFF PLATE RH

HINT:

Use the same procedure as for the LH side.

7. DISCONNECT FRONT DOOR OPENING TRIM WEATHERSTRIP LH

HINT:

Disconnect the front door opening trim weatherstrip LH to the extent that allows the removal of the luggage compartment trim cover LH.

8. DISCONNECT FRONT DOOR OPENING TRIM WEATHERSTRIP RH

HINT:

Use the same procedure as for the LH side.

9. REMOVE LUGGAGE COMPARTMENT TRIM COVER LH

(a) Remove the 3 clips.

(b) Disengage the 7 clips and remove the quarter trim panel LH.

10. REMOVE LUGGAGE COMPARTMENT TRIM COVER RH

HINT:

Use the same procedure as for the LH side.

11. REMOVE QUARTER TRIM LID SUB-ASSEMBLY LH

INFO

12. REMOVE QUARTER TRIM LID SUB-ASSEMBLY RH

HINT:

Use the same procedure as for the LH side.

13. REMOVE REAR WINDOW SIDE GARNISH LH

INFO

14. REMOVE REAR WINDOW SIDE GARNISH RH

HINT:

Use the same procedure as for the LH side.

15. REMOVE PACKAGE TRAY TRIM PANEL ASSEMBLY

INFO

16. REMOVE REAR SEATBACK LOCK STRIKER COVER LH

(a) Disengage the 3 clips to remove rear seatback lock striker cover LH.

17. REMOVE REAR SEATBACK LOCK STRIKER COVER RH

HINT:

Use the same procedure as for the LH side.

18. REMOVE REAR SEATBACK LOCK STRIKER SUB-ASSEMBLY LH

(a) Remove the 2 bolts and rear seatback lock striker sub-assembly LH.

19. REMOVE REAR SEATBACK LOCK STRIKER SUB-ASSEMBLY RH

HINT:

Use the same procedure as for the LH side.

Title: SEAT: SEAT HEATER SWITCH: INSPECTION (2013 FR-S)		

INSPECTION

1. INSPECT SEAT HEATER SWITCH (for LH)

(a) Check the seat heater switch.

(1) Measure the resistance according to the value(s) in the table below.

Text in Illustration

*a	Component without harness connected (Seat Heater Switch (for LH))
----	--

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
1 - 2	ON (HI)	Below 1 Ω
3 - 4	ON (HI)	Below 1 Ω
2 - 4	ON (LO)	Below 1 Ω

If the result is not as specified, replace the seat heater switch (for LH).

(b) Check that the indicator illuminates.

(1) Apply battery voltage to the seat heater switch (for LH) and check that the indicator illuminates.

Text in Illustration

*a	Component without harness connected (Seat Heater Switch (for LH))
----	--

OK:

CONDITION	SWITCH CONDITION	SPECIFIED CONDITION
Battery positive (+) → Terminal 2 Battery negative (-) → Terminal 3	ON (HI)	Indicator illuminates
Battery positive (+) →		

Terminal 2 Battery negative (-) → Terminal 3	ON (LO)	
--	---------	--

If the result is not as specified, replace the seat heater switch (for LH).

2. INSPECT SEAT HEATER SWITCH (for RH)

(a) Check the seat heater switch.

(1) Measure the resistance according to the value(s) in the table below.

Text in Illustration

INSPECTION PROCEDURE

NOTICE:

After turning the ignition switch off, waiting time may be required before disconnecting the cable from the negative (-) battery terminal. Therefore, make sure to read the disconnecting the cable from the negative (-) battery terminal notices before proceeding with work .

PROCEDURE

1.	CHECK CONNECTORS
-----------	-------------------------

- (a) Turn the ignition switch off.
- (b) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

- (c) Check that the connectors are properly connected to the airbag ECU assembly and combination meter assembly.

OK:

The connectors are properly connected.

HINT:

If the connectors are not connected securely, reconnect the connectors and proceed to the next inspection.

- (d) Disconnect the connectors from the airbag ECU assembly and combination meter assembly.

- (e) Check that the terminals of connectors are not damaged.

OK:

The connectors are not deformed or damaged.

NG  **REPLACE INSTRUMENT PANEL WIRE**

OK

2.	CHECK INSTRUMENT PANEL WIRE (OPEN)
-----------	---

- (a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D27-15 (PBE) - D7-38 (PBKL)	Always	Below 1 Ω

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: AIRBAG SYSTEM: B161A: Lost Communication with Front Satellite Sensor Bus (2013 FR-S)		

DTC	B161A	Lost Communication with Front Satellite Sensor Bus
------------	--------------	---

DESCRIPTION

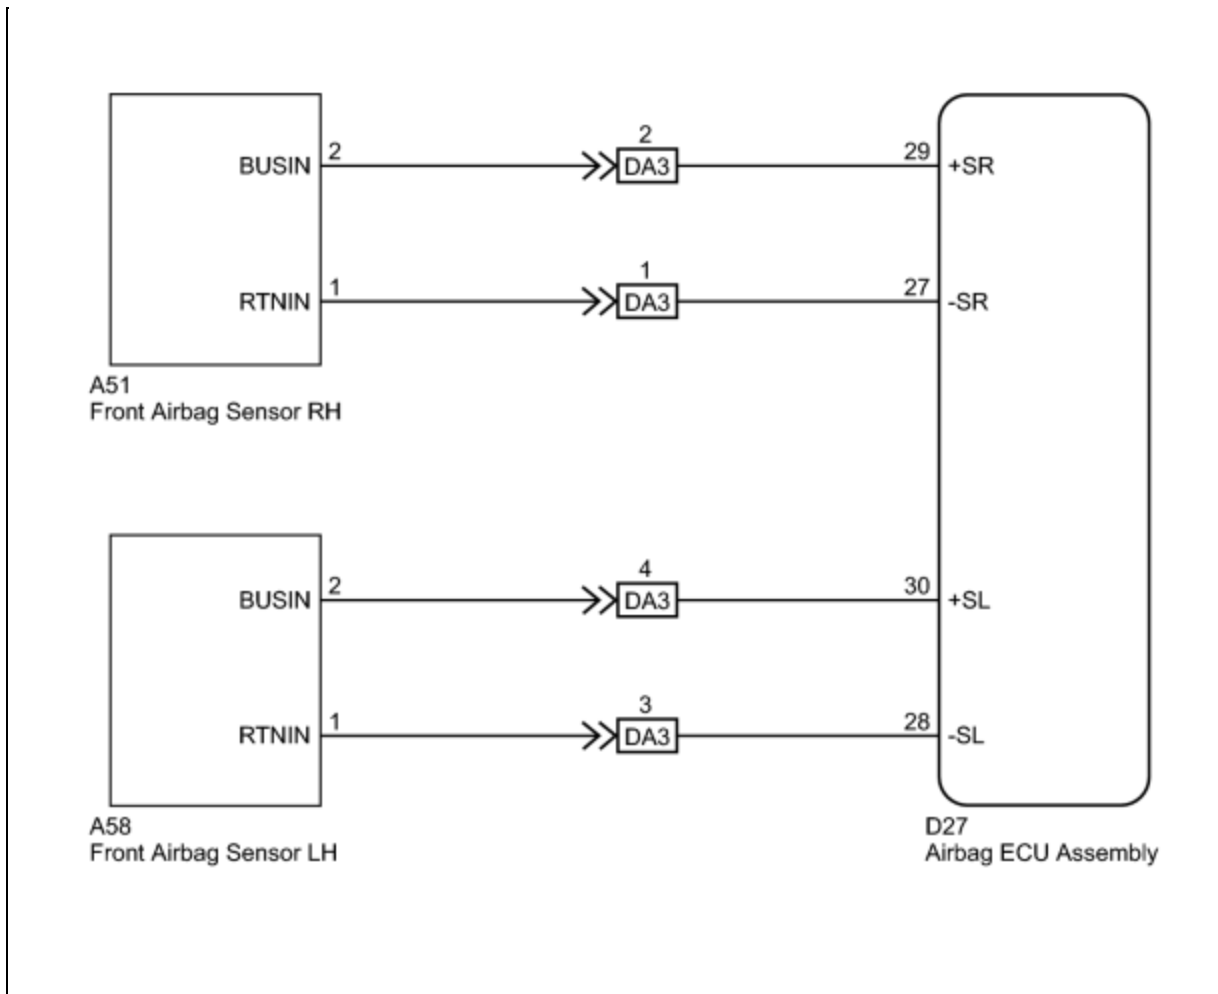

The front collision sensor circuit (front airbag sensor RH circuit and front airbag sensor LH circuit) is composed of the airbag ECU assembly, front airbag sensor RH and front airbag sensor LH.

The front airbag sensor RH and front airbag sensor LH detect impacts to the vehicle and send signals to the airbag ECU assembly to determine if the airbag should be deployed.

DTC B161A is stored when a malfunction is detected in the front collision sensor circuit (front airbag sensor RH circuit and front airbag sensor LH circuit).

INSPECTION PROCEDURE

NOTICE:

After turning the ignition switch off, waiting time may be required before disconnecting the cable from the negative (-) battery terminal. Therefore, make sure to read the disconnecting the cable from the negative (-) battery terminal notices before proceeding with work INFO.

PROCEDURE

1.	CHECK CONNECTORS
-----------	-------------------------

- (a) Turn the ignition switch off.
- (b) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

- (c) Check that the connectors are properly connected to the airbag ECU assembly and front airbag sensor RH. Also check that the connectors that link the engine room main wire and instrument panel wire are properly connected.

OK:

The connectors are properly connected.

HINT:

If the connectors are not connected securely, reconnect the connectors and proceed to the next inspection.

- (d) Disconnect the connectors from the airbag ECU assembly and front airbag sensor RH. Also disconnect the connectors that link the engine room main wire and instrument panel wire.
- (e) Check that the terminals of the connectors are not damaged.

OK:

The terminals are not deformed or damaged.

NG ▶ REPLACE WIRE HARNESS

OK

2. CHECK FRONT AIRBAG SENSOR RH CIRCUIT (OPEN)

(a) Connect the connectors that link the engine room main wire and instrument panel wire.

(b) Using a service wire, connect terminals 29 (+SR) and 27 (-SR) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting the wire.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A51-2 (BUSIN) - A51-1 (RTNIN)	Always	Below 1 Ω

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: AIRBAG SYSTEM: B1620,B16F4: Side Airbag Sensor RH Circuit Malfunction (2013 FR-S)		

DTC	B1620	Side Airbag Sensor RH Circuit Malfunction
------------	--------------	--

DTC	B16F4	Side Airbag Sensor RH Mismatch
------------	--------------	---------------------------------------

DESCRIPTION

The side collision sensor RH circuit (to determine deployment of the front seat airbag assembly RH, curtain shield airbag assembly RH and front seat outer belt assembly RH) is composed of the airbag ECU assembly, side airbag sensor assembly RH, side No. 2 airbag sensor assembly RH, rear airbag sensor RH and No. 2 airbag sensor assembly.

The side No. 2 airbag sensor assembly RH detects impacts to the vehicle and sends signals to the airbag ECU assembly to determine if the airbag should be deployed.

These DTCs are stored when a malfunction is detected in the side No. 2 airbag sensor assembly RH.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B1620	<ul style="list-style-type: none"> Side No. 2 airbag sensor assembly RH malfunction Airbag ECU assembly malfunction 	<ul style="list-style-type: none"> Side No. 2 airbag sensor assembly RH Airbag ECU assembly
B16F4	<ul style="list-style-type: none"> Improper installation of side No. 2 airbag sensor assembly RH Airbag ECU assembly malfunction 	

WIRING DIAGRAM

Refer to DTCs B1622, B1623, B1632, B1633, B1642, B1692 and B1693 INFO .

INSPECTION PROCEDURE

NOTICE:

After turning the ignition switch off, waiting time may be required before disconnecting the cable from the negative (-) battery terminal. Therefore, make sure to read the disconnecting the cable from the negative (-) battery terminal notices before proceeding with work INFO .

PROCEDURE

1.	CHECK SIDE NO. 2 AIRBAG SENSOR ASSEMBLY RH
-----------	---

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(c) Interchange the side No. 2 airbag sensor assembly RH with LH and connect the connectors.

(d) Connect the cable to the negative (-) battery terminal.

(e) Clear the DTCs stored in memory **INFO**.

(f) Turn the ignition switch off.

(g) Turn the ignition switch to ON, and wait for at least 60 seconds.

(h) Check for DTCs **INFO**.

Result:

RESULT	PROCEED TO
DTC B1620 or B16F4 is output.	A
DTC B1625 or B16F5 is output.	B
DTCs B1620, B1625, B16F4 and B16F5 are not output.	C

HINT:

Codes other than DTCs B1620, B1625, B16F4 and B16F5 may be output at this time, but they are not related to this check.

(i) Turn the ignition switch off.

(j) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(k) Return the side No. 2 airbag sensor assembly RH and LH to their original positions and connect the connectors.

DTC	B1692	Lost Communication with Side Airbag Sensor RH
------------	--------------	--

DTC	B1693	Side Airbag Sensor RH Initialization Incomplete
------------	--------------	--

DESCRIPTION

The side collision sensor RH circuit (to determine deployment of the front seat airbag assembly RH, curtain shield airbag assembly RH and front seat outer belt assembly RH) is composed of the airbag ECU assembly, side airbag sensor assembly RH, side No. 2 airbag sensor assembly RH, rear airbag sensor RH and No. 2 airbag sensor assembly.

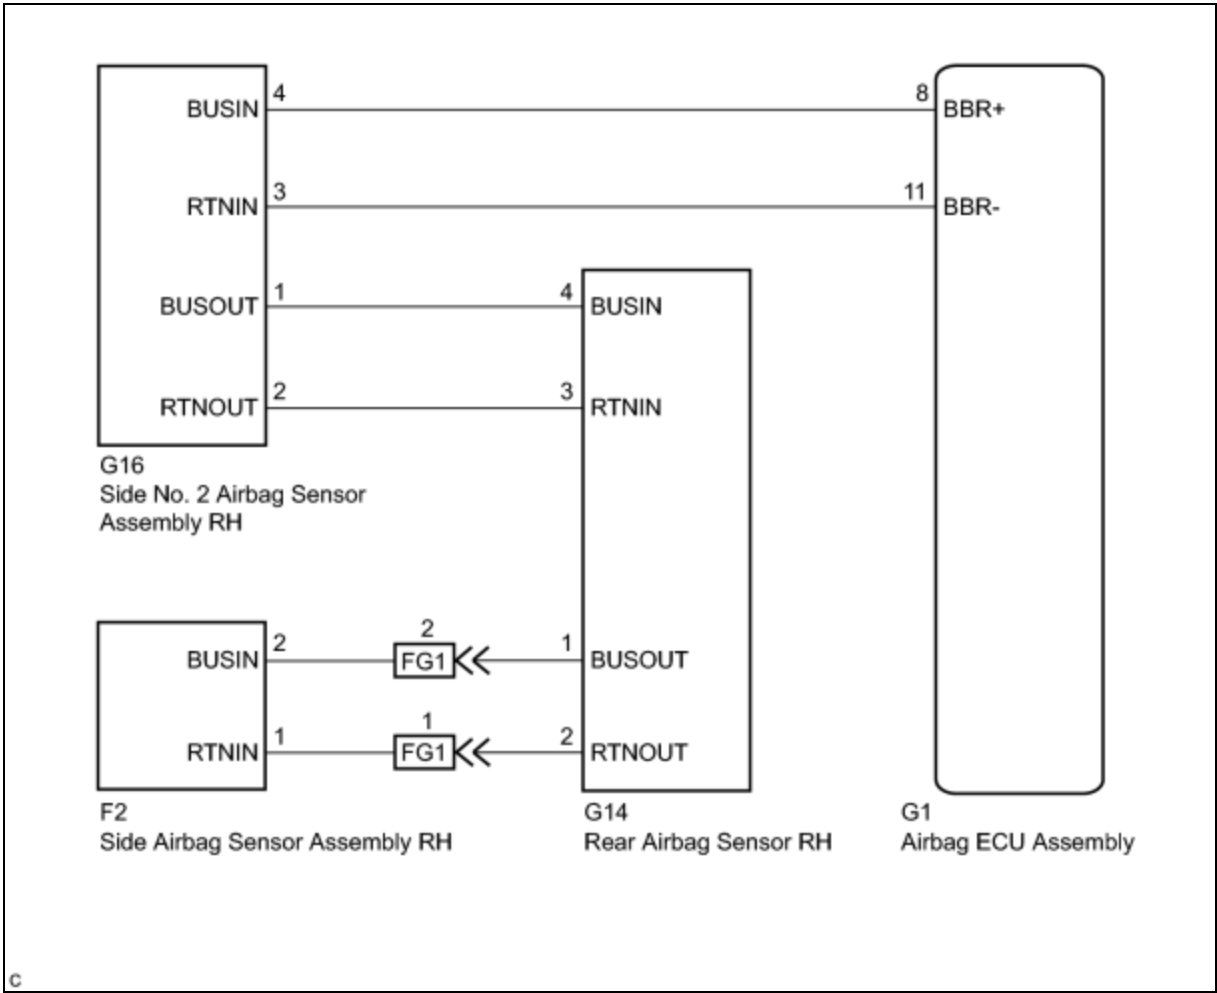

The side airbag sensor assembly RH, side No. 2 airbag sensor assembly RH and rear airbag sensor RH detect impacts to the vehicle and send signals to the airbag ECU assembly to determine if the airbag should be deployed.

These DTCs are stored when a malfunction is detected for the side collision sensor RH circuit.

INSPECTION PROCEDURE

NOTICE:

After turning the ignition switch off, waiting time may be required before disconnecting the cable from the negative (-) battery terminal. Therefore, make sure to read the disconnecting the cable from the negative (-) battery terminal notices before proceeding with work .

PROCEDURE

1.	CHECK CURRENT DTC
-----------	--------------------------

(a) Check for current DTCs .

Result:

RESULT	PROCEED TO
Current DTC B1642 is output.	A
Current DTC B1623 or B1633 is output.	B
Current DTC B1692 or B1693 is output.	C
Current DTC B1622 or B1632 is output.	D
Current DTCs B1622, B1623, B1632, B1633, B1642, B1692 and B1693 are not output.	E

HINT:

- DTCs indicating communication errors will be changed to DTCs indicating errors in initialization by turning the ignition switch off and then to ON again.
- Codes other than current DTCs B1622, B1623, B1632, B1633, B1642, B1692 and B1693 may be output at this time, but they are not related to this check.

B  **CHECK HISTORY DTC**

C  **CHECK CONNECTORS**

D  **CHECK CURRENT DTC**

E  **USE SIMULATION METHOD TO CHECK**

A

2.	CHECK CONNECTORS
-----------	-------------------------

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(c) Check that the connectors are properly connected to the airbag ECU assembly, side airbag sensor assembly RH, side No. 2 airbag sensor assembly RH and rear airbag sensor RH. Also check that the connectors that link the No. 2 floor wire and front door wire RH are properly connected.

OK:

The connectors are properly connected.

HINT:

If the connectors are not connected securely, reconnect the connectors and proceed to the next inspection.

(d) Disconnect the connectors from the airbag ECU assembly, side airbag sensor assembly RH, side No. 2 airbag sensor assembly RH and rear airbag sensor RH. Also disconnect the connectors that link the No. 2 floor wire and front door wire RH.

(e) Check that the terminals of the connectors are not damaged.

OK:

The terminals are not deformed or damaged.

NG ▶ REPLACE WIRE HARNESS

OK

3. CHECK NO. 2 FLOOR WIRE (OPEN)

(a) Using a service wire, connect terminals 8 (BBR+) and 11 (BBR-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting the wire.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
G16-4 (BUSIN) - G16-3 (RTNIN)	Always	Below 1 Ω

(c) Disconnect the service wire from connector B.

Text in Illustration

*3	No. 2 Floor Wire
*a	Front view of wire harness connector

NG ▶ **REPLACE NO. 2 FLOOR WIRE**

OK
▼

5. CHECK NO. 2 FLOOR WIRE (SHORT TO B+)

(a) Connect the cable to the negative (-) battery terminal.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
G16-4 (BUSIN) - Body ground	Ignition switch ON	Below 1 V
G16-3 (RTNIN) - Body ground	Ignition switch ON	Below 1 V

(d) Turn the ignition switch off.

(e) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

OK
▼

7. CHECK NO. 2 FLOOR WIRE (OPEN)

(a) Using a service wire, connect terminals 3 (RTNIN) and 4 (BUSIN) of connector C.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting the wire.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
G16-1 (BUSOUT) - G16-2 (RTNOUT)	Always	Below 1 Ω

(c) Disconnect the service wire from connector C.

NG ▶ REPLACE NO. 2 FLOOR WIRE

OK

9. CHECK NO. 2 FLOOR WIRE (SHORT TO B+)

(a) Connect the cable to the negative (-) battery terminal.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
G16-1 (BUSOUT) - Body ground	Ignition switch ON	Below 1 V
G16-2 (RTNOUT) - Body ground	Ignition switch ON	Below 1 V

(d) Turn the ignition switch off.

(e) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

B ▶ REPLACE SIDE NO. 2 AIRBAG SENSOR ASSEMBLY RH

C ▶ USE SIMULATION METHOD TO CHECK

A ▶ REPLACE AIRBAG ECU ASSEMBLY

26.	CHECK CONNECTORS
------------	-------------------------

- (a) Turn the ignition switch off.
- (b) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal

to disable the SRS system.

- (c) Check that the connectors are properly connected to the side No. 2 airbag sensor assembly RH and rear airbag sensor RH.

OK:

The connectors are properly connected.

HINT:

If the connectors are not connected securely, reconnect the connectors and proceed to the next inspection.

- (d) Disconnect the connectors from the side No. 2 airbag sensor assembly RH and rear airbag sensor RH.

- (e) Check that the terminals of the connectors are not damaged.

OK:

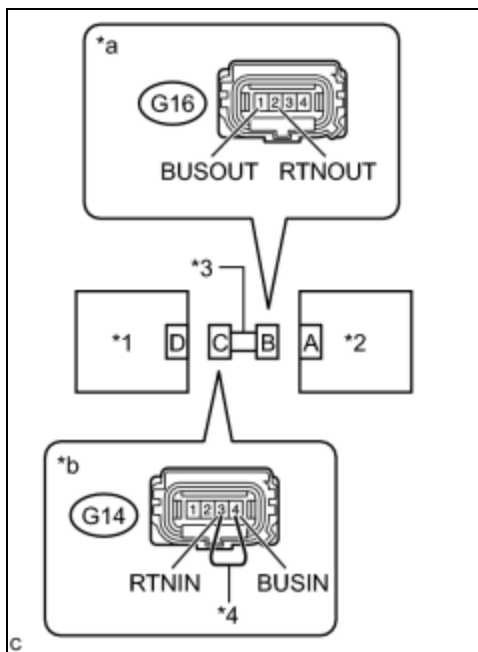

The terminals are not deformed or damaged.

NG ▶ REPLACE WIRE HARNESS

OK

27.	CHECK NO. 2 FLOOR WIRE (OPEN)
------------	--------------------------------------

- (a) Using a service wire, connect terminals 4 (BUSIN) and 3 (RTNIN) of connector C.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting the wire.

- (b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
G16-1 (BUSOUT) - G16-2 (RTNOUT)	Always	Below 1 Ω

(c) Disconnect the service wire from connector C.

*a	Front view of wire harness connector (to Side No. 2 Airbag Sensor Assembly RH)
*b	Front view of wire harness connector (to Rear Airbag Sensor RH)

NG  **REPLACE NO. 2 FLOOR WIRE**

OK

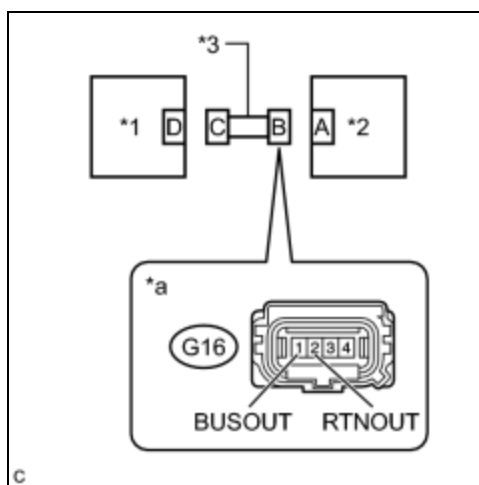

28. CHECK NO. 2 FLOOR WIRE (SHORT)

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
G16-1 (BUSOUT) - G16-2 (RTNOUT)	Always	1 M Ω or higher

Text in Illustration

*1	Rear Airbag Sensor RH
*2	Side No. 2 Airbag Sensor Assembly RH
*3	No. 2 Floor Wire
*a	Front view of wire harness connector (to Side No. 2 Airbag Sensor Assembly RH)

OK

29. CHECK NO. 2 FLOOR WIRE (SHORT TO B+)

(a) Connect the cable to the negative (-) battery terminal.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
G16-1 (BUSOUT) - Body ground	Ignition switch ON	Below 1 V
G16-2 (RTNOUT) - Body ground	Ignition switch ON	Below 1 V

(d) Turn the ignition switch off.

(e) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

A ▶ REPLACE AIRBAG ECU ASSEMBLY

33.	CHECK CONNECTORS
------------	-------------------------

- (a) Turn the ignition switch off.
- (b) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

- (c) Check that the connectors are properly connected to the rear airbag sensor RH and side airbag sensor assembly RH. Also check that the connectors that link the No. 2 floor wire and front door wire RH are properly connected.

OK:

The connectors are properly connected.

HINT:

If the connectors are not connected securely, reconnect the connectors and proceed to the next inspection.

- (d) Disconnect the connectors from the rear airbag sensor RH and side airbag sensor assembly RH. Also disconnect the connectors that link the No. 2 floor wire and front door wire RH.

- (e) Check that the terminals of the connectors are not damaged.

OK:

The terminals are not deformed or damaged.

NG ▶ REPLACE WIRE HARNESS

OK
▼

34.	CHECK SIDE AIRBAG SENSOR ASSEMBLY RH CIRCUIT (OPEN)
------------	--

(a) Connect the connectors that link the No. 2 floor wire and front door wire RH.

(b) Using a service wire, connect terminals 2 (BUSIN) and 1 (RTNIN) of connector E.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting the wire.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
G14-1 (BUSOUT) - G14-2 (RTNOUT)	Always	Below 1 Ω

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: AIRBAG SYSTEM: B1625,B16F5: Side Airbag Sensor LH Circuit Malfunction (2013 FR-S)		

DTC	B1625	Side Airbag Sensor LH Circuit Malfunction
------------	--------------	--

DTC	B16F5	Side Airbag Sensor LH Mismatch
------------	--------------	---------------------------------------

DESCRIPTION

The side collision sensor LH circuit (to determine deployment of the front seat airbag assembly LH, curtain shield airbag assembly LH and front seat outer belt assembly LH) is composed of the airbag ECU assembly, side airbag sensor assembly LH, side No. 2 airbag sensor assembly LH and rear airbag sensor LH and No. 2 airbag sensor assembly.

The side No. 2 airbag sensor assembly LH detects impacts to the vehicle and sends signals to the airbag ECU assembly to determine if the airbag should be deployed.

These DTCs are stored when a malfunction is detected in the side No. 2 airbag sensor assembly LH.

INSPECTION PROCEDURE

NOTICE:

After turning the ignition switch off, waiting time may be required before disconnecting the cable from the negative (-) battery terminal. Therefore, make sure to read the disconnecting the cable from the negative (-) battery terminal notices before proceeding with work .

PROCEDURE

1.	CHECK CURRENT DTC
-----------	--------------------------

(a) Check for current DTCs .

Result:

RESULT	PROCEED TO
Current DTC B1647 is output.	A
Current DTC B1628 or B1638 is output.	B
Current DTC B1697 or B1698 is output.	C
Current DTC B1627 or B1637 is output.	D
Current DTCs B1627, B1628, B1637, B1638, B1647, B1697 and B1698 are not output.	E

HINT:

- DTCs indicating communication errors will be changed to DTCs indicating errors in initialization by turning the ignition switch off and then to ON again.
- Codes other than current DTCs B1627, B1628, B1637, B1638, B1647, B1697 and B1698 may be output at this time, but they are not related to this check.

B ► CHECK HISTORY DTC

C ► CHECK CONNECTORS

D ► CHECK CURRENT DTC

E ► USE SIMULATION METHOD TO CHECK

A

2.	CHECK CONNECTORS
-----------	-------------------------

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

- (c) Check that the connectors are properly connected to the airbag ECU assembly, side airbag sensor assembly LH, side No. 2 airbag sensor assembly LH and rear airbag sensor LH. Also check that the connectors that link the floor wire and front door wire LH are properly connected.

OK:

The connectors are properly connected.

HINT:

If the connectors are not connected securely, reconnect the connectors and proceed to the next inspection.

- (d) Disconnect the connectors from the airbag ECU assembly, side airbag sensor assembly LH, side No. 2 airbag sensor assembly LH and rear airbag sensor LH. Also disconnect the connectors that link the floor wire and front door wire LH.

- (e) Check that the terminals of the connectors are not damaged.

OK:

The terminals are not deformed or damaged.

NG ► **REPLACE WIRE HARNESS**

OK

3. CHECK FLOOR WIRE (OPEN)

- (a) Using a service wire, connect terminals 8 (BBL+) and 15 (BBL-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting the wire.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
H23-4 (BUSIN) -H23-3 (RTNIN)	Always	Below 1 Ω

(c) Disconnect the service wire from connector B.

NG ▶ **REPLACE FLOOR WIRE**

OK
▼

5. CHECK FLOOR WIRE (SHORT TO B+)

(a) Connect the cable to the negative (-) battery terminal.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
H23-4 (BUSIN) - Body ground	Ignition switch ON	Below 1 V
H23-3 (RTNIN) - Body ground	Ignition switch ON	Below 1 V

(d) Turn the ignition switch off.

(e) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

OK
▼

7. CHECK FLOOR WIRE (OPEN)

(a) Using a service wire, connect terminals 4 (BUSIN) and 3 (RTNIN) of connector C.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting the wire.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
H23-1 (BUSOUT) - H23-2 (RTNOUT)	Always	Below 1 Ω

(c) Disconnect the service wire from connector C.

C ▶ USE SIMULATION METHOD TO CHECK

A ▶ REPLACE AIRBAG ECU ASSEMBLY

18.	CHECK HISTORY DTC
------------	--------------------------

(a) Check for history DTCs  .

Result:

RESULT	PROCEED TO
History DTCs B1627 and B1637 are not output.	A
History DTC B1627 is output.	B
History DTC B1637 is output.	C

HINT:

Codes other than history DTCs B1627 and B1637 may be output at this time, but they are not related to this check.

B ▶ CHECK SIDE NO. 2 AIRBAG SENSOR ASSEMBLY LH

C ► CHECK REAR AIRBAG SENSOR LH

A

19.	CHECK CURRENT DTC
-----	-------------------

(a) Check for current DTCs  .

Result:

RESULT	PROCEED TO
Current DTC B1628 is output.	A
Current DTC B1638 is output.	B

HINT:

Codes other than current DTCs B1628 and B1638 may be output at this time, but they are not related to this check.

B ► CHECK CONNECTORS

A

20.	CHECK CONNECTORS
-----	------------------

- (a) Turn the ignition switch off.
- (b) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

- (c) Check that the connectors are properly connected to the airbag ECU assembly and side No. 2 airbag sensor assembly LH.

OK:

The connectors are properly connected.

HINT:

If the connectors are not connected securely, reconnect the connectors and proceed to the next inspection.

- (d) Disconnect the connectors from the airbag ECU assembly and side No. 2 airbag sensor

assembly LH.

(e) Check that the terminals of the connectors are not damaged.

OK:

The terminals are not deformed or damaged.

NG ▶ REPLACE FLOOR WIRE

OK

21. CHECK FLOOR WIRE (OPEN)

(a) Using a service wire, connect terminals 8 (BBL+) and 15 (BBL-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting the wire.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
H23-4 (BUSIN) - H23-3 (RTNIN)	Always	Below 1 Ω

(c) Disconnect the service wire from connector B.

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: AIRBAG SYSTEM: B1650: Occupant Classification System Malfunction (2013 FR-S)		

DTC	B1650	Occupant Classification System Malfunction
------------	--------------	---

DESCRIPTION

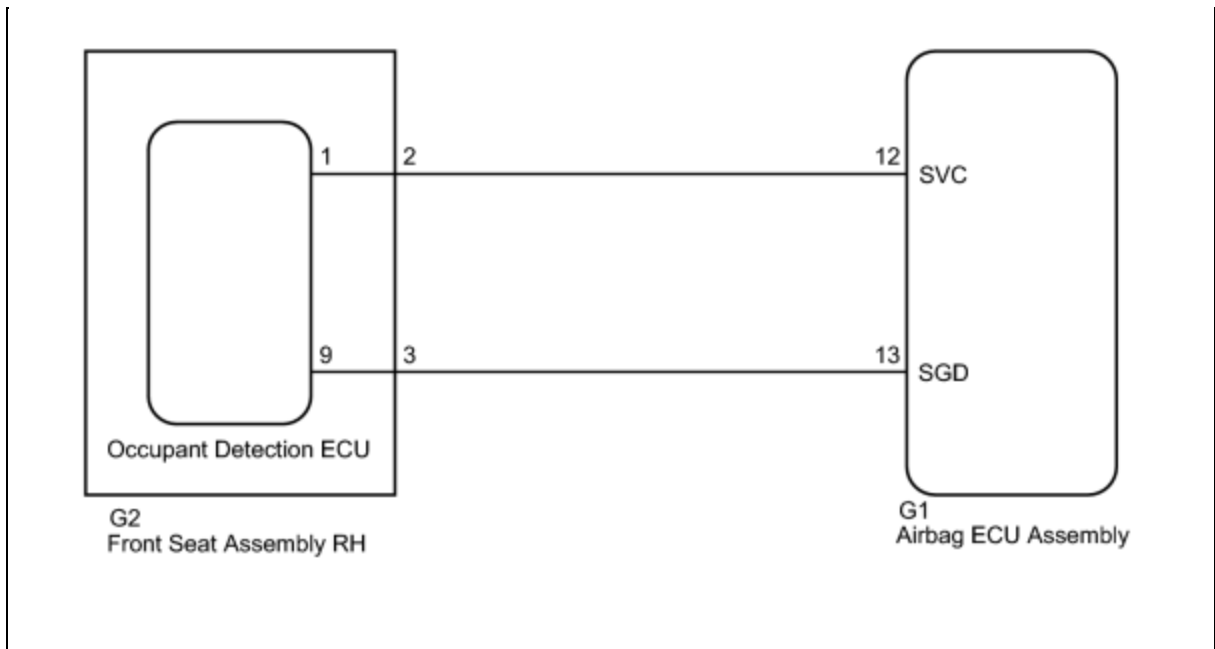

The occupant classification system circuit consists of the airbag ECU assembly and occupant classification system.

If the airbag ECU assembly receives signals from the occupant detection ECU, it determines whether the front passenger airbag and front seat belt pretensioner RH should be operated.

DTC B1650 is stored when a malfunction is detected in the occupant classification system circuit.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

After turning the ignition switch off, waiting time may be required before disconnecting the cable from the negative (-) battery terminal. Therefore, make sure to read the disconnecting the cable from the negative (-) battery terminal notices before proceeding with work **INFO**.

PROCEDURE

1.	CHECK DTC (OCCUPANT DETECTION ECU)
-----------	---

(a) Check for DTCs of the occupant detection ECU **INFO**.

OK:

DTC is not output.

NG **▶ GO TO OCCUPANT CLASSIFICATION SYSTEM**

OK

2.	CHECK CONNECTORS
-----------	-------------------------

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(c) Check that the connectors are properly connected to the airbag ECU assembly and front seat wire RH.

OK:

The connectors are properly connected.

HINT:

If the connectors are not connected securely, reconnect the connectors and proceed to the next inspection.

(d) Disconnect the connectors from the airbag ECU assembly and front seat wire RH.

(e) Check that the terminals of the connectors are not damaged.

OK:

The terminals are not deformed or damaged.

NG ► **REPLACE NO. 2 FLOOR WIRE**

OK

3.	CHECK CONNECTORS
-----------	-------------------------

(a) Check that the connectors are properly connected to the occupant detection ECU.

OK:

The connectors are properly connected.

HINT:

If the connectors are not connected securely, reconnect the connectors and proceed to the next inspection.

(b) Disconnect the connectors from the occupant detection ECU.

(c) Check that the terminals of the connectors are not damaged.

OK:

The terminals are not deformed or damaged.

NG ► **REPLACE FRONT SEAT ASSEMBLY RH**

OK

4.	CHECK OCCUPANT CLASSIFICATION SYSTEM CIRCUIT (OPEN)
-----------	--

(a) Connect the connectors to the front seat wire RH.

(b) Using a service wire, connect terminals 12 (SVC) and 13 (SGD) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting the wire.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 9	Always	Below 1 Ω

Text in Illustration

*1	Occupant Detection ECU
*2	Airbag ECU Assembly
*3	Service Wire
*a	Front view of wire harness connector (to Airbag ECU Assembly)
*b	Front view of wire harness connector (to Occupant Detection ECU)

NG ► CHECK NO. 2 FLOOR WIRE (OPEN)

OK

5.	CHECK OCCUPANT CLASSIFICATION SYSTEM CIRCUIT (SHORT)
----	--

(a) Disconnect the service wire from connector B.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 9	Always	1 MΩ or higher

Text in Illustration

*1	Occupant Detection ECU
*2	Airbag ECU Assembly
*a	Front view of wire harness connector (to Occupant Detection ECU)

NG ► CHECK NO. 2 FLOOR WIRE (SHORT)

OK

6.	CHECK OCCUPANT CLASSIFICATION SYSTEM CIRCUIT (SHORT TO B+)
-----------	---

(a) Connect the cable to the negative (-) battery terminal.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - Body ground	Ignition switch ON	Below 1 V
9 - Body ground	Ignition switch ON	Below 1 V

(d) Turn the ignition switch off.

(e) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

INSPECTION PROCEDURE

NOTICE:

After turning the ignition switch off, waiting time may be required before disconnecting the cable from the negative (-) battery terminal. Therefore, make sure to read the disconnecting the cable from the negative (-) battery terminal notices before proceeding with work .

HINT:

If DTC B1650 has been stored, check the errors with respect to that DTC first.

PROCEDURE

1.	CHECK DTC (OCCUPANT CLASSIFICATION SYSTEM)
-----------	---

(a) Check for DTCs of the occupant classification system .

Result :

RESULT	PROCEED TO
DTCs are not output	A
DTC B1760, B1761,B1771 or B1795 is output.	B

B  **GO TO OCCUPANT CLASSIFICATION SYSTEM (DIAGNOSTIC TROUBLE CODE CHART)**

A

2.	CHECK CONNECTORS
-----------	-------------------------

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal.

(c) Check that the connectors are properly connected to the occupant detection ECU and front seat inner belt assembly RH.

OK:

The connectors are properly connected.

HINT:

If the connectors are not connected securely, reconnect the connectors and proceed to the next inspection.

(d) Disconnect the connectors from the occupant detection ECU and front seat inner belt assembly RH.

(e) Check that the terminals of the connectors are not damaged.

OK:

The terminals are not deformed or damaged.

NG  **REPLACE FRONT SEAT ASSEMBLY RH**

OK

3.	CHECK FRONT SEAT WIRE RH (SHORT TO B+)
-----------	---

(a) Connect the cable to the negative (-) battery terminal.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
4 - Body ground	Ignition switch ON	Below 1 V
8 - Body ground	Ignition switch ON	Below 1 V

(d) Turn the ignition switch off.

(e) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

7. CHECK DTC

- (a) Connect the connectors to the occupant detection ECU and front seat inner belt assembly RH.
- (b) Connect the cable to the negative (-) battery terminal.
- (c) Clear the DTCs stored in the occupant detection ECU **INFO**.
- (d) Clear the DTCs stored in the airbag ECU assembly **INFO**.
- (e) Turn the ignition switch off.
- (f) Turn the ignition switch to ON, and wait for at least 60 seconds.
- (g) Check for DTCs **INFO**.
 OK:
 DTC B1655 is not output.

HINT:

Codes other than DTC B1655 may be output at this time, but they are not related to this check.

- (h) Turn the ignition switch off.

NG ► CHECK FRONT SEAT INNER BELT ASSEMBLY LH

8.	CHECK FRONT SEAT INNER BELT ASSEMBLY LH
-----------	--

(a) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(b) Replace the front seat inner belt assembly RH with a known good one INFO.

HINT:

Perform the following inspection using known good parts from another vehicle if possible.

(c) Connect the cable to the negative (-) battery terminal.

(d) Clear the DTCs stored in the occupant detection ECU INFO.

(e) Clear the DTCs stored in the airbag ECU assembly INFO.

(f) Turn the ignition switch off.

(g) Turn the ignition switch to ON, and wait for at least 60 seconds.

(h) Check for DTCs INFO.

OK:

DTC B1655 is not output.

HINT:

Codes other than DTC B1655 may be output at this time, but they are not related to this check.

(i) Turn the ignition switch off.

(j) Disconnect the cable from the negative (-) battery terminal.

(k) Restore the front seat inner belt assembly RH that was installed for testing to its original location INFO.

NG ► CHECK FRONT SEAT ASSEMBLY RH

OK ► REPLACE FRONT SEAT INNER BELT ASSEMBLY LH

9.	CHECK FRONT SEAT ASSEMBLY RH
-----------	-------------------------------------

(a) Disconnect the cable from the negative (-) battery terminal.

(b) Replace the front seat assembly RH with a new one INFO.

(c) Connect the cable to the negative (-) battery terminal.

- (d) Connect the connectors to the occupant detection ECU and front seat inner belt assembly RH.
- (e) Connect the cable to the negative (-) battery terminal.
- (f) Clear the DTCs stored in the occupant detection ECU INFO .
- (g) Clear the DTCs stored in the airbag ECU assembly INFO .
- (h) Turn the ignition switch off.
- (i) Turn the ignition switch to ON, and wait for at least 60 seconds.
- (j) Check for DTCs INFO .
 - OK:
DTC B1655 is not output.

HINT:

Codes other than DTC B1655 may be output at this time, but they are not related to this check.

NG ▶ REPLACE AIRBAG ECU ASSEMBLY

OK ▶ END (FRONT SEAT ASSEMBLY RH WAS DEFECTIVE)

Last Modified: 3-27-2012	6.4 C	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000001W2808SX
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: AIRBAG SYSTEM: B1660: P Seat Airbag Active Mode Indicator (2013 FR-S)		

DTC	B1660	P Seat Airbag Active Mode Indicator
------------	--------------	--

DESCRIPTION

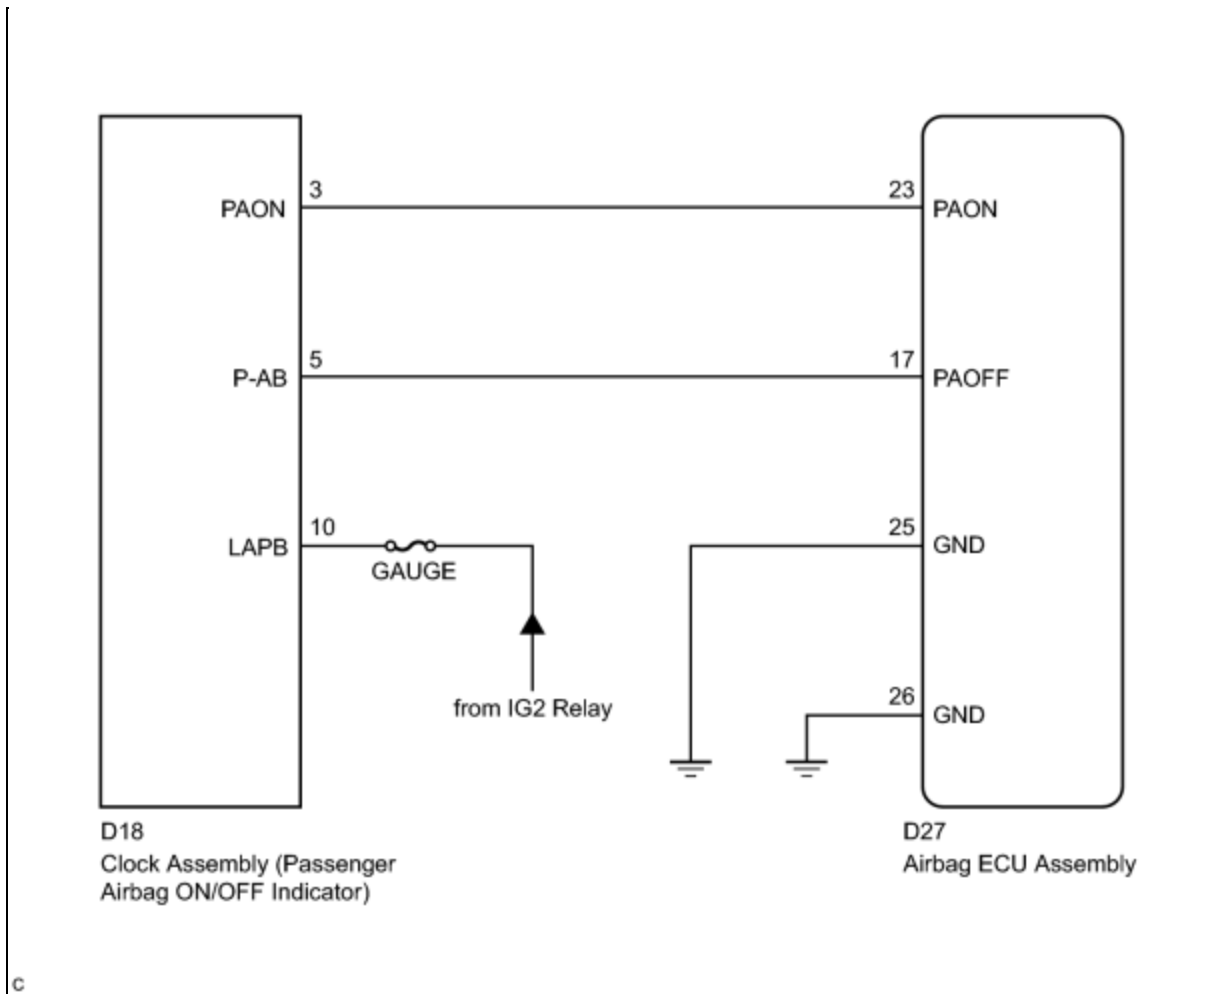

The passenger airbag ON/OFF indicator circuit consists of the airbag ECU assembly and clock assembly (passenger airbag ON/OFF indicator).

The passenger airbag ON/OFF indicator indicates the operation condition of the front passenger airbag and front seat belt pretensioner RH.

DTC B1660 is stored when a malfunction is detected in the passenger airbag ON/OFF indicator circuit.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B1660	<ul style="list-style-type: none"> The airbag ECU assembly receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the passenger airbag ON/OFF indicator circuit. Clock assembly malfunction Airbag ECU assembly malfunction 	<ul style="list-style-type: none"> Instrument panel wire Clock assembly (Passenger airbag ON/OFF indicator) Airbag ECU assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- After turning the ignition switch off, waiting time may be required before disconnecting the cable from the negative (-) battery terminal. Therefore, make sure to read the disconnecting the cable from the negative (-) battery terminal notices before proceeding with work **INFO** .
- Inspect the fuses for circuits related to this system before performing the following inspection procedure.

HINT:

- Perform the simulation method by selecting check mode (Signal Check) using the Techstream **INFO** .
- After selecting check mode (Signal Check), perform the simulation method by wiggling each connector of the airbag system or driving the vehicle on a city road or rough road **INFO** .

PROCEDURE

1.	CHECK PASSENGER AIRBAG ON/OFF INDICATOR CONDITION
-----------	--

- (a) Turn the ignition switch to ON.
- (b) Check the passenger airbag ON/OFF indicator operation.

Result:

ON/OFF INDICATOR ILLUMINATION	PROCEED TO
Always ON	A
OFF	B

HINT:

Refer to the normal condition of the passenger airbag ON/OFF indicator  .

B  **CHECK CONNECTORS**

A

2.	CHECK CONNECTORS
-----------	-------------------------

- (a) Turn the ignition switch off.
- (b) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

- (c) Check that the connectors are properly connected to the airbag ECU assembly and clock assembly.

OK:

The connectors are properly connected.

HINT:

If the connectors are not connected securely, reconnect the connectors and proceed to the next inspection.

- (d) Disconnect the connectors from the airbag ECU assembly and clock assembly.
- (e) Check that the terminals of the connectors are not damaged.

OK:

The terminals are not deformed or damaged.

NG  **REPLACE INSTRUMENT PANEL WIRE**

OK

--	--

3. CHECK PASSENGER AIRBAG ON/OFF INDICATOR

- (a) Connect the connector to the clock assembly.
- (b) Connect the cable to the negative (-) battery terminal.
- (c) Turn the ignition switch to ON.
- (d) Check the passenger airbag ON/OFF indicator operation.

OK:

The passenger airbag ON/OFF indicator does not come on.

NG ► **CHECK INSTRUMENT PANEL WIRE (OPEN)**

OK

4. CHECK DTC

- (a) Turn the ignition switch off.

- (b) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

- (c) Connect the connector to the airbag ECU assembly.
- (d) Connect the cable to the negative (-) battery terminal.
- (e) Clear the DTCs stored in memory **INFO**.
- (f) Turn the ignition switch off.
- (g) Turn the ignition switch to ON, and wait for at least 60 seconds.
- (h) Check for DTCs **INFO**.

OK:

DTC B1660 is not output.

HINT:

Codes other than DTC B1660 may be output at this time, but they are not related to this check.

*1	Clock Assembly
*2	Airbag ECU Assembly

NG ► REPLACE AIRBAG ECU ASSEMBLY

OK ► USE SIMULATION METHOD TO CHECK

5. CHECK INSTRUMENT PANEL WIRE (OPEN)

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(c) Disconnect the connector from the clock assembly.

(d) Using a service wire, connect terminals 23 (PAON) and 17 (PAOFF) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting the wire.

(e) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

--	--	--

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D18-3 (PAON) - D18-5 (P-AB)	Always	Below 1 Ω

(f) Disconnect the service wire from connector B.

OK

7. CHECK INSTRUMENT PANEL WIRE (SHORT TO B+)

(a) Connect the cable to the negative (-) battery terminal.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D18-3 (PAON) - Body ground	Ignition switch ON	Below 1 V
D18-5 (P-AB) - Body ground	Ignition switch ON	Below 1 V

(d) Turn the ignition switch off.

(e) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

9. CHECK CONNECTORS

- (a) Turn the ignition switch off.
- (b) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(c) Check that the connectors are properly connected to the airbag ECU assembly and clock assembly.

OK:

The connectors are properly connected.

HINT:

If the connectors are not connected securely, reconnect the connectors and proceed to the next inspection.

(d) Disconnect the connectors from the airbag ECU assembly and clock assembly.

(e) Check that the terminals of the connectors are not damaged.

OK:

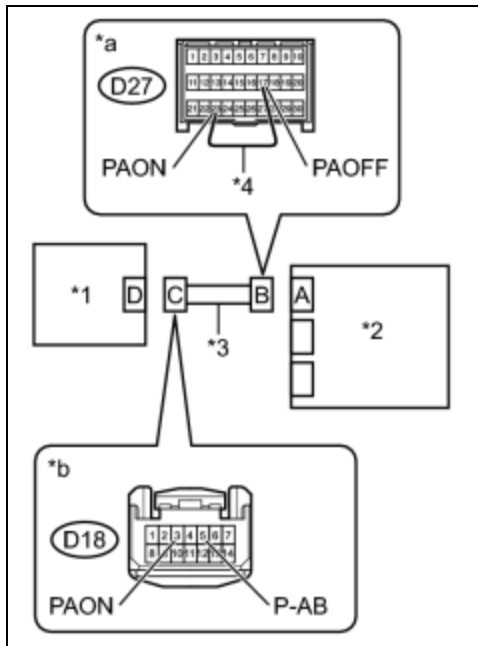

The terminals are not deformed or damaged.

NG ▶ REPLACE INSTRUMENT PANEL WIRE

OK

10. CHECK INSTRUMENT PANEL WIRE (OPEN)

(a) Using a service wire, connect terminals 23 (PAON) and 17 (PAOFF) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting the wire.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D18-3 (PAON) - D18-5 (P-AB)	Always	Below 1 Ω

------------	--------------	---

DESCRIPTION

The driver side squib circuit consists of the airbag ECU assembly, spiral cable sub-assembly and horn button assembly.

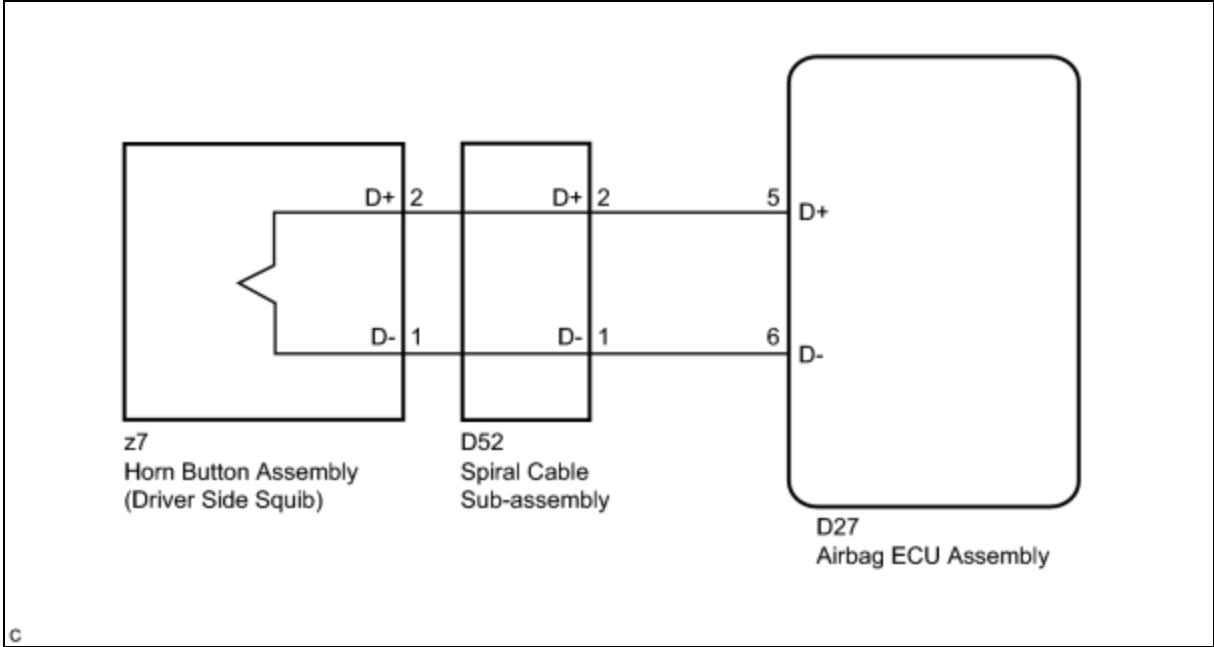

The airbag ECU assembly uses this circuit to deploy the airbag when deployment conditions are met.

These DTCs are stored when a malfunction is detected in the driver side squib circuit.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

After turning the ignition switch off, waiting time may be required before disconnecting the cable from the negative (-) battery terminal. Therefore, make sure to read the disconnecting the cable from the negative (-) battery terminal notices before proceeding with work INFO.

HINT:

- Perform the simulation method by selecting check mode (Signal Check) using the Techstream INFO.
- After selecting check mode (Signal Check), perform the simulation method by wiggling each connector of the airbag system or driving the vehicle on a city road or rough road INFO.

PROCEDURE

1.	CHECK CONNECTORS
-----------	-------------------------

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(c) Check that the connectors are properly connected to the horn button assembly, spiral cable sub-assembly and airbag ECU assembly.

OK:

The connectors are properly connected.

HINT:

If the connectors are not connected securely, reconnect the connectors and proceed to the next inspection.

(d) Disconnect the connectors from the horn button assembly, spiral cable sub-assembly and airbag ECU assembly.

(e) Check that the terminals of the connectors are not damaged.

OK:

The terminals are not deformed or damaged.

(f) Check that the spiral cable sub-assembly connector (on the horn button assembly side) is not damaged.

OK:

The lock button is not disengaged, or the claw of the lock is not deformed or damaged.

(g) Check that the short springs for the instrument panel wire and spiral cable sub-assembly with the activation prevention mechanism are not deformed or damaged.

OK:

The short springs are not deformed or damaged.

Text in Illustration

*1	Horn Button Assembly
*2	Spiral Cable Sub-assembly
*3	Airbag ECU Assembly
*4	Instrument Panel Wire

OK

2. CHECK HORN BUTTON ASSEMBLY (DRIVER SIDE SQUIB)

(a) Connect the instrument panel wire to the airbag ECU assembly and spiral cable sub-assembly.

(b) Connect SST (resistance 2.1 Ω) to connector E (orange connector).

CAUTION:

Never connect the tester to the horn button assembly (driver side squib) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- Do not forcibly insert SST into the terminals of the connector when connecting it.
- Insert SST straight into the terminals of the connector.

SST: 09843-18061

(c) Connect the cable to the negative (-) battery terminal.

(d) Clear the DTCs stored in memory  .

(e) Turn the ignition switch off.

(f) Turn the ignition switch to ON, and wait for at least 60 seconds.

(g) Check for DTCs  .

OK:

DTC B1800, B1801, B1802 or B1803 is not output.

HINT:

Codes other than DTCs B1800, B1801, B1802 and B1803 may be output at this time, but they are not related to this check.

(h) Turn the ignition switch off.

(i) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(j) Disconnect SST from connector E.

NG ► CHECK DRIVER SIDE SQUIB CIRCUIT

OK ► REPLACE HORN BUTTON ASSEMBLY

3. CHECK DRIVER SIDE SQUIB CIRCUIT

(a) Disconnect the instrument panel wire from the airbag ECU assembly.

(b) Check for a short to B+ in the circuit.

(1) Connect the cable to the negative (-) battery terminal.

(2) Turn the ignition switch to ON.

(3) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
z7-2 (D+) - Body ground	Ignition switch ON	Below 1 V

z7-1 (D-) - Body ground	Ignition switch ON	Below 1 V
-------------------------	--------------------	-----------

(4) Turn the ignition switch off.

(5) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(c) Check for an open in the circuit.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
z7-2 (D+) - z7-1 (D-)	Always	Below 1 Ω

(d) Check for a short to ground in the circuit.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
z7-2 (D+) - Body ground	Always	1 MΩ or higher
z7-1 (D-) - Body ground	Always	1 MΩ or higher

(e) Check for a short in the circuit.

(1) Release the activation prevention mechanism built into connector B  .

(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
z7-2 (D+) - z7-1 (D-)	Always	1 MΩ or higher

(3) Restore the released activation prevention mechanism of connector B to the original condition.

Text in Illustration

OK

4. CHECK DTC

(a) Connect the connectors to the horn button assembly and airbag ECU assembly.

(b) Connect the cable to the negative (-) battery terminal.

(c) Clear the DTCs stored in memory **INFO** .

(d) Turn the ignition switch off.

(e) Turn the ignition switch to ON, and wait for at least 60 seconds.

(f) Check for DTCs **INFO** .

OK:

DTC B1800, B1801, B1802 or B1803 is not output.

HINT:

Codes other than DTCs B1800, B1801, B1802 and B1803 may be output at this time, but they are not related to this check.

5. CHECK INSTRUMENT PANEL WIRE

- (a) Disconnect the instrument panel wire from the spiral cable sub-assembly.
- (b) Check for a short to B+ in the circuit.
 - (1) Connect the cable to the negative (-) battery terminal.
 - (2) Turn the ignition switch to ON.
 - (3) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D52-1 (D-) - Body ground	Ignition switch ON	Below 1 V
D52-2 (D+) - Body ground	Ignition switch ON	Below 1 V

- (4) Turn the ignition switch off.
- (5) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

- (c) Check for an open in the circuit.
 - (1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D52-1 (D-) - D52-2 (D+)	Always	Below 1 Ω

- (d) Check for a short to ground in the circuit.
 - (1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D52-1 (D-) - Body ground	Always	1 MΩ or higher
D52-2 (D+) - Body		

ground	Always	1 MΩ or higher
--------	--------	----------------

(e) Check for a short in the circuit.

(1) Release the activation prevention mechanism built into connector B  .

(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D52-1 (D-) - D52-2 (D+)	Always	1 MΩ or higher

(3) Restore the released activation prevention mechanism of connector B to the original condition.

6.	CHECK SPIRAL CABLE SUB-ASSEMBLY
-----------	--

(a) Check for a short to B+ in the circuit.

(1) Connect the cable to the negative (-) battery terminal.

(2) Turn the ignition switch to ON.

(3) Measure the voltage according to the value(s) in

the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
z7-2 (D+) - Body ground	Ignition switch ON	Below 1 V
z7-1 (D-) - Body ground	Ignition switch ON	Below 1 V

(4) Turn the ignition switch off.

(5) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(b) Check for an open in the circuit.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
z7-2 (D+) - z7-1 (D-)	Always	Below 1 Ω

(c) Check for a short to ground in the circuit.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
z7-2 (D+) - Body ground	Always	1 MΩ or higher
z7-1 (D-) - Body ground	Always	1 MΩ or higher

(d) Check for a short in the circuit.

(1) Release the activation prevention mechanism built into connector D INFO.

(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
z7-2 (D+) - z7-1 (D-)	Always	1 MΩ or higher

(3) Restore the released activation prevention mechanism of connector D to the original condition.

INSPECTION PROCEDURE

NOTICE:

After turning the ignition switch off, waiting time may be required before disconnecting the cable from the negative (-) battery terminal. Therefore, make sure to read the disconnecting the cable from the negative (-) battery terminal notices before proceeding with work **INFO**.

HINT:

- Perform the simulation method by selecting check mode (Signal Check) using the Techstream **INFO**.
- After selecting check mode (Signal Check), perform the simulation method by wiggling each connector of the airbag system or driving the vehicle on a city road or rough road **INFO**.

PROCEDURE

1. CHECK CONNECTORS

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(c) Check that the connectors are properly connected to the horn button assembly, spiral cable sub-assembly and airbag ECU assembly.

OK:

The connectors are properly connected.

HINT:

If the connectors are not connected securely, reconnect the connectors and proceed to the next inspection.

(d) Disconnect the connectors from the horn button assembly, spiral cable sub-assembly and airbag ECU assembly.

(e) Check that the terminals of the connectors are not damaged.

OK:

The terminals are not deformed or damaged.

(f) Check that the spiral cable sub-assembly connector (on the horn button assembly side) is not damaged.

OK:

The lock button is not disengaged, or the claw of the lock is not deformed or damaged.

(g) Check that the short springs for the instrument panel wire and spiral cable sub-assembly with the activation prevention mechanism are not deformed or damaged.

OK:

The short springs are not deformed or damaged.

3. CHECK DRIVER SIDE SQUIB 2ND STEP CIRCUIT

(a) Disconnect the instrument panel wire from the airbag ECU assembly.

(b) Check for a short to B+ in the circuit.

(1) Connect the cable to the negative (-) battery terminal.

(2) Turn the ignition switch to ON.

(3) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
z6-1 (D2+) - Body ground	Ignition switch ON	Below 1 V

z6-2 (D2-) - Body ground	Ignition switch ON	Below 1 V
--------------------------	--------------------	-----------

(4) Turn the ignition switch off.

(5) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(c) Check for an open in the circuit.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
z6-1 (D2+) - z6-2 (D2-)	Always	Below 1 Ω

(d) Check for a short to ground in the circuit.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
z6-1 (D2+) - Body ground	Always	1 M Ω or higher
z6-2 (D2-) - Body ground	Always	1 M Ω or higher

(e) Check for a short in the circuit.

(1) Release the activation prevention mechanism built into connector B  .

(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
z6-1 (D2+) - z6-2 (D2-)	Always	1 M Ω or higher

(3) Restore the released activation prevention mechanism of connector B to the original condition.

5. CHECK INSTRUMENT PANEL WIRE

(a) Disconnect the instrument panel wire from spiral cable sub-assembly.

(b) Check for a short to B+ in the circuit.

(1) Connect the cable to the negative (-) battery terminal.

(2) Turn the ignition switch to ON.

(3) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D52-3 (D2+) - Body ground	Ignition switch ON	Below 1 V
D52-4 (D2-) - Body ground	Ignition switch ON	Below 1 V

(4) Turn the ignition switch off.

(5) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(c) Check for an open in the circuit.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D52-3 (D2+) - D52-4 (D2-)	Always	Below 1 Ω

(d) Check for a short to ground in the circuit.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D52-3 (D2+) - Body ground	Always	1 M Ω or higher

D52-4 (D2-) - Body ground	Always	1 MΩ or higher
---------------------------	--------	----------------

(e) Check for a short in the circuit.

(1) Release the activation prevention mechanism built into connector B  .

(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D52-3 (D2+) - D52-4 (D2-)	Always	1 MΩ or higher

(3) Restore the released activation prevention mechanism of connector B to the original condition.

6.	CHECK SPIRAL CABLE SUB-ASSEMBLY
-----------	--

(a) Check for a short to B+ in the circuit.

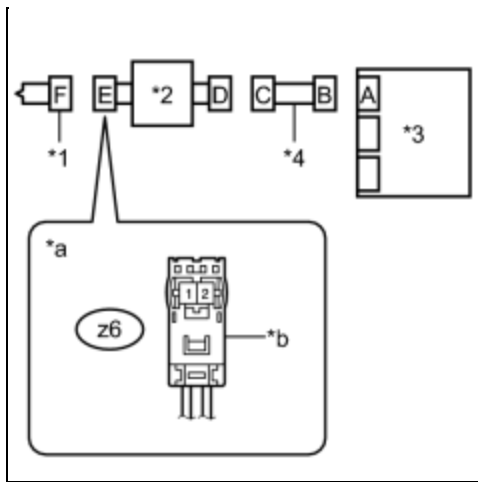

(1) Connect the cable to the negative (-) battery terminal.

(2) Turn the ignition switch to ON.

(3) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION

z6-1 (D2+) - Body ground	Ignition switch ON	Below 1 V
z6-2 (D2-) - Body ground	Ignition switch ON	Below 1 V

(4) Turn the ignition switch off.

(5) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(b) Check for an open in the circuit.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
z6-1 (D2+) - z6-2 (D2-)	Always	Below 1 Ω

(c) Check for a short to ground in the circuit.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
z6-1 (D2+) - Body ground	Always	1 MΩ or higher
z6-2 (D2-) - Body ground	Always	1 MΩ or higher

(d) Check for a short in the circuit.

(1) Release the activation prevention mechanism built into connector D INFO.

(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
z6-1 (D2+) - z6-2 (D2-)	Always	1 MΩ or higher

(3) Restore the released activation prevention mechanism of connector D to the original condition.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

After turning the ignition switch off, waiting time may be required before disconnecting the cable from the negative (-) battery terminal. Therefore, make sure to read the disconnecting the cable from the negative (-) battery terminal notices before proceeding with work **INFO**.

HINT:

- Perform the simulation method by selecting check mode (Signal Check) using the Techstream **INFO**.
- After selecting check mode (Signal Check), perform the simulation method by wiggling each connector of the airbag system or driving the vehicle on a city road or rough road **INFO**.

PROCEDURE

1.	CHECK CONNECTORS
-----------	-------------------------

(a) Turn the ignition switch off.

- (b) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

- (c) Check that the connectors are properly connected to the instrument panel passenger airbag assembly and airbag ECU assembly.

OK:

The connectors are properly connected.

HINT:

If the connectors are not connected securely, reconnect the connectors and proceed to the next inspection.

- (d) Disconnect the connectors from the instrument panel passenger airbag assembly and airbag ECU assembly.

- (e) Check that the terminals of the connectors are not damaged.

OK:

The terminals are not deformed or damaged.

- (f) Check that the short spring for the instrument panel wire with the activation prevention mechanism is not deformed or damaged.

OK:

The short spring is not deformed or damaged.

*3	Instrument Panel Wire

NG ▶ REPLACE INSTRUMENT PANEL WIRE

OK
▼

2.	CHECK INSTRUMENT PANEL PASSENGER AIRBAG ASSEMBLY (FRONT PASSENGER SIDE SQUIB 2ND STEP)
-----------	---

(a) Connect the connector to the airbag ECU assembly.

(b) Connect SST (resistance 2.1 Ω) to connector C.

CAUTION:

Never connect the tester to the instrument panel passenger airbag assembly (front passenger side squib 2nd step) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- Do not forcibly insert SST into the terminals of the connector when connecting it.
- Insert SST straight into the terminals of the connector.

SST: 09843-18061

(c) Connect the cable to the negative (-) battery terminal.

(d) Clear the DTCs stored in memory **INFO** .

(e) Turn the ignition switch off.

(f) Turn the ignition switch to ON, and wait for at least 60 seconds.

(g) Check for DTCs **INFO** .

OK:

DTC B1815, B1816, B1817 or B1818 is not output.

HINT:

Codes other than DTCs B1815, B1816, B1817 and B1818 may be output at this time, but they are not related to this check.

(h) Turn the ignition switch off.

(i) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(j) Disconnect SST from connector C.

NG ► CHECK FRONT PASSENGER SIDE SQUIB 2ND STEP CIRCUIT

OK ► REPLACE INSTRUMENT PANEL PASSENGER AIRBAG ASSEMBLY

3. CHECK FRONT PASSENGER SIDE SQUIB 2ND STEP CIRCUIT

(a) Disconnect the instrument panel wire from the airbag ECU assembly.

(b) Check for a short to B+ in the circuit.

(1) Connect the cable to the negative (-) battery terminal.

(2) Turn the ignition switch to ON.

(3) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D30-4 (P2+) - Body ground	Ignition switch ON	Below 1 V
D30-3 (P2-) - Body ground	Ignition switch ON	Below 1 V

(4) Turn the ignition switch off.

(5) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(c) Check for an open in the circuit.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D30-4 (P2+) - D30-3 (P2-)	Always	Below 1 Ω

(d) Check for a short to ground in the circuit.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D30-4 (P2+) - Body ground	Always	1 MΩ or higher
D30-3 (P2-) - Body ground	Always	1 MΩ or higher

(e) Check for a short in the circuit.

(1) Release the activation prevention mechanism built into connector B  .

(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D30-4 (P2+) - D30-3 (P2-)	Always	1 MΩ or higher

(3) Restore the released activation prevention mechanism of connector B to the original condition.

HINT:

- Perform the simulation method by selecting check mode (Signal Check) using the Techstream **INFO**.
- After selecting check mode (Signal Check), perform the simulation method by wiggling each connector of the airbag system or driving the vehicle on a city road or rough road **INFO**.

PROCEDURE

1.	CHECK CONNECTORS
----	------------------

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

- (c) Check that the connectors are properly connected to the front seat airbag assembly RH and airbag ECU assembly. Also check that the connectors that link the No. 2 floor wire and front seat wire RH are properly connected.

OK:

The connectors are properly connected.

HINT:

If the connectors are not connected securely, reconnect the connectors and proceed to the next inspection.

- (d) Disconnect the connectors from the front seat airbag assembly RH and airbag ECU assembly. Also disconnect the No. 2 floor wire from the front seat wire RH.

- (e) Check that the terminals of the connectors are not damaged.

OK:

The terminals are not deformed or damaged.

- (f) Check that the front seat wire RH connector (on the front seat airbag assembly RH side) is not damaged.

OK:

The lock button is not disengaged, or the claw of the lock is not deformed or damaged.

- (g) Check that the short springs for the No. 2 floor wire and the front seat wire RH with the activation prevention mechanism are not deformed or damaged.

OK:

The short springs are not deformed or damaged.

3. CHECK FRONT SIDE SQUIB RH CIRCUIT

(a) Disconnect the No. 2 floor wire from the airbag ECU assembly.

(b) Check for a short to B+ in the circuit.

(1) Connect the cable to the negative (-) battery terminal.

(2) Turn the ignition switch to ON.

(3) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
c1-1 (SFR-) - Body ground	Ignition switch ON	Below 1 V
c1-2 (SFR+) - Body ground	Ignition switch ON	Below 1 V

(4) Turn the ignition switch off.

(5) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(c) Check for an open in the circuit.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
c1-1 (SFR-) - c1-2 (SFR+)	Always	Below 1 Ω

(d) Check for a short to ground in the circuit.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
c1-1 (SFR-) - Body ground	Always	1 M Ω or higher
c1-2 (SFR+) - Body ground	Always	1 M Ω or higher

(e) Check for a short in the circuit.

(1) Release the activation prevention mechanism built into connector B  .

(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
c1-1 (SFR-) - c1-2 (SFR+)	Always	1 M Ω or higher

(3) Restore the released activation prevention mechanism of connector B to the original condition.

INSPECTION PROCEDURE

NOTICE:

After turning the ignition switch off, waiting time may be required before disconnecting the cable from the negative (-) battery terminal. Therefore, make sure to read the disconnecting the cable from the negative (-) battery terminal notices before proceeding with work **INFO**.

HINT:

- Perform the simulation method by selecting check mode (Signal Check) using the Techstream **INFO**.
- After selecting check mode (Signal Check), perform the simulation method by wiggling each connector of the airbag system or driving the vehicle on a city road or rough road **INFO**.

PROCEDURE

1.	CHECK CONNECTORS
----	------------------

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

- (c) Check that the connectors are properly connected to the front seat airbag assembly LH and airbag ECU assembly. Also check that the connectors that link the floor wire and front seat wire LH are properly connected.

OK:

The connectors are properly connected.

HINT:

If the connectors are not connected securely, reconnect the connectors and proceed to the next inspection.

- (d) Disconnect the connectors from the front seat airbag assembly LH and airbag ECU assembly. Also disconnect the floor wire from the front seat wire LH.

- (e) Check that the terminals of the connectors are not damaged.

OK:

The terminals are not deformed or damaged.

- (f) Check that the front seat wire LH connector (on the front seat airbag assembly LH side) is not damaged.

OK:

The lock button is not disengaged, or the claw of the lock is not deformed or damaged.

- (g) Check that the short springs for the floor wire and the front seat wire LH with the activation prevention mechanism are not deformed or damaged.

OK:

The short springs are not deformed or damaged.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
b1-1 (SFL-) - b1-2 (SFL+)	Always	Below 1 Ω

(d) Check for a short to ground in the circuit.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
b1-1 (SFL-) - Body ground	Always	1 M Ω or higher
b1-2 (SFL+) - Body ground	Always	1 M Ω or higher

(e) Check for a short in the circuit.

(1) Release the activation prevention mechanism built into connector B  .

(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
b1-1 (SFL-) - b1-2 (SFL+)	Always	1 M Ω or higher

(3) Restore the released activation prevention mechanism of connector B to the original condition.

*2	Airbag ECU Assembly
*a	Front view of wire harness connector (to Front Seat Airbag Assembly LH)

NG  **CHECK FLOOR WIRE**

OK

4.	CHECK DTC
-----------	------------------

(a) Connect the connectors to the front seat airbag assembly LH and airbag ECU assembly.

(b) Connect the cable to the negative (-) battery terminal.

(c) Clear the DTCs stored in memory **INFO** .

(d) Turn the ignition switch off.

(e) Turn the ignition switch to ON, and wait for at least 60 seconds.

(f) Check for DTCs **INFO** .

OK:

DTC B1825, B1826, B1827 or B1828 is not output.

HINT:

Codes other than DTCs B1825, B1826, B1827 and B1828 may be output at this time, but they are not related to this check.

5.	CHECK FLOOR WIRE
-----------	-------------------------

(a) Disconnect the front seat wire LH from the floor wire.

(b) Check for a short to B+ in the circuit.

- (1) Connect the cable to the negative (-) battery terminal.
- (2) Turn the ignition switch to ON.
- (3) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Hb1-1 - Body ground	Ignition switch ON	Below 1 V
Hb1-2 - Body ground	Ignition switch ON	Below 1 V

- (4) Turn the ignition switch off.
- (5) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(c) Check for an open in the circuit.

- (1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Hb1-1 - Hb1-2	Always	Below 1 Ω

(d) Check for a short to ground in the circuit.

- (1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Hb1-1 - Body ground	Always	1 M Ω or higher
Hb1-2 - Body ground	Always	1 M Ω or higher

(e) Check for a short in the circuit.

(1) Release the activation prevention mechanism built into connector B INFO.

(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Hb1-1 - Hb1-2	Always	1 MΩ or higher

(3) Restore the released activation prevention mechanism of connector B to the original condition.

6.	CHECK FRONT SEAT WIRE LH
-----------	---------------------------------

(a) Check for a short to B+ in the circuit.

(1) Connect the cable to the negative (-) battery terminal.

(2) Turn the ignition switch to ON.

(3) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
b1-1 (SFL-) - Body ground	Ignition switch ON	Below 1 V

b1-2 (SFL+) - Body ground	Ignition switch ON	Below 1 V

(4) Turn the ignition switch off.

(5) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(b) Check for an open in the circuit.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
b1-1 (SFL-) - b1-2 (SFL+)	Always	Below 1 Ω

(c) Check for a short to ground in the circuit.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
b1-1 (SFL-) - Body ground	Always	1 MΩ or higher
b1-2 (SFL+) - Body ground	Always	1 MΩ or higher

(d) Check for a short in the circuit.

(1) Release the activation prevention mechanism built into connector D INFO.

(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
b1-1 (SFL-) - b1-2 (SFL+)	Always	1 MΩ or higher

(3) Restore the released activation prevention mechanism of connector D to the original condition.

DTC	B1832	Short in Curtain Shield Airbag (RH) Squib Circuit (to Ground)
------------	--------------	--

DTC	B1833	Short in Curtain Shield Airbag (RH) Squib Circuit (to +B)
------------	--------------	--

DESCRIPTION

The curtain shield squib RH circuit consists of the airbag ECU assembly and curtain shield airbag assembly RH.

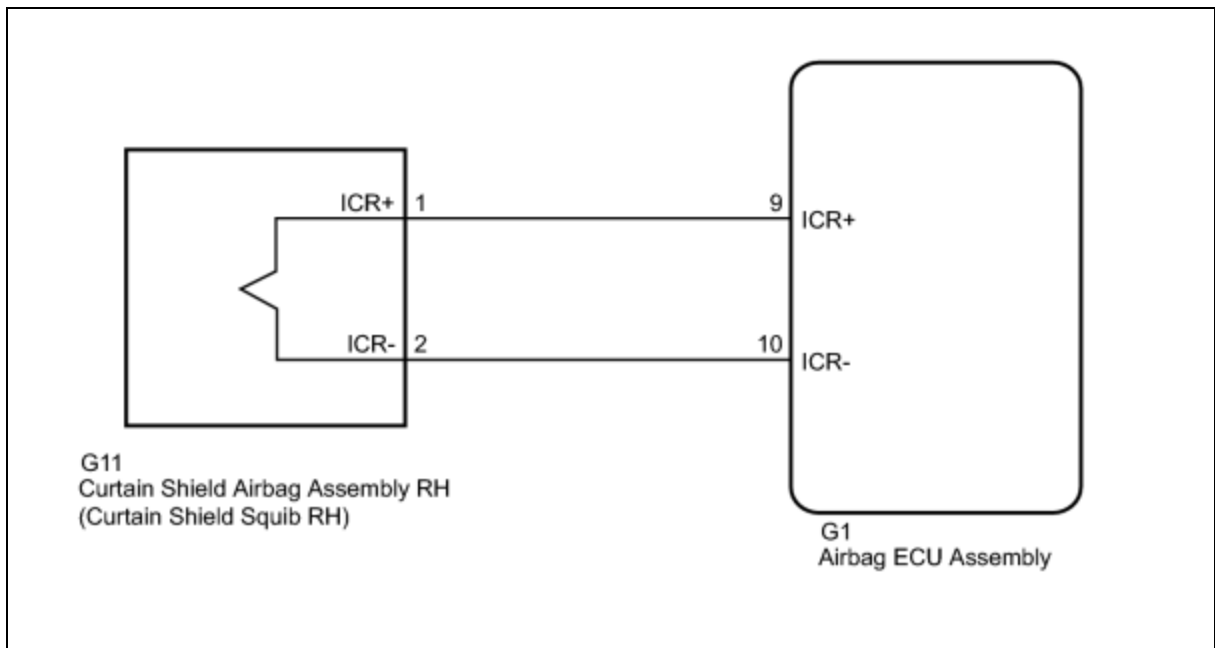

The airbag ECU assembly uses this circuit to deploy the airbag when deployment conditions are met.

These DTCs are stored when a malfunction is detected in the curtain shield squib RH circuit.

- Curtain shield squib RH malfunction
- Airbag ECU assembly malfunction

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

After turning the ignition switch off, waiting time may be required before disconnecting the cable from the negative (-) battery terminal. Therefore, make sure to read the disconnecting the cable from the negative (-) battery terminal notices before proceeding with work INFO.

HINT:

- Perform the simulation method by selecting check mode (Signal Check) using the Techstream INFO.
- After selecting check mode (Signal Check), perform the simulation method by wiggling each connector of the airbag system or driving the vehicle on a city road or rough road INFO.

PROCEDURE

1.	CHECK CONNECTORS
-----------	-------------------------

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(c) Check that the connectors are properly connected to the curtain shield airbag assembly RH and airbag ECU assembly.

OK:

The connectors are properly connected.

HINT:

If the connectors are not connected securely, reconnect the connectors and proceed to the next inspection.

(d) Disconnect the connectors from the curtain shield airbag assembly RH and airbag ECU assembly.

(e) Check that the terminals of the connectors are not damaged.

OK:

The terminals are not deformed or damaged.

(f) Check that the No. 2 floor wire connector (on the curtain shield airbag assembly RH side) is not damaged.

OK:

The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

(g) Check that the short spring for the No. 2 floor wire with the activation prevention mechanism is not deformed or damaged.

OK:

The short spring is not deformed or damaged.

*1	Curtain Shield Airbag Assembly RH
*2	Airbag ECU Assembly
*3	No. 2 Floor Wire

NG  **REPLACE NO. 2 FLOOR WIRE**

OK

2.	CHECK CURTAIN SHIELD AIRBAG ASSEMBLY RH (CURTAIN SHIELD SQUIB RH)
-----------	--

(a) Connect the connector to the airbag ECU assembly.

(b) Connect SST (resistance 2.1 Ω) to connector C.

CAUTION:

Never connect the tester to the curtain shield airbag assembly RH (curtain shield squib RH) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- Do not forcibly insert SST into the terminals of the connector when connecting it.
- Insert SST straight into the terminals of the connector.

SST: 09843-18061

(c) Connect the cable to the negative (-) battery terminal.

(d) Clear the DTCs stored in memory **INFO** .

(e) Turn the ignition switch off.

(f) Turn the ignition switch to ON, and wait for at least 60 seconds.

(g) Check for DTCs **INFO** .

OK:

DTC B1830, B1831, B1832 or B1833 is not output.

HINT:

Codes other than DTCs B1830, B1831, B1832 and B1833 may be output at this time, but they are not related to this check.

(h) Turn the ignition switch off.

(i) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal

to disable the SRS system.

(j) Disconnect SST from connector C.

Text in Illustration

*2	Airbag ECU Assembly
*a	Front view of wire harness connector (to Curtain Shield Airbag Assembly RH)

NG ► CHECK NO. 2 FLOOR WIRE

OK ► REPLACE CURTAIN SHIELD AIRBAG ASSEMBLY RH

3. CHECK NO. 2 FLOOR WIRE

(a) Disconnect the No. 2 floor wire from the airbag ECU assembly.

(b) Check for a short to B+ in the circuit.

- (1) Connect the cable to the negative (-) battery terminal.
- (2) Turn the ignition switch to ON.
- (3) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
G11-1 (ICR+) - Body ground	Ignition switch ON	Below 1 V
G11-2 (ICR-) - Body ground	Ignition switch ON	Below 1 V

(4) Turn the ignition switch off.

(5) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(c) Check for an open in the circuit.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
G11-1 (ICR+) - G11-2 (ICR-)	Always	Below 1 Ω

(d) Check for a short to ground in the circuit.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
G11-1 (ICR+) - Body ground	Always	1 M Ω or higher
G11-2 (ICR-) - Body ground	Always	1 M Ω or higher

(e) Check for a short in the circuit.

(1) Release the activation prevention mechanism built into connector B  .

(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
G11-1 (ICR+) - G11-2 (ICR-)	Always	1 M Ω or higher

(3) Restore the released activation prevention mechanism of connector B to the original condition.

*2	Airbag ECU Assembly
*3	No. 2 Floor Wire
*a	Front view of wire harness connector (to Curtain Shield Airbag Assembly RH)

NG  **REPLACE NO. 2 FLOOR WIRE**

OK

4.	CHECK DTC
-----------	------------------

(a) Connect the connectors to the curtain shield airbag assembly RH and airbag ECU assembly.

- (b) Connect the cable to the negative (-) battery terminal.
- (c) Clear the DTCs stored in memory INFO.
- (d) Turn the ignition switch off.
- (e) Turn the ignition switch to ON, and wait for at least 60 seconds.
- (f) Check for DTCs INFO.

OK:
DTC B1830, B1831, B1832 or B1833 is not output.

HINT:

Codes other than DTCs B1830, B1831, B1832 and B1833 may be output at this time, but they are not related to this check.

- Perform the simulation method by selecting check mode (Signal Check) using the Techstream INFO.
- After selecting check mode (Signal Check), perform the simulation method by wiggling each connector of the airbag system or driving the vehicle on a city road or rough road INFO.

PROCEDURE

1. CHECK CONNECTORS

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(c) Check that the connectors are properly connected to the curtain shield airbag assembly LH and airbag ECU assembly.

OK:

The connectors are properly connected.

HINT:

If the connectors are not connected securely, reconnect the connectors and proceed to the next inspection.

(d) Disconnect the connectors from the curtain shield airbag assembly LH and airbag ECU assembly.

(e) Check that the terminals of the connectors are not damaged.

OK:

The terminals are not deformed or damaged.

(f) Check that the floor wire connector (on the curtain shield airbag assembly LH side) is not damaged.

OK:

The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

(g) Check that the short spring for the floor wire with the activation prevention mechanism is not deformed or damaged.

OK:

The short spring is not deformed or damaged.

NG ► CHECK FLOOR WIRE

OK ► REPLACE CURTAIN SHIELD AIRBAG ASSEMBLY LH

3. CHECK FLOOR WIRE

(a) Disconnect the floor wire from the airbag ECU assembly.

(b) Check for a short to B+ in the circuit.

(1) Connect the cable to the negative (-) battery terminal.

(2) Turn the ignition switch to ON.

(3) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
H30-1 (ICL+) - Body ground	Ignition switch ON	Below 1 V
H30-2 (ICL-) - Body ground	Ignition switch ON	Below 1 V

(4) Turn the ignition switch off.

(5) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(c) Check for an open in the circuit.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
H30-1 (ICL+) - H30-2 (ICL-)	Always	Below 1 Ω

(d) Check for a short to ground in the circuit.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
H30-1 (ICL+) - Body ground	Always	1 MΩ or higher
H30-2 (ICL-) - Body ground	Always	1 MΩ or higher

(e) Check for a short in the circuit.

(1) Release the activation prevention mechanism built into connector B  .

(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
H30-1 (ICL+) - H30-2 (ICL-)	Always	1 MΩ or higher

(3) Restore the released activation prevention mechanism of connector B to the original condition.

INSPECTION PROCEDURE

NOTICE:

After turning the ignition switch off, waiting time may be required before disconnecting the cable from the negative (-) battery terminal. Therefore, make sure to read the disconnecting the cable from the negative (-) battery terminal notices before proceeding with work INFO.

HINT:

- Perform the simulation method by selecting check mode (Signal Check) using the Techstream INFO.
- After selecting check mode (Signal Check), perform the simulation method by wiggling each connector of the airbag system or driving the vehicle on a city road or rough road INFO.

PROCEDURE

1.	CHECK CONNECTORS
-----------	-------------------------

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(c) Check that the connectors are properly connected to the front seat outer belt assembly RH and airbag ECU assembly.

OK:

The connectors are properly connected.

HINT:

If the connectors are not connected securely, reconnect the connectors and proceed to the next inspection.

(d) Disconnect the connectors from the front seat outer belt assembly RH and airbag ECU assembly.

(e) Check that the terminals of the connectors are not damaged.

OK:

The terminals are not deformed or damaged.

(f) Check that the No. 2 floor wire connector (on the front seat outer belt assembly RH side) is not damaged.

OK:

The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

(g) Check that the short spring for the No. 2 floor wire with the activation prevention mechanism is not deformed or damaged.

OK:

The short spring is not deformed or damaged.

2.	CHECK FRONT SEAT OUTER BELT ASSEMBLY RH (FRONT PRETENSIONER SQUIB RH)
----	--

(a) Connect the connector to the airbag ECU assembly.

(b) Connect SST (resistance 2.1 Ω) to connector C.

CAUTION:

Never connect the tester to the front seat outer belt assembly RH (front pretensioner squib RH) for measurement, as this may lead to a serious injury due to pretensioner deployment.

NOTICE:

- Do not forcibly insert SST into the terminals of the connector when connecting it.
- Insert SST straight into the terminals of the connector.

SST: 09843-18061

(c) Connect the cable to the negative (-) battery terminal.

(d) Clear the DTCs stored in memory **INFO** .

(e) Turn the ignition switch off.

(f) Turn the ignition switch to ON, and wait for at least 60 seconds.

(g) Check for DTCs **INFO** .

OK:

DTC B1900, B1901, B1902 or B1903 is not output.

HINT:

Codes other than DTCs B1900, B1901, B1902 and B1903 may be output at this time, but they are not related to this check.

(h) Turn the ignition switch off.

(i) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(j) Disconnect SST from connector C.

NG ► CHECK NO. 2 FLOOR WIRE

OK ► REPLACE FRONT SEAT OUTER BELT ASSEMBLY RH

3.	CHECK NO. 2 FLOOR WIRE
-----------	-------------------------------

(a) Disconnect the No. 2 floor wire from the airbag ECU assembly.

(b) Check for a short to B+ in the circuit.

- (1) Connect the cable to the negative (-) battery terminal.
- (2) Turn the ignition switch to ON.
- (3) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
G17-1 - Body ground	Ignition switch ON	Below 1 V
G17-2 - Body ground	Ignition switch ON	Below 1 V

(4) Turn the ignition switch off.

(5) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(c) Check for an open in the circuit.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
G17-1 - G17-2	Always	Below 1 Ω

(d) Check for a short to ground in the circuit.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
G17-1 - Body ground	Always	1 MΩ or higher
G17-2 - Body ground	Always	1 MΩ or higher

(e) Check for a short in the circuit.

(1) Release the activation prevention mechanism built into connector B  .

(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
G17-1 - G17-2	Always	1 MΩ or higher

(3) Restore the released activation prevention mechanism of connector B to the original condition.

NG  **REPLACE NO. 2 FLOOR WIRE**

OK

4. CHECK DTC

(a) Connect the connectors to the front seat outer belt assembly RH and airbag ECU assembly.

(b) Connect the cable to the negative (-) battery terminal.

(c) Clear the DTCs stored in memory **INFO** .

(d) Turn the ignition switch off.

(e) Turn the ignition switch to ON, and wait for at least 60 seconds.

(f) Check for DTCs **INFO** .

OK:

DTC B1900, B1901, B1902 or B1903 is not output.

HINT:

Codes other than DTCs B1900, B1901, B1902 and B1903 may be output at this time, but they are not related to this check.

Last Modified: 3-27-2012	6.4 C	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM00000100609CX
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: AIRBAG SYSTEM: B1905-B1908: Short in P/T Squib (LH) Circuit (2013 FR-S)		

DTC	B1905	Short in P/T Squib (LH) Circuit
------------	--------------	--

DTC	B1906	Open in P/T Squib (LH) Circuit
------------	--------------	---------------------------------------

DTC	B1907	Short in P/T Squib (LH) Circuit (to Ground)
------------	--------------	--

DTC	B1908	Short in P/T Squib (LH) Circuit (to +B)
------------	--------------	--

DESCRIPTION

The front pretensioner squib LH circuit consists of the airbag ECU assembly and front seat outer belt assembly LH.

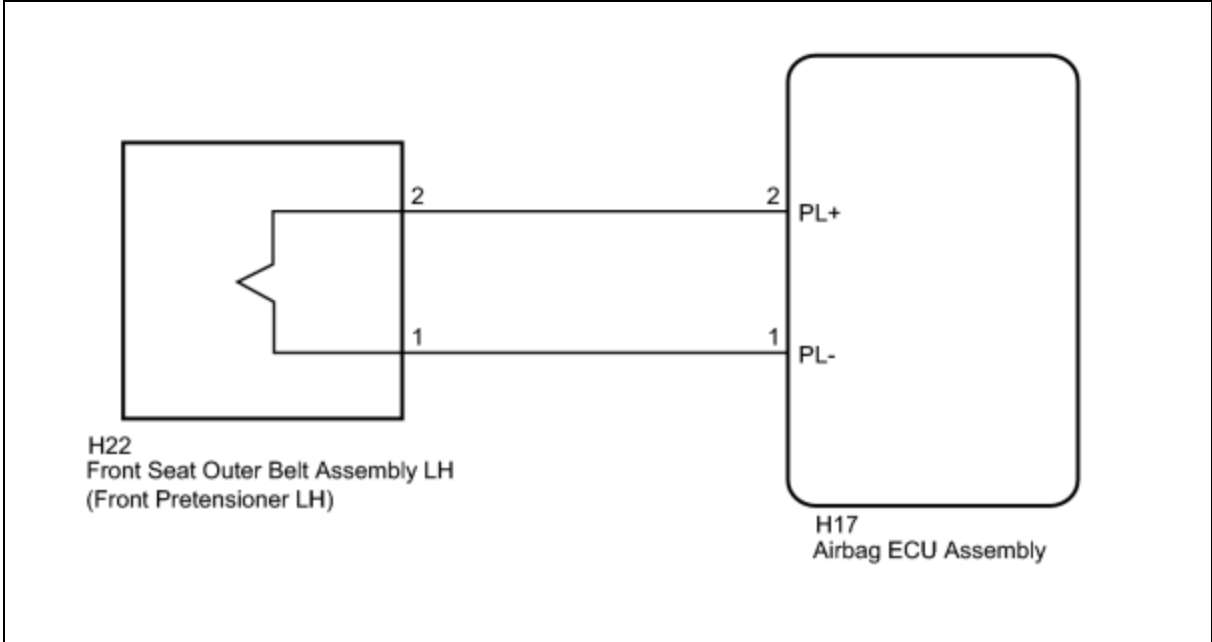

The airbag ECU assembly uses this circuit to deploy the seat belt pretensioner when deployment conditions are met.

These DTCs are stored when a malfunction is detected in the front pretensioner squib LH circuit.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B1905	<ul style="list-style-type: none"> The airbag ECU assembly receives a line short circuit signal in the front pretensioner squib LH circuit during primary check. Front pretensioner squib LH malfunction Airbag ECU assembly malfunction 	<ul style="list-style-type: none"> Floor wire Front seat outer belt assembly LH (Front pretensioner squib LH) Airbag ECU assembly
B1906	<ul style="list-style-type: none"> The airbag ECU assembly receives an open circuit signal in the front pretensioner squib LH circuit. Front pretensioner squib LH malfunction Airbag ECU assembly malfunction 	
B1907	<ul style="list-style-type: none"> The airbag ECU assembly receives a short circuit to ground signal in the front pretensioner squib LH circuit. Front pretensioner squib LH malfunction Airbag ECU assembly malfunction

-------	--

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

After turning the ignition switch off, waiting time may be required before disconnecting the cable from the negative (-) battery terminal. Therefore, make sure to read the disconnecting the cable from the negative (-) battery terminal notices before proceeding with work INFO.

HINT:

- Perform the simulation method by selecting check mode (Signal Check) using the Techstream INFO.
- After selecting check mode (Signal Check), perform the simulation method by wiggling each connector of the airbag system or driving the vehicle on a city road or rough road INFO.

PROCEDURE

1.	CHECK CONNECTORS
-----------	-------------------------

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(c) Check that the connectors are properly connected to the front seat outer belt assembly LH and airbag ECU assembly.

OK:

The connectors are properly connected.

HINT:

If the connectors are not connected securely, reconnect the connectors and proceed to the next inspection.

(d) Disconnect the connectors from the front seat outer belt assembly LH and airbag ECU assembly.

(e) Check that the terminals of the connectors are not damaged.

OK:

The terminals are not deformed or damaged.

(f) Check that the floor wire connector (on the front seat outer belt assembly LH side) is not damaged.

OK:

The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

(g) Check that the short spring for the floor wire with the activation prevention mechanism is not deformed or damaged.

OK:

The short spring is not deformed or damaged.

Text in Illustration

*1	Front Seat Outer Belt Assembly LH
*2	Airbag ECU Assembly
*3	Floor Wire

2.	CHECK FRONT SEAT OUTER BELT ASSEMBLY LH (FRONT PRETENSIONER SQUIB LH)
----	--

(a) Connect the connector to the airbag ECU assembly.

(b) Connect SST (resistance 2.1 Ω) to connector C.

CAUTION:

Never connect the tester to the front seat outer belt assembly LH (front pretensioner squib LH) for measurement, as this may lead to a serious injury due to pretensioner deployment.

NOTICE:

- Do not forcibly insert SST into the terminals of the connector when connecting it.
- Insert SST straight into the terminals of the connector.

SST: 09843-18061

(c) Connect the cable to the negative (-) battery terminal.

(d) Clear the DTCs stored in memory **INFO** .

(e) Turn the ignition switch off.

(f) Turn the ignition switch to ON, and wait for at least 60 seconds.

(g) Check for DTCs **INFO** .

OK:

DTC B1905, B1906, B1907 or B1908 is not output.

HINT:

Codes other than DTCs B1905, B1906, B1907 and B1908 may be output at this time, but they are not related to this check.

(h) Turn the ignition switch off.

(i) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(j) Disconnect SST from connector C.

Text in Illustration

*1	Front Seat Outer Belt Assembly LH
*2	Airbag ECU Assembly
*a	Front view of wire harness connector (to Front Seat Outer Belt Assembly LH)

NG ► CHECK FLOOR WIRE

OK ► REPLACE FRONT SEAT OUTER BELT ASSEMBLY LH

3. CHECK FLOOR WIRE

(a) Disconnect the floor wire from the airbag ECU assembly.

(b) Check for a short to B+ in the circuit.

(1) Connect the cable to the negative (-) battery terminal.

(2) Turn the ignition switch to ON.

(3) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
H22-1 - Body ground	Ignition switch ON	Below 1 V
H22-2 - Body ground	Ignition switch ON	Below 1 V

(4) Turn the ignition switch off.

(5) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(c) Check for an open in the circuit.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
H22-1 - H22-2	Always	Below 1 Ω

(d) Check for a short to ground in the circuit.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
H22-1 - Body ground	Always	1 M Ω or higher
H22-2 - Body ground	Always	1 M Ω or higher

(e) Check for a short in the circuit.

(1) Release the activation prevention mechanism built into connector B  .

(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
H22-1 - H22-2	Always	1 M Ω or higher

(3) Restore the released activation prevention mechanism of connector B to the original condition.

Text in Illustration

*1	Front Seat Outer Belt Assembly LH
*2	Airbag ECU Assembly
*3	Floor Wire
*a	Front view of wire harness connector (to Front Seat Outer Belt Assembly LH)

NG  **REPLACE FLOOR WIRE**

OK

4. CHECK DTC

(a) Connect the connectors to the front seat outer belt assembly LH and airbag ECU assembly.

(b) Connect the cable to the negative (-) battery terminal.

(c) Clear the DTCs stored in memory **INFO** .

(d) Turn the ignition switch off.

(e) Turn the ignition switch to ON, and wait for at least 60 seconds.

(f) Check for DTCs **INFO** .

OK:

DTC B1905, B1906, B1907 or B1908 is not output.

HINT:

Codes other than DTCs B1905, B1906, B1907 and B1908 may be output at this time, but they are not related to this check.

Last Modified: 3-27-2012	6.4 D	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000XFF0BYX
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: AIRBAG SYSTEM: CHECK MODE PROCEDURE (2013 FR-S)		

CHECK MODE PROCEDURE

1. CHECK MODE (SIGNAL CHECK): DTC CHECK

- (a) Turn the ignition switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the ignition switch to ON.
- (d) Turn the Techstream on.
- (e) Enter the following menus: Body Electrical / SRS Airbag / Utility / Signal Check, and proceed with checking using the Techstream.

NOTICE:

Select Signal Check screen on the Techstream to clear the output DTCs (both current and history).

HINT:

- DTCs can be detected more sensitively in check mode than in normal diagnosis mode.
- Perform check mode inspection when a malfunction in a squib circuit is suspected even after the normal system code is output through normal diagnosis mode inspection.

Last Modified: 3-27-2012	6.4 U	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000XFH0BDX
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: AIRBAG SYSTEM: DATA LIST / ACTIVE TEST (2013 FR-S)		

DATA LIST / ACTIVE TEST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

1. DATA LIST FOR AIRBAG ECU ASSEMBLY

- (a) Turn the ignition switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the ignition switch to ON.
- (d) Turn the Techstream on.
- (e) Enter the following menus: Body Electrical / SRS Airbag / Data List.
- (f) Check the values by referring to the table below.

SRS Airbag

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Passenger Classification	Passenger Classification/ NG: Data is not determined OFF: Vacant Child: Child (less than 32 kg (70.6 lb)) is seated AF05: Adult (36 to 54 kg (79.4 to 119.1 lb)) is seated AM50: Adult (more than 54 kg (119.1 lb)) is seated Fail: A failure is detected	OFF/Child/AF05/AM50	-
Driver Buckle SW	Driver Buckle SW/ Unset: The seat belt is not fastened Set: The seat belt is fastened NG: Data is not determined	Unset/Set	-
Number of DTC	Number of DTC/ Min.: 0, Max.: 255	0	-

Model Year: 2013	Model: FR-S	Doc ID: RM000000XFD0FVX
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: AIRBAG SYSTEM: DIAGNOSIS SYSTEM (2013 FR-S)		

DIAGNOSIS SYSTEM

1. FUNCTION OF SRS WARNING LIGHT

(a) Primary check

- (1) Turn the ignition switch off. Wait for at least 2 seconds, then turn the ignition switch to ON. The SRS warning light comes on for approximately 6 seconds and the diagnosis of the airbag system (including the seat belt pretensioners) is performed.

HINT:

If malfunctions are detected during the primary check, the SRS warning light remains on even after the primary check period of approximately 6 seconds.

(b) Constant check

- (1) After the primary check, the airbag ECU assembly constantly monitors the airbag system for malfunctions.

HINT:

If malfunctions are detected during the constant check, the airbag ECU assembly functions as follows:

- The SRS warning light comes on.
- The SRS warning light goes off, and then comes on. This indicates a source voltage drop. The SRS warning light goes off 10 seconds after the source voltage returns to normal.

(c) Review

- (1) When the airbag system is normal:

The SRS warning light comes on only during the primary check period of approximately 6 seconds after the ignition switch is turned to ON.

- (2) When the airbag system is malfunctioning:

- The SRS warning light remains on even after the primary check period.
- The SRS warning light goes off after the primary check, but comes on again during the constant check.
- The SRS warning light does not come on when turning the ignition switch from off to ON.

HINT:

The airbag ECU assembly keeps the SRS warning light on if airbags have been deployed.

2. SRS WARNING LIGHT CHECK

- (a) Turn the ignition switch to ON, and check that the SRS warning light comes on for approximately 6 seconds (primary check).

(b) Check that the SRS warning light goes off approximately 6 seconds after the ignition switch is turned to ON (constant check).

HINT:

When any of the following symptoms occur, refer to Problem Symptoms Table INFO.

- The SRS warning light comes on occasionally after the primary check period.
- The SRS warning light comes on, but a DTC is not output.
- The ignition switch is turned from off to ON, but the SRS warning light does not come on.

3. FUNCTION OF PASSENGER AIRBAG ON/OFF INDICATOR

(a) Initial check

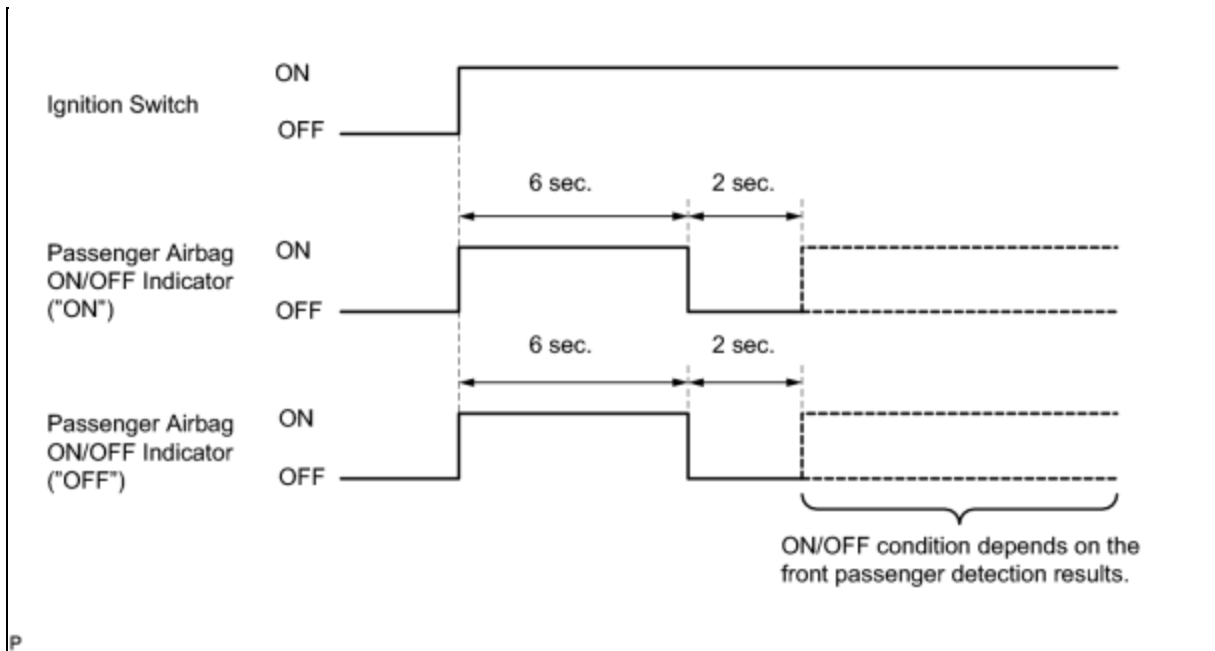

- (1) Turn the ignition switch to ON.
- (2) The passenger airbag ON/OFF indicator comes on for approximately 6 seconds, then goes off for approximately 2 seconds.
- (3) Approximately 6 seconds after the ignition switch is turned to ON, the passenger airbag ON/OFF indicator will indicate ON/OFF depending on the conditions listed below.

Indicator Operation

FRONT PASSENGER SEAT CONDITION	PASSENGER AIRBAG ON/OFF INDICATOR		SRS WARNING LIGHT
	ON INDICATOR	OFF INDICATOR	
Vacant	OFF	OFF	OFF
Adult is seated.	ON	OFF	OFF
Child is seated.	OFF	ON	OFF
Child restraint system is installed.			
Front passenger occupant classification failure	OFF	ON	ON

HINT:

- The passenger airbag ON/OFF indicator illuminates based on the timing chart below in order to check the indicator light circuit.
- When the occupant classification system has trouble, both the SRS warning light and passenger airbag ON/OFF indicator ("OFF") come on. In this case, check the DTCs in the airbag system first.

4. PASSENGER AIRBAG ON/OFF INDICATOR CHECK

(a) Turn the ignition switch to ON.

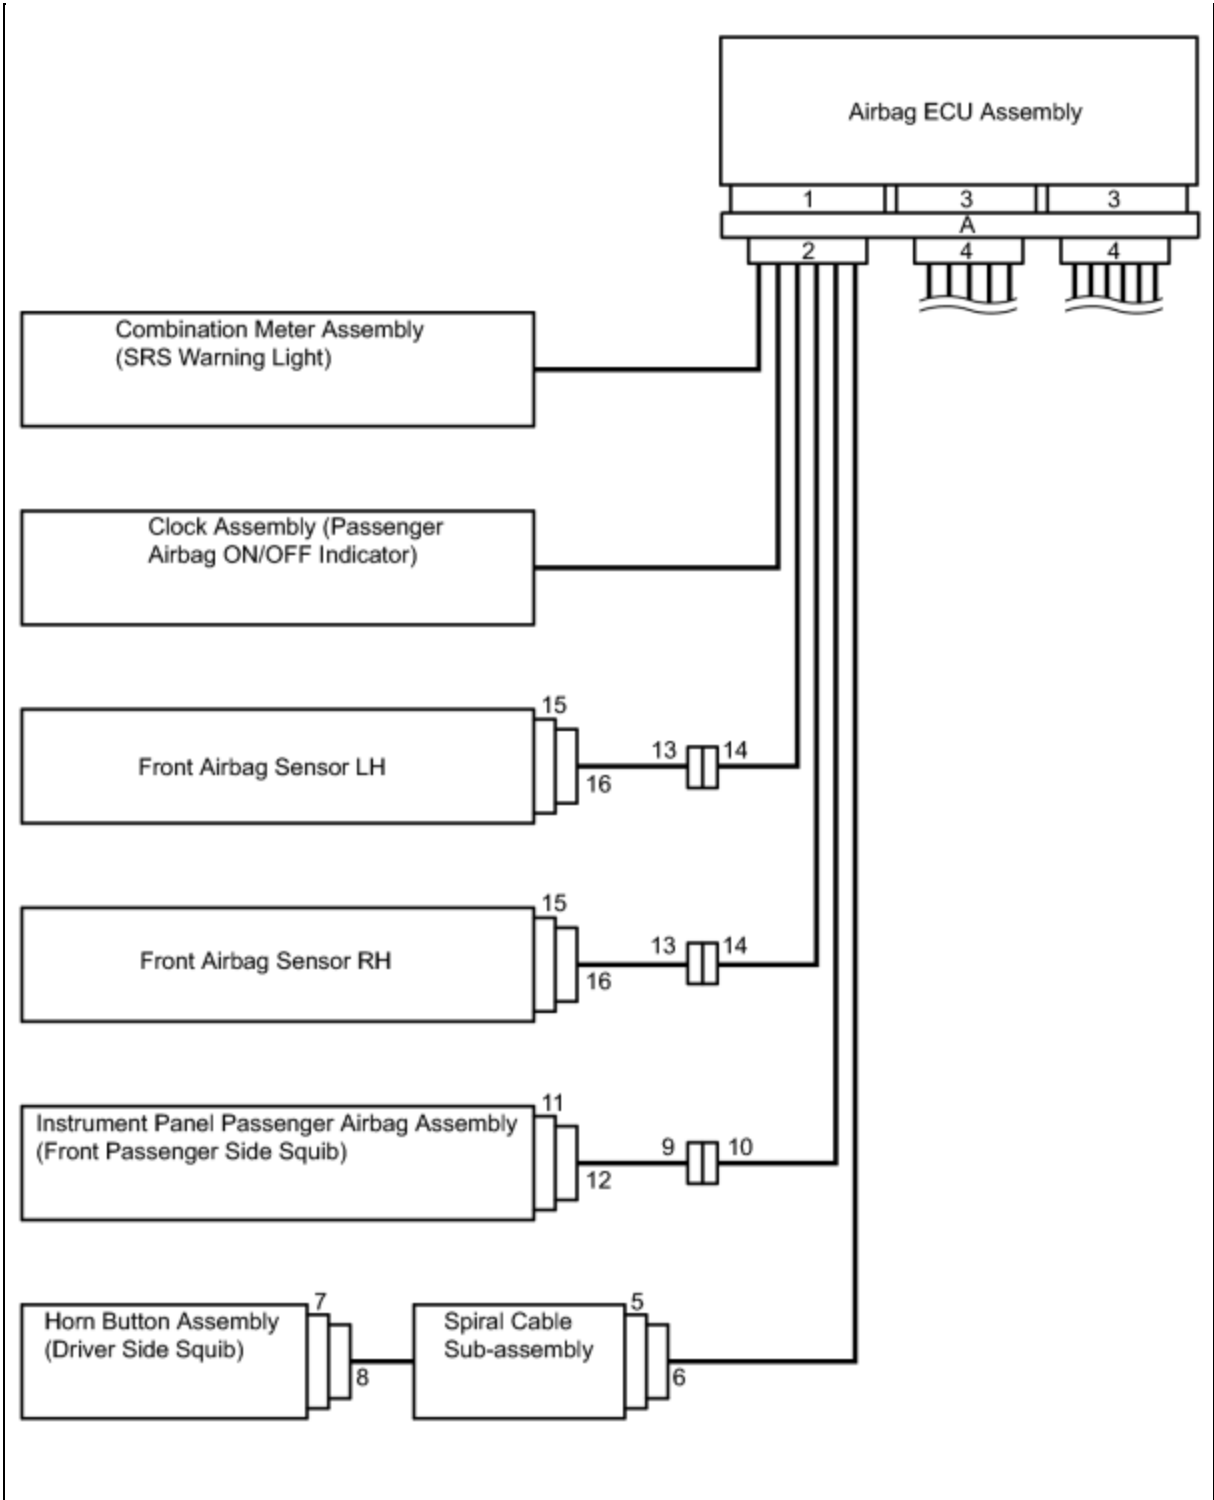

(b) Check that the passenger airbag ON/OFF indicator ("ON" and "OFF") comes on for approximately 6 seconds, then goes off for approximately 2 seconds.

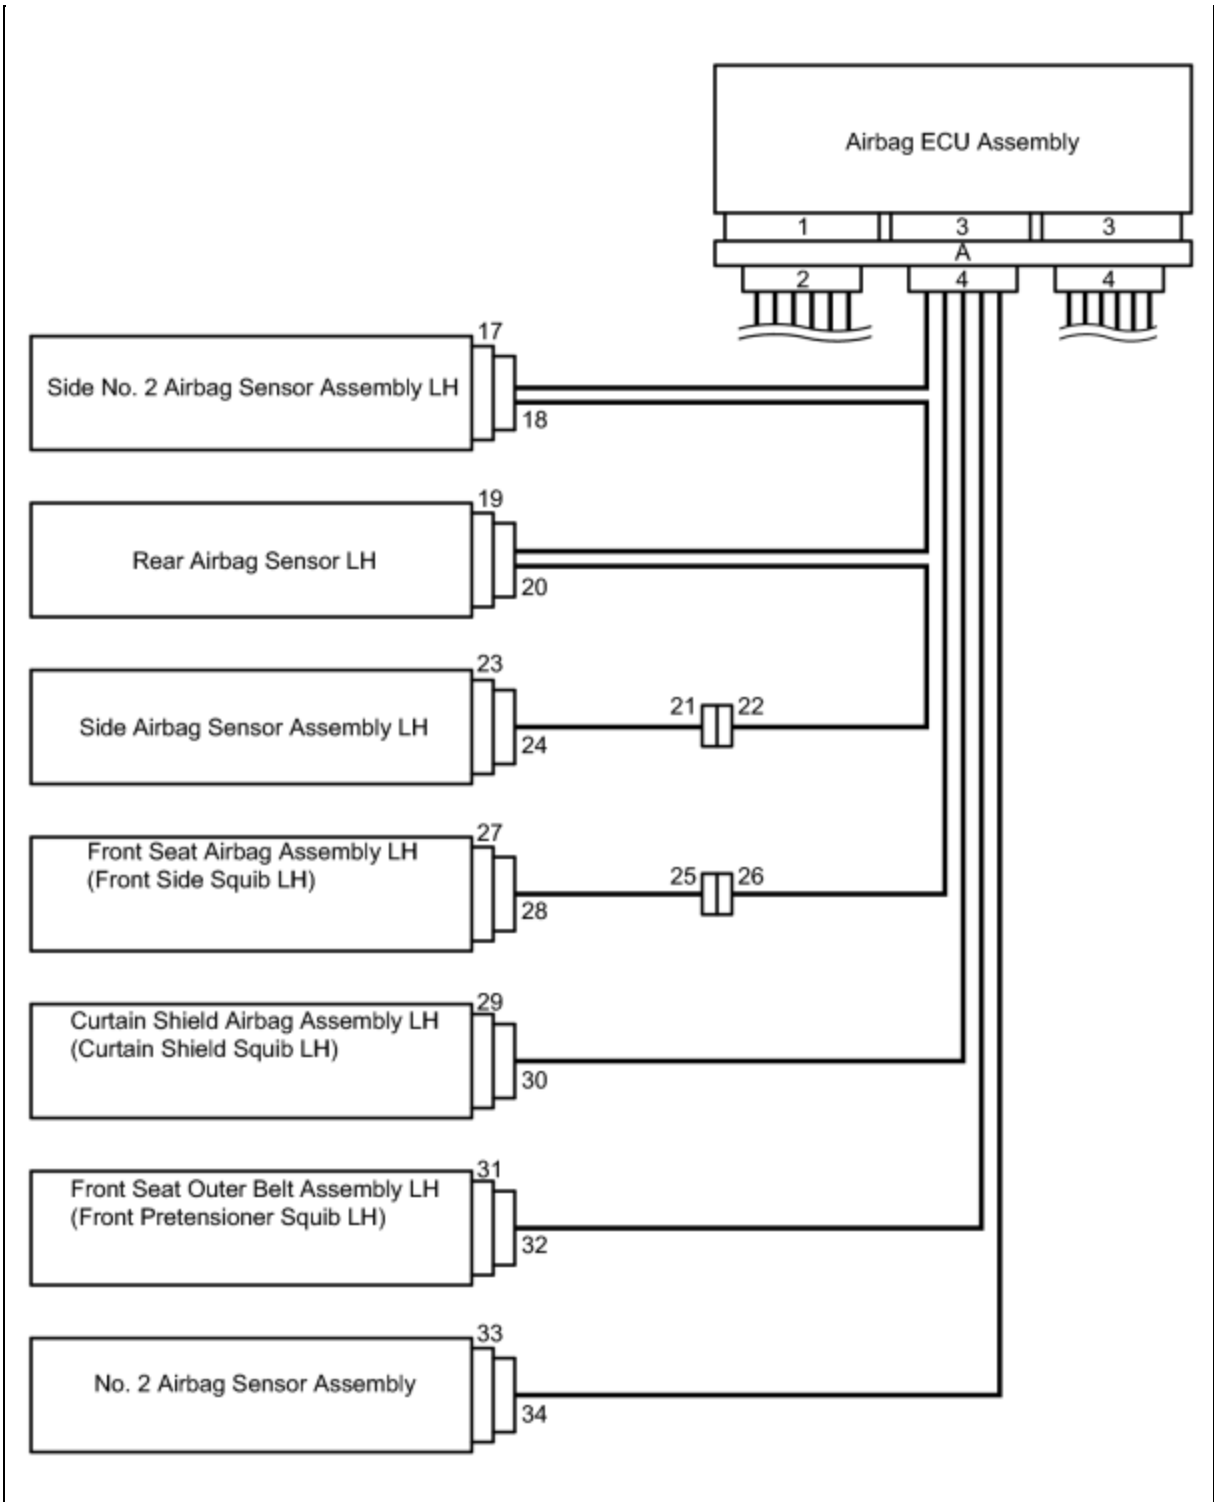

HINT:

Refer to the indicator operation table in the preceding step regarding the passenger airbag ON/OFF indicator when the ignition switch is turned to ON and approximately 6 seconds elapse.

5. FUNCTION OF SRS CONNECTORS

(a) The SRS connectors are located as shown in the illustration.

CONNECTOR TYPE	APPLICATION
Terminal Twin-lock Mechanism	Connectors 2, 4, 6, 9, 13, 21
Half Connection Prevention Mechanism	Connectors 6, 10
Activation Prevention Mechanism	Connectors 2, 4, 5, 7, 9, 11, 25, 27, 29, 31
Connector Lock Mechanism (1)	Connectors 8, 12, 30, 32
Connector Position Assurance Mechanism	Connectors 14, 16, 18, 20, 21, 24
Connector Lock Mechanism (2)	Connector A

(b) Terminal twin-lock mechanism

- (1) This mechanism is designed to increase the ability of the terminal to remain connected and prevent it from accidentally being disconnected.
- (2) The connector has a two-piece construction consisting of the housing and spacer to securely lock the terminal using both the lance (primary lock) and spacer (secondary lock).

(c) Half connection prevention mechanism

- (1) This mechanism is designed to prevent the connector from being connected only halfway.
- (2) If the connector is not completely connected, the connector is disconnected due to the spring force so that no continuity exists.

(d) Activation prevention mechanism

- (1) The activation prevention mechanism is designed to create a short circuit automatically between the positive and negative terminals of an airbag power source connector when disconnected.
 - (2) The short spring plate contained in the connector creates a closed circuit on the airbag side (no potential difference can occur between both terminals), preventing accidental airbag deployment when servicing.
- (e) Connector lock mechanism (1)

- (1) This mechanism is designed to prevent the connector from accidentally being disconnected.
 - (2) Locking the connector lock button engages the locking button claw to the groove on the other side connector to connect the connector securely.
- (f) Connector Position Assurance (CPA) mechanism

- (1) This mechanism is designed to detect when the connector is connected only halfway.
 - (2) The CPA and female connector slide to the male connector side at the same time and the primary lock is completed when the female connector is engaged with the male connector. From this point, only the CPA slides to the male connector side and secondary lock is completed when the CPA retainer is engaged with the female connector. When the CPA and female connector ends are aligned, they are completely engaged.
- (g) Connector lock mechanism (2)

- (1) This mechanism is designed to prevent the connector from accidentally being disconnected.
 - (2) Sliding the connector all the way into the holder and locking the lance completes the primary lock.
 - (3) Engaging the retainer to the holder as shown in the illustration completes the secondary lock, preventing the connector from accidentally being disconnected.
- (h) Improper connection prevention lock mechanism

- (1) This mechanism is designed to prevent the connector from being connected only halfway.
- (2) When the holder is connected to the airbag ECU assembly, the unlock rib unlocks the temporary hold lock, allowing the lever to be pushed in by rotating around the axis A.
- (3) Locking the lever to the holder locks the holder securely.

6. ACTIVATION PREVENTION MECHANISM

(a) Function of activation prevention mechanism

- (1) An activation prevention mechanism is built into the connector (on the airbag ECU assembly side) of the airbag system squib circuit to prevent accidental airbag activation.
- (2) This mechanism closes the circuit when the connector is disconnected by bringing the short spring into contact with the terminals and insulating the circuit from external power sources to prevent accidental airbag activation.

(b) Releasing of activation prevention mechanism

- (1) To release the activation prevention mechanism, insert a piece of paper with the same thickness as the male terminal (approximately 0.5 mm (0.0197 in.)) between the terminals and short spring to break the connection.
- (2) Refer to the following illustrations concerning connectors utilizing the activation prevention mechanism and its release method.

CAUTION:

Never release the activation prevention mechanism on the squib connector even when inspecting with the squib disconnected.

NOTICE:

- Do not release the activation prevention mechanism unless specially directed by the troubleshooting procedure.
- To prevent the terminal and short spring from being damaged, always use a piece of paper with the same thickness as the male terminal.

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: AIRBAG SYSTEM: DIAGNOSTIC TROUBLE CODE CHART (2013 FR-S)		

DIAGNOSTIC TROUBLE CODE CHART

If a trouble code is displayed during the DTC check, check the trouble areas listed for the code in the table below (refer to the appropriate page).

HINT:

- When the SRS warning light remains on and the DTC is output (or the normal system code is output), this may be due to a source voltage drop. This malfunction is not stored in memory by the airbag ECU assembly. If the power source voltage returns to normal, the SRS warning light will automatically go off.
- When 2 or more codes are indicated, the code with the lower number appears first.
- If a code is not listed on the display chart, the airbag ECU assembly may have failed.
- In the case of any malfunction concerning an open circuit, short to ground, or short to B+ due to a squib, other trouble codes may not be detected. In this case, repair the malfunction currently indicated and then perform malfunction diagnosis again.
- Mark in the check mode column:

*1: DTC does not apply to check mode.

*2: DTC applies to check mode.

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: AIRBAG SYSTEM: DTC CHECK / CLEAR (2013 FR-S)		

DTC CHECK / CLEAR

1. DTC CHECK (USING TECHSTREAM)

- (a) Turn the ignition switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the ignition switch to ON, and wait for approximately 60 seconds.
- (d) Turn the Techstream on.
- (e) Enter the following menus: Body Electrical / SRS Airbag / Trouble Codes.
- (f) Check for DTCs by following the prompts on the Techstream screen.

HINT:

Refer to the Techstream operator's manual for further details.

2. DTC CLEAR (USING TECHSTREAM)

- (a) Turn the ignition switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the ignition switch to ON, and wait for approximately 60 seconds.
- (d) Turn the Techstream on.
- (e) Enter the following menus: Body Electrical / SRS Airbag / Trouble Codes.
- (f) Clear the DTCs by following the prompts on the Techstream screen.

HINT:

Refer to the Techstream operator's manual for further details.

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: AIRBAG SYSTEM: HOW TO PROCEED WITH TROUBLESHOOTING (2013 FR-S)		

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedure to troubleshoot the airbag system.
- *: Use the Techstream.

1.	VEHICLE BROUGHT TO WORKSHOP
-----------	------------------------------------

NEXT

2.	CUSTOMER PROBLEM ANALYSIS
-----------	----------------------------------

(a) Confirm problem symptoms INFO.

NEXT

3.	CHECK CAN COMMUNICATION SYSTEM*
-----------	--

(a) Use the Techstream to check if the CAN communication system is functioning normally.

HINT:

- Refer to Bus Check for the CAN communication system INFO.
- The airbag ECU assembly is connected to the CAN communication system. Therefore, before starting troubleshooting, make sure to check that there is no trouble in the CAN communication system.

Result:

RESULT	PROCEED TO

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: AIRBAG SYSTEM: PRECAUTION (2013 FR-S)		

PRECAUTION

HINT:

In the airbag system, the following parts listed below are collectively referred to as the airbag sensors.

- Airbag ECU assembly
- Front airbag sensors
- Side airbag sensor assemblies
- Side No. 2 airbag sensor assemblies
- Rear airbag sensors
- No. 2 airbag sensor assembly

HINT:

The following parts listed below are collectively referred to as the SRS parts.

- Horn button assembly
- Instrument panel passenger airbag assembly
- Curtain shield airbag assemblies
- Front seat airbag assemblies
- Front seat outer belt assemblies

1. PRECAUTION FOR HANDLING SRS SYSTEM

- (a) Failure to carry out service operations in the correct sequence could cause the SRS to unexpectedly deploy during servicing, possibly leading to a serious accident. Furthermore, if a mistake is made when servicing the SRS, it is possible that the SRS may fail to operate when required. Before servicing (including removal or installation of parts, inspection or replacement), be sure to read the following items carefully, then follow the procedures exactly as indicated in the repair manual.

2. PRECAUTION FOR DISCONNECTING CABLE FROM NEGATIVE BATTERY TERMINAL

- (a) As SRS malfunctions are difficult to confirm, the Diagnostic Trouble Codes (DTCs) become the most important source of information when troubleshooting. When troubleshooting the SRS, always check for DTCs before disconnecting the cable from the negative (-) battery terminal.

NOTICE:

After turning the ignition switch off, waiting time may be required before disconnecting the cable from the negative (-) battery terminal. Therefore, make sure to read the disconnecting the cable from the negative (-) battery terminal notices before proceeding with work  .

- (b) When the cable is disconnected from the negative (-) battery terminal, the memory of various systems will be cleared. Because of this, be sure to make a record of the contents memorized in each system before starting work. When work is finished, adjust each system to its previous state.

3. GENERAL PRECAUTION

- (a) Use a voltmeter/ohmmeter with high impedance (minimum = 10 kΩ) for troubleshooting electrical circuits.
- (b) Information labels are attached to the SRS parts. Follow the instructions on the labels.

- (c) Never disassemble or attempt to repair any of the SRS parts.
- (d) If any of the SRS parts are dropped, or if any cracks, dents or other defects are found, replace them with new parts.
- (e) Never use SRS parts from another vehicle. When replacing parts, use new parts.
- (f) Do not expose any of the SRS parts directly to high temperatures or flames.
- (g) If the vehicle has been involved in a minor collision where the SRS does not deploy, the SRS parts should be inspected before further use of the vehicle.
- (h) Do not apply grease, detergent, oil or water to the SRS parts. If applied, immediately wipe it off with a dry cloth.
- (i) When deploying or storing the SRS parts, avoid places with a high temperature (ambient temperature of 93°C (199°F) or higher for an airbag and 80°C (176°F) or higher for a pretensioner) and high humidity, and keep them away from electrical noise.
- (j) Do not stack or place anything on top of the SRS parts.
- (k) When disposing of the vehicle or an SRS part by itself, deploy it using SST before disposal. Deploy the SRS parts in a safe place away from electrical noise.

HINT:

- Horn button assembly INFO
- Instrument panel passenger airbag assembly INFO
- Curtain shield airbag assemblies INFO
- Front seat airbag assemblies INFO
- Front seat outer belt assemblies INFO

- (l) Never inspect the resistance of the SRS parts.

CAUTION:

Never measure the resistance of the SRS parts because current from the tester may cause the SRS parts to deploy.

4. PRECAUTION FOR DISPOSAL OF SRS PARTS (NOT DEPLOYED)

- (a) Before performing pre-disposal deployment of any SRS parts, review and closely follow all applicable environmental and hazardous material regulations. Pre-disposal deployment may be considered hazardous material treatment.
- (b) Never dispose of any SRS parts that are not deployed.
- (c) Deploy the SRS parts outdoors in a safe and level place where it will not disturb nearby residents.
- (d) As the SRS parts produce a loud sound when deployed, be sure to inform nearby residents before deployment.
- (e) When deploying the SRS parts, always use SST and keep people at least 10 m (32.8 ft.) away.
- (f) The SRS parts may be accidentally deployed by static electricity. To prevent this, be sure to touch a grounded metal surface with your bare hands to discharge any static electricity before handling the SRS parts.
- (g) Do not face the airbag deployment side down when deploying an airbag.

5. PRECAUTION FOR DISPOSAL OF SRS PARTS (DEPLOYED)

- (a) As the SRS parts are very hot after being deployed, allow at least 30 minutes for them to cool down sufficiently before disposal.
- (b) Do not apply water etc. to any deployed SRS parts.
- (c) Use gloves and safety glasses when handling any deployed SRS parts.

- (d) Seal the deployed SRS parts in a thick clear plastic bag when disposing them.
- (e) Always wash your hands with water after disposing of deployed SRS parts.

6. PRECAUTION FOR HORN BUTTON ASSEMBLY, INSTRUMENT PANEL PASSENGER AIRBAG ASSEMBLY, CURTAIN SHIELD AIRBAG ASSEMBLY AND FRONT SEAT AIRBAG ASSEMBLY

- (a) Keep the airbag deployment side facing upward even when the airbag is temporarily removed during an operation.

CAUTION:

Always place a removed or new airbag with the deployment surface facing upward. Placing the airbag with the deployment surface facing downward could cause a serious accident if the airbag deploys.

7. PRECAUTION FOR FRONT SEAT OUTER BELT ASSEMBLY (PRETENSIONER)

- (a) Do not touch the area around the retractor even when the pretensioner is temporarily removed during an operation.

CAUTION:

If the retractor unexpectedly operates and the belt is retracted during an operation, it could cause a serious accident.

8. PRECAUTION FOR SPIRAL CABLE SUB-ASSEMBLY

- (a) Do not replace the spiral cable sub-assembly with the battery connected and the ignition switch ON.
- (b) Do not rotate the spiral cable sub-assembly without the steering wheel with the battery connected and the ignition switch ON.
- (c) Ensure that the steering wheel is installed and aligned straight when inspecting the steering sensor.
- (d) When rotating the spiral cable sub-assembly, make sure to push on the interlock to release the interlock mechanism.
- (e) Removing the steering sensor from the spiral cable sub-assembly without using a lock pin may result in a misaligned center position of the steering sensor. Therefore, make sure to use the lock pin provided with a new spiral cable sub-assembly or steering sensor when removing the steering sensor from the spiral cable sub-assembly.
- (f) Be sure that the spiral cable is in the neutral position during installation and when removing and installing the steering wheel .

CAUTION:

If the steering wheel is turned without the spiral cable installed in the neutral position, the cable may break.

9. PRECAUTION FOR AIRBAG SENSORS

- (a) Perform a diagnostic system check.
- (b) When the SRS parts are deployed (including when only an airbag or pretensioner is deployed) due to a collision, be sure to replace all sensors in the damaged areas (anywhere in need of repair) and Airbag ECU assembly.
- (c) Visually check the airbag sensors in undamaged areas for defects.
 - (1) The defects are as follows:
 - Cracks on the sensor housing
 - Dents on the sensor housing
 - Chips on the sensor housing
 - Cracks or other damage to the connector

- Damage to the serial number

OK:

No defects are found.

If any of the defects is found or an airbag sensor has detected a major collision, replace the airbag sensor with a new one.

10. PRECAUTION FOR WIRE HARNESS AND CONNECTOR

- (a) All wire harnesses except unexposed harnesses in the engine room are colored yellow.
- (b) As special connectors are used, be careful when handling them.

11. WHEN SERVICING DAMAGED VEHICLE

- (a) Before using an electric welder on the vehicle, remove any SRS parts around the area being repaired.

CAUTION:

Make sure to remove any SRS parts as necessary to prevent them from accidentally deploying.

- (b) Before repairs, remove the airbag sensor assemblies if impacts are likely to be applied to the sensor during repairs.
- (c) Never expose an airbag sensor directly to high temperatures.
- (d) As the SRS parts are very hot after being deployed, ensure that all wire harnesses and connectors around deployed SRS parts are not damaged.

12. CONDITIONS WHEN INSPECTION OF SRS PARTS IS NECESSARY

- (a) When the vehicle is damaged in a collision even when the SRS parts are not deployed.
- (b) When an SRS system DTC is output.

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: AIRBAG SYSTEM: PROBLEM SYMPTOMS TABLE (2013 FR-S)		

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: AIRBAG SYSTEM: SRS Warning Light does not Come ON (2013 FR-S)		

[SRS Warning Light does not Come ON](#)

DESCRIPTION

The SRS warning light is located on the combination meter assembly.

When the SRS is normal, the SRS warning light comes on for approximately 6 seconds after the ignition switch is turned from off to ON, and then goes off automatically.

If there is a malfunction in the SRS, the SRS warning light comes on to inform the driver of a problem.

The SRS is equipped with a voltage-increase circuit (DC-DC converter) in the airbag ECU assembly in case the source voltage drops.

When the battery voltage drops, the voltage-increase circuit (DC-DC converter) functions to increase the voltage of the SRS to normal voltage.

A malfunction in this circuit is not stored in the airbag ECU assembly. The SRS warning light automatically goes off when the source voltage returns to normal.

The signal to illuminate the SRS warning light is transmitted from the airbag ECU assembly to the combination meter assembly through the CAN communication system.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- After turning the ignition switch off, waiting time may be required before disconnecting the cable from the negative (-) battery terminal. Therefore, make sure to read the disconnecting the cable from the negative (-) battery terminal notices before proceeding with work [INFO](#) .
- Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1.	CHECK BATTERY VOLTAGE
-----------	------------------------------

(a) Measure the voltage of the battery.

Standard Voltage:

11 to 14 V

NG ▶ **INSPECT CHARGING SYSTEM AND BATTERY**

OK

2.	CHECK CONNECTOR
-----------	------------------------

- (a) Turn the ignition switch off.
- (b) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

- (c) Check that the connector is properly connected to the combination meter assembly.

OK:

The connector is properly connected.

HINT:

If the connector is not connected securely, reconnect the connector and proceed to the next inspection.

- (d) Disconnect the connector from the combination meter assembly.

- (e) Check that the terminal of the connector is not damaged.

OK:

The terminal is not deformed or damaged.

NG ► REPAIR OR REPLACE CONNECTOR

OK

3. CHECK WIRE HARNESS (COMBINATION METER ASSEMBLY - BODY GROUND)

- (a) Connect the cable to the negative (-) battery terminal.

- (b) Turn the ignition switch to ON.
- (c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION

D7-1 (B) - Body ground	Always	11 to 14 V
D7-2 (IG+) - Body ground	Ignition switch ON	11 to 14 V

(d) Turn the ignition switch off.

(e) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D7-20 (ES1) - Body ground	Always	Below 1 Ω
D7-40 (ES2) - Body ground	Always	Below 1 Ω

Text in Illustration

*a	Front view of wire harness connector (to Combination Meter Assembly)
----	---

NG  **REPAIR OR REPLACE WIRE HARNESS**

OK

4. CHECK SRS WARNING LIGHT

(a) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(b) Connect the connector to the combination meter assembly.

(c) Disconnect the connector from the airbag ECU assembly.

(d) Connect the cable to the negative (-) battery terminal.

(e) Turn the ignition switch to ON.

(f) Check the SRS warning light condition.

OK:

After the primary check period, the SRS warning light goes off for approximately 10 seconds and turns back on.

HINT:

The primary check period is approximately 6 seconds after the ignition switch is turned to ON.

NG  **REPLACE COMBINATION METER**

ASSEMBLY

OK ► REPLACE AIRBAG ECU ASSEMBLY

Last Modified: 3-27-2012	6.4 J	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000YE20F6X
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: AIRBAG SYSTEM: SRS Warning Light Remains ON (2013 FR-S)		

[SRS Warning Light Remains ON](#)

DESCRIPTION

The SRS warning light is located on the combination meter assembly.

When the SRS is normal, the SRS warning light comes on for approximately 6 seconds after the ignition switch is turned from off to ON, and then goes off automatically.

If there is a malfunction in the SRS, the SRS warning light comes on to inform the driver of a problem.

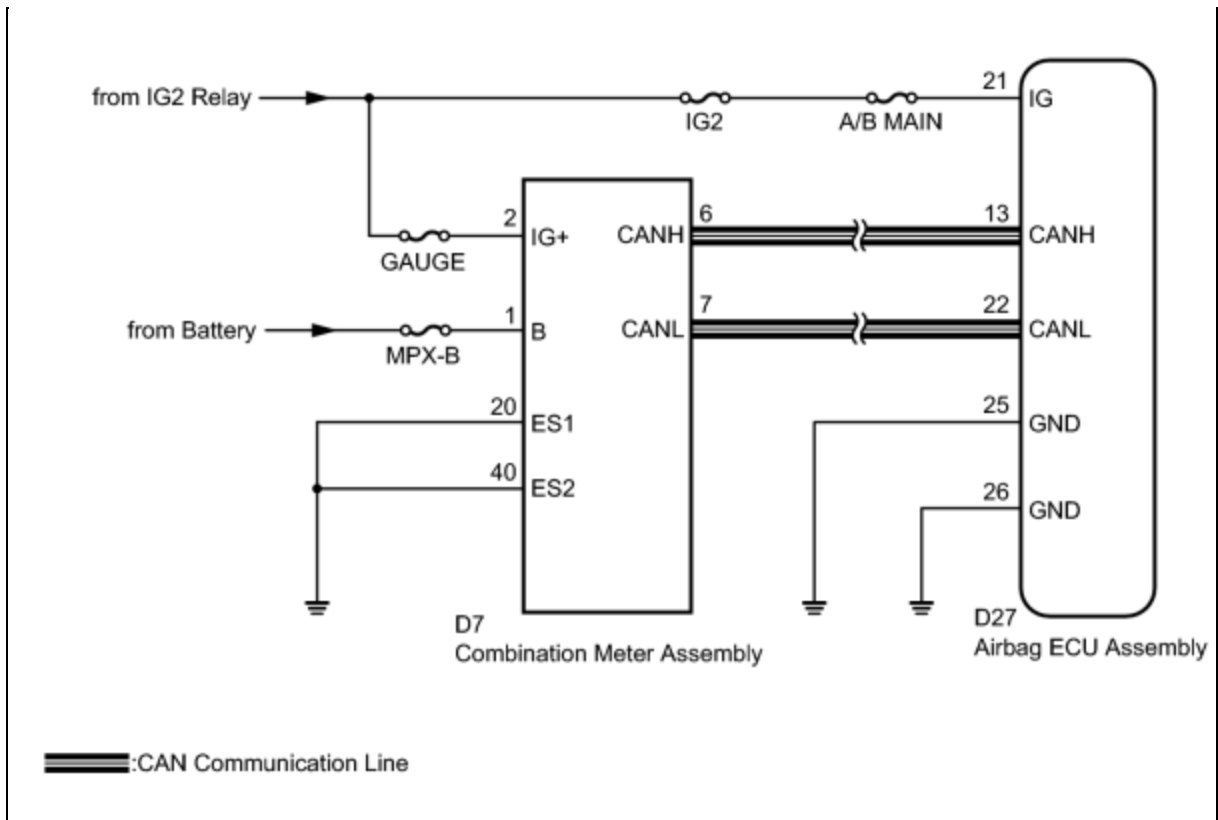

The SRS is equipped with a voltage-increase circuit (DC-DC converter) in the airbag ECU assembly in case the source voltage drops.

When the battery voltage drops, the voltage-increase circuit (DC-DC converter) functions to increase the voltage of the SRS to normal voltage. In addition, when the voltage drops, the SRS warning light will illuminate.

A malfunction in this circuit is not stored in the airbag ECU assembly. The SRS warning light automatically goes off when the source voltage returns to normal.

The signal to illuminate the SRS warning light is transmitted from the airbag ECU assembly to the combination meter assembly through the CAN communication system.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- After turning the ignition switch off, waiting time may be required before disconnecting the cable from the negative (-) battery terminal. Therefore, make sure to read the disconnecting the cable from the negative (-) battery terminal notices before proceeding with work **INFO**.
- Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1.	CHECK SRS WARNING LIGHT OPERATION
-----------	--

(a) Check the SRS warning light operation approximately 6 seconds after the ignition switch is turned to ON.

Result:

SRS WARNING LIGHT ILLUMINATION	PROCEED TO
Remains on	A
Goes off and then comes on again	B

B CHECK CAN COMMUNICATION SYSTEM

A

2.	CHECK BATTERY VOLTAGE
-----------	------------------------------

(a) Measure the voltage of the battery.

Standard Voltage:

11 to 14 V

NG ▶ **INSPECT CHARGING SYSTEM AND BATTERY**

OK

3.	CHECK CONNECTOR
-----------	------------------------

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(c) Check that the connector is properly connected to the airbag ECU assembly.

OK:

The connector is properly connected.

HINT:

If the connector is not connected securely, reconnect the connector and proceed to the next inspection.

(d) Disconnect the connector from the airbag ECU assembly.

(e) Check that the terminal of the connector is not damaged.

OK:

The terminal is not deformed or damaged.

NG ▶ **REPLACE WIRE HARNESS**

OK

4. CHECK WIRE HARNESS (AIRBAG ECU ASSEMBLY - BODY GROUND)

(a) Connect the cable to the negative (-) battery terminal.

(b) Turn the ignition switch to ON.

(c) Operate all components of the electrical system (defogger, wipers, headlights, heater blower, etc.).

(d) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D27-21 (IG) - Body ground	Ignition switch ON	8 to 16 V

(e) Turn the ignition switch off.

(f) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D27-25 (GND) - Body ground	Always	Below 1 Ω
D27-26 (GND) - Body ground	Always	Below 1 Ω

Text in Illustration

*a	Front view of wire harness connector (to Airbag ECU Assembly)
----	--

NG  REPLACE WIRE HARNESS

OK

5. CHECK SRS WARNING LIGHT

- (a) Turn the ignition switch to ON.
- (b) Check the SRS warning light condition.

OK:

After the primary check period, the SRS warning light goes off for approximately 10 seconds and turns back on.

HINT:

The primary check period is approximately 6 seconds after the ignition switch is turned to ON.

NG ► REPLACE COMBINATION METER ASSEMBLY

OK ► REPLACE AIRBAG ECU ASSEMBLY

6.	CHECK CAN COMMUNICATION SYSTEM
-----------	---------------------------------------

- (a) Use the Techstream to check if the CAN communication system is functioning normally.

HINT:

- Refer to Bus Check for the CAN communication system INFO.
- The airbag ECU assembly is connected to the CAN communication system. Therefore, before starting troubleshooting, make sure to check that there is no trouble in the CAN communication system.

Result:

RESULT	PROCEED TO
DTC is not output	A
DTC is output	B

B ► GO TO CAN COMMUNICATION SYSTEM

A

7.	CHECK BATTERY VOLTAGE
-----------	------------------------------

- (a) Measure the voltage of the battery.

Standard Voltage:

11 to 14 V

NG ► INSPECT CHARGING SYSTEM AND

OK

8.	CHECK CONNECTOR
-----------	------------------------

- (a) Turn the ignition switch off.
- (b) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

- (c) Check that the connector is properly connected to the airbag ECU assembly.

OK:

The connector is properly connected.

HINT:

If the connector is not connected securely, reconnect the connector and proceed to the next inspection.

- (d) Disconnect the connector from the airbag ECU assembly.
- (e) Check that the terminal of the connector is not damaged.

OK:

The terminal is not deformed or damaged.

NG  **REPLACE WIRE HARNESS**

OK

9.	CHECK WIRE HARNESS (AIRBAG ECU ASSEMBLY - BODY GROUND)
-----------	---

- (a) Connect the cable to the negative (-) battery terminal.

(b) Turn the ignition switch to ON.

(c) Operate all components of the electrical system (defogger, wipers, headlights, heater blower, etc.).

(d) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D27-21 (IG) - Body ground	Ignition switch ON	8 to 16 V

(e) Turn the ignition switch off.

(f) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D27-25 (GND) - Body ground	Always	Below 1 Ω
D27-26 (GND) - Body ground	Always	Below 1 Ω

Text in Illustration

*a	Front view of wire harness connector (to Airbag ECU Assembly)
----	--

NG  **REPLACE WIRE HARNESS**

OK

10.	CHECK CONNECTOR
------------	------------------------

(a) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(b) Check that the connector is properly connected to the combination meter assembly.

OK:

The connector is properly connected.

HINT:

If the connector is not connected securely, reconnect the connector and proceed to the next inspection.

(c) Disconnect the connector from the combination meter assembly.

(d) Check that the terminal of the connector is not damaged.

OK:

The terminal is not deformed or damaged.

NG ▶ REPAIR OR REPLACE CONNECTOR

OK

11. CHECK WIRE HARNESS (COMBINATION METER ASSEMBLY - BODY GROUND)

(a) Connect the cable to the negative (-) battery terminal.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D7-1 (B) - Body ground	Always	11 to 14 V
D7-2 (IG+) - Body ground	Ignition switch ON	11 to 14 V

(d) Turn the ignition switch off.

(e) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D7-20 (ES1) - Body ground	Always	Below 1 Ω
D7-40 (ES2) - Body ground	Always	Below 1 Ω

Text in Illustration

*a	Front view of wire harness connector (to Combination Meter Assembly)

NG ► REPAIR OR REPLACE WIRE HARNESS

OK
▼

12. CHECK SRS WARNING LIGHT

(a) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(b) Connect the connector to the combination meter assembly.

(c) Connect the cable to the negative (-) battery terminal.

(d) Turn the ignition switch to ON.

(e) Check the SRS warning light condition.

OK:

After the primary check period, the SRS warning light goes off for approximately 10 seconds and turns back on.

HINT:

The primary check period is approximately 6 seconds after the ignition switch is turned to ON.

NG ► REPLACE COMBINATION METER ASSEMBLY

OK ► REPLACE AIRBAG ECU ASSEMBLY

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: AIRBAG SYSTEM: U0073: Control Module Communication Bus OFF (2013 FR-S)		

DTC	U0073	Control Module Communication Bus OFF
------------	--------------	---

DESCRIPTION

These DTCs are stored when the self-diagnosis of the airbag ECU assembly determines that the CAN communication system is malfunctioning.

DTC CODE	DTC DETECTION CONDITION	TROUBLE AREA
U0073	Control Module Communication Bus OFF	CAN communication System

INSPECTION PROCEDURE

PROCEDURE

1.	CHECK FOR DTC (CAN COMMUNICATION SYSTEM)
-----------	---

(a) Use the Techstream to check if the CAN communication system is functioning normally.

Result

RESULT	PROCEED TO
DTC U0073 is not output	A
DTC U0073 is output	B

B ► **GO TO CAN COMMUNICATION SYSTEM**

A ► **USE SIMULATION METHOD TO CHECK**

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: CENTER AIRBAG SENSOR ASSEMBLY: INSTALLATION (2013 FR-S)		

INSTALLATION

1. INSTALL AIRBAG SENSOR ASSEMBLY

- (a) Check that the ignition switch is off.
- (b) Check that the cable is disconnected from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

The power window system utilizes a mechanism that the door glass moves down slightly when the door is opened, and that the glass moves up when closing the door in order to prevent the door molding from being damaged. When the battery negative (-) terminal needs to be disconnected for servicing, fully open the driver and passenger door glasses in advance.

- (c) Install the airbag sensor assembly with the bolt and 2 nuts.

Text in Illustration

*1	Waterproof Sheet
----	------------------

Torque: 25 N·m (255 kgf·cm, 18ft·lbf)

NOTICE:

- If the airbag sensor assembly has been dropped, or there are any cracks, dents or other defects in the case or connector, replace it with a new one.
- When installing the airbag sensor assembly, be careful that the SRS wiring does not interfere with or is not pinched between other parts.
- When the ignition switch is first turned on (IG) after the airbag sensor assembly has been replaced, make sure that no one is in the vehicle.

- (d) Connect the connectors to the airbag sensor assembly as shown in the illustration.

NOTICE:

When connecting any airbag connector, take care not to damage the airbag wire harness.

- (e) Check that the waterproof sheet is properly set.
- (f) Check that there is no looseness in the installation parts of the airbag sensor assembly.

2. INSTALL AIR CONDITIONING CONTROL ASSEMBLY

INFO

3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

Torque: 6.0 N·m (61 kgf·cm, 53in·lbf)

4. PERFORM DIAGNOSTIC SYSTEM CHECK

INFO

5. INSPECT SRS WARNING LIGHT

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: CENTER AIRBAG SENSOR ASSEMBLY: ON-VEHICLE INSPECTION (2013 FR-S)		

ON-VEHICLE INSPECTION

CAUTION:

Be sure to correctly follow the removal and installation procedures for the airbag sensor assembly.

1. INSPECT AIRBAG SENSOR ASSEMBLY (for Vehicle not Involved in Collision)

- (a) Perform a diagnostic system check. 

2. INSPECT AIRBAG SENSOR ASSEMBLY (for Vehicle Involved in Collision and Airbag not Deployed)

- (a) Perform a diagnostic system check. 
- (b) Visually check for defects with the airbag sensor assembly installed on the vehicle.

(1) The defects are as follows:

- Cracks on the sensor housing
- Dents on the sensor housing
- Chips on the sensor housing
- Cracks or other damage to the connector
- Peeling of the label

OK:

No defects are found.

If any of the defects is found, replace the airbag sensor assembly with a new one.

3. INSPECT AIRBAG SENSOR ASSEMBLY (for Vehicle Involved in Collision and Airbag is Deployed)

- (a) Replace the airbag sensor assembly.

HINT:

The airbag sensor assembly should be replaced after any of the airbags has deployed, as it has been subjected to an impact.

Last Modified: 3-27-2012	6.4 A	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000003VVJ025X
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: CENTER AIRBAG SENSOR ASSEMBLY: REMOVAL (2013 FR-S)		

REMOVAL

1. PRECAUTION

CAUTION:

Be sure to read Precaution thoroughly before servicing. INFO

NOTICE:

After turning the ignition switch off, waiting time may be required before disconnecting the cable from the negative (-) battery terminal. Therefore, make sure to read the disconnecting the cable from the negative (-) battery terminal notices before proceeding with work INFO.

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

The power window system utilizes a mechanism that the door glass moves down slightly when the door is opened, and that the glass moves up when closing the door in order to prevent the door molding from being damaged. When the battery negative (-) terminal needs to be disconnected for servicing, fully open the driver and passenger door glasses in advance.

3. REMOVE AIR CONDITIONING CONTROL ASSEMBLY

INFO

4. REMOVE AIRBAG SENSOR ASSEMBLY

- (a) Check that the ignition switch is off.
- (b) Check that the cable is disconnected from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

- (c) Disconnect the connectors from the airbag sensor assembly as shown in the illustration.

NOTICE:

When disconnecting any airbag connector, take care not to damage the airbag wire harness.

(d) Remove the bolt, 2 nuts and airbag sensor assembly.

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: CURTAIN SHIELD AIRBAG ASSEMBLY: DISPOSAL (2013 FR-S)		

DISPOSAL

CAUTION:

Before performing pre-disposal deployment of any SRS part, review and closely follow all applicable environmental and hazardous material regulations. Pre-disposal deployment may be considered hazardous material treatment.

1. PRECAUTION

CAUTION:

- An airbag or pretensioner may be activated by static electricity. To prevent this, be sure to touch a metal surface with your bare hands to discharge static electricity before performing this procedure.
- Never dispose of a curtain shield airbag assembly with an undeployed airbag.
- The airbag produces an exploding sound when it is deployed, so perform the operation outdoors and where it will not create a nuisance to nearby residents.
- When deploying the airbag, always use the specified SST (SRS Airbag Deployment Tool). Perform the operation in a place away from electrical noise.
- When deploying the airbag, perform the operation at least 10 m (32.8 ft.) away from the curtain shield airbag assembly.
- The curtain shield airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.
- Use gloves and safety glasses when handling a curtain shield airbag assembly with a deployed airbag.
- Do not apply water etc. to a curtain shield airbag assembly with a deployed airbag.
- Always wash your hands with water after completing the operation.

HINT:

When scrapping a vehicle equipped with an SRS or disposing of the curtain shield airbag assembly, be sure to deploy the airbag first in accordance with the procedure described below. If any abnormality occurs with the airbag deployment, contact the Service Dept. of TOYOTA MOTOR SALES, U.S.A., INC.

2. DISPOSE OF CURTAIN SHIELD AIRBAG ASSEMBLY (When Installed in Vehicle)

NOTICE:

- When disposing of the curtain shield airbag assembly, never use the customer's vehicle to deploy the airbag.
- Be sure to observe the following procedure when deploying the airbag.

HINT:

Prepare a battery as the power source to deploy the airbag.

- (a) Refer to Precaution .
- (b) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

- (c) Remove the rid cover **INFO**.
- (d) Disconnect the curtain shield airbag assembly connector.

- (1) Using a screwdriver with the tip wrapped with protective tape, release the airbag connector lock and disconnect the curtain shield airbag connector.

Text in Illustration

*1	Protective Tape
*2	Airbag Connector
*3	Airbag Connector Lock

NOTICE:

When disconnecting the airbag connector, take care not to damage the airbag wire harness.

- (e) Install SST.

SST: 09082-18010
SST: 09082-18020

CAUTION:

Check that there is no looseness in the curtain shield airbag assembly.

- (1) Connect the clip and terminal of SST.

- (2) After connecting the following SST to each other, connect them to the curtain shield airbag assembly.

Text in Illustration

*a	Connect the clip and terminal
----	-------------------------------

NOTICE:

To avoid damaging the SST connector or wire harness, do not lock the secondary lock of the twin lock.

- (3) Move SST at least 10 m (32.8 ft.) away from the rear side window.

Text in Illustration

*1	Battery
*a	10 m (32.8 ft.) or more

- (4) Maintaining sufficient clearance for the SST wire harness in the rear side window, close all doors and windows of the vehicle.

NOTICE:

Take care not to damage the SST wire harness.

- (5) Connect the clip of SST to the positive (+) battery terminal.
- (6) Connect the terminal of SST to the negative (-) battery terminal to deploy the curtain shield airbag assembly.
- (f) Deploy the airbag.
- (1) Check that no one is inside the vehicle or within a 10 m (32.8 ft.) radius of the vehicle.
- (2) Connect the clip of SST to the positive (+) battery terminal.
- (3) Connect the terminal of SST to the negative (-) battery terminal to deploy the curtain shield airbag assembly.

CAUTION:

- Before deployment, make sure that no one is near the vehicle.
- The curtain shield airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.
- Use gloves and safety glasses when handling a curtain shield airbag assembly with a deployed airbag.
- Do not apply water etc. to a curtain shield airbag assembly with a deployed airbag.
- Always wash your hands with water after completing the operation.

3. DISPOSE OF CURTAIN SHIELD AIRBAG ASSEMBLY (When not Installed in Vehicle)

NOTICE:

Be sure to observe the following procedure when deploying the airbag.

HINT:

Prepare a battery as the power source to deploy the airbag.

- (a) Remove the curtain shield airbag assembly  .

CAUTION:

- Before removing the curtain shield airbag assembly, wait at least 90 seconds after turning the ignition switch off and disconnecting the cable from the negative (-) battery terminal.
- When storing the curtain shield airbag assembly, keep the airbag deployment side facing upward.

- (b) Cut off the deployment section of the curtain shield airbag assembly.

(c) Using braided wire, tie down the curtain shield airbag assembly to an unneeded tire.

Text in Illustration

*1	Stripped Wire Section
*a	Wire Diameter

Wire:

Stripped wire section

1.25 mm² (0.0019 in.²) or more

CAUTION:

If the wire is too thin or an alternative object is used to tie down the curtain shield airbag assembly, it may snap when the airbag is deployed. Always use a wire for vehicle use with an area of at least 1.25 mm² (0.0019 in.²).

HINT:

To calculate the area of the stripped wire section:

$$\text{Area} = 3.14 \times (\text{Diameter})^2 / 4$$

(1) Position the curtain shield airbag assembly inside the tire as shown in the illustration.

Text in Illustration

*a	Width
*b	Inner Diameter

Minimum tire size:

Width

185 mm (7.28 in.)

Inner diameter

360 mm (1.18 ft.)

CAUTION:

Make sure that the wires are tight. If there is slack in the wires, the curtain shield airbag assembly may break loose when the airbag is deployed.

NOTICE:

The tire may be damaged by the airbag deployment, so use an unneeded tire.

(d) Install SST.

SST: 09082-18010

SST: 09082-18020

NOTICE:

To avoid damaging the SST connector or wire harness, do not lock the secondary lock of the twin lock. Also, secure some slack for the SST wire harness inside the tire.

(1) Connect the clip and terminal of SST.

Text in Illustration

*a	Connect the clip and terminal
----	-------------------------------

(2) After connecting the following SST to each other, connect them to the curtain shield airbag assembly.

(e) Place the tires.

CAUTION:

Do not face the deployment side of the curtain shield airbag assembly toward the ground.

(1) Place at least 2 tires under the tire to which the curtain shield airbag assembly is tied.

Text in Illustration

*1	Tires (2 or more)
----	-------------------

NOTICE:

- Do not place the SST connector under the tire because it could be damaged.
- The tires and wheel may be damaged by the airbag deployment, so use unneeded tires and wheel.

(2) Place at least 2 tires onto the tire to which the curtain shield airbag assembly is tied. The top tire should have a wheel installed.

(3) Tie the tires together with the 2 wires.

CAUTION:

Make sure that the wires are tight. Looseness in the wires results in the tires breaking loose when the airbag is deployed.

(f) Deploy the airbag.

Text in Illustration

*1	Curtain Shield Airbag Assembly
*2	Battery
*a	10 m (32.8 ft.) or more

- (1) Move SST at least 10 m (32.8 ft.) away from the airbag tied down to the tire.
- (2) Check that no one is within a 10 m (32.8 ft.) radius of the tire to which the curtain shield airbag assembly is tied.
- (3) Connect the clip of SST to the positive (+) battery terminal.
- (4) Connect the terminal of SST to the negative (-) battery terminal to deploy the curtain shield airbag assembly.

CAUTION:

Before deployment, make sure that no one is near the airbag.

(g) Dispose of the curtain shield airbag assembly.

CAUTION:

- The curtain shield airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.
- Use gloves and safety glasses when handling a curtain shield airbag assembly with a deployed airbag.
- Do not apply water etc. to a curtain shield airbag assembly with a deployed airbag.
- Always wash your hands with water after completing the operation.

- (1) Remove the curtain shield airbag assembly from the tire.
- (2) Place the curtain shield airbag assembly in a plastic bag, tie it tightly, and dispose of it according to local regulations.

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: CURTAIN SHIELD AIRBAG ASSEMBLY: INSTALLATION (2013 FR-S)		

INSTALLATION

HINT:

- Use the same procedure for the RH side and LH side.
- The procedure listed below is for the LH side.

1. INSTALL CURTAIN SHIELD AIRBAG ASSEMBLY

- Check that the ignition switch is off.
- Check that the cable is disconnected from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

- Engage the 9 guides and install the curtain shield airbag assembly with the 9 bolts in the sequence shown in the illustration.

NOTICE:

- When installing the curtain shield airbag assembly, have assistants hold it to prevent it from bending.
- Do not twist the curtain shield airbag assembly when installing it.

HINT:

Install the bolts and guides in order, from the rear.

Torque: 7.5 N·m (77 kgf·cm, 66in·lbf)

- Connect the curtain shield airbag connector.

Text in Illustration

*1	Airbag Connector
*2	Airbag Connector Lock

NOTICE:

When connecting any airbag connector, take care not to damage the airbag wire harness.

(e) Push in the lock to install the curtain shield airbag connector.

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: CURTAIN SHIELD AIRBAG ASSEMBLY: ON-VEHICLE INSPECTION (2013 FR-S)		

ON-VEHICLE INSPECTION

CAUTION:

Be sure to correctly follow the removal and installation procedures for the curtain shield airbag assemblies.

1. INSPECT CURTAIN SHIELD AIRBAG ASSEMBLY (for Vehicle not Involved in Collision)

- (a) Perform a diagnostic system check  .
- (b) Visually check for defects with the curtain shield airbag assemblies installed on the vehicle.

HINT:

The defects are as follows:

- Cuts on each pillar garnish or the roof headlining assembly around the curtain shield airbag assemblies
- Small cracks on each pillar garnish or the roof headlining assembly around the curtain shield airbag assemblies
- Significant discoloration on each pillar garnish or the roof headlining assembly around the curtain shield airbag assemblies

OK:

No defects are found.

If any of the defects is found, replace each pillar garnish or the roof headlining assembly with a new one.

2. INSPECT CURTAIN SHIELD AIRBAG ASSEMBLY (for Vehicle Involved in Collision and Airbag not Deployed)

- (a) Perform a diagnostic system check  .
- (b) Visually check for defects with the curtain shield airbag assemblies removed from the vehicle.

HINT:

The defects are as follows:

- Cuts
- Small cracks
- Significant discoloration
- Cracks or other damage to the connector

OK:

No defects are found.

If any of the defects is found, replace the curtain shield airbag assembly with a new one.

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: FRONT AIRBAG SENSOR: INSTALLATION (2013 FR-S)		

INSTALLATION

HINT:

- Use the same procedure for the RH and LH sides.
- The procedure listed below is for the LH side.

1. INSTALL FRONT AIRBAG SENSOR

- Check that the ignition switch is off.
- Check that the cable is disconnected from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

The power window system utilizes a mechanism that the door glass moves down slightly when the door is opened, and that the glass moves up when closing the door in order to prevent the door molding from being damaged. When the battery negative (-) terminal needs to be disconnected for servicing, fully open the driver and passenger door glasses in advance.

- Before connecting the connector, check that the position of the white housing lock is correct as shown in the illustration.

Text in Illustration

*a	Incorrect	*b	Correct
----	-----------	----	---------

- Connect the connector to the front airbag sensor.

NOTICE:

When connecting any airbag connector, take care not to damage the airbag wire harness.

- Be sure to engage the connectors until they are locked (when locking, make sure that a click sound can be heard).

Text in Illustration

*1	White Housing Lock	*2	Yellow CPA
*a	Connection is Completed	-	-

HINT:

When engaged, the white housing lock will slide. Be sure not to hold the white housing lock and part (A), as it may result in an insecure fit.

(e) Engage the 2 hooks and install the front airbag sensor with the 2 bolts.

Torque: 13 N·m (133 kgf·cm, 10ft·lbf)

NOTICE:

- If the front airbag sensor has been dropped, or there are any cracks, dents or other defects in the case or connector, replace it with a new one.
- When installing the front airbag sensor, be careful that the SRS wiring does not interfere with or is not pinched between other parts.

(f) Check that there is no looseness in the installation parts of the front airbag sensor.

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: FRONT AIRBAG SENSOR: ON-VEHICLE INSPECTION (2013 FR-S)		

ON-VEHICLE INSPECTION

CAUTION:

Be sure to correctly follow the removal and installation procedures for the front airbag sensors.

1. INSPECT FRONT AIRBAG SENSOR (for Vehicle not Involved in Collision)

(a) Perform a diagnostic system check  .

2. INSPECT FRONT AIRBAG SENSOR (for Vehicle Involved in Collision and Airbag not Deployed)

(a) Perform a diagnostic system check  .

(b) Visually check the front airbag sensors for defects if the front bumper of the vehicle or the area around the bumper is damaged.

HINT:

The defects are as follows:

- Cracks on the sensor housing
- Dents on the sensor housing
- Chips on the sensor housing
- Cracks or other damage to the connector
- Damage to the serial number

OK:

No defects are found.

If any of the defects is found, replace the front airbag sensor with a new one.

3. INSPECT FRONT AIRBAG SENSOR (for Vehicle Involved in Collision and Airbag is Deployed)

(a) When airbags have deployed as the result of a collision, be sure to replace all front airbag sensors in the damaged areas (anywhere in need of repair).

(b) Visually check the front airbag sensors in undamaged areas for defects.

HINT:

The defects are as follows:

- Cracks on the sensor housing
- Dents on the sensor housing
- Chips on the sensor housing
- Cracks or other damage to the connector
- Damage to the serial number

OK:

No defects are found.

If any of the defects is found or a front airbag sensor has detected a major collision, replace the

front airbag sensor with a new one.

*a	Connect the clip and terminal
----	-------------------------------

- (2) After connecting the following SST to each other, connect them to the instrument panel passenger airbag assembly.
- (3) Connect the SST connector to the No. 2 instrument panel wire.

NOTICE:

To avoid damaging the SST connector or wire harness, do not lock the secondary lock of the twin lock.

(4) Move SST at least 10 m (32.8 ft.) away from the front side window of the vehicle.

Text in Illustration

*1	Battery
*a	10 m (32.8 ft.) or more

(5) Maintaining sufficient clearance for the SST wire harness in the front side window, close all doors and windows of the vehicle.

NOTICE:

Take care not to damage the SST wire harness.

(f) Deploy the airbag.

(1) Check that no one is inside the vehicle or within a 10 m (32.8 ft.) radius of the vehicle.

(2) Connect the clip of SST to the positive (+) battery terminal.

(3) Connect the terminal of SST to the negative (-) battery terminal to deploy the instrument panel passenger airbag assembly.

CAUTION:

- Before deployment, make sure that no one is near the vehicle.
- The instrument panel passenger airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.
- Use gloves and safety glasses when handling an instrument panel passenger airbag assembly with a deployed airbag.
- Do not apply water etc. to an instrument panel passenger airbag assembly with a deployed airbag.
- Always wash your hands with water after completing the operation.

3. DISPOSE OF INSTRUMENT PANEL PASSENGER AIRBAG ASSEMBLY (When not Installed in Vehicle)

NOTICE:

Be sure to observe the following procedure when deploying the airbag.

HINT:

Prepare a battery as the power source to deploy the airbag.

(a) Remove the instrument panel passenger airbag assembly  .

CAUTION:

- Before removing the instrument panel passenger airbag assembly, wait at least 90 seconds after turning the ignition switch off and disconnecting the cable from the negative (-) battery terminal.
- When storing the instrument panel passenger airbag assembly, keep the airbag deployment side facing upward.

(b) Install SST.

SST: 09082-18010

SST: 09082-18030

NOTICE:

To avoid damaging the SST connector or wire harness, do not lock the secondary lock of the twin lock. Also, secure some slack for the SST wire harness inside the tire.

(1) Connect the clip and terminal of SST.

Text in Illustration

*a	Connect the clip and terminal
----	-------------------------------

(2) After connecting the following SST to each other, connect them to the instrument panel passenger airbag assembly.

(c) Using braided wire, tie down the instrument panel passenger airbag assembly to an unneeded tire.

Text in Illustration

*1	Stripped Wire Section
*a	Wire Diameter

Wire:

Stripped wire section

1.25 mm² (0.0019 in.²) or more

CAUTION:

If the wire is too thin or an alternative object is used to tie down the instrument panel passenger airbag assembly, it may snap when the airbag is deployed. Always use a wire for vehicle use with an area of at least 1.25 mm² (0.0019 in.²).

HINT:

To calculate the area of the stripped wire section:

$$\text{Area} = 3.14 \times (\text{Diameter})^2 / 4$$

(1) Position the instrument panel passenger airbag assembly inside the tire with the airbag deployment side facing inside.

Minimum tire size:

Width

185 mm (7.28 in.)

Inner diameter

360 mm (1.18 ft.)

Text in Illustration

*a	Inner Diameter	*b	Width
----	----------------	----	-------

CAUTION:

- Make sure that the wires are tight. If there is slack in the wires, the instrument panel passenger airbag assembly may break loose when the airbag is deployed.
- Always tie down the instrument panel passenger airbag assembly with the airbag deployment side facing inside the tire as shown in the illustration.

NOTICE:

The tire may be damaged by the airbag deployment, so use an unneeded tire.

(d) Place the tires.

(1) Place at least 2 tires under the tire to which the instrument panel passenger airbag assembly is tied.

Text in Illustration

*1	Tires (2 or more)
----	-------------------

NOTICE:

- Do not place the SST connector under the tire because it could be damaged.
- The tires and wheel may be damaged by the airbag deployment, so use unneeded tires and wheel.

(2) Place at least 2 tires onto the tire to which the instrument panel passenger airbag assembly is tied. The top tire should have a wheel installed.

(3) Tie the tires together with the 2 wires.

CAUTION:

Make sure that the wires are tight. Looseness in the wires results in the tires breaking loose when the airbag is deployed.

(e) Deploy the airbag.

Text in Illustration

*1	Instrument Panel Passenger Airbag Assembly
*2	Battery
*a	10 m (32.8 ft.) or more

- (1) Move SST at least 10 m (32.8 ft.) away from the airbag tied down to the tire.
- (2) Check that no one is within a 10 m (32.8 ft.) radius of the tire to which the instrument panel passenger airbag assembly is tied.
- (3) Connect the clip of SST to the positive (+) battery terminal.
- (4) Connect the terminal of SST to the negative (-) battery terminal to deploy the instrument panel passenger airbag assembly.

CAUTION:

Before deployment, make sure that no one is near the airbag.

(f) Dispose of the instrument panel passenger airbag assembly.

CAUTION:

- The instrument panel passenger airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.
- Use gloves and safety glasses when handling an instrument panel passenger airbag assembly with a deployed airbag.
- Do not apply water etc. to an instrument panel passenger airbag assembly with a deployed airbag.
- Always wash your hands with water after completing the operation.

- (1) Remove the instrument panel passenger airbag assembly from the tire.
- (2) Place the instrument panel passenger airbag assembly in a plastic bag, tie it tightly, and dispose of it according to local regulations.

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: FRONT PASSENGER AIRBAG ASSEMBLY: ON-VEHICLE INSPECTION (2013 FR-S)		

ON-VEHICLE INSPECTION

CAUTION:

Be sure to correctly follow the removal and installation procedures for the instrument panel passenger airbag assembly.

1. INSPECT INSTRUMENT PANEL PASSENGER AIRBAG ASSEMBLY (for Vehicle not Involved in Collision)

- (a) Perform a diagnostic system check  .
- (b) Visually check for defects with the instrument panel passenger airbag assembly installed on the vehicle.

HINT:

The defects are as follows:

- Cuts on the instrument panel sub-assembly around the instrument panel passenger airbag assembly
- Small cracks on the instrument panel sub-assembly around the instrument panel passenger airbag assembly
- Significant discoloration on the instrument panel sub-assembly around the instrument panel passenger airbag assembly

OK:

No defects are found.

If any of the defects is found, replace the instrument panel sub-assembly with a new one.

2. INSPECT INSTRUMENT PANEL PASSENGER AIRBAG ASSEMBLY (for Vehicle Involved in Collision and Airbag not Deployed)

- (a) Perform a diagnostic system check  .
- (b) Visually check for defects with the instrument panel passenger airbag assembly removed from the vehicle.

HINT:

- Cuts
- Small cracks
- Significant discoloration
- Cracks or other damage to the connector
- Deformation or cracks on the instrument panel sub-assembly or instrument panel reinforcement

OK:

No defects are found.

If any of the defects is found, replace the instrument panel passenger airbag assembly, instrument panel sub-assembly or instrument panel reinforcement with a new one.

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: FRONT PASSENGER AIRBAG ASSEMBLY: REMOVAL (2013 FR-S)		

REMOVAL

1. PRECAUTION

CAUTION:

Be sure to read Precaution thoroughly before servicing  .

NOTICE:

After turning the ignition switch off, waiting time may be required before disconnecting the cable from the negative (-) battery terminal. Therefore, make sure to read the disconnecting the cable from the negative (-) battery terminal notices before proceeding with work  .

2. REMOVE INSTRUMENT PANEL SUB-ASSEMBLY

3. REMOVE INSTRUMENT PANEL PASSENGER AIRBAG ASSEMBLY

CAUTION:

When storing the instrument panel passenger airbag assembly, keep the airbag deployment side facing upward.

- (a) Lean the instrument panel safety pad assembly and disengage the 5 hooks.

- (b) Disengage the 5 hooks to remove the instrument panel passenger airbag assembly from the upper instrument panel sub-assembly.

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: FRONT SEAT SIDE AIRBAG ASSEMBLY: DISPOSAL (2013 FR-S)		

DISPOSAL

CAUTION:

Before performing pre-disposal deployment of any SRS part, review and closely follow all applicable environmental and hazardous material regulations. Pre-disposal deployment may be considered hazardous material treatment.

1. PRECAUTION

CAUTION:

- An airbag or pretensioner may be activated by static electricity. To prevent this, be sure to touch a metal surface with your bare hands to discharge static electricity before performing this procedure.
- Never dispose of a front seat airbag assembly with an undeployed airbag.
- The airbag produces an exploding sound when it is deployed, so perform the operation outdoors and where it will not create a nuisance to nearby residents.
- When deploying the airbag, always use the specified SST (SRS Airbag Deployment Tool). Perform the operation in a place away from electrical noise.
- When deploying the airbag, perform the operation at least 10 m (32.8 ft.) away from the front seat airbag assembly.
- The front seat airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.
- Use gloves and safety glasses when handling a front seat airbag assembly with a deployed airbag.
- Do not apply water etc. to a front seat airbag assembly with a deployed airbag.
- Always wash your hands with water after completing the operation.

HINT:

When scrapping a vehicle equipped with an SRS or disposing of the front seat airbag assembly, be sure to deploy the airbag first in accordance with the procedure described below. If any abnormality occurs with the airbag deployment, contact the Service Dept. of TOYOTA MOTOR SALES, U.S.A., INC.

2. DISPOSE OF FRONT SEAT AIRBAG ASSEMBLY (When Installed in Vehicle)

NOTICE:

- When disposing of the front seat airbag assembly, never use the customer's vehicle to deploy the airbag.
- Be sure to observe the following procedure when deploying the airbag.

HINT:

Prepare a battery as the power source to deploy the airbag.

- (a) Refer to Precaution .
- (b) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(c) Disconnect the connector from the front seat airbag assembly under the front seat assembly.

NOTICE:

When disconnecting any airbag connector, take care not to damage the airbag wire harness.

(1) Slide the slider to release the lock, and then disconnect the yellow airbag connector as shown in the illustration.

Text in Illustration

*a	Slider
----	--------

(d) Install SST.

SST: 09082-18010

SST: 09082-18040

CAUTION:

Check that there is no looseness in the front seat assembly.

(1) Connect the clip and terminal of SST.

Text in Illustration

*a	Connect the clip and terminal
----	-------------------------------

(2) Connect the SST connector to the front seat airbag assembly connector.

NOTICE:

To avoid damaging the SST connector or wire harness, do not lock the secondary lock of the twin lock.

(3) Move SST at least 10 m (32.8 ft.) away from the front side window.

Text in Illustration

*1	Battery
*a	10 m (32.8 ft.) or more

- (4) Maintaining sufficient clearance for the SST wire harness in the front side window, close all doors and windows of the vehicle.

NOTICE:

Take care not to damage the SST wire harness.

- (e) Deploy the airbag.
- (1) Check that no one is inside the vehicle or within a 10 m (32.8 ft.) radius of the vehicle.
 - (2) Connect the clip of SST to the positive (+) battery terminal.
 - (3) Connect the terminal of SST to the negative (-) battery terminal to deploy the front seat airbag assembly.

CAUTION:

- Before deployment, make sure that no one is near the vehicle.
- The front seat airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.
- Use gloves and safety glasses when handling a front seat airbag assembly with a deployed airbag.
- Do not apply water etc. to a front seat airbag assembly with a deployed airbag.
- Always wash your hands with water after completing the operation.

3. DISPOSE OF FRONT SEAT AIRBAG ASSEMBLY (When not Installed in Vehicle)

SST: 09082-18010

SST: 09082-18040

NOTICE:

Be sure to observe the following procedure when deploying the airbag.

HINT:

Prepare a battery as the power source to deploy the airbag.

- (a) Remove the front seat airbag assembly .

CAUTION:

- Before removing the front seat assembly, wait at least 90 seconds after turning the ignition switch off and disconnecting the cable from the negative (-) battery terminal.
- When storing the front seat airbag assembly, keep the airbag deployment side facing upward.

- (b) Using braided wire, tie down the front seat airbag assembly to an unneeded tire.

Text in Illustration

*1	Stripped Wire Section
*a	Wire Diameter

Wire:

Stripped wire section

1.25 mm² (0.0019 in.²) or more

CAUTION:

If the wire is too thin or an alternative object is used to tie down the front seat airbag assembly, it may snap when the airbag is deployed. Always use a wire for vehicle use with an area of at least 1.25 mm² (0.0019 in.²).

HINT:

To calculate the area of the stripped wire section:

$$\text{Area} = 3.14 \times (\text{Diameter})^2 / 4$$

(1) Install the 2 nuts to the front seat airbag assembly.

(2) Wind the wires around the stud bolts of the front seat airbag assembly as shown in the illustration.

(3) Position the front seat airbag assembly inside the tire.

Text in Illustration

*a	Width
*b	Inner Diameter

Minimum tire size:

Width

185 mm (7.28 in.)

Inner diameter

360 mm (1.18 ft.)

CAUTION:

- Make sure that the wires are tight. If there is slack in

the wires, the front seat airbag assembly may break loose when the airbag is deployed.

- Face the front seat airbag assembly deployment surface toward the inside the tire to evenly distribute the force of deployment.

NOTICE:

The tire may be damaged by the airbag deployment, so use an unneeded tire.

(c) Install SST.

SST: 09082-18010

SST: 09082-18040

NOTICE:

To avoid damaging the SST connector or wire harness, do not lock the secondary lock of the twin lock. Also, secure some slack for the SST wire harness inside the tire.

(1) Connect the clip and terminal of SST.

Text in Illustration

*a	Connect the clip and terminal
----	-------------------------------

(2) After connecting the following SST to each other, connect them to the front seat airbag assembly.

(d) Place the tires.

(1) Place at least 2 tires under the tire to which the front seat airbag assembly is tied.

Text in Illustration

*1	Tires (2 or more)
----	-------------------

NOTICE:

- Do not place the SST connector under the tire because it could be damaged.
- The tires and wheel may be damaged by the airbag deployment, so use unneeded tires and wheel.

- (2) Place at least 2 tires onto the tire to which the front seat airbag assembly is tied. The top tire should have a wheel installed.

- (3) Tie the tires together with the 2 wires.

CAUTION:

Make sure that the wires are tight. Looseness in the wires results in the tires breaking loose when the airbag is deployed.

- (e) Deploy the airbag.

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: FRONT SEAT SIDE AIRBAG ASSEMBLY: ON-VEHICLE INSPECTION (2013 FR-S)		

ON-VEHICLE INSPECTION

CAUTION:

Be sure to correctly follow the removal and installation procedures for the front seat airbag assemblies.

1. INSPECT FRONT SEAT AIRBAG ASSEMBLY (for Vehicle not Involved in Collision)

- (a) Perform a diagnostic system check  .
- (b) Visually check for defects with the front seat airbag assemblies installed on the vehicle.

HINT:

The defects are as follows:

- Cuts on the front seatback assembly around the front seat airbag assemblies
- Small cracks on the front seatback assembly around the front seat airbag assemblies
- Significant discoloration on the front seatback assembly around the front seat airbag assemblies

OK:

No defects are found.

If any of the defects is found, replace the separate type front seatback pad or separate type front seatback cover with a new one.

2. INSPECT FRONT SEAT AIRBAG ASSEMBLY (for Vehicle Involved in Collision and Airbag not Deployed)

- (a) Perform a diagnostic system check  .
- (b) Visually check for defects with the front seat airbag assemblies removed from the vehicle.

HINT:

The defects are as follows:

- Make sure that there are no scratches, broken or frayed threads on the surface of the front seat airbag assemblies base fabric
- Marks from being dropped
- Deformation on the installation part of the front seat airbag assemblies
- Cracks or other damage to the wire harness or connector

OK:

No defects are found.

If any of the defects is found, replace the front seat airbag assembly with a new one.

HINT:

When DTC B1650 is detected as a result of troubleshooting for the airbag system, check the DTCs stored in the occupant detection ECU. When DTC B1771 is output, perform troubleshooting for the DTC.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

After turning the ignition switch off, waiting time may be required before disconnecting the cable from the negative (-) battery terminal. Therefore, make sure to read the disconnecting the cable from the negative (-) battery terminal notices before proceeding with work **INFO**.

HINT:

- If troubleshooting (wire harness inspection) is difficult to perform, remove the front passenger seat installation bolts to see under the seat cushion.
- In the above case, lift and hold the seat so that it does not fall down. Hold the seat only as necessary because holding the seat for a long period of time may cause seat rail deformation.

PROCEDURE

1.	CHECK CONNECTORS
-----------	-------------------------

- (a) Turn the ignition switch off.
- (b) Disconnect the cable from the negative (-) battery terminal.
- (c) Check that the connectors are properly connected to the occupant detection ECU and front seat inner belt assembly RH.

OK:

The connectors are properly connected.

HINT:

If the connectors are not connected securely, reconnect the connectors and proceed to the next inspection.

- (d) Disconnect the connectors from the occupant detection ECU and front seat inner belt assembly RH.

(e) Check that the terminals of the connectors are not damaged.

OK:

The terminals are not deformed or damaged.

NG  REPLACE FRONT SEAT ASSEMBLY RH

OK

2.	CHECK FRONT SEAT WIRE RH (SHORT TO B+)
-----------	---

(a) Connect the cable to the negative (-) battery terminal.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
4 - Body ground	Ignition switch ON	Below 1 V
8 - Body ground	Ignition switch ON	Below 1 V

(d) Turn the ignition switch off.

(e) Disconnect the cable from the negative (-) battery terminal.

*3	Front Seat Wire RH
*a	Front view of wire harness connector (to Occupant Detection ECU)

NG ► REPLACE FRONT SEAT ASSEMBLY RH

OK

6. CHECK DTC

- Connect the connectors to the occupant detection ECU and front seat inner belt assembly RH.
- Connect the cable to the negative (-) battery terminal.
- Clear the DTCs stored in the occupant detection ECU **INFO**.
- Clear the DTCs stored in the airbag ECU assembly **INFO**.
- Turn the ignition switch off.
- Turn the ignition switch to ON.
- Check for DTCs **INFO**.
OK:
DTC B1771 is not output.

HINT:

Codes other than DTC B1771 may be output at this time, but they are not related to this check.

- Turn the ignition switch off.

NG ► CHECK FRONT SEAT INNER BELT ASSEMBLY RH

OK ► USE SIMULATION METHOD TO CHECK

7.	CHECK FRONT SEAT INNER BELT ASSEMBLY RH
-----------	--

- (a) Disconnect the cable from the negative (-) battery terminal.
- (b) Replace the front seat inner belt assembly RH INFO.

HINT:

Perform the inspection using parts from a normal vehicle if possible.

- (c) Connect the cable to the negative (-) battery terminal.
- (d) Clear the DTCs stored in the occupant detection ECU INFO.
- (e) Clear the DTCs stored in the airbag ECU assembly INFO.
- (f) Turn the ignition switch off.
- (g) Turn the ignition switch to ON.
- (h) Check for DTCs INFO.

OK:
DTC B1771 is not output.

HINT:

Codes other than DTC B1771 may be output at this time, but they are not related to this check.

NG ► REPLACE FRONT SEAT ASSEMBLY RH

OK ► END (FRONT SEAT INNER BELT ASSEMBLY RH WAS DEFECTIVE)

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: OCCUPANT CLASSIFICATION SYSTEM: B1795: ECU Fault Status (2013 FR-S)		

DTC	B1795	ECU Fault Status
------------	--------------	-------------------------

DESCRIPTION

DTC B1795 is stored when a malfunction is detected in the occupant detection ECU.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B1795	Occupant detection ECU malfunction	Front seat assembly RH

HINT:

When DTC B1650 is detected as a result of troubleshooting for the airbag system, check the DTCs stored in the occupant detection ECU. When DTC B1795 is output, perform troubleshooting for the DTC.

INSPECTION PROCEDURE

NOTICE:

After turning the ignition switch off, waiting time may be required before disconnecting the cable from the negative (-) battery terminal. Therefore, make sure to read the disconnecting the cable from the negative (-) battery terminal notices before proceeding with work .

PROCEDURE

1.	REPLACE FRONT SEAT ASSEMBLY RH
-----------	---------------------------------------

- (a) Turn the ignition switch off.
- (b) Disconnect the cable from the negative (-) battery terminal.
- (c) Replace the front seat assembly RH .
- (d) Connect the cable to the negative (-) battery terminal.

NEXT  **END**

Model Year: 2013	Model: FR-S	Doc ID: RM0000010VM07KX
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: OCCUPANT CLASSIFICATION SYSTEM: DATA LIST / ACTIVE TEST (2013 FR-S)		

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

- (a) Turn the ignition switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the ignition switch to ON.
- (d) Turn the Techstream on.
- (e) Enter the following menus: Body Electrical / Occupant Detection / Data List.
- (f) Check the values by referring to the table below.

Occupant Detection

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Passenger Detection	Passenger detection status/ ON / OFF	ON/OFF	-
Status of Passenger Side Buckle SW	Passenger side buckle switch/ Set / Unset / NG	Set/Unset	-
Number of Present DTC	Number of present DTC recorded/ Min.: 0, Max.: 255	0	-

Last Modified: 3-27-2012	6.4 D	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM0000010VJ07PX
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: OCCUPANT CLASSIFICATION SYSTEM: DIAGNOSIS SYSTEM (2013 FR-S)		

DIAGNOSIS SYSTEM

1. FUNCTION OF PASSENGER AIRBAG ON/OFF INDICATOR

(a) Initial check

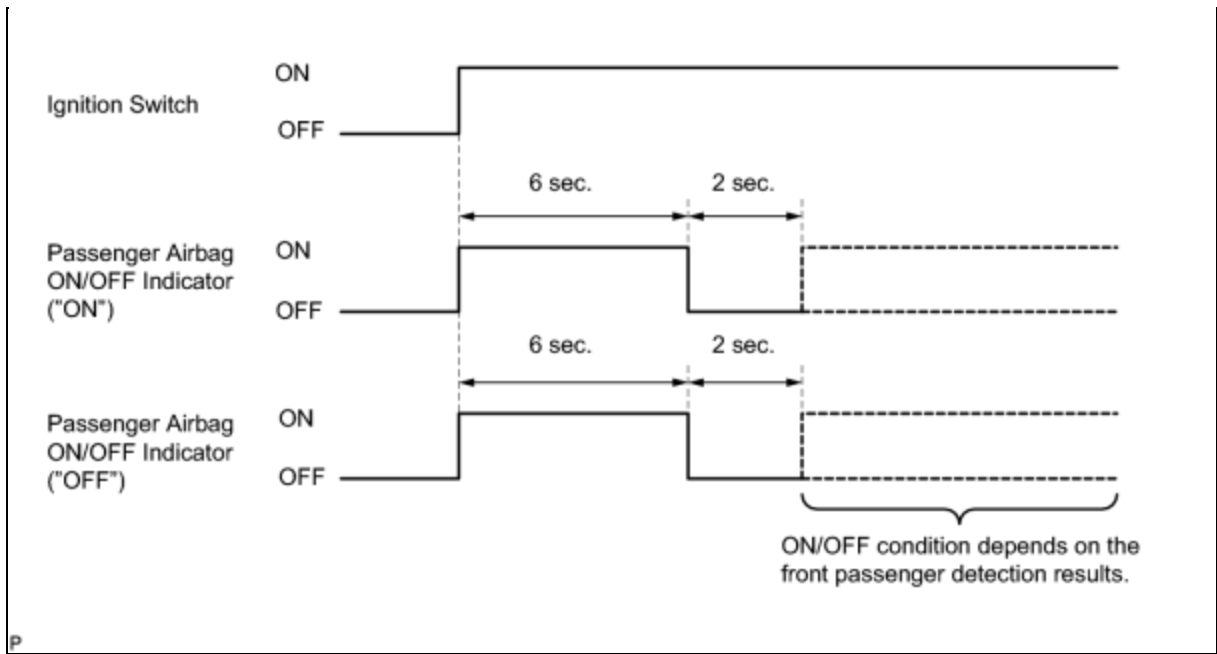

- (1) Turn the ignition switch to ON.
- (2) The passenger airbag ON/OFF indicator comes on for approximately 6 seconds, then goes off for approximately 2 seconds.
- (3) Approximately 6 seconds after the ignition switch is turned to ON, the passenger airbag ON/OFF indicator will indicate ON/OFF depending on the conditions listed below.

Indicator Operation

FRONT PASSENGER SEAT CONDITION	PASSENGER AIRBAG ON/OFF INDICATOR		SRS WARNING LIGHT
	ON INDICATOR	OFF INDICATOR	
Vacant	OFF	OFF	OFF
Adult is seated.	ON	OFF	OFF
Child is seated.	OFF	ON	OFF
Child restraint system is installed.			
Occupant classification system failure	OFF	ON	ON

HINT:

- The passenger airbag ON/OFF indicator illuminates based on the timing chart below in order to check the indicator light circuit.
- When the occupant classification system has trouble, both the SRS warning light and passenger airbag ON/OFF indicator ("OFF") come on. In this case, check the DTCs in the airbag system first.

2. CHECK PASSENGER AIRBAG ON/OFF INDICATOR

(a) Turn the ignition switch to ON.

(b) Check that the passenger airbag ON/OFF indicator ("ON" and "OFF") comes on for approximately 6 seconds, then goes off for approximately 2 seconds.

HINT:

Refer to the indicator operation table in the preceding step regarding the passenger airbag ON/OFF indicator when the ignition switch is turned to ON and approximately 6 seconds elapse.

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: OCCUPANT CLASSIFICATION SYSTEM: DTC CHECK / CLEAR (2013 FR-S)		

DTC CHECK / CLEAR

1. DTC CHECK

- (a) Turn the ignition switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the ignition switch to ON.
- (d) Turn the Techstream on.
- (e) Enter the following menus: Body Electrical / Occupant Detection / Trouble Codes.
- (f) Check for DTCs by following the prompts on the Techstream screen.

HINT:

Refer to the Techstream operator's manual for further details.

2. DTC CLEAR

- (a) Turn the ignition switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the ignition switch to ON.
- (d) Turn the Techstream on.
- (e) Enter the following menus: Body Electrical / Occupant Detection / Trouble Codes.
- (f) Clear the DTCs by following the prompts on the Techstream screen.

HINT:

Refer to the Techstream operator's manual for further details.

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: OCCUPANT CLASSIFICATION SYSTEM: PRECAUTION (2013 FR-S)		

PRECAUTION

1. PRECAUTION FOR OCCUPANT CLASSIFICATION SYSTEM REPLACEMENT

- (a) The occupant sensing control unit of the occupant sensing system (passenger seat only) and the occupant sensor are secured to the seat cushion frame and therefore, never remove the occupant sensing control unit or occupant sensor from the seat cushion frame.
- (b) Do not replace the seat cushion pad by itself. Make sure to replace it in a unit of the seat cushion pad and frame assembly. In the production line, the seat cushion pad and cushion frame are adjusted as a set and therefore, the occupant sensing system may not work properly if these were paired with a cushion or frame from another vehicle or different set.
- (c) If the seat cushion cover is removed, make sure to replace the hang wire on the seat cushion side with a new wire.
- (d) Do not connect the battery to the opposite terminal. Ignoring this may damage the occupant sensing system instantaneously.
- (e) Do not disconnect the battery cable while the engine is running. Ignoring this may damage the electronic components such as in the occupant sensing control unit because of the large negative surge yielded in the alternator.
- (f) Before disconnecting the connector between each sensor and control unit, always turn off the ignition switch first and then wait at least 60 seconds. Ignoring this may damage the occupant sensing control unit.
- (g) All of the parts associated with the occupant sensing system are precision components. Do not drop them.

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: OCCUPANT CLASSIFICATION SYSTEM: PROBLEM SYMPTOMS TABLE (2013 FR-S)		

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

Occupant Classification System

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: OCCUPANT CLASSIFICATION SYSTEM: SYSTEM DESCRIPTION (2013 FR-S)		

SYSTEM DESCRIPTION

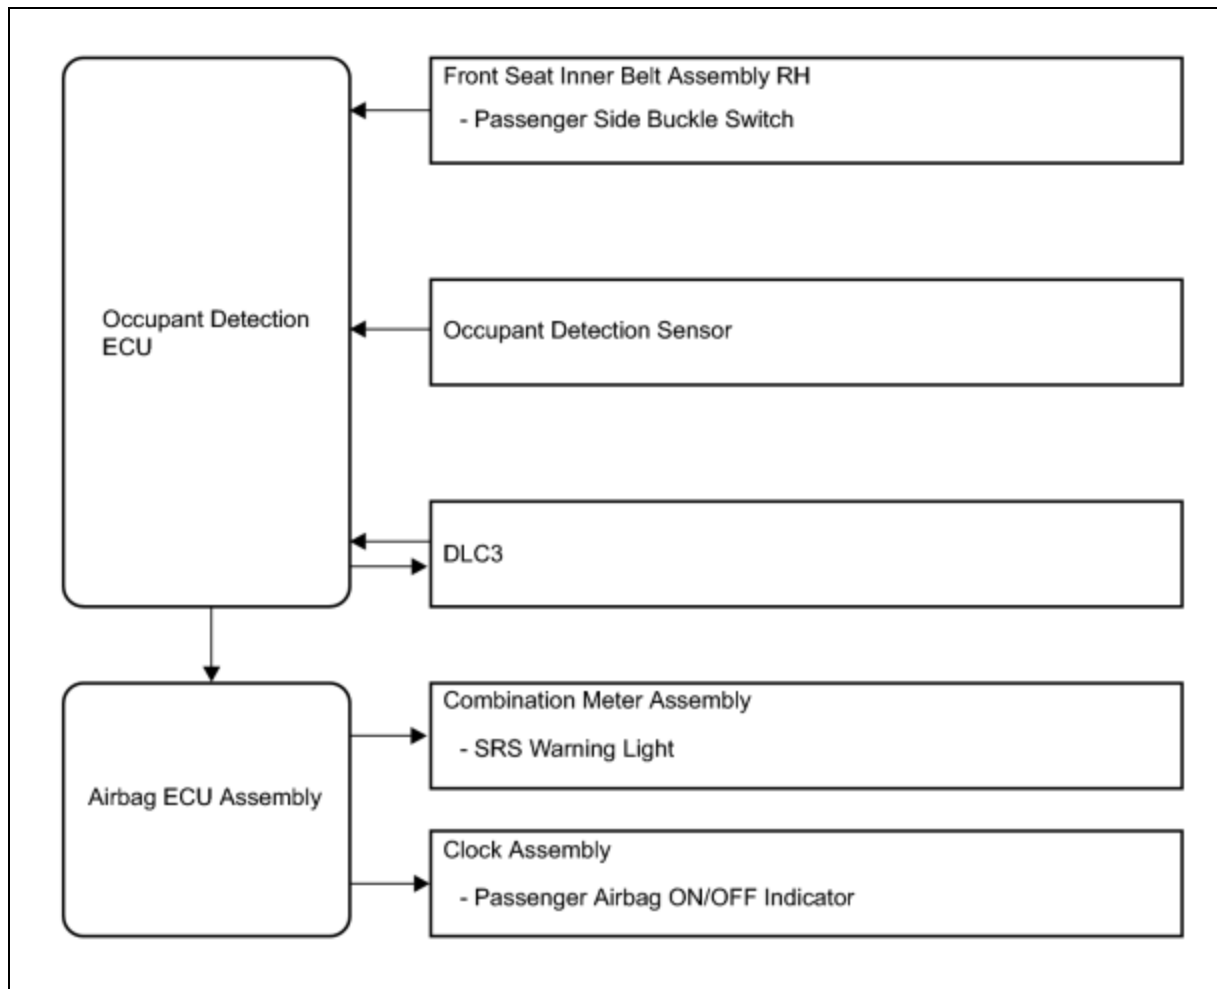

1. GENERAL

- (a) In the occupant classification system, the occupant detection ECU calculates the weight of the occupant based on signals from the occupant detection sensor. This system recognizes the occupant as a child if it detects a weight of less than 36 kg (79.4 lb) on the front passenger seat, and then disables the front passenger airbag and front seat belt pretensioner RH.
- (b) This system is mainly composed of the occupant detection sensor that detects the load on the front passenger seat. The occupant detection ECU controls the system, and the passenger airbag ON/OFF indicator indicates the ON/OFF condition of the front passenger airbag assembly and front seat belt pretensioner RH.

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: REAR AIRBAG SENSOR: INSTALLATION (2013 FR-S)		

INSTALLATION

HINT:

- Use the same procedure for the RH and LH sides.
- The procedure listed below is for the LH side.

1. INSTALL REAR AIRBAG SENSOR ASSEMBLY

- Check that the ignition switch is off.
- Check that the cable is disconnected from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

The power window system utilizes a mechanism that the door glass moves down slightly when the door is opened, and that the glass moves up when closing the door in order to prevent the door molding from being damaged. When the battery negative (-) terminal needs to be disconnected for servicing, fully open the driver and passenger door glasses in advance.

- Before connecting the connector, check that the position of the white housing lock is correct as shown in the illustration.

Text in Illustration

*a	Correct	*b	Incorrect
----	---------	----	-----------

- Connect the connector to the rear airbag sensor assembly.

Text in Illustration

*1	White housing lock	-	-
*a	Slide	-	-

NOTICE:

When connecting any airbag connector, take care not to damage the airbag wire harness.

- (1) Be sure to engage the connectors until they are locked (when locking, make sure that a click sound can be heard).

HINT:

When engaged, the white housing lock will slide. Be sure not to hold the white housing lock and part (A), as it may result in an insecure fit.

- (e) Insert the pin (stopper) into the body hole and install the rear airbag sensor assembly to the vehicle body with the nut.

Torque: 7.5 N·m (77 kgf·cm, 66in·lbf)

NOTICE:

- If the rear airbag sensor assembly has been dropped, or there are any cracks, dents or other defects in the case or connector, replace it with a new one.
- When installing the rear airbag sensor assembly, be careful that the SRS wiring does not interfere with or is not pinched between other parts.
- Make sure that the pin (stopper) is securely inserted into the body hole.
- Tighten the nut while holding the rear airbag sensor assembly because the rear airbag sensor assembly pin (stopper) is easily damaged.

- (f) Check that there is no looseness in the installation parts of the rear airbag sensor assembly.

2. INSTALL LUGGAGE COMPARTMENT TRIM COVER INFO

3. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP INFO

4. INSTALL FRONT DOOR SCUFF PLATE INFO

5. INSTALL SEPARATE TYPE REAR SEAT CUSHION ASSEMBLY INFO

6. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

Torque: 6.0 N·m (61 kgf·cm, 53in·lbf)

7. PERFORM DIAGNOSTIC SYSTEM CHECK

INFO

8. INSPECT SRS WARNING LIGHT

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: REAR AIRBAG SENSOR: ON-VEHICLE INSPECTION (2013 FR-S)		

ON-VEHICLE INSPECTION

CAUTION:

Be sure to correctly follow the removal and installation procedures for the rear airbag sensor assemblies.

1. INSPECT REAR AIRBAG SENSOR ASSEMBLY (for Vehicle not Involved in Collision)

(a) Perform a diagnostic system check  .

2. INSPECT REAR AIRBAG SENSOR ASSEMBLY (for Vehicle Involved in Collision and Airbag not Deployed)

(a) Perform a diagnostic system check  .

(b) Visually check the rear airbag sensor assemblies for defects if a quarter panel of the vehicle or the area around a quarter panel is damaged.

HINT:

The defects are as follows:

- Cracks on the sensor housing
- Dents on the sensor housing
- Chips on the sensor housing
- Cracks or other damage to the connector
- Damage to the serial number

OK:

No defects are found.

If any of the defects is found, replace the rear airbag sensor assembly with a new one.

3. INSPECT REAR AIRBAG SENSOR ASSEMBLY (for Vehicle Involved in Collision and Airbag is Deployed)

(a) When airbags have deployed as the result of a collision, be sure to replace all rear airbag sensor assemblies in the damaged areas (anywhere in need of repair).

(b) Visually check the rear airbag sensor assemblies in undamaged areas for defects.

HINT:

The defects are as follows:

- Cracks on the sensor housing
- Dents on the sensor housing
- Chips on the sensor housing
- Cracks or other damage to the connector
- Damage to the serial number

OK:

No defects are found.

If any of the defects is found or a rear airbag sensor assembly has detected a major collision,

replace the rear airbag sensor assembly with a new one.

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: REAR AIRBAG SENSOR: REMOVAL (2013 FR-S)		

REMOVAL

HINT:

- Use the same procedure for the RH and LH sides.
- The procedure listed below is for the LH side.

1. PRECAUTION

CAUTION:

Be sure to read Precaution thoroughly before servicing .

NOTICE:

After turning the ignition switch off, waiting time may be required before disconnecting the cable from the negative (-) battery terminal. Therefore, make sure to read the disconnecting the cable from the negative (-) battery terminal notices before proceeding with work .

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

The power window system utilizes a mechanism that the door glass moves down slightly when the door is opened, and that the glass moves up when closing the door in order to prevent the door molding from being damaged. When the battery negative (-) terminal needs to be disconnected for servicing, fully open the driver and passenger door glasses in advance.

3. REMOVE SEPARATE TYPE REAR SEAT CUSHION ASSEMBLY

4. REMOVE FRONT DOOR SCUFF PLATE

5. DISCONNECT FRONT DOOR OPENING TRIM WEATHERSTRIP

HINT:

Disconnect the front door opening trim weatherstrip to the extent that allows the removal of the luggage compartment trim cover.

6. REMOVE LUGGAGE COMPARTMENT TRIM COVER

7. REMOVE REAR AIRBAG SENSOR ASSEMBLY

- (a) Check that the ignition switch is off.
- (b) Check that the cable is disconnected from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

The power window system utilizes a mechanism that the door glass moves down slightly when the door is opened, and that the glass moves up when closing the door in order to prevent the door molding from being damaged. When the battery negative (-) terminal needs to be disconnected for servicing, fully open the driver and passenger door glasses in advance.

(c) Remove the nut and separate the rear airbag sensor assembly from the vehicle body.

NOTICE:

Loosen the nut while holding the rear airbag sensor assembly because the rear airbag sensor assembly pin (stopper) is easily damaged.

Text in Illustration

*1	White Housing Lock	*2	Yellow CPA
*a	Slide	*b	Push

(d) Disconnect the connector to remove the rear airbag sensor assembly.

NOTICE:

When disconnecting any airbag connector, take care not to damage the airbag wire harness.

- (1) Push down the white housing lock and slide the yellow CPA. (At this time, the connector cannot be disconnected yet.)
- (2) Push down the white housing lock again and disconnect the connector.

NOTICE:

Do not push down the part (A) shown in the illustration when disconnecting.

(e) After disconnecting the connector, check that the position of the white housing lock is correct as shown in the illustration.

Text in Illustration

*a	Correct	*b	Incorrect

NOTICE:

The power window system utilizes a mechanism that the door glass moves down slightly when the door is opened, and that the glass moves up when closing the door in order to prevent the door molding from being damaged. When the battery negative (-) terminal needs to be disconnected for servicing, fully open the driver and passenger door glasses in advance.

3. REMOVE CONSOLE BOX ASSEMBLY

INFO

4. REMOVE NO. 2 AIRBAG SENSOR ASSEMBLY

- (a) Check that the ignition switch is off.
- (b) Check that the cable is disconnected from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

The power window system utilizes a mechanism that the door glass moves down slightly when the door is opened, and that the glass moves up when closing the door in order to prevent the door molding from being damaged. When the battery negative (-) terminal needs to be disconnected for servicing, fully open the driver and passenger door glasses in advance.

- (c) Remove the bolt.

NOTICE:

Loosen the bolt while holding the No. 2 airbag sensor assembly because the No. 2 airbag sensor assembly pin (stopper) is easily damaged.

Text in Illustration

*1	Outer Housing
----	---------------

(d) Slide the outer housing to release the lock, and then disconnect the connector to remove the No. 2 airbag sensor assembly.

NOTICE:

When disconnecting airbag connector, take care not to damage the airbag wire harness.

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: SIDE AIRBAG SENSOR (for Front Side): INSTALLATION (2013 FR-S)		

INSTALLATION

HINT:

- Use the same procedure for the RH and LH sides.
- The procedure listed below is for the LH side.

1. INSTALL DOOR SIDE AIRBAG SENSOR

- Check that the ignition switch is off.
- Check that the cable is disconnected from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

The power window system utilizes a mechanism that the door glass moves down slightly when the door is opened, and that the glass moves up when closing the door in order to prevent the door molding from being damaged. When the battery negative (-) terminal needs to be disconnected for servicing, fully open the driver and passenger door glasses in advance.

- Connect the connector to the door side airbag sensor.

NOTICE:

When connecting any airbag connector, take care not to damage the airbag wire harness.

- Be sure to engage the connectors until they are locked (when locking, make sure that a click sound can be heard).

- Insert the pin (stopper) into the door hole and install the door side airbag sensor to the front door panel with the nut.

Torque: 7.5 N·m (77 kgf·cm, 66in·lbf)

NOTICE:

- If the door side airbag sensor has been dropped, or there are any cracks, dents or other defects in the case or connector, replace it with a new one.
- When installing the door side airbag sensor, be careful that the SRS wiring does not interfere with or is not pinched between other parts.
- Make sure that the pin (stopper) is securely inserted into the body hole.
- Tighten the nut while holding the door side airbag sensor because the door side airbag sensor

pin (stopper) is easily damaged.

(e) Check that there is no looseness in the installation parts of the door side airbag sensor.

2. INSTALL FRONT DOOR SERVICE HOLE COVER INFO

3. INSTALL FRONT DOOR TRIM BOARD SUB-ASSEMBLY INFO

4. INSTALL DOOR ARMREST COVER INFO

5. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

Torque: 6.0 N·m (61 kgf·cm, 53in·lbf)

6. PERFORM DIAGNOSTIC SYSTEM CHECK

INFO

7. INSPECT SRS WARNING LIGHT

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: SIDE AIRBAG SENSOR (for Front Side): ON-VEHICLE INSPECTION (2013 FR-S)		

ON-VEHICLE INSPECTION

CAUTION:

Be sure to correctly follow the removal and installation procedures for the door side airbag sensors.

1. INSPECT DOOR SIDE AIRBAG SENSOR (for Vehicle not Involved in Collision)

(a) Perform a diagnostic system check  .

2. INSPECT DOOR SIDE AIRBAG SENSOR (for Vehicle Involved in Collision and Airbag not Deployed)

(a) Perform a diagnostic system check  .

(b) Visually check the door side airbag sensors for defects if a front door of the vehicle or the area around a front door is damaged.

HINT:

The defects are as follows:

- Cracks on the sensor housing
- Dents on the sensor housing
- Chips on the sensor housing
- Cracks or other damage to the connector
- Damage to the serial number

OK:

No defects are found.

If any of the defects is found, replace the door side airbag sensor with a new one.

3. INSPECT DOOR SIDE AIRBAG SENSOR (for Vehicle Involved in Collision and Airbag is Deployed)

(a) When airbags have deployed as the result of a collision, be sure to replace all door side airbag sensors in the damaged areas (anywhere in need of repair).

(b) Visually check the door side airbag sensors in undamaged areas for defects.

HINT:

The defects are as follows:

- Cracks on the sensor housing
- Dents on the sensor housing
- Chips on the sensor housing
- Cracks or other damage to the connector
- Damage to the serial number

OK:

No defects are found.

If any of the defects is found or a door side airbag sensor has detected a major collision, replace

the door side airbag sensor with a new one.

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: SIDE AIRBAG SENSOR (for Front Side): REMOVAL (2013 FR-S)		

REMOVAL

HINT:

- Use the same procedure for the RH and LH sides.
- The procedure listed below is for the LH side.

1. PRECAUTION

CAUTION:

Be sure to read Precaution thoroughly before servicing .

NOTICE:

After turning the ignition switch off, waiting time may be required before disconnecting the cable from the negative (-) battery terminal. Therefore, make sure to read the disconnecting the cable from the negative (-) battery terminal notices before proceeding with work .

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

The power window system utilizes a mechanism that the door glass moves down slightly when the door is opened, and that the glass moves up when closing the door in order to prevent the door molding from being damaged. When the battery negative (-) terminal needs to be disconnected for servicing, fully open the driver and passenger door glasses in advance.

3. REMOVE DOOR ARMREST COVER

4. REMOVE FRONT DOOR TRIM BOARD SUB-ASSEMBLY

5. REMOVE FRONT DOOR SERVICE HOLE COVER

6. REMOVE DOOR SIDE AIRBAG SENSOR

- (a) Check that the ignition switch is off.
- (b) Check that the cable is disconnected from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

The power window system utilizes a mechanism that the door glass moves down slightly when the door is opened, and that the glass moves up when closing the door in order to prevent the door molding from being damaged. When the battery negative (-) terminal needs to be disconnected for servicing, fully open the driver and passenger door glasses in advance.

(c) Remove the nut and separate the door side airbag sensor from the front door panel.

NOTICE:

Loosen the bolt while holding the door side airbag sensor because the door side airbag sensor pin (stopper) is easily damaged.

(d) Slide the outer housing to release the lock, and then disconnect the connector to remove the door side airbag sensor.

NOTICE:

When disconnecting any airbag connector, take care not to damage the airbag wire harness.

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: SIDE AIRBAG SENSOR (for Rear Side): INSTALLATION (2013 FR-S)		

INSTALLATION

HINT:

- Use the same procedure for the RH and LH sides.
- The procedure listed below is for the LH side.

1. INSTALL NO. 2 SIDE AIRBAG SENSOR ASSEMBLY

- Check that the ignition switch is off.
- Check that the cable is disconnected from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

The power window system utilizes a mechanism that the door glass moves down slightly when the door is opened, and that the glass moves up when closing the door in order to prevent the door molding from being damaged. When the battery negative (-) terminal needs to be disconnected for servicing, fully open the driver and passenger door glasses in advance.

- Before connecting the connector, check that the position of the white housing lock is correct as shown in the illustration.

Text in Illustration

*a	Correct	*b	Incorrect
----	---------	----	-----------

- Connect the connector to the No. 2 side airbag sensor assembly.

NOTICE:

When connecting any airbag connector, take care not to damage the airbag wire harness.

- Be sure to engage the connectors until they are locked (when locking, make sure that a click sound can be heard).

HINT:

When engaged, the white housing lock will slide. Be sure not to hold the white housing lock and part (A), as it may result in an insecure fit.

Text in Illustration

*1	White housing lock	-	-
*a	Slide	-	-

(e) Insert the pin (stopper) into the body hole and install the No. 2 side airbag sensor assembly to the vehicle body with the nut.

Torque: 7.5 N·m (77 kgf·cm, 66in·lbf)

NOTICE:

- If the No. 2 side airbag sensor assembly has been dropped, or there are any cracks, dents or other defects in the case or connector, replace it with a new one.
- When installing the No. 2 side airbag sensor assembly, be careful that the SRS wiring does not interfere with or is not pinched between other parts.
- Make sure that the pin (stopper) is securely inserted into the body hole.
- Tighten the nut while holding the No. 2 side airbag sensor assembly because the No. 2 side airbag sensor assembly pin (stopper) is easily damaged.

(f) Check that there is no looseness in the installation parts of the No. 2 side airbag sensor assembly.

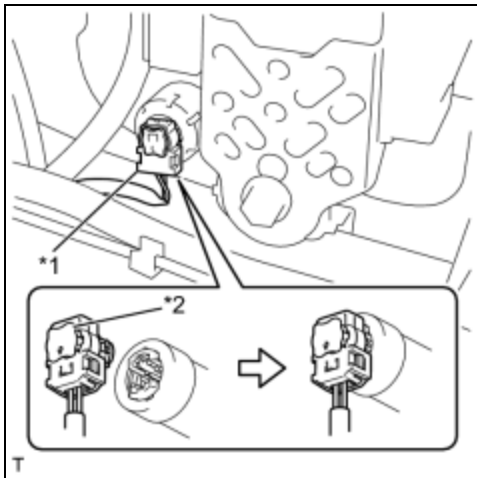

2. INSTALL FRONT SEAT OUTER BELT ASSEMBLY

(a) Engage the guide and install the front seat outer belt assembly with the 2 bolts.

Bolt A - Torque: 7.5 N·m (77 kgf·cm, 66in·lbf)

Bolt B - Torque: 30 N·m (306 kgf·cm, 22ft·lbf)

(b) Connect the pretensioner connector.

Text in Illustration

*1	Pretensioner Connector
*2	Pretensioner Connector Lock

(c) Push in the lock to install the pretensioner connector.

3. INSTALL LUGGAGE COMPARTMENT TRIM COVER INFO

4. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP INFO

5. INSTALL FRONT DOOR SCUFF PLATE INFO

6. INSTALL SEPARATE TYPE REAR SEAT CUSHION ASSEMBLY INFO

7. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

Torque: 6.0 N·m (61 kgf·cm, 53in·lbf)

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: SIDE AIRBAG SENSOR (for Rear Side): ON-VEHICLE INSPECTION (2013 FR-S)		

ON-VEHICLE INSPECTION

CAUTION:

Be sure to correctly follow the removal and installation procedures for the No. 2 side airbag sensor assemblies.

1. INSPECT NO. 2 SIDE AIRBAG SENSOR ASSEMBLY (for Vehicle not Involved in Collision)

(a) Perform a diagnostic system check  .

2. INSPECT NO. 2 SIDE AIRBAG SENSOR ASSEMBLY (for Vehicle Involved in Collision and Airbag not Deployed)

(a) Perform a diagnostic system check  .

(b) Visually check the No. 2 side airbag sensor assemblies for defects if a center pillar of the vehicle or the area around a center pillar is damaged.

HINT:

The defects are as follows:

- Cracks on the sensor housing
- Dents on the sensor housing
- Chips on the sensor housing
- Cracks or other damage to the connector
- Damage to the serial number

OK:

No defects are found.

If any of the defects is found, replace the No. 2 side airbag sensor assembly with a new one.

3. INSPECT NO. 2 SIDE AIRBAG SENSOR ASSEMBLY (for Vehicle Involved in Collision and Airbag is Deployed)

(a) When airbags have deployed as the result of a collision, be sure to replace all No. 2 side airbag sensor assemblies in the damaged areas (anywhere in need of repair).

(b) Visually check the No. 2 side airbag sensor assemblies in undamaged areas for defects.

HINT:

The defects are as follows:

- Cracks on the sensor housing
- Dents on the sensor housing
- Chips on the sensor housing
- Cracks or other damage to the connector
- Damage to the serial number

OK:

No defects are found.

If any of the defects is found or a No. 2 side airbag sensor assembly has detected a major collision, replace the No. 2 side airbag sensor assembly with a new one.

REMOVAL

HINT:

- Use the same procedure for the RH and LH sides.
- The procedure listed below is for the LH side.

1. PRECAUTION

CAUTION:

Be sure to read Precaution thoroughly before servicing. INFO

NOTICE:

After turning the ignition switch off, waiting time may be required before disconnecting the cable from the negative (-) battery terminal. Therefore, make sure to read the disconnecting the cable from the negative (-) battery terminal notices before proceeding with work INFO.

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

The power window system utilizes a mechanism that the door glass moves down slightly when the door is opened, and that the glass moves up when closing the door in order to prevent the door molding from being damaged. When the battery negative (-) terminal needs to be disconnected for servicing, fully open the driver and passenger door glasses in advance.

3. REMOVE SEPARATE TYPE REAR SEAT CUSHION ASSEMBLY INFO

4. REMOVE FRONT DOOR SCUFF PLATE INFO

5. DISCONNECT FRONT DOOR OPENING TRIM WEATHERSTRIP

HINT:

Disconnect the front door opening trim weatherstrip to the extent that allows the removal of the luggage compartment trim cover.

6. REMOVE LUGGAGE COMPARTMENT TRIM COVER INFO

7. REMOVE FRONT SEAT OUTER BELT ASSEMBLY

- (a) Check that the ignition switch is off.
- (b) Check that the cable is disconnected from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

The power window system utilizes a mechanism that the door glass moves down slightly when the door is opened, and that the glass moves up when closing the door in order to prevent the door molding from being damaged. When the battery negative (-) terminal needs to be disconnected for servicing, fully open the driver and passenger door glasses in advance.

(c) Using a screwdriver with the tip wrapped with protective tape, release the pretensioner connector lock and disconnect the pretensioner connector.

Text in Illustration

*1	Protective Tape
*2	Pretensioner Connector
*3	Pretensioner Connector Lock

(d) Remove the 2 bolts and disengage the guide to remove front seat outer belt assembly.

8. REMOVE NO. 2 SIDE AIRBAG SENSOR ASSEMBLY

(a) Remove the nut and separate the No. 2 side airbag sensor assembly from the vehicle body.

NOTICE:

Loosen the nut while holding the No. 2 side airbag sensor assembly because the No. 2 side airbag sensor assembly pin (stopper) is easily damaged.

Text in Illustration

STEERING SENSOR

SPIRAL CABLE SUB-ASSEMBLY

T

Last Modified: 3-27-2012	6.4 G	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000UWB08EX
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: SPIRAL CABLE: INSPECTION (2013 FR-S)		

INSPECTION

1. INSPECT SPIRAL CABLE SUB-ASSEMBLY

NOTICE:

- Do not remove the steering sensor from the spiral cable sub-assembly.
- As the spiral cable sub-assembly may break, do not rotate the spiral cable sub-assembly more than the specified amount.

(a) Remove the spiral cable with sensor sub-assembly from the vehicle INFO.

(b) Visually check for defects with the spiral cable sub-assembly.

(1) The defects are as follows:

- Scratches
- Small cracks
- Dents
- Chips
- Cracks or other damage to the connector

OK:

No defects are found.

If any of the defects is found, replace the spiral cable sub-assembly with a new one.

(c) Check the spiral cable sub-assembly.

Text in Illustration

*a	Component without harness connected (Spiral Cable Sub-assembly)	*b	Color: Orange
*c	Color: Black	-	-

(1) Set the spiral cable sub-assembly to the center position INFO.

(2) Measure the resistance between each terminal of the spiral cable sub-assembly according to

the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D51-1 - z4-3	Always	3 Ω or less
D51-2 - z4-4	Always	3 Ω or less
D51-2 - z5-6	Always	3 Ω or less
D51-8 - z4-2	Always	3 Ω or less
D51-8 - z5-1	Always	3 Ω or less
D51-10 - z5-3	Always	3 Ω or less
D51-11 - z5-4	Always	3 Ω or less
D51-12 - z5-5	Always	3 Ω or less
D52-1 - z7-2	Always	Below 1 Ω
D52-2 - z7-1	Always	Below 1 Ω
D52-3 - z6-1	Always	Below 1 Ω
D52-4 - z6-2	Always	Below 1 Ω

- (3) After setting the spiral cable sub-assembly to the center position, rotate the spiral cable sub-assembly 2.5 times clockwise, and measure the resistance as shown in the table below. Then rotate the spiral cable sub-assembly 5 times counterclockwise, and measure the resistance as shown in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D51-1 - z4-3	Always	3 Ω or less
D51-2 - z4-4	Always	3 Ω or less
D51-2 - z5-6	Always	3 Ω or less
D51-8 - z4-2	Always	3 Ω or less
D51-8 - z5-1	Always	3 Ω or less
D51-10 - z5-3	Always	3 Ω or less
D51-11 - z5-4	Always	3 Ω or less
D51-12 - z5-5	Always	3 Ω or less
D52-1 - z6-2	Always	Below 1 Ω
D52-2 - z6-1	Always	Below 1 Ω
D52-3 - z7-1	Always	Below 1 Ω
D52-4 - z7-2	Always	Below 1 Ω

- (4) After setting the spiral cable sub-assembly to the center position, rotate the spiral cable sub-assembly 2.5 times clockwise. Then while rotating the spiral cable sub-assembly 5 times counterclockwise, measure the resistance as shown in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D51-1 - z4-3	Always	3 Ω or less
D51-2 - z4-4	Always	3 Ω or less
D51-2 - z5-6	Always	3 Ω or less
D51-8 - z4-2	Always	3 Ω or less
D51-8 - z5-1	Always	3 Ω or less
D51-10 - z5-3	Always	3 Ω or less
D51-11 - z5-4	Always	3 Ω or less
D51-12 - z5-5	Always	3 Ω or less
D52-1 - z6-2	Always	Below 1 Ω
D52-2 - z6-1	Always	Below 1 Ω
D52-3 - z7-1	Always	Below 1 Ω
D52-4 - z7-2	Always	Below 1 Ω

If the result is not as specified, replace the spiral cable with sensor sub-assembly.

Last Modified: 3-27-2012	6.4 A	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000UWA096X
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: SPIRAL CABLE: INSTALLATION (2013 FR-S)		

INSTALLATION

1. INSTALL SPIRAL CABLE SUB-ASSEMBLY

- (a) Align the 2 pins and 2 guides, and engage the 6 claws to install the spiral cable sub-assembly to the steering sensor.

Text in Illustration

*1	Guide
*2	Pin

NOTICE:

Do not rotate the steering sensor until the spiral cable has been attached to it.

2. ALIGN FRONT WHEELS TO FACE STRAIGHT AHEAD

3. INSTALL SPIRAL CABLE WITH SENSOR SUB-ASSEMBLY

NOTICE:

- Do not replace the spiral cable sub-assembly with the battery connected and the ignition switch on (IG).
- Do not rotate the spiral cable sub-assembly without the steering wheel with the battery connected and the ignition switch on (IG).
- Ensure that the steering wheel is installed and aligned straight when inspecting the steering sensor.

(a) Check that the ignition switch is off.

(b) Check that the cable is disconnected from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(c) Check that the front wheels are facing straight ahead.

(d) Set the turn signal switch to the neutral position.

NOTICE:

If it is not in the neutral position, the turn signal switch pin may snap.

(e) Engage the 3 claws to install the spiral cable with sensor sub-assembly.

(f) Connect the each connector.

4. INSTALL UPPER STEERING COLUMN COVER INFO

5. INSTALL LOWER STEERING COLUMN COVER INFO

6. INSTALL UPPER INSTRUMENT PANEL METER ORNAMENT INFO

7. INSTALL METER HOOD SUB-ASSEMBLY INFO

8. INSTALL CENTER INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY INFO

9. INSTALL NO. 1 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY INFO

10. INSTALL INSTRUMENT SIDE PANEL INFO

11. INSPECT AND ADJUST SPIRAL CABLE WITH SENSOR SUB-ASSEMBLY

NOTICE:

Do not adjust the spiral cable sub-assembly with the battery connected and the ignition switch on (IG).

- (a) Check that the ignition switch is off.
- (b) Check that the cable is disconnected from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

- (c) Check if the spiral cable sub-assembly is centered.

Text in Illustration

*1	Matching Mark
*2	Colored Part

HINT:

When the spiral cable is attached in a central position, it will align with the matching mark, allowing the colored area indicated in the illustration to be checked.

- (d) If the spiral cable sub-assembly is not centered, center it.

NOTICE:

Do not turn the spiral cable sub-assembly using the airbag wire harness.

- (1) Rotate the spiral cable sub-assembly counterclockwise slowly by hand until it stops.

- (2) Rotate the spiral cable sub-assembly clockwise approximately 2.5 turns to the position where the matching mark is matched.

Text in Illustration

*1	Matching Mark
*2	Colored Part

HINT:

- The spiral cable sub-assembly will rotate approximately 2.5 turns to both the left and right from the center.
- When centering is not possible, there may be an open circuit in the spiral cable. Replace the spiral cable and steering sensor with new ones.

12. INSTALL STEERING WHEEL ASSEMBLY

INFO

13. PERFORM MEMORIZATION

HINT:

Perform VSC sensor neutral memorization INFO .

14. INSPECT SRS WARNING LIGHT

INFO

7. INSPECT SPIRAL CABLE SUB-ASSEMBLY

(a) Check the colored part as shown in the illustration.

Text in Illustration

	Colored Part
---	--------------

If the colored part shown in the illustration cannot be confirmed, it is possible that the spiral cable sub-assembly is broken. Replace the spiral cable with sensor sub-assembly with a new one.

8. REMOVE LOWER STEERING COLUMN COVER

INFO

9. REMOVE UPPER STEERING COLUMN COVER

INFO

10. REMOVE SPIRAL CABLE WITH SENSOR SUB-ASSEMBLY

NOTICE:

- Do not replace the spiral cable sub-assembly with the battery connected and turn the ignition switch to ON.

- Do not rotate the spiral cable sub-assembly without the steering wheel with the battery connected and turn the ignition switch to ON.
 - Ensure that the steering wheel is installed and aligned straight when inspecting the steering sensor.
- (a) Check that the ignition switch is off.
- (b) Check that the cable is disconnected from the negative (-) battery terminal.
- (c) Check that the front wheels are facing straight ahead.

- (d) Slide the slider to release the lock, and then disconnect the yellow airbag connector from the spiral cable with sensor sub-assembly.

Text in Illustration

*1	Slider
----	--------

NOTICE:

When disconnecting any airbag connector, take care not to damage the airbag wire harness.

- (e) Disconnect the other connector from the spiral cable with sensor sub-assembly.

- (f) Disengage the 3 claws to remove the spiral cable with sensor sub-assembly.

11. REMOVE SPIRAL CABLE SUB-ASSEMBLY

NOTICE:

- Remove the spiral cable sub-assembly from the steering sensor only when replacing it or the steering sensor.
- Do not rotate the center section of the steering sensor, as it may deviate from the steering sensor neutral point.
- When replacing the steering sensor: INFO

- (a) Disengage the 6 claws, 2 pins and 2 guides to remove the spiral cable sub-assembly from the steering sensor.

NOTICE:

Do not damage the guide and claw.

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: STEERING PAD: DISPOSAL (2013 FR-S)		

DISPOSAL

CAUTION:

Before performing pre-disposal deployment of any SRS part, review and closely follow all applicable environmental and hazardous material regulations. Pre-disposal deployment may be considered hazardous material treatment.

1. PRECAUTION

CAUTION:

- An airbag or pretensioner may be activated by static electricity. To prevent this, be sure to touch a metal surface with your bare hands to discharge static electricity before performing this procedure.
- Never dispose of a horn button assembly with an undeployed airbag.
- The airbag produces an exploding sound when it is deployed, so perform the operation outdoors and where it will not create a nuisance to nearby residents.
- When deploying the airbag, always use the specified SST (SRS Airbag Deployment Tool). Perform the operation in a place away from electrical noise.
- When deploying the airbag, perform the operation at least 10 m (32.8 ft.) away from the horn button assembly.
- The horn button assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.
- Use gloves and safety glasses when handling a horn button assembly with a deployed airbag.
- Do not apply water etc. to a horn button assembly with a deployed airbag.
- Always wash your hands with water after completing the operation.

HINT:

When scrapping a vehicle equipped with an SRS or disposing of the horn button assembly, be sure to deploy the airbag first in accordance with the procedure described below. If any abnormality occurs with the airbag deployment, contact the Service Dept. of TOYOTA MOTOR SALES, U.S.A., INC.

2. DISPOSE OF HORN BUTTON ASSEMBLY (When not Installed in Vehicle)

NOTICE:

Be sure to observe the following procedure when deploying the airbag.

HINT:

Prepare a battery as the power source to deploy the airbag.

- (a) Remove the horn button assembly  .

CAUTION:

- Before removing the horn button assembly, wait at least 90 seconds after turning the ignition switch off and disconnecting the cable from the negative (-) battery terminal.
 - When storing the horn button assembly, keep the airbag deployment side facing upward.
- (b) Using braided wire, tie down the horn button assembly to an unneeded wheel.

Text in Illustration

*1	Stripped Wire Section
*a	Wire Diameter

Wire:

Stripped wire section

1.25 mm² (0.0019 in.²) or more

CAUTION:

If the wire harness is too thin or an alternative object is used to tie down the horn button assembly, it may snap when the airbag is deployed. Always use a wire for vehicle use with an area of at least 1.25 mm² (0.0019 in.²).

HINT:

To calculate the area of the stripped wire section:

$$\text{Area} = 3.14 \times (\text{Diameter})^2 / 4$$

- (1) Wind 3 wires at least 2 times each around each of the snap pins.

Text in Illustration

*a	2 times or more
----	-----------------

CAUTION:

- Tightly wind the wires around the snap pins without any slack.
- Make sure that the wires are tight. If there is slack in the wires, the horn button assembly may break loose when the airbag is deployed.

- (2) Face the airbag deployment side of the horn button assembly upward on top of an unneeded tire and wheel set. Separately tie the each sides of the horn button assembly to the wheel through the

hub nut holes. Position the SST connector so that it hangs downward through the hub hole of the wheel.

Minimum tire size:

Width

185 mm (7.28 in.)

Inner diameter

360 mm (1.18 ft.)

CAUTION:

- Make sure that the wires are tight. If there is slack in the wires, the horn button assembly may break loose when the airbag is deployed.
- Always tie down the horn button assembly with the airbag deployment side facing upward.

NOTICE:

The tire and wheel may be damaged by the airbag deployment, so use unneeded tire and wheel.

(c) Install SST.

(1) Connect the clip and terminal of SST.

SST: 09082-18010

Text in Illustration

*a	Connect the clip and terminal
----	-------------------------------

CAUTION:

Place the wheel on level ground.

(2) Connect the SST connector.

NOTICE:

To avoid damaging the SST connector or wire harness, do not lock the secondary lock of the twin lock. Also, secure some slack for the SST wire harness inside the disc wheel.

(3) Move SST at least 10 m (32.8 ft.) away from the airbag tied down to the wheel.

Text in Illustration

*a	10 m (32.8 ft.) or more
----	-------------------------

(d) Cover the horn button assembly (Using a cardboard box).

(1) Cover the horn button assembly with a cardboard box.

Text in Illustration

*1	Weight
----	--------

(2) Place weights on the cardboard box in 4 places totaling at least 190 N (19 kg, 42.7 lb).

Minimum cardboard box size:

Must exceed the following dimensions

X

460 mm (1.51 ft.)

Y

650 mm (2.13 ft.)

NOTICE:

- When dimension Y of the cardboard box exceeds the diameter of the wheel and tire to which the horn button assembly is tied, X should be the following size.

$$X = 460 \text{ mm (1.51 ft.)} + \text{width of tire}$$

- If a cardboard box smaller than the specified size is used, it may be broken by the shock from the airbag deployment.

(e) Cover the horn button assembly (Using tires).

(1) Place at least 3 tires without wheels onto the wheel and tire to which the horn button assembly is tied.

Text in Illustration

*1	Tires (3 or more)
*a	Inner Diameter
*b	Width

(2) Place a wheel and tire on top.

Minimum tire size:

Width

185 mm (7.28 in.)

Inner diameter

360 mm (1.18 ft.)

CAUTION:

Do not use tires with wheels except for on the top and bottom.

NOTICE:

- The tires may be damaged by the airbag deployment, so use unneeded tires.
- Do not place the SST connector under the tire because it could be damaged.

(3) Tie the tires together with the 2 wires.

CAUTION:

Make sure that the wires are tight. Looseness in the wires results in the tires breaking loose when the airbag is deployed.

(f) Deploy the airbag.

- (1) Check that no one is within a 10 m (32.8 ft.) radius of the wheel to which the horn button assembly is tied.

(2) Connect the clip of SST to the positive (+) battery terminal.

Text in Illustration

*A	Using a Cardboard Box
*B	Using Tires
*1	Battery
*2	Horn Button Assembly
*a	10 m (32.8 ft.) or more

(3) Connect the terminal of SST to the negative (-) battery terminal to deploy the horn button assembly.

CAUTION:

Before deployment, make sure that no one is near the airbag.

(g) Dispose of the horn button assembly.

CAUTION:

- The horn button assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.

- Use gloves and safety glasses when handling a horn button assembly with a deployed airbag.
- Do not apply water etc. to a horn button assembly with a deployed airbag.
- Always wash your hands with water after completing the operation.

(1) Remove the horn button assembly from the wheel.

(2) Place the horn button assembly in a plastic bag, tie it tightly and dispose of it according to local regulations.

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: STEERING PAD: INSTALLATION (2013 FR-S)		

INSTALLATION

1. INSTALL HORN BUTTON ASSEMBLY

- (a) Check that the ignition switch is off.
- (b) Check that the cable is disconnected from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

- (c) Connect the 2 airbag connectors to the horn button assembly.

Text in Illustration

*1	Airbag Connector
*2	Horn Connector
*3	Airbag Connector Lock

NOTICE:

- When connecting any airbag connector, take care not to damage the airbag wire harness.
- Be sure to only connect the connectors to each corresponding color.

- (d) Push in the 2 locks to install the 2 airbag connectors.
- (e) Connect the horn connector to the horn button assembly.

- (f) Push the horn button assembly to engage the 3 pins carefully.

NOTICE:

- Make sure that the pins are securely inserted into the steering holes.
- Make sure to engage the 2 upper pins first.
- Make sure that the horn button assembly is securely installed.

2. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

Torque: 6.0 N·m (61 kgf·cm, 53in·lbf)

3. INSPECT HORN BUTTON ASSEMBLY

(a) Make sure that the horn sounds.

If the horn does not sound, inspect the horn system  .

4. PERFORM DIAGNOSTIC SYSTEM CHECK

5. INSPECT SRS WARNING LIGHT

Last Modified: 3-27-2012	6.4 G	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000UW909DX
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: STEERING PAD: ON-VEHICLE INSPECTION (2013 FR-S)		

ON-VEHICLE INSPECTION

CAUTION:

Be sure to correctly follow the removal and installation procedures for the horn button assembly.

1. INSPECT HORN BUTTON ASSEMBLY (for Vehicle not Involved in Collision)

- (a) Perform a diagnostic system check  .
- (b) Visually check for defects with the horn button assembly installed on the vehicle.

HINT:

The defects are as follows:

- Cuts on the surface or in the grooves
- Small cracks on the surface or in the grooves
- Significant discoloration on the surface or in the grooves

OK:

No defects are found.

If any of the defects is found, replace the horn button assembly with a new one.

2. INSPECT HORN BUTTON ASSEMBLY (for Vehicle Involved in Collision and Airbag not Deployed)

- (a) Perform a diagnostic system check  .
- (b) Visually check for defects with the horn button assembly removed from the vehicle.

HINT:

The defects are as follows:

- Cuts on the surface or in the grooves
- Small cracks on the surface or in the grooves
- Significant discoloration on the surface or in the grooves
- Cracks or other damage to the connector
- Deformation of the steering wheel assembly
- Deformation of the horn button sub-assembly of the horn button assembly
- Interference or uneven clearance between the horn button assembly and steering wheel assembly when the new horn button assembly is installed on the steering wheel assembly

OK:

No defects are found.

If any of the defects is found, replace the horn button assembly or steering wheel assembly with a new one.

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: STEERING PAD: REMOVAL (2013 FR-S)		

REMOVAL

1. PRECAUTION

CAUTION:

Be sure to read Precaution thoroughly before servicing. INFO

NOTICE:

After turning the ignition switch off, waiting time may be required before disconnecting the cable from the negative (-) battery terminal. Therefore, make sure to read the disconnecting the cable from the negative (-) battery terminal notices before proceeding with work INFO.

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

The power window system utilizes a mechanism that the door glass moves down slightly when the door is opened, and that the glass moves up when closing the door in order to prevent the door molding from being damaged. When the battery negative (-) terminal needs to be disconnected for servicing, fully open the driver and passenger door glasses in advance.

3. REMOVE HORN BUTTON ASSEMBLY

CAUTION:

When storing the horn button assembly, keep the airbag deployment side facing upward.

- (a) Check that the ignition switch is off.
- (b) Check that the cable is disconnected from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

- (c) Using a screwdriver, push in the 3 torsion springs to disengage the 3 pins.

Text in Illustration

*1	Torsion Spring
----	----------------

NOTICE:

Do not drop the horn button assembly.

(d) Pull out the horn button assembly from the steering wheel assembly and support the horn button assembly with one hand.

NOTICE:

When removing the horn button assembly, do not pull the airbag wire harness.

(e) Using a screwdriver with its tip wrapped with protective tape, release the 2 airbag connector locks.

Text in Illustration

*1	Protective Tape
*2	Airbag Connector
*3	Horn Connector
*4	Airbag Connector Lock

(f) Disconnect the 2 airbag connectors to remove the horn button assembly.

NOTICE:

When disconnecting any airbag connector, take care not to damage the airbag wire harness.

(g) Disconnect the horn connector from the horn button assembly.

INSPECTION PROCEDURE

NOTICE:

- If the main body ECU (network gateway ECU) or transponder key ECU assembly is replaced, refer to Registration **INFO** .
- Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1.	CHECK HARNESS AND CONNECTOR (INSTRUMENT PANEL JUNCTION BLOCK - BATTERY, BODY GROUND)
-----------	---

- (a) Disconnect the A73 and D6 main body ECU (network gateway ECU) connectors.
- (b) Disconnect the 3A, 3B and 3C instrument panel junction block assembly connectors.

- (c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3A-27 - Body ground	Always	11 to 14 V
3C-19 - Body ground	Always	11 to 14 V

- (d) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3B-18 - Body ground	Always	Below 1 Ω
A73-4 (GND) - Body ground	Always	Below 1 Ω
D6-1 (GND) - Body ground	Always	Below 1 Ω

Text in Illustration

*a	Front view of wire harness connector (to Instrument Panel Junction Block Assembly)
----	---

OK

2. INSPECT INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY

- (a) Remove the instrument panel junction block assembly  .
- (b) Remove the main body ECU (network gateway ECU) from the instrument panel junction block assembly.
- (c) Measure the resistance according to the value(s) in the table below.

Text in Illustration

*a	Component without harness connected (Instrument Panel Junction Block Assembly)	-	-
----	---	---	---

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
MB-1 (BECU) - 3A-27	Always	Below 1 Ω
MB-32 (+B) - 3C-19	Always	Below 1 Ω
MB-11 (GND) - 3B-18	Always	Below 1 Ω

OK

3.	CHECK HARNESS AND CONNECTOR (TRANSPONDER KEY ECU ASSEMBLY - BATTERY, BODY GROUND)
-----------	--

(a) Disconnect the A64 transponder key ECU assembly connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A64-1 (+B) - Body ground	Always	11 to 14 V

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A64-5 (GND) - Body ground	Always	Below 1 Ω

NG **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4.	CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - TRANSPONDER KEY ECU ASSEMBLY)
-----------	---

(a) Measure the voltage and resistance according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A73-17 (UART) - Body ground	Always	Below 1 V

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A73-17 (UART) - A64-3 (UART)	Always	Below 1 Ω
A73-17 (UART) - Body ground	Always	10 k Ω or higher

NG ▶ REPAIR OR REPLACE HARNESS OR
CONNECTOR

OK

5.	REPLACE TRANSPONDER KEY ECU ASSEMBLY
-----------	---

(a) Replace the transponder key ECU assembly with a new one  .

NEXT

6.	CHECK FOR DTC
-----------	----------------------

(a) Check for DTCs  .

OK:

DTC B1409 is not output

NG ▶ REPAIR MAIN BODY ECU (NETWORK
GATEWAY ECU)

OK ▶ END (TRANSPONDER KEY ECU ASSEMBLY
WAS DEFECTIVE)

DESCRIPTION

The ECM stores this code if a communication problem is detected between the main body ECU (network gateway ECU) and the ECM.

DTC CODE	DTC DETECTION CONDITION	TROUBLE AREA
B1572	When there is a problem in communication between the main body ECU (network gateway ECU) and ECM.	<ul style="list-style-type: none"> • Harness or connector • ECM • Instrument panel junction block assembly • Main body ECU (network gateway ECU)

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- If the main body ECU (network gateway ECU) or ECM is replaced, refer to Registration INFO.
- Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1. CHECK HARNESS AND CONNECTOR (BATTERY, BODY GROUND)

- (a) Disconnect the A73 and D6 main body ECU (network gateway ECU) connectors.
- (b) Disconnect the 3A, 3B and 3C instrument panel junction block assembly connectors.

- (c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3A-27 - Body ground	Always	11 to 14 V
3C-19 - Body ground	Always	11 to 14 V

- (d) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3B-18 - Body ground	Always	Below 1 Ω
A73-4 (GND) - Body ground	Always	Below 1 Ω
D6-1 (GND) - Body ground	Always	Below 1 Ω

Text in Illustration

*a Front view of wire harness connector
(to Instrument Panel Junction Block Assembly)

OK

2. INSPECT INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY

- (a) Remove the instrument panel junction block assembly  .
- (b) Remove the main body ECU (network gateway ECU) from the instrument panel junction block assembly.
- (c) Measure the resistance according to the value(s) in the table below.

Text in Illustration

*a	Component without harness connected (Instrument Panel Junction Block Assembly)	-	-
----	---	---	---

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
MB-1 (BECU) - 3A-27	Always	Below 1 Ω
MB-32 (+B) - 3C-19	Always	Below 1 Ω
MB-11 (GND) - 3B-18	Always	Below 1 Ω

OK

3.	CHECK HARNESS AND CONNECTOR
-----------	------------------------------------

- (a) Disconnect the A73 main body ECU (network gateway ECU) connector.
- (b) Disconnect the A35 and A36 ECM connectors.
- (c) Measure the voltage and resistance according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A73-9 - Body ground	Always	Below 1 V
A35-25 (IMO) - Body ground	Always	Below 1 V

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A73-9 - A35-25 (IMO)	Always	Below 1 Ω
A36-4 (E01) - Body ground	Always	Below 1 Ω
A73-9 - Body ground	Always	10 k Ω or higher

**REPAIR OR REPLACE HARNESS OR
NG CONNECTOR**

OK

4.	REPLACE ECM
-----------	--------------------

- (a) Temporarily replace the ECM with a new or known good one INFO .
- (b) Register the ECU communication ID INFO .

NEXT

5.	CHECK FOR DTC
-----------	----------------------

(a) Turn the ignition switch to ON and wait 5 seconds.

(b) Check for DTCs  .

OK:

DTC B1572 is not output

NG  **REPLACE MAIN BODY ECU (NETWORK GATEWAY ECU)**

OK  **END (ECM WAS DEFECTIVE)**

Title: THEFT DETERRENT / KEYLESS ENTRY: ENGINE IMMOBILISER SYSTEM: DATA LIST / ACTIVE TEST (2013 FR-S)		

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

- Connect the Techstream to the DLC3.
- Turn the ignition switch to ON.
- Turn the Techstream on.
- Enter the following menus: Body Electrical or Powertrain / Main Body or Engine / Data List.
- Read the Data List according to the display on the Techstream.

Main Body

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Number of Registration Key	Number of registered key / 0 to 8	Number of registered key	-
IG SW	Ignition switch ON signal / OFF or ON	OFF: Ignition switch ACC or off ON: Ignition switch ON	-
ACC SW	Ignition switch ACC signal / OFF or ON	OFF: Ignition switch off ON: Ignition switch ACC or ON	-
Key Unlock Warning SW	Unlock warning switch signal / OFF or ON	OFF: No key in ignition key cylinder ON: Key inserted in ignition key cylinder	-
Battery Power Supply Control Voltage	Battery power supply control voltage / 0 to 21.4 V	11 to 14 V	-
Battery Power Supply Back Up Voltage	Battery power supply backup voltage / 0 to 21.4 V	11 to 14 V	-

IG Power Supply Voltage	IG power supply voltage / 0 to 21.4 V	11 to 14 V	-
ACC Voltage	ACC voltage / 0 to 21.4 V	11 to 14 V	-
Immobiliser Light	Security indicator light status / OFF or ON	OFF: Security indicator light OFF ON: Security indicator light ON	-
Immobiliser Power Supply	Main body ECU (network gateway ECU) engine immobiliser system power supply output status / OFF or ON	OFF: Power not supplied to engine immobiliser system ON: Power supplied to engine immobilizer system	-

Engine

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Immobiliser Fuel Cut	Status of immobiliser fuel cut / ON or OFF	-	-
Immobiliser Fuel Cut History	Status of immobiliser fuel cut history / ON or OFF	-	-

2. ACTIVE TEST

HINT:

Using the Techstream to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Main Body / Active Test.
- (e) According to the display on the Techstream, perform the Active Test.

Main Body

Title: THEFT DETERRENT / KEYLESS ENTRY: ENGINE IMMOBILISER SYSTEM: HOW TO PROCEED WITH TROUBLESHOOTING (2013 FR-S)		

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use these procedures to troubleshoot the engine immobiliser system.
- *: Use the Techstream.

1.	VEHICLE BROUGHT TO WORKSHOP
-----------	------------------------------------

NEXT

2.	INSPECT BATTERY VOLTAGE
-----------	--------------------------------

Standard voltage:

11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding.

HINT:

A simple method to determine whether the battery is depleted is to operate the horn.

NEXT

3.	CHECK COMMUNICATION FUNCTION OF CAN COMMUNICATION SYSTEM*
-----------	--

(a) Use the Techstream to check if the CAN communication system is functioning normally

NFC .

Result

RESULT	PROCEED TO
CAN DTC is not output	A

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

Engine Immobiliser System

SYMPTOM	SUSPECTED AREA	SEE PAGE
Security indicator light does not blink	Proceed to "Security Indicator Light does not Blink"	INFO

Last Modified: 3-27-2012	6.4 M	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM00000120Y027X
Title: THEFT DETERRENT / KEYLESS ENTRY: ENGINE IMMOBILISER SYSTEM: REGISTRATION (2013 FR-S)		

REGISTRATION

1. DESCRIPTION OF CODE REGISTRATION

- (a) The key has 2 codes: the key code (immobiliser code) and the wireless code. Both of these codes need to be registered. For the wireless code registration procedures, refer to Wireless Door Lock Control System [INFO](#) .

2. KEY REGISTRATION PROCEDURES WHEN ADDING OR REPLACING KEY OR WHEN KEY IS LOST

HINT:

- The following procedures require the use of the Techstream:
 - New key code registration
 - Additional key code registration
 - Key code erasure
- A maximum of 6 key codes can be registered.

CUSTOMER REQUEST/CONDITION	REGISTRATION PROCEDURE CONDITION	PROCEDURE	REFER TO
Registering additional key	Customer must bring at least 1 key.	1. Register additional keys as necessary (additional key code registration).	PROCEDURE "C"
<ul style="list-style-type: none"> • Replacing a key • Making a lost key unusable <p><u>HINT:</u> After key code erasure, any remaining keys that are not registered at this time cannot be used. Therefore, after key code erasure, register all remaining keys.</p>	Customer must bring at least 1 key.	1. Using remaining key, clear all registered keys except one (key code erasure).	PROCEDURE "D"
		2. Register additional keys as necessary (additional key code registration).	PROCEDURE "C"
All keys are lost	-	1. Reset all keys (all keys ID erasure (key code reset)).	PROCEDURE "E"
		2. Register all keys new key ID registration.	PROCEDURE "A"

3. PART REPLACEMENT AND KEY REGISTRATION PROCEDURES

(a) The following table shows ECU replacement and key registration procedures for cases in which an ECU has been determined to be malfunctioning during troubleshooting of the engine immobiliser system.

HINT:

- The following procedures require the use of the Techstream:
 - New key code registration
 - Additional key code registration
 - Key code erasure
- A maximum of 6 key codes can be registered.

MALFUNCTIONING ECU	REGISTRATION PROCEDURE CONDITION	PROCEDURE	REFER TO
Main body ECU (network gateway ECU)	Customer must bring all keys.*3	1. Replace main body ECU (network gateway ECU).	*4
		2. Reregister all keys.	PROCEDURE "B"
		3. Register ECU communication ID.	PROCEDURE "G"
Combination meter assembly*1	Customer must bring at least 1 key.	1. Replace combination meter assembly.	*5
		2. Register recognition codes (ECU code registration).	PROCEDURE "F"
Transponder key ECU assembly*2	Customer must bring at least 1 key.	1. Replace transponder key ECU assembly.	*6
		2. Register recognition codes (ECU code registration).	PROCEDURE "F"
ECM	Customer must bring at least 1 key.	1. Replace ECM.	*7
		2. Register ECU communication ID.	PROCEDURE "G"
Main body ECU (network gateway ECU) and combination meter assembly*1	-	1. Replace main body ECU (network gateway ECU).	*4
		2. Replace combination meter assembly.	*5
		3. Reregister all keys.	PROCEDURE "A"
Main body ECU (network gateway ECU) and transponder key ECU assembly*2	-	1. Replace main body ECU (network gateway ECU).	*4
		2. Replace transponder key ECU assembly.	*6
			PROCEDURE

		3. Reregister all keys.	"A"
Main body ECU (network gateway ECU) and ECM	Customer must bring all keys. *3	1. Replace main body ECU (network gateway ECU).	*4
		2. Replace ECM.	*7
		3. Reregister all keys.	PROCEDURE "B"
		4. Register ECU communication ID.	PROCEDURE "G"
Combination meter assembly and ECM*1	Customer must bring at least 1 key.	1. Replace combination meter assembly.	*5
		2. Replace ECM.	*7
		3. Register recognition codes (ECU code registration).	PROCEDURE "F"
		4. Register ECU communication ID.	PROCEDURE "G"
Transponder key ECU assembly and ECM*2	Customer must bring at least 1 key.	1. Replace transponder key ECU assembly.	*6
		2. Replace ECM.	*7
		3. Register recognition codes (ECU code registration).	PROCEDURE "F"
		4. Register ECU communication ID.	PROCEDURE "G"
Main body ECU (network gateway ECU), combination meter assembly and ECM*1	-	1. Replace main body ECU (network gateway ECU).	*4
		2. Replace combination meter assembly.	*5
		3. Replace ECM.	*7
		4. Reregister all keys.	PROCEDURE "A"
		5. Register ECU communication ID.	PROCEDURE "G"
Main body ECU (network gateway ECU), transponder key ECU assembly and ECM*2	-	1. Replace main body ECU (network gateway ECU).	*4
		2. Replace transponder key ECU assembly.	*6
		3. Replace ECM.	*7
		4. Reregister all keys.	PROCEDURE "A"
		5. Register ECU	PROCEDURE

	communication ID.	"G"
--	-------------------	-----

*1: w/o Transponder Key ECU Assembly
 *2: w/ Transponder Key ECU Assembly
 *3: If none of the registered keys are available, the main body ECU (network gateway ECU) is unable to authenticate users, and registration will not be possible. It will therefore be necessary to replace the combination meter assembly*1 or transponder key ECU assembly*2 with a new one. After replacement with a new combination meter assembly*1 or transponder key ECU assembly*2, carry out new key ID registration and registration of communications code between ECUs. However, if there is at least 1 registered key, then deleting the key ID will mean that replacement of the combination meter assembly*1 or transponder key ECU assembly*2 will not be necessary.

- *4: INFO
- *5: INFO
- *6: INFO
- *7: INFO

NOTICE:

Information on main body ECU (network gateway ECU) and combination meter assemblies that have been registered in another vehicle cannot be deleted from within the ECUs, meaning that re-registration is not possible, therefore it is necessary to replace the main body ECU (network gateway ECU) and combination meter assembly with new parts.

4. KEY REGISTRATION (PROCEDURE "A")

(a) New key code registration (Procedure "A"):

NOTICE:

Make sure that no key codes are registered in the main body ECU (network gateway ECU) and combination meter assembly*1 or transponder key ECU assembly*2.

- *1: w/o Transponder Key ECU Assembly
- *2: w/ Transponder Key ECU Assembly

HINT:

- In this mode, a maximum of 6 key codes can be registered.
- New key codes must be registered with the battery connected. The ignition switch can be either ON or off.
- When a main body ECU (network gateway ECU) and combination meter assembly*1 or transponder key ECU assembly*2 is installed with a new one, key codes must be registered in the main body ECU (network gateway ECU) and combination meter assembly*1 or transponder key ECU assembly*2.
- In the chart below, the numbers in the "Procedure" column (1, 2, 3, etc.) indicate the step numbers. Perform the steps in numerical order.

- *1: w/o Transponder Key ECU Assembly
- *2: w/ Transponder Key ECU Assembly

Automatic Key Code Registration (New Registration)

PROCESS	PROCEDURE
1. Start of	<ol style="list-style-type: none"> 1. Turn the ignition switch off. 2. Connect Techstream to DLC3. 3. Turn the ignition switch to ON. 4. Turn Techstream on. 5. Enter the following menus: Body Electrical / Main Body / Utility /

registration	<p style="text-align: center;">Key Registration</p> <p>HINT:</p> <p>After completing the above operation, proceed to the next step in accordance with the prompts on the Techstream screen.</p>
2. Verification of unregistered key	<ol style="list-style-type: none"> 1. Following the instructions on the Techstream, insert the key to be registered into the ignition key cylinder. 2. Perform operation according to prompts on Techstream screen.
3. End of registration	Finish new key code registration.

HINT:

A brief outline of a new key code registration procedure is shown above. For detailed information, refer to the Techstream screen.

(b) End automatic key code registration mode:

Automatic key code registration mode can be forced to end when at least 1 key code (immobiliser code) has been registered.

HINT:

Follow the instruction on the Techstream screen to end new key code registration mode.

5. KEY REGISTRATION (PROCEDURE "B")

(a) Key code re-registration (Procedure "B"):

NOTICE:

If none of the registered keys for the vehicle are available, the main body ECU (network gateway ECU) is unable to authenticate users, and registration will not be possible. It will therefore be necessary to replace the combination meter assembly*1 or transponder key ECU assembly*2 with a new one. However, if there is at least 1 registered key, then deleting the key code will mean that replacement of the combination meter assembly*1 or transponder key ECU assembly*2 will not be necessary.

*1: w/o Transponder Key ECU Assembly

*2: w/ Transponder Key ECU Assembly

HINT:

- Carried out this work when replacing only the main body ECU (network gateway ECU) with a new one.
- Registration mode will end if any step is not completed within the specified time.
- In the chart below, the numbers in the "Procedure" column (1, 2, 3, etc.) indicate the step numbers. Perform the steps in numerical order.

Key Code Re-registration

PROCESS	PROCEDURE
1. Start of registration	<ol style="list-style-type: none"> 1. Prepare all keys registered to the vehicle. 2. Turn the ignition switch off. 3. Connect Techstream to DLC3. 4. Turn the ignition switch to ON. 5. Turn Techstream on. 6. Enter the following menus: Body Electrical / Main Body / Utility / Key Registration

	<p>HINT:</p> <p>After completing the above operation, proceed to the next step in accordance with the prompts on the Techstream screen.</p>
2. Confirmation of registered key*1	Following the directions on the Techstream screen, insert a key registered to the vehicle into the ignition switch locking cylinder, and then remove it. Carry out this procedure for all keys registered to the vehicle.
3. Verification of unregistered key*2	Following the directions on the Techstream screen, insert a key to be registered to the vehicle into the ignition switch locking cylinder, and then remove it. Carry out this procedure for all keys to be registered to the vehicle.
4. End of registration	Finish key code re-registration.

HINT:

A brief outline of a key code re-registration procedure is shown above. For detailed information, refer to the Techstream screen.

*1: Carry out "Confirmation of registered key" for all keys registered to the vehicle. If all keys registered to the vehicle are not available, such as when keys are lost, then the ECU is unable to perform user authentication, and registration will not be possible.

*2: Insert and remove all keys including the keys used in "Confirmation of registered key" into and from the ignition switch locking cylinder.

6. KEY REGISTRATION (PROCEDURE "C")

(a) Additional registration (Procedure "C"):

NOTICE:

When the ignition key cylinder has been replaced, locking and unlocking doors is possible with the new key transmitter module (removed from the original key). However, the new key will not be able to lock and unlock doors through the door key cylinder. Keep the original key. If the battery in the new key transmitter module fails, the original key can be used to lock and unlock doors through the door key cylinder.

HINT:

- In this mode, a maximum of 6 key codes can be registered.
- Registration mode will end if any step is not completed within the specified time.
- When the ignition cylinder or the key cylinder set is replaced, remove the transmitter module from the original key. Then install this transmitter module to a new key and use the new key. If necessary, use this key to register other keys.
- In the chart below, the numbers in the "Procedure" column (1, 2, 3, etc.) indicate the step numbers. Perform the steps in numerical order.

Additional Registration

PROCESS	PROCEDURE
	<ol style="list-style-type: none"> 1. Turn the ignition switch off. 2. Connect Techstream to DLC3. 3. Turn the ignition switch to ON. 4. Turn Techstream on.

1. Start of registration	<p>5. Enter the following menus: Body Electrical / Main Body / Utility / Key Registration</p> <p>HINT:</p> <p>After completing the above operation, proceed to the next step in accordance with the prompts on the Techstream screen.</p>
2. Confirmation of registered key	<ol style="list-style-type: none"> Following the instructions on the Techstream, insert the key registered into the ignition key cylinder. Turn the ignition switch to ON. Perform operation according to prompts on Techstream screen
3. Verification of unregistered key	<ol style="list-style-type: none"> Following the instructions on the Techstream, insert the key to be registered into the ignition key cylinder. Perform operation according to prompts on Techstream screen.
4. End of registration	Finish key code registration.

HINT:

A brief outline of a key code registration procedure is shown above. For detailed information, refer to the Techstream screen.

7. KEY REGISTRATION (PROCEDURE "D")

(a) Key code erasure (Procedure "D"):

HINT:

- Performing this procedure will erase all key codes except for the key, which is used for erasing the key codes. In order to use a key whose code has been erased, a new key code must be registered.
- This procedure will be canceled if each step is not completed within the specified time.
- In the chart below, the numbers in the "Procedure" column (1, 2, 3, etc.) indicate the step numbers. Perform the steps in numerical order.

Key Code Erasure

PROCESS	PROCEDURE
1. Start of erasure	<ol style="list-style-type: none"> Turn the ignition switch off. Connect Techstream to DLC3. Turn the ignition switch to ON. Turn Techstream on. Enter the following menus: Body Electrical / Main Body / Utility / Key Code Erasure <p>HINT:</p> <p>After completing the above operation, proceed to the next step in accordance with the prompts on the Techstream screen.</p>
2. Confirmation of registered key	<ol style="list-style-type: none"> Following the instructions on the Techstream, insert the key registered into the ignition key cylinder. Perform operation according to prompts on Techstream screen.

3. End of erasure	Finish key code erasure.
-------------------	--------------------------

HINT:

A brief outline of a key code erasure procedure is shown above. For detailed information, refer to the Techstream screen.

8. KEY REGISTRATION (PROCEDURE "E")

(a) All key code erasure (Procedure "E"):

HINT:

- To perform this procedure, at least 1 key should be registered to the transponder key ECU assembly.
- This procedure can be performed using either a registered or unregistered key.
- In the chart below, the numbers in the "Procedure" column (1, 2, 3, etc.) indicate the step numbers. Perform the steps in numerical order.

All Key Code Erasure

PROCESS	PROCEDURE
1. Start of erasure	<ol style="list-style-type: none"> 1. Turn the ignition switch off. 2. Connect Techstream to DLC3. 3. Insert the previous registered key or unregistered key into ignition key cylinder. 4. Turn the ignition switch to ON. 5. Using TIS, confirm that user and vehicle match. 6. Turn Techstream on. 7. Enter the following menus: Body Electrical / Main Body / Utility / Key Reset <p>HINT: After completing the above operation, proceed to the next step in accordance with the prompts on the Techstream screen.</p>
2. Erasure of ID code	<ol style="list-style-type: none"> 1. Perform operation according to prompts on Techstream screen. 2. Wait for 15 minutes.
3. End of erasure	Finish all key code erasure.

HINT:

A brief outline of all key code erasure procedure is shown above. For detailed information, refer to the Techstream screen.

9. KEY REGISTRATION (PROCEDURE "F")

(a) ECU code registration (Procedure "F"):

NOTICE:

The ECU code should be registered when the combination meter assembly*1 or transponder key ECU assembly*2 is replaced with a new one in order to match the ECU code.

*1: w/o Transponder Key ECU Assembly

*2: w/ Transponder Key ECU Assembly

HINT:

- This procedure will be canceled if each step is not completed within the specified time.
- In the chart below, the numbers in the "Procedure" column (1, 2, 3, etc.) indicate the step numbers. Perform the steps in numerical order.

ECU code registration

PROCESS	PROCEDURE
1. Start of registration	<ol style="list-style-type: none">1. Turn the ignition switch off.2. Connect Techstream to DLC3.3. Turn the ignition switch to ON.4. Turn Techstream on.5. Enter the following menus: Body Electrical / Main Body / Utility / ECU Communication ID Registration <p><u>HINT:</u> After completing the above operation, proceed to the next step in accordance with the prompts on the Techstream screen.</p>
2. Confirmation of registered key	<ol style="list-style-type: none">1. Following the instructions on the Techstream, insert the key registered into the ignition key cylinder.2. Turn the ignition switch to ON.
3. Registration of ECU code	Perform operation according to prompts on Techstream screen.
4. End of registration	Finish ECU code registration.

HINT:

A brief outline of a ECU code registration procedure is shown above. For detailed information, refer to the Techstream screen.

10. KEY REGISTRATION (PROCEDURE "G")

(a) ECU communication ID registration (When the main body ECU (network gateway ECU) is replaced with a new one, or when the ECM is replaced with other than a new one.):

NOTICE:

- The ECU communication ID should be registered when the main body ECU (network gateway ECU) is replaced with a new one, or when the ECM is replaced with other than a new one. in order to match the ECU communication ID.
- If registration of the main body ECU (network gateway ECU) or combination meter assembly*1 or transponder key ECU assembly*2 is not completed, then this work will not be possible. Therefore, prior to carrying out ECU communications code registration, carry out main body ECU (network gateway ECU) or combination meter assembly*1 or transponder key ECU assembly*2 registration.
- The engine cannot be started unless the ECU communication IDs match.
- After registration, turning the ignition switch to the START position may not start the engine on the first try. If so, turn the ignition switch to the START position again.
- Using the Techstream, clear DTC B1572 (code for ECM immobiliser communication error) after the engine is started.

- *1: w/o Transponder Key ECU Assembly
- *2: w/ Transponder Key ECU Assembly

HINT:

If both the main body ECU (network gateway ECU) and ECM have been replaced with new items at the same time, then proceed as in "(b) When the ECM is replaced with a new one".

(1) Using SST, connect terminals 13 (TC) and 4 (CG) of the DLC3.

SST: 09843-18040

Text in Illustration

*1	DLC3
----	------

(2) Turn the ignition switch to ON and leave the vehicle as is for 30 minutes.

HINT:

Do not start the engine.

- (3) Start the engine.
- (4) Check that the engine starts and stays on for more than 5 sec.
- (b) ECU communication ID registration (When the ECM is replaced with a new one):

NOTICE:

The ECU communication ID should be registered when the ECM is replaced with a new one in order to match the ECU communication ID.

ECU Communication ID Registration

PROCEDURE
1. Start
2. Insert an already registered key into the ignition key cylinder.
3. Start the engine.
4. Check that the engine starts and stays on for more than 5 sec.
5. End

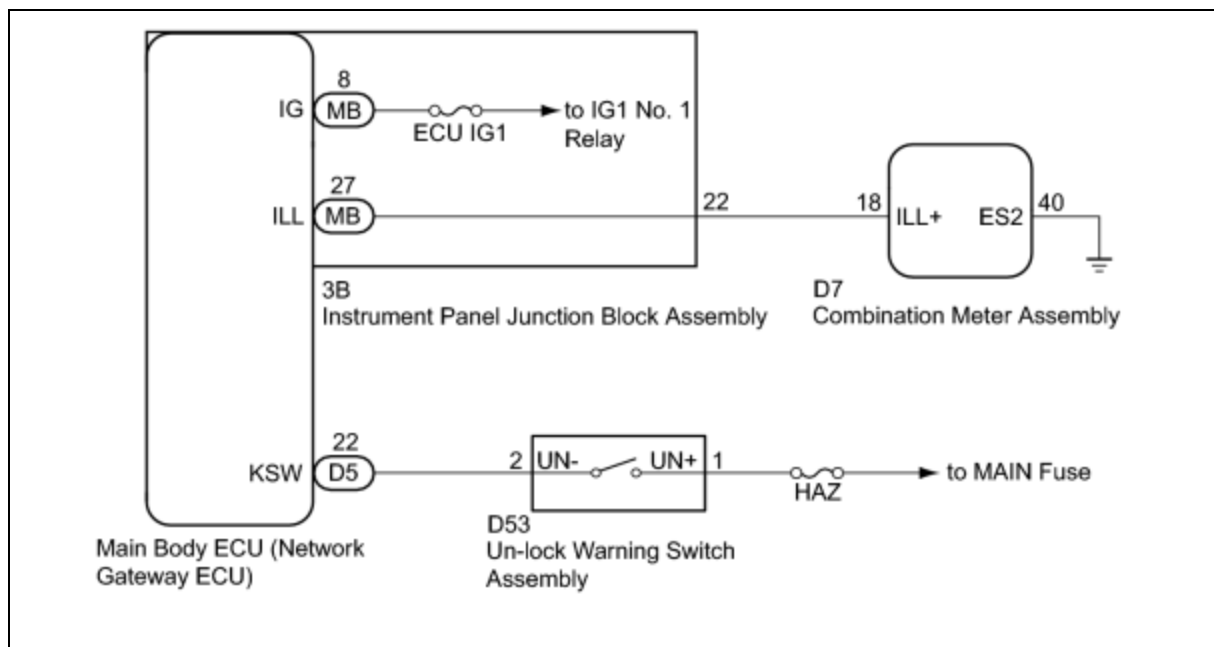

Last Modified: 3-27-2012	6.4 J	From: 201203

Title: THEFT DETERRENT / KEYLESS ENTRY: ENGINE IMMOBILISER SYSTEM: Security Indicator Light Does not Blink (2013 FR-S)		

Security Indicator Light Does not Blink

DESCRIPTION

When the engine immobiliser system is set, the security indicator light blinks continuously, but does not illuminate if the engine immobiliser system is not set.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- Inspect the fuses for circuits related to this system before performing the following inspection procedure.
- If the combination meter assembly and main body ECU (network gateway ECU) is replaced, refer to Registration **INFO**.

PROCEDURE

1.	CHECK FOR DTC
-----------	----------------------

(a) Check for DTCs **INFO**.

OK:

DTC is not output.

NG  **GO TO DTC CHART**

OK

2.	PERFORM ACTIVE TEST USING TECHSTREAM (SECURITY INDICATOR)
-----------	--

(a) Check that the security indicator light illuminates when operating it with the Active Test

 .

Main Body

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Security Indicator	Security indicator light	ON/OFF	-

OK:

Security indicator light can be turned on and off using the Techstream.

NG  **CHECK HARNESS AND CONNECTOR
(INSTRUMENT PANEL JUNCTION BLOCK -
COMBINATION METER ASSEMBLY)**

OK

3.	READ VALUE USING TECHSTREAM (IG SW, KEY UNLOCK WARNING SW)
-----------	---

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Main Body / Data List.

(e) Read the Data List according to the display on the Techstream.

Main Body

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
IG SW	Ignition switch ON signal / OFF or ON	OFF: Ignition switch ACC or off ON: Ignition switch ON	-
		OFF: No key in ignition key	

Key Unlock Warning SW	Un-lock warning switch signal / OFF or ON	cylinder ON: Key inserted in ignition key cylinder	-
-----------------------	---	---	---

OK:

On the Techstream screen, the display changes between ON and OFF according to the chart above.

Result

RESULT	PROCEED TO
OK	A
NG (IG SW)	B
NG (Key Unlock Warning SW)	C

B ▶ **GO TO LIGHTING SYSTEM (IG Signal Circuit)**

C ▶ **INSPECT UN-LOCK WARNING SWITCH ASSEMBLY**

A ▶ **REPLACE MAIN BODY ECU (NETWORK GATEWAY ECU)**

4. INSPECT UN-LOCK WARNING SWITCH ASSEMBLY

(a) Remove the un-lock warning switch assembly  .

(b) Inspect the un-lock warning switch assembly  .

NG ▶ **REPLACE UN-LOCK WARNING SWITCH ASSEMBLY**

OK

5. CHECK HARNESS AND CONNECTOR (UN-LOCK WARNING SWITCH ASSEMBLY - MAIN BODY ECU)

(a) Disconnect the D5 main body ECU (network gateway ECU) connector.

(b) Measure the voltage and resistance according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D53-1 (UN+) - Body ground	Always	11 to 14 V

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D53-2 (UN-) - D5-22 (KSW)	Always	Below 1 Ω
D53-2 (UN-) - Body ground	Always	10 k Ω or higher

Text in Illustration

*a	Front view of wire harness connector (to Un-lock Warning Switch Assembly)
----	---

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ► REPLACE MAIN BODY ECU (NETWORK GATEWAY ECU)

6. CHECK HARNESS AND CONNECTOR (INSTRUMENT PANEL JUNCTION BLOCK - COMBINATION METER ASSEMBLY)

- (a) Disconnect the 3B instrument panel junction block assembly connector.
- (b) Disconnect the D7 combination meter assembly connector.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3B-22 - D7-18	Always	Below 1 Ω
D7-40 - Body ground	Always	Below 1 Ω
3B-22 - Body ground	Always	10 k Ω or higher

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR

OK
▼

7. INSPECT INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY

- (a) Remove the instrument panel junction block assembly INFO.
- (b) Remove the main body ECU (network gateway ECU) from the instrument panel junction block assembly.
- (c) Measure the resistance according to the value(s) in the table below.

Text in Illustration

*a	Component without harness connected (Instrument Panel Junction Block Assembly)	-	-
----	---	---	---

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
MB-17 - 3B-22	Always	Below 1 Ω

NG ▶ REPLACE INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY

OK
▼

8. REPLACE COMBINATION METER ASSEMBLY

- (a) Replace the combination meter assembly with a new one INFO.
- (b) When the immobiliser is set, check that the security indicator light blinks.

OK:
Security indicator light blinks.

NG ▶ REPLACE MAIN BODY ECU (NETWORK
GATEWAY ECU)

OK ▶ END (COMBINATION METER ASSEMBLY
WAS DEFECTIVE)

Last Modified: 3-27-2012	6.4 D	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000001TCO01VX
Title: THEFT DETERRENT / KEYLESS ENTRY: ENGINE IMMOBILISER SYSTEM: SYSTEM DESCRIPTION (2013 FR-S)		

SYSTEM DESCRIPTION

1. ENGINE IMMOBILISER SYSTEM DESCRIPTION

(a) The engine immobiliser system is a system for preventing theft of the vehicle. The engine immobiliser system utilizes the main body ECU (network gateway ECU) and combination meter assembly to store a key ID. When an improper key is used to attempt to start the engine, the main body ECU (network gateway ECU) sends a fuel cut and starter cut signal to the ECM, making it impossible to start the engine.

2. FUNCTION OF MAIN COMPONENTS

COMPONENT	OUTLINE
Main body ECU (network gateway ECU)	Checks the key ID received from the transponder key amplifier to assess whether it matches a key ID that has already been registered. At the same time, data is exchanged with the combination meter assembly to check whether the key ID matches the key ID stored in the combination meter assembly. When both key IDs match, the main body ECU (network gateway ECU) sends an engine start permission signal to the ECM.
Combination meter assembly*1	Checks the key ID received from the main body ECU (network gateway ECU) and the key ID stored when the key was registered, and sends the results of this check to the main body ECU (network gateway ECU).
Transponder key ECU assembly*2	Checks the key ID received from the main body ECU (network gateway ECU) and the key ID stored when the key was registered, and sends the results of this check to the main body ECU (network gateway ECU).
Transponder key amplifier	When the key is inserted into the ignition key cylinder, receives the key ID from the antenna coil, and outputs the key ID code boosted in the amplifier to the main body ECU (network gateway ECU).
ECM	Starts the engine based on the ID results collected from the main body ECU (network gateway ECU).
Un-lock warning switch assembly	Detects whether the key is in the ignition key cylinder and outputs the results to the main body ECU (network gateway ECU).

*1: w/o Transponder Key ECU Assembly

*2: w/ Transponder Key ECU Assembly

3. SYSTEM FUNCTION

(a) When the main body ECU (network gateway ECU) detects that the un-lock warning switch assembly is on, it sends power to the transponder key amplifier, which magnetizes the area around the antenna coil. The transponder chip inside the key grip uses the electromotive force generated by this magnetism to output a key ID signal. The transponder key amplifier receives the key ID signal, which is boosted by the amplifier and sent to the main body ECU (network gateway ECU). The main body ECU (network gateway ECU) checks whether the key ID received

from the transponder key amplifier matches the registered key ID. Simultaneously, the main body ECU (network gateway ECU) sends the key ID to the transponder key ECU assembly*1 or combination meter assembly*2. The transponder key ECU assembly*1 or combination meter assembly*2 compares the key ID to those it has stored, and sends the results of this comparison to the main body ECU (network gateway ECU). When both ID codes match, the engine immobiliser system is canceled, and the engine start control (fuel injection and starter control) is placed on standby.

Title: THEFT DETERRENT / KEYLESS ENTRY: ENGINE IMMOBILISER SYSTEM: TERMINALS OF ECU (2013 FR-S)		

TERMINALS OF ECU

1. CHECK TRANSPONDER KEY AMPLIFIER

- (a) Disconnect the D54 transponder key amplifier connector.
- (b) Measure the resistance and voltage, and check for pulses according to the value(s) in the table below.

TERMINAL NO. (SYMBOL)	INPUT/OUTPUT	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
D54-7 (AGND) - Body ground	-	GR - Body ground	Ground	Always	Below 1 Ω

- (c) Reconnect the D54 transponder key amplifier connector.
- (d) Measure the voltage and check for pulses according to the value(s) in the table below.

TERMINAL NO. (SYMBOL)	INPUT/OUTPUT	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
D54-1 (VC5) - D54-7 (AGND)	Input	R - GR	Transponder key amplifier power supply	Ignition switch ON	4.5 to 5.5 V
D54-4 (CODE) - D54-7 (AGND)	Output	LG - GR	Demodulated signal of key code data	Key inserted in ignition key cylinder	Pulse generation
D54-5 (TXCT) - D54-7 (AGND)	Output	W-G - GR	Key code output signal	No key in ignition key cylinder	Below 1 V
				Key inserted in ignition key cylinder	Pulse generation

2. CHECK INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY AND MAIN BODY ECU (NETWORK GATEWAY ECU)

Text in Illustration

*1	Instrument Panel Junction Block Assembly	*2	Main Body ECU (Network Gateway ECU)
----	--	----	-------------------------------------

- (a) Remove the main body ECU (network gateway ECU) from the instrument panel junction block assembly.
- (b) Disconnect the D5, D6 and A73 main body ECU (network gateway ECU) connectors.
- (c) Measure the resistance and voltage according to the value(s) in the table below.

TERMINAL NO.	INPUT/OUTPUT	WIRING	TERMINAL	CONDITION	SPECIFIED
--------------	--------------	--------	----------	-----------	-----------

(SYMBOL)		COLOR	DESCRIPTION		CONDITION
MB-1 (BECU) - Body ground	Input	None - Body ground	Battery power supply	Always	11 to 14 V
MB-8 (IG) - Body ground	Input	None - Body ground	Ignition switch power supply	Ignition switch ON	11 to 14 V
				Ignition switch off	Below 1 V
MB-9 (ACC) - Body ground	Input	None - Body ground	ACC power supply	Ignition switch ACC	11 to 14 V
				Ignition switch off	Below 1 V
MB-11 (GND) - Body ground	-	None - Body ground	Ground	Always	Below 1 Ω
MB-32 (+B) - Body ground	Input	None - Body ground	Battery power supply	Always	11 to 14 V
D5-22 (KSW) - Body ground	Input	BR - Body ground	Unlock warning switch input	No key in ignition key cylinder (off)	Below 1 V
				Key inserted ignition key cylinder (on)	11 to 14 V
D6-1 (GND) - Body ground	-	B - Body ground	Ground	Always	Below 1 Ω
A73-4 (GND) - Body ground	-	B-Y - Body ground	Ground	Always	Below 1 Ω

(d) Reconnect the D5, D6 and A73 main body ECU (network gateway ECU) connectors.

(e) Install the main body ECU (network gateway ECU) to the instrument panel junction block assembly.

(f) Measure the resistance and voltage, and check for pulses according to the value(s) in the table below.

TERMINAL NO. (SYMBOL)	INPUT/OUTPUT	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
A73-5 (CODE) - Body ground	Input	LG - Body ground	Demodulated signal of key code data	Key inserted in ignition key cylinder	Pulse generation
A73-9 - Body ground	Input / output	Y - Body ground	EFI communication	Ignition switch off	Below 1 V
				Ignition switch ON	Pulse generation
A73-8 (VC5) - Body ground	Output	R - Body ground	Transponder key amplifier power supply	Ignition switch ON	4.5 to 5.5 V
A73-15 (TXCT) - Body ground	Input	W - Body ground	Key code output signal	Key inserted in ignition key cylinder	Pulse generation
A73-16 (AGND) -		GR -	Transponder key		

Body ground	-	Body ground	amplifier ground	Always	Below 1 Ω
A73-17 (UART) - Body ground*	Input / output	SB - Body ground	Transponder key ECU communication	Key inserted in ignition key cylinder	Pulse generation

*: w/ Transponder Key ECU Assembly

3. CHECK TRANSPONDER KEY ECU ASSEMBLY

(a) Disconnect the A64 transponder key ECU assembly connector.

(b) Measure the resistance and voltage according to the value(s) in the table below.

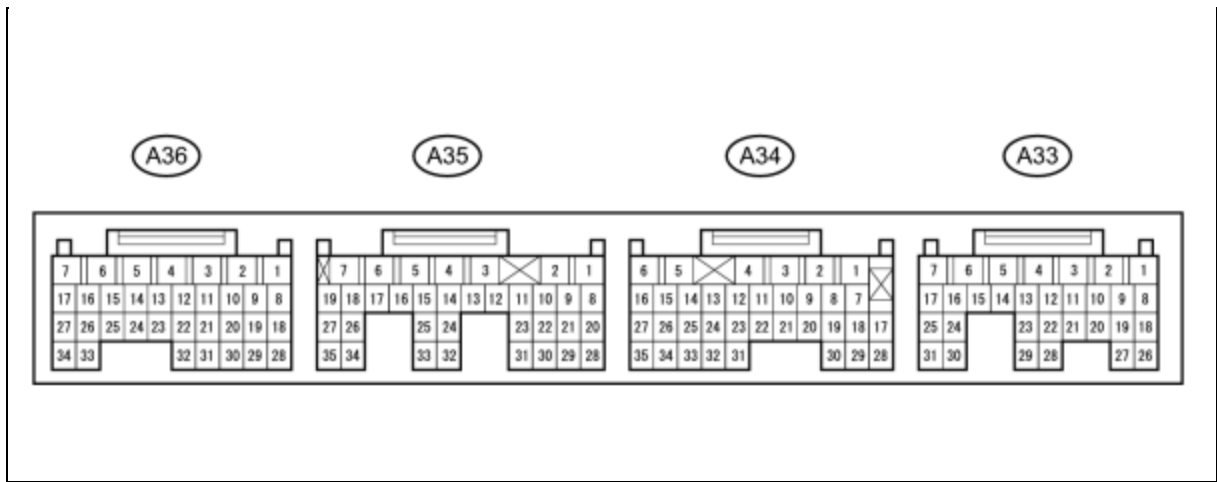

TERMINAL NO. (SYMBOL)	INPUT/OUTPUT	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
A64-1 (+B) - Body ground	Input	L-R - Body ground	Battery power supply	Always	11 to 14 V
A64-5 (GND) - Body ground	-	B-Y - Body ground	Ground	Always	Below 1 Ω

(c) Reconnect the A64 transponder key ECU assembly connector.

(d) Measure the voltage and check for pulses according to the value(s) in the table below.

TERMINAL NO. (SYMBOL)	INPUT/OUTPUT	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
A64-3 (UART) - A64-5 (GND)	Input/Output	SB - B-Y	Main body ECU communication	Key inserted in ignition key cylinder	Pulse generation

4. CHECK ECM

(a) Measure the resistance and voltage, and check for pulses according to the value(s) in the table below.

TERMINAL NO. (SYMBOL)	INPUT/OUTPUT	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
A33-1 (+B2) - A36-4 (E01)	Input	V - B-L	Battery power supply	Ignition switch off	Below 1 V
				Ignition switch ON	11 to 14 V
A33-2 (BATT) - A36-4 (E01)	Input	W - B-L	Battery power supply	Always	11 to 14 V
A34-6 (+B) - A36-4 (E01)	Input	V - B-L	Battery power supply	Ignition switch off	Below 1 V
				Ignition switch ON	11 to 14 V
A35-25 (IMO) - A36-4 (E01)	Input/Output	Y - B-L	Main body ECU communication	Ignition switch off	Below 1 V
				Ignition switch ON	Pulse generation
A36-4 (E01) - Body ground	-	B-L - Body ground	Ground	Always	Below 1 Ω

Title: THEFT DETERRENT / KEYLESS ENTRY: TRANSPONDER KEY AMPLIFIER: INSTALLATION (2013 FR-S)		

INSTALLATION

1. INSTALL TRANSPONDER KEY AMPLIFIER

- (a) Connect the connector.
- (b) Attach the 2 claws to install the transponder key amplifier.

2. INSTALL UPPER STEERING COLUMN COVER [INFO](#)

3. INSTALL LOWER STEERING COLUMN COVER [INFO](#)

4. INSTALL NO. 1 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY [INFO](#)

5. INSTALL UPPER INSTRUMENT PANEL METER ORNAMENT [INFO](#)

6. INSTALL METER HOOD SUB-ASSEMBLY [INFO](#)

7. INSTALL CENTER INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY [INFO](#)

8. INSTALL INSTRUMENT SIDE PANEL LH [INFO](#)

Last Modified: 3-27-2012	6.4 A	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000003YO100WX
Title: THEFT DETERRENT / KEYLESS ENTRY: TRANSPONDER KEY AMPLIFIER: REMOVAL (2013 FR-S)		

REMOVAL

1. REMOVE INSTRUMENT SIDE PANEL LH [INFO](#)
2. REMOVE CENTER INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY [INFO](#)
3. REMOVE METER HOOD SUB-ASSEMBLY [INFO](#)
4. REMOVE UPPER INSTRUMENT PANEL METER ORNAMENT [INFO](#)
5. REMOVE NO. 1 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY [INFO](#)
6. REMOVE LOWER STEERING COLUMN COVER [INFO](#)
7. REMOVE UPPER STEERING COLUMN COVER [INFO](#)
8. REMOVE TRANSPONDER KEY AMPLIFIER

(a) Disconnect the connector.

(b) Using a screwdriver with its tip wrapped with protective tape, detach the 2 claws and remove the transponder key amplifier.

Title: THEFT DETERRENT / KEYLESS ENTRY: TRANSPONDER KEY ECU: INSTALLATION (2013 FR-S)		

INSTALLATION

1. INSTALL TRANSPONDER KEY ECU ASSEMBLY

- (a) Connect the connector.
- (b) Install the transponder key ECU assembly with the 2 nuts.

Torque: 7.5 N·m (77 kgf·cm, 66in·lbf)

2. INSTALL AIR CONDITIONING UNIT

INFO

3. REGISTER ECU CODE

- (a) Register the ECU code INFO.
