Model Year: 2013	Model: FR-S	Doc ID: RM0000010EX1UGX
Title: FOREWORD / CAUTION / SECTION: FOREWORD: CAUTION (2013 FR-S)		

CAUTION

This contents does not include all the necessary items about repair and service. This manual is made for the use of persons who have special techniques and certifications. If non-specialized or uncertified technicians perform repairs or service only using this manual or without proper equipment or tools, this may cause severe injury to you or other persons nearby and also cause damage to your customer's vehicle.

In order to prevent dangerous operation and damage to your customer's vehicle, be sure to follow the instructions shown below.

- This contents must be read thoroughly. It is especially important to have a good understanding of all the contents written in the PRECAUTION of "INTRODUCTION" section.
- The service method written in this manual is very effective to perform repair and service. When performing the operations following the procedures using this manual, be sure to use tools specified and recommended. If using non-specified or tools other than recommended tools and service methods, be sure to confirm the safety of the technicians and that there is no possibility of causing personal injury or damage to the customer's vehicle before starting the operation.
- If part replacement is necessary, the part must be replaced with the same part number or equivalent part. Do not replace it with an inferior quality part.
- It is important to note that this manual contains various "Cautions" and "Notices" that must be carefully observed in order to reduce the risk of personal injury during service or repair, or reduce the possibility that improper service or repair may damage the vehicle or render it unsafe. It is also important to understand that these "Cautions" and "Notices" are not exaggerations and are possible hazardous consequences that might result from failure to follow these instructions.

Title: FOREWORD / CAUTION / SECTION: FOREWORD: FOREWORD (2013 FR-S)		

FOREWORD

This is Volume 1 of the 2013 SCION FR-S manual. There are three volumes to this manual. The sections included in each volume are indicated by black type in the Section Index. Use the Section Index of each volume to find the volume with the section you need.

Applicable models	ZN6 series
-------------------	------------

Please note that the publications below have also been prepared as relevant service manuals for the components and system in these vehicles.

MANUAL NAME	PUB. NO.
2013 SCION FR-S Electrical Wiring Diagram	EM20S0U
2013 SCION FR-S New Car Features	NM20S0U

All information in this manual is based on the latest product information at the time of publication. However, specifications and procedures are subject to change without notice. For the most current information available, refer to the Toyota Technical Information System (TIS) online at dealership locations or on the Internet at <http://techinfo.toyota.com>.

If you find any failures in this manual, you are kindly requested to inform us by using the report form on the next page.

Title: INTRODUCTION: HOW TO USE THIS MANUAL: GENERAL INFORMATION (2013 FR-S)		

GENERAL INFORMATION

1. GENERAL DESCRIPTION

- (a) This manual is written in accordance with SAE J2008.
- (b) Repair operations can be separated mainly into the following 3 processes:
 - (1) Diagnosis
 - (2) Removing/Installing, Replacing, Disassembling/Reassembling, Checking and Adjusting
 - (3) Final Inspection
- (c) The following procedure is omitted from this manual. However, this procedure must be performed.
 - (1) Use a jack or lift to perform operations.
 - (2) Clean all removed parts.
 - (3) Perform a visual check before and after performing any work.

2. INDEX

- (a) An alphabetical INDEX section is provided at the end of the manual as a reference to help find the item to be repaired.

3. PREPARATION

- (a) Use of Special Service Tools (SST) and Special Service Materials (SSM) may be required, depending on the repair procedure. Be sure to use SST and SSM when they are required and follow the work procedure properly. A list of SST and SSM is in the "Preparation" section of this manual.

4. REPAIR PROCEDURES

- (a) A component illustration is placed under the title where necessary.
- (b) Non-reusable parts, grease application areas, precoated parts and torque specifications are noted in the component illustrations.

The following illustration is an example.

(c) Torque specifications, grease application areas and non-reusable parts are emphasized in the procedures.

HINT:

There are cases where such information can only be explained by using an illustration. In these cases, torque, oil and other information are described in the illustration.

(d) Only items with key points are described in the text. What to do and other details are explained using illustrations next to the text. Both the text and illustrations are accompanied by standard values and notices.

Illustration	What to do and where to do it
Task heading	What work will be performed
Explanation text	<ul style="list-style-type: none"> • How to perform the task • Information such as specifications and warnings, which are written in boldface text

(e) Illustrations of similar vehicle models are sometimes used. In these cases, minor details may be different from the actual vehicle.

(f) Procedures are presented in a step-by-step format.

5. SERVICE SPECIFICATIONS

(a) Specifications are presented in boldface text throughout the manual. The specifications are also found in the "Service Specifications" section for reference.

6. TERM DEFINITIONS

CAUTION	Possibility of injury to you or other people.
NOTICE	Possibility of damage to components being repaired.
HINT	Provides additional information to help you perform repairs.

7. INTERNATIONAL SYSTEM OF UNITS

- (a) The units used in this manual comply with the International System of Units (SI UNIT) standard. Other units from the metric system and the English systems are also provided.

Example:

Torque: 30 N·m (310 kgf·cm, 22ft·lbf)

Last Modified: 3-27-2012	6.4 F	From: 201203

Title: INTRODUCTION: TERMS: ABBREVIATIONS USED IN MANUAL (2013 FR-S)		

ABBREVIATIONS USED IN MANUAL

ABBREVIATION	MEANING
ABS	Anti-Lock Brake System
A/C	Air Conditioner
AC	Alternating Current
ACC	Accessory
ACIS	Acoustic Control Induction System
ACM	Active Control Engine Mount
ACSD	Automatic Cold Start Device
ACT	Actuator
A.D.D	Automatic Disconnecting Differential
ADM	P.T. Astra Daihatsu Motor
A/F	Air-Fuel Ratio
AFS	Adaptive Front-Lighting System
AHC	Active Height Control Suspension
AID	Air Injection Control Driver
ALR	Automatic Locking Retractor
ALT	Alternator
AMP	Amplifier
ANT	Antenna
ASG	Automated Sequential Gearbox
ASL	Automatic Sound Levelizer
ASSB	Assembly Services Sdn. Bhd.
A/T, ATM	Automatic Transmission (Transaxle)
A-TRAC, A-TRC	Active Traction Control
ATDC	After Top Dead Center
ATF	Automatic Transmission Fluid
AUTO	Automatic
AUX	Auxiliary
AVG	Average
AVS	Adaptive Variable Suspension
AWD	All Wheel Drive
B+, +B	Battery Voltage

BA	Brake Assist
BACS	Boost Altitude Compensation System
BATT	Battery
BDC	Bottom Dead Center
B/L	Bi-Level
B/S	Bore-Stroke Ratio
BTDC	Before Top Dead Center
BVSV	Bimetallic Vacuum Switching Valve
Calif.	California
CAN	Controller Area Network
CB	Circuit Breaker
CCM	Carbon Ceramic Material
CCo	Catalytic Converter for Oxidation
CCV	Canister Closed Valve
CD	Compact Disc
CF	Cornering Force
CG	Center of Gravity
CH	Channel
CKD	Complete Knock Down
CNG	Compressed Natural Gas
COMB.	Combination
CPS	Combustion Pressure Sensor
CPU	Central Processing Unit
CRAWL	Crawl Control
CRS	Child Restraint System
CTR	Center
C/V	Check Valve
CV	Control Valve
CVT	Continuously Variable Transmission (Transaxle)
CW	Curb Weight
DC	Direct Current
DEF	Defogger
DFL	Deflector
DIFF.	Differential
DIFF. LOCK	Differential Lock
D/INJ	Direct Injection
DLC	Data Link Connector

DLI	Distributorless Ignition
DOHC	Double Overhead Camshaft
DP	Dash Pot
DS	Dead Soak
DSP	Digital Signal Processor
DTC	Diagnostic Trouble Code
DVD	Digital Versatile Disc
EBD	Electric Brake Force Distribution
EC	Electrochromic
ECAM	Engine Control And Measurement System
ECD	Electronically Controlled Diesel
ECDY	Eddy Current Dynamometer
ECT	Electronic Controlled Automatic Transmission
ECU	Electronic Control Unit
ED	Electro-Deposited
EDU	Electronic Driving Unit
EDIC	Electric Diesel Injection Control
EFI	Electronic Fuel Injection
E/G	Engine
EGR	Exhaust Gas Recirculation
ELR	Emergency Locking Retractor
EMPS	Electric Motor Power Steering
EPS	Electric Power Steering
ENG	Engine
ES	Easy & Smooth
ESA	Electronic Spark Advance
EVAP	Evaporative Emission Control
E-VRV	Electric Vacuum Regulating Valve
EX	Exhaust
FE	Fuel Economy
FF	Front-Engine-Front-Wheel-Drive
F/G	Fuel Gauge
FIPG	Formed In Place Gasket
FL	Fusible Link
	Front Left
F/P	Fuel Pump
FR	Front

	Front Right
F/W	Flywheel
FW/D	Flywheel Damper
FWD	Front Wheel Drive
GAS	Gasoline
GND	Ground
GPS	Global Positioning System
GSA	Gear Shift Actuator
GTMC	Gac Toyota Motor Co., Ltd.
GTS	Global TechStream
H/B	Hatchback
H-FUSE	High Current Fuse
HID	High Intensity Discharge (Headlight)
HPU	Hydraulic Power Unit
HSG	Housing
HT	Hard Top
HV	Hybrid Vehicle
HWS	Heated Windshield System
IC	Integrated Circuit
IDI	Indirect Diesel Injection
IFS	Independent Front Suspension
IG	Ignition
IIA	Integrated Ignition Assembly
IMC	INDUS Motor Company Ltd.
IN	Intake (Manifold, Valve)
INT	Intermittent
I/P	Instrument Panel
IRS	Independent Rear Suspension
ISC	Idle Speed Control
ISCV	Idle Speed Control Valve
KD	Kick-Down
KDSS	Kinetic Dynamic Suspension System
LAN	Local Area Network
LCD	Liquid Crystal Display
LED	Light Emitting Diode
LEV	Low Emission Vehicle
LH	Left-Hand

LHD	Left-Hand Drive
LIN	Local Interconnect Network
L/H/W	Length, Height, Width
LLC	Long-Life Coolant
LNG	Liquefied Natural Gas
LPG	Liquefied Petroleum Gas
LSD	Limited Slip Differential
LSP & BV	Load Sensing Proportioning and Bypass Valve
LSPV	Load Sensing Proportioning Valve
MAP	Manifold Absolute Pressure
MAX.	Maximum
MIC	Microphone
MIL	Malfunction Indicator Lamp
MIN.	Minimum
MG1	Motor Generator No. 1
MG2	Motor Generator No. 2
MMT	Multi-mode Manual Transmission
MP	Multipurpose
MPI	Multipoint Electronic Injection
MPX	Multiplex Communication System
M/T	Manual Transmission (Transaxle)
MT	Mount
MTG	Mounting
N	Neutral
NA	Natural Aspiration
NO.	Number
O2S	Oxygen Sensor
OC	Oxidation Catalyst
OCV	Oil Control Valve
O/D	Overdrive
OEM	Original Equipment Manufacturing
OPT	Option
ORVR	On-board Refilling Vapor Recovery
O/S	Oversize
P & BV	Proportioning and Bypass Valve
PBD	Power Back Door
PCS	Power Control System

	Pre-crash Safety System/Pre-collision System
PCV	Positive Crankcase Ventilation
PKB	Parking Brake
PPS	Progressive Power Steering
PROM	Programmable Read Only Memory
PS	Power Steering
PSD	Power Slide Door
PTC	Positive Temperature Coefficient
PTO	Power Take-Off
PZEV	Partial Zero Emission Vehicle
P/W	Power Window

Title: INTRODUCTION: TERMS: GLOSSARY OF SAE AND SCION TERMS (2013 FR-S)		

GLOSSARY OF SAE AND SCION TERMS

This glossary lists all SAE-J1930 terms and abbreviations used in this manual in compliance with SAE recommendations, as well as their SCION equivalents.

SAE ABBREVIATION	SAE TERM	SCION TERM ()-ABBREVIATION
A/C	Air Conditioning	Air Conditioner
ACL	Air Cleaner	Air Cleaner, A/CL
AIR	Secondary Air Injection	Air Injection (AI)
AP	Accelerator Pedal	-
B+	Battery Positive Voltage	+B, Battery Voltage
BARO	Barometric Pressure	-
CAC	Charge Air Cooler	Intercooler
CARB	Carburetor	Carburetor
CFI	Continuous Fuel Injection	-
CKP	Crankshaft Position	Crank Angle
CL	Closed Loop	Closed Loop
CMP	Camshaft Position	Cam Angle
CPP	Clutch Pedal Position	-
CTOX	Continuous Trap Oxidizer	-
CTP	Closed Throttle Position	LL ON, Idle ON
DFI	Direct Fuel Injection	Direct Injection (DI./INJ)
DI	Distributor Ignition	-
DLC3	Data Link Connector 3	OBD II Diagnostic Connector
DTC	Diagnostic Trouble Code	Diagnostic Trouble Code
DTM	Diagnostic Test Mode	-
ECL	Engine Coolant Level	-
ECM	Engine Control Module	Engine Electronic Control Unit (ECU)
ECT	Engine Coolant Temperature	Coolant Temperature, Water Temperature (THW)
EEPROM	Electrically Erasable Programmable Read Only Memory	Electrically Erasable Programmable Read Only Memory (EEPROM)
EFE	Early Fuel Evaporation	Cold Mixture Heater (CMH), Heat Control Valve (HCV)
EGR	Exhaust Gas Recirculation	Exhaust Gas Recirculation (EGR)

EI	Electronic Ignition	Distributorless Ignition (DLI)
EM	Engine Modification	Engine Modification (EM)
EPROM	Erasable Programmable Read Only Memory	Programmable Read Only Memory (PROM)
EVAP	Evaporative Emission	Evaporative Emission Control (EVAP)
FC	Fan Control	-
FEEPROM	Flash Electrically Erasable Programmable Read Only Memory	-
FEPRM	Flash Erasable Programmable Read Only Memory	-
FF	Flexible Fuel	-
FP	Fuel Pump	Fuel Pump
GEN	Generator	Alternator
GND	Ground	Ground (GND)
HO2S	Heated Oxygen Sensor	Heated Oxygen Sensor (HO ₂ S)
IAC	Idle Air Control	Idle Speed Control (ISC)
IAT	Intake Air Temperature	Intake or Inlet Air Temperature
ICM	Ignition Control Module	-
IFI	Indirect Fuel Injection	Indirect Injection (IDL)
IFS	Inertia Fuel-Shutoff	-
ISC	Idle Speed Control	-
KS	Knock Sensor	Knock Sensor
MAF	Mass Airflow	Air Flow Meter
MAP	Manifold Absolute Pressure	Manifold Pressure Intake Vacuum
MC	Mixture Control	Electric Bleed Air Control Valve (EBCV) Mixture Control Valve (MCV) Electric Air Control Valve (EACV)
MDP	Manifold Differential Pressure	-
MFI	Multiport Fuel Injection	Electronic Fuel Injection (EFI)
MIL	Malfunction Indicator Lamp	Check Engine Light
MST	Manifold Surface Temperature	-
MVZ	Manifold Vacuum Zone	-
NVRAM	Non-Volatile Random Access Memory	-
O2S	Oxygen Sensor	Oxygen Sensor, O ₂ Sensor (O ₂ S)
OBD	On-Board Diagnostic	On-Board Diagnostic System (OBD)
OC	Oxidation Catalytic Converter	Oxidation Catalytic Convert (OC), CCo
OL	Open Loop	Open Loop
PAIR	Pulsed Secondary Air Injection	Air Suction (AS)
PCM	Powertrain Control Module	-

PNP	Park/Neutral Position	-
PROM	Programmable Read Only Memory	-
PSP	Power Steering Pressure	-
PTOX	Periodic Trap Oxidizer	Diesel Particulate Filter (DPF) Diesel Particulate Trap (DPT)
RAM	Random Access Memory	Random Access Memory (RAM)
RM	Relay Module	-
ROM	Read Only Memory	Read Only Memory (ROM)
RPM	Engine Speed	Engine Speed
SC	Supercharger	Supercharger
SCB	Supercharger Bypass	E-ABV
SFI	Sequential Multiport Fuel Injection	Electronic Fuel Injection (EFI), Sequential Injection
SPL	Smoke Puff Limiter	-
SRI	Service Reminder Indicator	-
SRT	System Readiness Test	-
ST	Scan Tool	-
TB	Throttle Body	Throttle Body
TBI	Throttle Body Fuel Injection	Single Point Injection Central Fuel Injection (Ci)
TC	Turbocharger	Turbocharger
TCC	Torque Converter Clutch	Torque Converter
TCM	Transmission Control Module	Transmission ECU, ECT ECU
TP	Throttle Position	Throttle Position
TR	Transmission Range	-
TVV	Thermal Vacuum Valve	Bimetallic Vacuum Switching Valve (BVSV) Thermostatic Vacuum Switching Valve (TVSV)
TWC	Three-Way Catalytic Converter	Three-Way Catalytic (TWC) Manifold Converter CC _{RO}
TWC+OC	Three-Way + Oxidation Catalytic Converter	CC _R + CCo
VAF	Volume Airflow	Air Flow Meter
VR	Voltage Regulator	Voltage Regulator
VSS	Vehicle Speed Sensor	Vehicle Speed Sensor
WOT	Wide Open Throttle	Full Throttle
WU-OC	Warm Up Oxidation Catalytic Converter	-
WU-TWC	Warm Up Three-Way Catalytic Converter	-

3GR	Third Gear	-
4GR	Fourth Gear	-

Title: INTRODUCTION: IDENTIFICATION INFORMATION: VEHICLE IDENTIFICATION AND SERIAL NUMBERS (2013 FR-S)		

VEHICLE IDENTIFICATION AND SERIAL NUMBERS

1. VEHICLE IDENTIFICATION NUMBER

- (a) The vehicle identification number is stamped on the vehicle body and on the certification label as shown in the illustration.

Text in Illustration

*A	Manual transmission	-	-
*1	Vehicle Identification Number	*2	Certification Label

2. ENGINE SERIAL NUMBER AND TRANSMISSION SERIAL NUMBER

- (a) The engine serial number is stamped on the cylinder block of the engine as shown in the illustration.

Text in Illustration

*1	FA20 Engine Serial Number
----	---------------------------

- (b) The transmission serial number is printed on the transmission number label.

Text in Illustration

*A	TL70	*B	TX6A
*1	Transmission Number Label	-	-

Last Modified: 3-27-2012	6.4 F	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000UZ30BTX
Title: INTRODUCTION: HOW TO TROUBLESHOOT ECU CONTROLLED SYSTEMS: ELECTRONIC CIRCUIT INSPECTION PROCEDURE (2013 FR-S)		

ELECTRONIC CIRCUIT INSPECTION PROCEDURE

1. BASIC INSPECTION

(a) WHEN MEASURING RESISTANCE OF ELECTRONIC PARTS

- (1) Unless otherwise stated, all resistance measurements are standard values measured at an ambient temperature of 20°C (68°F). Resistance measurements may be inaccurate if measured at high temperatures, i.e. immediately after the vehicle has been running. Measurements should be made after the engine has cooled down.

(b) HANDLING CONNECTORS

Text in Illustration

*a	INCORRECT
*b	CORRECT

- (1) When disconnecting a connector, first squeeze the mating connector housing halves tightly together to release the lock, and then press the lock claw and separate the connector.
- (2) When disconnecting a connector, do not pull on the harnesses. Grasp the connector directly and separate it.
- (3) Before connecting a connector, check that there are no deformations, damage, looseness or missing terminals.
- (4) When connecting a connector, press firmly until it locks with a "click" sound.
- (5) If checking a connector with a TOYOTA electrical tester, check the connector from the backside (harness side) using a mini test lead.

NOTICE:

- As a waterproof connector cannot be checked from the backside, check it by connecting a sub-harness.
- Do not damage the terminals by moving the inserted tester needle.

(c) CHECKING CONNECTORS

Text in Illustration

*a	Core Wire
*b	Looseness of Crimping
*c	Terminal Deformation
*d	Pull Lightly

- (1) Checking when a connector is connected: Squeeze the connectors together to confirm that they are fully connected and locked.
- (2) Checking when a connector is disconnected: Check by pulling the wire harness lightly from the backside of the connector. Look for unlatched terminals, missing terminals, loose crimps or broken conductor wires. Visually check for corrosion, metallic or foreign matter and water, and bent, rusted, overheated, contaminated or deformed terminals.

- (3) Checking the contact pressure of the terminal:
Prepare a spare male terminal. Insert it into a female terminal, and check for ample tension when inserting and after full engagement.

NOTICE:

When testing a gold-plated female terminal, always use a gold-plated male terminal.

(d) CONNECTOR TERMINAL REPAIR METHOD

Text in Illustration

*a	CORRECT
*b	INCORRECT

- (1) If there is any foreign matter on the terminal, clean the contact point with compressed air or a cloth. Never rub the contact point using sandpaper as the plating may come off.
- (2) If there is abnormal contact pressure, replace the female terminal. If the male terminal is gold-plated (gold color), use a gold-plated female terminal; if it is silver-plated (silver color), use a silver-plated female terminal.

- (3) Damaged, deformed or corroded terminals should be replaced. If the terminal does not lock into the housing, the housing may have to be replaced.

(e) WIRE HARNESS HANDLING

Text in Illustration

*a	INCORRECT
----	-----------

- (1) If removing a wire harness, check the wiring and clamps before proceeding so that it can be restored in the same way.
- (2) Never twist, pull or slacken the wire harness more than necessary.
- (3) The wire harness should never come into contact with any high temperature part, rotating, moving, vibrating or sharp-edged parts. Avoid contact with panel edges, screw tips and other sharp items.
- (4) When installing parts, never pinch the wire harness.
- (5) Never cut or break the cover of the wire harness. If it is cut or broken, repair it with insulating tape or replace the wire harness.

2. CHECK FOR OPEN CIRCUIT

- (a) For an open circuit in the wire harness in Fig. 1, measure the resistance and voltage as follows:

(b) Check the resistance.

- (1) Disconnect connectors A and C and measure the resistance between the terminals of the connectors.

Standard Resistance (Fig. 2):

TESTER CONNECTION	SPECIFIED CONDITION
Connector A terminal 1 - Connector C terminal 1	10 kΩ or higher
Connector A terminal 2 - Connector C terminal 2	Below 1 Ω

HINT:

Measure the resistance while lightly shaking the wire harness vertically and horizontally.

If the results match the values specified above, an open circuit exists between terminal 1 of connector A and terminal 1 of connector C.

- (2) Disconnect connector B and measure the resistance between the terminals of the connectors.

Standard Resistance (Fig. 3):

TESTER CONNECTION	SPECIFIED CONDITION
Connector A terminal 1 - Connector B1 terminal 1	Below 1 Ω
Connector B2 terminal 1 - Connector C terminal 1	10 kΩ or higher

If the results match the values specified above, an open circuit exists between terminal 1 of connector B2 and terminal 1 of connector C.

- (c) Check the voltage.

- (1) In a circuit in which voltage is applied to the ECU connector terminal, an open circuit can be checked by conducting a voltage check.

With each connector still connected, measure the voltage between body ground and the following terminals (in this order): 1) terminal 1 of connector A, 2) terminal 1 of connector B, and 3) terminal 1 of connector C.

Standard Voltage (Fig. 4):

TESTER CONNECTION	SPECIFIED CONDITION
Connector A terminal 1 - Body ground	5 V
Connector B terminal 1 - Body ground	5 V
Connector C terminal 1 - Body ground	Below 1 V

If the results match the values specified above, an open circuit exists in the wire harness between terminal 1 of connector B and terminal 1 of connector C.

3. CHECK FOR SHORT CIRCUIT

(a) If a wire in the harness is shorted to ground (Fig. 5), locate the shorted section by measuring the resistance as follows:

(b) Check the resistance to body ground.

(1) Disconnect connectors A and C and measure the resistance.

Standard Resistance (Fig. 6):

TESTER CONNECTION	SPECIFIED CONDITION
Connector A terminal 1 - Body ground	Below 1 Ω
Connector A terminal 2 - Body ground	10 k Ω or higher

HINT:

Measure the resistance while lightly shaking the wire harness vertically and horizontally.

If the results match the values specified above, a short circuit exists between terminal 1 of connector A and terminal 1 of connector C.

(2) Disconnect connector B and measure the resistance.

Standard Resistance (Fig. 7):

TESTER CONNECTION	SPECIFIED CONDITION
Connector A terminal 1 - Body ground	10 k Ω or higher
Connector B2 terminal 1 - Body ground	Below 1 Ω

If the results match the values specified above, a

short circuit exists between terminal 1 of connector B2 and terminal 1 of connector C.

4. CHECK AND REPLACE ECU

NOTICE:

- The connector should not be disconnected from the ECU. Perform the inspection from the backside of the connector on the wire harness side.
- When no measuring condition is specified, perform the inspection with the engine stopped and the ignition switch ON.
- Check that the connectors are fully seated. Check for loose, corroded or broken wires.

(a) First, check the ECU ground circuit. If it is faulty, repair it. If it is normal, the ECU could be faulty. Temporarily replace the ECU with a normally functioning one and check if the symptoms occur. If the trouble symptoms disappear, replace the original ECU.

(1) Measure the resistance between the ECU ground terminal and body ground.

Text in Illustration

*a	Ground
----	--------

Standard resistance:
Below 1 Ω

(2) Disconnect the ECU connector. Check the ground terminals on the ECU side and wire harness side for bent terminals, corrosion or foreign matter. Lastly, check the contact pressure of the female terminals.

Text in Illustration

*a	Component without harness connected (ECU)
*b	Ground
*c	Front view of wire harness connector (to ECU)
*d	Ground

Title: INTRODUCTION: HOW TO TROUBLESHOOT ECU CONTROLLED SYSTEMS: GENERAL INFORMATION (2013 FR-S)		

GENERAL INFORMATION

A large number of ECU controlled systems are used in this vehicle. In general, ECU controlled systems are considered to be very intricate, requiring a high level of technical knowledge to troubleshoot. However, most problem checking procedures only involve inspecting the ECU controlled system circuits one by one. An adequate understanding of the system and a basic knowledge of electricity is enough to perform effective troubleshooting, accurate diagnosis and necessary repairs.

(For using the Techstream*)

HINT:

***: The Techstream is the name for the diagnostic tester in North America.**

- o Before using the Techstream, read the operator's manual thoroughly.
- o If the Techstream cannot communicate with the ECU controlled systems when connected to the DLC3 with the ignition switch ON and the Techstream turned on, there is a problem on the vehicle side or the Techstream side.
 - i. If communication is possible when the Techstream is connected to another vehicle, inspect the diagnosis data link line (bus (+) line), CANH and CANL lines, and the power circuits for the vehicle ECUs.
 - ii. If communication is still not possible when the Techstream is connected to another vehicle, the problem is probably in the Techstream itself. Perform the Self Test procedure outlined in the Techstream operator's manual.

1. TROUBLESHOOTING PROCEDURES

- The troubleshooting procedures consist of diagnosis procedures for when a DTC is stored and diagnosis procedures for when no DTC is stored. The basic idea is explained in the following table.

PROCEDURE TYPE	DETAILS	TROUBLESHOOTING METHOD
DTC Based Diagnosis	The diagnosis procedure is based on the DTC that is stored.	The malfunctioning part is identified based on the DTC detection conditions using a process of elimination. The possible trouble areas are eliminated one-by-one by use of the Techstream and inspection of related parts.
Symptom Based Diagnosis (No DTCs stored)	The diagnosis procedure is based on problem symptoms.	The malfunctioning part is identified based on the problem symptoms using a process of elimination. The possible trouble areas are eliminated one-by-one by use of the Techstream and inspection of related parts.

- Vehicle systems are complex and use many ECUs that are difficult to inspect independently. Therefore, a process of elimination is used, where components that can be inspected

individually are inspected, and if no problems are found in these components, the related ECU is identified as the problem and replaced.

- It is extremely important to ask the customer about the environment and the conditions present when the problem occurred (Customer Problem Analysis). This makes it possible to simulate the conditions and confirm the symptom. If the symptom cannot be confirmed or the DTC does not recur, the malfunctioning part may not be identified using the troubleshooting procedure, and the ECU for the related system may be replaced even though it is not defective. If this happens, the original problem will not be solved.
- In order to prevent endless expansion of troubleshooting procedures, the troubleshooting procedures are written with the assumption that multiple malfunctions do not occur simultaneously for a single problem symptom.
- To identify the malfunctioning part, troubleshooting procedures narrow down the target by separating components, ECUs and wire harnesses during the inspection. If the wire harness is identified as the cause of the problem, it is necessary to inspect not only the connections to components and ECUs but also all of the wire harness connectors between the component and the ECU.

2. DESCRIPTION

- (a) The data of each system and Diagnostic Trouble Codes (DTCs) can be read from the Data Link Connector 3 (DLC3) of the vehicle. When the system seems to be malfunctioning, use the Techstream to check for malfunctions and perform repairs.

3. CHECK DLC3

- (a) The vehicle ECUs use ISO 15765-4 communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

TERMINAL NO. (SYMBOL)	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
4 (CG) - Body ground	Chassis ground	Always	Below 1 Ω
5 (SG) - Body ground	Signal ground	Always	Below 1 Ω
16 (BAT) - Body ground	Battery positive	Always	11 to 14 V
6 (CANH) - 14 (CANL)	CAN bus line	Ignition switch off*	57 to 63 Ω
6 (CANH) - 4 (CG)	HIGH-level CAN bus line	Ignition switch off*	200 Ω or higher
14 (CANL) - 4 (CG)	LOW-level CAN bus line	Ignition switch off*	200 Ω or higher
6 (CANH) - 16 (BAT)	HIGH-level CAN bus line	Ignition switch off*	6 k Ω or higher
14 (CANL) - 16 (BAT)	LOW-level CAN bus line	Ignition switch off*	6 k Ω or higher

NOTICE:

*: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors.

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness or connector.

Last Modified: 3-27-2012	6.4 D	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000UZ1088X
Title: INTRODUCTION: HOW TO TROUBLESHOOT ECU CONTROLLED SYSTEMS: HOW TO PROCEED WITH TROUBLESHOOTING (2013 FR-S)		

HOW TO PROCEED WITH TROUBLESHOOTING

1. OPERATION FLOW

HINT:

Perform troubleshooting in accordance with the procedure below. The following is an outline of basic troubleshooting procedure. Confirm the troubleshooting procedure for the circuit you are working on before beginning troubleshooting.

1.	VEHICLE BROUGHT TO WORKSHOP
-----------	------------------------------------

NEXT

2.	CUSTOMER PROBLEM ANALYSIS
-----------	----------------------------------

(a) Ask the customer about the conditions and environment when the problem occurred.

NEXT

3.	INSPECT BATTERY VOLTAGE
-----------	--------------------------------

Standard voltage:

11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

NEXT

4.	SYMPTOM CONFIRMATION AND DTC (AND FREEZE FRAME DATA) CHECK
-----------	---

(a) Visually check the wire harnesses, connectors and fuses for open and short circuits.

(b) Warm up the engine to the normal operating temperature.

(c) Confirm the problem symptoms and conditions, and check for DTCs.

Result:

RESULT	PROCEED TO
DTC is output	A
DTC is not output	B

B  GO TO STEP 6

A

5.	DTC CHART
-----------	------------------

(a) Find the output DTC in the DTC chart. Look at the Trouble Area column for a list of potentially malfunctioning circuits and/or parts.

NEXT  GO TO STEP 7

6.	PROBLEM SYMPTOMS CHART
-----------	-------------------------------

(a) Find the problem symptoms in the problem symptoms table. Look at the Suspected Area column for a list of potentially malfunctioning circuits and/or parts.

NEXT

7.	CIRCUIT INSPECTION OR PARTS INSPECTION
-----------	---

(a) Identify the malfunctioning circuit or part.

NEXT

8.	ADJUST, REPAIR OR REPLACE
-----------	----------------------------------

(a) Adjust, repair or replace the malfunctioning circuit or parts.

NEXT

9.	CONFIRMATION TEST
-----------	--------------------------

(a) After the adjustment, repairs or replacement of components, confirm that the malfunction no longer exists. If the malfunction does not recur, perform a confirmation test under the same conditions and in the same environment as when the malfunction first occurred.

NEXT **END**

2. CUSTOMER PROBLEM ANALYSIS

HINT:

- When troubleshooting, confirm that the problem symptoms have been accurately identified. Preconceptions should be discarded in order to make an accurate judgment. To clearly understand what the problem symptoms are, it is extremely important to ask the customer about the problem and the conditions at the time the malfunction occurred.
- Gather as much information as possible for reference. Past problems that seem unrelated may also help in some cases.
- The following 5 items are important points for problem analysis:

What	Vehicle model, system name
When	Date, time, occurrence frequency
Where	Road conditions
Under what conditions?	Driving conditions, weather conditions
How did it happen?	Problem symptoms

3. SYMPTOM CONFIRMATION AND DIAGNOSTIC TROUBLE CODE

HINT:

The diagnostic system in this vehicle has various functions.

- The first function is the Diagnostic Trouble Code (DTC) check. A DTC is a code stored in the ECU memory whenever a malfunction in the signal circuits to the ECU occurs. In a DTC check, a previous malfunction's DTC can be checked by a technician during troubleshooting.
- Another function is the Input Signal Check, which checks if the signals from various switches are sent to the ECU correctly.

By using these functions, the problem areas can be narrowed down and troubleshooting can be more effective. Diagnostic functions are incorporated in the following systems of this vehicle.

SYSTEM	SYMPTOM CONFIRMATION AND DIAGNOSTIC TROUBLE CODE				
	DTC CHECK	DTC CHECK	SENSOR CHECK/TEST MODE (INPUT SIGNAL CHECK)	DATA LIST	ACTIVE TEST

	(NORMAL MODE)	(CHECK MODE)

Lighting System (EXT)	o	-	-	o	o
Horn System	-	-	-	-	-

- In the DTC check, it is very important to determine whether the problem indicated by the DTC either: 1) still occurs, or 2) occurred in the past but has returned to normal. In addition, the DTC should be compared to the problem symptom to see if they are related. For this reason, DTCs should be checked before and after confirmation of symptoms (i.e., whether or not problem symptoms exist) to determine current system conditions, as shown in the flowchart below.
- Never skip the DTC check. Failing to check for DTCs, depending on the case, may result in unnecessary troubleshooting for systems operating normally or lead to repairs not related to the problem. Follow the procedure listed in the flowchart in the correct order.
- The following flowchart shows how to proceed with troubleshooting using the DTC check. Directions from the flowchart will indicate how to proceed either to DTC troubleshooting or to the troubleshooting of each problem symptom.

1.	DTC CHECK
-----------	------------------

NEXT

2.	MAKE A NOTE OF DTC DISPLAYED AND THEN CLEAR DTCs
-----------	---

NEXT

3.	SYMPTOM CONFIRMATION
-----------	-----------------------------

Result:

RESULT	PROCEED TO
No symptoms exist	A
Symptoms exist	B

B ► GO TO STEP 5

A

4.	SIMULATION TEST USING SYMPTOM SIMULATION METHODS
-----------	---

NEXT

5.	DTC CHECK
-----------	------------------

Result:

RESULT	PROCEED TO
DTC is not output	A
DTC is output	B

B ► TROUBLESHOOT FOR PROBLEM INDICATED BY DTC

A

6.	SYMPTOM CONFIRMATION
-----------	-----------------------------

Result:

RESULT	PROCEED TO
Symptoms exist	A

If a DTC was displayed in the initial DTC check, the problem may have occurred in a wire harness or connector in that circuit in the past. Check the wire harness and connectors.

B ▶ END

A ▶ TROUBLESHOOT FOR EACH PROBLEM SYMPTOM

If problem symptoms are present, but no DTCs were stored again after they were cleared, then the problem causing the symptom may be occurring for something that does not store DTCs (the DTC that was displayed in the initial DTC check may have been from a past problem or a secondary problem).

4. SYMPTOM SIMULATION

HINT:

The most difficult case in troubleshooting is when no problem symptoms occur. In such a case, a thorough problem analysis must be carried out. A simulation of the same or similar conditions and environment in which the problem occurred in the customer's vehicle should be carried out. No matter how much skill or experience a technician has, troubleshooting without confirming the problem symptoms will lead to important repairs being overlooked and mistakes or delays.

For example:

With a problem that only occurs when the engine is cold or as a result of vibration caused by the road during driving, the problem can never be determined if the symptoms are being checked on a stationary vehicle or a vehicle with a warmed-up engine. Vibration, heat or water penetration (moisture) is difficult to reproduce. The following symptom simulation tests are effective substitutes for the conditions and can be applied to a stationary vehicle. Important points in the symptom simulation test:

In the symptom simulation test, the problem symptoms as well as the problem area or parts must be confirmed. First, narrow down the possible problem circuits according to the symptoms. Then, connect the tester and carry out the symptom simulation test, judging whether the circuit being tested is defective or normal. Also, confirm the problem symptoms at the same time. Refer to Problem Symptoms Table for each system to narrow down the possible causes.

To reproduce DTCs, it is necessary to satisfy the respective DTC detection conditions.

- (a) VIBRATION METHOD: When a malfunction seems to occur as a result of vibration.

Text in Illustration

*a	Vibrate Slightly
*b	Shake Slightly

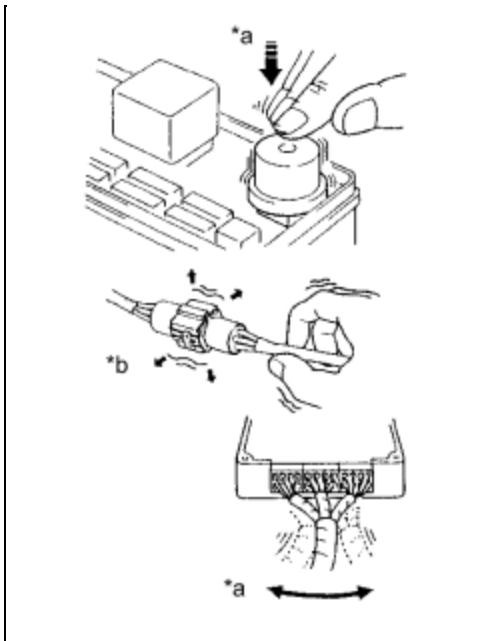

(1) PARTS OR SENSORS

Apply slight vibration with a finger to the part or sensor suspected to be the cause of the problem, and check whether the malfunction occurs.

NOTICE:

Applying strong vibration to relays may open the relays.

(2) CONNECTORS

Slightly shake the connector vertically and horizontally.

(3) WIRE HARNESS

Slightly shake the wire harness vertically and horizontally.

HINT:

The connector joint and fulcrum of the vibration are the major areas that should be checked thoroughly.

(b) HEAT METHOD: When a malfunction seems to occur when the area in question is heated.

(1) Heat the component that is the possible cause of the malfunction with a hair dryer or similar device. Check if the malfunction occurs.

NOTICE:

- Do not heat components to more than 60°C (140°F). Exceeding this temperature may damage the components.
- Do not apply heat directly to parts in an ECU.

(c) WATER SPRINKLING METHOD: When a malfunction seems to occur on a rainy day or in high-humidity.

(1) Sprinkle water onto the vehicle and check if the malfunction occurs.

NOTICE:

- Never sprinkle water directly into the engine compartment. Indirectly change the temperature and humidity by spraying water onto the front of the radiator.
- Never apply water directly onto the electronic components.

HINT:

If the vehicle has or had a water leak problem, the leak may have damaged the ECU or connections. Look for evidence of corrosion or short circuits. Proceed with caution during water tests.

(d) HIGH ELECTRICAL LOAD METHOD: When a malfunction seems to occur when the electrical load is high.

- (1) Turn on the heater blower, headlights, rear window defogger and all other electrical loads. Check if the malfunction recurs.

5. DIAGNOSTIC TROUBLE CODE CHART

Look for output Diagnostic Trouble Codes (DTCs) (from the DTC checks) in the appropriate section's Diagnostic Trouble Code chart. Use the chart to determine the trouble area and the proper inspection procedure. A description of each of the chart's columns is shown in the table below.

ITEM	DESCRIPTION
DTC No.	Indicates the diagnostic trouble code.
Detection Item	Indicates the system or details of the problem.
Trouble Area	Indicates the suspected areas of the problem.
See page	Indicates the page where the inspection procedure for each circuit is to be found, or gives instruction for checking and repairs.

6. PROBLEM SYMPTOMS TABLE

When no DTC is output but the problem still occurs, use the Problem Symptoms Table. The suspected areas (circuits or parts) for each problem symptom are shown in the table. The suspected areas are listed in order of probability. A description of each of the table columns is shown in the following table.

HINT:

In some cases, the problem is not detected by the diagnostic system even though a problem symptom occurs. It is possible that the problem occurs outside the detection range of the diagnostic system, or that the problem occurs in a completely different system.

ITEM	DESCRIPTION
Symptom	-
Suspected Area	Indicates the circuit or part which needs to be checked.
See page	Indicates the page where the inspection procedure is located.

7. INSPECTION

A description of the main points for inspection of suspected areas is shown in the following table.

ITEM	DESCRIPTION
Description	The major role and operation of the circuit or system and its component parts are explained.
DTC No., DTC	

Detection Condition and Trouble Area	Indicates the diagnostic trouble codes, DTC detection conditions and suspected areas for a problem.
Wiring Diagram	<p>This is a wiring diagram for the circuit or system.</p> <p>This diagram can be used together with the Electrical Wiring Diagram to thoroughly understand the circuit.</p> <p>Wire colors are indicated by alphabetical codes. B = Black, L = Blue, R = Red, BR = Brown, LG = Light Green, V = Violet, G = Green, O = Orange, W = White, GR = Gray, P = Pink, Y = Yellow, SB = Sky Blue</p> <p>The first letter indicates the basic wire color and the second letter indicates the color of the stripe.</p>
Inspection Procedure	This shows the procedure not only to determine whether the circuit is normal or abnormal, but also to determine whether the problem is located in the sensors, actuators, wire harness or ECU.
Illustration of the ECU connector during the check	<p>The illustration shows whether the connector being checked is connected or disconnected.</p> <p>The connections for an electrical tester are indicated by (+) or (-) after the terminal name.</p> <p>For inspections between a connector and body ground, information about the ground is not shown in the illustration.</p>

Title: INTRODUCTION: REPAIR INSTRUCTION: PRECAUTION (2013 FR-S)		

PRECAUTION

1. BASIC REPAIR HINT

(a) HINTS ON OPERATIONS

1	Attire	<ul style="list-style-type: none"> • Always wear a clean uniform. • A hat and safety shoes must be worn.
2	Vehicle protection	Prepare a grille cover, fender cover, seat cover and floor mat before starting work.
3	Safety procedures	<ul style="list-style-type: none"> • When working with 2 or more persons, be sure to check the safety of one another. • When working with the engine running, make sure to provide ventilation for exhaust fumes in the workshop. • If working on high temperature, high pressure, rotating, moving or vibrating parts, wear appropriate safety equipment and take extra care not to injure yourself or others. • When jacking up the vehicle, be sure to support the specified locations with safety stands. • When lifting up the vehicle, use appropriate safety equipment.
	Preparation of	

4	tools and measuring equipment	Before starting work, prepare a tool stand, SST, measuring equipment, oil, and any replacement parts required.
5	Removal and installation, disassembly and assembly operations	<ul style="list-style-type: none"> • Diagnose with a thorough understanding of proper procedures and of the reported problem. • Before removing any parts, check the general condition of the assembly and for deformation and damage. • If the procedure is complicated, take notes. For example, note the total number of electrical connections, bolts or hoses removed. Add matchmarks to ensure reassembly of components in the original positions. Temporarily mark hoses and their fittings if needed. • Clean and wash the removed parts if necessary and assemble them after a thorough check.
6	Removed parts	<ul style="list-style-type: none"> • Place the removed parts in a separate box to avoid mixing them up with new parts or contaminating the new parts. • For non-reusable parts such as gaskets, O-rings and self-locking nuts, replace them with new ones as instructed in this manual. • Retain the removed parts for customer inspection, if requested.
7*	Checks to perform after work is finished	<ul style="list-style-type: none"> • Make sure that removed and installed parts (oil filler cap, level dipstick, floor mat, etc.) are properly installed/tightened. • Make sure that none of the cloths or tools that were used have been left in the engine compartment or within the vehicle. • Check that there are no oil leaks.

CAUTION:

*: Be sure to perform these checks properly, Not performing these checks properly after finishing work can lead to serious accident or injury.

(b) JACKING UP AND SUPPORTING THE VEHICLE

- (1) Care must be taken when jacking up and supporting the vehicle. Be sure to lift and support the vehicle at the proper locations.

(c) PRECOATED PARTS

Text in Illustration

*a	Seal Lock Adhesive
----	--------------------

- (1) Precoated parts are bolts and nuts that are coated with seal lock adhesive at the factory.
- (2) If a precoated part is retightened, loosened or moved in any way, it must be recoated with the specified adhesive.
- (3) When reusing a precoated part, clean off the old adhesive and dry the part with compressed air. Then apply new seal lock adhesive appropriately to that part.
- (4) Some seal lock agents harden slowly. You may have to wait for the seal lock adhesive to harden.

(d) GASKETS

(1) When necessary, use a sealer on gaskets to prevent leaks.

(e) BOLTS, NUTS AND SCREWS

(1) Carefully follow all the specifications for tightening torque. Always use a torque wrench.

(2) Make sure that no foreign matter (burrs, paint, etc.) gets trapped under the heads of the bolts and nuts when tightening them.

(f) FUSES

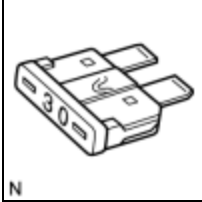

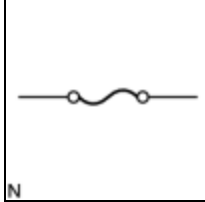

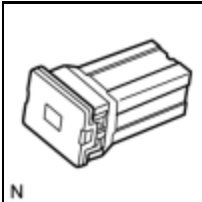

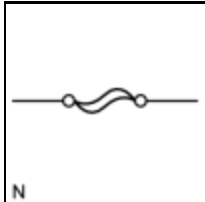

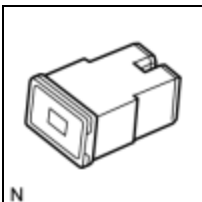

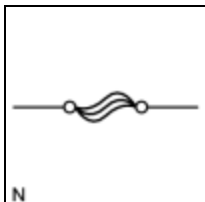

Text in Illustration

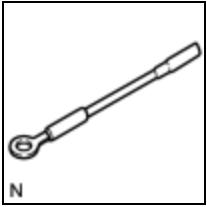

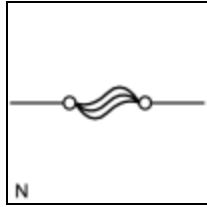

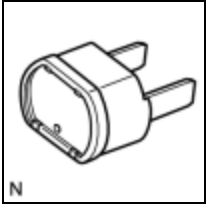

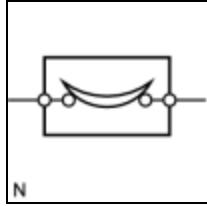

*a	INCORRECT
*b	CORRECT

(1) When inspecting a fuse, check that the wire of the fuse is not broken.

(2) If the wire of a fuse is broken, confirm that there are no shorts in its circuit.

(3) When a fuse is replaced, a fuse with the same amperage rating must be used.

ILLUSTRATION	SYMBOL	PART NAME	ABBREVIATION
		FUSE	FUSE
		MEDIUM CURRENT FUSE	M-FUSE
		HIGH CURRENT FUSE	H-FUSE

 <p>N</p>	 <p>N</p>	FUSIBLE LINK	FL
 <p>N</p>	 <p>N</p>	CIRCUIT BREAKER	CB

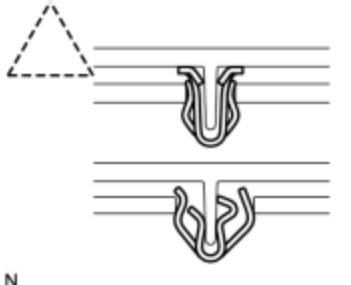

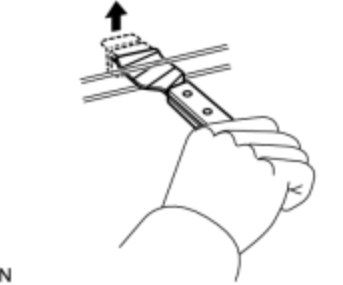

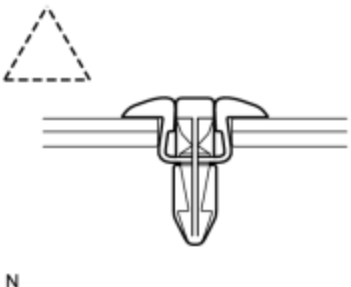

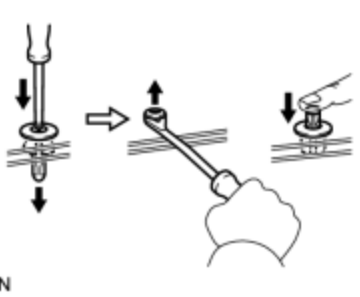

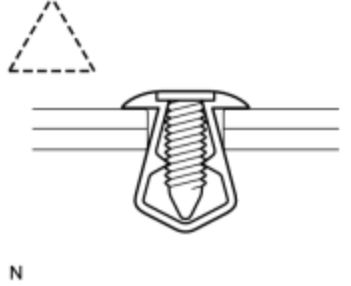

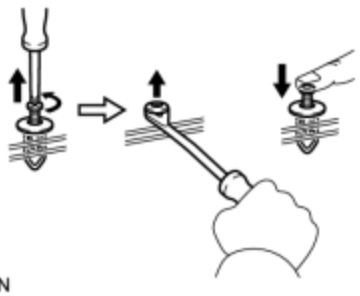

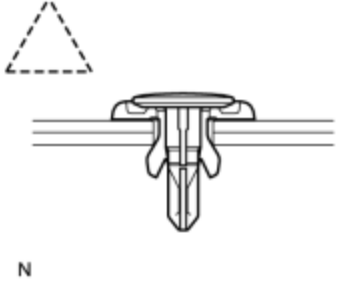

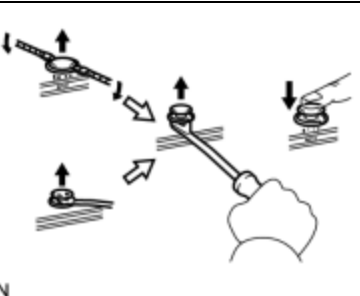

(g) CLIPS

(1) The removal and installation methods of typical clips used for vehicle body parts are shown in the table below.

HINT:

If clips are damaged during a procedure, always replace the damaged clips with new ones.

SHAPE (EXAMPLE)	REMOVAL/INSTALLATION
 <p>N</p>	 <p>N</p> <p>Remove the clips with a clip remover or pliers.</p>
 <p>N</p>	 <p>N</p> <p>Remove the clips with a clip remover or screwdriver.</p>

 <p>N</p>	 <p>N</p>
 <p>N</p>	 <p>N</p>
 <p>N</p>	 <p>N</p>
 <p>N</p>	 <p>N</p>

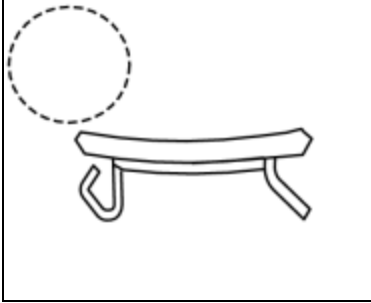

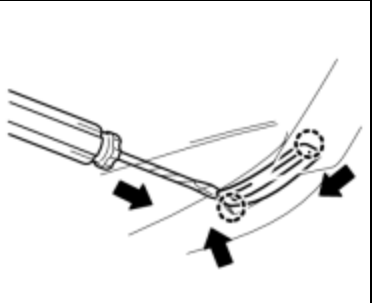

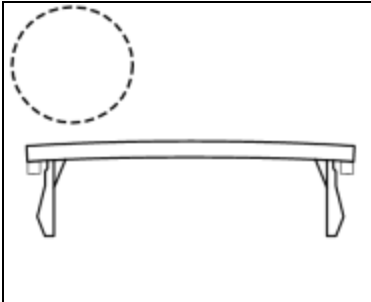

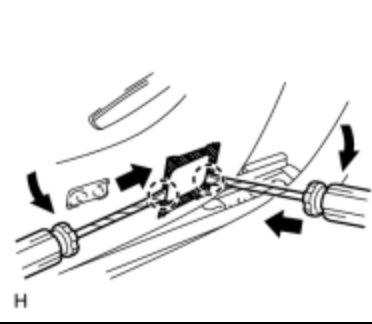

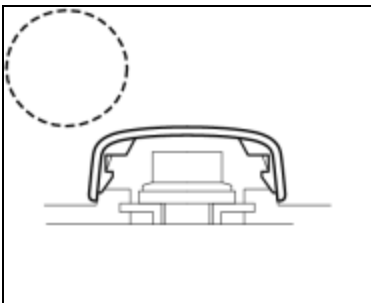

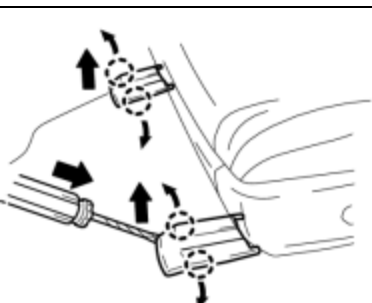

(h) CLAWS

(1) The removal and installation methods of typical claws used for vehicle body parts are shown in the table below.

HINT:

If claws are damaged during a procedure, always replace the cap or cover that has damaged claws

with a new one.

SHAPE (EXAMPLE)	ILLUSTRATION	PROCEDURE
		<p>Using a screwdriver, disengage the claws and remove the cap or cover.</p>
		<p>Using a screwdriver, disengage the claws and remove the cap or cover.</p>
		<p>Using a screwdriver, disengage the claws and remove the cap or cover.</p>

(i) HINGES, GUIDES, CLAMPS, PINS, ETC.

(1) The removal and installation methods of typical hinges, guides, clamps and pins used for vehicle body parts are shown in the table below.

HINT:

If clamps are damaged during a procedure, always replace the cap or cover that has damaged clamps with a new one.

SHAPE (EXAMPLE)	REMOVAL/INSTALLATION

(j) REMOVAL AND INSTALLATION OF VACUUM HOSES

(1) To disconnect a vacuum hose, pull and twist it from the end of the hose. Do not pull it from the middle of the hose as this may damage the hose.

Text in Illustration

*a	INCORRECT
*b	CORRECT

(2) When disconnecting vacuum hoses, use tags to identify where they should be reconnected.

(3) After completing any hose related repairs, double-check that the vacuum hoses are properly connected. The label under the hood shows the proper layout.

(4) When using a vacuum gauge, never force the hose onto a connector that is too large. If a hose has been stretched, air may leak. Use a step-down adapter if necessary.

(k) TORQUE WHEN USING TORQUE WRENCH WITH EXTENSION TOOL

(1) Use the formula below to calculate special torque values for situations where SST or an extension tool is combined with a torque wrench.

Formula

$$T' = (L2 / (L1 + L2)) * T$$

T'	Reading of torque wrench {N*m (kgf*cm, ft.*lbf)}
T	Torque {N*m (kgf*cm, ft.*lbf)}
L1	Length of SST or extension tool {cm (in.)}
L2	Length of torque wrench {cm (in.)}

NOTICE:

If an extension tool or SST is combined with a torque wrench and used to tighten to a torque specification in this manual, the actual torque will be excessive and parts will be damaged.

2. FOR VEHICLES EQUIPPED WITH SRS AIRBAG AND SEAT BELT PRETENSIONER

This vehicle is equipped with a Supplemental Restraint System (SRS).

CAUTION:

- Before performing pre-disposal deployment of any SRS component, review and closely follow all applicable environmental and hazardous material regulations. Pre-disposal deployment may be considered hazardous material treatment.
- Failure to carry out the service operations in the correct sequence could cause the SRS to unexpectedly deploy during servicing and lead to serious injury. Furthermore, if a mistake is made when servicing the SRS, it is possible that the SRS may fail to operate properly. Before servicing (including removal or installation of parts, inspection or replacement), be sure to read the following section carefully.

(a) GENERAL NOTICE

- (1) The power window system utilizes a mechanism in which the door glass moves down slightly when the door is opened, and in which the glass moves up when the door closed in order to prevent the door molding from being damaged. When the negative (-) battery terminal needs to be disconnected for servicing, fully open the driver and passenger door glasses in advance.
- (2) As malfunctions of the SRS are difficult to confirm, the Diagnostic Trouble Codes (DTCs) become the most important source of information when troubleshooting. When troubleshooting the SRS, always check for DTCs before disconnecting the battery.
- (3) Work must be started at least 90 seconds after the ignition switch is turned off and after the cable is disconnected from the negative (-) battery terminal.

The SRS is equipped with a back-up power source. If work is started within 90 seconds after turning the ignition switch off and disconnecting the cable from the negative (-) battery terminal, the SRS may deploy.

When the cable is disconnected from the negative (-) battery terminal, the clock and audio system memory will be cleared. Before starting work, make a note of the settings of each memory system. When work is finished, reset the clock and audio system as before.

CAUTION:

Never use a back-up power source (battery or other) to avoid clearing the system memory. The back-up power source may inadvertently power the SRS and cause it to deploy.

- (4) If the vehicle has been involved in a minor collision where the SRS does not deploy, the steering pad, front passenger airbag assembly, knee airbag assembly, front seat side airbag assembly, curtain shield airbag assembly and front seat outer belt assembly should be inspected before further use of the vehicle.
- (5) Never use SRS parts from another vehicle. When replacing parts, use new ones.
- (6) Before repairs, remove the airbag sensor assemblies if impacts are likely to be applied to the sensor during repairs.
- (7) Never disassemble and attempt to repair any airbag sensor assemblies or airbag assemblies.
 1. Steering pad
 2. Front passenger airbag assembly
 3. Front seat side airbag assembly
 4. Curtain shield airbag assembly
 5. Front seat outer belt assembly
- (8) Replace the airbag sensor assemblies and the airbag assemblies if: 1) damage has occurred from being dropped, or 2) cracks, dents or other defects in the case, bracket or connector are present.
- (9) Do not directly expose the airbag sensor assemblies or airbag assemblies to hot air or flames.
- (10) Use a voltmeter/ohmmeter with high impedance (minimum = 10 k Ω) for troubleshooting electrical circuits.

- (11) Information labels are attached to the SRS components. Follow the instructions on the labels.
- (12) After work on the SRS is completed, check the SRS warning light.

(b) SPIRAL CABLE

- (1) The steering wheel must be fitted correctly to the steering column with the spiral cable at the neutral position. Otherwise, cable damage and other problems may occur. Refer to the information about correct installation of the steering wheel  .

(c) STEERING PAD

- (1) Always place a removed or new steering pad with the surface facing upward. Placing the steering pad with the pad surface facing downward could cause a serious accident if the airbag deploys. Also, do not place anything on top of the steering pad.
- (2) Never measure the resistance of the airbag squib. This may cause the airbag to deploy, which could cause serious injury.
- (3) Grease or detergents of any kind should not be applied to the steering pad.
- (4) Store the steering pad in an area where the ambient temperature is below 93°C (199°F), the humidity is not high and there is no electrical noise.
- (5) Before using an electric welder anywhere on the vehicle, disconnect the airbag ECU assembly connectors. These connectors contain shorting springs. This feature reduces the possibility of the airbag deploying due to current entering the squib wiring.
- (6) When disposing of the vehicle or the steering pad by itself, the airbag should be deployed using SST before disposal  . Deploy the airbag in a safe place away from electrical noise.

(d) FRONT PASSENGER AIRBAG ASSEMBLY

- (1) Always place a removed or new front passenger airbag assembly with the pad surface facing upward. Placing the airbag assembly with the airbag deployment direction facing downward could cause a serious accident if the airbag deploys.
- (2) Never measure the resistance of the airbag squib. This may cause the airbag to deploy, which could cause serious injury.
- (3) Grease or detergents of any kind should not be applied to the front passenger airbag assembly.
- (4) Store the airbag assembly in an area where the ambient temperature is below 93°C (199°F), the humidity is not high and there is no electrical noise.
- (5) Before using an electric welder anywhere on the vehicle, disconnect the airbag ECU assembly connectors. These connectors contain shorting springs. This feature reduces the possibility of the airbag deploying due to current entering the squib wiring.
- (6) When disposing of the vehicle or the airbag assembly unit by itself, the airbag should be deployed using SST before disposal  . Deploy the airbag in a safe place away from electrical noise.

(e) FRONT SEAT SIDE AIRBAG ASSEMBLY

- (1) Always place a removed or new front seat side airbag assembly with the airbag deployment direction facing upward.
- (2) Never measure the resistance of the airbag squib. This may cause the airbag to deploy, which could cause serious injury.
- (3) Grease or detergents of any kind should not be applied to the front seat side airbag assembly.
- (4) Store the airbag assembly in an area where the ambient temperature is below 93°C (199°F), the humidity is not high and there is no electrical noise.
- (5) Before using an electric welder anywhere on the vehicle, disconnect the airbag ECU assembly connectors. These connectors contain shorting springs. This feature reduces the possibility of the airbag deploying due to current entering the squib wiring.

- (6) When disposing of a vehicle or the airbag assembly unit by itself, the airbag should be deployed using SST before disposal **INFO** . Deploy the airbag in a safe place away from electrical noise.
- (f) CURTAIN SHIELD AIRBAG ASSEMBLY
- (1) Always place a removed or new curtain shield airbag assembly in a clear plastic bag, and keep it in a safe place.

CAUTION:

The plastic bag should be disposed of after use.

NOTICE:

Never disassemble the curtain shield airbag assembly.

- (2) Never measure the resistance of the airbag squib. This may cause the airbag to deploy, which could cause serious injury.
- (3) Grease or detergents of any kind should not be applied to the curtain shield airbag assembly.
- (4) Store the airbag assembly in an area where the ambient temperature is below 93°C (199°F), the humidity is not high and there is no electrical noise.
- (5) Before using an electric welder anywhere on the vehicle, disconnect the airbag ECU assembly connectors. These connectors contain shorting springs. This feature reduces the possibility of the airbag deploying due to current entering the squib wiring.
- (6) When disposing of a vehicle or the airbag assembly unit by itself, the airbag should be deployed using SST before disposal **INFO** . Deploy the airbag in a safe place away from electrical noise.

(g) FRONT SEAT OUTER BELT ASSEMBLY (SEAT BELT PRETENSIONER)

- (1) Never measure the resistance of the front seat outer belt assembly. This may cause the pretensioner of the front seat outer belt assembly to activate, which could cause serious injury.
- (2) Never disassemble the front seat outer belt assembly.
- (3) Never install the front seat outer belt assembly on another vehicle.
- (4) Store the seat outer belt assembly in an area where the ambient temperature is below 80°C (176°F), the humidity is not high and there is no electrical noise.
- (5) Before using an electric welder anywhere on the vehicle, disconnect the airbag ECU assembly connectors. These connectors contain shorting springs. This feature reduces the possibility of the airbag deploying due to current entering the squib wiring.
- (6) When disposing of a vehicle or the front seat outer belt assembly unit by itself, the front seat outer belt assembly should be activated before disposal **INFO** . Activate the front seat outer belt assembly in a safe place away from electrical noise.
- (7) As the front seat outer belt assembly is hot after being activated, allow some time for it to cool down sufficiently before disposal. Never apply water to cool down the front seat outer belt assembly.
- (8) Grease, detergents, oil or water should not be applied to the front seat outer belt assembly.

(h) AIRBAG ECU ASSEMBLY

- (1) Never reuse a airbag ECU assembly that has been involved in a collision where the SRS has deployed.
- (2) The connectors to the airbag ECU assembly should be connected or disconnected with the airbag ECU assembly installed to the vehicle. If the connectors are connected or disconnected while the airbag ECU assembly is not installed, the SRS may activate.
- (3) Work must be started at least 90 seconds after the ignition switch is turned off and the cable is disconnected from the negative (-) battery terminal, even if only loosening the bolts of the airbag ECU assembly.

(i) WIRE HARNESS AND CONNECTOR

- (1) All the connectors in the system are a standard yellow color. If an SRS wire harness has an open circuit or a connector is broken, replace it.

3. ELECTRONIC CONTROL

Text in Illustration

*1	Cable
*2	Negative (-) Battery Terminal

NOTICE:

- The power window system utilizes a mechanism in which the door glass moves down slightly when the door is opened, and in which the glass moves up when the door closed in order to prevent the door molding from being damaged. When the negative (-) battery terminal needs to be disconnected for servicing, fully open the driver and passenger door glasses in advance.
- Certain systems need to be initialized after disconnecting and reconnecting the cable from the negative (-) battery terminal.
- After the ignition switch is turned off, the navigation receiver assembly (for Navigation Receiver Type) or radio and display receiver assembly (for Radio and Display Type with Intuitive Parking Assist System) records various types of memory and settings. As a result, after turning the ignition switch off, make sure to wait at least 60 seconds before disconnecting the cable from the negative (-) battery terminal.

(a) DISCONNECTING AND RECONNECTING NEGATIVE BATTERY CABLE

- (1) Before performing work on electronic components, disconnect the cable from the negative (-) battery terminal to prevent damage to the electrical system or components.
- (2) When disconnecting the cable, turn the ignition switch and headlight switch off and loosen the cable nut completely. Perform these operations without twisting or prying the cable. Then disconnect the cable.
- (3) Clock settings, radio settings, audio system memory, DTCs and other data will be cleared when the cable is disconnected from the negative (-) battery terminal. Write down any necessary data before disconnecting the cable.

(b) HANDLING OF ELECTRONIC PARTS

Text in Illustration

*a	INCORRECT
----	-----------

- (1) Do not open the cover or case of the ECU unless absolutely necessary. If the IC terminals are touched, the IC may be rendered inoperative by static

electricity.

- (2) Do not pull on the wires when disconnecting electronic connectors. Pull on the connector itself.
- (3) Do not drop electronic components, such as sensors or relays. If they are dropped on a hard surface, they should be replaced.
- (4) When cleaning the engine components with steam, protect the electronic components, air filter and emission-related components from water.
- (5) Never use an impact wrench to remove or install temperature switches or temperature sensors.
- (6) When measuring the resistance between terminals of a wire connector, insert the tester probe carefully to prevent the terminals from bending.

4. REMOVAL AND INSTALLATION OF FUEL CONTROL PARTS

(a) PLACE FOR REMOVING AND INSTALLING FUEL SYSTEM PARTS

- (1) Work in a location with good air ventilation that does not have welders, grinders, drills, electric motors, stoves, or any other ignition sources nearby.
- (2) Never work in a pit or near a pit as fuel vapors will collect there.

(b) REMOVING AND INSTALLING FUEL SYSTEM PARTS

- (1) Prepare a fire extinguisher before starting work.
- (2) To prevent static electricity, install a ground wire between the fuel changer and vehicle, and do not spray the surrounding area with water. Be careful when performing work in this area, as the floor surface will become slippery. Do not clean up gasoline spills with water, as this may cause the gasoline to spread, and possibly create a fire hazard.
- (3) Avoid using electric motors, work lights and other electric equipment that can cause sparks or high temperatures.
- (4) Avoid using iron hammers as they may create sparks.
- (5) Dispose of fuel-contaminated cloth separately using a fire resistant container.

5. REMOVAL AND INSTALLATION OF ENGINE INTAKE PARTS

- (a) If any metal particles enter intake system parts, this may damage the engine.

- (b) When removing and installing intake system parts, cover the openings of the removed parts and engine openings. Use adhesive tape or other suitable materials.
- (c) When installing intake system parts, check that no metal particles have entered the engine or

installed parts.

6. REMOVING AND INSTALLING HOSES

(a) Before removing and installing hoses

- Using hoses that are damaged or deformed may cause seeping, leaking, or coming off hoses, etc. Leaked oil may disperse into the exhaust pipe and ignite or cause fumes, so take sufficient care during inspection and maintenance.
- Neglecting to remove hoses when working on areas that require removal of hoses may damage the interior of the hoses. Be sure to remove such hoses when working.

(b) When removing, installing, and inspecting hoses

(1) Comply with the following when removing hoses.

- When using standard hose removers, do not use hose removers with pointed tips (hose pluckers) as pointed tips may damage the hose or the surface of the pipe.
- When using pliers, etc. to make hose removal process easier, be sure to protect the hose with a cloth, then pull it out by hand in a straight line while rotating it slightly.

Text in Illustration

*1	Hose Remover
----	--------------

(2) When continuing to use the same hose, perform the following inspection, and replace with a new hose if a fault is found.

- Replace hoses that have ridden up on the stay or spool.
- Bend hoses and check carefully to see whether they exhibit damage to their outer or inner surfaces, cracks, fractures, hardened or softened rubber, swelling, peeling interiors, or deformation due to foreign matter adhering to or penetrating the hose. Replace with a new hose if any of these problems are found.

Text in Illustration

*a	Hose riding up on stay
----	------------------------

*b	Hose riding up on spool
----	-------------------------

(3) Comply with the following when installing hoses.

- Take sufficient care with regard to where the hose is installed.
- Do not use lubricant.
- Push in firmly up to the specified position (the seat or spool).
- Check whether the hose clamp position, orientation, and hose layout are correct (Check that the positioning and orientation are correct, that the hose is not too long or too short, that the hose is not different to before the procedure was done, and that sufficient space has been left between the hose and other parts in the area).
- After attaching the hoses, check that they are not leaking or losing fluid (Check that the hoses are firmly fixed in place with the clamps).

Text in Illustration

*a	Push the hose against the spool (Do not push the hose firmly enough to cause wrinkles on its tip).
*b	Apply clamping force evenly around the exterior of the hose.

(4) For hose clips and hose clamps, perform the following inspection and replace with new ones if a fault is found.

- Check for the presence of deformation, rust, damage, and foreign matter.
- For clips, check that the springs are performing properly, and that the clip has sufficient clamping force.
- For clamps, check that the clamp can be screw-tightened, that the clamp is not elliptical in shape, and that the screws are undamaged.

(5) For pipes, perform the following inspection, and replace with a new pipe if a fault is found.

Check that there is no damage, rust, peeling (including peeling plating), foreign matter, bending, breakage, or fracturing.

(6) Replace the following parts with new ones when removing or changing the attachment position of the hose.

Transmission oil cooler hose and fuel hose

7. HANDLING OF HOSE CLAMPS

Text in Illustration

*1	Clamp Track
*2	Spring Type Clamp

- (a) Before removing a hose, check the clamp position so that it can be reinstalled in the same position.
- (b) Replace any deformed or dented clamps with new ones.
- (c) When reusing a hose, attach the clamp on the clamp track portion of the hose.
- (d) For a spring type clamp, it may be necessary to spread the tabs slightly after installation by pushing them in the direction of the arrows as shown in the illustration.

8. FOR VEHICLES EQUIPPED WITH MOBILE COMMUNICATION SYSTEMS

- (a) Install the antenna as far away from the ECU and sensors of the vehicle electronic systems as possible.
- (b) Install the antenna and feeder at least 20 cm (7.87 in.) away from the ECU and sensors of the vehicle electronic systems. For details about ECU and sensor locations, refer to the section on the applicable components.
- (c) Keep the antenna and feeder separate from other wiring as much as possible. This will prevent signals sent from the communication equipment from affecting vehicle equipment and vice versa.
- (d) Check that the antenna and feeder are correctly adjusted.
- (e) Do not install a high-powered mobile communication system.

9. HEADLIGHT INSPECTION OR MAINTENANCE

- (a) When the headlight dimmer switch assembly is set to head, do not touch the discharge headlight high-voltage socket area.

NOTICE:

When performing inspection or maintenance, the discharge headlight precautions must be followed.

- (b) When the headlights are illuminated, do not cover the headlights for 3 minutes or more.

Text in Illustration

*a	Illumination for 3 minutes or more prohibited if covered
----	--

NOTICE:

As the headlight's outer lens is made of resin, the resulting heat created when covering the headlight for an extended period of time may deform the headlight.

10. SET FRONT HOOD STAY

(a) When performing inspections or general maintenance, use the front hood stay in its normal attachment position.

NOTICE:

When performing inspections or general maintenance, do not remove the front hood stay.

(b) When it is necessary to open the engine hood further to remove the engine, etc., set the front hood stay in attachment position B, as shown in the illustration.

11. FOR VEHICLES EQUIPPED WITH TRACTION CONTROL (TR(A)C) AND VEHICLE STABILITY CONTROL (VSC) SYSTEMS

When testing with a 2-wheel drum tester such as a speedometer tester, a combination speedometer and brake tester, or a chassis dynamometer, or when jacking up the front wheels and turning the wheels, perform the following procedure to enter inspection mode and disable the TR(A)C and VSC systems INFO

HINT:

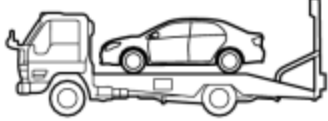

- The vehicle may slip unexpectedly out of the dynamometer because of TR(A)C and VSC operation.
- Pressing the VSC OFF switch does not disable TR(A)C and VSC operation completely.

NOTICE:

- Make sure that the VSC OFF indicator light will come on.
- Secure the vehicle with chains for safety.

12. PRECAUTIONS FOR TOWING REAR WHEEL DRIVE VEHICLES

- (a) Use one of the following methods to tow the vehicle.
- (b) If the vehicle has trouble with the chassis or drivetrain, use method 1 (flatbed truck).

Towing Method \ Conditions	Parking Brake	Shift Lever Position	
		Automatic transmission	Manual transmission
1. Flatbed Truck 	Applied	Neutral	Any
2. Wheel Lift Type Truck From Front (using dollies)  From Rear (using dollies) 	Applied	Neutral	Any

NOTICE:

Do not use any towing method other than those shown above.

- (c) If a tow truck is not available, in an emergency the vehicle may be temporarily towed using a cable or chain secured to the emergency towing eyelet(s).

This should only be attempted on hard surfaced roads for distances of less than 30 km, and at speeds below 30km/h (19 mph).

A driver must be in the vehicle to steer and operate the brakes. The vehicle's wheels, drivetrain, axles, steering and brakes must be in good condition.

NOTICE:

If the towing speed or distance exceeds the above limits, or the vehicle is towed in a backward direction with the wheels on the ground, the drivetrain or vehicle may be damaged.

- (1) Emergency towing procedure

1. Turn the ignition switch ON.
2. Depress the brake pedal and move the shift lever to N.
3. Release the parking brake.
4. Release the brake pedal slowly.

NOTICE:

- Use extreme caution when towing the vehicle. Avoid sudden starts or erratic driving maneuvers which place excessive stress on the emergency towing eyelet and the cables or chains.
- Do not turn off the ignition switch. Turning off the ignition switch may result in engagement of the steering lock, resulting in a hazardous situation or accident.

- (d) The towing methods shown below are dangerous and can damage the vehicle, so do not use them.

(1) Do not tow the vehicle with only 2 wheels on the ground.

CAUTION:

If the vehicle is towed with only the front wheels on the ground, the steering may move, causing the vehicle to become unstable.

NOTICE:

If the vehicle is towed with only the rear wheels on the ground, the drivetrain may overheat and be damaged.

(2) Do not use a sling-type towing method either from the front or rear.

NOTICE:

If a sling-type tow truck is used, damage may occur to the vehicle body.

13. FOR VEHICLES EQUIPPED WITH CATALYTIC CONVERTER

CAUTION:

If a large amount of unburned gasoline or gasoline vapors flow into the converter, it may cause converter overheating and create a fire hazard. To prevent this, observe the following precautions:

- (a) Use only unleaded gasoline.
- (b) Avoid performing unnecessary spark tests.
 - (1) Perform a spark test only when absolutely necessary. Perform this test as rapidly as possible.
 - (2) While testing, never race the engine unless instructed.
- (c) Avoid a prolonged engine compression measurement. Engine compression measurements must be performed as rapidly as possible.
- (d) Do not run the engine when the fuel tank is nearly empty. This may cause the engine to misfire and create an extra load on the converter.

Title: INTRODUCTION: REPAIR INSTRUCTION: VEHICLE LIFT AND SUPPORT LOCATIONS (2013 FR-S)		

VEHICLE LIFT AND SUPPORT LOCATIONS

1. NOTICE ABOUT VEHICLE CONDITION WHEN RAISING VEHICLE

- (a) The vehicle must be unloaded before jacking up or raising the vehicle. Never jack up or raise a heavily loaded vehicle.
- (b) When removing any heavy components like the engine or transaxle, the vehicle center of gravity will shift. To stabilize the vehicle, place a balance weight in a location that will prevent the vehicle from rolling or shifting, or place a transmission jack under the appropriate jack position at the opposite end of the vehicle.

2. NOTICE FOR USING 4 POST LIFT

- (a) Follow the safety procedures outlined in the lift's instruction manual.
- (b) Do not damage the tires or wheels while driving onto the lift.
- (c) Use wheel chocks to secure the vehicle.

3. NOTICE FOR USING JACK AND SAFETY STANDS

- (a) Work on a level surface. Use wheel chocks at all times.

- (b) Use safety stands with rubber attachments as shown in the illustration.

Text in Illustration

*1	Rubber Attachment
----	-------------------

- (c) Set the jack and safety stands exactly under the specified locations on the vehicle.
- (d) Do not work on or leave the vehicle supported only by a jack. Be sure to support the vehicle with safety stands.
- (e) When jacking up the vehicle, first release the parking brake and move the shift lever to N.
- (f) When jacking up the entire vehicle:
 - (1) When jacking up the front wheels first, make sure wheel chocks are behind the rear wheels.
 - (2) When jacking up the rear wheels first, make sure wheel chocks are in front of the front wheels.
- (g) When jacking up only the front or rear wheels of the vehicle:
 - (1) Before jacking up the front wheels, place wheel chocks on both sides of the rear wheels.
 - (2) Before jacking up the rear wheels, place wheel chocks on both sides of the front wheels.
- (h) When lowering a vehicle that only has its front or rear wheels jacked up.

- (1) Before lowering the front wheels, make sure wheel chocks are in front of the rear wheels.
- (2) Before lowering the rear wheels, make sure wheel chocks are behind the front wheels.

4. NOTICE FOR USING A SWING ARM TYPE LIFT

- (a) Follow the safety procedures outlined in the lift's instruction manual.
- (b) Use swing arms equipped with rubber attachments as shown in the illustration.
- (c) Position the vehicle so that its center of gravity is centered on the lift (length of "L" in the illustration should be as short as possible).
- (d) Ensure that the rubber cushions or swing arms do not contact the body cladding or lower mouldings.
- (e) Be sure to lock the swing arms before raising the vehicle (if equipped with arm locks).
- (f) Use the lift to raise the vehicle until the tires are off the ground, then stop the lift and shake the front and rear of the vehicle to make sure that it is stable.

5. NOTICE FOR USING PLATE TYPE LIFT

- (a) Follow the safety procedures outlined in the lift's instruction manual.
- (b) Use plate lift attachments (rubber lifting blocks) on top of the plates.
- (c) Be sure to set the vehicle to the specified position described in the following chart and shown in the following illustration.

Right and left set position	<ul style="list-style-type: none"> • Center the vehicle on the lift.
Front and rear set position	<ul style="list-style-type: none"> • Match the attachments to positions A in the illustration. • Do not use a plate lift with attachments that are unable to reach positions A in the illustration.

- (d) Ensure that the plate lift or rubber lifting blocks do not contact the body cladding or lower mouldings.
- (e) Use the lift to raise the vehicle until the tires are off the ground, then stop the lift and shake the front and rear of the vehicle to make sure that it is stable.

Attachment Dimensions

Last Modified: 3-27-2012	6.4 N	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM0000019FS055X
Title: MAINTENANCE: BODY: GENERAL MAINTENANCE (2013 FR-S)		

GENERAL MAINTENANCE

1. BODY INSPECTION

- (a) Check the body exterior for dents, scratches and rust.
- (b) Check the underbody for rust and damage.

If necessary, replace the damaged part or repair the damaged area.

2. REPLACE AIR CONDITIONING FILTER

- (a) Remove the air conditioning filter  .
- (b) Visually inspect the surface of the air conditioning filter.
- (c) If the air conditioning filter is contaminated with foreign matter, replace it.

3. ROAD TEST

- (a) Check the engine and chassis for abnormal noises.
- (b) Check that the vehicle does not wander or pull to one side.
- (c) Check that the brakes work properly and do not drag.
- (d) Set the parking brake shoes and drums.

4. TIGHTEN BOLTS AND NUTS ON CHASSIS AND BODY

- (a) If necessary, tighten the bolts and nuts on the chassis parts listed below.
 - Front axle and suspension
 - Drivetrain
 - Rear axle and suspension
 - Brake system
 - Engine mounts
 - Other chassis parts
- (b) If necessary, tighten the bolts and nuts on the body parts listed below.
 - Seat belt system
 - Seats
 - Doors and hood
 - Body mounts
 - Fuel tank
 - Exhaust system
 - Other body parts

5. FINAL INSPECTION

- (a) Check the operation of the body parts.
 - (1) Hood
 - Auxiliary catch operates properly.
 - Hood locks securely when closed.
 - (2) Front doors

- Door locks operate properly.
- Doors close properly.

(3) Luggage compartment door

- Luggage compartment door opens and closes properly.

(4) Seats

- Seats adjust easily and lock securely in any position.
- Front seatbacks lock securely in any position.
- Fold-down rear seatbacks lock securely.

(5) Be sure to deliver a clean car. Make sure to check the following:

- Steering wheel
- Shift lever knob
- All switches and knobs
- Door handles
- Seats

Last Modified: 3-27-2012	6.4 N	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000001AQU061X
Title: MAINTENANCE: BRAKE: GENERAL MAINTENANCE (2013 FR-S)		

GENERAL MAINTENANCE

1. INSPECT BRAKE LINE PIPES AND HOSES

HINT:

Work in a well-lighted area. Turn the front wheels fully to the right or left before beginning the inspection.

(a) Using a mirror, check the entire circumference and length of the brake lines and hoses for:

- Damage
- Wear
- Deformation
- Cracks
- Bends
- Corrosion
- Leaks
- Twists

(b) Check all the clamps for tightness and connections for leakage.

(c) Check that the hoses and lines are not near sharp edges, moving parts or the exhaust system.

(d) Check that the lines are installed properly and pass through the center of the grommets.

2. INSPECT BRAKE PEDAL

(a) Check the brake pedal **INFO** for Automatic Transmission, **INFO** for Manual Transmission).

3. INSPECT PARKING BRAKE

(a) Check the parking brake shoe clearance and parking brake lever travel **INFO** .

(b) Check the parking brake cables to ensure that they are not deformed or binding.

4. INSPECT BRAKE LININGS AND DRUMS

(a) Check the parking brake linings and drums.

5. INSPECT FRONT BRAKE

(a) Check the front brake pads and discs **INFO** .

6. INSPECT REAR BRAKE

(a) Check the rear brake pads and discs **INFO** .

7. INSPECT OR CHANGE BRAKE FLUID

(a) Inspect or change the brake fluid INFO .

Last Modified: 3-27-2012	6.4 N	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000001AQV066X
Title: MAINTENANCE: CHASSIS: GENERAL MAINTENANCE (2013 FR-S)		

GENERAL MAINTENANCE

1. INSPECT STEERING LINKAGE AND GEAR HOUSING

- (a) Check the steering wheel free play INFO .
- (b) Check the steering linkage for looseness or damage.
 - (1) Check that the tie rod ends do not have excessive play.
 - (2) Check that the dust seals and boots are not damaged.
 - (3) Check that the boot clamps are not loose.
 - (4) Check that the steering gear box is not damaged.
 - (5) Check that the connectors are properly connected to the steering gear box.

2. INSPECT SUSPENSION BALL JOINT AND DUST COVER

- (a) Inspect the ball joints for excessive looseness.
 - (1) Jack up the front of the vehicle and place wooden blocks with a height of 180 to 200 mm (7.09 to 7.87 in.) under the front tires.
 - (2) Jack up the lower suspension arm until there is about half a load on the front suspension.
 - (3) Check that the front wheels are pointing straight ahead. Use wheel chocks on all 4 wheels.
 - (4) Using a lever, pry up the end of the lower arm. Check the amount of play.

Maximum ball joint vertical play:
0 mm (0 in.)

If there is any play, replace the ball joint.

- (b) Check the dust cover for damage.

3. INSPECT CLUTCH FLUID LEVEL AND SYSTEM OPERATION

- (a) Check the clutch fluid level INFO .

4. INSPECT DRIVE SHAFT BOOTS

- (a) Check the drive shaft boots for loose clamps, cracks, grease leaks, kinks or damage.

5. INSPECT AUTOMATIC TRANSMISSION FLUID

- (a) Visually check the automatic transmission for fluid leakage. If fluid is leaking, find the cause and repair it.
- (b) Inspect the automatic transmission fluid INFO .

6. REPLACE AUTOMATIC TRANSMISSION FLUID

- (a) Replace the automatic transmission fluid INFO .

7. INSPECT MANUAL TRANSMISSION OIL

- (a) Visually check the manual transmission for oil leakage. If fluid is leaking, find the cause and repair it.

(b) Inspect the manual transmission oil [INFO](#) .

8. INSPECT REAR DIFFERENTIAL OIL

(a) Visually check the rear differential for oil leakage. If fluid is leaking, find the cause and repair it.

(b) Inspect the rear differential oil [INFO](#) .

9. PERFORM TIRE ROTATION [INFO](#)

10. INSPECT FRONT AND REAR SUSPENSION

(a) Check the front and rear suspension.

SUSPENSION TYPE	SEE PROCEDURE
Front Suspension	INFO
Rear Suspension	INFO

Last Modified: 3-27-2012	6.4 N	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000001AQT066X
Title: MAINTENANCE: ENGINE: GENERAL MAINTENANCE (2013 FR-S)		

GENERAL MAINTENANCE

HINT:

Perform these procedures after the engine has cooled down.

1. INSPECT DRIVE BELT

- (a) Inspect the drive belt **INFO** .

2. INSPECT ENGINE OIL

- (a) Inspect the engine oil **INFO** .

3. REPLACE ENGINE OIL AND OIL FILTER

- (a) Replace the engine oil and oil filter **INFO** .

4. INSPECT ENGINE COOLANT

- (a) Inspect the engine coolant **INFO** .

5. REPLACE ENGINE COOLANT

- (a) Replace the engine coolant **INFO** .

6. REPLACE SPARK PLUGS

- (a) Replace the spark plugs **INFO** .

7. REPLACE FUEL FILTER

- (a) Replace the fuel filter **INFO** .

8. INSPECT BATTERY

- (a) Check the battery **INFO** .

9. INSPECT AIR CLEANER FILTER ELEMENT

- (a) Remove the air cleaner filter element.
- (b) Check that the air cleaner filter element is not excessively dirty. If the air cleaner filter element is excessively dirty, replace the air cleaner filter element.
- (c) Clean the air cleaner filter element with compressed air.
- (d) Reinstall the air cleaner filter element.

10. INSPECT EXHAUST PIPES AND MOUNTINGS

- (a) Visually check the pipes, hangers and connections for severe corrosion, leaks or damage.

11. INSPECT FUEL TANK CAP ASSEMBLY

- (a) Inspect the fuel tank cap gasket **INFO** .

12. INSPECT FUEL LINES, CONNECTIONS, FUEL TANK VAPOR VENT SYSTEM HOSES AND FUEL TANK BANDS

- (a) Visually check the fuel lines and hoses for cracks, leakage, loose connections, or deformation.
- (b) Check for tank band looseness or deformation.

Last Modified: 3-27-2012	6.4 N	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000UZE09JX
Title: MAINTENANCE: INSIDE VEHICLE: GENERAL MAINTENANCE (2013 FR-S)		

GENERAL MAINTENANCE

These are maintenance and inspection items that are considered to be the owner's responsibility.

The owner can do them or they can have them done at a service center.

These items include those that should be checked on a daily basis, those that in most cases do not require special tools, and those that are considered to be reasonable for the owner to do.

General maintenance items and procedures are as follows:

1. GENERAL NOTES

- Maintenance requirements vary depending on the country.
- Check the maintenance schedule in the owner's manual supplement.
- Determine the appropriate time to service the vehicle using either miles driven or time (months) elapsed, whichever reaches the specification first.
- Maintain similar intervals between periodic maintenance unless noted.
- Failing to check each vehicle part could lead to poor engine performance and increase exhaust emissions.

2. LIGHTS

- (a) Check that the headlights, stop lights, taillights, turn signal lights, and other lights illuminate or blink properly. Also, check if they have enough brightness.
- (b) Check that the headlights are aimed properly.

3. WARNING LIGHTS AND BUZZERS

- (a) Check that all the warning lights and buzzers are working.

4. HORNS

- (a) Check if the horns are working correctly.

5. WINDSHIELD GLASS

- (a) Check for scratches, pits or abrasions.

6. WINDSHIELD WIPER AND WASHER

- (a) Check that the washers are aimed properly. Also, check that the washer fluid hits the center of the operating range of each wiper on the windshield.
- (b) Check if the wipers streak. Replace them if necessary.

7. WINDSHIELD DEFROSTER

- (a) When the air conditioning is on the defroster setting, check that air comes out of the defroster outlets.

8. REAR VIEW MIRROR

- (a) Check that the rear view mirror is securely mounted.

9. SUN VISORS

- (a) Check that the sun visors move freely and are securely mounted.

10. STEERING WHEEL

- (a) Check that the steering wheel has the proper amount of free play. Also check for steering difficulty and unusual noises  .

11. SEATS

- (a) Check that the seat adjusters, seatback recliner and other seat controls operate smoothly.
- (b) Check that all the latches lock securely in all positions.
- (c) Check that the locks hold securely in all positions.
- (d) Check that the headrests move up and down smoothly and that the locks hold securely in all latched positions.
- (e) When the rear seatbacks are folded down, check that the latches lock securely.

12. SEAT BELTS

- (a) Check that the seat belt components, such as the buckles, retractors and anchors, operate properly and smoothly.
- (b) Check that the belt webbing is not cut, frayed, worn or damaged.

13. ACCELERATOR PEDAL

- (a) Check that the pedal operates smoothly. Check that the pedal does not have uneven resistance or stick in certain positions.

14. BRAKE PEDAL

- (a) Check that the brake pedal operates smoothly.
- (b) Check that the pedal has the proper reserve distance and free play  for Automatic Transmission,  for Manual Transmission).
- (c) Start the engine and check the brake booster function.
- (d) Start the engine and check the brake system indicator.

15. BRAKES

- (a) In a safe place, check that the vehicle does not pull or lead to the side when applying the brakes.

16. PARKING BRAKE

- (a) Check that the parking brake lever has the proper amount of travel  .
- (b) On a slight grade, check that the parking brake alone can hold the vehicle in place.

17. AUTOMATIC TRANSMISSION "PARK" MECHANISM

- (a) Check the shift lever for proper and smooth operation.
- (b) When the shift lever is in P and all brakes are released in an area that has a slight grade, check that the vehicle is stable.

18. FLOOR MATS

- (a) Check that the correct floor mats are used, and that they are properly installed.

Title: MAINTENANCE: OUTSIDE VEHICLE: GENERAL MAINTENANCE (2013 FR-S)		

GENERAL MAINTENANCE

These are maintenance and inspection items that are considered to be the owner's responsibility.

The owner can do them or they can have them done at a service center.

These items include those that should be checked on a daily basis, those that in most cases do not require special tools, and those that are considered to be reasonable for the owner to do.

General maintenance items and procedures are as follows:

1. GENERAL NOTES

- Maintenance requirements vary depending on the country.
- Check the maintenance schedule in the owner's manual supplement.
- Following the maintenance schedule is mandatory.
- Determine the appropriate time to service the vehicle using either miles driven or time (months) elapsed, whichever reaches the specification first.
- Failing to check each vehicle part could lead to poor engine performance and increase exhaust emissions.

2. TIRES

- (a) Check the tire inflation pressure with a gauge. Make adjustments if necessary.
- (b) Check the surfaces of the tires for cuts, damage or excessive wear.

3. WHEEL NUTS

- (a) Check for nuts that are loose or missing. Tighten them if necessary.

4. TIRE ROTATION

- (a) Check the maintenance schedule in the owner's manual supplement.

5. WINDSHIELD WIPER BLADES

- (a) Check the blades for wear or cracks whenever they are unable to wipe the windshield clean. Replace them if necessary.

6. FLUID LEAKS

- (a) Check under the vehicle for leaking fuel, oil, water and other fluids.

NOTICE:

If you smell fuel or notice any leaks, locate the cause and correct it.

7. DOORS AND ENGINE HOOD

- (a) Check that all of the doors and the hood operate smoothly, and that all the latches lock securely.
- (b) When the primary latch is released, check that the engine hood secondary latch prevents the hood from opening.

Title: MAINTENANCE: UNDER HOOD: GENERAL MAINTENANCE (2013 FR-S)		

GENERAL MAINTENANCE

1. GENERAL NOTES

- Maintenance requirements vary depending on the country.
- Check the maintenance schedule in the owner's manual supplement.
- Following the maintenance schedule is mandatory.
- Determine the appropriate time to service the vehicle using either miles driven or time (months) elapsed, whichever reaches the specification first.
- Maintain similar intervals between periodic maintenance unless noted.
- Failing to check each maintenance item could lead to poor engine performance and increase exhaust emissions.

2. WINDSHIELD WASHER FLUID

- (a) Check that there is sufficient fluid in the tank.

3. ENGINE COOLANT LEVEL

- (a) Check that the coolant level is between the "FULL" and "LOW" lines on the see-through reservoir.

4. RADIATOR AND HOSES

- (a) Check that the front of the radiator is clean and not blocked by leaves, dirt and bugs.
(b) Check the radiator and hoses for:

- Damage
- Cracks
- Kinks
- Corrosion
- Rot
- Clogging
- Leaks

5. BATTERY ELECTROLYTE LEVEL

- (a) Check that the electrolyte level of all the battery cells is between the upper and lower level lines on the case.

HINT:

If the electrolyte level is difficult to see, lightly shake the vehicle.

6. BRAKE FLUID LEVEL

- (a) Check that the brake fluid level is near the upper level line on the see-through reservoirs.

7. ENGINE DRIVE BELT

- (a) Check the drive belt for fraying, cracks, wear or oil.

8. ENGINE OIL LEVEL

- (a) Check that the engine oil level is between the full level and low level marks on the dipstick with the engine turned off.

9. EXHAUST SYSTEM

- (a) Visually inspect for severe corrosion, cracks, holes or loose supports.

HINT:

If any change in the sound of the exhaust or smell of the exhaust fumes is noticed, inspect and repair the exhaust system.

Title: SPECIFICATIONS: ALIGNMENT / HANDLING DIAGNOSIS: SERVICE DATA (2013 FR-S)		

SERVICE DATA

Vehicle Height (Unloaded Vehicle)

FRONT B - A	REAR C	REAR D	REAR E
146 mm (5.75 in.)	225 mm (8.86 in.)	375 mm (14.76 in.)	372 mm (14.65 in.)

Measurement points:

- A: Ground clearance of front lower suspension arm set front bolt center
- B: Ground clearance of front wheel center
- C: Ground clearance of lower control arm set bolt center
- D: Front wheel arch height of front wheel center
- E: Rear wheel arch height of rear wheel center

Camber (Unloaded Vehicle)

-	CAMBER INCLINATION	RIGHT-LEFT DIFFERENCE
Front	0 +/- 45' (0 +/- 0.75°)	30' (0.50°) or less
Rear	-1°12' +/- 45' (-1.20° +/- 0.75°)	45' (0.75°) or less

Caster (Unloaded Vehicle)

-	CASTER INCLINATION (REFERENCE)	RIGHT-LEFT DIFFERENCE
Front	5°54' (5.90°)	30' (0.50°) or less

Wheel Turning Angle (Unloaded Vehicle)

-	INSIDE WHEEL (REFERENCE)	OUTSIDE WHEEL (REFERENCE)
Front	36°54' (43.90°)	31°12' (31.20°)

Toe-in (Unloaded Vehicle)

-	SPECIFIED CONDITION
Front	C + D: 0°00' +/- 0°11' (0.00° +/- 0.19°)
	B - A: 0 +/- 3.0 mm (0 +/- 0.1181 in.)
Rear	C + D: 0°10' +/- 0°15' (0.16° +/- 0.24°)
	B - A: 2.0 +/- 3.0 mm (0.0787 +/- 0.1181 in.)

Wheel Turning Angle (Unloaded Vehicle)

-	INSIDE WHEEL	OUTSIDE WHEEL REFERENCE
Front	41°48' +/- 2° (41.8° +/- 2°)	36°20' (36.33°)

Distance between the centers of the 2 installation bolts of the rear No. 2 suspension arm assembly LH and RH

-	STANDARD DISTANCE
Rear	443.8 to 447.8 mm (17.47 to 17.63 in.)

Distance between the centers of the 2 installation bolts of the rear No. 2 suspension arm assembly

-	STANDARD DISTANCE
Rear	448.9 to 450.9 mm (17.67 to 17.75 in.)

Compression	Compression pressure	1750 kPa (17.8 kgf/cm, 254 psi)	
	Minimum pressure	1150 kPa (11.7 kgf/cm ² , 167 psi)	
	Difference between each cylinder	200 kPa (2.0 kgf/cm ² , 29 psi) or less	
Valve clearance	Standard (Cold)	Intake	0.10 to 0.16 mm (0.0039 to 0.0063 in.)
		Exhaust	0.21 to 0.27 mm (0.0083 to 0.0106 in.)
Camshaft	Circle runout	Maximum	0.020 mm (0.00079 in.)
	Cam lobe height	Intake	40.82 to 40.92 mm (1.6083 to 1.6110 in.)
		Exhaust	40.72 to 40.82 mm (1.6031 to 1.6071 in.)
		For fuel pump	40.6 mm (1.5984 in.)
	Cam base circle	Intake	34.0 mm (1.3386 in.)
		Exhaust	34.0 mm (1.3386 in.)
	Journal diameter	25.946 to 25.963 mm (1.02149 to 1.02216 in.)	
	Thrust clearance	0.0068 to 0.1160 mm (0.00027 to 0.00457 in.)	
Oil clearance	0.037 to 0.072 mm (0.00146 to 0.00283 in.)		
Cylinder head sub-assembly	Warpage	Maximum	0.035 mm (0.00138 in.)
	Cylinder head height	Standard	98.5 mm (3.878 in.)
		Minimum	98.4 mm (3.874 in.)
Intake valve	Overall length	103.3 mm (4.067 in.)	
	Margin thickness	0.8 to 1.2 mm (0.0315 to 0.0472 in.)	
	Valve stem diameter	5.455 to 5.470 mm (0.2148 to 0.2154 in.)	
	Valve seat width	0.8 to 1.6 mm (0.032 to 0.063 in.)	

Exhaust valve	Overall length		95.1 mm (3.744 in.)
	Margin thickness		1.0 to 1.4 mm (0.039 to 0.055 in.)
	Valve stem diameter		5.445 to 5.460 mm (0.21437 to 0.21496 in.)
	Valve seat width		1.1 to 1.7 mm (0.043 to 0.067 in.)
Intake valve guide bush	Inside diameter		5.500 to 5.512 mm (0.21654 to 0.21701 in.)
	Oil clearance		0.030 to 0.057 mm (0.00118 to 0.00224 in.)
	Protrusion height		11.4 to 11.8 mm (0.449 to 0.466 in.)
Exhaust valve guide bush	Inside diameter		5.500 to 5.512 mm (0.21654 to 0.21701 in.)
	Oil clearance		0.040 to 0.067 mm (0.00157 to 0.00264 in.)
	Protrusion height		11.4 to 11.8 mm (0.449 to 0.466 in.)
Valve adjusting shim	Valve stem end diameter	Intake	5.455 to 5.470 mm (0.21476 to 0.21535 in.)
		Exhaust	5.445 to 5.460 mm (0.21437 to 0.21496 in.)
	Valve adjusting shim inside diameter		5.500 to 5.560 mm (0.21654 to 0.21890 in.)
	Oil clearance		0.030 to 0.115 mm (0.00118 to 0.00453 in.)
Valve spring	Free length		41.06 mm (1.617 in.)
	Deviation	Maximum	Less than 1.8 mm (0.0710 in.)
	Angle	Maximum	2.5°
Cylinder block	Warpage	Maximum	0.025 mm (0.00098 in.)
	Cylinder block height	Standard	205.0 mm (8.071 in.)
		Minimum	204.9 mm (8.067 in.)
	Cylinder bore diameter	Thrust	86.005 to 86.015 mm (3.38602 to 3.38641 in.)
		lateral	85.995 to 86.005 mm (3.38562 to 3.38602 in.)
		Maximum (When boring)	86.505 mm (3.40570 in.)
Cylinder bore	Taper		0.030 mm (0.00118 in.)
	Out-of-runout		0.010 mm (0.00039 in.)
		Distance from piston head	39.4 mm (1.551 in.)

Piston	Piston diameter	A grade	85.985 to 85.995 mm (3.38523 to 3.38562 in.)	
		B grade	85.975 to 85.985 mm (3.38484 to 3.38523 in.)	
		0.25 mm (0.0098 in.) over size	86.225 to 86.245 mm (3.39468 to 3.39547 in.)	
		0.50 mm (0.0197 in.) over size	86.475 to 86.495 mm (3.40452 to 3.40531 in.)	
	Oil clearance		0.010 to 0.030 mm (0.00039 to 0.00118 in.)	
Piston pin	Piston pin oil clearance		0.004 to 0.008 mm (0.00016 to 0.00031 in.)	
	Connecting rod bushing oil clearance		0.006 to 0.026 mm (0.00024 to 0.00102 in.)	
Piston ring	Piston ring end gap	No. 1	0.25 to 0.30 mm (0.00984 to 0.01181 in.)	
		No. 2	0.60 to 0.70 mm (0.02362 to 0.02756 in.)	
		Oil ring	0.10 to 0.35 mm (0.00394 to 0.01378 in.)	
	Groove clearance	No. 1	0.030 to 0.080 mm (0.00118 to 0.00315 in.)	
		No. 2	0.030 to 0.070 mm (0.00118 to 0.00276 in.)	
Connecting rod	Bend	Maximum	0.10 mm (0.0039 in.) per 100 mm (3.937 in.) in length	
	Twist	Maximum	0.10 mm (0.0039 in.) per 100 mm (3.937 in.) in length	
	Thrust clearance		0.070 to 0.330 mm (0.00276 to 0.01299 in.)	
	Oil clearance		0.025 to 0.055 mm (0.00098 to 0.00217 in.)	
	Bearing size (Thickness at center)	Standard	1.492 to 1.508 mm (0.05874 to 0.05937 in.)	
		0.03 mm (0.0012 in.) Undersize	1.511 to 1.515 mm (0.05949 to 0.05965 in.)	
		0.05 mm (0.0020 in.) Undersize	1.521 to 1.525 mm (0.05988 to 0.06004 in.)	
		0.25 mm (0.0098 in.) Undersize	1.621 to 1.625 mm (0.06382 to 0.06398 in.)	
		Standard	49.976 to 50.000 mm (1.96756 to 1.96850 in.)	
		0.03 mm (0.0012 in.) Undersize	49.946 to 49.970 mm (1.96637 to 1.96732 in.)	

	Crank pin diameter			
		0.05 mm (0.0020 in.) Undersize	49.926 to 49.950 mm (1.96559 to 1.96653 in.)	
		0.25 mm (0.0098 in.) Undersize	49.726 to 49.750 mm (1.95771 to 1.95866 in.)	
Crankshaft	Circle runout	Maximum	0.035 mm (0.00138 in.)	
	Crank pin taper	Maximum	0.006 mm (0.00024 in.)	
	Crank pin out-of-runout	Maximum	0.005 mm (0.00020 in.)	
	Crankshaft journal taper	Maximum	0.006 mm (0.00024 in.)	
	Crankshaft journal out-of-runout	Maximum	0.005 mm (0.00020 in.)	
	Crank pin diameter	Minimum	47.726 mm (1.87897 in.)	
	Crankshaft journal diameter	Minimum	67.735 mm (2.66673 in.)	
	Connecting rod bearing thickness (at center)	Standard		1.492 to 1.508 mm (0.05874 to 0.05937 in.)
		0.03 mm (0.0012 in.) Undersize		1.511 to 1.515 mm (0.05949 to 0.05965 in.)
		0.05 mm (0.0020 in.) Undersize		1.521 to 1.525 mm (0.05988 to 0.06004 in.)
		0.25 mm (0.0098 in.) Undersize		1.621 to 1.625 mm (0.06382 to 0.06398 in.)
	No. 1 to No. 4 crank bearing thickness (at center)	Standard		2.495 to 2.513 mm (0.09823 to 0.09894 in.)
		0.03 mm (0.0012 in.) Undersize		2.519 to 2.522 mm (0.09917 to 0.09929 in.)
		0.05 mm (0.0020 in.) Undersize		2.529 to 2.532 mm (0.09957 to 0.09968 in.)
		0.25 mm (0.0098 in.) Undersize		2.629 to 2.632 mm (0.10350 to 0.10362 in.)
	No. 5 crank bearing thickness (at center)	Standard		2.493 to 2.511 mm (0.09815 to 0.09886 in.)
		0.03 mm (0.0012 in.) Undersize		2.517 to 2.520 mm (0.09909 to 0.09921 in.)
		0.05 mm (0.0020 in.) Undersize		2.527 to 2.530 mm (0.09949 to 0.09961 in.)
		0.25 mm (0.0098 in.) Undersize		2.627 to 2.630 mm (0.10342 to 0.10354 in.)
	Crank pin outer diameter	Standard		49.976 to 50.000 mm (1.96756 to 1.96850 in.)
		0.03 mm (0.0012 in.) Undersize		49.946 to 49.970 mm (1.96637 to 1.96734 in.)
0.05 mm (0.0020 in.) Undersize			49.926 to 49.950 mm (1.96559 to 1.96653 in.)	

	0.25 mm (0.0098 in.) Undersize	49.726 to 49.750 mm (1.95771 to 1.95866 in.)
Crankshaft journal diameter	Standard	67.985 to 68.009 mm (2.67657 to 2.67751 in.)
	0.03 mm (0.0012 in.) Undersize	67.955 to 67.979 mm (2.67539 to 2.67633 in.)
	0.05 mm (0.0020 in.) Undersize	67.935 to 67.959 mm (2.67460 to 2.67555 in.)
	0.25 mm (0.0098 in.) Undersize	67.735 to 67.759 mm (2.66673 to 2.66767 in.)
Thrust clearance		0.130 to 0.308 mm (0.00512 to 0.01213 in.)
Oil clearance		0.013 to 0.031 mm (0.00051 to 0.00122 in.)

Cylinder head cover sub-assembly RH x Camshaft housing sub-assembly RH		6.4	65	57 in.*lbf
Camshaft housing sub-assembly RH x Injector driver bracket		6.4	65	57 in.*lbf
Spark plug x Cylinder head sub-assembly		17	174	13
Timing chain or belt cover sub-assembly	Bolt A and B	10	102	7
	Bolt C and D	25	255	18
Water outlet x Cylinder block sub-assembly		6.4	65	57 in.*lbf
Engine water pump assembly x Cylinder block sub-assembly		6.4	65	57 in.*lbf
Water pump pulley x Engine water pump assembly		14	143	10
No. 1 idler pulley sub-assembly x Timing chain or belt cover sub-assembly		36	367	27
PCV valve sub-assembly x Cylinder block sub-assembly		23	235	17
Water inlet pipe x Cylinder block sub-assembly		6.4	65	57 in.*lbf
Rear cylinder head plate x Camshaft housing sub-assembly RH		16	163	12
PCV hose connector x Cylinder block sub-assembly		6.4	65	57 in.*lbf
Engine oil pressure switch assembly x Timing chain or belt cover sub-assembly		18	184	13
Engine oil temperature sensor x Timing chain or belt cover sub-assembly		18	184	13
Camshaft timing oil control valve x Timing chain or belt cover sub-assembly		6.4	65	57 in.*lbf
VVT sensor x Timing chain or belt cover sub-assembly		6.4	65	57 in.*lbf
Crank position sensor x Cylinder block sub-assembly		6.4	65	57 in.*lbf
Knock control sensor x Cylinder block sub-assembly		24	245	18
E.F.I. water temperature sensor x Water inlet pipe		18	184	13
Oil filter union x Timing chain or belt cover sub-assembly		45	459	33
Oil filter sub-assembly x Timing chain or belt cover sub-assembly		14	143	10
Ignition coil x Cylinder block sub-assembly		8.5	87	75 in.*lbf
No. 1 water by-pass x Engine assembly		6.4	65	57 in.*lbf
Intake manifold x Cylinder head cover sub-assembly		25	255	18
Fuel delivery pipe sub-assembly x Fuel pump assembly		31	316	23
Fuel delivery pipe sub-assembly x Intake manifold		6.4	65	57 in.*lbf
Injector cover x Intake manifold		19	194	14
Generator assembly x Engine assembly		25	255	18
Stud bolt x Cylinder head		18	184	13

Chain cover mount bolt x Cylinder head LH		6.4	65	57 in.*lbf
No. 1 cylinder block tight plug x Cylinder block		37	377	27
Crankshaft sensor holder assembly x cylinder block LH		6.4	65	57 in.*lbf
Cylinder block plate x cylinder block LH		6.4	65	57 in.*lbf
Oil separator cover x cylinder block RH		6.4	65	57 in.*lbf
Connecting rod x Connecting rod cap	1st	10	102	7
	2nd	25	255	18
	3rd	turn 92.5°		
Cylinder block sub-assembly	1st	35	357	26
	2nd	loosen 180°		
	3rd	35	357	26
	4st	loosen 180°		
	5st	17	173	13
	6st	turn 60°		
Cylinder block sub-assembly		25	255	18

Model Year: 2013	Model: FR-S	Doc ID: RM00000201W00GX
Title: SPECIFICATIONS: FA20 FUEL: SERVICE DATA (2013 FR-S)		

SERVICE DATA

Fuel pressure		350 to 500 kPa (4.0 to 5.0 kgf/cm ² , 51 to 73 psi)
Fuel pressure : at fuel pressure remains for 5 minutes after engine has stopped		147 kPa (1.5 kgf/cm ² , 21 psi) or more
Fuel pressure (for high pressure) : at engine warm up and idle		3000 to 5000 kPa (30.6 to 51.0 kgf/cm ² , 435 to 725 psi)
Fuel injector (for port injection)		
Resistance	at 20°C (68°F)	12 Ω
Injection volume		84 to 103 cc(5.1 to 6.3 cu.in.) per 15 seconds
Difference between each injector		19 cc(1.2 cu.in.) or less
Fuel drop		1 drop or less per 22 minutes
Fuel Injector (for direct injection)		
Resistance	at 20°C (68°F)	1.9 Ω
Fuel pressure sensor		
voltage	Terminal 2 (VOUT) and 1 (GND) : Apply 5 V between terminals 3 (VCC) and 1 (GND)	Approximately 0.5 V
Fuel pump		
Resistance	at 20°C (68°F)	0.2 to 3.0 Ω
Fuel pump (for high pressure)		
Resistance	at 20°C (68°F)	1.19 to 1.39 Ω
Fuel sender gauge assembly (Main)		
Resistance	Float Level F	6.5 to 8.5 Ω
	Float Level E	168 to 172 Ω
Fuel sender gauge assembly (Sub)		
Resistance	Float Level F	5.5 to 9.5 Ω
	Float Level E	236 to 244 Ω

SERVICE DATA

Neutral position switch assembly	1 - 2	Pushed: Below 1 Ω
		Released: 10 k Ω or higher
Back-up light switch assembly	1 - 2	Pushed: Below 1 Ω
		Released: 10 k Ω or higher
Manual transmission extension housing oil seal installation depth	-	0.1 to 1.1 mm (0.00394 to 0.0433 in.)
Reverse idler gear radial clearance	Standard Maximum	0.040 to 0.082 mm (0.00157 to 0.00323 in.) 0.082 mm (0.00323 in.)
No. 4 gear shift fork slotted spring pin drive in depth	-	0 mm (0 in.) (from the end surface of the No. 4 gear shift fork)
No. 1 gear shift head slotted spring pin drive in depth	-	0 mm (0 in.) (from the end surface of the No. 1 gear shift head)
No. 2 gear shift head slotted spring pin drive in depth	-	0 mm (0 in.) (from the end surface of the No. 2 gear shift head)
No. 3 gear shift head slotted spring pin drive in depth	-	0 mm (0 in.) (from the end surface of the No. 3 gear shift head)
Transmission front bearing retainer oil seal installation depth	-	11.1 to 11.9 mm (0.437 to 0.469 in.)
Extension housing rear oil seal installation depth	-	1.0 to 2.0 mm (0.0394 to 0.0787 in.)
Counter shaft 6th gear thrust clearance	Standard Maximum	0.10 to 0.40 mm (0.00394 to 0.0157 in.) 0.40 mm (0.0157 in.)
Counter shaft 6th gear radial clearance	Standard Maximum	0.015 to 0.068 mm (0.000590 to 0.00268 in.) 0.068 mm (0.00268 in.)
Input shaft radial clearance	Standard Maximum	0.029 to 0.072 mm (0.00114 to 0.00283 in.) 0.072 mm (0.00283 in.)
1st gear thrust clearance	Standard Maximum	0.15 to 0.40 (0.00590 to 0.0157 in.) 0.40 (0.0157 in.)
1st gear radial clearance	Standard Maximum	0.015 to 0.066 (0.000590 to 0.00260 in.) 0.066 (0.00260 in.)
2nd gear thrust clearance	Standard Maximum	0.10 to 0.45 (0.000394 to 0.0177 in.) 0.45 (0.0177 in.)
2nd gear radial clearance	Standard	0.015 to 0.066 (0.000590 to 0.00260 in.)

	Maximum	0.066 (0.00260 in.)
Reverse gear thrust clearance	Standard Maximum	0.10 to 0.45 (0.000394 to 0.0177 in.) 0.45 (0.0177 in.)
Reverse gear radial clearance	Standard Maximum	0.015 to 0.066 (0.000590 to 0.00260 in.) 0.066 (0.00260 in.)
Counter shaft 3rd gear thrust clearance	Standard Maximum	0.10 to 0.35 (0.00393 to 0.0138 in.) 0.35 (0.0138 in.)
Counter shaft 3rd gear radial clearance	Standard Maximum	0.015 to 0.068 (0.000590 to 0.00268 in.) 0.068 (0.00268 in.)
Counter shaft 4th gear thrust clearance	Standard Maximum	0.10 to 0.35 (0.00393 to 0.0138 in.) 0.35 (0.0138 in.)
Counter shaft 4th gear radial clearance	Standard Maximum	0.065 to 0.115 (0.002559 to 0.00453 in.) 0.115 (0.00453 in.)
No. 1 gear shift head clearance	Standard Maximum	15.2 to 15.4 mm (0.59843 to 0.60630 in.) 15.4 mm (0.60630 in.)
No. 2 gear shift head clearance	Standard Maximum	15.2 to 15.4 mm (0.59843 to 0.60630 in.) 15.4 mm (0.60630 in.)
No. 3 gear shift head clearance	Standard Maximum	15.2 to 15.4 mm (0.59843 to 0.60630 in.) 15.4 mm (0.60630 in.)
Shift shaft	Standard width Minimum width	14.8 to 15.0 mm (0.583 to 0.591 in.) 14.8 mm (0.583 in.)
No. 1 shift inter lock block	Standard width Minimum width	14.8 to 15.0 mm (0.583 to 0.591 in.) 14.8 mm (0.583 in.)
No. 4 gear shift fork	Standard Maximum	15.2 to 15.4 mm (0.59843 to 0.60630 in.) 15.4 mm (0.60630 in.)
5th shift head	Standard Maximum	15.2 to 15.4 mm (0.59843 to 0.60630 in.) 15.4 mm (0.60630 in.)
No. 2 synchronizer ring and counter shaft 6th gear clearance	Standard Minimum	0.88 to 1.52 mm (0.0346 to 0.0598 in.) 0.88 mm (0.0346 in.)
Counter shaft 6th gear inside diameter	Standard Maximum	34.015 to 34.040 mm (1.33917 to 1.34016 in.) 34.040 mm (1.34016 in.)
No. 4 gear shift fork claw	Standard	7.9 to 8.0 mm (0.311 to 0.315 in.)

	Minimum	7.9 mm (0.311 in.)
No. 4 gear shift fork claw and glove of the No. 4 transmission hub sleeve clearance	Standard Maximum	0.15 to 0.35 mm (0.00590 to 0.0138 in.) 0.35 mm (0.0138 in.)
Reverse idler gear inside diameter	Standard Maximum	22.040 to 22.061mm (0.86771 to 0.86854 in.) 22.061mm (0.86854 in.)
Reverse idler gear shaft outer diameter	Standard Minimum	21.979 to 22.000 mm (0.86531 to 0.86614 in.) 21.979 mm (0.86531 in.)
Front input shaft bearing shaft snap ring thickness	Standard	0 to 0.1 mm (0 to 0.00394 in.)
No. 4 transmission clutch hub shaft snap ring	Mark A	2.80 mm (0.11023 in.)
	B	2.85 mm (0.11220 in.)
	C	2.90 mm (0.11417 in.)
	D	2.95 mm (0.11614 in.)
	E	3.00 mm (0.11811 in.)
	F	3.05 mm (0.12007 in.)
No. 2 synchronizer ring and 3rd gear clearance	Standard Minimum	0.8 to 1.6 mm (0.0315 to 0.0630 in.) 0.8 mm (0.0315 in.)
Front input shaft bearing shaft snap ring thickness	Standard Maximum	0 mm (0 in.) 0.1 mm (0.00394 in.)
Front input shaft bearing shaft snap ring	Mark 0	1.95 mm (0.07677 in.)
	2	2.00 mm (0.07874 in.)
	3	2.05 mm (0.08070 in.)
	4	2.10 mm (0.08267 in.)
	5	2.15 mm (0.08464 in.)
	6	2.20 mm (0.08661 in.)
Output shaft outer diameter	Standard A	31.984 to 32.000 mm (1.25921 to 1.25984 in.)
	B	42.984 to 43.000 mm (1.69228 to 1.69291 in.)
	C	40.984 to 41.000 mm (1.61354 to 1.61417 in.)
	Minimum A	31.984 mm (1.25921 in.)
	B	42.9849 mm (1.69228 in.)
	C	40.984 mm (1.61354 in.)
Output shaft runout	Standard	0.03 mm (0.00118 in.) or less
Reverse gear inside diameter	Standard Maximum	47.015 to 47.040 mm (1.85098 to 1.85197 in.) 47.040 mm (1.85197 in.)

1st gear inside diameter	Standard Maximum	46.315 to 46.340 mm (1.82343 to 1.82441 in.) 46.340 mm (1.82441 in.)
2nd gear inside diameter	Standard Maximum	49.015 to 49.040 mm (1.92972 to 1.93071 in.) 49.040 mm (1.93071 in.)
1st gear bearing inner race outer diameter	Standard Minimum	40.284 to 40.300 mm (1.58598 to 1.58661 in.) 40.284 mm (1.58598 in.)
No. 1 gear shift fork claw	Standard Minimum	7.9 to 8.0 mm (0.311 to 0.315 in.) 7.9 mm (0.311 in.)
No. 1 gear shift fork claw and glove of the No. 1 transmission hub sleeve clearance	Standard Maximum	0.15 to 0.35 mm (0.00590 to 0.0138 in.) 0.35 mm (0.0138 in.)
No. 3 gear shift fork claw	Standard Minimum	7.9 to 8.0 mm (0.311 to 0.315 in.) 7.9 mm (0.311 in.)
No. 3 gear shift fork claw and glove of the No. 3 transmission hub sleeve clearance	Standard Maximum	0.15 to 0.35 mm (0.00590 to 0.0138 in.) 0.35 mm (0.0138 in.)
No. 1 synchronizer ring set and 1st gear clearance	Standard inner	0.48 to 1.12 mm (0.0189 to 0.0441 in.)
	Middle	0.38 to 1.22 mm (0.0150 to 0.0480 in.)
	Outer	0.8 to 1.8 mm (0.0315 to 0.0709 in.)
No. 1 synchronizer ring set and 2nd gear clearance	Standard inner	0.48 to 1.12 mm (0.0189 to 0.0441 in.)
	Middle	0.38 to 1.22 mm (0.0150 to 0.0480 in.)
	Outer	0.8 to 1.8 mm (0.0315 to 0.0709 in.)
No. 3 transmission clutch hub shaft snap ring thickness	Standard	0 to 0.1 mm (0 to 0.00394 in.)
No. 3 transmission clutch hub shaft snap ring	Mark A	1.80 mm (0.07086 in.)
	B	1.85 mm (0.07283 in.)
	C	1.90 mm (0.07480 in.)
	D	1.95 mm (0.07677 in.)
	E	2.00 mm (0.07874 in.)
	F	2.05 mm (0.08070 in.)
6th gear shaft snap ring thickness	Standard	0 to 0.11 mm (0 to 0.00433 in.)
6th gear shaft snap ring	Mark A	2.67 mm (0.10511 in.)
	B	2.73 mm (0.10748 in.)
	C	2.79 mm (0.10984 in.)
	D	2.85 mm (0.11220 in.)
	E	2.91 mm (0.11456 in.)
	F	2.97 mm (0.11692 in.)

	G	3.03 mm (0.11929 in.)
	H	3.09 mm (0.12165 in.)
	J	3.15 mm (0.12401 in.)
	K	3.21 mm (0.01053 in.)
	L	3.27 mm (0.12874 in.)
No. 2 gear shift fork claw	Standard Minimum	7.9 to 8.0 mm (0.311 to 0.315 in.) 7.9 mm (0.311 in.)
No. 2 gear shift fork claw and glove of the No. 2 transmission hub sleeve clearance	Standard Maximum	0.15 to 0.35 mm (0.00590 to 0.0138 in.) 0.35 mm (0.0138 in.)
No. 2 synchronizer ring and 3rd gear clearance	Standard Maximum	0.8 to 1.6 mm (0.0314 to 0.0629 in.) 1.6 mm (0.0629 in.)
No. 3 synchronizer ring set and counter shaft 3rd gear clearance	Standard inner	0.4 to 1.2 mm (0.0157 to 0.0472 in.)
	Middle	0.3 to 1.3 mm (0.0118 to 0.0512 in.)
	Outer	0.8 to 1.8 mm (0.0315 to 0.0709 in.)
Counter shaft outer diameter	Standard A	39.284 to 39.300 mm (1.54661 to 1.54721 in.)
	B	37.984 to 38.000 mm (1.49543 to 1.49606 in.)
	C	24.987 to 25.000 mm (0.98374 to 0.98425 in.)
	Minimum A	39.284 mm (1.54661 in.)
	B	37.984 mm (1.49543 in.)
	C	24.987 mm (0.98374 in.)
Counter shaft runout	Standard	0.03 mm (0.00118 in.) or less
Counter shaft 3rd gear inside diameter	Standard Maximum	43.015 to 43.040 mm (1.69350 to 1.69448 in.) 43.040 mm (1.69448 in.)
Counter shaft 4th gear inside diameter	Standard Maximum	46.315 to 46.340 mm (1.82425 to 1.82441 in.) 46.340 mm (1.82441 in.)
4th gear bearing inner race outer diameter	Standard Minimum	46.225 to 46.250 mm (1.81988 to 1.82087 in.) 46.225 mm (1.81988 in.)
4th inner race thrust washer thickness	Standard	0 to 0.1 mm (0 to 0.00394 in.)
4th inner race thrust washer	Mark A	3.75 mm (0.14763 in.)
	B	3.80 mm (0.14960 in.)
	C	3.85 mm (0.15157 in.)
	D	3.90 mm (0.15354 in.)
	E	3.95 mm (0.15551 in.)

	F	4.00 mm (0.15748 in.)
	G	4.05 mm (0.15944 in.)
	H	4.10 mm (0.16141 in.)
Counter drive gear shaft snap ring thickness	Standard	0 to 0.1 mm (0 to 0.00394 in.)
Counter drive gear shaft snap ring	Mark A	1.80 mm (0.07086 in.)
	B	1.85 mm (0.07283 in.)
	C	1.90 mm (0.07480 in.)
	D	1.95 mm (0.07677 in.)

Model Year: 2013	Model: FR-S	Doc ID: RM000001PMD00GX
Title: SPECIFICATIONS: TX6A AUTOMATIC TRANSMISSION / TRANSAXLE: SERVICE DATA (2013 FR-S)		

SERVICE DATA

Line pressure (Fluid temperature): 50 to 80°C (122 to 176°F) Engine idling	D position	350 to 430 kPa (3.6 to 4.4 kgf/cm ² , 51 to 62 psi)
	R position	760 to 950 kPa (7.7 to 9.7 kgf/cm ² , 110 to 138 psi)
Line pressure (Fluid temperature): 50 to 80°C (122 to 176°F) At stall speed (Throttle valve fully open)	D position	1200 to 1380 kPa (12.5 to 14.0 kgf/cm ² , 174 to 200 psi)
	R position	1410 to 1630 kPa (14.4 to 16.6 kgf/cm ² , 204 to 236 psi)
Engine stall speed	D position	2350 +/- 250 rpm
Time lag	N → D position	Less than 1.2 seconds
	N → R position	Less than 1.5 seconds
Engine idle speed (A/C OFF)	N position	600 to 800 r/min
Drive plate runout	Maximum	0.30 mm (0.0118 in.)
Shift schedule		
D, 6 position		
Throttle valve fully open	1 → 2	47 km/h (29 mph)
	2 → 3	96 km/h (59 mph)
	3 → 4	142 km/h (88 mph)
	4 → 5	201 km/h (125 mph)
	5 → 6	282 km/h (175 mph)
Throttle valve opening 6 %	1 → 2	12 km/h (7 mph)
	2 → 3	20 km/h (12 mph)
	3 → 4	30 km/h (19 mph)
	4 → 5	48 km/h (30 mph)
	5 → 6	59 km/h (37 mph)
Manual downshift speed		
5, 4, 3, 2, 1 gear range	→ 5	264 km/h (164 mph)
	→ 4	186 km/h (116 mph)
	→ 3	129 km/h (80 mph)
	→ 2	80 km/h (50 mph)

NOTICE:

- All shift point values indicated in the above tables are actual values. Therefore, if checking a shift point with a chassis dynamometer, keep in mind that there is a range of error in the chassis dynamometer indication.
- If checking a shift point against the speed indicated on the speedometer, remember to consider the speedometer correction rate and range of error in the tester indication.

Transmission Revolution Sensor

ITEM	TESTER CONNECTION CONDITION	SPECIFIED CONDITION
Transmission revolution sensor NT	1 - 2 20°C (68°F)	560 to 680 Ω
Transmission revolution sensor SP2	1 - 2 20°C (68°F)	560 to 680 Ω

Transmission Wire

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 (E2) - 9 (OIL)	10°C (50°F)	5 to 8 kΩ
1 (E2) - 9 (OIL)	25°C (77°F)	2.5 to 4.5 kΩ
1 (E2) - 9 (OIL)	110°C (230°F)	0.22 to 0.28 kΩ
1 (E2) - 9 (OIL)	Always	79 Ω to 156 kΩ
1 (E2) - Body ground	Always	10 kΩ or higher
9 (OIL) - Body ground	Always	10 kΩ or higher

Shift Solenoid Valve

ITEM	TESTER CONNECTION CONDITION	SPECIFIED CONDITION
Shift solenoid valve SL1	1 - 2 20°C (68°F)	5.0 to 5.6 Ω
Shift solenoid valve S1	Solenoid Connector (S1) - Solenoid Body (S1) 20°C (68°F)	11 to 15 Ω
Shift solenoid valve S2	Solenoid Connector (S2) - Solenoid Body (S2) 20°C (68°F)	11 to 15 Ω
Shift solenoid valve S3	Solenoid Connector (S3) - Solenoid Body (S3) 20°C (68°F)	11 to 15 Ω
Shift solenoid valve S4	Solenoid Connector (S4) - Solenoid Body (S4) 20°C (68°F)	11 to 15 Ω
Shift solenoid valve SL2	1 - 2 20°C (68°F)	5.0 to 5.6 Ω
Shift solenoid valve SR	Solenoid Connector (SR) - Solenoid Body (SR) 20°C (68°F)	11 to 15 Ω

Shift solenoid valve SLT	1 - 2 20°C (68°F)	5.0 to 5.6 Ω
Shift solenoid valve SLU	1 - 2 20°C (68°F)	5.0 to 5.6 Ω

Park/Neutral Position Switch

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2 (RB) - 6 (PL) 4 (B) - 5 (L)	Shift lever in P	Below 1 Ω
	Shift lever not in P	10 kΩ or higher
2 (RB) - 1 (RL)	Shift lever in R	Below 1 Ω
	Shift lever not in R	10 kΩ or higher
2 (RB) - 9 (NL) 4 (B) - 5 (L)	Shift lever in N	Below 1 Ω
	Shift lever not in N	10 kΩ or higher
2 (RB) - 7 (DL)	Shift lever in D, M, "+" or "-"	Below 1 Ω
	Shift lever not in D, M, "+" or "-"	10 kΩ or higher

Shift Lever Assembly

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 3	Shift lever not in P	Below 1 Ω
2 - 3	Shift lever in P	
8 - 9	Shift lever in M	
	Shift lever held in "+" (Up shift)	
10 - 11	Shift lever in M	
12 - 13	Shift lever in M	
	Shift lever held in "-" (Down shift)	
1 - 3	Shift lever in P	10 kΩ or higher
2 - 3	Shift lever not in P	
8 - 9	Shift lever in M	
	Shift lever not in "+"	
10 - 11	Shift lever not in M	
12 - 13	Shift lever in M	
	Shift lever not in "-"	

Shift Lock Solenoid

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
4 - 5	20°C (68°F)	27.6 to 30.5 Ω

Shift Paddle Switch

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
-------------------	-----------	---------------------

1 - 3	Pull continuously "+" (Up shift)	Below 1 Ω
	Release "+"	10 k Ω or higher
1 - 4	Pull continuously "-" (Down shift)	Below 1 Ω
	Release "-"	10 k Ω or higher

Pattern Select Switch

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
6 - 8	Pattern select (SNOW) switch on	Below 1 Ω
	Pattern select (SNOW) switch off	10 k Ω or higher
4 - 8	Pattern select (SPORT) switch on	Below 1 Ω
	Pattern select (SPORT) switch off	10 k Ω or higher

Automatic Transmission Unit:

1st and reverse return spring free length	Standard: 23.74 mm (0.934 in.)
Rear planetary gear pinion thrust clearance	Standard: 0.2 to 0.6 mm (0.00788 to 0.0236 in.)
Rear planetary gear bushing inside diameter	Standard: 18.025 mm (0.710 in.)
1st and reverse brake pack clearance	0.5 to 0.8 mm (0.0197 to 0.0315 in.)
Flange thickness (1st and reverse brake)	Mark 0: 0 mm (0 in.) Mark 2: 0.2 mm (0.00787 in.) Mark 4: 0.4 mm (0.01575 in.) Mark 6: 0.6 mm (0.02362 in.) Mark 8: 0.8 mm (0.03150 in.) Mark 10: 1.0 mm (0.03937 in.) Mark 12: 1.2 mm (0.04724 in.) Mark 14: 1.4 mm (0.05512 in.)
Intermediate shaft runout	Standard: 0.03 mm (0.00118 in.)
Intermediate shaft diameter	Standard A: 22.962 to 22.975 mm (0.9041 to 0.9045 in.) Standard B: 27.759 to 27.775 mm (1.0929 to 1.0935 in.)
Center planetary gear pinion thrust clearance	Standard: 0.12 to 0.68 mm (0.00473 to 0.0267 in.)
No. 2 brake pinion return spring free length	Standard: 22.66 mm (0.892 in.)
No. 2 brake piston piston stroke	0.6 to 0.9 mm (0.0237 to 0.0354 in.)
Flange thickness (No. 2 brake piston)	Mark 0: 2.0 mm (0.0787 in.) Mark 1: 2.1 mm (0.0826 in.) Mark 2: 2.2 mm (0.0866 in.) Mark 3: 2.3 mm (0.0905 in.) Mark 4: 2.4 mm (0.0944 in.) Mark 5: 2.5 mm (0.0984 in.) Mark 6: 2.6 mm (0.102 in.) Mark 7: 2.7 mm (0.106 in.)
Brake piston return spring free length	Standard: 17.05 mm (0.671 in.)
Front planetary gear pinion thrust clearance	Standard: 0.20 to 0.60 mm (0.00788 to 0.0236 in.)

Front planetary gear bushing inside diameter	Standard: 48.78 mm (1.92 in.)
No. 1 brake piston piston stroke	0.42 to 0.72 mm (0.0166 to 0.0283 in.)
No. 3 brake piston return spring free length	Standard: 15.72 mm (0.619 in.)
Flange thickness (No. 1 brake piston)	Mark 0: 2.0 mm (0.0787 in.) Mark 1: 2.2 mm (0.0866 in.) Mark 2: 2.4 mm (0.0944 in.) Mark 3: 2.6 mm (0.102 in.)

Oil Pump:

Oil pump body bushing inside diameter	Standard: 38.138 mm (1.5015 in.)
Stator shaft bushing inside diameter	Standard: 21.527 mm (0.8475 in.)
Body clearance	Standard: 0.10 to 0.17 mm (0.00394 to 0.00669 in.)
Tip clearance	Standard: 0.070 to 0.150 mm (0.00276 to 0.00590 in.)
Side clearance	Standard: 0.02 to 0.04 mm (0.000787 to 0.00157 in.)
Drive and driven gear thickness	Mark 0: 9.946 to 9.952 mm (0.39157 to 0.39181 in.) Mark 1: 9.953 to 9.959 mm (0.39185 to 0.39209 in.) Mark 2: 9.960 to 9.966 mm (0.39213 to 0.39236 in.) Mark 3: 9.967 to 9.973 mm (0.39240 to 0.39264 in.) Mark 4: 9.974 to 9.980 mm (0.39268 to 0.39291 in.) Mark 5: 9.981 to 9.987 mm (0.39295 to 0.39319 in.) Mark 6: 9.988 to 9.994 mm (0.39323 to 0.39346 in.)

Clutch Drum And Input Shaft:

Direct clutch return spring free length	Standard: 20.02 mm (0.788 in.)
Reverse clutch return spring free length	Standard: 21.03 mm (0.828 in.)
Direct clutch pack clearance	0.5 to 0.8 mm (0.0197 to 0.0314 in.)
Flange thickness (Direct clutch)	Mark 0: 3.0 mm (0.118 in.) Mark 1: 3.1 mm (0.122 in.) Mark 2: 3.2 mm (0.126 in.) Mark 3: 3.3 mm (0.130 in.) Mark 4: 3.4 mm (0.134 in.) Mark 5: 3.5 mm (0.138 in.) Mark 6: 3.6 mm (0.142 in.) Mark 7: 3.7 mm (0.146 in.) Mark 8: 3.8 mm (0.150 in.)
Reverse clutch pack clearance	0.4 to 0.7 mm (0.0158 to 0.0275 in.)
Flange thickness (Reverse clutch)	Mark 0: 2.4 mm (0.0945 in.) Mark 1: 2.5 mm (0.0984 in.) Mark 2: 2.6 mm (0.102 in.) Mark 3: 2.7 mm (0.106 in.) Mark 4: 2.8 mm (0.110 in.) Mark 5: 2.9 mm (0.114 in.) Mark 6: 3.0 mm (0.118 in.) Mark 7: 3.1 mm (0.122 in.)

	Mark 8: 3.2 mm (0.126 in.) Mark 9: 3.3 mm (0.130 in.) Mark A: 3.4 mm (0.134 in.) Mark B: 3.5 mm (0.138 in.)
Forward clutch return spring free length	Standard: 26.29 mm (1.04 in.)
Forward clutch pack clearance	0.56 to 0.86 mm (0.0221 to 0.0338 in.)
Flange thickness (Forward clutch)	Mark 0: 3.0 mm (0.118 in.) Mark 1: 3.1 mm (0.122 in.) Mark 2: 3.2 mm (0.126 in.) Mark 3: 3.3 mm (0.130 in.) Mark 4: 3.4 mm (0.134 in.) Mark 5: 3.5 mm (0.138 in.) Mark 6: 3.6 mm (0.142 in.) Mark 7: 3.7 mm (0.146 in.) Mark 8: 3.8 mm (0.150 in.) Mark 9: 3.9 mm (0.154 in.)
Coast clutch pack clearance	0.4 to 0.7 mm (0.0158 to 0.0275 in.)
Flange thickness (Coast clutch)	Mark 0: 3.0 mm (0.118 in.) Mark 1: 3.1 mm (0.122 in.) Mark 2: 3.2 mm (0.126 in.) Mark 3: 3.3 mm (0.130 in.) Mark 4: 3.4 mm (0.134 in.) Mark 5: 3.5 mm (0.138 in.) Mark 6: 3.6 mm (0.142 in.) Mark 7: 3.7 mm (0.146 in.) Mark 8: 3.8 mm (0.150 in.) Mark 9: 3.9 mm (0.154 in.)
Forward clutch hub inside diameter	Standard: 23.037 to 23.062 mm (0.9070 to 0.9079 in.)
Reverse clutch hub inside diameter	Standard: 33.312 to 33.337 mm (1.3115 to 1.3125 in.)

Accumulator:

SPRING	FREE LENGTH/OUTER DIAMETER MM (IN.)	COLOR
B ₁ (Outer)	46.36 (1.8252)/17.10 (0.6732)	Natural
C ₂	65.07 (2.5618)/16.2 (0.6378)	Pink
B ₃	64.5 (2.539)/19.5 (0.768)	Orange
C ₃ (Inner)	44.0 (1.732)/14.0 (0.551)	Yellow
C ₃ (Outer)	76.65 (3.0178)/20.10 (0.7913)	White

Title: AUDIO / VIDEO: AMPLIFIER ANTENNA: INSTALLATION (2013 FR-S)		

INSTALLATION

1. INSTALL NO. 3 ANTENNA CORD SUB-ASSEMBLY

(a) Engage the 3 clamps and install the No. 3 antenna cord sub-assembly.

2. INSTALL AMPLIFIER ANTENNA ASSEMBLY

(a) Engage the 2 claws to install the amplifier antenna assembly.

(b) Place the amplifier antenna cord in the amplifier antenna cutout.

(c) Install the amplifier antenna assembly with the nut.

Torque: 4.5 N·m (46 kgf·cm, 40in·lbf)

Title: AUDIO / VIDEO: FRONT DOOR SPEAKER: INSPECTION (2013 FR-S)		

INSPECTION

1. INSPECT FRONT NO. 1 SPEAKER ASSEMBLY

- (a) With the speaker installed, check that there is no looseness or other abnormalities.
- (b) Check that there is no foreign matter in the speaker, no tears on the speaker cone or other abnormalities.

- (c) Measure the resistance of the speaker.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	Always	3.4 to 4.6 Ω

If the result is not as specified, replace the speaker.

Title: BRAKE (FRONT): FRONT BRAKE FLEXIBLE HOSE: INSTALLATION (2013 FR-S)		

INSTALLATION

HINT:

- Use the same procedure for RH and LH sides.
- The procedure listed below is for LH side.

1. INSTALL NO. 1 FRONT FLEXIBLE HOSE

(a) Temporarily install the NO. 1 front flexible hose with a new clip.

NOTICE:

Securely install the clip.

(b) Hold the NO. 1 front flexible hose with a wrench using a union nut wrench.

Torque: 15 N·m (155 kgf·cm, 11ft·lbf)

NOTICE:

- Do not bend or damage the brake tube.
- Do not allow any foreign matter such as dirt and dust to enter the brake tube from the connecting point.
- Use the formula to calculate special torque values for situations where a union nut wrench is combined with a torque wrench **INFO** .

(c) Connect the No. 1 front flexible hose to the front shock absorber assembly with the bolt.

Torque: 33 N·m (337 kgf·cm, 24ft·lbf)

(d) Install the No. 1 flexible hose to the disc brake cylinder assembly with 2 new gaskets and the new union bolt.

Torque: 18 N·m (184 kgf·cm, 13ft·lbf)

2. ADD BRAKE FLUID **INFO**

3. BLEED BRAKE LINE **INFO**

4. INSPECT BRAKE FLUID LEAK

5. INSPECT FLUID LEVEL **INFO**

6. INSTALL FRONT WHEEL

Torque: 120 N·m (1224 kgf·cm, 89ft·lbf)

Title: BRAKE (FRONT): FRONT BRAKE: DISASSEMBLY (2013 FR-S)		

DISASSEMBLY

1. REMOVE CYLINDER BOOT

(a) Remove the 2 cylinder boots.

NOTICE:

To prevent damage to the front disc brake piston, remove the boot by hand, and not using a screwdriver or the like.

Text in Illustration

*1	Cylinder Boot
*2	Front Disc Brake Piston

2. REMOVE FRONT DISC BRAKE PISTON

(a) Place a wooden block between the front disc brake piston and disc cylinder.

Text in Illustration

*1	Wooden Block
*a	30 mm (1.811 in.)

(b) Slowly apply compressed air to remove the 2 front disc brake pistons from the cylinder.

CAUTION:

Do not place your fingers in front of the front disc brake piston when applying compressed air.

NOTICE:

Do not spatter the brake fluid.

HINT:

If the front disc brake piston has been damaged, replace it with a new one.

(c) Remove the wooden block.

3. REMOVE PISTON SEAL

- (a) Using a screwdriver with its tip wrapped in protective tape, remove the 2 piston seals from the disc brake cylinder.

Text in Illustration

*1

Protective Tape

NOTICE:

Do not damage the inner surface or piston seal groove of the cylinder.

4. REMOVE FRONT DISC BRAKE BLEEDER PLUG CAP

- (a) Remove the front disc brake bleeder plug cap from the front disc brake bleeder plug.

5. REMOVE FRONT DISC BRAKE BLEEDER PLUG

- (a) Remove the front disc brake bleeder plug.

Last Modified: 3-27-2012	6.4 G	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM0000010KR014X
Title: BRAKE (FRONT): FRONT BRAKE: INSPECTION (2013 FR-S)		

INSPECTION

1. CHECK BRAKE CYLINDER AND PISTON

- (a) Check the cylinder bore and piston for rust and scoring. If necessary, replace the disc brake cylinder and piston.

2. CHECK PAD LINING THICKNESS

- (a) Using a ruler, measure the pad lining thickness.

Standard thickness:

1.5 mm (0.0591 in.)

Minimum thickness:

11.0 mm (0.4331 in.)

If the pad lining thickness is lower/under the minimum, replace the pad.

3. CHECK DISC THICKNESS

- (a) Using a micrometer, measure the disc thickness.

Standard Thickness:

24.0 mm (0.945 in.)

Minimum Thickness:

22.0 mm (0.866 in.)

4. CHECK DISC RUNOUT

- (a) Check the bearing play in the axial direction and check the axle hub runout [INFO](#) .

(b) Tighten the disc with the 5 nuts.

Torque: 120 N·m (1224 kgf·cm, 89ft·lbf)

(c) Using a dial indicator, measure the disc runout 10 mm (0.394 in.) away from the outer edge of the front disc.

Text in Illustration

*1	Dial Indicator
----	----------------

Maximum disc runout:

0.05 mm (0.0020 in.)

NOTICE:

- Do not bring the magnetic base near the axle hub and speed sensor.
- Set the magnetic base on the shock absorber.
- If the runout exceeds the maximum value, change the installation positions of the disc and axle to make the minimum runout. If the runout exceeds the maximum even when the installation positions are changed, replace the front disc.

(d) Remove the 5 hub nuts and front disc.

Last Modified: 3-27-2012	6.4 A	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000C1E02MX
Title: BRAKE (FRONT): FRONT BRAKE: INSTALLATION (2013 FR-S)		

INSTALLATION

HINT:

- Use the same procedure for RH and LH sides.
- The procedure listed below is for LH side.

1. INSTALL FRONT DISC

(a) When reusing the disc

(1) Align the matchmarks placed when removing, and install the front disc to the axle hub.

(b) When replacing the front disc

(1) Install a new front disc to the axle hub and measure the disc runout INFO.

(c) Temporarily tighten the hub nut and fix the front disc to the axle hub.

2. INSTALL CARRIER

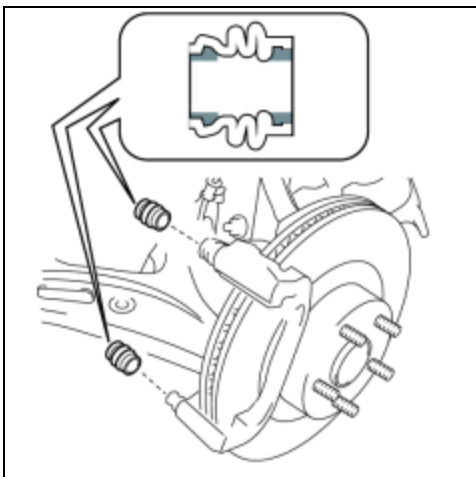

(a) Install the carrier with the 2 new bolts.

Torque: 80 N·m (816 kgf·cm, 59ft·lbf)

3. INSTALL FRONT DISC BRAKE CYLINDER SLIDE BUSH

(a) Apply a light layer of lithium soap base glycol grease to the inner face of the 2 new front disc brake cylinder slide bushes as shown in the illustration.

Text in Illustration

	Lithium Soap Base Glycol Grease
---	---------------------------------

4. INSTALL BUSH

- (a) Apply a light layer of lithium soap base glycol grease to the contact surface of the No. 2 front disc brake cylinder slide pin with a new bush.

Text in Illustration

	Lithium Soap Base Glycol Grease
--	---------------------------------

- (b) Install the bush to the No. 2 front disc brake cylinder slide pin.

5. INSTALL NO. 2 FRONT DISC BRAKE CYLINDER SLIDE PIN

- (a) Apply a light layer of lithium soap base glycol grease to the entire circumference of the No. 2 front disc brake cylinder slide pin, as shown in the illustration.

Text in Illustration

	Lithium Soap Base Glycol Grease
---	---------------------------------

- (b) Install the No. 2 front disc brake cylinder slide pin to the carrier.

6. INSTALL FRONT DISC BRAKE CYLINDER SLIDE PIN

- (a) Apply a light layer of lithium soap base glycol grease to the entire circumference of the front disc brake cylinder slide pin, as shown in the illustration.

Text in Illustration

	Lithium Soap Base Glycol Grease
---	---------------------------------

- (b) Install the front disc brake cylinder slide pin to the carrier.

7. INSTALL FRONT DISC BRAKE PAD SUPPORT PLATE (LOWER)

- (a) Apply MP grease to the front disc brake pad support plate (lower) as shown in the illustration.

Text in Illustration

	MP grease
---	-----------

8. INSTALL FRONT DISC BRAKE PAD SUPPORT PLATE (UPPER)

HINT:

Use the same procedure as for the front disc brake pad support plate (lower).

9. INSTALL FRONT DISC BRAKE CYLINDER SUB-ASSEMBLY

- (a) Apply disc brake grease to both sides of the shim.

Text in Illustration

	Disc Brake Grease
---	-------------------

- (b) Install the covers (shim) to each front disc brake pad.
- (c) Install the disc brake pads, covers (shim) and shims to the carrier.

Text in Illustration

*1	Cover (Shim)	*2	Shim
*3	Disc Brake Pad	-	-

10. INSTALL FRONT DISC BRAKE CYLINDER SUB-ASSEMBLY

- (a) Install the front disc brake cylinder assembly LH to the carrier with the 2 bolts.

Torque: 26 N·m (270 kgf·cm, 19ft·lbf)

11. CONNECT NO. 1 FRONT FLEXIBLE HOSE

- (a) Install the No. 1 front flexible hose to the disc brake cylinder assembly with 2 new gaskets and the new union bolt.

Torque: 18 N·m (184 kgf·cm, 13ft·lbf)

12. ADD BRAKE FLUID INFO

13. BLEED BRAKE LINE INFO

14. INSPECT FLUID LEAK

15. INSPECT FLUID LEVEL INFO

16. INSTALL FRONT WHEEL

Torque: 120 N·m (1224 kgf·cm, 89ft·lbf)

Last Modified: 3-27-2012	6.4 A	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000CIJ02DX
Title: BRAKE (FRONT): FRONT BRAKE: REASSEMBLY (2013 FR-S)		

REASSEMBLY

1. TEMPORARILY INSTALL FRONT DISC BRAKE BLEEDER PLUG

- (a) Temporarily install the front disc brake bleeder plug to the front disc brake cylinder assembly LH.

2. INSTALL FRONT DISC BRAKE BLEEDER PLUG CAP

- (a) Install the front disc brake bleeder plug cap on the front disc brake bleeder plug.

3. INSTALL PISTON SEAL

- (a) Apply a light layer of lithium soap base glycol grease to the entire circumference of 2 new piston seals.

Text in Illustration

	Lithium Soap Base Glycol Grease
---	---------------------------------

- (b) Securely install the 2 piston seals into the grooves of the disc brake cylinder.

NOTICE:

Securely install the piston seal into the groove of the disc brake cylinder.

4. INSTALL FRONT DISC BRAKE PISTON

- (a) Apply a light layer of lithium soap base glycol grease to the entire circumference of a new cylinder boot as shown in the illustration.

Text in Illustration

*1	Cylinder Boot
*2	Front Disc Brake Piston
	Lithium Soap Base Glycol Grease

- (b) Securely install the cylinder boot into the grooves of the front disc brake piston.
- (c) Apply a light of lithium soap base glycol grease to the entire circumference of the 2 front disc brake pistons and install them to the front disc brake cylinder LH.

NOTICE:

Do not install the piston forcibly in the disc brake cylinder.

5. INSTALL CYLINDER BOOT

- (a) Securely install the cylinder boot into the groove of the front disc brake cylinder LH.

Text in Illustration

*1	Cylinder Boot	*2	Front Disc Brake Cylinder Assembly LH
*3	Front Disc Brake Piston	-	-

Title: BRAKE (FRONT): FRONT BRAKE: REMOVAL (2013 FR-S)		

REMOVAL

HINT:

- Use the same procedure for the RH and LH sides.
- The procedure listed below is for the LH side.

1. REMOVE FRONT WHEEL

2. DRAIN BRAKE FLUID

NOTICE:

Immediately wash off any brake fluid that comes into contact with any painted surfaces.

3. DISCONNECT NO. 1 FRONT FLEXIBLE HOSE

- (a) Remove the union bolt, 2 gaskets and disconnect the No. 1 front flexible hose from the disc brake cylinder assembly LH.

4. REMOVE FRONT DISC BRAKE CYLINDER SUB-ASSEMBLY

- (a) Remove the 2 bolts and front disc brake cylinder sub-assembly.

5. REMOVE FRONT DISC BRAKE PAD

- (a) Remove the disc brake pads from the carrier.
- (b) Remove the covers (shims) and shims from each pad.

Text in Illustration

*1	Cover (shim)	*2	Shim
*3	Disc Brake Pad	-	-

6. REMOVE FRONT DISC BRAKE PAD SUPPORT PLATE (UPPER)

(a) Remove the front disc brake pad support plate (upper) from the carrier.

7. REMOVE FRONT DISC BRAKE PAD SUPPORT PLATE (LOWER)

(a) Remove the front disc brake pad support plate (lower) from the carrier.

8. REMOVE FRONT DISC BRAKE CYLINDER SLIDE PIN

- (a) Remove the front disc brake cylinder slide pin from the carrier.

9. REMOVE NO. 2 FRONT DISC BRAKE CYLINDER SLIDE PIN

- (a) Remove the No. 2 front disc brake cylinder slide pin from the carrier.

10. REMOVE FRONT DISC BRAKE CYLINDER SLIDE BUSH

- (a) Remove the 2 front disc brake cylinder slide bushes from the carrier.

11. REMOVE BUSH

- (a) Using a screwdriver with its tip wrapped in protective tape, remove the bush from the pin (B).

Text in Illustration

*1	Protective Tape
----	-----------------

12. REMOVE CARRIER

(a) Remove the 2 bolts and carrier.

13. REMOVE FRONT DISC

(a) Place matchmarks on the front disc and front axle hub.

HINT:

It is not necessary when replacing the disc.

Text in Illustration

*a

Matchmark

(b) Remove the front disc.

INSTALLATION

HINT:

- Use the same procedure for RH and LH sides.
- The procedure listed below is for LH side.

1. INSTALL REAR LEFT FLEXIBLE HOSE

(a) Connect the rear left flexible hose with a new clip.

NOTICE:

Securely install the clip.

(b) Hold the rear left flexible hose with a wrench and connect the brake tube to the rear left flexible hose using a union nut wrench.

Torque: 15 N·m (155 kgf·cm, 11ft·lbf)

NOTICE:

- Do not bend or damage the brake tube.
- Do not allow any foreign matter such as dirt and dust to enter the brake tube from the connecting position.
- Use the formula to calculate special torque wrench is combined with a torque wrench  .

(c) Connect the rear left flexible hose to the rear carrier LH with the bolt.

Torque: 33 N·m (337 kgf·cm, 24ft·lbf)

(d) Connect the rear left flexible hose to the rear disc brake cylinder assembly LH with a new 2 gaskets and the new union bolt.

Torque: 18 N·m (184 kgf·cm, 13ft·lbf)

2. ADD BRAKE FLUID

3. BLEED BRAKE LINE

4. INSPECT BRAKE FLUID LEAK

Model Year: 2013	Model: FR-S	Doc ID: RM000001ED100LX
Title: BRAKE (REAR): REAR BRAKE: INSPECTION (2013 FR-S)		

INSPECTION

1. CHECK BRAKE CYLINDER AND PISTON

- (a) Check the cylinder bore and piston for rust and scoring.

2. INSPECT PAD LINING THICKNESS

- (a) Using a ruler, measure the pad lining thickness.

SPECIFICATION	MINIMUM THICKNESS	STANDARD THICKNESS
Solid Type	1.5 mm (0.059 in.)	9.0 mm (0.354 in.)
Ventilated Type	1.5 mm (0.059 in.)	11.0 mm (0.433 in.)

3. INSPECT DISC THICKNESS

- (a) Using a micrometer, measure the disc thickness.

SPECIFICATION	MINIMUM THICKNESS	STANDARD THICKNESS
Solid Type	8.5 mm (0.3346 in.)	10.0 mm (0.3937 in.)
Ventilated Type	16.5 mm (0.6496 in.)	18.0 mm (0.7087 in.)

4. INSPECT DISC RUNOUT

- (a) Check the bearing play in the axial direction and check for the axle hub runout [INFO](#) .

(b) Tighten the disc with the 5 nuts.

Torque: 120 N·m (1224 kgf·cm, 89ft·lbf)

(c) Using a dial indicator, measure the disc runout 10 mm (0.394 in.) away from the outer edge of the rear disc.

Text in Illustration

*1	Dial Indicator
----	----------------

Maximum disc runout:

0.05 mm (0.0020 in.)

NOTICE:

- If the runout exceeds the maximum value, change the installation positions of the disc and axle to make the minimum runout. If the runout exceeds the maximum even when the installation positions are changed, replace the front disc.

(d) Remove the 5 hub nuts and rear disc.

Model Year: 2013	Model: FR-S	Doc ID: RM000000C1K011X
Title: BRAKE (REAR): REAR BRAKE: INSTALLATION (2013 FR-S)		

INSTALLATION

HINT:

- Use the same procedure for RH and LH sides.
- The procedure listed below is for LH side.

1. INSTALL REAR DISC BRAKE CYLINDER SLIDE BUSH

- (a) Apply a light layer of lithium soap base glycol grease to the inner face of a new rear disc brake cylinder slide bush.

Text in Illustration

	Lithium Soap Base Glycol Grease
---	---------------------------------

HINT:

Apply at least 0.3 g (0.01 oz.) of lithium soap base glycol grease to each rear disc brake cylinder slide bush.

- (b) Install the 2 rear disc brake cylinder slide bushes to the caliper support bracket.

2. INSTALL REAR DISC BRAKE REAR CYLINDER SLIDE PIN

- (a) Apply a light layer of lithium soap base glycol grease to the contact face between a new bush and rear disc brake rear cylinder rear disc brake cylinder slide pin.

Text in Illustration

*1	rear disc brake rear cylinder rear disc brake cylinder slide pin
*2	Bush
	Lithium Soap Base Glycol Grease

- (b) Install the new bush to the rear disc brake rear cylinder rear disc brake cylinder slide pin.
- (c) Apply a light layer of lithium soap base glycol grease to entire circumference of the rear disc brake rear cylinder rear disc brake cylinder slide pin and fitting part.
- (d) Install the rear disc brake rear cylinder rear disc brake cylinder slide pin to the caliper support bracket.

3. INSTALL REAR DISC BRAKE CYLINDER SLIDE PIN

- (a) Apply a light layer of lithium soap base glycol grease to entire circumference of the rear disc brake cylinder slide pin and fitting part.

Text in Illustration

	Lithium Soap Base Glycol Grease
---	---------------------------------

- (b) Install the rear disc brake cylinder slide pin to the caliper support bracket.

4. INSTALL REAR DISC

- (a) Align the matchmarks placed when removing, install the rear disc to the axle hub.

HINT:

When using a new rear disc, install it so that rear disc runout is minimum.

5. ADJUST PARKING BRAKE

6. INSTALL PARKING BRAKE SHOE ADJUSTING HOLE PLUG

- (a) Install the parking brake shoe adjusting hole plug to the rear disc.

7. INSTALL CALIPER SUPPORT BRACKET

- (a) Install the caliper support bracket with the 2 new bolts.

Torque: 66 N·m (673 kgf·cm, 49ft·lbf)

- (b) Apply a light of lithium soap base glycol grease to contact section of the rear disc brake pad support plate with the rear disc brake pad.

Text in Illustration

	Lithium Soap Base Glycol Grease
---	---------------------------------

8. INSTALL REAR DISC BRAKE PAD SUPPORT PLATE

- (a) Apply a light of lithium soap base glycol grease to contact section of the rear disc brake pad support plate with the rear disc brake pad.

Text in Illustration

	Lithium Soap Base Glycol Grease
---	---------------------------------

- (b) Install the rear disc brake pad support plate to the caliper support bracket.

9. INSTALL REAR DISC BRAKE ANTI SQUEAL SHIM KIT

- (a) Apply disc brake grease to the rear disc brake anti squeal shim kit.

Text in Illustration

*A	Solid Disc Brake
*B	Ventilated Disc Brake

Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: BRAKE ACTUATOR: REASSEMBLY (2013 FR-S)		

REASSEMBLY

1. INSTALL BRAKE ACTUATOR DAMPER

- (a) Install the 3 new brake actuator dampers (A and B) to the brake actuator bracket assembly.

2. INSTALL BRAKE ACTUATOR BRACKET ASSEMBLY

- (a) Install the brake actuator bracket assembly to the brake actuator assembly with the 3 new nuts and 3 new washers.

NOTICE:

Do not remove the hole plugs of a new brake actuator assembly before connecting the brake lines because the brake actuator assembly is filled with brake fluid.

Torque: 7.5 N·m (77 kgf·cm, 66in·lbf)

Last Modified: 3-27-2012	6.4 A	From: 201203

Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: BRAKE ACTUATOR: REMOVAL (2013 FR-S)		

REMOVAL

NOTICE:

Before removing the brake actuator assembly, refer to the "Brake line precaution". INFO

1. REMOVE FRONT WHEEL LH

2. DRAIN BRAKE FLUID

NOTICE:

Wash off the brake fluid immediately if it comes into contact with a painted surface.

3. REMOVE FRONT FENDER LINER LH INFO

4. REMOVE BRAKE ACTUATOR ASSEMBLY WITH BRAKE ACTUATOR BRACKET

(a) Disconnect the harness clamp from the brake actuator bracket.

(b) Disconnect the harness clamp from the brake actuator bracket.

(c) Disconnect the cooler pipe from the clamp.

(d) Disconnect the front speed sensor LH harness clamp from the brake actuator bracket.

(e) Press the wire harness connector locking claw to disengage the locking lever, and turn the locking lever upwards to unlock the connector.

Text in Illustration

*a	Turn
----	------

(f) Disconnect the connector from the brake actuator assembly.

(g) Using a union nut wrench 12 mm, disconnect the 2 brake lines from the brake actuator assembly.

NOTICE:

Be careful not to allow the brake fluid to enter the removed connector.

(h) Using a union nut wrench 10 mm, disconnect the 4 brake lines from the brake actuator assembly.

NOTICE:

Be careful not to allow the brake fluid to enter the removed connector.

(i) Remove the brake actuator bracket installation bolt.

(j) Remove the 3 bolts from the brake actuator with bracket.

(k) Remove the brake actuator with bracket from the vehicle body.

NOTICE:

Do not damage the brake tubes.

INSTALLATION

HINT:

- The procedures listed below are for the LH side.
- Use the same procedures for the RH and LH sides.

1. INSTALL REAR SPEED SENSOR LH

- (a) Install the rear speed sensor LH with the 3 bolts.

Torque: 7.5 N·m (77 kgf·cm, 66in·lbf)

NOTICE:

Prevent foreign matter from attaching to the rear speed sensor LH tip, installation surface and sensor body.

- (b) Connect the 2 clamps.

NOTICE:

Do not twist the wire harness for the rear speed sensor LH when installing it.

- (c) Pull the rear speed sensor LH grommet out from vehicle interior.

NOTICE:

- Do not pull the rear speed sensor LH wire harness.
- Do not fix the pass-through grommet at an angle.

- (d) Connect the rear speed sensor LH connector.

- (e) Remove the luggage compartment floor mat.

2. INSTALL REAR WHEEL LH

Torque: 120 N·m (1224 kgf·cm, 89ft·lbf)

INSTALLATION

1. INSTALL STEERING SENSOR

- (a) Align the 2 pins and 2 guides, and engage the 6 claws to install the steering sensor to the spiral cable sub-assembly.

Text in Illustration

*1	Guide
*2	Pin

NOTICE:

Do not rotate the spiral cable until the steering sensor has been attached to it.

2. ALIGN FRONT WHEELS TO FACEING STRAIGHT AHEAD

3. INSTALL SPIRAL CABLE WITH SENSOR SUB-ASSEMBLY

NOTICE:

- Do not replace the spiral cable sub-assembly with the battery connected and the ignition switch on (IG).
- Do not rotate the spiral cable sub-assembly without the steering wheel with the battery connected and the ignition switch on (IG).
- Ensure that the steering wheel is installed and aligned straight when inspecting the steering sensor.

(a) Check that the ignition switch is off.

(b) Check that the cable is disconnected from the negative (-) battery terminal.

CAUTION:

Wait at least for 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(c) Check that the front wheels are facing straight ahead.

(d) Set the turn signal switch to the neutral position.

NOTICE:

If it is not in the neutral position, the turn signal switch pin may snap.

(e) Engage the 3 claws to install the spiral cable with sensor sub-assembly.

(f) Connect the each connector.

Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: VEHICLE STABILITY CONTROL SYSTEM: ABS Warning Light does not Come ON (2013 FR-S)		

[ABS Warning Light does not Come ON](#)

DESCRIPTION

The skid control ECU (brake actuator assembly) is connected to the combination meter assembly via CAN communication.

INSPECTION PROCEDURE

NOTICE:

When replacing the skid control ECU (brake actuator assembly), perform VSC sensor neutral memorization  .

PROCEDURE

1.	CHECK CAN COMMUNICATION SYSTEM
-----------	---------------------------------------

(a) Check if a CAN communication system DTC is output  .

Result:

RESULT	PROCEED TO
DTC is not output.	A
DTC is output.	B

B  **INSPECT CAN COMMUNICATION SYSTEM**

A

2.	CHECK ABS WARNING LIGHT
-----------	--------------------------------

(a) Disconnect the skid control ECU (brake actuator assembly) connector.

(b) Turn the ignition switch to ON.

(c) Check that the ABS warning light comes on.

OK:

The ABS warning light comes on.

HINT:

If troubleshooting has been carried out according to Problem Symptoms Table, refer back to the table and proceed to the next step before replacing parts  .

NG ► **INSPECT COMBINATION METER ASSEMBLY**

OK ► **REPLACE BRAKE ACTUATOR ASSEMBLY**

3.	INSPECT COMBINATION METER ASSEMBLY
-----------	---

- (a) Turn the ignition switch off.
- (b) Reconnect the skid control ECU (brake actuator assembly) connector.
- (c) Perform an Active Test of the combination meter assembly (meter CPU) using the Techstream  .
- (d) Check the combination meter assembly.

OK:

The ABS warning light turns on or off in accordance with the Active Test operation.

HINT:

If troubleshooting has been carried out according to Problem Symptoms Table, refer back to the table and proceed to the next step before replacing parts  .

NG ► **REPLACE COMBINATION METER ASSEMBLY**

OK ► **REPLACE BRAKE ACTUATOR ASSEMBLY**

Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: VEHICLE STABILITY CONTROL SYSTEM: ABS Warning Light Remains ON (2013 FR-S)		

ABS Warning Light Remains ON

DESCRIPTION

The skid control ECU (brake actuator assembly) is connected to the combination meter assembly via CAN communication.

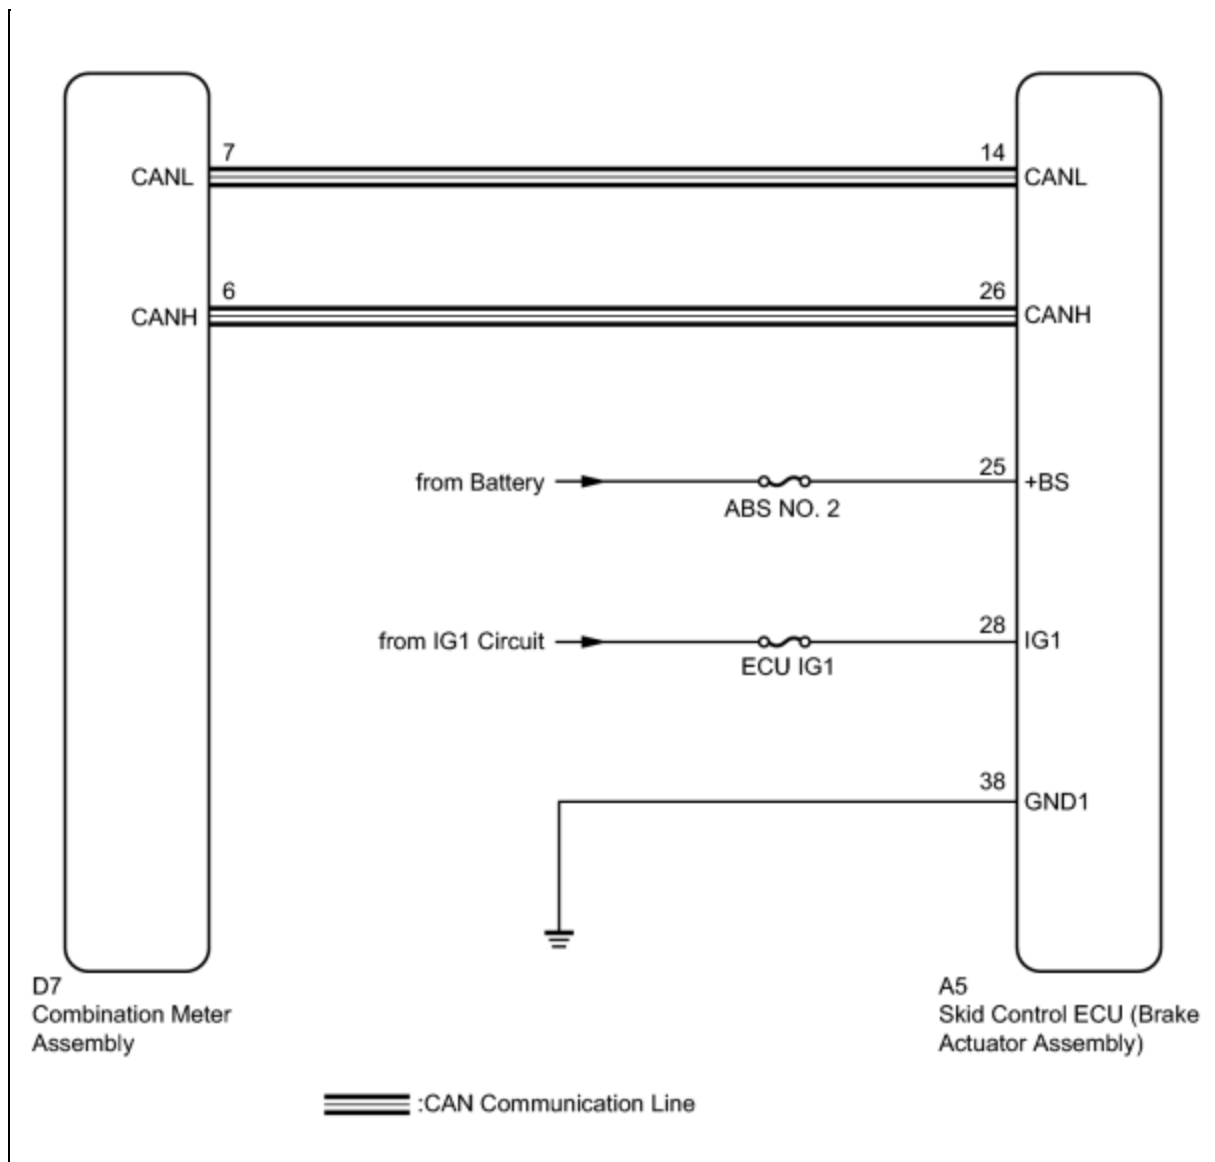

If any of the following is detected, the ABS warning light remains on:

- The skid control ECU (brake actuator assembly) connector is disconnected from the skid control ECU (brake actuator assembly).
- There is a malfunction in the skid control ECU (brake actuator assembly) internal circuit.
- There is an open in the harness between the combination meter assembly and the skid control ECU (brake actuator assembly).
- The ABS control system is defective.

HINT:

In some cases, the Techstream cannot be used when the skid control ECU (brake actuator assembly) is abnormal.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- When replacing the skid control ECU (brake actuator assembly), perform VSC sensor neutral memorization .
- Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1.	CHECK CAN COMMUNICATION SYSTEM
-----------	---------------------------------------

(a) Check if a CAN communication system DTC is output .

Result:

RESULT	PROCEED TO
DTC is not output.	A

B ▶ INSPECT CAN COMMUNICATION SYSTEM**A****2. CHECK IF BRAKE ACTUATOR ASSEMBLY CONNECTOR IS SECURELY CONNECTED**

(a) Check if the skid control ECU (brake actuator assembly) connector is securely connected.

OK:

The connector is securely connected.

NG ▶ CONNECT CONNECTOR TO ECU CORRECTLY**OK****3. CHECK BATTERY**

(a) Check the battery voltage.

Standard Voltage:

11 to 14 V

NG ▶ CHECK OR REPLACE CHARGING SYSTEM COMPONENT OR BATTERY**OK****4. CHECK HARNESS AND CONNECTOR (POWER SOURCE TERMINAL)**

(a) Disconnect the skid control ECU (brake actuator assembly) connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A5-25 (+BS) - Body ground	Always	11 to 14 V
A5-25 (+BS) - A5-38 (GND1)	Always	11 to 14 V
A5-28 (IG1) - Body ground	Ignition switch ON	11 to 14 V

HINT:

If there is no problem after finishing the above check, adjust the brake fluid level to the MAX level.

NG ▶ **REPLACE BRAKE MASTER CYLINDER SUB-ASSEMBLY**

OK

8.	CHECK HARNESS AND CONNECTOR (COMBINATION METER ASSEMBLY - BRAKE FLUID LEVEL WARNING SWITCH)
----	--

- (a) Disconnect the combination meter assembly connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D7-17 (LBL) - A59-1	Always	Below 1 Ω
D7-17 (LBL) - Body ground	Always	10 k Ω or higher
A59-2 - Body ground	Always	Below 1 Ω

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

9.	INSPECT COMBINATION METER ASSEMBLY
-----------	---

(a) Reconnect the combination meter assembly connector and the brake fluid level warning switch connector.

(b) Perform an Active Test of the combination meter assembly (meter CPU) using the Techstream .

(c) Check the combination meter assembly.

OK:

The brake warning light turns on or off in accordance with the Active Test operation.

HINT:

If troubleshooting has been carried out according to Problem Symptoms Table, refer back to the table and proceed to the next step before replacing parts .

NG  **REPLACE COMBINATION METER ASSEMBLY**

OK  **REPLACE BRAKE ACTUATOR ASSEMBLY**

10.	INSPECT PARKING BRAKE SWITCH ASSEMBLY
------------	--

(a) Turn the ignition switch off.

(b) Disconnect the parking brake switch assembly connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - Body ground	Parking brake switch ON (Switch pin free)	Below 1 Ω
1 - Body ground	Parking brake switch OFF (Switch pin pushed in)	10 k Ω or higher

Text in Illustration

*a	Component without harness connected (Parking Brake Switch Assembly)
----	--

NG ► **REPLACE PARKING BRAKE SWITCH ASSEMBLY**

OK

11.	CHECK HARNESS AND CONNECTOR (INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY - PARKING BRAKE SWITCH ASSEMBLY)
------------	---

(a) Disconnect the instrument panel junction block assembly connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3B-24 - D31-1	Always	Below 1 Ω

3B-24 - Body ground	Always	10 kΩ or higher
---------------------	--------	-----------------

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

12. INSPECT INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY

- (a) Remove the instrument panel junction block assembly **INFO** .
- (b) Remove the main body ECU (network gateway ECU) from the instrument panel junction block assembly **INFO** .
- (c) Measure the resistance according to the value(s) in the table below.

Text in Illustration

*a	Component without harness connected (Instrument Panel Junction Block Assembly)	-	-
----	---	---	---

Standard Resistance:

Model Year: 2013	Model: FR-S	Doc ID: RM000001JD60BOX
Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: VEHICLE STABILITY CONTROL SYSTEM: C146C: Open in ABS Motor Relay Circuit (2013 FR-S)		

DTC	C146C	Open in ABS Motor Relay Circuit
------------	--------------	--

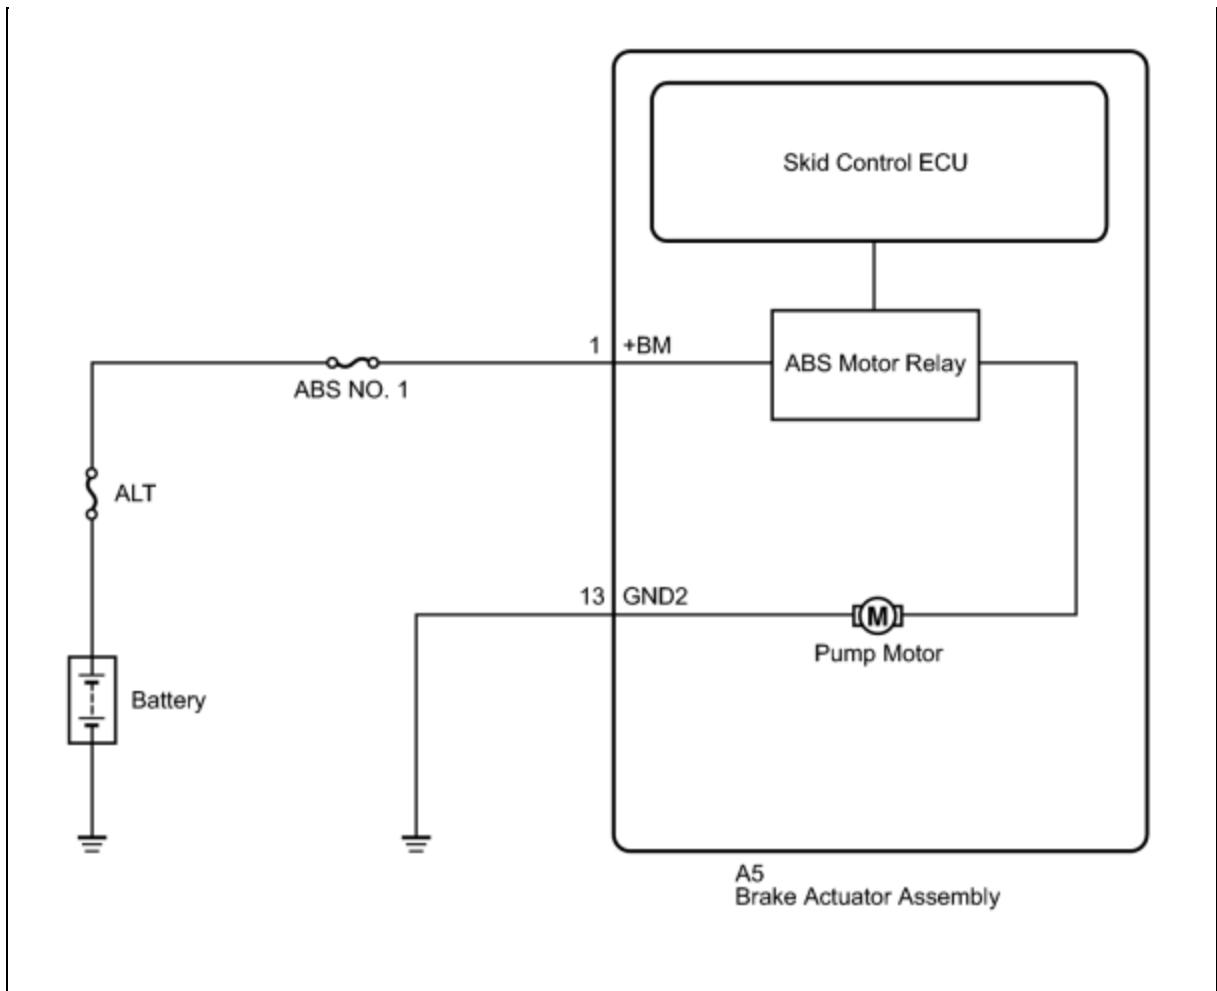

DESCRIPTION

The ABS motor relay supplies power to the pump motor. While the ABS is activated, the skid control ECU turns the ABS motor relay on to operate the pump motor.

If the voltage supplied to the ABS motor relay (+BM) is too low due to low voltage from the battery or alternator, the DTC may be stored.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
C146C	Any of the following is detected: <ol style="list-style-type: none"> 1. When the ABS motor relay is actuated, voltage is not supplied to the pump motor. 2. When the ABS motor relay is not actuated, voltage in the pump motor is high. 3. The skid control ECU judges that pump motor operation is abnormal. 	<ul style="list-style-type: none"> • ABS NO. 1 fuse (Fusible link block assembly) • ABS motor relay circuit • ABS motor relay (Brake actuator assembly)

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- When replacing the skid control ECU (brake actuator assembly), perform VSC sensor neutral memorization INFO.
- Inspect the fuses for circuits related to this system before performing the following inspection procedure.

HINT:

When C1241 is output together with C146C, inspect and repair the trouble areas indicated by C1241 first INFO.

PROCEDURE

1.	PERFORM ACTIVE TEST USING TECHSTREAM (ABS MOTOR RELAY)
-----------	---

- Connect the Techstream to the DLC3.
- Start the engine.
- Select the Active Test using the Techstream INFO.

ABS/VSC/TRAC

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Motor Relay	ABS motor relay	Relay ON/OFF	Operating sound of motor can be heard

(d) Check the operating sound of the pump motor when operating it using the Techstream.

Result:

RESULT	PROCEED TO
Operating sound is heard.	A
Operating sound is not heard.	B

B ▶ **CHECK HARNESS AND CONNECTOR (+BM TERMINAL)**

A

2.	RECONFIRM DTC
-----------	----------------------

HINT:

This DTC is stored when a problem is identified in the brake actuator assembly.

The ABS motor relay is in the brake actuator assembly.

Therefore, motor relay inspection and motor relay unit inspection cannot be performed. Be sure to check if the DTC is output again before replacing the skid control ECU (brake actuator assembly).

- (a) Clear the DTCs INFO.
- (b) Turn the ignition switch off.
- (c) Start the engine.
- (d) Drive the vehicle at a speed of 40 km/h (25 mph) or more for 30 seconds or more.
- (e) Check if the same DTC is output INFO.

Result:

RESULT	PROCEED TO
DTC C146C is not output.	A
DTC C146C is output.	B

HINT:

- If a speed signal of 40 km/h (25 mph) or more is received by the skid control ECU (brake actuator assembly) with the ignition switch ON, the skid control ECU (brake actuator assembly) performs self diagnosis of the motor circuit.

- If the normal system code is output (No DTCs are output), slightly jiggle the connectors, wire harness, and fuses of the skid control ECU (brake actuator assembly).
- If any DTCs are output while jiggling a connector or wire harness of the skid control ECU (brake actuator assembly), inspect and repair the connector or wire harness.
 - If no DTCs were output when reconfirming DTCs, checking for intermittent problems is necessary because it is suspected that the original DTCs were stored due to the poor connection of a connector terminal.

B ▶ REPLACE BRAKE ACTUATOR ASSEMBLY

A ▶ CHECK FOR INTERMITTENT PROBLEMS

3. CHECK HARNESS AND CONNECTOR (+BM TERMINAL)

(a) Make sure that there is no looseness at the locking part and the connecting part of the connector.

(b) Disconnect the skid control ECU (brake actuator assembly) connector.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A5-1 (+BM) - Body ground	Always	11 to 14 V

Last Modified: 3-27-2012	6.4 C	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000001NJY01TX
Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: VEHICLE STABILITY CONTROL SYSTEM: C146E: Open in ABS Solenoid Relay Circuit (2013 FR-S)		

DTC	C146E	Open in ABS Solenoid Relay Circuit
------------	--------------	---

DESCRIPTION

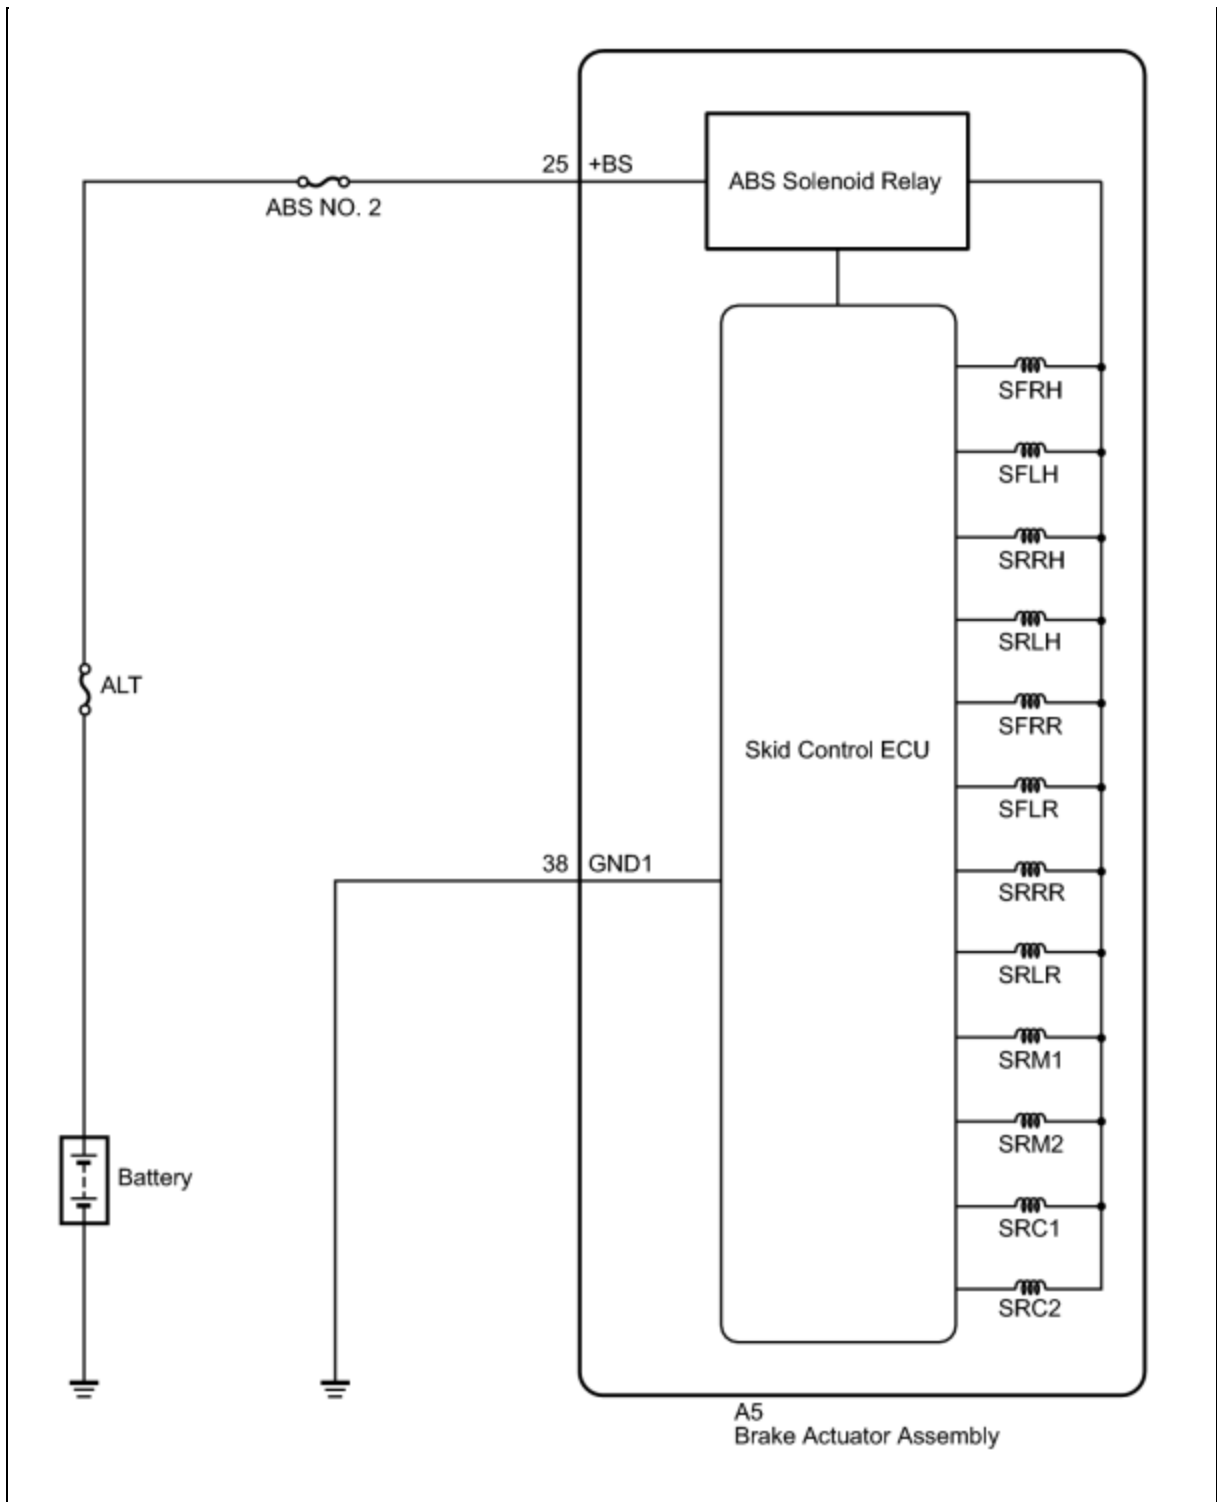

The ABS solenoid relay is built into the skid control ECU in the brake actuator assembly.

The ABS solenoid relay supplies power to the ABS and TR(A)C solenoids.

The skid control ECU detects a solenoid relay malfunction by performing a self check and relay operation check.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
C146E	Either of the following is detected: <ol style="list-style-type: none"> 1. A solenoid relay drive circuit in the skid control ECU is malfunctioning. 2. The solenoid relay cannot be switched between on and off. 	<ul style="list-style-type: none"> • ABS NO. 2 fuse (Fusible link block assembly) • ABS solenoid relay circuit • ABS solenoid relay (Brake actuator assembly)

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- When replacing the skid control ECU (brake actuator assembly), perform VSC sensor neutral memorization INFO.
- Inspect the fuses for circuits related to this system before performing the following inspection procedure.

HINT:

When C1241 is output together with C146E, inspect and repair the trouble areas indicated by C1241

PROCEDURE

1. CHECK HARNESS AND CONNECTOR (+BS TERMINAL)

(a) Make sure that there is no looseness at the locking part and the connecting part of the connector.

(b) Disconnect the skid control ECU (brake actuator assembly) connector.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A5-25 (+BS) - Body ground	Always	11 to 14 V

Text in Illustration

*a	Front view of wire harness connector (to Skid Control ECU (Brake Actuator Assembly))
----	---

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR (+BS CIRCUIT)**

OK

2. CHECK HARNESS AND CONNECTOR (GND1 TERMINAL)

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

--	--	--

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A5-38 (GND1) - Body ground	Always	Below 1 Ω

Text in Illustration

----	--

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR (GND1 CIRCUIT)

OK
▼

3.	RECONFIRM DTC
-----------	----------------------

HINT:

This DTC is stored when a problem is identified in the skid control ECU (brake actuator assembly).

The solenoid circuits are located in the brake actuator assembly.

Therefore, solenoid circuit inspection and solenoid unit inspection cannot be performed. Be sure to check if the DTC is output again before replacing the skid control ECU (brake actuator assembly).

- (a) Reconnect the skid control ECU (brake actuator assembly) connector.
- (b) Clear the DTCs INFO.
- (c) Turn the ignition switch off.
- (d) Start the engine.
- (e) Drive the vehicle at a speed of 40 km/h (25 mph) or more for 30 seconds or more.
- (f) Check if the same DTC is output INFO.

Result:

RESULT	PROCEED TO
DTC C146E is not output.	A
DTC C146E is output.	B

HINT:

If a speed signal of 15 km/h (9 mph) or more is received by the skid control ECU (brake actuator assembly) with the ignition switch ON, the skid control ECU (brake actuator assembly) performs self diagnosis of the solenoid circuit.

- If the normal system code is output (No DTCs are output), slightly jiggle the connectors, wire harnesses, and fuses of the skid control ECU (brake actuator assembly).
- If any DTCs are output while jiggling a connector or wire harness of the skid control ECU (brake actuator assembly), inspect and repair the connector or wire harness.
- If no DTCs were output when reconfirming DTCs, checking for intermittent problems is necessary because it is suspected that the original DTCs were stored due to the poor connection of a connector terminal.

B ▶ REPLACE BRAKE ACTUATOR ASSEMBLY

Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: VEHICLE STABILITY CONTROL SYSTEM: C1231: Steering Angle Sensor (2013 FR-S)		

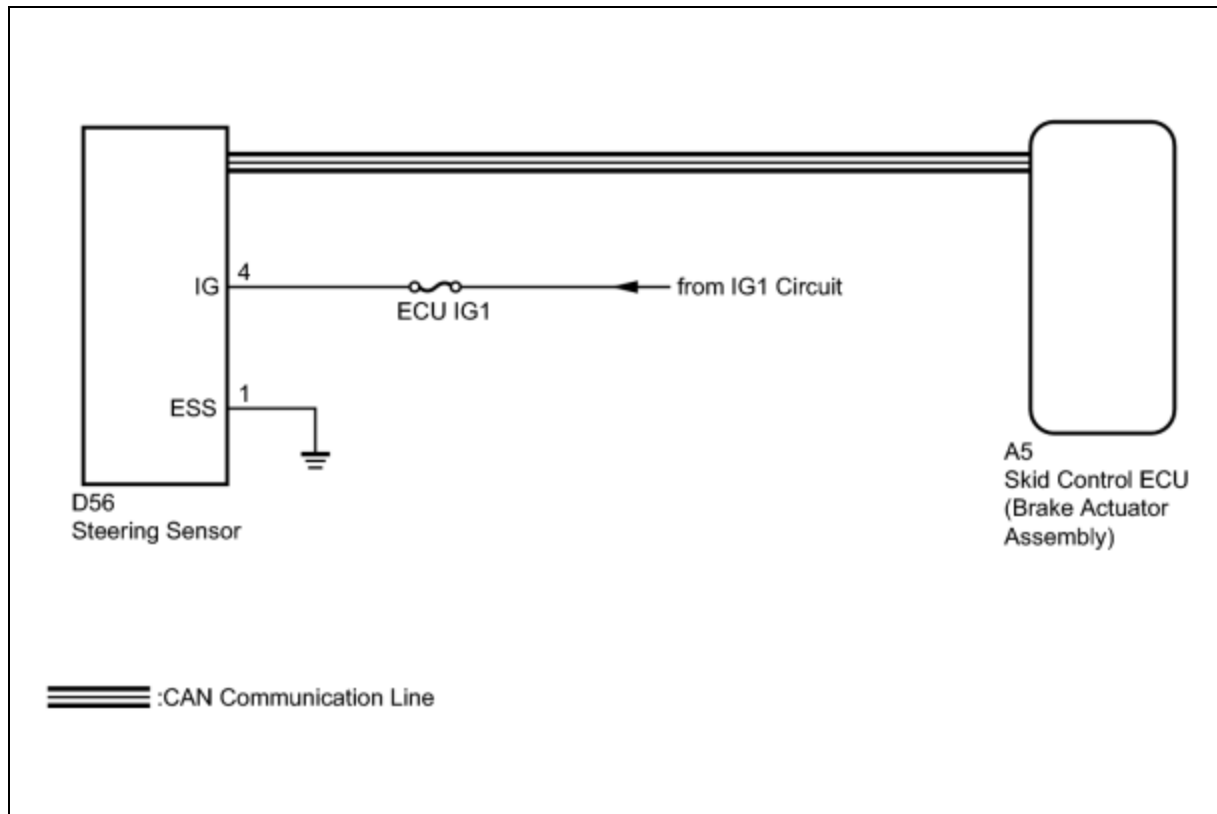

DTC	C1231	Steering Angle Sensor
------------	--------------	------------------------------

DESCRIPTION

The steering sensor signal is sent to the skid control ECU (brake actuator assembly) via the CAN communication system. When there is a malfunction in the CAN communication system, it will be detected by the steering sensor zero point malfunction diagnostic function.

DTC CODE	DTC DETECTION CONDITION	TROUBLE AREA
C1231	When the +BS terminal voltage is between 9.6 and 16.5 V, the steering sensor malfunction signal is received.	<ul style="list-style-type: none"> Steering sensor Steering sensor circuit Steering sensor power supply

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- When replacing the steering sensor, perform VSC sensor neutral memorization **INFO** .
- Inspect the fuses for circuits related to this system before performing the following inspection procedure.

HINT:

- When DTC U0073 and/or U0126 is output together with DTC C1231, inspect and repair the trouble areas indicated by DTC U0073 and/or U0126 first **INFO** .
- When the speed sensor or the yaw rate sensor has trouble, DTCs for the steering sensor may be output even when the steering sensor is normal. When DTCs for the speed sensor or yaw rate sensor assembly are output together with this steering sensor DTC, inspect and repair the speed sensor and yaw rate sensor assembly first, and then inspect and repair the steering sensor.

PROCEDURE

1.	CHECK DTC
-----------	------------------

- (a) Clear the DTCs **INFO** .
- (b) Turn the ignition switch off.
- (c) Turn the ignition switch to ON again and check that no CAN communication system DTC is output.
- (d) Drive the vehicle at a speed of 35 km/h (22 mph), turn the steering wheel to the right and left, and check that no speed sensor and yaw rate sensor DTCs are output **INFO** .

Result

RESULT	PROCEED TO
No CAN communication system, speed sensor or yaw rate sensor DTC is output.	A
CAN communication system DTC is output.	B
Speed sensor or yaw rate sensor DTC is output.	C

HINT:

- If there is a malfunction in the speed sensor or yaw rate sensor, an abnormal value may be output although the steering sensor is normal.
- If speed sensor and yaw rate sensor assembly DTCs are output together with this steering sensor DTC, inspect and repair the speed and yaw rate sensors first, and then inspect and repair the steering sensor.

DTC	C1277	Abnormal Change in Output Signal of Rear Speed Sensor RH (Test Mode DTC)
------------	--------------	---

DTC	C1278	Abnormal Change in Output Signal of Rear Speed Sensor LH (Test Mode DTC)
------------	--------------	---

DESCRIPTION

The skid control ECU (brake actuator assembly) measures the speed of each wheel by receiving signals from the speed sensor.

These signals are used for recognizing that all four wheels are operating properly.

Therefore, all wheel signals must be equal.

DTCs C1275 to C1278 are cleared when the speed sensor sends a vehicle speed signal or when Test Mode ends. DTCs C1275 to C1278 are output only in Test Mode.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
C1237	Any of the following is detected: <ol style="list-style-type: none"> 1. Discrepancy among four wheel speed sensor output. 2. Abnormal pulse signals from 3 or more sensors. 3. Continuous ABS control is performed for 60 seconds or more. 4. VSC control is performed for 5 seconds or more. 	<ul style="list-style-type: none"> • Tire and wheel size • Tire deformation • Speed sensor rotor • Speed sensor • Speed sensor circuit • Skid control ECU (Brake actuator assembly)
C1275	Detected only during Test Mode.	Front speed sensor rotor RH/LH (Front axle

C1276		hub sub-assembly RH/LH)
C1277 C1278	Detected only during Test Mode.	Rear speed sensor rotor RH/LH (Rear axle hub sub-assembly RH/LH)

HINT:

- DTC C1275 is for the front speed sensor RH.
- DTC C1276 is for the front speed sensor LH.
- DTC C1277 is for the rear speed sensor RH.
- DTC C1278 is for the rear speed sensor LH.

WIRING DIAGRAM

Refer to DTCs C1330, C1331, C1332, C1333, C1464, C1465, C1466 and C1467  for front, and  for rear).

INSPECTION PROCEDURE

NOTICE:

When replacing the skid control ECU (brake actuator assembly), perform VSC sensor neutral memorization .

HINT:

When C1330, C1331, C1332, C1333, C1464, C1465, C1466 and/or C1467 is output together with C1237, inspect and repair the trouble areas indicated by C1330, C1331, C1332, C1333, C1464, C1465, C1466 and/or C1467 first  for front, and/or  for rear).

PROCEDURE

1.	CHECK TIRES
-----------	--------------------

(a) Check the size and condition of all four wheels .

HINT:

The DTC is output when tire deformation or a difference in tire size is detected.

OK:

The diameter of all four tires and the tire pressure are the same.

NG  **REPLACE TIRES SO THAT ALL FOUR TIRES ARE THE SAME SIZE**

OK

2.	READ VALUE USING TECHSTREAM (SPEED SENSOR)
-----------	---

- (a) Connect the Techstream to the DLC3.
- (b) Start the engine.
- (c) Select the Data List using the Techstream  .

ABS/VSC/TRAC

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
FR Wheel Speed	Front wheel speed sensor RH reading / Min.: 0 km/h (0 mph), Max.: 326.4 km/h (202 mph)	Vehicle stopped: 0 km/h (0 mph)	When driving at constant speed: No large fluctuations
FL Wheel Speed	Front wheel speed sensor LH reading / Min.: 0 km/h (0 mph), Max.: 326.4 km/h (202 mph)	Vehicle stopped: 0 km/h (0 mph)	When driving at constant speed: No large fluctuations
RR Wheel Speed	Rear wheel speed sensor RH reading / Min.: 0 km/h (0 mph), Max.: 326.4 km/h (202 mph)	Vehicle stopped: 0 km/h (0 mph)	When driving at constant speed: No large fluctuations
RL Wheel Speed	Rear wheel speed sensor LH reading / Min.: 0 km/h (0 mph), Max.: 326.4 km/h (202 mph)	Vehicle stopped: 0 km/h (0 mph)	When driving at constant speed: No large fluctuations

- (d) Check the speed value output from the speed sensor displayed on the Techstream.

HINT:

Factors that affect the indicated vehicle speed include tire size, tire pressure, and tire wear. The speed indicated on the speedometer has an allowable margin of error. This can be tested using a speedometer tester (calibrated chassis dynamometer). For details about testing and the margin of error, see the reference chart  .

OK:

The speed value output from the speed sensor displayed on the Techstream is similar to the speed indicated on the speedometer.

Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: VEHICLE STABILITY CONTROL SYSTEM: C1241: Low or High Power Supply Voltage (2013 FR-S)		

DTC	C1241	Low or High Power Supply Voltage
------------	--------------	---

DESCRIPTION

If a malfunction is detected in the power supply circuit, the skid control ECU (brake actuator assembly) stores this DTC and the fail-safe function prohibits ABS operation.

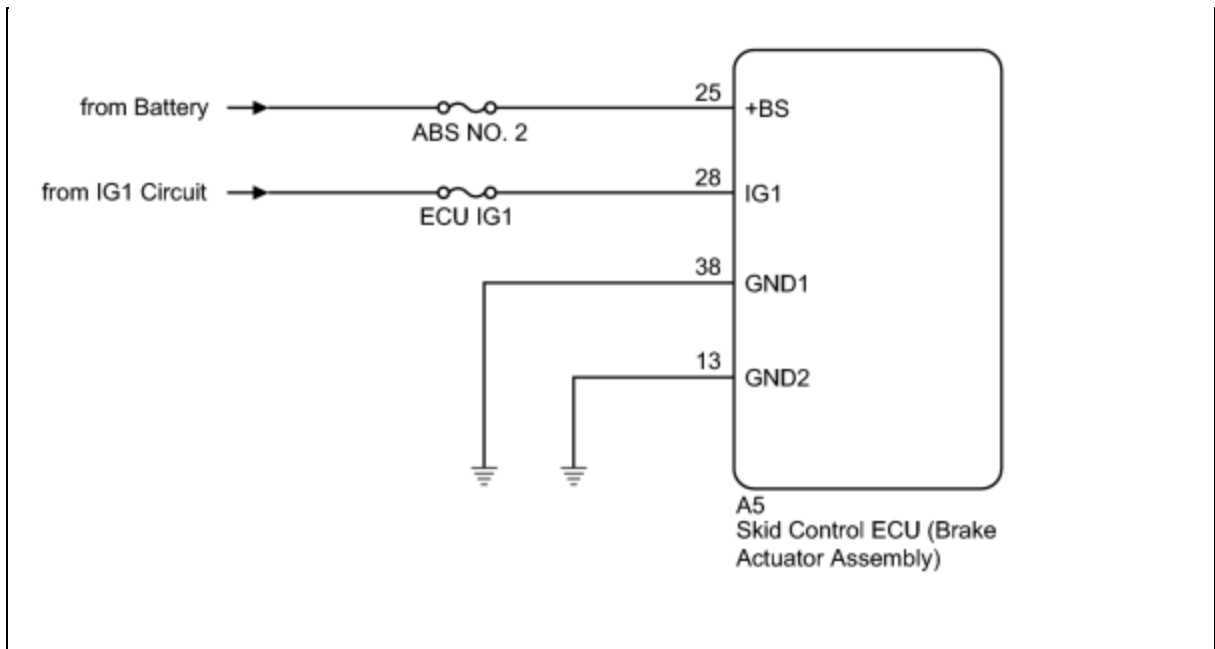

This DTC is stored when the +BS terminal voltage meets one of the DTC detection conditions due to a malfunction in the power supply or charging circuit such as the battery or alternator circuit, etc.

The DTC is canceled when the +BS terminal voltage returns to normal.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
C1241	<p>Any of the following is detected:</p> <ol style="list-style-type: none"> 1. The vehicle speed is 6 km/h (4 mph) or more and the +BS terminal voltage (soft low voltage) is 9.6 V or less for 1 second or more. 2. The vehicle speed is 6 km/h (4 mph) or more and the +BS terminal voltage (hard low voltage) is 6.9 V or less for 1 second or more. 3. The vehicle speed is 15 km/h (9 mph) or more, the +BS terminal voltage is 9.6 V or more, the skid control ECU (brake actuator assembly) turns on more than one valve at the same time within a short period of time and the valve relay supply voltage drop exceeds the threshold.* 	<ul style="list-style-type: none"> • ABS NO. 2 fuse • ECU IG1 fuse • Battery • Charging system • Power source circuit • Ground circuit • Internal power supply circuit of the skid control ECU (brake actuator assembly)

*: The skid control ECU (brake actuator assembly) monitors the resistance of the power source line at the +BS terminal. A malfunction is detected when an abnormality occurs in the +BS terminal wire harness or its connection and the skid control ECU (brake actuator assembly) determines that the wiring resistance at the +BS terminal exceeds the standard resistance.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- When replacing the skid control ECU (brake actuator assembly), perform VSC sensor neutral memorization **INFO**.
- Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1.	CHECK BATTERY
-----------	----------------------

(a) Check the battery voltage.

Standard Voltage:
11 to 14 V

NG ► **CHECK OR REPLACE CHARGING SYSTEM COMPONENT OR BATTERY**

OK
▼

2.	CHECK HARNESS AND CONNECTOR (POWER SOURCE TERMINAL)
-----------	--

(a) Make sure that there is no looseness at the locking part and the connecting part of the connector.

(b) Disconnect the skid control ECU (brake actuator assembly) connector.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A5-25 (+BS) - Body ground	Always	11 to 14 V
A5-25 (+BS) - A5-38 (GND1)	Always	11 to 14 V
A5-28 (IG1) - Body ground	Ignition switch ON	11 to 14 V
A5-28 (IG1) - A5-38 (GND1)	Ignition switch ON	11 to 14 V

Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: VEHICLE STABILITY CONTROL SYSTEM: C1246: Master Cylinder Pressure Sensor Malfunction (2013 FR-S)		

DTC	C1246	Master Cylinder Pressure Sensor Malfunction
------------	--------------	--

DESCRIPTION

The master cylinder pressure sensor is connected to the skid control ECU in the brake actuator assembly.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
C1246	<p>Any of the following is detected:</p> <ol style="list-style-type: none"> 1. The voltage of the sensor signal is out of range (below 0.129 V, above 3.29 V). 2. An abnormality is detected in the skid control ECU internal sensor test. 3. The sensor signal offset value is out of range. 	<ul style="list-style-type: none"> • STOP fuse • Stop light switch circuit • Master cylinder pressure sensor circuit • Master cylinder pressure sensor (Brake actuator assembly)

WIRING DIAGRAM

Refer to DTCs C1249 INFO.

INSPECTION PROCEDURE

NOTICE:

- When replacing the skid control ECU (brake actuator assembly), perform VSC sensor neutral memorization INFO.
- Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1.	CHECK STOP LIGHT OPERATION
-----------	-----------------------------------

(a) Check that the stop lights come on when the brake pedal is depressed, and go off when the brake pedal is released.

OK:

CONDITION	ILLUMINATION CONDITION
Brake pedal depressed.	ON
Brake pedal released.	OFF

NG ▶ **INSPECT LIGHTING SYSTEM (STOP LIGHT CIRCUIT)**

OK

2.	READ VALUE USING TECHSTREAM (MASTER CYLINDER PRESSURE SENSOR)
-----------	--

(a) Connect the Techstream to the DLC3.

(b) Start the engine.

(c) Select the Data List using the Techstream INFO.

ABS/VSC/TRAC

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Master Cylinder	Master cylinder pressure sensor reading / Min.: 0.00 V, Max.: 5.00 V	Brake pedal released: 0.20 to	Reading increases when brake pedal is depressed

Sensor	0.40 V
--------	--------

(d) Check that the brake fluid pressure value of the master cylinder pressure sensor observed on the Techstream changes when the brake pedal is depressed.

OK:

When the pedal is depressed, the voltage displayed on the Techstream increases.

NG ▶ **REPLACE BRAKE ACTUATOR ASSEMBLY**

OK

3.	READ VALUE USING TECHSTREAM (STOP LIGHT SWITCH)
-----------	--

(a) Select the Data List using the Techstream .

ABS/VSC/TRAC

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Stop Light SW	Stop light switch / ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released	-

(b) Check that the stop light switch display observed on the Techstream change according to brake pedal operation.

OK:

The Techstream displays on or off according to brake pedal operation.

NG ▶ **CHECK HARNESS AND CONNECTOR (POWER SOURCE TERMINAL)**

OK

4.	RECONFIRM DTC
-----------	----------------------

(a) Clear the DTCs .

(b) Turn the ignition switch off.

(c) Start the engine.

(d) Drive the vehicle and depress the brake pedal several times to test the stop light circuit.

(e) Check if the same DTC is output .

Result:

RESULT	PROCEED TO
DTC C1246 is not output.	A
DTC C1246 is output.	B

B ▶ REPLACE BRAKE ACTUATOR ASSEMBLY

A ▶ CHECK FOR INTERMITTENT PROBLEMS

5. CHECK HARNESS AND CONNECTOR (POWER SOURCE TERMINAL)

(a) Make sure that there is no looseness at the locking part and the connecting part of the connector.

(b) Disconnect the noise filter connector.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A13-3 - Body ground	Always	11 to 14 V

Text in Illustration

*a	Front view of wire harness connector (to Noise Filter)
----	--

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR (POWER SOURCE CIRCUIT)

OK
▼

6. INSPECT NOISE FILTER

(a) Remove the noise filter  .

(b) Inspect the noise filter  .

NG  **REPLACE NOISE FILTER**

OK

7.	CHECK HARNESS AND CONNECTOR (NOISE FILTER - STOP LIGHT SWITCH ASSEMBLY)
-----------	--

(a) Make sure that there is no looseness at the locking part and the connecting part of the connector.

(b) Disconnect the stop light switch assembly connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A13-2 - A22-1	Always	Below 1 Ω
A13-1 - A22-2	Always	Below 1 Ω

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

8.	INSPECT STOP LIGHT SWITCH ASSEMBLY
-----------	---

(a) Remove the stop light switch assembly  .

(b) Inspect the stop light switch assembly  .

NG  **REPLACE STOP LIGHT SWITCH ASSEMBLY**

OK

9. CHECK HARNESS AND CONNECTOR (STP TERMINAL)

(a) Turn the ignition switch off.

(b) Make sure that there is no looseness at the locking part and the connecting part of the connector.

(c) Disconnect the skid control ECU (brake actuator assembly) connector.

(d) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A5-30 (STP) - Body ground	Stop light switch ON (Brake pedal depressed)	11 to 14 V*
	Stop light switch OFF (Brake pedal released)	Below 1.5 V

HINT:

*: The standard voltage value varies depending on the +BS terminal voltage value. The standard voltage is 85% of the +BS terminal voltage.

NG ► REPAIR OR REPLACE HARNESS OR
CONNECTOR (STP CIRCUIT)

OK ► REPLACE BRAKE ACTUATOR ASSEMBLY

Last Modified: 3-27-2012	6.4 C	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000XIEOK1X
Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: VEHICLE STABILITY CONTROL SYSTEM: C1249: Open in Stop Light Switch Circuit (2013 FR-S)		

DTC	C1249	Open in Stop Light Switch Circuit
------------	--------------	--

DESCRIPTION

The skid control ECU (brake actuator assembly) receives stop light switch signals and uses them to determine whether or not the brakes are applied.

DTCs may be stored if one of the following occurs:

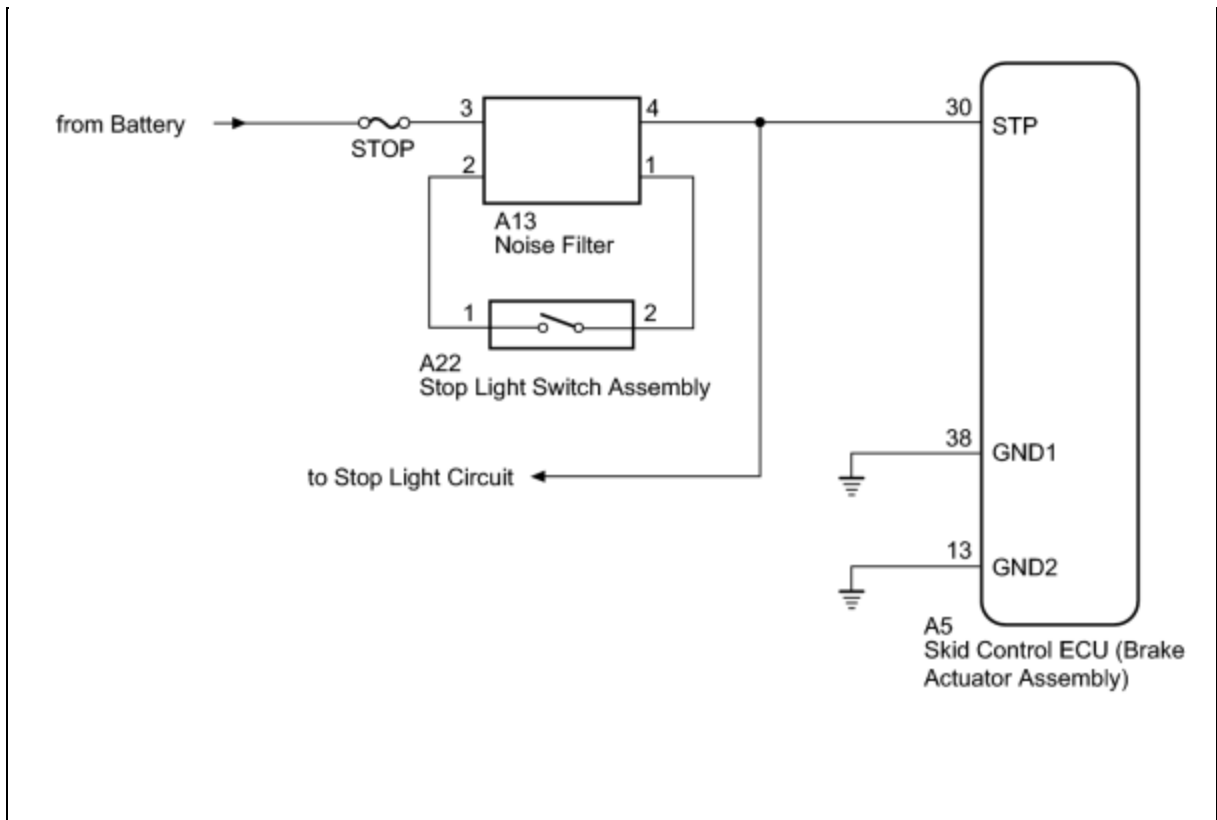

- Stop light switch stuck on/off malfunction.
- Accelerator pedal and brake pedal depressed simultaneously.*

HINT:

*: The skid control ECU (brake actuator assembly) may store this DTC upon judging that a stuck on malfunction has occurred when the accelerator pedal and brake pedal are depressed simultaneously. However, this does not indicate a malfunction.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
C1249	<p>Any of the following is detected:</p> <ul style="list-style-type: none"> • The vehicle speed is 10 km/h (6 mph) or more, the accelerator pedal is depressed, the master cylinder pressure is 0.5 MPa (5.09 kgf/cm², 72 psi) or less, and the stop light switch is on for 60 seconds or more. • When the stop light switch is OFF, the master cylinder pressure is increased. 	<ul style="list-style-type: none"> • STOP fuse • Stop light switch assembly • Noise filter • Stop light switch circuit • Skid control ECU (Brake actuator assembly)

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- When replacing the skid control ECU (brake actuator assembly), perform VSC sensor neutral memorization **INFO** .
- Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1.	CHECK ACCELERATOR PEDAL AND BRAKE PEDAL OPERATION
-----------	--

(a) Interview the customer to check if the pedals were depressed simultaneously while driving or braking.

OK:

The pedals were not depressed simultaneously.

HINT:

The skid control ECU (brake actuator assembly) may store this DTC upon judging that a stuck on malfunction has occurred when the accelerator pedal and brake pedal are depressed simultaneously.

If the pedals were depressed simultaneously, clear the DTC because it is not a malfunction.

OK

2.	CHECK STOP LIGHT OPERATION
-----------	-----------------------------------

(a) Check that the stop lights come on when the brake pedal is depressed, and go off when the brake pedal is released.

OK:

CONDITION	ILLUMINATION CONDITION
Brake pedal depressed.	ON
Brake pedal released.	OFF

NG ► **CHECK HARNESS AND CONNECTOR (POWER SOURCE TERMINAL)**

OK

3.	READ VALUE USING TECHSTREAM (STOP LIGHT SWITCH)
-----------	--

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Select the Data List using the Techstream .

ABS/VSC/TRAC

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Stop Light SW	Stop light switch / ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released	-

(d) Check that the stop light switch display observed on the Techstream changes according to brake pedal operation.

OK:

The Techstream displays on or off according to brake pedal operation.

NG ► **CHECK HARNESS AND CONNECTOR (STP TERMINAL)**

OK

4.	RECONFIRM DTC
-----------	----------------------

- (a) Turn the ignition switch off.
- (b) Clear the DTCs INFO.
- (c) Turn the ignition switch off.
- (d) Start the engine.
- (e) Drive the vehicle and depress the brake pedal several times to test the stop light circuit.
- (f) Check if the same DTC is output INFO.

Result:

------------	--------------	--------------------------------------

DTC	C1464	Front Speed Sensor RH
------------	--------------	------------------------------

DTC	C1465	Front Speed Sensor LH
------------	--------------	------------------------------

DESCRIPTION

Each speed sensor detects wheel speed and sends the appropriate signals to the skid control ECU (brake actuator assembly). These signals are used by the brake control system.

Speed sensor rotors have row of alternating N and S magnetic poles, and their magnetic fields change when the rotors turn.

Each speed sensor detects that magnetic field change and sends a pulse signal to the skid control ECU (brake actuator assembly).

DTCs C1271 and C1272 are cleared when the speed sensor sends a vehicle speed signal or when Test Mode ends. DTCs C1271 and C1272 are output only in Test Mode.

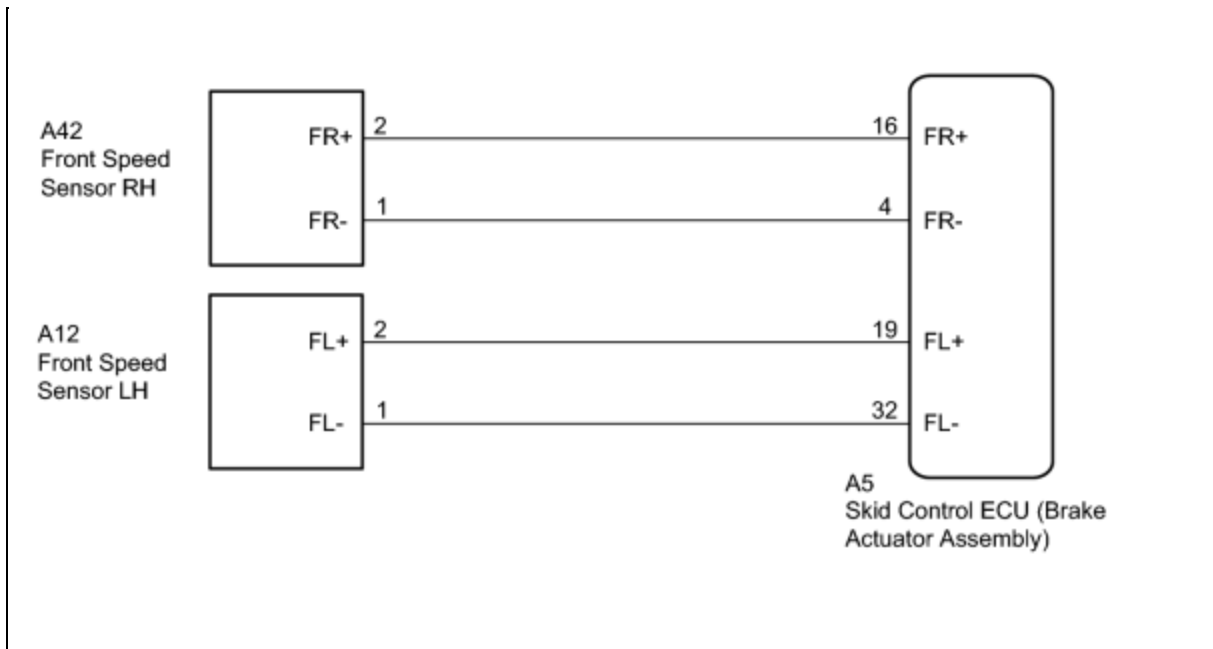

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
C1330 C1331	An open or short in the speed sensor signal circuit.	<ul style="list-style-type: none"> • Front speed sensor RH/LH • Speed sensor circuit • Sensor installation • Skid control ECU (Brake actuator assembly)
C1464 C1465	An abnormal signal is received from a wheel speed sensor.	<ul style="list-style-type: none"> • Front speed sensor RH/LH • Speed sensor circuit • Front speed sensor rotor RH/LH (Front axle hub sub-assembly RH/LH) • Sensor installation • Skid control ECU (Brake actuator assembly)
C1271 C1272	Detected only during Test Mode.	<ul style="list-style-type: none"> • Front speed sensor RH/LH • Sensor installation • Front speed sensor rotor RH/LH (Front axle hub sub-assembly RH/LH)

HINT:

- DTCs C1271, C1330 and C1464 are for the front speed sensor RH.
- DTCs C1272, C1331 and C1465 are for the front speed sensor LH.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When replacing the skid control ECU (brake actuator assembly), perform VSC sensor neutral memorization INFO.

PROCEDURE

1.	READ VALUE USING TECHSTREAM (FRONT SPEED SENSOR)
-----------	---

- (a) Connect the Techstream to the DLC3.
- (b) Start the engine.
- (c) Select the Data List using the Techstream INFO.

ABS/VSC/TRAC

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
FR Wheel Speed	Front wheel speed sensor RH reading / Min.: 0 km/h (0 mph), Max.: 326.4 km/h (202 mph)	Vehicle stopped: 0 km/h (0 mph)	When driving at constant speed: No large fluctuations
FL Wheel Speed	Front wheel speed sensor LH reading / Min.: 0 km/h (0 mph), Max.: 326.4 km/h (202 mph)	Vehicle stopped: 0 km/h (0 mph)	When driving at constant speed: No large fluctuations

- (d) Check the speed value output from the speed sensor displayed on the Techstream.

HINT:

Factors that affect the indicated vehicle speed include tire size, tire pressure, and tire wear. The speed indicated on the speedometer has an allowable margin of error. This can be tested using a speedometer tester (calibrated chassis dynamometer). For details about testing and the margin of

error, see the reference chart  .

OK:

The speed value output from the speed sensor displayed on the Techstream is similar to the speed indicated on the speedometer.

NG  **CHECK FRONT SPEED SENSOR INSTALLATION**

OK

2.	PERFORM TEST MODE INSPECTION (SIGNAL CHECK)
-----------	--

(a) Turn the ignition switch off.

(b) Perform the sensor check using the Test Mode procedure  .

OK:

All Test Mode DTCs are not output.

NG  **CHECK FRONT SPEED SENSOR INSTALLATION**

OK

3.	RECONFIRM DTC
-----------	----------------------

(a) Clear the DTCs  .

(b) Turn the ignition switch off.

(c) Start the engine.

(d) Drive the vehicle at a speed of 45 km/h (28 mph) or more for at least 120 seconds.

(e) Check if the same DTC is output  .

Result:

RESULT	PROCEED TO
DTCs C1330, C1331, C1464 and C1465 are not output.	A
DTCs C1330, C1331, C1464 and/or C1465 are output.	B

B  **REPLACE FRONT SPEED SENSOR**

4. CHECK FRONT SPEED SENSOR INSTALLATION

(a) Turn the ignition switch off.

(b) Check the speed sensor installation.

OK:

There is no clearance between the sensor and the front axle hub sub-assembly.

The installation bolt is tightened properly.

Torque

7.5 N*m (77 kgf*cm, 66 in.*lbf)

NG ► INSTALL FRONT SPEED SENSOR CORRECTLY

OK

5. CHECK FRONT SPEED SENSOR TIP

(a) Remove the front speed sensor **INFO**.

(b) Check the speed sensor tip.

OK:

No scratches or foreign matter on the sensor tip.

NOTICE:

Check the speed sensor signal after cleaning or replacement **INFO**.

NG ► CLEAN OR REPLACE FRONT SPEED SENSOR

OK

6.	CHECK HARNESS AND CONNECTOR (BRAKE ACTUATOR ASSEMBLY - FRONT SPEED SENSOR)
-----------	---

- (a) Install the front speed sensor  .
- (b) Make sure that there is no looseness at the locking part and the connecting part of the connectors.
- (c) Disconnect the skid control ECU (brake actuator assembly) connector and the front speed sensor connector.
- (d) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

for RH

for LH

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A5-16 (FR+) - A42-2 (FR+)	Always	Below 1 Ω
A5-16 (FR+) - Body ground	Always	10 k Ω or higher
A5-4 (FR-) - A42-1 (FR-)	Always	Below 1 Ω
A5-4 (FR-) - Body ground	Always	10 k Ω or higher

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A5-19 (FL+) - A12-2 (FL+)	Always	Below 1 Ω
A5-19 (FL+) - Body ground	Always	10 k Ω or higher
A5-32 (FL-) - A12-1 (FL-)	Always	Below 1 Ω
A5-32 (FL-) - Body ground	Always	10 k Ω or higher

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

7.	INSPECT BRAKE ACTUATOR ASSEMBLY (FRONT SPEED SENSOR POWER SOURCE TERMINAL)
-----------	---

(a) Reconnect the skid control ECU (brake actuator assembly) connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

for RH

for LH

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A42-2 (FR+) - Body ground	Ignition switch ON	8 to 14 V

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION

Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: VEHICLE STABILITY CONTROL SYSTEM: C1273,C1274,C1332,C1333,C1466,C1467: Low Output Signal of Rear Speed Sensor RH (Test Mode DTC) (2013 FR-S)		

DTC	C1273	Low Output Signal of Rear Speed Sensor RH (Test Mode DTC)
------------	--------------	--

DTC	C1274	Low Output Signal of Rear Speed Sensor LH (Test Mode DTC)
------------	--------------	--

DTC	C1332	Open in Rear Speed Sensor RH
------------	--------------	-------------------------------------

DTC	C1333	Open in Rear Speed Sensor LH
------------	--------------	-------------------------------------

DTC	C1466	Rear Speed Sensor RH
------------	--------------	-----------------------------

DTC	C1467	Rear Speed Sensor LH
------------	--------------	-----------------------------

DESCRIPTION

Each speed sensor detects the wheel speed and sends the appropriate signals to the skid control ECU (brake actuator assembly). These signals are used by the brake control system.

Speed sensor rotors have row of alternating N and S magnetic poles, and their magnetic fields change when the rotors turn.

Each speed sensor detects that magnetic field change and sends a pulse signal to the skid control ECU (brake actuator assembly).

DTCs C1273 and C1274 are cleared when the speed sensor sends a vehicle speed signal or when Test Mode ends. DTCs C1273 and C1274 are output only in Test Mode.

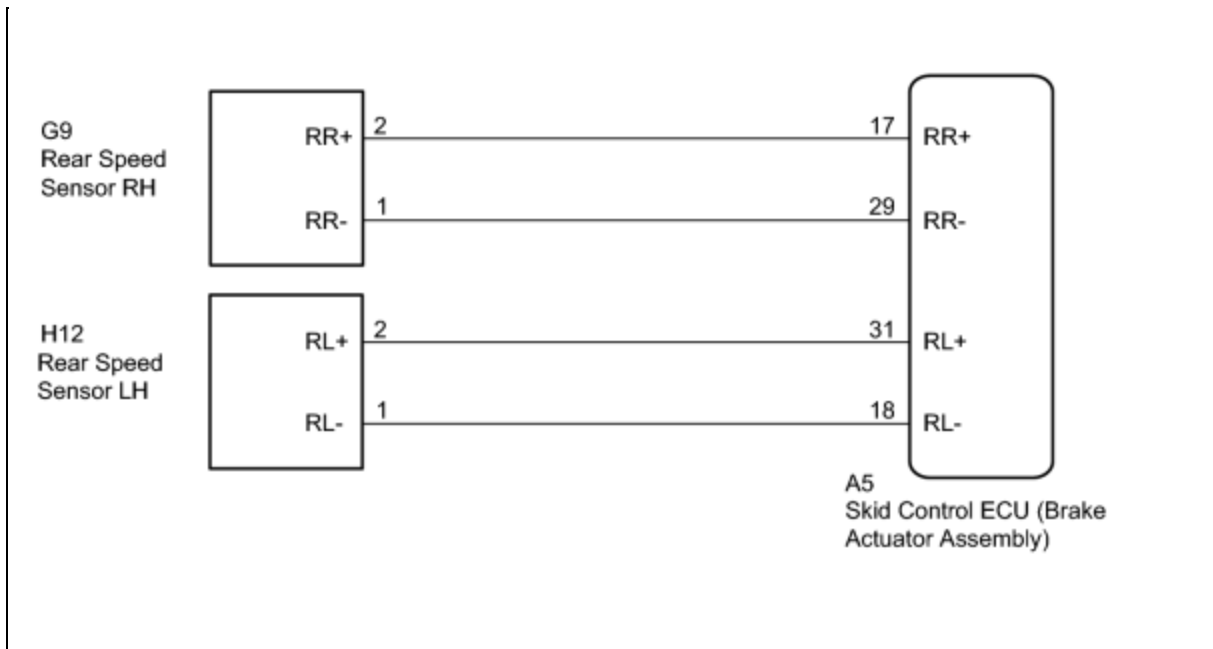

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
C1332 C1333	An open or short in the speed sensor signal circuit.	<ul style="list-style-type: none"> • Rear speed sensor RH/LH • Speed sensor circuit • Sensor installation • Skid control ECU (Brake actuator assembly)
C1466 C1467	An abnormal signal is received from a wheel speed sensor.	<ul style="list-style-type: none"> • Rear speed sensor RH/LH • Speed sensor circuit • Rear speed sensor rotor RH/LH (Rear axle hub sub-assembly RH/LH) • Sensor installation • Skid control ECU (Brake actuator assembly)
C1273 C1274	Detected only during Test Mode.	<ul style="list-style-type: none"> • Rear speed sensor RH/LH • Sensor installation • Rear speed sensor rotor RH/LH (Rear axle hub sub-assembly RH/LH)

HINT:

- DTCs C1273, C1332 and C1466 are for the rear speed sensor RH.
- DTCs C1274, C1333 and C1467 are for the rear speed sensor LH.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When replacing the skid control ECU (brake actuator assembly), perform VSC sensor neutral memorization INFO.

PROCEDURE

1.	READ VALUE USING TECHSTREAM (REAR SPEED SENSOR)
-----------	--

- (a) Connect the Techstream to the DLC3.
- (b) Start the engine.
- (c) Select the Data List using the Techstream INFO.

ABS/VSC/TRAC

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
RR Wheel Speed	Rear wheel speed sensor RH reading / Min.: 0 km/h (0 mph), Max.: 326.4 km/h (202 mph)	Vehicle stopped: 0 km/h (0 mph)	When driving at constant speed: No large fluctuations
RL Wheel Speed	Rear wheel speed sensor LH reading / Min.: 0 km/h (0 mph), Max.: 326.4 km/h (202 mph)	Vehicle stopped: 0 km/h (0 mph)	When driving at constant speed: No large fluctuations

- (d) Check the speed value output from the speed sensor displayed on the Techstream.

HINT:

Factors that affect the indicated vehicle speed include tire size, tire pressure, and tire wear. The speed indicated on the speedometer has an allowable margin of error. This can be tested using a speedometer tester (calibrated chassis dynamometer). For details about testing and the margin of

error, see the reference chart  .

OK:

The speed value output from the speed sensor displayed on the Techstream is similar to the speed indicated on the speedometer.

NG  **CHECK REAR SPEED SENSOR INSTALLATION**

OK

2.	PERFORM TEST MODE INSPECTION (SIGNAL CHECK)
-----------	--

(a) Turn the ignition switch off.

(b) Perform the sensor check using the Test Mode procedure  .

OK:

All Test Mode DTCs are not output.

NG  **CHECK REAR SPEED SENSOR INSTALLATION**

OK

3.	RECONFIRM DTC
-----------	----------------------

(a) Clear the DTCs  .

(b) Turn the ignition switch off.

(c) Start the engine.

(d) Drive the vehicle at a speed of 45 km/h (28 mph) or more for at least 120 seconds.

(e) Check if the same DTC is output  .

Result:

RESULT	PROCEED TO
DTCs C1332, C1333, C1466 and C1467 are not output.	A
DTCs C1332, C1333, C1466 and/or C1467 are output.	B

B  **REPLACE REAR SPEED SENSOR**

A  **CHECK FOR INTERMITTENT PROBLEMS**

4. CHECK REAR SPEED SENSOR INSTALLATION

(a) Turn the ignition switch off.

(b) Check the speed sensor installation.

OK:

There is no clearance between the sensor and the rear axle hub sub-assembly.

The installation bolt is tightened properly.

Torque

7.5 N*m (77 kgf*cm, 66 in.*lbf)

NG ► **INSTALL REAR SPEED SENSOR CORRECTLY**

OK

5. CHECK REAR SPEED SENSOR TIP

(a) Remove the rear speed sensor **INFO** .

(b) Check the speed sensor tip.

OK:

No scratches or foreign matter on the sensor tip.

NOTICE:

Check the speed sensor signal after cleaning or replacement **INFO** .

NG ► **CLEAN OR REPLACE REAR SPEED SENSOR**

OK

6.	CHECK HARNESS AND CONNECTOR (BRAKE ACTUATOR ASSEMBLY - REAR SPEED SENSOR)
-----------	--

- (a) Install the rear speed sensor  .
- (b) Make sure that there is no looseness at the locking part and the connecting part of the connector.
- (c) Disconnect the skid control ECU (brake actuator assembly) connector and the rear speed sensor connector.
- (d) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

for RH

for LH

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A5-17 (RR+) - G9-2 (RR+)	Always	Below 1 Ω
A5-17 (RR+) - Body ground	Always	10 kΩ or higher
A5-29 (RR-) - G9-1 (RR-)	Always	Below 1 Ω
A5-29 (RR-) - Body ground	Always	10 kΩ or higher

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A5-31 (RL+) - H12-2 (RL+)	Always	Below 1 Ω
A5-31 (RL+) - Body ground	Always	10 kΩ or higher
A5-18 (RL-) - H12-1 (RL-)	Always	Below 1 Ω
A5-18 (RL-) - Body ground	Always	10 kΩ or higher

**REPAIR OR REPLACE HARNESS OR
NG  CONNECTOR**

OK

7.	INSPECT BRAKE ACTUATOR ASSEMBLY (REAR SPEED SENSOR POWER SOURCE TERMINAL)
-----------	--

- (a) Reconnect the skid control ECU (brake actuator assembly) connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

for RH

for LH

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
G9-2 (RR+) - Body ground	Ignition switch ON	8 to 14 V

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
H12-2 (RL+) - Body ground	Ignition switch ON	8 to 14 V

Text in Illustration

*A	for RH
*B	for LH
*a	Front view of wire harness connector (to Rear Speed Sensor)

NG ▶ REPLACE BRAKE ACTUATOR ASSEMBLY

OK

8. RECONFIRM DTC

- (a) Reconnect the rear speed sensor connector.
- (b) Clear the DTCs INFO.
- (c) Turn the ignition switch off.
- (d) Start the engine.
- (e) Drive the vehicle at a speed of 45 km/h (28 mph) or more for at least 120 seconds.
- (f) Check if the same DTC is output INFO.

Result:

RESULT	PROCEED TO
DTCs C1332, C1333, C1466 and/or C1467 are output.	A

B ► CHECK FOR INTERMITTENT PROBLEMS**A****9. REPLACE REAR SPEED SENSOR**

- (a) Turn the ignition switch off.
- (b) Replace the rear speed sensor .

NOTICE:

Check the speed sensor signal after replacement .

NEXT**10. RECONFIRM DTC**

- (a) Clear the DTCs .
- (b) Turn the ignition switch off.
- (c) Start the engine.
- (d) Drive the vehicle at a speed of 45 km/h (28 mph) or more for at least 120 seconds.
- (e) Check if the same DTC is output .

Result:

RESULT	PROCEED TO
DTCs C1332, C1333, C1466 and/or C1467 are output.	A
DTCs C1332, C1333, C1466 and C1467 are not output.	B

B ► END**A**

11. REPLACE REAR SPEED SENSOR ROTOR

- (a) Turn the ignition switch off.
- (b) Replace the rear speed sensor rotor  .

HINT:

If the rear speed sensor rotor needs to be replaced, replace the rear axle hub and bearing assembly.

NOTICE:

Check the speed sensor signal after replacement  .

NEXT

12. RECONFIRM DTC

- (a) Clear the DTCs  .
- (b) Turn the ignition switch off.
- (c) Start the engine.
- (d) Drive the vehicle at a speed of 45 km/h (28 mph) or more for at least 120 seconds.
- (e) Check if the same DTC is output  .

Result:

RESULT	PROCEED TO
DTCs C1332, C1333, C1466 and/or C1467 are output.	A
DTCs C1332, C1333, C1466 and C1467 are not output.	B

HINT:

If troubleshooting has been carried out according to Problem Symptoms Table, refer back to the table and proceed to the next step before replacing parts  .

B  END

A  REPLACE BRAKE ACTUATOR ASSEMBLY

Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: VEHICLE STABILITY CONTROL SYSTEM: C1300: Skid Control ECU Malfunction (2013 FR-S)		

DTC	C1300	Skid Control ECU Malfunction
------------	--------------	-------------------------------------

DESCRIPTION

The skid control ECU stores this DTC if malfunctions are found in the circuit inside the ECU by self diagnosis.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
C1300	Internal failure of the skid control ECU.	Skid control ECU (Brake actuator assembly)

INSPECTION PROCEDURE

NOTICE:

When replacing the skid control ECU (brake actuator assembly), perform VSC sensor neutral memorization  .

PROCEDURE

1.	REPLACE BRAKE ACTUATOR ASSEMBLY
-----------	--

(a) Replace the skid control ECU (brake actuator assembly)  .

HINT:

This DTC is output when the skid control ECU (brake actuator assembly) detects a malfunction in the internal circuit.

(b) Perform the sensor check using the Test Mode procedure  .

NEXT  **END**

Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: VEHICLE STABILITY CONTROL SYSTEM: CALIBRATION (2013 FR-S)		

CALIBRATION

1. DESCRIPTION

- (a) Refer to the table below and then perform the necessary operation according to the part to be replaced in order to perform calibration.

PARTS TO BE REPLACED	NECESSARY OPERATION
Skid control ECU (Brake actuator assembly)	1. Perform VSC sensor neutral memorization
Steering sensor	
Steering column assembly	
Rack and pinion power steering gear assembly	
Wheel alignment adjustment	

2. VSC SENSOR NEUTRAL MEMORIZATION

- (a) Perform VSC Sensor Neutral Memorization.

NOTICE:

- While obtaining the zero point, keep the vehicle stationary and do not vibrate, tilt, move, or shake it. (Do not start the engine.)
- Be sure to perform this procedure on a level surface (with an inclination of less than 1 degree).

HINT:

When VSC sensor neutral memorization is performed, the yaw rate and acceleration sensor and the steering sensor zero point calibration are performed at the same time.

- (1) Turn the ignition switch off.
- (2) Check that the steering wheel is centered.
- (3) Check that the shift lever is in neutral.
- (4) Apply the parking brake by pulling up the parking brake lever.
- (5) Connect the Techstream to the DLC3.
- (6) Turn the ignition switch on.
- (7) Turn the Techstream on.
- (8) Enter the following menus: Chassis / ABS/VSC/TRAC / Utility / VSC Sensor Neutral Memorization.
- (9) According to the display on the Techstream, perform VSC sensor neutral memorization.
- (10) Turn the ignition switch off and disconnect the Techstream.

Model Year: 2013	Model: FR-S	Doc ID: RM000000XHS0C2X
Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: VEHICLE STABILITY CONTROL SYSTEM: CHECK FOR INTERMITTENT PROBLEMS (2013 FR-S)		

CHECK FOR INTERMITTENT PROBLEMS

1. CHECK FOR INTERMITTENT PROBLEMS

HINT:

A momentary interruption (open circuit) in the connectors and/or wire harness can be detected using the Data List function of the Techstream.

- (a) Turn the ignition switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the ignition switch to ON.
- (d) Turn the Techstream on.
- (e) Follow the directions on the Techstream to display the Data List and select areas where momentary interruption should be monitored.

HINT:

- A momentary interruption (open circuit) cannot be detected for 3 seconds after the ignition switch is turned to ON (initial check).
- If Error remains displayed for one of the items on the Techstream, check for continuity between the ECU and the item for which Error is displayed.
- If a momentary interruption occurs and Error is displayed on the Techstream, Error will remain displayed on the Techstream for 1 second after the circuit returns to normal.

ABS/VSC/TRAC

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
IG Voltage Value Decreased	IG voltage value decrease detection / Error or Normal	Error: Voltage low Normal: Normal	-
IG Voltage Value Increased	IG voltage value increase detection / Error or Normal	Error: Voltage high Normal: Normal	-

- (f) While observing the screen, gently jiggle the connector or wire harness.

OK:

Normal is displayed.

HINT:

If the display changes, this indicates that there has been a momentary interruption (open circuit) in the connector and/or wire harness. In this case, repair or replace the connectors and/or wire harnesses as one of them is faulty.

Last Modified: 3-27-2012	6.4 U	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000XHWOBIX
Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: VEHICLE STABILITY CONTROL SYSTEM: DATA LIST / ACTIVE TEST (2013 FR-S)		

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

- (a) Warm up the engine.
- (b) Turn the ignition switch off.
- (c) Connect the Techstream to the DLC3.
- (d) Turn the ignition switch to ON.
- (e) Turn the Techstream on.
- (f) Enter the following menus: Chassis / ABS/VSC/TRAC / Data List.
- (g) According to the display on the tester, read the Data List.

ABS/VSC/TRAC

2. ACTIVE TEST

HINT:

Using the Techstream to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts to operate without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

- (a) Warm up the engine.
- (b) Turn the ignition switch off.

- (c) Connect the Techstream to the DLC3.
- (d) Turn the ignition switch to ON.
- (e) Turn the Techstream on.
- (f) Enter the following menus: Chassis / ABS/VSC/TRAC / Active Test.
- (g) According to the display on the tester, perform the Active Test.

ABS/VSC/TRAC

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
ABS Warning Light	ABS warning light	Warning light ON/OFF	Observe combination meter assembly
VSC OFF Indicator Light	VSC OFF indicator light	Indicator light ON/OFF	Observe combination meter assembly

Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: VEHICLE STABILITY CONTROL SYSTEM: DIAGNOSIS SYSTEM (2013 FR-S)		

DIAGNOSIS SYSTEM

1. DESCRIPTION

When troubleshooting a vehicle with a diagnosis system, the only difference from the usual troubleshooting procedure is connecting the Techstream to the vehicle and reading various data output from the skid control ECU.

The skid control ECU records DTCs when it detects a malfunction in itself or in its circuits.

To check for DTCs, connect the Techstream to the DLC3 on the vehicle. The Techstream can be used to clear the DTCs, activate various actuators, and check the Freeze Frame Data and Data List.

- (a) Check the battery voltage.

Standard Voltage:

11 to 14 V

If the voltage is below 11 V, recharge the battery before proceeding to the next step.

- (b) Check the DLC3  .

2. DIAGNOSIS

- (a) If the skid control ECU detects a malfunction, the ABS warning, brake warning, and/or slip indicator lights will come on in order to warn the driver.

- (b) The DTCs are simultaneously stored in memory.

The DTCs can be read by connecting the Techstream  .

- (c) This system has a Test Mode (signal check) function.

The DTCs can be read by connecting the Techstream  .

3. WARNING LIGHT AND INDICATOR LIGHT INITIAL CHECK

- (a) Release the parking brake.

NOTICE:

Before releasing the parking brake, move the shift lever to P (for automatic transmission) or set chocks to prevent the vehicle from rolling.

HINT:

When the parking brake is applied or the brake fluid level is low, the brake warning light comes on.

- (b) When the ignition switch is turned to ON, check that the ABS warning, brake warning, TR(A)C OFF indicator, VSC OFF indicator, VSC SPORT indicator and slip indicator lights all come on.

HINT:

- If the warning light and indicator light check result is not normal, proceed to troubleshooting for the ABS warning, brake warning, TR(A)C OFF indicator, VSC OFF indicator, VSC SPORT indicator and slip indicator light circuits.
- If any of the indicators remains on or does not come on, proceed to troubleshooting for the light circuits listed below.

TROUBLE AREA	SEE PROCEDURE
ABS warning light circuit (Remains on)	INFO
ABS warning light circuit (Does not come on)	INFO
Brake warning light circuit (Remains on)	INFO
Brake warning light circuit (Does not come on)	INFO
TR(A)C OFF indicator light circuit (Remains on)	INFO
TR(A)C OFF indicator light circuit (Does not come on)	INFO
VSC OFF indicator light circuit (Remains on)	INFO
VSC OFF indicator light circuit (Does not come on)	INFO
VSC SPORT indicator light circuit (Remains on)	INFO
VSC SPORT indicator light circuit (Does not come on)	INFO
Slip indicator light circuit (Remains on)	INFO
Slip indicator light circuit (Does not come on)	INFO

- (1) When the ignition switch is turned to ON, check that the brake warning, TR(A)C OFF indicator, VSC OFF indicator and VSC SPORT indicator lights turn off after 3 seconds.
- (2) When the engine is started, check that the ABS warning and slip indicator lights turn off after 3 seconds.

Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: VEHICLE STABILITY CONTROL SYSTEM: DIAGNOSTIC TROUBLE CODE CHART (2013 FR-S)		

DIAGNOSTIC TROUBLE CODE CHART

NOTICE:

Turn the ignition switch off before removing any parts.

HINT:

- If no malfunction is found when inspecting parts, inspect the skid control ECU and ground points for poor connections.
- If a trouble code is displayed during the DTC check, inspect the trouble areas listed for that code. For details, refer to the "See page" reference for the DTC.
- When 2 or more DTCs are detected, perform diagnosis for each DTC, one by one until the problem is identified.
- If DTCs were checked using the warning light or indicator light, refer to the tables in DTC Check/Clear to cross-reference them to the 5-digit DTCs shown in the following tables.
- Inspect the fuses and relays before inspecting the trouble areas shown in the following table.

*1, *2:

Even after the trouble areas are repaired, the ABS warning light will not go off unless the following operations are performed:

- *1:
 - a. Drive the vehicle at 20 km/h (12 mph) for 30 seconds or more and check that the ABS warning light goes off.
 - b. Clear the DTC.
- *2:
 - a. Keep the vehicle stationary for 5 seconds or more and depress the brake pedal lightly 2 or 3 times.
 - b. Drive the vehicle at a vehicle speed of 50 km/h (31 mph) and keep depressing the brake pedal strongly for approximately 3 seconds.
 - c. Repeat the above operation 3 times or more and check that the ABS warning light goes off.
 - d. Clear the DTC.

Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: VEHICLE STABILITY CONTROL SYSTEM: DTC CHECK / CLEAR (2013 FR-S)		

DTC CHECK / CLEAR

1. DTC CHECK/CLEAR

(a) Check for DTCs.

- (1) Turn the ignition switch off.
- (2) Connect the Techstream to the DLC3.
- (3) Turn the ignition switch to ON.
- (4) Turn the Techstream on.
- (5) Read the DTCs following the prompts on the Techstream. Enter the following menus: Chassis / ABS/VSC/TRAC / Trouble Codes.
- (6) Check the details of the DTCs  .

(b) Clear the DTCs.

- (1) Turn the ignition switch off.
- (2) Connect the Techstream to the DLC3.
- (3) Turn the ignition switch to ON.
- (4) Turn the Techstream on.
- (5) Operate the Techstream to clear the codes. Enter the following menus: Chassis / ABS/VSC/TRAC / Trouble Codes.

2. END OF DTC CHECK/CLEAR

(a) Turn the ignition switch to ON.

(b) Check that the ABS warning and slip indicator lights go off within approximately 3 seconds after turning the ignition switch to ON.

Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: VEHICLE STABILITY CONTROL SYSTEM: FAIL-SAFE CHART (2013 FR-S)		

FAIL-SAFE CHART

1. FAIL-SAFE OPERATION

- If there is a problem with sensor signals or actuator systems, the skid control ECU prohibits power supply to the brake actuator assembly and informs the ECM of VSC system malfunction.

The brake actuator turns off the solenoids and the ECM stops its VSC control according to signals from the skid control ECU. The vehicle will operate in a manner similar to a vehicle that is not equipped with ABS, TR(A)C and VSC systems.

ABS control will be prohibited, but EBD control will continue to the extent that EBD control is possible. If EBD control is impossible, the brake warning light will come on to warn the driver  .

- If a VSC system component malfunctions before VSC control begins, VSC control will be prohibited. If a system component malfunctions during VSC control, the system will gradually stop performing control so as not to trigger a sudden change in vehicle operation.

If it is impossible for control to continue, the indicator light comes on to inform the driver of system control termination  .

ABS, EBD and BA System

ITEM	OPERATION
Malfunction in the ABS system.	ABS, BA, TR(A)C and VSC control prohibited.
Malfunction in the BA system.	ABS, BA, TR(A)C and VSC control prohibited.
Malfunction in the EBD system.	ABS, EBD, BA, TR(A)C and VSC control prohibited.

TR(A)C and VSC System

ITEM	OPERATION
Malfunction in the engine control system (TR(A)C and VSC systems).	Before control: Disables control. During control: Uses only the brakes to perform control.
Malfunction in the automatic transmission control system (TR(A)C and VSC systems).	Disables control.
Malfunction in the brake control system (VSC system).	Disables control.
Malfunction in the brake control system (TR(A)C system).	Before control: Disables control. During control: Disables control (by gradually ending control).

Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: VEHICLE STABILITY CONTROL SYSTEM: FREEZE FRAME DATA (2013 FR-S)		

FREEZE FRAME DATA

1. FREEZE FRAME DATA

- (a) Whenever an ABS DTC is detected, the skid control ECU stores the current vehicle (ECU or sensor) state as Freeze Frame Data.
- (b) The skid control ECU stores the number of times (maximum: 31) the ignition switch has been turned from off to ON since the last time the ABS was activated.

HINT:

- However, if the vehicle is stopped or driven at a low speed (7 km/h (4.3 mph) or less), or if a DTC is detected, the skid control ECU will stop counting the number.
- Freeze Frame Data at the time the ABS operates:

The skid control ECU stores and updates data whenever the ABS system operates.

When the ECU stores data at the time a DTC is detected, the data stored during ABS operation is cleared.

- Freeze Frame Data at the time a DTC is detected:

When the skid control ECU stores data at the time a DTC is detected, no updates will be performed until the data is cleared.

2. CHECK FREEZE FRAME DATA

- (a) Turn the ignition switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the ignition switch to ON.
- (d) Turn the Techstream on.
- (e) Enter the following menus: Chassis / ABS/VSC/ TRAC / Trouble Codes.
- (f) Select a DTC to display its Freeze Frame Data.

ABS/VSC/TRAC

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Elapsed Time after Freeze Trigger	Elapsed time after freeze trigger / Min.: 0 msec, Max.: 510 msec	-	-
Number of IG ON	Number of times ignition switch turned to ON after Freeze Frame Data stored / 0 to 31	-	-
Stop Light SW	Stop light switch / ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released	-

Parking Brake SW	Parking brake switch / ON or OFF	ON: Parking brake applied OFF: Parking brake released	-
Gear Position*	Gear position information / "P,N", R, 1st-6th or Fail	Actual gear position	-
Shift Lever Position*	Shift lever position information / "P,N", R, D/M or Fail	Actual shift lever position	-
Operated System	Operated system status / ABS, VSC, TRC(TRAC), BA or Fail	Actual operated system	ABS: ABS activated VSC: VSC activated TRC(TRAC): TR(A)C activated BA: BA activated Fail: Fail safe mode activated
Master Cylinder Sensor	Master cylinder pressure sensor reading / Min.: 0.00 V, Max.: 5.00 V	Brake pedal released: 0.20 to 0.40 V	Reading increases when brake pedal is depressed
M/C Sensor Grade	Master cylinder pressure sensor change / Min.: -30 MPa/s, Max.: 225 MPa/s	When brake pedal is released or pedal held at constant position: 0 MPa/s	When brake pedal is being operated: Changes in proportion with pedal movement speed
Yaw Rate Sensor	Yaw rate sensor / Min.: -128 °/s, Max.: 127 °/s	Vehicle stopped: 0 °/s Turning right: -128 to 0 °/s Turning left: 0 to 127 °/s	-
Lateral G	Lateral G / Min.: -25.10 m/s ² , Max.: 24.90 m/s ²	-	During turning: Changes in proportion with acceleration
Forward and Rearward G	Forward and backward G / Min.: - 25.10 m/s ² , Max.: 24.90 m/s ²	-	During acceleration/deceleration: Changes in proportion with acceleration
FR Wheel Speed	Front wheel speed sensor RH reading / Min.: 0 km/h (0 mph), Max.: 326.4 km/h (202 mph)	Vehicle stopped: 0 km/h (0 mph)	When driving at constant speed: No large fluctuations
FL Wheel Speed	Front wheel speed sensor LH reading / Min.: 0 km/h (0 mph), Max.: 326.4 km/h (202 mph)	Vehicle stopped: 0 km/h (0 mph)	When driving at constant speed: No large fluctuations
RR Wheel Speed	Rear wheel speed sensor RH reading / Min.: 0 km/h (0 mph), Max.: 326.4 km/h (202 mph)	Vehicle stopped: 0 km/h (0 mph)	When driving at constant speed: No large fluctuations
RL Wheel Speed	Rear wheel speed sensor LH reading / Min.: 0 km/h (0 mph), Max.: 326.4 km/h (202 mph)	Vehicle stopped: 0 km/h (0 mph)	When driving at constant speed: No large fluctuations

Vehicle Speed	Maximum wheel speed sensor reading / Min.: 0 km/h (0 mph), Max.: 326.4 km/h (202 mph)	Vehicle stopped: 0 km/h (0 mph)	When driving at constant speed: No large fluctuations
Vehicle Speed Grade	Vehicle speed grade / Min.: - 25.10 m/s ² , Max.: 24.90 m/s ²	Vehicle stopped: 0 m/s ²	During driving: Changes in proportion with vehicle acceleration/deceleration
Real Engine Torque	Real engine torque / Min.: - 1024.0 Nm, Max.: 1023.0 Nm	-	-
Accelerator Opening Angle %	The difference of a present accelerator / Min.: 0.0%, Max.: 100.0%	When the accelerator pedal is released: 0.0%	During accelerator pedal operation: Changes in proportion with the pedal movement
Inspection Mode	Inspection mode / Other or Inspect	Other: Normal mode Inspect: Inspection mode	-
Steering Angle Sensor	Steering angle sensor / Min.: - 3276.8°, Max.: 3276.7°	Turning left: Increases Turning right: Decreases	-
TRC(TRAC)/VSC Off Mode	TR(A)C/VSC OFF mode / Normal, TRC(TRAC) OFF or VSC OFF	Normal: Normal mode TRC(TRAC) OFF: TR(A)C OFF mode VSC OFF: VSC OFF mode	-
Sports Mode	VSC SPORT mode / Normal or Sports	Normal: Normal mode Sports: VSC SPORT mode	-

*: for Automatic Transmission

3. CLEAR FREEZE FRAME DATA

NOTICE:

Clearing the DTC will also clear the Freeze Frame Data.

- (a) Turn the ignition switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the ignition switch to ON.
- (d) Clear the DTCs and Freeze Frame Data  .

Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: VEHICLE STABILITY CONTROL SYSTEM: PRECAUTION (2013 FR-S)		

PRECAUTION

1. TROUBLESHOOTING PRECAUTIONS

- (a) When there is a malfunction with terminal contact points or part installation problems, removal and installation of the suspected parts may return the system to normal either completely or temporarily.
- (b) In order to determine the malfunctioning area, be sure to check the conditions at the time the malfunction occurred, such as DTC output and the Freeze Frame Data, and record it before disconnecting any connector or removing and installing parts.
- (c) Since the system may be influenced by malfunctions in systems other than the VSC system, be sure to check for DTCs in other systems.

2. HANDLING PRECAUTIONS

- (a) Do not remove or install VSC parts such as the steering sensor except when required, as they need to be adjusted correctly after removal and installation.
- (b) Be sure to perform preparation before work and confirmation after work is completed by following the directions in the repair manual when working on the VSC system.
- (c) Be sure to remove and install the ECU, brake actuator assembly, sensors, etc. with the ignition switch off unless it is otherwise specified in the inspection procedure.
- (d) If the ECU, brake actuator assembly or a sensor has been removed and installed, it is necessary to check the system for problems after the parts have been reassembled. Check for DTCs using the Techstream, also check that system functions and signals received by the ECU are normal using Test Mode.

3. DTC PRECAUTION

- (a) Warnings for some DTCs cannot be cleared only by repairing the malfunctioning parts. If the warning is displayed after repair work, the DTC should be cleared after turning the ignition switch off.

NOTICE:

If a DTC for a malfunctioning part reappears after it was cleared, then it has been stored again.

4. CHASSIS DYNAMOMETER PRECAUTION

When testing with a 2-wheel drum tester such as a speedometer tester, a combination tester for the speedometer and brakes, a chassis dynamometer, or when jacking up the front wheels and turning the wheels, perform the following procedure to enter Inspection Mode and stop the TR(A)C and VSC systems.

Enter Inspection Mode to disable TR(A)C and VSC operation when using a chassis dynamometer.

HINT:

- If Inspection Mode is not used, the vehicle may unexpectedly move off the dynamometer because of TR(A)C and VSC operation.
- The VSC OFF switch must not be used to disable TR(A)C and VSC operation when the vehicle is to be operated on a dynamometer. Pressing the VSC OFF switch does not disable TR(A)C and VSC operation completely.

NOTICE:

Secure the vehicle with lock chains for safety.

- (a) Activating Inspection Mode (When Using the Techstream)
 - (1) Ensure that the ignition switch is off and the engine is stopped.
 - (2) Make sure that the shift lever is in P.
 - (3) Connect the Techstream to the DLC3.
 - (4) Start the engine.
 - (5) Turn the Techstream on.
 - (6) Enter the following menus: Chassis / ABS/VSC/TRAC / Utility / Inspection Mode.
 - (7) Check that the VSC OFF indicator light will come on.

HINT:

- If the VSC OFF indicator light does not come on, repeat the steps.
- Turning the ignition switch off ends Inspection Mode.

- (b) Activating Inspection Mode (When not Using the Techstream)

HINT:

Perform steps "C" to "H" within 30 seconds.

- (1) Ensure that the ignition switch is off and the engine is stopped (Step "A").
- (2) for Manual Transmission:
Check that the shift lever is in neutral (Step "B").
for Automatic Transmission:
Make sure that the shift lever is in P (Step "B").
- (3) Start the engine (Step "C").
- (4) Apply the parking brake by pulling up the parking brake lever (Step "D").
- (5) Depress and release the brake pedal twice (Step "E").
- (6) While holding the brake pedal down, release and apply the parking brake twice (Step "F").
- (7) With the parking brake applied, depress and release the brake pedal twice (Step "G").
- (8) Check if the slip indicator light will come on (Step "H").

HINT:

- If the slip indicator light does not come on in step "H", repeat steps "A" to "H".
- Turning the ignition switch off ends Inspection Mode.

5. CAN COMMUNICATION SYSTEM PRECAUTIONS

- (a) The CAN communication system is used for communication between the skid control ECU (brake actuator assembly), the steering sensor and other ECUs. If any CAN communication DTCs are detected, DTCs corresponding to the malfunction will be output.
- (b) If any CAN communication DTCs are output, repair the malfunction and troubleshoot the VSC system while communication is normal.
- (c) In order to enable CAN communication, a specific type of wiring is used for the CAN communication lines. The wiring used for each communication line is a twisted pair of wires that have an equal length. A bypass wire should not be used because the data being transmitted will be corrupted.

Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: VEHICLE STABILITY CONTROL SYSTEM: PROBLEM SYMPTOMS TABLE (2013 FR-S)		

PROBLEM SYMPTOMS TABLE

If there are no DTCs output and the problem still occurs, check the suspected areas for each problem symptom in the order given in the following table and proceed to the relevant troubleshooting page.

NOTICE:

When replacing the brake actuator assembly, sensors, etc., turn the ignition switch off.

HINT:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

Vehicle Stability Control System

SYMPTOM	SUSPECTED AREA	SEE PAGE
ABS, BA and/or EBD does not operate.	Check for DTCs again and make sure that DTCs are not output.	INFO
	Power source circuit	INFO

Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: VEHICLE STABILITY CONTROL SYSTEM: Slip Indicator Light does not Come ON (2013 FR-S)		

[Slip Indicator Light does not Come ON](#)

DESCRIPTION

The skid control ECU (brake actuator assembly) is connected to the combination meter assembly via CAN communication.

INSPECTION PROCEDURE

NOTICE:

When replacing the skid control ECU (brake actuator assembly), perform VSC sensor neutral memorization  .

PROCEDURE

1.	CHECK CAN COMMUNICATION SYSTEM
-----------	---------------------------------------

(a) Check if a CAN communication system DTC is output  .

Result:

RESULT	PROCEED TO
DTC is not output.	A
DTC is output.	B

B INSPECT CAN COMMUNICATION SYSTEM

A

2.	PERFORM ACTIVE TEST USING TECHSTREAM (SLIP INDICATOR LIGHT)
-----------	--

(a) Connect the Techstream to the DLC3.

(b) Start the engine.

(c) Select the Active Test using the Techstream  .

ABS/VSC/TRAC

--	--	--	--

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Slip Indicator Light	Slip indicator light	Indicator light ON/OFF	Observe combination meter assembly

(d) Check that the slip indicator light on the combination meter assembly turns on or off in accordance with the Techstream operation.

OK:

The slip indicator light turns on or off in accordance with the Active Test operation.

HINT:

If troubleshooting has been carried out according to Problem Symptoms Table, refer back to the table and proceed to the next step before replacing parts  .

NG ► INSPECT COMBINATION METER ASSEMBLY

OK ► REPLACE BRAKE ACTUATOR ASSEMBLY

3.	INSPECT COMBINATION METER ASSEMBLY
-----------	---

(a) Turn the ignition switch off.

(b) Perform an Active Test of the combination meter assembly (meter CPU) using the Techstream  .

(c) Check the combination meter assembly.

OK:

The slip indicator light turns on or off in accordance with the Active Test operation.

HINT:

If troubleshooting has been carried out according to Problem Symptoms Table, refer back to the table and proceed to the next step before replacing parts  .

NG ► REPLACE COMBINATION METER ASSEMBLY

OK ► REPLACE BRAKE ACTUATOR ASSEMBLY

Last Modified: 3-27-2012	6.4 J	From: 201203

Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: VEHICLE STABILITY CONTROL SYSTEM: Slip Indicator Light Remains ON (2013 FR-S)		

Slip Indicator Light Remains ON

DESCRIPTION

The skid control ECU (brake actuator assembly) is connected to the combination meter assembly via CAN communication.

The slip indicator light blinks during VSC and/or TR(A)C operation.

If a malfunction is detected, the slip indicator light comes on to warn the driver INFO.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When replacing the skid control ECU (brake actuator assembly), perform VSC sensor neutral memorization INFO.

PROCEDURE

1. CHECK CAN COMMUNICATION SYSTEM

(a) Check if a CAN communication system DTC is output **INFO** .

Result:

RESULT	PROCEED TO
DTC is not output.	A
DTC is output.	B

B ▶ INSPECT CAN COMMUNICATION SYSTEM

A

2. CHECK IF BRAKE ACTUATOR ASSEMBLY CONNECTOR IS SECURELY CONNECTED

(a) Check if the skid control ECU (brake actuator assembly) connector is securely connected.

OK:

The connector is securely connected.

NG ▶ CONNECT CONNECTOR TO ECU CORRECTLY

OK

3. CHECK BATTERY

(a) Check the battery voltage.

Standard Voltage:

11 to 14 V

NG ▶ CHECK OR REPLACE CHARGING SYSTEM COMPONENT OR BATTERY

OK

4. INSPECT COMBINATION METER ASSEMBLY

(a) Perform an Active Test of the combination meter assembly (meter CPU) using the Techstream  .

(b) Check the combination meter assembly.

OK:

The slip indicator light turns on or off in accordance with the Active Test operation.

HINT:

If troubleshooting has been carried out according to Problem Symptoms Table, refer back to the table and proceed to the next step before replacing parts  .

NG  **REPLACE COMBINATION METER ASSEMBLY**

OK  **REPLACE BRAKE ACTUATOR ASSEMBLY**

Model Year: 2013	Model: FR-S	Doc ID: RM000000XHO09FX
Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: VEHICLE STABILITY CONTROL SYSTEM: SYSTEM DESCRIPTION (2013 FR-S)		

SYSTEM DESCRIPTION

1. FUNCTION DESCRIPTION

(a) Anti-lock Brake System (ABS)

- (1) Helps prevent the wheels from locking when the brakes are applied firmly or when braking on a slippery surface.

(b) Electronic Brake force Distribution (EBD)

- (1) EBD control utilizes ABS, realizing proper brake force distribution between the front and rear wheels in accordance with the driving conditions. In addition, during braking while cornering, it also controls the brake forces of the right and left wheels, helping maintain vehicle behavior.

(c) Brake Assist (BA)

- (1) The primary purpose of brake assist is to provide supplementary brake force to assist a driver who cannot generate a large brake force during emergency braking, thus helping ensure the vehicle's braking performance.

(d) Traction Control (TR(A)C)

- (1) Helps restrain the slippage of the drive wheels if the driver depresses the accelerator pedal excessively when starting off or accelerating on a slippery surface.

(e) Vehicle Stability Control (VSC)

- (1) Helps restrain sideways slippage of the vehicle during a strong understeer tendency or strong oversteer tendency while cornering.

2. FUNCTION OF COMPONENTS

COMPONENT		FUNCTION
Brake Actuator Assembly	Skid Control ECU	Judges the vehicle driving condition based on the signals from each sensor and switch, and sends the brake control signals to the brake actuator assembly.
	Master Cylinder Pressure Sensor	Detects the master cylinder pressure.
	Pump Motor	Drives the pumps inside the brake actuator assembly.
	Solenoid Valves	<ul style="list-style-type: none"> The hydraulic circuit has 2 master cylinder cut solenoid valves, 2 reservoir cut solenoid valves, 4 pressure holding solenoid valves and 4 pressure reduction solenoid valves. Change the fluid path based on the signals from the skid control ECU during the operation of the brake control system functions, in order to control the fluid pressure applied to the wheel cylinders.
	Yaw Rate and Acceleration	<ul style="list-style-type: none"> The yaw rate sensor detects the vehicle's yaw rate. The acceleration sensor detects the vehicle's longitudinal and

	Sensor	lateral acceleration.
Skid Control ECU	ABS Motor Relay	Supplies power to the pump motor.
	ABS Solenoid Relay	Supplies power to the solenoid valves.
Speed Sensor		Detect the wheel speed of each of the 4 wheels.
Pattern Select Switch Assembly	VSC OFF Switch	Enables the driver to select normal mode, TR(A)C OFF mode or VSC OFF mode.
	VSC SPORT Switch	Enables the driver to select normal mode or VSC SPORT mode.
Stop Light Switch Assembly		Detects the brake pedal depressing signal.
Main Body ECU (Network Gateway ECU)		Transmits the parking brake switch signal to the skid control ECU.
Parking Brake Switch Assembly		Detects the parking brake pedal status.
ECM		<ul style="list-style-type: none"> • Sends the accelerator pedal position signal, engine speed signal etc., to the skid control ECU. • Based on the signals from the skid control ECU, controls the engine output.
TCM*		Sends the gear position signal to the skid control ECU.
Steering Sensor		Detects the steering direction and angle of the steering wheel.
Combination Meter Assembly	ABS Warning Light	Illuminates to alert the driver when the skid control ECU detects a malfunction in the ABS.
	Brake Warning Light	<ul style="list-style-type: none"> • Illuminates to alert the driver when the skid control ECU detects a malfunction in the EBD or brake system. • Illuminates to alert the driver when the brake fluid level is low. • Illuminates to inform the driver when the parking brake is operated.
	TR(A)C OFF Indicator Light	Illuminates to inform the driver when TR(A)C OFF mode is selected.
	VSC OFF Indicator Light	Illuminates to inform the driver when VSC OFF mode or VSC SPORT mode is selected.
	VSC SPORT Indicator Light	Illuminates to inform the driver when VSC SPORT mode is selected.
	Slip Indicator Light	<ul style="list-style-type: none"> • Blinks to inform the driver when the TR(A)C or VSC is performing control. • Illuminates to alert the driver when the skid control ECU detects a

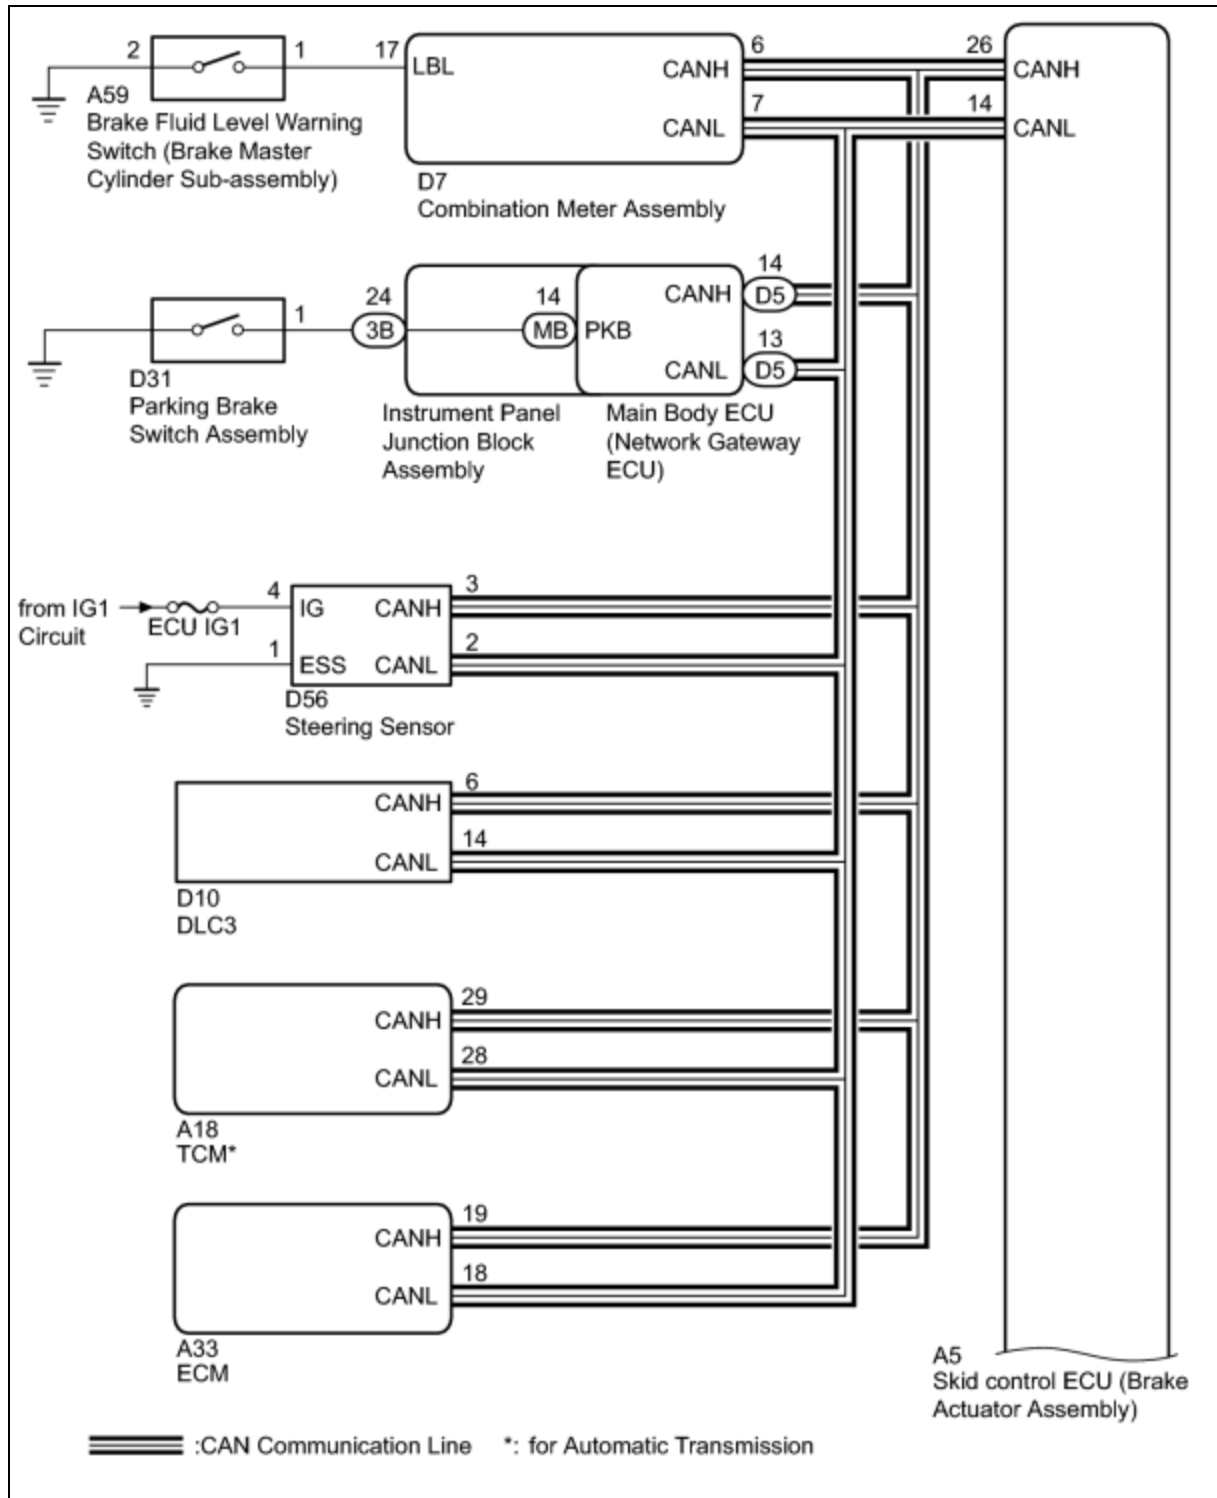

malfunction in the TR(A)C and/or VSC.

Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: VEHICLE STABILITY CONTROL SYSTEM: TEST MODE PROCEDURE (2013 FR-S)		

TEST MODE PROCEDURE

1. WARNING LIGHT AND INDICATOR LIGHT INITIAL CHECK

(a) Release the parking brake.

NOTICE:

Before releasing the parking brake, move the shift lever to P (for automatic transmission) or set chocks to prevent the vehicle from rolling.

HINT:

When the parking brake is applied or the brake fluid level is low, the brake warning light comes on.

(b) When the ignition switch is turned to ON, check that the ABS warning, brake warning, TR(A)C OFF indicator, VSC OFF indicator, VSC SPORT indicator and slip indicator lights all come on.

HINT:

- If the skid control ECU stores a DTC, the ABS warning and slip indicator lights will come on.
- If any of the indicators remains on or does not come on, proceed to troubleshooting for the light circuits listed below.

TROUBLE AREA	SEE PROCEDURE
ABS warning light circuit (Remains on)	INFO
ABS warning light circuit (Does not come on)	INFO
Brake warning light circuit (Remains on)	INFO
Brake warning light circuit (Does not come on)	INFO
TR(A)C OFF indicator light circuit (Remains on)	INFO
TR(A)C OFF indicator light circuit (Does not come on)	INFO
VSC OFF indicator light circuit (Remains on)	INFO
VSC OFF indicator light circuit (Does not come on)	INFO
VSC SPORT indicator light circuit (Remains on)	INFO
VSC SPORT indicator light circuit (Does not come on)	INFO
Slip indicator light circuit (Remains on)	INFO
Slip indicator light circuit (Does not come on)	INFO

(1) When the ignition switch is turned to ON, check that the brake warning, TR(A)C OFF indicator, VSC OFF indicator and VSC SPORT indicator lights turn off after 3 seconds.

(2) When the engine is started, check that the ABS warning and slip indicator lights turn off after 3 seconds.

2. SENSOR CHECK USING TEST MODE (SIGNAL CHECK)

HINT:

DTCs are stored if any malfunctions are detected during the check of each sensor.

- (a) Procedure to enter Test Mode
- (1) Turn the ignition switch off.
 - (2) Check that the steering wheel is centered.
 - (3) Check that the shift lever is in neutral.
 - (4) Connect the Techstream to the DLC3.
 - (5) Turn the ignition switch to ON.
 - (6) Turn the Techstream on.
 - (7) Switch the skid control ECU to Test Mode using the Techstream. Enter the following menus:
Chassis / ABS/VSC/TRAC / Utility / Signal Check.
 - (8) Check that the ABS warning and slip indicator lights come on.
- (b) Speed Sensor Check
- (1) Drive the vehicle straight-ahead.
Accelerate the vehicle to a speed of 45 km/h (28 mph) or more for several seconds.

HINT:

- The sensor check may not complete if wheelspin occurs.
- The speed sensor check may not complete if the speed sensor check is started while turning the steering wheel or spinning the wheels.

NOTICE:

After the ABS warning light goes off, if the vehicle speed exceeds 80 km/h (50 mph), a sensor check code will be stored again.

Decelerate or stop the vehicle before the speed reaches 80 km/h (50 mph).

- (2) Check that the ABS warning light goes off.

HINT:

- The ABS warning light goes off when the sensor check has completed.
 - The ABS warning light comes on immediately after a malfunction has been detected during the speed sensor check.
- (3) Stop the vehicle.

HINT:

When the sensor check has completed, the ABS warning light goes off.

NOTICE:

If the sensor check has not completed, the ABS warning light will come on and the ABS system will not operate.

- (c) End of Sensor Check
- (1) If the sensor checks have completed, the ABS warning light goes off.

NOTICE:

If the sensor checks have not completed, the ABS warning light come on and the ABS system will not operate.

- (d) Reading Sensor Check DTCs
- (1) Read the DTC(s) by following the Techstream screen.

NOTICE:

- If only DTCs other than Test Mode sensor check DTCs are displayed, repair the malfunctions and clear the DTCs.
- If Test Mode sensor check DTCs and other DTCs are displayed or if only Test Mode sensor check DTCs are displayed, repair the malfunctions, clear the DTCs, and perform Test Mode inspection again.

HINT:

See "Sensor Check DTCs".

(2) Turn the ignition switch off and disconnect the Techstream.

(e) Sensor Check DTCs

ABS Sensor

DTC NO.	DETECTION ITEM	TROUBLE AREA

INSPECTION PROCEDURE

PROCEDURE

1.	RECONFIRM DTC
-----------	----------------------

- (a) Clear the DTCs INFO.
- (b) Turn the ignition switch off.
- (c) Start the engine.
- (d) Drive the vehicle at a speed of 15 km/h (9 mph) or more and turn the steering wheel to the right and left.
- (e) Check that no CAN communication system DTC is output INFO.
- (f) If VSC system DTCs are output, record them INFO.

Result:

RESULT	PROCEED TO
DTC is not output.	A
DTC is output.	B
CAN communication system DTC is output.	C

HINT:

The CAN communication system must be normal when performing troubleshooting for sensor DTCs (for VSC system).

B ▶ REPAIR CIRCUITS INDICATED BY OUTPUT DTCs

C ▶ INSPECT CAN COMMUNICATION SYSTEM

A ▶ CHECK FOR INTERMITTENT PROBLEMS

Last Modified: 3-27-2012	6.4 L	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000XFTOCCX
Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: VEHICLE STABILITY CONTROL SYSTEM: PRECAUTION (2013 FR-S)		

PRECAUTION

1. TROUBLESHOOTING PRECAUTIONS

- (a) When there is a malfunction with terminal contact points or part installation problems, removal and installation of the suspected parts may return the system to normal either completely or temporarily.
- (b) In order to determine the malfunctioning area, be sure to check the conditions at the time the malfunction occurred, such as DTC output and the Freeze Frame Data, and record it before disconnecting any connector or removing and installing parts.
- (c) Since the system may be influenced by malfunctions in systems other than the VSC system, be sure to check for DTCs in other systems.

2. HANDLING PRECAUTIONS

- (a) Do not remove or install VSC parts such as the steering sensor except when required, as they need to be adjusted correctly after removal and installation.
- (b) Be sure to perform preparation before work and confirmation after work is completed by following the directions in the repair manual when working on the VSC system.
- (c) Be sure to remove and install the ECU, brake actuator assembly, sensors, etc. with the ignition switch off unless it is otherwise specified in the inspection procedure.
- (d) If the ECU, brake actuator assembly or a sensor has been removed and installed, it is necessary to check the system for problems after the parts have been reassembled. Check for DTCs using the Techstream, also check that system functions and signals received by the ECU are normal using Test Mode.

3. DTC PRECAUTION

- (a) Warnings for some DTCs cannot be cleared only by repairing the malfunctioning parts. If the warning is displayed after repair work, the DTC should be cleared after turning the ignition switch off.

NOTICE:
If a DTC for a malfunctioning part reappears after it was cleared, then it has been stored again.

- ☰ Steering
- ☰ Suspension
- ☰ Vehicle Exterior
- ☰ Vehicle Interior

4. CHASSIS DYNAMOMETER PRECAUTION

When testing with a 2-wheel drum tester such as a speedometer tester, a combination tester for the speedometer and brakes, a chassis dynamometer, or when jacking up the front wheels and turning the wheels, perform the following procedure to enter Inspection Mode and stop the TR(A)C and VSC systems.

Enter Inspection Mode to disable TR(A)C and VSC operation when using a chassis dynamometer.

HINT:

- If Inspection Mode is not used, the vehicle may unexpectedly move off the dynamometer because of TR(A)C and VSC operation.
- The VSC OFF switch must not be used to disable TR(A)C and VSC operation when the vehicle is to be operated on a dynamometer. Pressing the VSC OFF switch does not disable TR(A)C and VSC operation completely.

NOTICE:

Secure the vehicle with lock chains for safety.

(a) Activating Inspection Mode (When Using the Techstream)

- (1) Ensure that the ignition switch is off and the engine is stopped.
- (2) Make sure that the shift lever is in P.
- (3) Connect the Techstream to the DLC3.
- (4) Start the engine.
- (5) Turn the Techstream on.
- (6) Enter the following menus: Chassis / ABS/VSC/TRAC / Utility / Inspection Mode.
- (7) Check that the VSC OFF indicator light will come on.

HINT:

- If the VSC OFF indicator light does not come on, repeat the steps.
- Turning the ignition switch off ends Inspection Mode.

(b) Activating Inspection Mode (When not Using the Techstream)

HINT:

Perform steps "C" to "H" within 30 seconds.

- (1) Ensure that the ignition switch is off and the engine is stopped (Step "A").
- (2) for Manual Transmission:
 - Check that the shift lever is in neutral (Step "B").
- for Automatic Transmission:
 - Make sure that the shift lever is in P (Step "B").

- (3) Start the engine (Step "C").
- (4) Apply the parking brake by pulling up the parking brake lever (Step "D").
- (5) Depress and release the brake pedal twice (Step "E").
- (6) While holding the brake pedal down, release and apply the parking brake twice (Step "F").
- (7) With the parking brake applied, depress and release the brake pedal twice (Step "G").
- (8) Check if the slip indicator light will come on (Step "H").

HINT:

- If the slip indicator light does not come on in step "H", repeat steps "A" to "H".
- Turning the ignition switch off ends Inspection Mode.

5. CAN COMMUNICATION SYSTEM

PRECAUTIONS

- (a) The CAN communication system is used for communication between the skid control ECU (brake actuator assembly), the steering sensor and other ECUs. If any CAN communication DTCs are detected, DTCs corresponding to the malfunction will be output.
- (b) If any CAN communication DTCs are output, repair the malfunction and troubleshoot the VSC system while communication is normal.
- (c) In order to enable CAN communication, a specific type of wiring is used for the CAN communication lines. The wiring used for each communication line is a twisted pair of wires that have an equal length. A bypass wire should not be used because the data being transmitted will be corrupted.

Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: VEHICLE STABILITY CONTROL SYSTEM: VSC OFF Indicator Light does not Come ON (2013 FR-S)		

VSC OFF Indicator Light does not Come ON

DESCRIPTION

The skid control ECU (brake actuator assembly) is connected to the combination meter assembly via CAN communication.

INSPECTION PROCEDURE

NOTICE:

When replacing the skid control ECU (brake actuator assembly), perform VSC sensor neutral memorization  .

PROCEDURE

1.	CHECK CAN COMMUNICATION SYSTEM
-----------	---------------------------------------

(a) Check if a CAN communication system DTC is output  .

Result:

RESULT	PROCEED TO
DTC is not output.	A
DTC is output.	B

B  **INSPECT CAN COMMUNICATION SYSTEM**

A

2.	PERFORM ACTIVE TEST USING TECHSTREAM (VSC OFF INDICATOR LIGHT)
-----------	---

(a) Connect the Techstream to the DLC3.

(b) Start the engine.

(c) Select the Active Test using the Techstream  .

ABS/VSC/TRAC

--	--	--	--

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
VSC OFF Indicator Light	VSC OFF indicator light	Indicator light ON/OFF	Observe combination meter assembly

(d) Check that the VSC OFF indicator light on the combination meter assembly turns on or off in accordance with the Techstream operation.

OK:

The VSC OFF indicator light turns on or off in accordance with the Active Test operation.

HINT:

If troubleshooting has been carried out according to Problem Symptoms Table, refer back to the table and proceed to the next step before replacing parts  .

NG ► INSPECT COMBINATION METER ASSEMBLY

OK ► REPLACE BRAKE ACTUATOR ASSEMBLY

3.	INSPECT COMBINATION METER ASSEMBLY
-----------	---

(a) Turn the ignition switch off.

(b) Perform an Active Test of the combination meter assembly (meter CPU) using the Techstream  .

(c) Check the combination meter assembly.

OK:

The VSC OFF indicator light turns on or off in accordance with the Active Test operation.

HINT:

If troubleshooting has been carried out according to Problem Symptoms Table, refer back to the table and proceed to the next step before replacing parts  .

NG ► REPLACE COMBINATION METER ASSEMBLY

OK ► REPLACE BRAKE ACTUATOR ASSEMBLY

Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: VEHICLE STABILITY CONTROL SYSTEM: VSC OFF Indicator Light Remains ON (2013 FR-S)		

VSC OFF Indicator Light Remains ON

DESCRIPTION

The skid control ECU (brake actuator assembly) is connected to the combination meter assembly via CAN communication.

Pressing the VSC OFF switch turns off TR(A)C and pressing and holding this switch turns off TR(A)C and VSC. If VSC is turned off, the VSC OFF indicator light will come on.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When replacing the skid control ECU (brake actuator assembly), perform VSC sensor neutral memorization INFO.

PROCEDURE

1. CHECK CAN COMMUNICATION SYSTEM

(a) Check if a CAN communication system DTC is output **INFO** .

Result:

RESULT	PROCEED TO
DTC is not output.	A
DTC is output.	B

B ▶ INSPECT CAN COMMUNICATION SYSTEM

A

2. CHECK IF BRAKE ACTUATOR ASSEMBLY CONNECTOR IS SECURELY CONNECTED

(a) Check if the skid control ECU (brake actuator assembly) connector is securely connected.

OK:

The connector is securely connected.

NG ▶ CONNECT CONNECTOR TO ECU CORRECTLY

OK

3. CHECK BATTERY

(a) Check the battery voltage.

Standard Voltage:

11 to 14 V

NG ▶ CHECK OR REPLACE CHARGING SYSTEM COMPONENT OR BATTERY

OK

4. READ VALUE USING TECHSTREAM (VSC OFF SWITCH)

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Select the Data List using the Techstream  .

ABS/VSC/TRAC

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
TRC(TRAC)/VSC Off Mode	TR(A)C/VSC OFF mode / Normal, TRC(TRAC) OFF, Unknown or VSC OFF	Normal: Normal mode TRC(TRAC) OFF: TR(A)C OFF mode Unknown: Unspecified VSC OFF: VSC OFF mode	-

- (d) Using the Techstream, check that the switch condition displayed on the Techstream changes according to VSC OFF switch operation.

OK:

The Techstream display changes according to VSC OFF switch operation.

NG  **INSPECT VSC OFF SWITCH**

OK

5. READ VALUE USING TECHSTREAM (VSC SPORT SWITCH)

- (a) Select the Data List using the Techstream  .

ABS/VSC/TRAC

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Sports Mode	VSC SPORT mode / Normal or Sports	Normal: Normal mode Sports: VSC SPORT mode	-

- (b) Using the Techstream, check that the switch condition displayed on the Techstream changes according to VSC SPORT switch operation.

OK:

The Techstream display changes according to VSC SPORT switch operation.

NG  **INSPECT VSC SPORT SWITCH**

OK

6.	INSPECT COMBINATION METER ASSEMBLY
-----------	---

(a) Perform an Active Test of the combination meter assembly (meter CPU) using the Techstream  .

(b) Check the combination meter assembly.

OK:

The VSC OFF indicator and VSC SPORT indicator lights turn on or off in accordance with the Active Test operation.

HINT:

If troubleshooting has been carried out according to Problem Symptoms Table, refer back to the table and proceed to the next step before replacing parts  .

NG  **REPLACE COMBINATION METER ASSEMBLY**

OK  **REPLACE BRAKE ACTUATOR ASSEMBLY**

7.	INSPECT VSC OFF SWITCH
-----------	-------------------------------

(a) Remove the VSC OFF switch  .

(b) Inspect the VSC OFF switch  .

NG  **REPLACE PATTERN SELECT SWITCH ASSEMBLY**

OK

8.	CHECK HARNESS AND CONNECTOR (BRAKE ACTUATOR ASSEMBLY - VSC OFF SWITCH)
-----------	---

(a) Disconnect the skid control ECU (brake actuator assembly) connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A5-12 (CSW1) - D35-5	Always	Below 1 Ω

A5-12 (CSW1) - Body ground	Always	10 k Ω or higher
D35-8 - Body ground	Always	Below 1 Ω

HINT:

If troubleshooting has been carried out according to Problem Symptoms Table, refer back to the table and proceed to the next step before replacing parts .

NG  REPAIR OR REPLACE HARNESS OR CONNECTOR

OK  REPLACE BRAKE ACTUATOR ASSEMBLY

9.	INSPECT VSC SPORT SWITCH
-----------	---------------------------------

(a) Remove the VSC SPORT switch .

(b) Inspect the VSC SPORT switch .

NG  REPLACE PATTERN SELECT SWITCH ASSEMBLY

OK

10.	CHECK HARNESS AND CONNECTOR (BRAKE ACTUATOR ASSEMBLY - VSC SPORT SWITCH)
------------	---

(a) Disconnect the skid control ECU (brake actuator assembly) connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A5-27(CSW2) - D35-1	Always	Below 1 Ω
A5-27(CSW2) - Body ground	Always	10 k Ω or higher
D35-8 - Body ground	Always	Below 1 Ω

HINT:

If troubleshooting has been carried out according to Problem Symptoms Table, refer back to the table and proceed to the next step before replacing parts .

REPAIR OR REPLACE HARNESS OR

NG ▶ CONNECTOR

OK ▶ REPLACE BRAKE ACTUATOR ASSEMBLY

Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: VSC OFF SWITCH: INSPECTION (2013 FR-S)		

INSPECTION

1. INSPECT PATTERN SELECT SWITCH ASSEMBLY

(a) Make sure that there is no looseness in the locking part and the connecting part of the VSC OFF switch.

(1) Measure the resistance according to the value(s) in the table below.

Text in Illustration

*a	Component without harness connected (Pattern Select Switch Assembly)
----	---

Standard Resistance:

TESTER CONNECTION	CHECK CONDITION	SPECIFIED CONDITION
5 - 8	Switch not pushed in	10 k Ω or higher
	Switch pushed in	Below 1 Ω

(b) Make sure that there is no looseness in the locking part and the connecting part of the VSC SPORT switch.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CHECK CONDITION	SPECIFIED CONDITION
1 - 8	Switch not pushed in	10 k Ω or higher
	Switch pushed in	Below 1 Ω

(c) Check the illumination status

(1) Check the illumination when the battery voltage is applied between the connector terminals.

Standard:

CHECK CONDITION	SPECIFIED CONDITION
Battery positive → 2 Battery negative → 3	The illumination comes on

(d) Connect the vacuum hose to the booster assembly with the paint mark facing front side of the vehicle.

HINT:

If the paint mark has been disappeared, check the ventilation and connect the hose so that there is ventilation from the booster to the engine, and no ventilation from the engine to the booster.

(e) Slide the 2 clamps and install the vacuum hose connector hose.

Title: BRAKE SYSTEM (OTHER): BRAKE BOOSTER: INSTALLATION (2013 FR-S)		

INSTALLATION

1. INSTALL BRAKE BOOSTER ASSEMBLY

(a) Temporarily install the lock nut and push rod clevis to the brake booster assembly.

(b) Set the push rod length as shown in the illustration.

Text in Illustration

*1	Lock Nut
*2	Push Rod Clevis
*a	Push Rod Length

Push rod length:
155.2 mm (6.11 in.)

(c) Tighten the lock nut.

Torque: 19 N·m (194 kgf·cm, 14ft·lbf)

(d) Install the 4 nuts to the brake booster assembly.

Torque: 18 N·m (184 kgf·cm, 13ft·lbf)

2. INSTALL FRONT NO. 2 BRAKE TUBE

(a) Connect 2 clips and install the front No. 2 brake tube.

(b) Using a union nut wrench 12 mm, connect the front No. 2 brake tube from the brake actuator.

Torque: 19 N·m (194 kgf·cm, 14ft·lbf)

NOTICE:

- Do not bend or damage the brake lines.
- Do not allow brake lines to twist and interfere with other parts or vehicle body during tightening.
- Do not allow any foreign matter such as dirt or dust to enter the brake lines.
- Use the formula to calculate special torque values for situations where the union nut wrench is combined with a torque wrench  .

3. INSTALL FRONT NO. 1 BRAKE TUBE

(a) Connect 2 clips and install the front No. 1 brake tube.

(b) Using a union nut wrench 12 mm, connect the front No. 1 brake tube from the brake actuator.

NOTICE:

- Do not bend or damage the brake lines.
- Do not allow brake lines to twist and interfere with other parts or vehicle body during tightening.
- Do not allow any foreign matter such as dirt or dust to enter the brake lines.
- Use the formula to calculate special torque values for situations where the union nut wrench is combined with a torque wrench  .

4. CONNECT VACUUM TUBE CONNECTOR HOSE INFO

5. INSTALL PUSH ROD PIN INFO

6. INSTALL BRAKE MASTER CYLINDER SUB-ASSEMBLY

INFO

7. CHECK AND ADJUST BRAKE PEDAL

INFO

8. INSTALL TCM (for Automatic Transmission)

INFO

9. INSTALL NO. 1 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY INFO

10. INSTALL INSTRUMENT SIDE PANEL LH

HINT:

Use the same procedure for the LH side as for the RH side INFO .

Last Modified: 3-27-2012	6.4 A	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000001HJD01QX
Title: BRAKE SYSTEM (OTHER): BRAKE BOOSTER: REMOVAL (2013 FR-S)		

REMOVAL

1. REMOVE INSTRUMENT SIDE PANEL LH

HINT:

Use the same procedure for the LH side as for the RH side [INFO](#) .

2. REMOVE NO. 1 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY [INFO](#)

3. REMOVE TCM (for Automatic Transmission)

[INFO](#)

4. REMOVE BRAKE MASTER CYLINDER SUB-ASSEMBLY

[INFO](#)

5. DISCONNECT VACUUM TUBE CONNECTOR HOSE

- (a) Slide the clip and disconnect the vacuum tube connector hose from the brake booster assembly.

6. REMOVE FRONT NO. 1 BRAKE TUBE

- (a) Using a union nut wrench 12 mm, disconnect the front No. 1 brake tube from the brake actuator.

- (b) Disconnect 2 clips and remove the front No. 1 brake tube.

7. REMOVE FRONT NO. 2 BRAKE TUBE

(a) Using a union nut wrench 12 mm, disconnect the front No. 2 brake tube from the brake actuator.

(b) Disconnect 2 clips and remove the front No. 2 brake tube.

8. REMOVE BRAKE BOOSTER ASSEMBLY

(a) Loosen the push rod clevis lock nut.

(b) Remove the 4 nuts.

(c) Remove the push rod clevis pin.

(d) Remove the brake booster assembly.

Model Year: 2013	Model: FR-S	Doc ID: RM000003WYV00DX
Title: BRAKE SYSTEM (OTHER): BRAKE FLUID: BLEEDING (2013 FR-S)		

BLEEDING

NOTICE:

- Move the shift lever to P and apply the parking brake before bleeding the brakes (for automatic transmission).
- Apply the parking brake before bleeding the brakes (for manual transmission).
- Add brake fluid to keep the level between the MIN and MAX lines of the reservoir while bleeding the brakes.
- If brake fluid leaks onto any painted surface, immediately wash it off.
- Do not operate the brake actuator assembly while air is in the brake system or in the brake master cylinder sub-assembly. Doing so may cause air to enter the brake actuator assembly.
- If bleeding the brake actuator assembly is difficult due to air in the brake actuator assembly, replace it with a new one.

HINT:

If any work is done on the brake system or if air in the brake lines is suspected, bleed the air from the system.

1. FILL RESERVOIR WITH BRAKE FLUID INFO

2. BLEED BRAKE MASTER CYLINDER SUB-ASSEMBLY

HINT:

If the master cylinder has been disassembled or if the reservoir becomes empty, bleed the air from the master cylinder.

- (a) Using a union nut wrench 12 mm, separate the 2 brake tubes from the master cylinder.

- (b) Slowly depress the brake pedal and hold it there (Step A).

(c) Block the outer holes with your fingers, and release the brake pedal (Step B).

(d) Repeat Steps A and B 3 or 4 times.

(e) Using a union nut wrench 12 mm, install the 2 brake tubes into the master cylinder.

Torque: 19 N·m (194 kgf·cm, 14ft·lbf)

NOTICE:

- Do not bend or damage the brake lines.
- Do not allow brake lines to twist and interfere with other parts or vehicle body during tightening.
- Do not allow any foreign matter such as dirt or dust to enter the brake lines.
- Use the formula to calculate special torque values for situations where a union nut wrench is combined with a torque wrench [INFO](#).

3. BLEED BRAKE LINE [INFO](#)

4. INSPECT FOR BRAKE FLUID LEAK

5. INSPECT FLUID LEVEL [INFO](#)

Last Modified: 3-27-2012	6.4 G	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000SRG03NX
Title: BRAKE SYSTEM (OTHER): BRAKE FLUID: ON-VEHICLE INSPECTION (2013 FR-S)		

ON-VEHICLE INSPECTION

1. INSPECT BRAKE FLUID LEVEL IN RESERVOIR

(a) Check the fluid level.

Text in Illustration

*a	MAX Line
*b	MIN Line

If brake fluid level is lower than the MIN line, check for leaks and inspect the disc brake pads. If necessary, refill the reservoir with brake fluid to the MAX line after repair or replacement.

Brake Fluid:

SAE J1703 or FMVSS No. 116 DOT 3

NOTICE:

If using a dropper to adjust the fluid amount, make sure that the dropper has not been used with mineral oils, water or deteriorated brake fluid. Sealed areas may deteriorate and lead to fluid leaks, or the fluid may deteriorate and lead to decreased efficiency.

Last Modified: 3-27-2012	6.4 A	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000002XY202KX
Title: BRAKE SYSTEM (OTHER): BRAKE FLUID: REPLACEMENT (2013 FR-S)		

REPLACEMENT

NOTICE:

- Move the shift lever to P and apply the parking brake before replacing the brake fluid (for automatic transmission).
- Move the shift lever to P and apply the parking brake before replacing the brake fluid (for manual transmission).
- Add brake fluid to keep the level between the MIN and MAX lines of the reservoir while replacing the brake fluid.
- If brake fluid leaks onto any painted surface, immediately wash it off.

HINT:

If any work is performed on the brake system or if air in the brake lines is suspected, bleed the brake system.

1. FILL RESERVOIR WITH BRAKE FLUID

- Remove the brake master cylinder reservoir filler cap.
- Fill the reservoir with brake fluid.

Brake Fluid:

SAE J1703 or FMVSS No. 116 DOT 3

NOTICE:

Make sure that there is sufficient brake fluid in the reservoir.

2. BLEED BRAKE LINE

NOTICE:

- Bleed the brake line of the wheel farthest from the master cylinder first.
 - Add brake fluid to keep the level between the MIN and MAX lines of the reservoir while bleeding the brake lines.
- Connect a vinyl tube to the bleeder plug.
 - Depress the brake pedal several times, and then loosen the bleeder plug with the pedal depressed.*1
 - When fluid stops coming out, tighten the bleeder plug and release the brake pedal.*2
 - Repeat steps *1 and *2 until all the air in the brake fluid is completely bled out and a new brake fluid comes out.
 - Tighten the bleeder plug completely.

Torque: 8.0 N·m (82 kgf·cm, 71in·lbf)

- Repeat the above steps to replace the brake fluid of the brake lines for each wheel.

3. INSPECT FOR BRAKE FLUID LEAK

4. INSPECT BRAKE FLUID LEVEL IN RESERVOIR [INFO](#)

Last Modified: 3-27-2012	6.4 L	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000SRD092X
Title: BRAKE SYSTEM (OTHER): BRAKE LINE: PRECAUTION (2013 FR-S)		

PRECAUTION

1. TROUBLESHOOTING PRECAUTION

NOTICE:

- Since the brake lines are classified as critical safety related parts, be sure to disassemble and inspect the components if a brake fluid leak is found. If any abnormality is found, replace the component with a new one.
- When removing brake components, cover the brake line connections to prevent foreign matter, such as dust or dirt, from entering the lines.
- Do not damage or deform the brake lines when removing or installing them.
- Do not deform the bracket and the body when connecting a brake line and flexible hose.
- When installing a brake tube grommet to the body, make sure that the brake line passes through the center of the grommet.
- When installing a brake line or flexible hose, make sure that it is free from twists or bends.
- If the cap of a flexible hose does not match the groove on the bracket, twist the hose slightly to insert it.
- Flexible hoses must be free from shock absorber oil, grease, etc.
- When installing a brake line to a plastic clamp, make sure that the brake line is not loose or pinched.
- Do not reuse any clips or plastic clamps removed from a flexible hose or brake line.
- After installing a brake line or flexible hose, make sure that it does not interfere with any other components.
- Do not allow brake fluid to adhere to any painted surface such as the vehicle body. If brake fluid leaks onto any painted surface, immediately wash it off.
- When disconnecting and connecting a flexible hose and brake line:

Text in Illustration

*1	Union Nut Wrench

*2	Clip
*a	Disconnecting
*b	Connecting

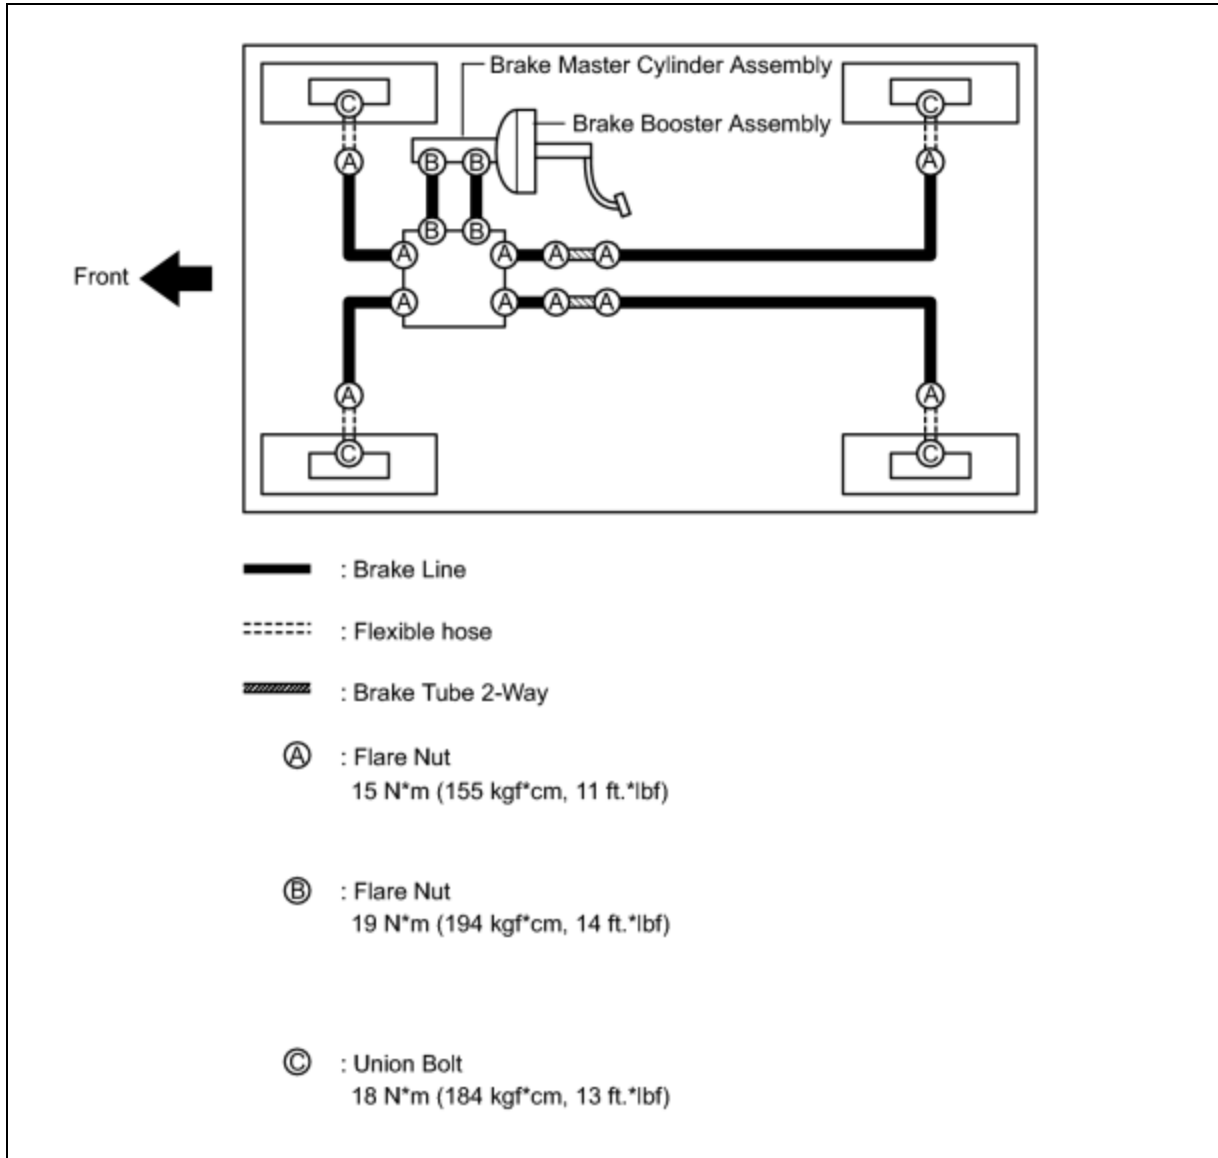

- a. Hold the flexible hose with a wrench and disconnect the brake line with a union nut wrench without deforming the line.
 - b. Remove the clip.
 - c. Install a new clip.
 - d. Hold the flexible hose with a wrench and connect the brake line with a union nut wrench without deforming the line.
- When connecting a brake line and way:

- a. Support the way to prevent deformation of the brake tube and connect the brake tube to the way with a union nut wrench.
- b. Support the way to prevent deformation of the brake tube and install the bolt to fix the way to the body.

Title: BRAKE SYSTEM (OTHER): BRAKE MASTER CYLINDER: INSTALLATION (2013 FR-S)		

INSTALLATION

1. INSTALL SEAL

- (a) Install a new seal to the brake master cylinder sub-assembly.

2. INSTALL BRAKE MASTER CYLINDER SUB-ASSEMBLY

- (a) Install the brake master cylinder sub-assembly to the brake booster assembly with the 2 nuts.

Torque: 13 N·m (133 kgf·cm, 10ft·lbf)

- (b) Using a union nut wrench 12 mm, install the 2 brake tubes to the brake master cylinder sub-assembly.

Torque: 19 N·m (194 kgf·cm, 14ft·lbf)

NOTICE:

Use the formula to calculate the special torque values for situations where a union nut wrench is combined with a torque wrench .

- (c) Connect the brake fluid level switch connector.

3. BLEED BRAKE SYSTEM

4. INSTALL FRONT SUSPENSION UPPER TO COWL BRACE SUB-ASSEMBLY LH

5. INSTALL FRONT WHEEL LH

Torque: 120 N·m (1224 kgf·cm, 86ft·lbf)

Last Modified: 3-27-2012	6.4 A	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000001HK902FX
Title: BRAKE SYSTEM (OTHER): BRAKE MASTER CYLINDER: REMOVAL (2013 FR-S)		

REMOVAL

NOTICE:

Make sure to release the vacuum from the brake booster assembly before removing the brake master cylinder sub-assembly from the brake booster assembly.

1. REMOVE FRONT WHEEL LH

2. DRAIN BRAKE FLUID

NOTICE:

If brake fluid leaks onto any painted surface, wash it off immediately.

3. REMOVE FRONT SUSPENSION UPPER TO COWL BRACE SUB-ASSEMBLY LH

NFC

4. REMOVE BRAKE MASTER CYLINDER SUB-ASSEMBLY

- (a) Release the vacuum from the booster by depressing the brake pedal several times.
- (b) Disconnect the brake fluid level switch connector.

- (c) Using a union nut wrench 12 mm, disconnect the 2 brake tubes from the brake master cylinder sub-assembly.

- (d) Remove the 2 nuts and the brake master cylinder sub-assembly from the brake booster assembly.

NOTICE:

- Because of the way the master cylinder sub-assembly is designed, the piston can easily fall out, and so do not hold the master cylinder sub-assembly by the piston or pull the piston out. If the piston has been removed from the master cylinder sub-assembly by accident, there is a danger that the performance of the master cylinder sub-assembly will be degraded, and so it cannot be reused and must be replaced with a new master cylinder sub-assembly.
- The master cylinder requires careful handling. Do not allow the master cylinder to receive any impact, such as

from being dropped. Do not reuse a master cylinder that has been dropped.

- Do not strike or pinch the master cylinder piston, and do not cause any damage to the master cylinder piston by any other means.
- When installing the master cylinder to the brake booster or removing the master cylinder from the brake booster, make sure that the master cylinder is kept horizontal or with its tip facing downward (the piston faces upward) to prevent the master cylinder piston from falling out.
- Do not allow any foreign objects to contaminate the master cylinder piston. If a foreign object gets on the piston, remove it by using a piece of cloth, and then apply an even layer of lithium soap base glycol grease around the circumference (sliding part) of the piston.
- Do not use any other type of grease or fluid.
- Be careful not to damage the brake tubes.

5. REMOVE SEAL

- (a) Remove the seal.

Model Year: 2013	Model: FR-S	Doc ID: RM000001HJ3019X
Title: BRAKE SYSTEM (OTHER): BRAKE PEDAL (for Automatic Transmission): ADJUSTMENT (2013 FR-S)		

ADJUSTMENT

1. CHECK AND ADJUST BRAKE PEDAL HEIGHT

(a) Check the pedal height.

Text in Illustration

*1	Push Rod Clevis Lock Nut
*2	Floor mat
*a	Pedal Height

Standard Pedal Height from floor mat:
150mm (5.906in.)

(b) Adjust the pedal height.

- (1) Remove the instrument side panel LH.
- (2) Remove the No. 1 instrument panel under cover sub-assembly.
- (3) Disconnect the connector from the stop light switch assembly.
- (4) Remove the stop light switch assembly.
- (5) Loosen the push rod clevis lock nut.
- (6) Adjust the pedal height by turning the push rod.

Standard Pedal Height from floor mat:
150mm (5.906in.)

- (7) Tighten the push rod clevis lock nut.

Torque: 19 N·m (194 kgf·cm, 14ft·lbf)

- (8) Install the stop light switch NFC.
- (9) Connect the connector to the stop light switch assembly.
- (10) Check that the stop light does not illuminate when the brake pedal is not stepped.

2. CHECK BRAKE PEDAL FREE PLAY

(a) Stop the engine. Depress the pedal several times until

there is no vacuum in the booster. Then release the pedal.

- (b) Depress the pedal until resistance is felt.
- (c) Check the pedal free play by measuring the distance between the position in the previous step and the pedal released position.

Standard pedal free play:
0.5 to 2.0mm (0.020 to 0.079in.)

Text in Illustration

*a	Pedal Free Play
----	-----------------

HINT:

If the pedal free play distance 1mm (0.039in.) or less, adjust the stop light switch assembly.

3. CHECK BRAKE PEDAL RESERVE DISTANCE

- (a) Release the brake pedal. Start the engine, and when the pressure in the brake booster reaches 66.7 kPa (500 mmHg, 19.6 in.Hg), proceed with the next step.

- (b) Depress the pedal and check the pedal reserve distance.

Text in Illustration

*1	Floor mat
*a	Pedal Reserve Distance

Standard Pedal Reserve Distance from the floor mat at 490 N (50 kgf, 110.2 lbf):
More than 55 mm (2.165 in.)

If the distance is not as specified, troubleshoot the brake system.

HINT:

Check the brake pedal reserve distance at the same location as that used when checking the brake pedal height.

Model Year: 2013	Model: FR-S	Doc ID: RM000001HJ901XX
Title: BRAKE SYSTEM (OTHER): BRAKE SYSTEM: PRECAUTION (2013 FR-S)		

PRECAUTION

NOTICE:

- Take extra care to replace each part properly. Improper installation or repair could affect the performance of the brake system and cause a driving hazard.
- It is very important to keep the brake system parts and the work area clean when repairing the brake system.
- If the vehicle is equipped with a mobile communication system, refer to the Precautions in the Introduction section.
- Care must be taken when using magnets as they could affect the performance of the speed sensors.
- Since the brake line is one of the critical safety-related parts, be sure to disassemble the components if a brake fluid leak is found. If any abnormality is found, replace the component with a new one.
- When removing brake components, cover the brake tube connections to prevent foreign matter such as dust or dirt from entering the tubes.
- Do not damage or deform the brake tubes when removing or installing them.
- Do not deform the bracket and the body when connecting a brake line and flexible hose.
- When installing a brake tube grommet to the body, make sure that the brake tube passes through the center of the grommet.
- When installing a brake tube or flexible hose, make sure that it is not twisted or bent.
- If the fitting of the flexible hose does not match the groove on the bracket, twist the hose slightly to insert it.
- Flexible hoses must be free from absorber oil, grease, etc.
- When installing a brake tube to a plastic clamp, make sure that the brake tube is not loose or being pinched.
- Do not reuse a clip or plastic clamp removed from a flexible hose.
- After installing a brake tube and flexible hose, make sure that they do not interfere with any other components.
- Do not allow brake fluid to adhere to any painted surface such as the vehicle body. If brake fluid leaks onto any painted surface, immediately wash it off.

Model Year: 2013	Model: FR-S	Doc ID: RM00000159A017X
Title: BRAKE SYSTEM (OTHER): VACUUM PUMP: INSTALLATION (2013 FR-S)		

INSTALLATION

1. INSTALL VACUUM PUMP ASSEMBLY

(a) Coat a new O-ring with engine oil, and install it.

(b) Apply seal packing in a continuous line as shown in the illustration.

Text in Illustration

*a	Edge of groove
*b	2.0 to 4.0 mm (0.078 to 0.158 in.) in diameter
*c	1.0mm or less

NOTICE:

- Clean and degrease the contact surface.
- Install the vacuum pump assembly within 5 minutes of applying seal packing.

HINT:

When replace the vacuum pump assembly on the vehicle, apply seal packing to the vacuum pump assembly.

(c) Install the vacuum pump assembly while aligning the grooves of the vacuum pump assembly with the claws of the intake camshaft RH.

Text in Illustration

*a	Groove of the vacuum pump assembly
*b	Claw of the intake camshaft

NOTICE:

Make sure that the O-ring is not pinched.

(d) Install the 3 bolts.

Torque: 16 N·m (163 kgf·cm, 12ft·lbf)

2. INSTALL VACUUM TUBE CONNECTOR HOSE

(a) Install the vacuum tube connector hose.

3. INSTALL FRONT SUSPENSION UPPER TO COWL BRACE SUB-ASSEMBLY RH

Last Modified: 3-27-2012	6.4 G	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM00000159D016X
Title: BRAKE SYSTEM (OTHER): VACUUM PUMP: ON-VEHICLE INSPECTION (2013 FR-S)		

ON-VEHICLE INSPECTION

1. INSPECT VACUUM PUMP ASSEMBLY OPERATION

- (a) Move the clamp and disconnect the vacuum tube connector hose from the vacuum pump assembly.

- (b) Connect the hose of a vacuum gauge to the vacuum pump assembly.

Text in Illustration

*1	Vacuum Gauge
----	--------------

- (c) Start the engine and warm it up for more than 2 minutes.
 (d) With the engine idling, check the vacuum of the vacuum pump assembly.

Standard pressure:

More than 93 kPa (698 mmHg, 27 in.Hg) of vacuum

If the is not as specified, disassemble the vacuum pump assembly and inspect or replace it [INFO](#).

HINT:

After disassembling and checking the vacuum pump assembly, check the vacuum pump assembly function.

- (e) Remove the vacuum gauge from the vacuum pump assembly.
 (f) Connect the vacuum tube connector hose to the vacuum pump and move the clamp back into position.

Last Modified: 3-27-2012	6.4 A	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM00000159C017X
Title: BRAKE SYSTEM (OTHER): VACUUM PUMP: REMOVAL (2013 FR-S)		

REMOVAL

1. REMOVE VACUUM TUBE CONNECTOR HOSE

- (a) Change the locations of the front hood stay from A to B, and support the hood sub-assembly with the location B.

- (b) Disconnect the vacuum tube connector hose from the vacuum pump assembly.

2. REMOVE FRONT SUSPENSION UPPER TO COWL BRACE SUB-ASSEMBLY RH

NFC

3. REMOVE VACUUM PUMP ASSEMBLY

(a) Remove the 3 bolts and vacuum pump assembly.

(b) Remove the O-ring.

(c) Remove the seal packing from the vacuum pump assembly and the engine.

Title: PARKING BRAKE: PARKING BRAKE ASSEMBLY: DISASSEMBLY (2013 FR-S)		

DISASSEMBLY

HINT:

- Use the same procedure for the RH and LH sides.
- The procedure listed below is for the LH side.

1. REMOVE REAR WHEEL

2. SEPARATE REAR DISC BRAKE CALIPER ASSEMBLY LH

- (a) Remove the 2 bolts and separate the rear disc brake caliper assembly LH.

NOTICE:

Hang the rear disc brake cylinder assembly LH with wire or equivalent.

3. REMOVE REAR DISC

- (a) Put matchmarks on the rear disc and the rear axle hub.

Text in Illustration

*a	Matchmark
----	-----------

- (b) Release the parking brake and remove the rear disc.

HINT:

If the disc cannot be removed easily, use a screwdriver to turn the shoe adjuster as shown in the illustration in order to contract the parking brake shoes.

Text in illustration

*a	Expand	*b	Contract
----	--------	----	----------

4. REMOVE PARKING BRAKE SHOE RETURN TENSION SPRING (for Front Side)

(a) Using SST, remove the parking brake shoe return tension spring.

SST: 09921-00011

5. REMOVE PARKING BRAKE SHOE RETURN TENSION SPRING (for Rear Side)

(a) Using SST, remove the parking brake shoe return tension spring.

SST: 09921-00011

6. REMOVE PARKING BRAKE SHOE STRUT COMPRESSION SPRING

(a) Using SST, remove the parking brake shoe strut

compression spring.
SST: 09921-00011

7. FIX PARKING BRAKE SHOE HOLD DOWN COMPRESSION SPRING (for Front Side)

(a) Using SST, remove the brake shoe hold down compression spring.
SST: 09718-00011

HINT:

Hold the parking brake shoe hold down spring pin with your finger.

8. REMOVE PARKING BRAKE SHOE HOLD DOWN SPRING PIN (for Front Side)

(a) Remove the parking brake shoe hold down spring pin (for front side).

9. REMOVE PARKING BRAKE SHOE STRUT LH

(a) Pull the parking brake shoe towards the front of the vehicle by hand as shown in the illustration.

(b) Remove the parking brake shoe strut LH.

Text in Illustration

*1	Parking brake shoe strut LH
----	-----------------------------

10. REMOVE PARKING BRAKE SHOE HOLD DOWN COMPRESSION SPRING (for Rear Side)

(a) Using SST, remove the brake shoe hold down compression spring (for rear side).

SST: 09718-00011

HINT:

Use the service hole to hold the parking brake shoe hold down spring pin with your finger.

11. REMOVE PARKING BRAKE SHOE HOLD DOWN SPRING PIN (for Rear Side)

(a) Remove the parking brake shoe hold down spring pin (for rear side).

12. REMOVE PARKING BRAKE SHOE ADJUSTING SCREW SET

(a) Expand the parking brake shoe outward by hand and pull downward to separate them from the parking brake plate.

(b) Remove the parking brake shoe adjusting screw set.

13. REMOVE PARKING BRAKE SHOE KIT

(a) Remove the parking brake shoe kit.

14. REMOVE PARKING BRAKE SHOE RETURN TENSION SPRING

(a) Remove the parking brake shoe return tension spring.

15. REMOVE PARKING BRAKE SHOE LEVER LH

(a) Using needle-nose pliers, remove the parking brake shoe lever LH from the No. 3 parking brake cable assembly as shown in the illustration.

16. REMOVE PARKING BRAKE SHOE TYPE C WASHER

(a) Widen and remove the parking brake shoe type C washer from the parking brake shoe as shown in the illustration.

17. REMOVE PARKING BRAKE SHOE WAVE WASHER

(a) Remove the parking brake shoe wave washer.

18. REMOVE PARKING BRAKE SHOE PIN

(a) Remove the parking brake shoe pin.

Last Modified: 3-27-2012	6.4 G	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000V6G04TX
Title: PARKING BRAKE: PARKING BRAKE ASSEMBLY: INSPECTION (2013 FR-S)		

INSPECTION

1. INSPECT BRAKE DISC INSIDE DIAMETER

- (a) Using a brake drum gauge or an equivalent tool, measure the inside diameter of the disc.

Standard inside diameter:

190 mm (7.48 in.)

Maximum inside diameter:

191 mm (7.52 in.)

If the inside diameter is more than the maximum, replace the rear disc.

2. INSPECT PARKING BRAKE SHOE LINING THICKNESS

- (a) Using a ruler, measure the thickness of the parking brake shoe lining.

Standard thickness:

3.5 mm (0.1378 in.)

Minimum thickness:

1.5 mm (0.0591 in.)

If the lining thickness is less than the minimum, or if there is severe or uneven wear, replace the parking brake shoe assembly.

NOTICE:

Always replace both right and left parking brake shoes together.

3. INSPECT BRAKE DISC AND PARKING BRAKE SHOE LINING FOR PROPER CONTACT

- (a) Apply chalk to the inside surface of the disc, then slide the brake shoe against the disc to check the fit of the brake shoe lining to the disc.

Text in Illustration

If the contact between the disc and the brake shoe lining is incorrect, repair it using a brake shoe grinder or replace the parking brake shoe assembly.

NOTICE:

- Always replace both right and left parking brake shoes together.
- Wipe off the chalk after inspection.

Last Modified: 3-27-2012	6.4 A	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM0000006NT00RX
Title: PARKING BRAKE: PARKING BRAKE ASSEMBLY: REASSEMBLY (2013 FR-S)		

REASSEMBLY

HINT:

- The procedure listed below is for the LH side.
- Use the same procedure for the RH and LH sides.

1. APPLY DISC BRAKE GREASE

- (a) Apply a light coat of disc brake grease to the areas of the backing plate which make contact with the shoe as shown in the illustration.

Text in Illustration

	Disc Brake Grease
---	-------------------

2. INSTALL PARKING BRAKE SHOE PIN

- (a) Install the parking brake shoe pin.

3. INSTALL PARKING BRAKE SHOE LEVER LH

- (a) Apply a light coat of disc brake grease to the areas of the parking brake shoe lever LH which make contact with the parking brake shoe pin.
- (b) Install the parking brake shoe lever LH to the parking brake shoe.

4. INSTALL PARKING BRAKE SHOE WAVE WASHER

- (a) Install the wave washer.

5. INSTALL PARKING BRAKE SHOE TYPE C WASHER

- (a) Install a new parking brake shoe type C washer.

- (b) Using a pair of pliers, squeeze together the ends of the parking brake shoe type C washer.

6. INSTALL NO. 3 PARKING BRAKE CABLE ASSEMBLY

- (a) Using needle-nose pliers, connect the No. 3 parking brake cable assembly to the parking brake shoe lever LH.

7. INSTALL PARKING BRAKE SHOE RETURN TENSION SPRING

- (a) Install the parking brake shoe return tension spring to the parking brake shoe.

8. INSTALL PARKING BRAKE SHOE KIT

- (a) Install the parking brake shoe to the parking brake shoe return tension spring.

9. INSTALL PARKING BRAKE SHOE ADJUSTING SCREW SET

- (a) Apply disc brake grease to the parking brake shoe adjusting screw set as shown in the illustration.

(b) Install the parking brake shoe adjusting screw set to the parking brake shoes.

NOTICE:

Take care to install the correct parking brake shoe adjusting screw set because the direction of the parking brake shoe adjusting screw set is different between the left and right sides.

Text in Illustration

	Disc Brake Grease
	For front side (LH Side) For rear side (RH Side)

(c) Expand the parking brake shoes outward by hand and fit them to the parking brake plate.

10. INSTALL PARKING BRAKE SHOE HOLD DOWN SPRING PIN (for Rear Side)

(a) Install the parking brake shoe hold down spring pin (for rear side) to the parking brake plate.

11. INSTALL PARKING BRAKE SHOE HOLD DOWN COMPRESSION SPRING (for Rear Side)

(a) Using SST, install the parking brake shoe hold down compression spring (for rear side) as shown in the illustration.

SST: 09718-00011

12. INSTALL PARKING BRAKE SHOE STRUT LH

(a) Pull the parking brake shoe towards the front of the vehicle by hand as shown in the illustration.

(b) Install the parking brake shoe strut LH.

(c) Install the parking brake shoe.

Text in Illustration

*1	Parking brake shoe strut LH
----	-----------------------------

13. INSTALL PARKING BRAKE SHOE HOLD DOWN SPRING PIN (for Front Side)

(a) Install the parking brake shoe hold down spring pin (for Front side) to the parking brake plate.

14. INSTALL PARKING BRAKE SHOE HOLD DOWN COMPRESSION SPRING (for Front Side)

(a) Using SST, install the parking brake shoe hold down compression spring (for Front Side) as shown in the illustration.

SST: 09718-00011

15. INSTALL PARKING BRAKE SHOE STRUT COMPRESSION SPRING

(a) Install the parking brake shoe strut compression spring to the shoe strut.

16. INSTALL PARKING BRAKE SHOE RETURN TENSION SPRING (for Rear Side)

(a) Install the parking brake shoe return tension spring (for rear side).

17. INSTALL PARKING BRAKE SHOE RETURN TENSION SPRING (for Front Side)

(a) Install the parking brake shoe return tension spring (for front side).

18. CHECK PARKING BRAKE INSTALLATION

(a) Make sure that all the parts are installed properly. If necessary, remove and reinstall the parts.

Text in Illustration

*a	LH Side	*b	RH Side
	Front of the Vehicle	-	-

19. INSTALL REAR DISC

(a) Align the matchmarks of the rear disc and rear axle hub, and install the rear disc.

Text in Illustration

*a	Matchmark
----	-----------

HINT:

When replacing the disc with a new one, select the installation position where the rear disc has minimal runout.

20. ADJUST PARKING BRAKE SHOE CLEARANCE AND PARKING BRAKE PEDAL TRAVEL

(a) Temporarily install the hub nuts to the hub bolts.

(b) Remove the parking brake shoe adjusting hole plug.

(c) Turn the shoe adjuster and expand the shoes until the disc locks.

Text in illustration

*a	Expand	*b	Contract
----	--------	----	----------

(d) Turn and contract the shoe adjuster until the disc can rotate smoothly.

Standard:

Returns 10 notches.

(e) Check that the parking brake does not drag.

(f) Remove the hub nuts from the hub bolts.

21. INSTALL REAR DISC BRAKE CALIPER ASSEMBLY LH

(a) Install the rear disc brake caliper assembly LH with the new 2 bolts.

Torque: 66 N·m (673 kgf·cm, 49ft·lbf)

22. INSPECT PARKING BRAKE LEVER TRAVEL

INFO

23. ADJUST PARKING BRAKE LEVER TRAVEL

INFO

24. INSTALL REAR WHEEL

Title: PARKING BRAKE: PARKING BRAKE CABLE: INSTALLATION (2013 FR-S)		

INSTALLATION

1. INSTALL NO. 3 PARKING BRAKE CABLE ASSEMBLY

- (a) Install the No. 3 parking brake cable assembly to the parking brake plate with the clamp.
- (b) Install the No. 3 parking brake cable assembly to the body with the 4 bolts.

Torque: 18 N·m (184 kgf·cm, 13ft·lbf)

2. INSTALL NO. 2 PARKING BRAKE CABLE ASSEMBLY

HINT:

Use the same procedure for the No. 2 parking brake cable assembly as for the No. 3 parking brake cable assembly.

3. INSTALL PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY

INFO

4. INSTALL CENTER EXHAUST PIPE ASSEMBLY

- (a) Install the center exhaust pipe assembly with the cushion rubber.
- (b) Install the new gasket and the center exhaust pipe assembly with the 2 new nuts and the 2 bolts.

Torque: 48 N·m (490 kgf·cm, 35ft·lbf)

HINT:

- Do not reuse the gaskets.
- Do not reuse the nuts.

- (c) Install the new gasket and the front exhaust pipe assembly with the 2 nuts and the 2 bolts and the 2 compression springs to the center exhaust pipe assembly.

Torque: 18 N·m (184 kgf·cm, 13ft·lbf)

HINT:

Do not reuse the gaskets.

5. INSTALL NO. 3 FUEL TANK PROTECTOR

INFO

6. INSTALL LOWER CASING BRACKET

- (a) Install the lower casing bracket of the body with the 2 bolts.

Torque: 18 N·m (184 kgf·cm, 13ft·lbf)

7. INSTALL CLAMP H/B

- (a) Install the clamp H/B of the casing lower bracket with the 2 nuts.

Torque: 18 N·m (184 kgf·cm, 13ft·lbf)

8. INSTALL PARKING BRAKE ASSEMBLY

Model Year: 2013	Model: FR-S	Doc ID: RM000000UVR057X
Title: PARKING BRAKE: PARKING BRAKE SYSTEM: ADJUSTMENT (2013 FR-S)		

ADJUSTMENT

1. INSPECT PARKING BRAKE LEVER TRAVEL

- (a) Fully pull the parking brake lever to engage the parking brake.
- (b) Pull the lever again to disengage the parking brake.
- (c) Slowly pull the parking brake lever using the specified force, and count the number of clicks.

Parking brake lever travel:

7 to 8 notches at 200 N (20 kgf, 45.0 lbf)

If the parking brake lever travel is not as specified, adjust the parking brake shoe clearance and parking brake lever travel.

2. ADJUST PARKING BRAKE LEVER TRAVEL

- (a) Remove the front console box INFO.
- (b) Completely release the parking brake lever.

- (c) Loosen the adjusting nut to completely release the parking brake cable.

Text in Illustration

*1	Adjusting nut
----	---------------

- (d) Remove the rear wheels.
- (e) Temporarily install the hub nuts to the hub bolts.
- (f) Remove the parking brake shoe adjusting hole plug.
- (g) Turn the shoe adjuster and expand the shoes until the disc locks.

Text in illustration

*a	Expand	*b	Contract
----	--------	----	----------

(h) Turn and contract the shoe adjuster until the disc can rotate smoothly.

Standard:

Returns 10 notches.

(i) Check that there is no brake drag against the shoe.

(j) Install the parking brake shoe adjusting hole plug.

(k) Turn the adjusting nut until the parking brake lever travel is corrected to be within the specified range.

Parking brake lever travel:

7 to 8 notches at 200 N (20 kgf, 45.0 lbf)

(l) Using a wrench or an equivalent tool, tighten the adjusting nut.

(m) Operate the parking brake lever 3 to 4 times, and check the parking brake lever travel.

Parking brake lever travel:

7 to 8 notches at 200 N (20 kgf, 45.0 lbf)

(n) Check that the parking brake does not drag.

(o) Remove the hub nuts from the hub bolts.

(p) Install the rear wheels.

Torque: 120 N·m (1224 kgf·cm, 89ft·lbf)

(q) Install the front console box [INFO](#) .

3. INSPECT BRAKE WARNING LIGHT

(a) When operating the parking brake lever, check that the brake warning light illuminates.

Standard:

The brake warning light always illuminates at the first click.

Title: AXLE AND DIFFERENTIAL: DIFFERENTIAL OIL: ADJUSTMENT (2013 FR-S)		

ADJUSTMENT

1. INSPECT DIFFERENTIAL OIL LEVEL

(a) Using a hexagon wrench 10 mm, remove the rear differential filler plug and gasket.

(b) Check that the oil level is between 0 to 5 mm (0 to 0.197 in.) from the bottom lip of the rear differential filler plug opening.

Text in illustration

*a	0 to 5 mm (0 to 0.197 in.)
----	----------------------------

NOTICE:

- An excessively large or small amount of differential oil may cause damage.
- After replacing oil, drive the vehicle and check the oil level.

If necessary, fill the rear differential carrier assembly with differential synthetic gear oil.

(c) Inspect for oil leaks if the oil level is low.

(d) Using a hexagon wrench 10 mm, install the rear differential filler plug and a new gasket.

Torque: 49 N·m (500 kgf·cm, 36ft·lbf)

2. ADD DIFFERENTIAL OIL

(a) Using a hexagon wrench 10 mm, remove the rear differential filler plug and gasket.

(b) Add differential oil.

Capacity	Oil Grade
	<ul style="list-style-type: none"> • Toyota genuine differential gear oil LT 75W-85 GL-5

1.10 to 1.20 liters (1.17 to 1.27 US qts, 0.97 to 1.05 Imp. qts)

- or equivalent (except for LSD)
- Toyota genuine differential gear oil LX 75W-85 GL-5 or equivalent (for LSD)

(c) Using a hexagon wrench 10 mm, install the rear differential filler plug together with a new gasket.

Torque: 49 N·m (500 kgf·cm, 36ft·lbf)

NOTICE:

- When adding differential oil, make sure that the vehicle is level.
- An excessively large or small amount of differential oil may cause damage.
- After adding differential oil, drive the vehicle and recheck the oil level.

Model Year: 2013	Model: FR-S	Doc ID: RM0000013SC00YX
Title: AXLE AND DIFFERENTIAL: DIFFERENTIAL SYSTEM: PRECAUTION (2013 FR-S)		

PRECAUTION

1. Before disassembly, clean the outside of the rear differential carrier assembly and remove any sand or mud to prevent it from entering the inside of the rear differential carrier assembly during disassembly and installation.
2. When removing a connected part made of light alloy such as a rear differential carrier cover, tap it off with a plastic-faced hammer. Do not attempt to pry it off with a screwdriver.
3. Always arrange disassembled parts in order to protect them from dust.
4. Before installation, thoroughly clean and dry each part, and then apply Toyota genuine differential gear oil LT 75W-85 GL-5 to those parts. Do not use alkaline cleaner for aluminum or rubber parts and ring gear set bolts. Also, do not clean rubber parts such as O-rings or oil seals with non-residue solvent (except LSD).
5. Before installation, thoroughly clean and dry each part, and then apply Toyota genuine differential gear oil LX 75W-85 GL-5 to those parts. Do not use alkaline cleaner for aluminum or rubber parts and ring gear set bolts. Also, do not clean rubber parts such as O-rings or oil seals with non-residue solvent (for LSD).
6. Coat sliding surfaces and rotating parts with Toyota genuine differential gear oil LT 75W-85 GL-5 (except LSD).
7. Coat sliding surfaces and rotating parts with Toyota genuine differential gear oil LX 75W-85 GL-5 (for LSD).
8. When holding a part in a vise, be sure to place an aluminum sheet between the part and vise. Do not put the part directly in the vise.
9. Do not damage the contact surfaces of the rear differential carrier. Such damage may cause oil leakage.
10. Do not fill the differential with oil immediately after parts have been installed using seal packing. Allow at least 1 hour for the seal packing to dry before filling the differential.
11. Damage to surfaces in contact with an oil seal, O-ring or gasket may cause oil leakage.
12. When press-fitting an oil seal, do not damage the oil seal lip or outside periphery.
13. When replacing a bearing, replace the inner and outer races as a set.

Title: AXLE AND DIFFERENTIAL: FRONT AXLE HUB: ON-VEHICLE INSPECTION (2013 FR-S)		

ON-VEHICLE INSPECTION

HINT:

- Use the same procedure for the RH and LH sides.
- The procedure listed below is for the LH side.

1. REMOVE FRONT WHEEL

2. SEPARATE FRONT DISC BRAKE CALIPER ASSEMBLY INFO

3. REMOVE FRONT DISC INFO

4. INSPECT FRONT AXLE HUB BEARING LOOSENESS

- (a) Using a dial indicator, check for looseness near the center of the front axle hub.

Maximum looseness:
0.05 mm (0.00196 in.)

NOTICE:

If the looseness is more than the maximum, replace the front axle hub and bearing assembly.

5. INSPECT FRONT AXLE HUB RUNOUT

- (a) Using a dial indicator, check for runout on the surface of the axle hub outside the hub bolt.

Maximum runout:
0.05 mm (0.00196 in.)

NOTICE:

If the looseness is more than the maximum, replace the front axle hub and bearing assembly.

6. INSTALL FRONT DISC INFO

7. INSTALL FRONT DISC BRAKE CALIPER ASSEMBLY INFO

8. INSTALL FRONT WHEEL

Title: AXLE AND DIFFERENTIAL: REAR AXLE CARRIER: INSTALLATION (2013 FR-S)		

INSTALLATION

HINT:

- Use the same procedure for the RH and LH sides.
- The procedure listed below is for the LH side.

1. INSTALL REAR AXLE CARRIER SUB-ASSEMBLY LH

- (a) Using a jack and wooden block, jack up the rear axle carrier sub-assembly LH to replicate standard vehicle height conditions.

2. TEMPORARILY TIGHTEN REAR UPPER CONTROL ARM ASSEMBLY LH

- (a) Temporarily tighten the rear upper control arm assembly LH to the rear axle carrier sub-assembly with the new bolt and new nut.

3. TEMPORARILY TIGHTEN REAR NO. 1 SUSPENSION ARM ASSEMBLY LH

- (a) Temporarily tighten the rear NO. 1 suspension arm assembly LH to the rear axle carrier sub-assembly with the new bolt and new nut.

4. TEMPORARILY TIGHTEN REAR NO. 2 SUSPENSION ARM ASSEMBLY LH

- (a) Temporarily tighten the rear NO. 2 suspension arm assembly LH to the rear axle carrier sub-assembly with

the bolt and new nut.

5. INSTALL TOE CONTROL LINK SUB-ASSEMBLY LH

(a) Install the nut and the toe control link sub-assembly LH to the rear axle carrier sub-assembly.

Torque: 60 N·m (612 kgf·cm, 44ft·lbf)

(b) Install the new cotter pin.

6. TEMPORARILY TIGHTEN STABILIZER LINK SUB-ASSEMBLY INFO

7. INSTALL NO. 3 PARKING BRAKE CABLE ASSEMBLY

(a) Install the clip and the NO. 3 parking brake cable assembly to the parking brake plate sub-assembly.

8. REASSEMBLY PARKING BRAKE ASSEMBLY

INFO

9. STABILIZE SUSPENSION INFO

10. FULLY TIGHTEN REAR UPPER CONTROL ARM ASSEMBLY LH

(a) Fully tighten the bolt.

Torque: 80 N·m (816 kgf·cm, 59ft·lbf)

HINT:

Hold the bolt and tighten the nut.

11. FULLY TIGHTEN REAR NO. 1 SUSPENSION ARM ASSEMBLY LH

(a) Fully tighten the bolt.

Torque: 110 N·m (1122 kgf·cm, 81ft·lbf)

HINT:

Hold the nut and tighten the bolt.

12. FULLY TIGHTEN REAR NO. 2 SUSPENSION ARM ASSEMBLY LH

(a) Fully tighten the bolt.

Torque: 80 N·m (816 kgf·cm, 59ft·lbf)

HINT:

Hold the bolt and tighten the nut.

Title: AXLE AND DIFFERENTIAL: REAR AXLE CARRIER: REMOVAL (2013 FR-S)		

REMOVAL

HINT:

- Use the same procedure for the RH and LH sides.
- The procedure listed below is for the LH side.

1. REMOVE REAR AXLE HUB AND BEARING ASSEMBLY LH

INFO

2. DISASSEMBLY PARKING BRAKE ASSEMBLY

INFO

3. SEPARATE STABILIZER LINK SUB-ASSEMBLY INFO

4. SEPARATE NO. 3 PARKING BRAKE CABLE ASSEMBLY

- (a) Remove the clip and separate the No. 3 parking brake cable assembly from parking brake plate sub-assembly.

5. SEPARATE REAR UPPER CONTROL ARM ASSEMBLY LH

- (a) Remove the bolt, nut and separate the rear upper control arm assembly LH from rear axle carrier.

6. SEPARATE REAR NO. 1 SUSPENSION ARM ASSEMBLY LH

- (a) Remove the bolt, nut and separate the rear No. 1 suspension arm assembly LH from rear axle carrier.

7. SEPARATE REAR NO. 2 SUSPENSION ARM ASSEMBLY LH

- (a) Remove the bolt, nut and separate the rear No. 2 suspension arm assembly LH from rear axle carrier.

8. DISCONNECT TOE CONTROL LINK SUB-ASSEMBLY LH

- (a) Remove the cotter pin.
(b) Remove the nut.
(c) Install the SST (spacer B) as shown in the illustration.

NOTICE:

As SST may become damaged, make sure the space between the toe control link sub-assembly LH and spacers is not less than 1 mm (0.0394 in.).

- (d) Using SST, disconnect the toe control link sub-assembly LH from the rear axle carrier as shown in the illustration.

SST: 09960-20010

09961-02010

09961-02060

Title: AXLE AND DIFFERENTIAL: REAR AXLE HUB: INSTALLATION (2013 FR-S)		

INSTALLATION

HINT:

- Use the same procedure for the RH and LH sides.
- The procedure listed below is for the LH side.

1. INSTALL REAR AXLE HUB AND BEARING ASSEMBLY LH

(a) Install the rear axle hub and bearing assembly to the rear axle assembly with the 4 bolts.

Torque: 65 N·m (663 kgf·cm, 48ft·lbf)

2. INSTALL REAR DISC INFO

3. INSTALL REAR CALIPER ASSEMBLY INFO

4. STAKE REAR AXLE SHAFT NUT LH

(a) Clean the threaded parts on the rear drive shaft assembly and a new rear axle shaft nut using a non-residue solvent.

NOTICE:

- Be sure to perform this step even when using a new rear drive shaft assembly.
- Keep the threaded parts free of oil and foreign matter.

(b) Install the new rear axle shaft nut.

Torque: 190 N·m (1938 kgf·cm, 140ft·lbf)

HINT:

Stake the rear axle shaft nut LH after inspecting for looseness and runout in the following steps.

5. INSPECT REAR AXLE HUB BEARING LOOSENESS INFO

6. INSPECT REAR AXLE HUB RUNOUT INFO

7. STAKE REAR AXLE SHAFT NUT LH

(a) Using a chisel and hammer, stake the rear axle shaft nut LH.

8. INSTALL REAR SPEED SENSOR LH

(a) Install the bolt and the rear speed sensor LH.

Torque: 7.5 N·m (77 kgf·cm, 66in·lbf)

9. INSTALL REAR WHEEL

Torque: 120 N·m (1224 kgf·cm, 89ft·lbf)

10. ADJUST PARKING BRAKE LEVER TRAVEL

INFO

11. INSPECT SPEED SENSOR SIGNAL

INFO

Title: AXLE AND DIFFERENTIAL: REAR AXLE HUB: ON-VEHICLE INSPECTION (2013 FR-S)		

ON-VEHICLE INSPECTION

HINT:

- Use the same procedure for the RH and LH sides.
- The procedure listed below is for the LH side.

1. REMOVE REAR WHEEL

2. SEPARATE REAR CALIPER ASSEMBLY INFO

3. REMOVE REAR DISC INFO

4. INSPECT REAR AXLE HUB BEARING LOOSENESS

- (a) Using a dial indicator, check for looseness near the center of the rear axle hub.

Maximum looseness:
0.05 mm (0.00196 in.)

NOTICE:

- Make sure that the dial indicator is set perpendicular to the measurement surface.
- Keep the magnet of the dial indicator away from the rear axle hub and bearing assembly.

If the looseness is more than the maximum, replace the rear axle hub and bearing assembly.

5. INSPECT REAR AXLE HUB RUNOUT

- (a) Using a dial indicator, check for runout on the surface of the rear axle hub and bearing assembly outside the rear axle hub bolt.

Maximum runout:
0.05 mm (0.00196 in.)

NOTICE:

- Make sure that the dial indicator is set perpendicular to the measurement surface.
- Keep the magnet of the dial indicator away from the rear axle hub and bearing assembly.

If the runout is more than the maximum, replace the rear axle hub and bearing assembly.

6. INSTALL REAR DISC INFO

7. INSTALL REAR CALIPER ASSEMBLY

INFO

8. INSTALL REAR WHEEL

Torque: 120 N·m (1224 kgf·cm, 89ft·lbf)

Last Modified: 3-27-2012	6.4 A	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM00000004M031X
Title: AXLE AND DIFFERENTIAL: REAR AXLE HUB: REMOVAL (2013 FR-S)		

REMOVAL

HINT:

- Use the same procedure for the RH and LH sides.
- The procedure listed below is for the LH side.

1. REMOVE REAR WHEEL

2. SEPARATE REAR SPEED SENSOR LH

- (a) Remove the bolt and separate rear speed sensor LH.

NOTICE:

Prevent foreign matter from attaching to the sensor tip.

3. REMOVE REAR AXLE SHAFT NUT LH

- (a) Using SST and a hammer, release the staked part of the rear axle shaft nut.

SST: 09930-00010

NOTICE:

- Do not grind the SST.
- Release the staked part of the nut completely, otherwise the threads of the drive shaft may be damaged.

- (b) Remove the rear axle shaft nut.

4. SEPARATE REAR CALIPER ASSEMBLY INFO

5. REMOVE REAR DISC INFO

6. REMOVE REAR AXLE HUB AND BEARING ASSEMBLY LH

- (a) Using a plastic-faced hammer, disconnect the rear drive shaft assembly from the rear axle hub and bearing assembly LH.

NOTICE:

- Be careful not to damage the boot.
- Use wire or equivalent to prevent the rear drive shaft assembly from hanging down.

(b) Remove the 4 bolts and the rear axle hub and bearing assembly LH from the rear axle assembly.

Model Year: 2013	Model: FR-S	Doc ID: RM00000005901CX
Title: AXLE AND DIFFERENTIAL: REAR DIFFERENTIAL CARRIER ASSEMBLY: DISASSEMBLY (2013 FR-S)		

DISASSEMBLY

1. REMOVE REAR DIFFERENTIAL BREATHER PLUG

- (a) Remove the rear differential breather plug from the rear differential carrier cover.

2. REMOVE REAR DIFFERENTIAL CARRIER COVER

- (a) Remove the 8 bolts.

- (b) Using a brass bar and a hammer, remove the rear differential carrier cover from the rear differential carrier assembly.

NOTICE:

- Place the brass bar onto the corners of the rear differential carrier cover.
- Do not damage the sealing surface of the rear differential carrier.

3. REMOVE REAR DIFFERENTIAL BREATHER PLUG OIL DEFLECTOR

(a) Remove the bolt and the rear differential breather plug oil deflector from the rear differential carrier cover.

4. SECURE REAR DIFFERENTIAL CARRIER SUB-ASSEMBLY

(a) Secure the rear differential carrier sub-assembly to the overhaul stand with the 6 bolts.

5. INSPECT RUNOUT OF DIFFERENTIAL RING GEAR

(a) Set a dial indicator perpendicular to the end of the

differential ring gear face.

(b) Rotate the differential ring gear and measure the runout.

Maximum runout:
0.07 mm (0.00275 in.)

If the runout is more than the specified maximum value, remove the differential ring gear and check the runout of the rear differential case sub-assembly.

6. INSPECT DIFFERENTIAL RING GEAR BACKLASH

(a) While holding the rear drive pinion companion flange sub-assembly, rotate the differential ring gear and measure the backlash.

Standard Backlash:
0.13 to 0.18 mm (0.00512 to 0.00708 in.)

HINT:

- Record the measured backlash to use as a reference for selecting a rear differential side gear shaft plate washer.
- Inspect the tooth contact and use the result as a reference for selecting a rear differential side gear shaft plate washer.

7. INSPECT TOOTH CONTACT BETWEEN RING GEAR AND DRIVE PINION

(a) Coat 3 or 4 teeth at 3 different positions on the differential ring gear with Prussian blue.

(b) Rotate the differential ring gear in both directions.

(c) Inspect the tooth contact pattern.

Text in Illustration

*a	Proper Contact	*b	Heel Contact
*c	Face Contact	*d	Select an adjusting washer that brings the drive pinion closer to the ring gear
*e	Toe Contact	*f	Flank Contact
*g	Select an adjusting washer that shifts the drive pinion away from the ring gear	-	-

8. INSPECT DIFFERENTIAL SIDE GEAR BACKLASH

(a) Place a dial indicator on the tip of a side gear tooth at a right angle. Hold the pinion gear in the rear differential case sub-assembly and check that the backlash.

Standard Backlash:

0 mm (0 in.)

If the result is not as specified, replace the rear differential case sub-assembly with a new one.

9. INSPECT RUNOUT OF REAR DRIVE PINION COMPANION FLANGE SUB-ASSEMBLY

- (a) Using a dial indicator, measure the vertical and lateral runout of the rear drive pinion companion flange sub-assembly.

Text in Illustration

*a	Vertical Runout
*b	Lateral Runout
*c	30 mm (1.181 in.)

Maximum Runout:

ITEM	SPECIFIED CONDITION
Vertical runout	0.09 mm (0.00354 in.)
Lateral runout	0.09 mm (0.00354 in.)

NOTICE:

Measure the runout of the rear drive pinion companion flange horizontally at a position 30 mm (1.18 in.) away from the center of the differential drive pinion shaft.

If the runout is more than the maximum value, replace the rear drive pinion companion flange.

10. INSPECT DIFFERENTIAL DRIVE PINION PRELOAD

- (a) Using a torque wrench, measure the starting torque of the differential drive pinion.

Differential drive pinion preload (at starting):

1.11 to 1.91 N*m (11.3 to 19.5 kgf*cm, 9.8 to 16.9 in.*lbf)

HINT:

- The backlash between the differential drive pinion and differential ring gear should allow enough movement of the differential drive pinion to allow this measurement to be performed.
- Make sure not to include the preload of the differential ring gear (rear differential case sub-assembly) in the measurement of the differential drive pinion preload.

11. INSPECT TOTAL PRELOAD

- (a) Using a torque wrench, measure the preload with the teeth of the differential drive pinion and differential ring gear in contact.

Total preload (at starting):

1.60 to 2.69 N*m (16.3 to 27.4 kgf*cm, 14.2 to 23.8 in.*lbf)

12. REMOVE REAR DIFFERENTIAL SIDE GEAR SHAFT OIL SEAL

(a) Using SST, remove the 2 rear differential side gear shaft oil seals.

SST: 09308-00010

Text in Illustration

*1	Rear Differential Side Gear Shaft Oil Seal
----	--

13. REMOVE REAR DRIVE PINION NUT

(a) Using SST and a hammer, unstack the staked part of the rear drive pinion nut.

SST: 09930-00010

NOTICE:

- Be sure to use SST with the tapered surface facing the differential drive pinion.
- Do not grind the tip of SST with a grinder, etc.
- Completely loosen the staked part of the rear drive pinion nut when removing it.
- Do not damage the threads of the differential drive pinion.

(b) Using SST to hold the rear drive pinion companion flange, remove the rear drive pinion nut.

SST: 09330-00021

Text in Illustration

*a	Turn
*b	Hold

14. REMOVE REAR DRIVE PINION COMPANION FLANGE SUB-ASSEMBLY

(a) Using SST, remove the rear drive pinion companion flange sub-assembly.

Text in Illustration

*a	Turn
*b	Hold

09953-03010

09954-03010

09955-03030

09956-03030

NOTICE:

Apply grease to the threads of SST center bolt before use.

15. REMOVE REAR DIFFERENTIAL DUST DEFLECTOR

HINT:

Perform this procedure only when the rear differential dust deflector is damaged.

(a) Using SST and a press, remove the rear differential dust deflector.

SST: 09950-00020

SST: 09950-60010

09951-00380

SST: 09950-70010

09951-07100

NOTICE:

Do not drop the rear drive pinion companion flange.

16. REMOVE REAR DIFFERENTIAL CARRIER OIL SEAL INFO

17. REMOVE REAR DIFFERENTIAL DRIVE PINION OIL SLINGER

- (a) Remove the rear differential drive pinion oil slinger.

18. REMOVE REAR DRIVE PINION FRONT TAPERED ROLLER BEARING

- (a) Using SST, remove the rear drive pinion front tapered roller bearing (inner race) from the differential drive pinion.

SST: 09556-22010

Text in Illustration

*a	Turn
*b	Hold

NOTICE:

Apply grease to the threads and tip of SST center bolt before use.

19. REMOVE REAR DIFFERENTIAL DRIVE PINION BEARING SPACER

- (a) Remove the rear differential drive pinion bearing spacer.

20. REMOVE REAR DIFFERENTIAL CASE SUB-ASSEMBLY

- (a) Put matchmarks on either bearing cap and the rear differential carrier sub-assembly.

Text in Illustration

*a	Matchmark
----	-----------

(b) Remove the 4 bolts and 2 bearing caps from the rear differential carrier sub-assembly.

NOTICE:

Do not exchange bearing caps, as each cap is only suitable for its original location and the installation direction relative to the rear differential carrier sub-assembly for which it was manufactured.

(c) Using SST and a hammer, remove the 2 rear differential side gear shaft plate washers.

SST: 09504-22011

NOTICE:

Put identification marks on the rear differential side gear shaft plate washers to show the location for installation (differential ring gear back side or differential ring gear teeth side), or keep them separate so that they can be distinguished.

HINT:

Measure the thickness of each rear differential side gear shaft plate washer and note it.

(d) Remove the rear differential case sub-assembly and the rear differential case bearing outer races differential ring gear back side and differential ring gear teeth side from the rear differential carrier.

NOTICE:

- Do not damage the rear differential case bearing or the differential ring gear.
- Put identification marks on the rear differential case bearing outer races to show the location for installation (back side or teeth side), or keep them separate so that they can be distinguished.

21. REMOVE REAR DRIVE PINION REAR TAPERED ROLLER BEARING

(a) Remove the differential drive pinion from the rear differential carrier sub-assembly.

(b) Using SST and a press, remove the rear drive pinion rear tapered roller bearing (inner race) from the differential

drive pinion.

SST: 09950-00020

NOTICE:

Do not drop the differential drive pinion.

HINT:

If either the differential drive pinion or differential ring gear is damaged, replace both as a set.

(c) Remove the rear differential drive pinion plate washer from the differential drive pinion.

HINT:

Measure the thickness of the rear differential drive pinion plate washer and note it.

(d) Using a brass bar and a hammer, remove the rear drive pinion rear tapered roller bearing (outer race) from the rear differential carrier sub-assembly.

Text in Illustration

*1	Outer Race
----	------------

NOTICE:

Place the brass bar onto the rear drive pinion rear tapered roller bearing outer race. Do not damage the rear differential carrier.

22. REMOVE REAR DRIVE PINION FRONT TAPERED ROLLER BEARING

(a) Using a brass bar and a hammer, remove the rear drive pinion front tapered roller bearing (outer race) from the rear differential carrier sub-assembly.

Text in Illustration

*1	Outer Race
----	------------

NOTICE:

Place the brass bar onto the rear drive pinion front tapered roller bearing outer race. Do not damage the rear differential carrier sub-assembly.

23. REMOVE DIFFERENTIAL RING GEAR

(a) Hold the rear differential case sub-assembly in a vise between aluminum plates.

Text in Illustration

*a	Matchmark
----	-----------

--	--

NOTICE:

Do not overtighten the vise.

- (b) Put matchmarks on the differential ring gear and the rear differential case sub-assembly.
- (c) Using a chisel and hammer, unstake the 5 rear differential ring gear set bolt lock plates.

- (d) Remove the 10 rear differential ring gear set bolts and the 5 rear differential ring gear set bolt lock plates.

- (e) Using a plastic-faced hammer, tap on the differential ring gear to separate it from the rear differential case sub-assembly.

NOTICE:

Do not damage the differential ring gear.

24. INSPECT RUNOUT OF REAR DIFFERENTIAL CASE SUB-ASSEMBLY

HINT:

Perform this procedure only when the runout of the differential ring gear exceeds the specified maximum value.

- (a) Install the rear differential case bearing outer races differential ring gear back side and differential ring gear teeth side to the rear differential case bearing inner races LH and RH respectively.

NOTICE:

- Be sure to install the rear differential case bearing outer races in the correct position.
- Do not damage the rear differential case bearing or differential ring gear.

(b) Install the rear differential case sub-assembly to the rear differential carrier sub-assembly.

(c) Install the differential ring gear back side and differential ring gear teeth side rear differential side gear shaft plate washers so that there is no looseness in the rear differential case bearings.

Text in Illustration

*a	Differential Ring Gear Back Side	*b	Differential Ring Gear Teeth Side
----	----------------------------------	----	-----------------------------------

(d) Align the matchmarks on the bearing cap and the rear differential carrier sub-assembly and install the 2 bearing caps.

Text in Illustration

*a	Matchmark
----	-----------

NOTICE:

Make sure that the right and left bearing caps are not interchanged.

(e) Tighten both bearing caps with the 4 bolts.

Torque: 85 N·m (867 kgf·cm, 63ft·lbf)

(f) Using a dial indicator, measure the rear differential case sub-assembly runout.

Maximum runout:
0.07 mm (0.00275 in.)

If the runout is more than the maximum value, replace the rear differential case sub-assembly with a new one.

(g) Remove the 4 bolts and 2 bearing caps.

NOTICE:

Do not exchange bearing caps, as each cap is only suitable for its original location and the installation direction relative to the carrier for which it was manufactured.

(h) Remove the rear differential case sub-assembly and the rear differential case bearing outer races differential ring gear back side and differential ring gear teeth side from the rear differential carrier sub-assembly.

NOTICE:

Do not damage the rear differential case bearing or differential ring gear.

25. REMOVE REAR DIFFERENTIAL CASE BEARING

HINT:

Perform this procedure only when replacing the rear differential case bearing or rear differential case sub-assembly.

(a) Hold the rear differential case sub-assembly in a vise between aluminum plates.

Text in Illustration

*a	Turn
*b	Hold

NOTICE:

Do not overtighten the vise.

(b) Using SST, remove the rear differential case bearing inner races LH and RH from the rear differential case sub-assembly.

09951-00480

09952-06010

NOTICE:

- Do not deform the bearing cage if the bearing is to be reused.
- Hook the claws of SST to the rear differential case bearing inner race.
- Apply grease to the threads and tip of SST center bolt before use.

26. INSPECT DIFFERENTIAL SIDE GEAR BACKLASH

- (a) Secure the rear differential case sub-assembly in a vise between aluminum plates.

NOTICE:

Do not overtighten the vise.

- (b) Place a dial indicator on the tip of a side gear tooth at a right angle. Hold the pinion gear in the rear differential case sub-assembly and check that the backlash.

Standard Backlash:

0 mm (0 in.)

If the result is not as specified, replace the rear differential case sub-assembly with a new one.

INSTALLATION

1. INSTALL REAR DIFFERENTIAL CARRIER ASSEMBLY

- (a) Support the rear differential carrier assembly using a jack.
- (b) Install a new snap ring to the rear drive shaft assembly.
- (c) Coat the spline of the inboard joint shaft assembly with toyota genuine differential gear oil LT 75W-85 GL-5 (except LSD).
- (d) Coat the spline of the inboard joint shaft assembly with toyota genuine differential gear oil LX 75W-85 GL-5 (for LSD).
- (e) Install the shaft snap ring with the opening facing downward.
- (f) Align the shaft splines and install the drive shaft assembly with a brass bar and hammer.

NOTICE:

- Be careful not to damage the drive shaft dust cover, boot or oil seal.
- Keep the drive shaft assembly level while handling it.
- Do not tap the axle side of the drive shaft with the hammer.
- Set the hole snap ring with the opening facing down word.

HINT:

Whether the inboard joint shaft is in contact with the pinion shaft or not can be confirmed from the sound or feeling when tapping it in.

- (g) Install the rear upper differential mount stopper and rear lower differential mount stopper to the rear differential carrier assembly.

- (h) Install the rear differential carrier assembly along with the rear differential mount stopper with the 5 bolts.

Title: AXLE AND DIFFERENTIAL: REAR DIFFERENTIAL CARRIER ASSEMBLY: REASSEMBLY (2013 FR-S)		

REASSEMBLY

1. INSTALL DIFFERENTIAL RING GEAR

- (a) Clean the contact surfaces of the rear differential case sub-assembly and differential ring gear.
- (b) Clean the rear differential ring gear set bolt hole.

- (c) Heat the differential ring gear to approximately 100°C (212°F) in boiling water.

Text in Illustration

*a	Boiling Water
----	---------------

- (d) Carefully take the differential ring gear out of the boiling water.

CAUTION:

Use thick gloves to protect your hands as the differential ring gear is hot.

- (e) Secure the rear differential case sub-assembly between aluminum plates in a vise.

NOTICE:

Do not overtighten the vise.

- (f) After the moisture on the differential ring gear has completely evaporated, quickly install the differential ring gear to the rear differential case sub-assembly.

- (g) Align the matchmarks on the differential ring gear and rear differential case sub-assembly.

Text in Illustration

*a	Matchmark
----	-----------

- (h) Temporarily install 5 new rear differential ring gear set bolt lock plates with the 10 rear differential ring gear set bolts.
- (i) After the differential ring gear cools down, tighten the 10 ring gear set bolts uniformly.

Torque: 97 N·m (984 kgf·cm, 71ft·lbf)

(j) Using a chisel and hammer, stake the 5 rear differential ring gear set bolt lock plates.

- (1) Stake one claw so that it is flush against the flat surface of the bolt.
- (2) Stake the other claw against the surface of the bolt head to act as a stopper if the bolt starts to loosen.

2. INSTALL REAR DIFFERENTIAL CASE BEARING

(a) Using SST and a press, install the rear differential case bearing inner races LH and RH to the rear differential case sub-assembly.

SST: 09710-30012

09710-04081

SST: 09950-60010

09951-00430

09951-00580

SST: 09950-70010

09951-07100

Text in Illustration

NOTICE:

- Do not apply hypoid gear oil to a new bearing.
- Do not deform the bearing cage. Set SST to the center of the rear differential case sub-assembly.
- If the bearing is replaced, replace it and its outer race as a set.

3. INSPECT RUNOUT OF DIFFERENTIAL RING GEAR

- (a) Install the rear differential case bearing outer races differential ring gear back side and differential ring gear teeth side to the rear differential case bearing inner races LH and RH respectively.

NOTICE:

- Be sure to install the rear differential case bearing outer races in the correct position.
- Do not damage the rear differential case bearing or differential ring gear.

- (b) Install the rear differential case sub-assembly to the rear differential carrier.
- (c) Install the differential ring gear back side and differential ring gear teeth side rear differential side gear shaft plate washers so that there is no looseness in the rear differential case bearings.

Text in Illustration

*a	Differential Ring Gear Back Side	*b	Differential Ring Gear Teeth Side
----	----------------------------------	----	-----------------------------------

HINT:

- If the rear differential case bearing is new, select a thinner rear differential side gear shaft plate washer and install it.
- If the rear differential case bearing is reused, install a rear differential side gear shaft plate washer with the same thickness as the removed one.

- (d) Align the matchmarks on the bearing cap and the rear

differential carrier and install the 2 bearing caps.

Text in Illustration

*a	Matchmark
----	-----------

NOTICE:

Make sure that the right and left bearing caps are not interchanged.

(e) Tighten both bearing caps with the 4 bolts.

Torque: 85 N·m (870 kgf·cm, 63ft·lbf)

(f) Using a dial indicator, measure the runout of the differential ring gear.

Maximum runout:
0.07 mm (0.00275 in.)

(g) Remove the 4 bolts and 2 bearing caps.

Text in Illustration

*a	Matchmark
----	-----------

NOTICE:

Do not exchange bearing caps, as each cap is only suitable for its original location and the installation direction relative to the carrier for which it was manufactured.

(h) Remove the 2 rear differential side gear shaft plate washers.

(i) Remove the rear differential case sub-assembly and the rear differential case bearing outer races differential ring gear back side and differential ring gear teeth side from the rear differential carrier.

NOTICE:

Do not damage the rear differential case bearing or differential ring gear.

4. INSTALL REAR DRIVE PINION REAR TAPERED ROLLER BEARING

- (a) Install the rear differential drive pinion plate washer to the differential drive pinion.

Text in Illustration

*1	Rear Differential Drive Pinion Plate Washer
----	---

HINT:

- Temporarily install the rear drive pinion rear tapered roller bearing (inner race) to prevent the rear differential drive pinion plate washer from being dropped.
- The rear differential drive pinion plate washer can be installed in either direction.

- (b) Using SST and a press, install the rear drive pinion rear tapered roller bearing (inner race) to the differential drive pinion.

SST: 09506-30012

- (c) Using SST and a press, install the rear drive pinion rear tapered roller bearing (outer race) to the differential carrier assembly rear.

SST: 09950-60020

09951-00890

----	--

5. INSTALL REAR DRIVE PINION FRONT TAPERED ROLLER BEARING

- (a) Using SST and a press, install the rear drive pinion front tapered roller bearing (outer race) to the differential carrier assembly rear.

SST: 09950-60020

09951-00720

SST: 09950-70010

09951-07100

Text in Illustration

*1	Rear Drive Pinion Front Tapered Roller Bearing (Outer Race)
----	---

6. INSTALL REAR DIFFERENTIAL DUST DEFLECTOR

HINT:

Perform this procedure only when replacing the rear differential dust deflector.

- (a) Using SST and a press, install a new rear differential dust deflector to the rear drive pinion companion flange.

SST: 09636-20010

NOTICE:

- Slowly press in the rear differential dust deflector.
- If any burrs remain after pressing in the rear differential dust deflector, remove them.

7. ADJUST DIFFERENTIAL DRIVE PINION PRELOAD

- (a) Install the differential drive pinion and the rear drive pinion front tapered roller bearing (inner race) to the differential carrier assembly rear.

NOTICE:

- Do not drop the differential drive pinion.
- Install the rear differential drive pinion bearing spacer and the differential carrier assembly rear oil seal after adjusting the tooth contact pattern.

- (b) Install the rear differential drive pinion oil slinger to the differential carrier assembly rear.

- (c) Using SST, install the rear drive pinion companion flange to the differential carrier assembly rear.

Text in Illustration

*a	Turn
*b	Hold

SST: 09950-30012

- 09951-03010
- 09953-03010
- 09954-03010
- 09955-03030
- 09956-03030

NOTICE:

- Hold the differential drive pinion until SST is installed.
- Install the rear drive pinion companion flange so that there is a slight looseness in the differential drive pinion because the rear differential drive pinion bearing spacer is not yet installed.
- Apply grease to the threads and tip of SST center bolt before use.

- (d) Coat the threads of a new rear drive pinion nut with hypoid gear oil LSD.

- (e) Using SST and a torque wrench, hold the rear drive pinion companion flange and tighten the rear drive pinion nut.

Text in Illustration

*a	Turn
*b	Hold

SST: 09330-00021

Torque: 338 N·m (3445 kgf·cm, 249ft·lbf) or less

NOTICE:

- Tighten the rear drive pinion nut to approximately 100 N*m (1020 kgf*cm, 74 ft.*lbf), and then tighten it further while checking the differential drive pinion preload.
- Apply hypoid gear oil LSD to the rear drive pinion nut and the threads of the differential drive pinion.
- As there is no rear differential drive pinion bearing spacer, tighten the rear drive pinion nut a little at a time. Do not overtighten it.

(f) Turn the bearing clockwise and counterclockwise several times to stabilize it.

(g) Using a torque wrench, measure the starting torque of the differential drive pinion.

HINT:

- The backlash between the differential drive pinion and differential ring gear should allow enough movement of the differential drive pinion to allow this measurement to be performed.
- Make sure not to include the preload of the differential ring gear (rear differential case sub-assembly) in the measurement of the differential drive pinion preload.

Differential Drive Pinion Preload (at Starting):

ITEM	SPECIFIED CONDITION
New rear drive pinion tapered roller bearing	1.39 to 2.49 N*m (14.2 to 25.4 kgf*cm, 12.3 to 22.0 in.*lbf)
Reused rear drive pinion tapered roller bearing	1.01 to 1.81 N*m (10.3 to 18.5 kgf*cm, 8.9 to 16.0 in.*lbf)

NOTICE:

- Record the differential drive pinion preload for the total preload measurement.
- Do not apply hypoid gear oil to a new rear drive pinion tapered roller bearing.

If the preload is not within the specified range, adjust the differential drive pinion preload or perform repairs as necessary.

8. INSTALL REAR DIFFERENTIAL CASE SUB-ASSEMBLY

- (a) Install the rear differential case bearing outer races differential ring gear back side and differential ring gear teeth side to the rear differential case bearing inner races LH and RH respectively.

NOTICE:

- Be sure to install the rear differential case bearing outer races in the correct position.
- Do not damage the rear differential case bearing or differential ring gear.

- (b) Install the rear differential case sub-assembly to the differential carrier assembly rear.

- (c) Install the differential ring gear back side and differential ring gear teeth side rear differential side gear shaft plate washers so that the rear differential case bearing is not loose.

Text in Illustration

*a	Differential Ring Gear Back Side	*b	Differential Ring Gear Teeth Side
----	----------------------------------	----	-----------------------------------

HINT:

- If the final gear set (differential drive pinion and differential ring gear) and rear differential case bearing are new, select a thinner rear differential side gear shaft plate washer and install it.
- If the final gear set (differential drive pinion and differential ring gear) and rear differential case bearing are reused, install a rear differential side gear shaft plate washer with the same thickness as the removed one.

9. INSPECT AND ADJUST DIFFERENTIAL RING GEAR BACKLASH

- (a) While holding the rear drive pinion companion flange, rotate the differential ring gear and measure the backlash.

Standard Backlash:

0.13 to 0.18 mm (0.00512 to 0.00708 in.)

HINT:

- Record the measured backlash to use as a reference for selecting a rear differential side gear shaft plate washer.
- Inspect the tooth contact and use the result as a reference for selecting a rear differential side gear shaft plate washer.

(b) Select a new rear differential side gear shaft plate washer so that the differential ring gear backlash will be within the specified range, and install it to the differential ring gear back side.

Standard Plate Washer:

90564-46024	42	2.90 mm (0.1142 in.)	90201-52027	27	3.36 mm (0.1323 in.)
90564-46025	43	2.92 mm (0.1150 in.)	90564-46040	58	3.38 mm (0.1331 in.)
90201-52013	13	2.94 mm (0.1157 in.)	90564-46041	59	3.40 mm (0.1339 in.)
90564-46026	44	2.96 mm (0.1165 in.)	90201-52029	29	3.42 mm (0.1346 in.)
90564-46027	45	2.98 mm (0.1173 in.)	90564-46042	60	3.44 mm (0.1354 in.)
90201-52015	15	3.00 mm (0.1181 in.)	90564-46043	61	3.46 mm (0.1362 in.)
90564-46028	46	3.02 mm (0.1189 in.)	90201-52031	31	3.48 mm (0.1370 in.)

- (c) Make the rear differential case bearing and the rear differential side gear shaft plate washer snug by tapping on the rear differential carrier with a plastic-faced hammer.

- (d) Set a dial indicator perpendicular to the end of the differential ring gear face.

- (e) While holding the rear drive pinion companion flange, rotate the differential ring gear and measure the backlash.

Standard Backlash:

0.13 to 0.18 mm (0.00512 to 0.00708 in.)

- (f) If the backlash is not within the specified range, select a new rear differential side gear shaft plate washer so that the differential ring gear backlash will be within the specified range, and install it to the differential ring gear back side.

- (g) Select a thicker rear differential side gear shaft plate washer so that the clearance (A) becomes zero or close to zero.

Text in Illustration

*1	Rear Differential Side Gear Shaft Plate Washer
*2	Rear Differential Case Bearing LH

(h) Make the rear differential case bearing and the rear differential side gear shaft plate washer snug by tapping on the rear differential carrier with a plastic-faced hammer.

(i) Set a dial indicator perpendicular to the end of the differential ring gear face.

(j) While holding the rear drive pinion companion flange, rotate the differential ring gear and measure the backlash.

Standard Backlash:

0.13 to 0.18 mm (0.00512 to 0.00708 in.)

If the backlash is not within the specified range, adjust the thickness of the right and left rear differential side gear shaft plate washers by an equal amount so that the backlash is within the specified range.

10. ADJUST REAR DIFFERENTIAL CASE BEARING PRELOAD

- (a) After adjusting the backlash of the differential ring gear, remove the differential ring gear teeth side rear differential side gear shaft plate washer.

- (b) Using a micrometer, measure the thickness of the removed rear differential side gear shaft plate washer.
- (c) Select a new rear differential side gear shaft plate washer which is 0.06 to 0.09 mm (0.00236 to 0.00354 in.) thicker than the removed one.

HINT:

Select a rear differential side gear shaft plate washer which can be pressed in 2/3 of the way with a finger.

- (d) Using SST and a plastic-faced hammer, drive in the rear differential side gear shaft plate washer.

SST: 09504-22011

- (e) Align the matchmarks on the bearing cap and rear differential carrier and install the 2 bearing caps.

Text in Illustration

*a	Matchmark
----	-----------

NOTICE:

Make sure that the right and left bearing caps are not interchanged.

- (f) Tighten both bearing caps with the 4 bolts.

Torque: 85 N·m (870 kgf·cm, 63ft·lbf)

(g) Set a dial indicator perpendicular to the end of the differential ring gear face.

(h) While holding the rear drive pinion companion flange, rotate the differential ring gear and measure the backlash.

Standard Backlash:

0.13 to 0.18 mm (0.00512 to 0.00708 in.)

If the measured value is out of the specified range, adjust it by increasing or decreasing the thickness of both the right and left rear differential side gear shaft plate washers equally.

HINT:

- Record the measured backlash to use as a reference for selecting a rear differential side gear shaft plate washer.
- Inspect the tooth contact and use the result as a reference for selecting a rear differential side gear shaft plate washer.

11. INSPECT TOTAL PRELOAD

(a) Using a torque wrench, measure the preload with the teeth of the differential drive pinion and the differential ring gear in contact.

Total Preload (at Starting):

ITEM		SPECIFIED CONDITION
New rear drive pinion tapered roller bearing	New differential case bearing	2.47 to 4.16 N*m (25.2 to 42.4 kgf*cm, 21.9 to 36.8 in.*lbf)
	Reused differential case bearing	1.88 to 3.27 N*m (19.2 to 33.3 kgf*cm, 16.6 to 28.9 in.*lbf)
Reused rear drive pinion tapered roller bearing	New differential case bearing	2.09 to 3.48 N*m (21.3 to 35.5 kgf*cm, 18.5 to 30.8 in.*lbf)
	Reused differential case bearing	1.50 to 2.59 N*m (15.3 to 26.4 kgf*cm, 13.3 to 22.9 in.*lbf)

If the measured preload is less than the specified value, replace the rear differential side gear shaft plate washer of the differential ring gear tooth surface side with a new thicker one.

If the preload is more than the specified value, replace the rear differential side gear shaft plate washer of the differential ring gear tooth surface side with a new thinner one.

(b) Set a dial indicator to the end of the differential ring gear face.

(c) While holding the rear drive pinion companion flange, rotate the differential ring gear and measure the backlash.

Standard Backlash:

0.13 to 0.18 mm (0.00512 to 0.00708 in.)

If the backlash is not within the specified range, change the thickness of the right and left rear differential side gear shaft plate washers by equal amounts to adjust it.

HINT:

- Record the measured backlash to use as a reference for selecting a rear differential side gear shaft plate washer.
- Inspect the tooth contact and use the result as a reference for selecting a rear differential side gear shaft plate washer.

12. INSPECT TOOTH CONTACT BETWEEN RING GEAR AND DRIVE PINION

(a) Coat 3 or 4 teeth at 3 different positions on the differential ring gear with Prussian blue.

- (b) Rotate the differential ring gear in both directions.
 (c) Inspect the tooth contact pattern.

Text in Illustration

*a	Proper Contact	*b	Heel Contact
*c	Face Contact	*d	Select an adjusting washer that brings the drive pinion closer to the ring gear
*e	Toe Contact	*f	Flank Contact
*g	Select an adjusting washer that shifts the drive pinion away from the ring gear	-	-

- (d) If the teeth are not contacting properly, use the following table to select a proper rear differential drive pinion plate washer for correction.

Text in Illustration

*1	Rear Differential Drive Pinion Plate Washer
----	---

NOTICE:

- If the contact pattern is face contact or flank contact, tooth contact may be adjustable while keeping the backlash within the specified range.
- If the thickness of the rear differential drive pinion plate washer has been changed, adjust the backlash and measure the total preload.

Standard Plate Washer:

PART NO.	MARK	THICKNESS	PART NO.	MARK	THICKNESS

NOTICE:

Apply grease to the threads of SST center bolt before use.

(b) Coat the threads of the rear drive pinion nut with hypoid gear oil LSD.

(c) Using SST and a torque wrench, hold the rear drive pinion companion flange and tighten the rear drive pinion nut.

Text in Illustration

*a	Turn
*b	Hold

SST: 09330-00021

Torque: 338 N·m (3445 kgf·cm, 249ft·lbf) or less

NOTICE:

- Tighten the rear drive pinion nut to approximately 100 N*m (1020 kgf*cm, 74 ft.*lbf), and then tighten it further while checking the differential drive pinion preload.
- Apply hypoid gear oil LSD to the rear drive pinion nut and the threads of the differential drive pinion.

24. ADJUST DIFFERENTIAL DRIVE PINION PRELOAD

(a) Using a torque wrench, measure the starting torque of the differential drive pinion.

HINT:

- The backlash between the differential drive pinion and differential ring gear should allow enough movement of the differential drive pinion to allow this measurement to be performed.
- Make sure not to include the preload of the differential ring gear (rear differential case sub-assembly) in the measurement of the differential drive pinion preload.

Differential Drive Pinion Preload (at Starting):

ITEM	SPECIFIED CONDITION
New rear drive pinion tapered roller bearing	1.49 to 2.59 N*m (15.2 to 26.4 kgf*cm, 13.2 to 22.9 in.*lbf)
Reused rear drive pinion tapered roller bearing	1.11 to 1.91 N*m (11.3 to 19.5 kgf*cm, 9.8 to 16.9 in.*lbf)

- If the preload is less than the specified minimum value, check the preload while retightening the rear drive pinion nut by 5 to 10° to adjust it so that it is within the specified range.

Torque:

338 N*m (3445 kgf*cm, 249 ft.*lbf) or less

- If the preload is less than the specified minimum value even when the tightening torque of the rear drive pinion nut is more than the specified maximum value, loosen the rear drive pinion nut and check that the

threads of the rear drive pinion nut and differential drive pinion are not stripped.

- If the threads are not stripped, replace the rear differential drive pinion bearing spacer. Apply hypoid gear oil LSD to the threads of the differential drive pinion and repeat the procedure.

25. INSPECT TOTAL PRELOAD

- (a) Using a torque wrench, measure the preload with the teeth of the drive pinion and ring gear in contact.

Total Preload (at Starting):

ITEM		SPECIFIED CONDITION
New rear drive pinion tapered roller bearing	New differential case bearing	2.57 to 4.26 N*m (26.2 to 43.4 kgf*cm, 22.7 to 37.7 in.*lbf)
	Reused differential case bearing	1.98 to 3.37 N*m (20.2 to 34.4 kgf*cm, 17.5 to 29.8 in.*lbf)
Reused rear drive pinion tapered roller bearing	New differential case bearing	2.19 to 3.58 N*m (22.3 to 36.5 kgf*cm, 19.4 to 31.7 in.*lbf)
	Reused differential case bearing	1.60 to 2.69 N*m (16.3 to 27.4 kgf*cm, 14.2 to 23.8 in.*lbf)

If the total preload is not within the specified range, adjust the total preload or perform repairs as necessary.

26. INSPECT DIFFERENTIAL RING GEAR BACKLASH

- (a) Set a dial indicator perpendicular to the end of the differential ring gear face.

- (b) While holding the rear drive pinion companion flange, rotate the differential ring gear and measure the backlash.

Standard Backlash:

0.13 to 0.18 mm (0.00512 to 0.00708 in.)

27. INSPECT RUNOUT OF REAR DRIVE PINION COMPANION FLANGE SUB-ASSEMBLY

- (a) Using a dial indicator, measure the vertical and lateral runout of the rear drive pinion companion flange.

Text in Illustration

*a	Vertical Runout
*b	Lateral Runout
*c	30 mm (1.181 in.)

Maximum Runout:

ITEM	SPECIFIED CONDITION
Vertical runout	0.09 mm (0.00354 in.)
Lateral runout	0.09 mm (0.00354 in.)

NOTICE:

Measure the runout of the rear drive pinion companion flange horizontally at a position 30 mm (1.181 in.) away from the center of the differential drive pinion shaft.

If the runout is more than the maximum, replace the rear drive pinion companion flange and differential ring gear.

28. STAKE REAR DRIVE PINION NUT

- (a) Using SST and a hammer, stake the rear drive pinion nut.

SST: 09930-00010

29. INSTALL REAR DIFFERENTIAL SIDE GEAR SHAFT OIL SEAL INFO

30. INSTALL REAR DIFFERENTIAL DRAIN PLUG

- (a) Using a hexagon wrench 10 mm, install the rear differential drain plug and a new gasket.

Torque: 49 N·m (500 kgf·cm, 36ft·lbf)

31. REMOVE REAR DIFFERENTIAL CARRIER SUB-ASSEMBLY

- (a) Remove the rear differential carrier sub-assembly from the overhaul stand.

32. INSTALL REAR DIFFERENTIAL BREATHER PLUG OIL DEFLECTOR

- (a) Clean the seal packing attached to the rear differential carrier and the rear differential carrier cover using a scraper and wire brush. Then remove the oil with non-residue solvent or equivalent.

NOTICE:

Do not scratch the sealing surface.

- (b) Install the rear differential breather plug oil deflector to the rear differential carrier cover with the bolt.

Torque: 8.0 N·m (82 kgf·cm, 71 in·lbf)

33. INSTALL REAR DIFFERENTIAL CARRIER COVER

- (a) Apply seal packing to the rear differential carrier cover as shown in the illustration.

Text in Illustration

*a	Seal packing
*b	2 to 3 mm (0.0787 to 0.118 in.)

Seal packing:

Toyota Genuine Seal Packing 1281, Three Bond 1281 or equivalent

NOTICE:

- Apply the seal packing in a continuous line, approximately 2 to 3 mm (0.0787 to 0.118 in.) in diameter.
- Overlap the seal packing at least 10 mm (0.394 in.) at

the beginning and end of application.

- Install the rear differential carrier cover within 3 minutes of application.

- (b) Install the rear differential carrier cover with the 8 bolts.

Torque: 47 N·m (475 kgf·cm, 35ft·lbf)

NOTICE:

Do not fill the differential with oil or drive the vehicle immediately after installing the differential carrier cover. Leave the vehicle for at least 1 hour. Also, avoid sudden acceleration and deceleration for at least 12 hours after application.

34. INSTALL REAR DIFFERENTIAL BREATHER PLUG

- (a) Install the rear differential breather plug to the rear differential carrier cover.

Torque: 21 N·m (210 kgf·cm, 16ft·lbf)

Title: AXLE AND DIFFERENTIAL: REAR DIFFERENTIAL CARRIER ASSEMBLY: REMOVAL (2013 FR-S)		

REMOVAL

1. REMOVE REAR WHEEL

2. DRAIN DIFFERENTIAL OIL

- (a) Using a hexagon wrench 10 mm, remove the rear differential filler plug and gasket.

- (b) Using a hexagon wrench 10 mm, remove the rear differential drain plug and gasket to drain the differential oil.

3. REMOVE CENTER EXHAUST PIPE ASSEMBLY INFO

4. REMOVE PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY

INFO

5. REMOVE REAR DIFFERENTIAL CARRIER ASSEMBLY

- (a) Support the rear differential carrier assembly with a transmission jack.

(b) Remove the 5 bolts, rear upper differential mount stopper and rear lower differential mount stopper.

(c) Lower the transmission jack slowly.

(d) Using a SST, disconnect the rear drive shaft assembly from the rear differential carrier assembly as shown in the illustration.

SST: 09520-01010

SST: 09520-24010

09520-32040

(e) Lower the transmission jack and pull off the rear drive shaft assembly from the rear differential carrier assembly, and then remove the rear differential carrier assembly.

HINT:

Tie the disconnected rear drive shaft with a rope.

Title: AXLE AND DIFFERENTIAL: STEERING KNUCKLE: INSTALLATION (2013 FR-S)		

INSTALLATION

HINT:

- Use the same procedure for the RH and LH sides.
- The procedure listed below is for the LH side.

1. INSTALL STEERING KNUCKLE LH

- (a) Install the steering knuckle LH with the 2 bolts and 2 new nuts.

Torque: 155 N·m (1581 kgf·cm, 114ft·lbf)

2. INSTALL FRONT LOWER SUSPENSION ARM ASSEMBLY LH

- (a) Install the nut and the front lower suspension arm assembly LH.

Torque: 51 N·m (520 kgf·cm, 38ft·lbf)

- (b) Install new cotter pin.

3. INSTALL TIE ROD SUB-ASSEMBLY LH

- (a) Install the nut and the tie rod sub-assembly LH to the steering knuckle LH.

Torque: 27 N·m (275 kgf·cm, 20ft·lbf)

- (b) Install new cotter pin.

NOTICE:

If the holes for the clip are not aligned, tighten the nut up to an additional 60°

4. INSTALL FRONT DISC BRAKE DUST COVER LH

- (a) Install the 3 bolts and the front disc brake dust cover LH to the steering knuckle LH.

Torque: 18 N·m (184 kgf·cm, 13ft·lbf)

5. INSTALL FRONT WHEEL

Torque: 120 N·m (1224 kgf·cm, 89ft·lbf)

6. INSTALL FRONT AXLE HUB SUB-ASSEMBLY

REMOVAL

HINT:

- Use the same procedure for the RH and LH sides.
- The procedure listed below is for the LH side.

1. REMOVE FRONT AXLE HUB SUB-ASSEMBLY LH

INFO

2. REMOVE FRONT DISC BRAKE DUST COVER LH

- (a) Remove the 3 bolts and the front disc brake dust cover LH.

3. DISCONNECT TIE ROD SUB-ASSEMBLY LH

- (a) Remove the cotter pin and nut.

- (b) Install the SST (spacer B) to tie rod assembly.

NOTICE:

As SST may become damaged, make sure the space between the tie rod and spacers is not less than 1 mm (0.0394 in.).

- (c) Using SST, disconnect the tie rod assembly.

SST: 09960-20010

09961-02010

09961-02060

Text in Illustration

*1	Nut	*2	Body
*3	Claw	*4	SST (spacer B)
*a	1 mm (0.0394 in.)	*b	Place a wrench here
	Molybdenum grease		Turn

CAUTION:

Apply the molybdenum grease to the end and threads of SST bolt.

NOTICE:

- Install SST so that claw and body are parallel.
- Make sure to tie the string of SST to the vehicle to prevent SST from dropping.
- Do not damage the dust cover on the tie rod end sub-assembly.
- Do not damage the tie-rod end.
- Do not damage the ball joint dust cover.
- Do not damage the steering knuckle.

4. REMOVE FRONT LOWER SUSPENSION ARM ASSEMBLY LH

(a) Remove the cotter pin and nut.

(b) Install the SST (spacer B) to the front lower suspension arm assembly LH.

NOTICE:

As SST may become damaged, make sure the space between the front lower suspension arm assembly LH and spacers is not less than 1 mm (0.0394 in.).

(c) Using SST, disconnect the front lower suspension arm assembly LH.

SST: 09960-20010

Title: CLUTCH: CLUTCH FLUID: BLEEDING (2013 FR-S)		

BLEEDING

NOTICE:

Immediately wash off any clutch fluid that comes into contact with any painted surfaces.

HINT:

If any work is done on the clutch system or if air in the clutch lines is suspected, bleed the air from the system.

1. FILL CLUTCH FLUID

(a) Fill the clutch fluid.

Fluid:

SAE J1703 or FMVSS No. 116 DOT3

NOTICE:

Add clutch fluid to keep the level between the MIN and MAX lines of the master cylinder reservoir sub-assembly while bleeding the clutch.

2. BLEED CLUTCH LINE

NOTICE:

In case of clutch fluid replacement, make sure that the old fluid is replaced in the clutch line between the master cylinder reservoir sub-assembly and the bleeder before bleeding.

(a) Connect a vinyl tube to the clutch release cylinder bleeder plug.

- (b) Depress the clutch pedal 5 times, and then loosen the clutch release cylinder bleeder plug while the pedal is depressed (Step C).
- (c) When fluid no longer comes out, tighten the clutch release cylinder bleeder plug, and then release the clutch pedal (Step D).
- (d) Repeat Steps C and D until all the air in the fluid is completely bled out.
- (e) Tighten the clutch release cylinder bleeder plug.

Torque: 7.8 N·m (80 kgf·cm, 69in·lbf)

(f) Depress the clutch pedal 10 times or more and confirm its operation.

3. INSPECT FOR CLUTCH FLUID LEAK

4. INSPECT CLUTCH FLUID LEVEL

INFO

TOYOTA

Title: CLUTCH: CLUTCH FLUID: ON-VEHICLE INSPECTION (2013 FR-S)		

ON-VEHICLE INSPECTION

1. INSPECT CLUTCH FLUID LEVEL

- (a) Check the clutch fluid level.

If clutch fluid level is lower than the MIN line, check for leaks and inspect the clutch lines. If necessary, refill the master cylinder reservoir sub-assembly with clutch fluid to the MAX line after repair or replacement.

Fluid:

SAE J1703 or FMVSS No. 116 DOT 3

NOTICE:

When adjusting fluid amount using a dropper or the like, do not use one which was used with liquid petroleum, water, or deteriorated clutch fluid. This may deteriorate seals or fluid, resulting in a fluid leak and poor clutch function.

Title: CLUTCH: CLUTCH FLUID: REPLACEMENT (2013 FR-S)		

REPLACEMENT

NOTICE:

Immediately wash off any clutch fluid that comes into contact with any painted surfaces.

HINT:

If any work is done on the clutch system or if air in the clutch lines is suspected, bleed the air from the system.

1. FILL CLUTCH FLUID INFO

2. REPLACE CLUTCH FLUID

(a) Connect a vinyl tube to the clutch release cylinder bleeder plug.

- (b) Depress the clutch pedal several times, and then loosen the clutch release cylinder bleeder plug with the pedal depressed (Step A).
- (c) At the point where the fluid stops coming out, tighten the clutch release cylinder bleeder plug, and then release the clutch pedal (Step B).
- (d) Repeat Steps A and B until the new clutch fluid is comes out.

NOTICE:

Make sure that the master cylinder reservoir sub-assembly does not run out of clutch fluid.

- (e) Tighten the clutch release cylinder bleeder plug.

Torque: 7.8 N·m (80 kgf·cm, 69in·lbf)

- (f) Repeat the above procedure to bleed the air out of the clutch line for each wheel.

3. INSPECT FOR CLUTCH FLUID

4. INSPECT CLUTCH FLUID LEVEL INFO

Title: CLUTCH: CLUTCH PEDAL SWITCH: ON-VEHICLE INSPECTION (2013 FR-S)		

ON-VEHICLE INSPECTION

1. INSPECT CLUTCH START SYSTEM

- (a) Check that the engine does not start when the clutch pedal is released.
- (b) Check that the engine starts when the clutch pedal is fully depressed.

If necessary, replace or adjust the clutch start switch assembly.

Last Modified: 3-27-2012	6.4 A	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000001B3D013X
Title: CLUTCH: CLUTCH PEDAL SWITCH: REMOVAL (2013 FR-S)		

REMOVAL

1. REMOVE INSTRUMENT SIDE PANEL LH INFO

2. REMOVE NO. 1 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY INFO

3. REMOVE CLUTCH SWITCH ASSEMBLY

(a) Disconnect the clutch switch connector.

(b) Remove the nut and the clutch switch assembly from the clutch pedal support sub-assembly.

HINT:

Do not turn the clutch switch assembly.

4. REMOVE CLUTCH PEDAL SUPPORT SUB-ASSEMBLY

INFO

5. REMOVE CLUTCH START SWITCH ASSEMBLY

(a) Disconnect the clutch start switch connector.

(b) Remove the nut and the clutch start switch assembly from the clutch pedal support sub-assembly.

HINT:

Do not turn the clutch start switch assembly.

Last Modified: 3-27-2012	6.4 N	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000ERC032X
Title: CLUTCH: CLUTCH PEDAL: ADJUSTMENT (2013 FR-S)		

ADJUSTMENT

1. INSPECT AND ADJUST CLUTCH PEDAL

- (a) If the full stroke of the clutch pedal sub-assembly is not within the specified value, loosen the lock nuts of the clutch switch assembly and adjust the full stroke of the clutch pedal sub-assembly with the clutch switch assembly.

Text in Illustration

*1	Lock Nut
*a	Pedal stroke

Pedal stroke:

110 to 115 mm (4.331 to 4.528 in.)

Torque: 8.0 N·m (82 kgf·cm, 71 in·lbf)

NOTICE:

When adjusting the full stroke of clutch pedal sub-assembly, do not turn the clutch switch assembly.

HINT:

If the clutch switch assembly cannot adjust the full stroke of clutch pedal sub-assembly to the specified value, adjust it by turning the clutch master cylinder push rod.

- (b) Loosen the push rod lock nuts of the clutch master cylinder assembly.

- (c) Rotate the clutch master cylinder push rod to adjust.

Text in Illustration

*a	In the Longer Direction
----	-------------------------

*b	In the Shorter Direction

- (d) Make sure that the clutch pedal sub-assembly contacts the clutch pedal stopper when the clutch pedal sub-assembly is at the maximum stroke position.
- (e) Make sure that the clutch pedal sub-assembly contacts the clutch switch side when the pedal is released.

- (f) Turn the clutch master cylinder push rod to shorten until a clearance is gained on the clutch switch side.

- (g) Turn the clutch master cylinder push rod to lengthen until the clutch pedal sub-assembly contacts the clutch switch assembly.

- (h) Turn further in the direction that will shorten the clutch master cylinder push rod by 270°.

Text in Illustration

*a	In the Longer Direction
*b	In the Shorter Direction

- (i) Check that the clevis pin moves smoothly by moving it to the left and right directions.

- (j) Tighten the clutch master cylinder push rod lock nut of the clutch master cylinder assembly.

Torque: 10 N·m (102 kgf·cm, 7ft·lbf)

- (k) Depress and release the clutch pedal sub-assembly two or three times to ensure that the clutch pedal sub-assembly and the release lever operate smoothly. If the clutch pedal sub-assembly and the release lever do not operate smoothly, bleed the air from the clutch line.
- (l) Measure the clutch pedal sub-assembly full stroke length again to ensure that it is within specifications. If it is not within specifications, repeat the adjustment procedures again from the beginning.

Pedal stroke:

105 to 115 mm (4.134 to 4.528 in.)

2. INSPECT CLUTCH PEDAL SUB-ASSEMBLY

- (a) Move the clutch pedal sub-assembly in the lateral direction with a force of approximately 10 N (1.0 kgf, 2.2 lbf) to check that the clutch pedal sub-assembly deflection is within the service limit.

Maximum play:

4.0 (0.158 in.)

If the play exceeds the maximum, replace the clutch pedal sub-assembly.

Title: CLUTCH: CLUTCH PEDAL: INSTALLATION (2013 FR-S)		

INSTALLATION

1. INSTALL CLUTCH PEDAL PAD

- (a) Install the clutch pedal pad to the clutch pedal sub-assembly.

2. INSTALL NO. 1 CLUTCH PEDAL CUSHION

- (a) Install the No. 1 clutch pedal cushion to the clutch pedal sub-assembly.

3. INSTALL CLUTCH PEDAL STOPPER

- (a) Install the clutch pedal stopper to the clutch pedal support sub-assembly.

4. INSTALL CLUTCH PEDAL SUB-ASSEMBLY

- (a) Apply MP grease to the 2 clutch pedal bushes.

Text in Illustration

	MP grease
---	-----------

- (b) Install the clutch pedal sub-assembly and 2 clutch pedal bushes to the clutch pedal support sub-assembly.
- (c) Using a pin punch (3 mm (0.118 in.)) and a hammer, align the clutch pedal lever sub-assembly hole and the clutch pedal sub-assembly hole, and insert the straight pin from above.

5. INSTALL CLUTCH PEDAL SPRING

- (a) Install the 2 bushes to the clutch pedal sub-assembly and clutch pedal support sub-assembly.
- (b) Apply MP grease to the assist rod A, assist rod B and clutch pedal spring.

Text in Illustration

	MP grease
---	-----------

(c) Install the assist rod A, assist rod B, clutch pedal spring and assist bush to the clutch pedal sub-assembly and the clutch pedal support sub-assembly.

(d) Apply MP grease to the 2 clevis pins.

Text in Illustration

	MP grease
---	-----------

(e) Install the 2 clevis pins and 2 E-rings.

HINT:

Install the clevis pin from the left side of the vehicle.

6. INSTALL CLUTCH SWITCH ASSEMBLY

(a) Install the clutch switch assembly to the clutch pedal support sub-assembly with the nut.

Torque: 8.0 N·m (82 kgf·cm, 71 in·lbf)

7. INSTALL CLUTCH START SWITCH ASSEMBLY INFO

8. INSTALL CLUTCH PEDAL SUPPORT SUB-ASSEMBLY

(a) Insert the hook on the clutch pedal support sub-assembly into the vehicle panel.

Text in Illustration

*1	Hook
----	------

(b) Install the clutch pedal support sub-assembly to the vehicle with the 4 nuts and 3 bolts.

Torque: 18 N·m (184 kgf·cm, 13ft·lbf)

(c) Install the clutch master cylinder assembly with the 2 nuts.

Torque: 18 N·m (184 kgf·cm, 13ft·lbf)

(d) Apply MP grease to the new clevis pin.

(e) Install the clutch master cylinder push rod clevis to the clutch pedal lever sub-assembly with the clevis pin and a clip.

HINT:

Install the clevis pin from the left side of the vehicle.

(f) Apply MP grease to the push rod pin.

(g) Install the brake master cylinder push rod clevis with the push rod pin and a clip.

HINT:

Install the push rod pin from the left side of the vehicle.

(h) Connect the connector and engage the wire harness clamp.

(i) Connect the 3 connectors.

9. INSTALL STEERING INTERMEDIATE SHAFT ASSEMBLY

(a) Install the steering intermediate shaft assembly to the steering column assembly.

Text in Illustration

*a	Matchmark
----	-----------

NOTICE:

Align the matchmarks on the steering intermediate shaft assembly and the steering column assembly.

(b) Install the bolt.

Torque: 35 N·m (357 kgf·cm, 26ft·lbf)

10. INSPECT AND ADJUST CLUTCH PEDAL

11. INSPECT CLUTCH SWITCH ASSEMBLY

- (a) Without depressing the clutch pedal sub-assembly, check that there is no clearance between the clutch switch shaft and the clutch pedal stopper.

Text in Illustration

Title: CLUTCH: CLUTCH UNIT: INSPECTION (2013 FR-S)		

INSPECTION

1. INSPECT CLUTCH DISC ASSEMBLY

(a) Using a vernier caliper, measure the rivet head depth.

Minimum rivet depth:

0.3 mm (0.0118 in.)

If necessary, replace the clutch disc assembly.

(b) Install the clutch disc assembly to the manual transmission assembly.

NOTICE:

Insert the clutch disc assembly in the correct direction.

(c) Using a dial indicator with a roller instrument, measure the clutch disc assembly runout.

Maximum runout:

0.8 mm (0.0315 in.)

If necessary, replace the clutch disc assembly.

2. INSPECT CLUTCH COVER ASSEMBLY

(a) Using a vernier caliper, measure the depth and width of the diaphragm spring wear.

Maximum:

A (Depth)

0.5 mm (0.0197 in.)

B (Width)

6.0 mm (0.236 in.)

If necessary, replace the clutch cover assembly.

3. INSPECT FLYWHEEL SUB-ASSEMBLY

- (a) Using a dial indicator, measure the flywheel sub-assembly runout.

Maximum runout:

0.1 mm (0.00394 in.)

If necessary, replace the flywheel sub-assembly.

4. INSPECT CLUTCH RELEASE BEARING ASSEMBLY

- (a) Check that the clutch release bearing assembly moves smoothly without abnormal resistance by turning the sliding parts of the clutch release bearing assembly (contact surfaces with the clutch cover) while applying force in the axial direction.

- (b) Inspect the clutch release bearing assembly for damage and wear.

If necessary, replace the clutch release bearing assembly.

Last Modified: 3-27-2012	6.4 A	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000PA600EX
Title: CLUTCH: CLUTCH UNIT: INSTALLATION (2013 FR-S)		

INSTALLATION

1. INSTALL CLUTCH DISC ASSEMBLY

- (a) Insert SST into the clutch disc assembly, and then insert them both into the flywheel sub-assembly.

Text in Illustration

*1	Clutch Disc Assembly
*2	Flywheel Sub-assembly

SST: 09301-00110

NOTICE:

Insert the clutch disc assembly in the correct direction.

2. INSTALL CLUTCH COVER ASSEMBLY

- (a) Align the matchmark on the clutch cover assembly with that on the flywheel sub-assembly.

Text in Illustration

*a	Matchmark
----	-----------

- (b) Following the procedures shown in the illustration, tighten the 6 bolts in order, starting with the bolt located near the knock pin at the top.

SST: 09301-00110

Torque: 16 N·m (163 kgf·cm, 12ft·lbf)

HINT:

- Following the order in the illustration, tighten the bolts evenly one at a time.
- Move SST up, down, right and left lightly after checking that the disc is in the center, and tighten the bolts.

3. INSPECT AND ADJUST CLUTCH COVER ASSEMBLY

- (a) Using a dial indicator with a roller instrument, measure the diaphragm spring tip alignment.

Maximum non-alignment:
0.5 mm (0.0197 in.)

- (b) If the alignment is not as specified, using SST, adjust the diaphragm spring tip alignment.

SST: 09333-00013

4. INSTALL RELEASE FORK SUPPORT

- (a) Install the release fork support to the manual transmission assembly.

Torque: 16 N·m (163 kgf·cm, 12ft·lbf)

5. INSTALL CLUTCH RELEASE FORK BOOT

- (a) Install the clutch release fork boot to the manual transmission assembly.

6. INSTALL RELEASE BEARING HUB CLIP

- (a) Install the 3 release bearing hub clips to the clutch release bearing assembly.
(b) Install the release bearing hub clip to the clutch release fork sub-assembly.

7. INSTALL CLUTCH RELEASE FORK SUB-ASSEMBLY

- (a) Apply release hub grease to the contact surfaces of the clutch release fork sub-assembly and clutch release bearing assembly, clutch release fork sub-assembly and clutch release cylinder push rod, and clutch release fork sub-assembly and release fork support.

Text in Illustration

	Release Hub Grease
---	--------------------

Grease:

Toyota Genuine Release Hub Grease or equivalent

- (b) Engage the 2 release bearing hub clips and install the clutch release fork sub-assembly to the clutch release bearing assembly.

8. INSTALL CLUTCH RELEASE BEARING ASSEMBLY

- (a) Apply clutch spline grease to the input shaft spline.

Text in Illustration

	Clutch Spline Grease
---	----------------------

Grease:

Toyota Genuine Clutch Spline Grease or equivalent

NOTICE:

Do not apply grease to portion A shown in the illustration.

- (b) Install the clutch release bearing assembly with the clutch release fork sub-assembly to the manual transmission assembly.

NOTICE:

After the installation, move the fork forward and backward to check that the release bearing slides smoothly.

9. INSTALL MANUAL TRANSMISSION ASSEMBLY

Last Modified: 3-27-2012	6.4 A	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000PA700EX
Title: CLUTCH: CLUTCH UNIT: REMOVAL (2013 FR-S)		

REMOVAL

1. REMOVE MANUAL TRANSMISSION ASSEMBLY

INFO

2. REMOVE CLUTCH RELEASE FORK SUB-ASSEMBLY

- (a) Remove the clutch release fork sub-assembly with the clutch release bearing assembly from the manual transmission assembly.

3. REMOVE CLUTCH RELEASE BEARING ASSEMBLY

- (a) Disengage the 2 release bearing hub clips and remove the clutch release bearing assembly from the clutch release fork sub-assembly.

4. REMOVE RELEASE BEARING HUB CLIP

- (a) Remove the 3 release bearing hub clips from the clutch release bearing assembly.

5. REMOVE CLUTCH RELEASE FORK BOOT

- (a) Remove the clutch release fork boot from the manual transmission assembly.

6. REMOVE RELEASE FORK SUPPORT

- (a) Remove the release fork support from the manual transmission assembly.

7. REMOVE CLUTCH COVER ASSEMBLY

- (a) Put the matchmarks on the clutch cover assembly and the flywheel sub-assembly.

Text in Illustration

*a	Matchmark
----	-----------

- (b) Loosen the 6 bolts one turn at a time until spring tension is released.

- (c) Remove the 6 bolts and pull off the clutch cover assembly.

NOTICE:

Do not drop the clutch disc assembly.

8. REMOVE CLUTCH DISC ASSEMBLY

- (a) Remove the clutch disc assembly.

NOTICE:

Keep the lining part of the clutch disk and the surfaces of the pressure plate and flywheel free of oil and foreign matter.

Title: DRIVE SHAFT / PROPELLER SHAFT: PROPELLER SHAFT ASSEMBLY: INSPECTION (2013 FR-S)		

INSPECTION

1. INSPECT PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY

- (a) Set the dial indicator so that the dial indicator measurement probe is centered on the propeller shaft with center bearing shaft assembly.

- (b) Lightly turn the propeller shaft with center bearing shaft assembly by hand, and measure the deflection.

Maximum runout:
0.6 mm (0.0236 in.)

NOTICE:

The dial indicator must be placed so that it is perpendicular to the propeller shaft with center bearing shaft assembly at the center of the shaft.

If the shaft runout is more than the maximum, replace the propeller shaft with center bearing shaft assembly.

2. INSPECT SPIDER BEARING

- (a) Check that the spider bearing rotates smoothly.

- (b) Check that there is no play in the spider bearing.

Text in Illustration

*1	Front spider bearing
*2	Rear spider bearing

3. INSPECT CENTER SUPPORT BEARING ASSEMBLY

(a) Turn the center support bearing assembly by hand. Check that the center support bearing assembly turns smoothly.

(b) Check that the center support bracket of the center support bearing assembly is not cracked or deformed.

(c) Check that the seals are not cracked or damaged.

HINT:

If the center support bearing assembly is damaged or worn, or does not turn smoothly, replace it.

Title: DRIVE SHAFT / PROPELLER SHAFT: PROPELLER SHAFT ASSEMBLY: INSTALLATION (2013 FR-S)		

INSTALLATION

1. INSTALL PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY

- (a) Completely remove any oil or the like and clean the contact surfaces of the propeller shaft assembly and the rear drive pinion companion flange.
- (b) Remove SST from the extension housing. (for Manual Transmission)
SST: 09325-20010
- (c) Remove SST from the extension housing. (for Automatic Transmission)
SST: 09325-40010
- (d) Insert the front propeller shaft assembly into the extension housing.

NOTICE:

Be careful not to damage the oil seal.

- (e) Install the 2 center support bearing washers and the center support bearing.

- (f) Install the 2 bolts and the center support bearing bracket.

Torque: 52 N·m (530 kgf·cm, 38ft·lbf)

- (g) Align the matchmarks on the differential companion flange and the flexible coupling and connect the propeller shaft.

Text in Illustration

*a	Matchmark
----	-----------

- (h) Install the rear propeller shaft assembly with the 4 new bolts, 4 washers and 4 new nuts.

NOTICE:

Hold the nut and tighten the bolt.

Torque: 74 N·m (755 kgf·cm, 55ft·lbf)

2. INSTALL CENTER EXHAUST PIPE ASSEMBLY

INFO

Title: DRIVE SHAFT / PROPELLER SHAFT: REAR DRIVE SHAFT ASSEMBLY: DISASSEMBLY (2013 FR-S)		

DISASSEMBLY

HINT:

- Use the same procedure for both the RH and LH sides.
- The procedure described below is for the LH side.

1. REMOVE REAR NO. 2 DRIVE SHAFT INBOARD JOINT BOOT CLAMP

- (a) Using a flat tip screwdriver or needle-nose pliers, loosen the boot band on the large end of rear No.2 drive shaft inboard joint boot clamp.

NOTICE:

Do not damage the rear drive shaft outboard joint boot.

2. REMOVE REAR DRIVE SHAFT INBOARD JOINT BOOT CLAMP

HINT:

Remove the rear drive shaft inboard joint boot clamp on the small end of rear No.2 drive shaft inboard joint boot clamp in the same manner.

3. REMOVE REAR NO. 2 DRIVE SHAFT OUTBOARD JOINT BOOT CLAMP

HINT:

Remove the rear No. 2 drive shaft outboard joint boot clamp on the small end of rear drive shaft inboard joint boot No.2 clamp in the same manner.

4. REMOVE REAR DRIVE SHAFT OUTBOARD JOINT BOOT CLAMP

HINT:

Remove the rear drive shaft outboard joint boot clamp on the small end of rear drive shaft inboard joint boot No.2 clamp in the same manner.

5. REMOVE CIRCLIP B

- (a) Using screwdriver, remove the round circlip B at the neck of the EDJ outer race.

6. REMOVE EDJ OUTER RACE

- (a) Take out the EDJ outer race from the shaft assembly.
- (b) Wipe off the grease and take out the balls.

Text in Illustration

*1	EDJ outer race
*2	Grease
*3	Balls (8 pieces)

NOTICE:

The grease is a special grease (grease for constant velocity joints). Do not mix it with other greases.

HINT:

Disassemble exercising care not to lose the balls (8 pieces).

- (c) To remove the EDJ cage from the EDJ inner race, turn the EDJ cage by a half pitch to the track groove of the EDJ inner race and shift the EDJ cage.

7. REMOVE EDJ INNER RACE

- (a) Using pliers, remove the snap ring fixing the EDJ inner race to the shaft.
- (b) Remove the EDJ inner race.

8. REMOVE EDJ BOOT

- (a) Disconnect the EDJ cage from the shaft and remove the EDJ boot.

NOTICE:

Wrap the shaft splines with vinyl tape to protect the boot from scratches.

9. REMOVE EBJ BOOT

- (a) Remove the EDJ boot or EBJ boot in the same procedure as for the EDJ boot.

HINT:

Further disassembly of the drive shaft is impossible because the DOJ and EBJ cannot be disassembled.

Title: DRIVE SHAFT / PROPELLER SHAFT: REAR DRIVE SHAFT ASSEMBLY: INSPECTION (2013 FR-S)		

INSPECTION

1. INSPECT DRIVE SHAFT

- (a) Check that there is no excessive play in the outboard joint.
- (b) Check that the inboard joint slides smoothly in the thrust direction.
- (c) Check that there is no excessive play in the radial directions of the inboard joint.
- (d) Check the boots for damage.

Last Modified: 3-27-2012	6.4 A	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000O46027X
Title: DRIVE SHAFT / PROPELLER SHAFT: REAR DRIVE SHAFT ASSEMBLY: INSTALLATION (2013 FR-S)		

INSTALLATION

1. INSTALL REAR DRIVE SHAFT ASSEMBLY LH

- (a) Align the rear axle carrier splines and rear drive shaft assembly splines, and install the rear drive shaft assembly.

2. INSTALL REAR AXLE SHAFT NUT LH INFO

3. INSTALL REAR DRIVE SHAFT ASSEMBLY RH

HINT:

Use the same procedure described for the LH side.

4. INSTALL REAR AXLE SHAFT NUT RH

HINT:

Use the same procedure described for the LH side.

5. INSTALL REAR DIFFERENTIAL CARRIER ASSEMBLY

INFO

Last Modified: 3-27-2012	6.4 A	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM0000021T800VX
Title: DRIVE SHAFT / PROPELLER SHAFT: REAR DRIVE SHAFT ASSEMBLY: REASSEMBLY (2013 FR-S)		

REASSEMBLY

HINT:

- Use the same procedure for both the RH and LH sides.
- The procedure described below is for the LH side.

1. INSTALL EBJ BOOT

- (a) Wrap the shaft splines with vinyl tape.

NOTICE:

Wrap the shaft splines with vinyl tape to protect the boot from scratches.

- (b) Install the EDJ boot in the specified position, and fill of the specified grease.

Standard grease capacity:
50 to 60g (1.76 to 2.12 oz.)

2. INSTALL EDJ BOOT

- (a) Place the EDJ boot at the center of the shaft.

- (b) Insert the EDJ cage onto the shaft.

Text in Illustration

*1	EDJ cage
*a	Cutout portion

HINT:

Insert the EDJ cage with the cutout portion facing the shaft end, since the EDJ cage has an orientation.

3. INSTALL EDJ INNER RACE

- (a) Install the EDJ inner race on the shaft and fix the rear drive the shaft snap ring in place using pliers.

HINT:

Confirm that the rear drive the shaft snap ring is completely fitted into the shaft groove.

4. INSTALL EDJ CAGE

- (a) Install the EDJ cage to EDJ inner race fixed upon the

shaft.

Text in Illustration

*1	EDJ cage
*2	EDJ inner race

HINT:

Fit the cage with the protruding section aligned with the track on the EDJ inner race, and turn by a half pitch.

(b) Fill of the specified grease into the inner side of the EDJ outer race.

Standard grease capacity:

80 to 90 g (2.82 to 3.17 oz)

(c) Apply a thin coat of the specified grease to the cage pocket and 8 ball bearings.

(d) Insert the 8 ball bearings into the cage pocket.

(e) Align the outer race track and ball positions, and place the shaft, EDJ inner race, cage and ball bearings in the original positions, and then fix the outer race in place.

Text in Illustration

*1	Outer race
*2	Grease
*3	Balls (8 pieces)

(f) Install the circlip B in the groove on the EDJ outer race.

HINT:

- Assure that the balls, cage and EDJ inner race are completely fitted in the outer race of EDJ.
- Use care not to place the matched position of rear drive shaft snap ring in the ball groove of outer race.
- Pull the shaft lightly and assure that the circlip is completely fitted in the groove.

(g) NKG814 apply an even coat of the specified grease to the entire inner surface of the boot. Also apply grease to the shaft.

Standard grease capacity:

20 to 30 g (0.71 to 1.06 oz)

(h) Install the EDJ boot taking care not to twist it.

HINT:

- The inside of the large end of EDJ boot and the boot groove shall be cleaned so as to be free from

- grease and other substances.
- When installing the EDJ boot, position the outer race of EDJ at center of the stroke.

5. INSTALL REAR NO. 2 DRIVE SHAFT OUTBOARD JOINT BOOT CLAMP

(a) Apply NKG814 grease to the interior surface of the new rear No. 2 drive shaft outboard joint boot clamp.

(b) Mount the rear No. 2 drive shaft outboard joint boot clamp to the EDJ boot, and temporarily bend the lever.

CAUTION:

Make sure that protective gloves are worn during work in order to prevent injury to hands, etc.

NOTICE:

- When temporarily bending the lever, make sure that the band and lever are not twisted.
- In order to prevent breakage of the rear No. 2 drive shaft outboard joint boot clamp, do not repeatedly bend the lever.

(c) While pushing the joint towards the work surface, press down using one hand, and fold the lever while turning the drive shaft forward.

Text in Illustration

*a	Weight
*b	Ground

NOTICE:

- Do not damage the deflector.
- Do not raise the joint off the work surface.

(d) Using a plastic hammer, tap the buckle to affix.

NOTICE:

- Do not hit the buckle with the plastic hammer excessively hard

- Install the clamp so that the lever does not rise.
- Make sure that the gap between the two buckles is parallel.

6. INSTALL REAR DRIVE SHAFT OUTBOARD JOINT BOOT CLAMP

- (a) Install a new rear drive shaft outboard joint boot clamp to the EDJ boot and temporarily bend the lever.

CAUTION:

Make sure that protective gloves are worn during work in order to prevent injury to hands, etc.

NOTICE:

- When temporarily bending the lever, make sure that the band and lever are not twisted.
- In order to prevent breakage of the rear drive shaft outboard joint boot clamp, do not repeatedly bend the lever.

- (b) Use water pump pliers to tighten the rear drive shaft outboard joint boot clamp, and temporarily fasten.

Text in Illustration

*a	The end is near the center of the lever.
----	--

(c) Use a plastic hammer to tap the buckle to affix.

NOTICE:

- Do not hit the buckle with the plastic hammer excessively hard.
- Affix the lever so that it does not rise.
- Make sure that the gap between the two buckles is parallel.

7. INSTALL REAR NO. 2 DRIVE SHAFT INBOARD JOINT BOOT CLAMP

HINT:

Work on the rear No. 2 drive shaft inboard joint boot clamp in the same way as the rear No. 2 drive shaft outboard joint boot clamp.

8. INSTALL REAR DRIVE SHAFT INBOARD JOINT BOOT CLAMP

HINT:

Work on the rear drive shaft inboard joint boot clamp in the same way as the rear drive shaft outboard joint boot clamp.

Model Year: 2013	Model: FR-S	Doc ID: RM000000O4801WX
Title: DRIVE SHAFT / PROPELLER SHAFT: REAR DRIVE SHAFT ASSEMBLY: REMOVAL (2013 FR-S)		

REMOVAL

1. REMOVE REAR DIFFERENTIAL CARRIER ASSEMBLY

INFO

2. REMOVE REAR AXLE SHAFT NUT LH INFO

3. REMOVE REAR DRIVE SHAFT ASSEMBLY LH

- (a) Using a plastic hammer, separate the rear drive shaft assembly LH from the rear axle carrier. If it is difficult to separate, tap the end of the rear drive shaft assembly LH using a brass bar and a hammer.

- (b) Remove the rear drive shaft assembly LH.

NOTICE:

- Be careful not to damage the joint boot or speed sensor.
- Do not push out the rear axle carrier excessively.

4. REMOVE REAR AXLE SHAFT NUT RH

HINT:

Use the same procedure described for the LH side.

5. REMOVE REAR DRIVE SHAFT ASSEMBLY RH

HINT:

Use the same procedure described for the LH side.

Title: TL70 MANUAL TRANSMISSION / TRANSAXLE: BACK-UP LIGHT SWITCH: INSPECTION (2013 FR-S)		

INSPECTION

1. INSPECT BACK-UP LIGHT SWITCH ASSEMBLY

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
1 - 2	Pushed	Below 1 Ω
1 - 2	Released	10 k Ω or higher

Text in Illustration

*a	Component without harness connected (Back-Up Light Switch Assembly)
----	--

If the result is not as specified, replace the back-up light switch assembly.

Title: TL70 MANUAL TRANSMISSION / TRANSAXLE: BACK-UP LIGHT SWITCH: INSTALLATION (2013 FR-S)		

INSTALLATION

1. INSTALL BACK-UP LIGHT SWITCH ASSEMBLY

- (a) Using a 19 mm union nut wrench, install the back-up light switch assembly with a new gasket to the manual transmission assembly.

Torque: 32 N·m (329 kgf·cm, 24ft·lbf)

NOTICE:

Use the formula to calculate special torque values for situations where a union nut wrench is combined with a torque wrench [INFO](#) .

- (b) In the order indicated in the illustration, engage the 3 clamps in place, and connect the back-up light switch assembly wire and neutral position switch assembly wire.

HINT:

Install the wire harness so that there is slack on the connector side.

2. INSTALL MANUAL TRANSMISSION ASSEMBLY

[INFO](#)

Title: TL70 MANUAL TRANSMISSION / TRANSAXLE: COUNTER GEAR: DISASSEMBLY (2013 FR-S)		

DISASSEMBLY

1. INSPECT THRUST CLEARANCE

- (a) Using a feeler gauge, measure the thrust clearance of the counter shaft 3rd gear and counter shaft 4th gear.

Text in Illustration

*a	Counter shaft 4th gear thrust clearance
*b	Counter shaft 3rd gear thrust clearance

Standard Clearance

GEAR	STANDARD CLEARANCE MM (IN.)	MAXIMUM CLEARANCE MM (IN.)
Counter shaft 3rd gear	0.10 to 0.35 (0.00393 to 0.0138)	0.35 (0.0138)
Counter shaft 4th gear	0.10 to 0.35 (0.00393 to 0.0138)	0.35 (0.0138)

HINT:

If the clearance exceeds the maximum, adjust it with the 4th inner race thrust washer.

2. INSPECT RADIAL CLEARANCE

- (a) Using a feeler gauge, measure the radial clearance of the counter shaft 3rd gear and counter shaft 4th gear.

Text in Illustration

*a	Counter shaft 4th gear radial clearance
*b	Counter shaft 3rd gear radial clearance

Standard Clearance

GEAR	STANDARD CLEARANCE MM (IN.)	MAXIMUM CLEARANCE MM (IN.)
Counter shaft 3rd gear	0.015 to 0.068 (0.000590 to 0.00268)	0.068 (0.00268)
Counter shaft 4th gear	0.065 to 0.115	

4th gear	(0.002559 to 0.00453)	0.115 (0.00453)
----------	-----------------------	-----------------

HINT:

If the clearance exceeds the maximum, replace the corresponding gear and needle roller bearing or 4th gear bearing inner race all together with a new ones.

3. REMOVE FRONT COUNTER GEAR BEARING

(a) Using a snap ring expander, remove the shaft snap ring.

(b) Using SST and a press, remove the front counter gear bearing.

SST: 09950-00020

SST: 09950-60010

09951-00230

SST: 09950-70010

4. REMOVE COUNTER DRIVE GEAR

(a) Using a snap ring expander, remove the shaft snap ring.

(b) Using SST and a press, remove the counter drive gear.

SST: 09950-00020

SST: 09950-60010

09951-00230

SST: 09950-70010
09951-07100

5. REMOVE COUNTER SHAFT 4TH GEAR

- (a) Using a snap ring expander, remove the shaft snap ring, and then remove the 4th washer retaining ring and 4th inner race thrust washer.

- (b) Using a screwdriver, pry the 4th gear bearing inner race and turn it counterclockwise along the gear, and remove the 4th gear bearing inner race.

- (c) Remove the counter shaft 4th gear and No. 1 synchronizer ring.

6. REMOVE COUNTER SHAFT 3RD GEAR

- (a) Using SST and a press, remove the No. 2 transmission clutch hub, counter shaft 3rd gear, No. 3 synchronizer ring set and needle roller bearing.

SST: 09950-00020

7. REMOVE NO. 2 TRANSMISSION HUB SLEEVE

- (a) Remove the No. 2 transmission hub sleeve, and then remove the 3 No. 1 synchronesh shifting keys, 3 No. 1 synchronesh shifting key springs and 3 balls from the transmission clutch hub.

NOTICE:

- Use a cloth to prevent the No. 1 synchronesh shifting keys, No. 1 synchronesh shifting key springs and balls from popping out.
- Do not deform the No. 1 synchronesh shifting key spring.

HINT:

During this operation, keep the No. 2 transmission clutch hub and No. 1 synchronesh shifting key intact.

Last Modified: 3-27-2012	6.4 G	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM00000590U000X
Title: TL70 MANUAL TRANSMISSION / TRANSAXLE: COUNTER GEAR: INSPECTION (2013 FR-S)		

INSPECTION

1. INSPECT NO. 2 TRANSMISSION HUB SLEEVE

- (a) Check that the spline gear edges of the No. 2 transmission hub sleeve are not worn down.

HINT:

If it shows any sign of wear, replace the No. 2 transmission hub sleeve with a new one.

- (b) Install the No. 2 transmission hub sleeve to the No. 2 transmission clutch hub, and then check that it slides smoothly.

HINT:

If it does not slide smoothly, replace the No. 2 transmission hub sleeve and No. 2 transmission clutch hub with a new one.

2. INSPECT NO. 2 TRANSMISSION HUB SLEEVE CLEARANCE

- (a) Using a vernier caliper, measure the claw width of the No. 2 gear shift fork.

Standard width:

7.9 to 8.0 mm (0.311 to 0.315 in.)

Minimum width:

7.9 mm (0.311 in.)

HINT:

If the width is less than the minimum, replace the No. 2 gear shift fork with a new one.

- (b) Using a vernier caliper, measure the groove of the No. 2 transmission hub sleeve, and then calculate the clearance with the No. 2 gear shift fork.

Standard clearance:

0.15 to 0.35 mm (0.00590 to 0.0138 in.)

Maximum clearance:

0.35 mm (0.0138 in.)

HINT:

If the clearance exceeds the maximum, replace both the No. 2 gear shift fork and No. 2 transmission hub sleeve with a new ones.

3. INSPECT NO. 1 SYNCHRONIZER RING

- (a) Apply manual transmission gear oil to the taper cone of the counter shaft 4th gear, and then hold the No. 1 synchronizer ring in position with your hand to measure the clearance between the No. 1 synchronizer ring and counter shaft 4th gear by using a feeler gauge.

Standard clearance:

0.8 to 1.6 mm (0.0314 to 0.0629 in.)

Maximum clearance:

1.6 mm (0.0629 in.)

NOTICE:

Check the entire circumference of the gear.

HINT:

If the clearance exceeds the maximum, replace the No. 1 synchronizer ring with a new one.

- (b) Apply manual transmission gear oil to the taper cone of the counter shaft 4th gear, and then hold the No. 1 synchronizer ring in position with your hand to check that it does not slide in the circumferential direction.

HINT:

If the ring slides, replace the No. 1 synchronizer ring with a new one.

4. INSPECT NO. 3 SYNCHRONIZER RING SET

- (a) Apply manual transmission gear oil to the taper cone of the counter shaft 3rd gear and No. 3 synchronizer ring set, and then hold the No. 3 synchronizer ring set in position with your hand to measure the clearance between the No. 3 synchronizer ring set and the counter shaft 3rd gear by using a feeler gauge.

Text in Illustration

*a	Inner	*b	Middle
----	-------	----	--------

*c	Outer	-	-
----	-------	---	---

Standard Clearance:

LOCATION	STANDARD CLEARANCE MM (IN.)
Inner	0.4 to 1.2 (0.0157 to 0.0472)
Middle	0.3 to 1.3 (0.0118 to 0.0512)
Outer	0.8 to 1.8 (0.0315 to 0.0709)

NOTICE:

Check the entire circumference of the gear.

HINT:

If the result is not as specified, replace the No. 3 synchronizer ring set with a new one.

(b) Apply manual transmission gear oil to the taper cone of the counter shaft 3rd gear, and then hold the No. 3 synchronizer ring set in position with your hand to check that it does not slide in the circumferential direction.

HINT:

If the No. 3 synchronizer ring set slides, replace the No. 3 synchronizer ring set with a new one.

5. INSPECT COUNTER SHAFT

(a) Using a micrometer, measure the outer diameter of each location.

Standard Outer Diameter:

PART	STANDARD OUTER DIAMETER MM (IN.)	MINIMUM OUTER DIAMETER MM (IN.)
A	39.284 to 39.300 (1.54661 to 1.54721)	39.284 (1.54661)
B	37.984 to 38.000 (1.49543 to 1.49606)	37.984 (1.49543)
C	24.987 to 25.000 (0.98374 to 0.98425)	24.987 (0.98374)

HINT:

If the diameter is less than the minimum, replace the counter shaft with a new one.

(b) Using V-block and a dial gauge, measure the runout of

each location as shown in the illustration.

Standard runout:

0.03 mm (0.00118 in.) or less

HINT:

If the runout exceeds the standard, replace the counter shaft with a new one.

6. INSPECT COUNTER SHAFT 3RD GEAR

(a) Using a cylinder gauge, measure the inside diameter of the counter shaft 3rd gear.

Standard inside diameter:

43.015 to 43.040 mm (1.69350 to 1.69448 in.)

Maximum inside diameter:

43.040 mm (1.69448 in.)

HINT:

If the inside diameter exceeds the maximum, replace the counter shaft 3rd gear with a new one.

7. INSPECT COUNTER SHAFT 4TH GEAR

(a) Using a cylinder gauge, measure the inside diameter of the counter shaft 4th gear.

Standard inside diameter:

46.315 to 46.340 mm (1.82425 to 1.82441 in.)

Maximum inside diameter:

46.340 mm (1.82441 in.)

HINT:

If the inside diameter exceeds the maximum, replace the counter shaft 4th gear with a new one.

8. REMOVE 4TH GEAR BEARING INNER RACE

(a) Using a micrometer, measure the outside diameter of the 4th gear bearing inner race.

Standard outside diameter:

46.225 to 46.250 mm (1.81988 to 1.82087 in.)

Minimum outside diameter:

46.225 mm (1.81988 in.)

NOTICE:

Do not measure the oil groove.

HINT:

If the outside diameter is less than the minimum, replace the 4th gear bearing inner race with a new one.

Last Modified: 3-27-2012	6.4 A	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000002RI3006X
Title: TL70 MANUAL TRANSMISSION / TRANSAXLE: COUNTER GEAR: REASSEMBLY (2013 FR-S)		

REASSEMBLY

1. INSTALL COUNTER SHAFT 3RD GEAR

- (a) Apply manual transmission gear oil to the mounting point of the counter shaft, needle roller bearing and inside surface and taper cone of the counter shaft 3rd gear.

- (b) Install the needle roller bearing and counter shaft 3rd gear.

2. INSTALL NO. 2 TRANSMISSION HUB SLEEVE

- (a) Apply manual transmission gear oil to the moving parts of the No. 2 transmission clutch hub.

Text in Illustration

*1	No. 2 Transmission Clutch Hub
*2	No. 2 Transmission Hub Sleeve
*3	Ball
*4	No. 1 Synchromesh Shifting Key
*5	No. 1 Synchromesh Shifting Key Spring
	Front Side

(b) As shown in the illustration, install the No. 2 transmission hub sleeve to the No. 2 transmission clutch hub. Install the 3 No. 1 synchronesh shifting keys and 3 No. 1 synchronesh shifting key springs all together, and then install the balls.

HINT:

- Install the shifting key ball while holding down the synchronesh shifting key spring. Install the ball while holding down the No. 1 synchronesh shifting key spring.
- After the installation, let the No. 1 synchronesh shifting key spring settle down.

3. INSTALL NO. 2 TRANSMISSION CLUTCH HUB

(a) Install the No. 3 synchronizer ring set to the counter shaft 3rd gear.

HINT:

- Align the middle ring claw with the groove in the counter shaft 3rd gear.
- Align the inner ring claw with the groove in the outer ring.

(b) Using SST and a press, install the No. 2 transmission clutch hub.

SST: 09316-60011

09316-00011

NOTICE:

Make sure that the No. 3 synchronizer ring set is positioned properly.

HINT:

- Align the No. 2 transmission clutch hub and the No. 3 synchronizer ring set so that they can fit together.
- Make sure to press fit the No. 2 transmission clutch hub until it touches the counter shaft.
- After the press fit, make sure that the No. 3 synchronizer ring set moves toward the thrust direction.

4. INSTALL COUNTER SHAFT 4TH GEAR

(a) Install the No. 1 synchronizer ring to the No. 2 transmission clutch hub.

HINT:

Align the No. 2 transmission clutch hub and the No. 1 synchronizer ring so that they can fit together.

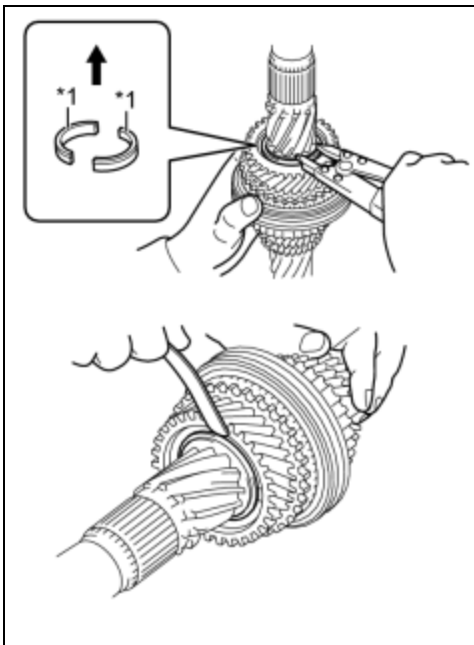

- (b) Apply manual transmission gear oil to the 4th gear bearing inner race and inside surface and taper cone of the counter shaft 4th gear.
- (c) Install the counter shaft 4th gear and 4th gear bearing inner race.

HINT:

To install it, rotate the 4th gear bearing inner race along the gear in a clockwise direction.

5. INSTALL 4TH INNER RACE THRUST WASHER

- (a) Select a 4th inner race thrust washer that is suitable to retain the specific thrust clearance between the 4th gear bearing inner race and 4th inner race thrust washer.

Text in Illustration

*1	4th Inner Race Thrust Washer
	Front Side

Standard clearance:
0 to 0.1 mm (0 to 0.00394 in.)

HINT:

Select the thickest 4th inner race thrust washer possible for installation.

4th Inner Race Thrust Washer Thickness

PART NO.	THICKNESS MM (IN.)	MARK
SU003-03500	3.75 (0.14763)	A
SU003-03501	3.80 (0.14960)	B
SU003-03502	3.85 (0.15157)	C
SU003-03503	3.90 (0.15354)	D
SU003-03504	3.95 (0.15551)	E
SU003-03505	4.00 (0.15748)	F
SU003-03506	4.05 (0.15944)	G
SU003-03507	4.10 (0.16141)	H

(b) Using a snap ring expander, as shown in the illustration, install a new 4th inner race thrust washer, new 4th washer retaining ring and new shaft snap ring to the counter shaft.

6. INSTALL COUNTER DRIVE GEAR

(a) Using SST and a press, install the counter drive gear.

SST: 09309-36010

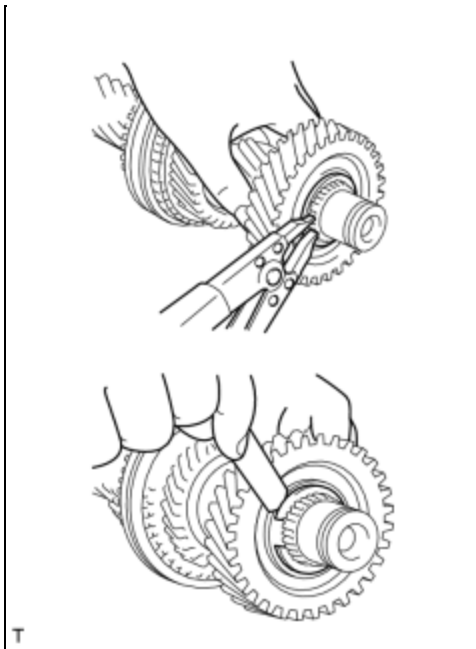

7. INSTALL SHAFT SNAP RING (for Counter Drive Gear)

(a) Select a shaft snap ring that is suitable to retain the specific thrust clearance between the counter drive gear and shaft snap ring.

Standard clearance:
0 to 0.1 mm (0 to 0.00394 in.)

HINT:

Select the thickest shaft snap ring possible for installation.

Shaft Snap Ring Thickness

PART NO.	THICKNESS: MM (IN.)	MARK
SU003-03581	1.80 (0.07086)	A
SU003-03582	1.85 (0.07283)	B
SU003-03583	1.90 (0.07480)	C
SU003-03584	1.95 (0.07677)	D
SU003-03585	2.00 (0.07874)	E
SU003-03586	2.05 (0.08070)	F

(b) Using a snap ring expander, install a new shaft snap ring to the counter shaft.

8. INSTALL FRONT COUNTER GEAR BEARING

(a) Using SST and a press, as shown in the illustration, install a new front counter gear bearing while holding it with your hand.

Text in Illustration

*1	Front Counter Gear Bearing
	Front Side

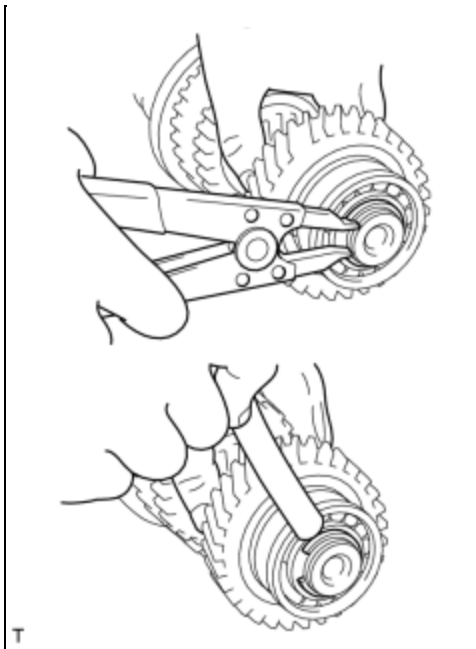

SST: 09330-50010

NOTICE:

Attach SST to the inner race of the front counter gear bearing, and then install the front counter gear bearing.

9. INSTALL SHAFT SNAP RING (for Front Counter Gear Bearing)

(a) Select a shaft snap ring that is suitable to retain the specific thrust clearance between the counter gear front

bearing and shaft snap ring.

Standard clearance:

0 to 0.1 mm (0 to 0.00394 in.)

HINT:

Select the thickest shaft snap ring possible for installation.

Shaft Snap Ring Thickness

PART NO.	THICKNESS: MM (IN.)	MARK
SU003-03560	2.05 (0.08070)	1
SU003-03558	2.10 (0.08267)	2
SU003-03561	2.15 (0.08464)	3
SU003-03559	2.20 (0.08661)	4
SU003-03562	2.25 (0.08858)	5
SU003-03563	2.30 (0.09055)	6

(b) Using a snap ring expander, install a new shaft snap ring to the counter shaft.

Title: TL70 MANUAL TRANSMISSION / TRANSAXLE: INPUT SHAFT: DISASSEMBLY (2013 FR-S)		

DISASSEMBLY

1. INSPECT NEEDLE ROLLER BEARING

- (a) Install the input shaft to the output shaft, and then check the needle roller bearing.

Standard:

Abnormal fitting, interfering, abnormal noise, or looseness should not be found.

HINT:

If any abnormality is found, replace the needle roller bearing with a new one.

2. INSPECT RADIAL CLEARANCE

- (a) Install the input shaft to the output shaft, and then using a dial indicator, measure the radial clearance.

Standard clearance:

0.029 to 0.072 mm (0.00114 to 0.00283 in.)

Maximum clearance:

0.072 mm (0.00283 in.)

HINT:

If the clearance exceeds the maximum, replace the needle roller bearing and output shaft with a new ones.

3. INSPECT FRONT INPUT SHAFT BEARING

- (a) Check the front input shaft bearing.

Standard:

Abnormal fitting, interfering, abnormal noise, or looseness should not be found.

HINT:

If any abnormality is found, replace the front input shaft bearing with a new one.

4. REMOVE NEEDLE ROLLER BEARING

(a) Remove the needle roller bearing from the input shaft.

5. REMOVE NO. 2 SYNCHRONIZER RING

(a) Remove the No. 2 synchronizer ring from the input shaft.

6. REMOVE FRONT INPUT SHAFT BEARING

(a) Using 2 screwdrivers and a hammer, remove the shaft snap ring from the input shaft.

NOTICE:

Use a cloth to prevent the shaft snap ring from popping out.

(b) Using SST and a press, remove the front input shaft bearing from the input shaft.

SST: 09950-00020

Title: TL70 MANUAL TRANSMISSION / TRANSAXLE: INPUT SHAFT: INSPECTION (2013 FR-S)		

INSPECTION

1. INSPECT NO. 2 SYNCHRONIZER RING

- (a) Apply manual transmission gear oil to the taper cone of the 3rd gear, and hold the No. 2 synchronizer ring in position with your hand to measure the clearance between the No. 2 synchronizer ring and 3rd gear by using a feeler gauge.

Standard clearance:

0.8 to 1.6 mm (0.0315 to 0.0630 in.)

Minimum clearance:

0.8 mm (0.0315 in.)

NOTICE:

Check the entire circumference of the gear.

HINT:

If the clearance is less than the minimum, replace the No. 2 synchronizer ring with a new one.

- (b) Apply manual transmission gear oil to the taper cone of the 3rd gear, and then hold the No. 2 synchronizer ring in position with your hand to check that it does not slide in the circumferential direction.

HINT:

If the No. 2 synchronizer ring slides, replace the No. 2 synchronizer ring with a new one.

Title: TL70 MANUAL TRANSMISSION / TRANSAXLE: MANUAL TRANSAXLE UNIT: DISASSEMBLY (2013 FR-S)		

DISASSEMBLY

1. REMOVE MANUAL TRANSMISSION FILLER PLUG

(a) Remove the manual transmission filler plug and gasket.

2. REMOVE MANUAL TRANSMISSION DRAIN PLUG

(a) Remove the manual transmission drain plug and gasket.

3. REMOVE RELEASE FORK SUPPORT

(a) Using a 19 mm deep socket wrench, remove the release fork support from the clutch housing.

4. REMOVE BACK-UP LIGHT SWITCH ASSEMBLY

(a) Disengage the 3 clamps.

(b) Using a 19 mm union nut wrench, remove the back-up light switch assembly and gasket.

5. REMOVE NEUTRAL POSITION SWITCH ASSEMBLY

(a) Disengage the clamp.

(b) Using a 19 mm union nut wrench, remove the neutral position switch assembly and gasket.

6. REMOVE WIRE HARNESS CLAMP BRACKET

(a) Remove the bolt and wire harness clamp bracket.

7. REMOVE LOCK BALL PIN

(a) Using a 10 mm hexagon socket wrench, remove the head straight screw plug, compression spring and lock ball pin.

8. REMOVE HOLDER

(a) Using a 27 mm deep socket wrench, remove the holder, compression spring and lock ball pin.

9. REMOVE TRANSMISSION EXTENSION HOUSING SUB-ASSEMBLY

(a) Remove the bolt.

(b) Remove the 8 bolts and clamp.

Text in Illustration

*1	Clamp
----	-------

(c) Using a plastic hammer, remove the transmission extension housing sub-assembly.

NOTICE:

- Be sure to remove the transmission extension housing sub-assembly while the transmission is in neutral.
- Do not damage the transmission extension housing sub-assembly.

10. REMOVE EXTENSION HOUSING REAR OIL SEAL

(a) Using a screwdriver with its tip wrapped with protective tape, remove the extension housing rear oil seal.

Text in Illustration

*1	Protective Tape
----	-----------------

NOTICE:

- Do not damage the transmission extension housing sub-assembly.

HINT:

Remove the transmission extension housing sub-assembly while protecting it with a piece of cloth.

11. REMOVE EXTENSION HOUSING DUST DEFLECTOR

(a) Using a plastic hammer, remove the extension housing dust deflector.

12. REMOVE TRANSMISSION EXTENSION HOUSING OIL SEAL

- (a) Using a screwdriver with its tip wrapped with protective tape, remove the transmission extension housing oil seal.

Text in Illustration

*1

Protective Tape

NOTICE:

Do not damage the transmission extension housing sub-assembly.

HINT:

Remove the transmission extension housing sub-assembly while protecting it with a piece of cloth.

13. REMOVE NO. 2 EXTENSION HOUSING OIL RECEIVER PIPE

- (a) Remove the No. 2 extension housing oil receiver pipe.

14. REMOVE NO. 1 EXTENSION HOUSING OIL RECEIVER PIPE

- (a) Remove the bolt, No. 1 extension housing oil receiver pipe and stopper plate.

- (b) Remove the straight pin.

15. REMOVE SHIFT SHAFT

(a) Slide and remove the shift shaft and No. 1 shift inter lock block.

16. REMOVE NO. 1 SHIFT INTER LOCK BLOCK

(a) Remove the No. 1 shift inter lock block from the shift shaft.

17. REMOVE FRONT SHIFT INNER LEVER

(a) Remove the bolt and front shift inner lever from the shift shaft.

18. REMOVE HEAD STRAIGHT SCREW PLUG

- (a) Using a T40 "TORX" socket wrench, remove 3 head straight screw plugs.

- (b) Using a magnet hand, remove the 2 compression springs and 2 balls.

19. REMOVE SHIFT ARM

- (a) Using a screwdriver, remove the E-ring.

NOTICE:

Use a cloth to prevent the E-ring from flying off.

- (b) Remove the shift arm.

20. REMOVE NO. 3 GEAR SHIFT FORK SHAFT

- (a) Remove the No. 3 gear shift fork shaft and 5th shift head

together.

NOTICE:

- Be careful not to drop the ball from the 5th shift head.
- The ball on the transmission case may fall inside the transmission case. If that happens, take it out when the transmission case is removed.

(b) Remove the ball from the 5th shift head.

(c) Using a magnetic hand, remove the ball.

21. REMOVE 5TH SHIFT HEAD

(a) Using 2 screwdrivers and a plastic hammer, remove the shaft snap ring.

NOTICE:

Use a cloth to prevent the shaft snap ring from flying off.

(b) Remove the washer.

(c) Remove the 5th shift head, compression spring and ball.

NOTICE:

Be careful of the ball and compression spring that fall out when sliding the 5th shift head.

22. INSPECT COUNTER SHAFT 6TH GEAR THRUST CLEARANCE

- (a) Using SST and a dial indicator, measure the thrust clearance.

SST: 09350-20015

09350-06120

Standard clearance:

0.10 to 0.40 mm (0.00394 to 0.0157 in.)

Maximum clearance:

0.40 mm (0.0157 in.)

HINT:

If the clearance exceeds the maximum, replace the counter shaft 6th gear, No. 4 transmission clutch hub, 6th gear thrust washer, needle roller bearing and counter shaft with a new ones.

23. INSPECT COUNTER SHAFT 6TH GEAR RADIAL CLEARANCE

- (a) Using a dial indicator, measure the radial clearance.

Standard clearance:

0.015 to 0.068 mm (0.000590 to 0.00268 in.)

Maximum clearance:

0.068 mm (0.00268 in.)

HINT:

If the clearance exceeds the maximum, replace the counter shaft 6th gear, needle roller bearing and counter shaft with a new ones.

24. REMOVE NO. 4 TRANSMISSION CLUTCH HUB

- (a) Using 2 screwdrivers and a plastic hammer, remove the shaft snap ring.

NOTICE:

Use a cloth to prevent the shaft snap ring from flying

off.

- (b) Using SST and 3 bolts, remove the No. 4 transmission clutch hub, No.4 transmission hub sleeve, No. 4 gear shift fork and No. 2 gear shift fork shaft all together.

Text in Illustration

*a	Hold
*b	Turn

SST: 09950-30012

09951-03010

09953-03010

09956-03010

25. REMOVE NO. 4 GEAR SHIFT FORK

- (a) Using a 5 mm pin punch and hammer, remove the slotted spring pin.

- (b) Remove the No. 4 gear shift fork from the No. 2 gear shift fork shaft.

26. REMOVE NO. 4 TRANSMISSION HUB SLEEVE

- (a) Using a screwdriver, remove the hole snap ring.

- (b) Remove the No. 4 transmission hub sleeve, and then remove the 3 No. 1 synchromesh shifting keys, 3 No. 1 synchromesh shifting key springs and 3 balls from the No. 4 transmission clutch hub.

NOTICE:

- Use a cloth to prevent the No. 1 synchromesh shifting keys, No. 1 synchromesh shifting key springs and balls from popping out.
- Do not deform the No. 1 synchromesh shifting key spring.

HINT:

During this operation, keep intact the No. 4 transmission clutch hub and No. 1 synchromesh shifting key.

27. REMOVE NO. 2 SYNCHRONIZER RING

- (a) Remove the No. 2 synchronizer ring.

28. REMOVE COUNTER SHAFT 6TH GEAR

- (a) Remove the counter shaft 6th gear.

29. REMOVE NEEDLE ROLLER BEARING

- (a) Remove the needle roller bearing.

30. REMOVE 6TH GEAR THRUST WASHER

(a) Remove the 6th gear thrust washer.

(b) Remove the straight pin.

31. REMOVE NO. 2 GEAR SHIFT HEAD

(a) Using a 5 mm pin punch and hammer, remove the slotted spring pin.

NOTICE:

- Use a cloth to prevent the slotted spring pin from flying off.
- Take care in order that the slotted spring pin does not fall inside through the gear shift fork shaft hole.

(b) Remove the No. 2 gear shift head from the No. 2 gear shift fork shaft.

32. REMOVE NO. 1 GEAR SHIFT HEAD

- (a) Using a 5 mm pin punch and a hammer, remove the slotted spring pin.

NOTICE:

- Use a cloth to prevent the slotted spring pin from flying off.
- Take care in order that the slotted spring pin does not fall inside through the gear shift fork shaft hole.

- (b) Remove the No. 1 gear shift head from the No. 1 gear shift fork shaft.

33. REMOVE NO. 3 GEAR SHIFT HEAD

- (a) Using a 5 mm pin punch and a hammer, remove the slotted spring pin.

NOTICE:

- Use a cloth to prevent the slotted spring pin from flying off.
- Take care in order that the slotted spring pin does not fall inside through the gear shift fork shaft hole.

- (b) Remove the No. 3 gear shift head from the No. 3 gear shift fork shaft.

34. REMOVE REAR BEARING RETAINER

- (a) Using a T45 "TORX" socket wrench, remove the 4 bolts and rear bearing retainer.

- (b) Remove the shift arm pivot.

35. REMOVE TRANSMISSION CASE

(a) Using a snap ring expander, remove the shaft snap ring.

(b) Remove the bolt that retains the reverse idler gear shaft, and the gasket (transmission case side)

(c) Remove the 9 bolts and clamp.

Text in Illustration

*1	Clamp
----	-------

(d) Using a plastic hammer, remove the transmission case.

NOTICE:

Do not damage the transmission case.

36. REMOVE OIL RECEIVER PIPE

(a) Remove the oil receiver pipe.

37. REMOVE FRONT BEARING RETAINER

(a) Remove 7 bolts and front bearing retainer.

38. REMOVE TRANSMISSION FRONT BEARING RETAINER OIL SEAL

(a) Using a screwdriver with its tip wrapped with protective tape, remove the transmission front bearing retainer oil seal.

Text in Illustration

*1	Protective Tape
----	-----------------

NOTICE:

Do not damage the front bearing retainer.

HINT:

Remove the front bearing retainer while protecting it with a piece of cloth.

39. REMOVE COUNTER SHAFT

(a) Using a snap ring expander, remove the 2 shaft snap rings.

HINT:

Remove the 2 shaft snap rings from the input shaft and counter shaft.

(b) Remove the bolt and gasket to free the reverse idler gear and reverse idler gear shaft. (Clutch housing side)

(c) Using a hammer handle edge, tap to remove the input shaft, output shaft, counter shaft, reverse idler gear, reverse idler gear shaft, No. 1 gear shift fork shaft, No. 2 gear shift fork shaft and No. 3 gear shift fork shaft all together from the clutch housing side.

40. REMOVE NO. 2 GEAR SHIFT FORK SHAFT

(a) Using 2 screwdrivers and a plastic hammer, remove the shaft snap ring.

NOTICE:

Use a cloth to prevent the shaft snap ring from flying off.

(b) Remove the bolt and No. 2 gear shift fork shaft.

41. REMOVE NO. 1 GEAR SHIFT FORK SHAFT

(a) Using 2 screwdrivers and a plastic hammer, remove the shaft snap ring.

NOTICE:

Use a cloth to prevent the shaft snap ring from flying off.

(b) Remove the No. 1 gear shift fork shaft and No.1 gear shift fork together.

(c) Using 2 screwdrivers and a plastic hammer, remove the shaft snap ring.

NOTICE:

Use a cloth to prevent the shaft snap ring from flying off.

(d) Remove the bolt and No. 1 gear shift fork shaft.

42. REMOVE NO. 3 GEAR SHIFT FORK SHAFT

(a) Remove the bolt and No. 3 gear shift fork shaft.

43. REMOVE INPUT SHAFT

(a) Remove the input shaft from the output shaft.

44. INSPECT REVERSE IDLER GEAR RADIAL CLEARANCE

(a) Use a vice to secure the reverse idler gear, and then use a dial indicator to measure the radial clearance.

Standard clearance:

0.040 to 0.082 mm (0.00157 to 0.00323 in.)

Maximum clearance:

0.082 mm (0.00323 in.)

HINT:

If the clearance exceeds the maximum, replace the reverse idler gear and reverse idler gear shaft with a new ones.

45. REMOVE REVERSE IDLER GEAR SHAFT

- (a) Remove the reverse idler gear shaft from the reverse idler gear.

Last Modified: 3-27-2012	6.4 G	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM00000590P000X
Title: TL70 MANUAL TRANSMISSION / TRANSAXLE: MANUAL TRANSAXLE UNIT: INSPECTION (2013 FR-S)		

INSPECTION

1. INSPECT NO. 1 GEAR SHIFT HEAD

- (a) Using a vernier caliper, measure the clearance of the No. 1 gear shift head groove.

Standard clearance:

15.2 to 15.4 mm (0.59843 to 0.60630 in.)

Maximum clearance:

15.4 mm (0.60630 in.)

HINT:

If the clearance exceeds the maximum, replace the No. 1 gear shift head with a new one.

2. INSPECT NO. 2 GEAR SHIFT HEAD

- (a) Using a vernier caliper, measure the clearance of the No. 2 gear shift head groove.

Standard clearance:

15.2 to 15.4 mm (0.59843 to 0.60630 in.)

Maximum clearance:

15.4 mm (0.60630 in.)

HINT:

If the clearance exceeds the maximum, replace the No. 2 gear shift head with a new one.

3. INSPECT NO. 3 GEAR SHIFT HEAD

- (a) Using a vernier caliper, measure the clearance of the No. 3 gear shift head groove.

Standard clearance:

15.2 to 15.4 mm (0.598 to 0.606 in.)

Maximum clearance:

15.4 mm (0.606 in.)

HINT:

If the clearance exceeds the maximum, replace the No. 3 gear shift head with a new one.

4. INSPECT SHIFT SHAFT

- (a) Using a vernier caliper, measure the claw width of the shift shaft.

Standard width:

14.8 to 15.0 mm (0.583 to 0.591 in.)

Minimum width:

14.8 mm (0.583 in.)

HINT:

If the width is less than the minimum, replace the gear shift with a new one.

5. INSPECT NO. 1 SHIFT INTER LOCK BLOCK

- (a) Using a vernier caliper, measure the claw width of the No. 1 shift inter lock block.

Standard width:

14.8 to 15.0 mm (0.583 to 0.591 in.)

Minimum width:

14.8 mm (0.583 in.)

HINT:

If the width is less than the minimum, replace the No. 1 shift inter lock block.

6. INSPECT NO. 4 GEAR SHIFT FORK

- (a) Using a vernier caliper, measure the clearance of the No. 4 gear shift fork groove.

Standard clearance:

15.2 to 15.4 mm (0.598 to 0.606 in.)

Maximum clearance:

15.4 mm (0.606 in.)

HINT:

If the clearance exceeds the maximum, replace the No. 4 gear shift fork with a new one.

7. INSPECT 5TH SHIFT HEAD

- (a) Using a vernier caliper, measure the clearance of the 5th shift head groove.

Standard clearance:

15.2 to 15.4 mm (0.598 to 0.606 in.)

Maximum clearance:

15.4 mm (0.606 in.)

HINT:

If the clearance exceeds the maximum, replace the 5th shift head with a new one.

8. INSPECT NO. 2 SYNCHRONIZER RING

- (a) Apply manual transmission gear oil to the taper cone of the counter shaft 6th gear, and then hold the No. 2 synchronizer ring in position with your hand to measure the clearance between the No. 2 synchronizer ring and counter shaft 6th gear by using a feeler gauge.

Standard clearance:

0.88 to 1.52 mm (0.0346 to 0.0598 in.)

Minimum clearance:

0.88 mm (0.0346 in.)

NOTICE:

Check the entire circumference of the gear.

HINT:

If the clearance is less than the minimum, replace the No. 2 synchronizer ring and counter shaft 6th gear with a new one.

- (b) Apply manual transmission gear oil to the taper cone of the counter shaft 6th gear, and then hold the No. 2 synchronizer ring in position with your hand to check that it does not slide in the circumferential direction.

HINT:

If the No. 2 synchronizer ring slides, replace the No. 2 synchronizer ring and counter shaft 6th gear with a new one.

9. INSPECT COUNTER SHAFT 6TH GEAR

- (a) Using a cylinder gauge, measure the inside diameter of the counter shaft 6th gear.

Standard inside diameter:

34.015 to 34.040 mm (1.33917 to 1.34016 in.)

Maximum inside diameter:

34.040 mm (1.34016 in.)

HINT:

If the inside diameter exceeds the maximum, replace the counter shaft 6th gear with a new one.

10. INSPECT NO. 4 TRANSMISSION HUB SLEEVE

- (a) Check that the spline gear edges of the No. 4 transmission hub sleeve are not worn down.

HINT:

If it shows any sign of wear, replace the No. 4 transmission hub sleeve with a new one.

- (b) Install the No. 4 transmission hub sleeve to the No. 4 transmission clutch hub, and then check that it slides smoothly.

HINT:

If it does not slide smoothly, replace the No. 4 transmission hub sleeve and No. 4 transmission clutch hub with a new one.

11. INSPECT NO. 4 TRANSMISSION HUB SLEEVE CLEARANCE

- (a) Using a vernier caliper, measure the claw width of the No. 4 gear shift fork.

Standard width:

7.9 to 8.0 mm (0.311 to 0.315 in.)

Minimum width:

7.9 mm (0.311 in.)

HINT:

If the width is less than the minimum, replace the gear No. 4 shift fork with a new one.

- (b) Using a vernier caliper, measure the groove of the No. 4 transmission hub sleeve and then calculate the clearance with the No. 4 gear shift fork.

Standard clearance:

0.15 to 0.35 mm (0.00590 to 0.0138 in.)

Maximum clearance:

0.35 mm (0.0138 in.)

HINT:

If the clearance exceeds the maximum, replace both the No. 4 gear shift fork and No. 4 transmission hub sleeve with a new ones.

12. INSPECT REVERSE IDLER GEAR

(a) Using a cylinder gauge, measure the inner diameter of the reverse idler gear.

Standard inside diameter:

22.040 to 22.061mm (0.86771 to 0.86854 in.)

Maximum inside diameter:

22.061mm (0.86854 in.)

HINT:

If the inside diameter exceeds the maximum, replace the reverse idler gear with a new one.

13. INSPECT REVERSE IDLER GEAR SHAFT

(a) Using a micrometer, measure the outer diameter of the reverse idler gear shaft.

Standard outer diameter:

21.979 to 22.000 mm (0.86531 to 0.86614 in.)

Minimum outer diameter:

21.979 mm (0.86531 in.)

HINT:

If the outer diameter is less than the minimum, replace the reverse idler gear shaft with a new one.

Last Modified: 3-27-2012	6.4 A	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000002RHV007X
Title: TL70 MANUAL TRANSMISSION / TRANSAXLE: MANUAL TRANSAXLE UNIT: REASSEMBLY (2013 FR-S)		

REASSEMBLY

1. INSTALL NO. 3 GEAR SHIFT FORK SHAFT

- (a) Install the No. 3 gear shift fork shaft to the No. 3 gear shift fork with a new bolt.

Torque: 20 N·m (199 kgf·cm, 14ft·lbf)

2. INSTALL NO. 1 GEAR SHIFT FORK SHAFT

- (a) Install the No. 1 gear shift fork shaft to the No. 1 gear shift fork with a new bolt.

Torque: 20 N·m (199 kgf·cm, 14ft·lbf)

- (b) Using a brass bar and a hammer, install a new shaft snap ring.

- (c) Install the No. 1 gear shift fork shaft together with the No. 1 gear shift fork to the No. 3 gear shift fork shaft and No. 3 gear shift fork.

- (d) Using a brass bar and a hammer, install a new shaft snap ring.

3. INSTALL NO. 2 GEAR SHIFT FORK SHAFT

- (a) Install the No. 2 gear shift fork shaft to the No. 2 gear shift fork with a new bolt.

Torque: 20 N·m (199 kgf·cm, 14ft·lbf)

- (b) Using a brass bar and a hammer, install a new shaft snap ring.

4. INSTALL TRANSMISSION FRONT BEARING RETAINER OIL SEAL

- (a) Using SST and a hammer, install a new transmission front bearing retainer oil seal.

SST: 09950-60010

09951-00420

SST: 09950-70010

09951-07100

Installation depth:

11.1 to 11.9 mm (0.437 to 0.469 in.) (from the end surface of the front bearing retainer)

NOTICE:

- Do not damage the lip of the transmission front bearing retainer oil seal.
- Do not damage the front bearing retainer.

(b) Apply MP grease to the lip of the transmission front bearing retainer oil seal.

5. INSTALL REVERSE IDLER GEAR SHAFT

(a) Apply manual transmission gear oil to the reverse idler gear shaft, and then install it to the reverse idler gear.

6. INSTALL INPUT SHAFT

(a) Apply manual transmission gear oil to the needle roller bearing of the input shaft, and then install the input shaft to the output shaft.

7. INSTALL COUNTER SHAFT

(a) Install the input shaft, output shaft, counter shaft, reverse idler gear, reverse idler gear shaft, No. 1 gear shift fork shaft, No. 2 gear shift fork shaft and No. 3 gear shift fork shaft all together to the clutch housing.

(b) Using a new gasket and a new bolt, temporarily install the reverse idler gear shaft (clutch housing side).

(c) Using a snap ring expander, install 2 new shaft snap rings.

HINT:

Install the shaft snap rings to the input shaft and counter

shaft.

8. INSTALL FRONT BEARING RETAINER

(a) Apply seal packing 1281 continuously to the front bearing retainer as shown in the illustration.

Text in Illustration

	Seal Packing 1281
--	-------------------

NOTICE:

Install it within 10 minutes of the seal packing application.

(b) Apply adhesive 1344 to the 2nd and 3rd pitches from the tip of new bolt.

Text in Illustration

*1	Adhesive 1344
----	---------------

(c) Install the front bearing retainer with the 7 bolts.

Torque: 17 N·m (173 kgf·cm, 13ft·lbf)

NOTICE:

Install the front bearing retainer ensuring that the transmission front bearing retainer oil seal lip is not damaged.

9. INSTALL OIL RECEIVER PIPE

(a) Install the oil receiver pipe.

NOTICE:

Confirm that the protrusions of the oil receiver pipe are properly fitted in the grooves.

Text in Illustration

*a	Protrusion
----	------------

10. INSTALL TRANSMISSION CASE

(a) Apply seal packing 1281 continuously to the transmission case as shown in the illustration.

Text in Illustration

	Seal Packing 1281
---	-------------------

NOTICE:

Install within 10 minutes of the seal packing application.

(b) Check the location of the knock pin, and then using a plastic hammer, install the transmission case.

Text in Illustration

	<p>Do not hit hard.</p>
---	-------------------------

(c) Apply adhesive 1324 to the 2nd and 3rd pitches.

Text in Illustration

*1	Adhesive 1324
----	---------------

(d) Install the transmission case and clamp with the 9 bolts.

Text in Illustration

*1	clamp
----	-------

Torque: 29 N·m (296 kgf·cm, 21ft·lbf)

(e) Install a new reverse idler gear shaft fixing bolt and new gasket (transmission case side).

Torque: 28 N·m (286 kgf·cm, 21ft·lbf)

(f) Securely tighten the reverse idler gear shaft fixing bolt (clutch housing side).

Torque: 28 N·m (286 kgf·cm, 21ft·lbf)

(g) Using a snap ring expander, install a new shaft snap ring.

11. INSTALL REAR BEARING RETAINER

(a) Install the shift arm pivot to the rear bearing retainer.

(b) Apply adhesive 1324 to the 2nd and 3rd pitches from the tip of new bolt.

Text in Illustration

*1	Adhesive 1324
----	---------------

(c) Using a T45 "TORX" socket wrench, install the rear

bearing retainer with the 4 bolts.

Torque: 30 N·m (306 kgf·cm, 22ft·lbf)

12. INSTALL 6TH GEAR THRUST WASHER

(a) Install the straight pin to the counter shaft.

(b) Apply manual transmission gear oil to the 6th gear thrust washer.

Text in Illustration

*1	6th Gear Thrust Washer
	Front Side

(c) As shown in the illustration, install the 6th gear thrust washer to the counter shaft.

13. INSTALL NEEDLE ROLLER BEARING

- (a) Apply manual transmission gear oil to the needle roller bearing, and then install the needle roller bearing to the counter shaft.

14. INSTALL COUNTER SHAFT 6TH GEAR

- (a) Apply manual transmission gear oil to the counter shaft 6th gear, and then install the counter shaft 6th gear to the counter shaft.

15. INSTALL NO. 2 SYNCHRONIZER RING

- (a) Apply manual transmission gear oil to the No. 2 synchronizer ring, and then install the No. 2 synchronizer ring to the counter shaft.

16. INSTALL NO. 4 TRANSMISSION HUB SLEEVE

- (a) Apply manual transmission gear oil to the moving parts of the No. 4 transmission clutch hub.

Text in Illustration

*1	No. 4 Transmission Clutch Hub
*2	No. 4 Transmission Hub Sleeve
*3	Ball
*4	No. 1 Synchromesh Shifting Key
*5	No. 1 Synchromesh Shifting Key Spring
	Front Side

(b) As shown in the illustration, install the No. 4 transmission hub sleeve to the No. 4 transmission clutch hub, and install the 3 No. 1 synchromesh shifting keys and 3 No. 1 synchromesh shifting key springs all together, and then install the 3 balls.

HINT:

- Install the ball while holding down the No. 1 synchromesh shifting key spring.
- After the installation, settle the No. 1 synchromesh shifting key spring.

(c) Install a new hole snap ring.

17. INSTALL NO. 4 TRANSMISSION CLUTCH HUB

(a) Using SST and a press, install the No. 4 transmission clutch hub, No. 4 transmission hub sleeve, and No. 4 gear shift fork all together.

SST: 09632-36010

HINT:

- Align the No. 4 transmission clutch hub and the No. 2 synchronizer ring so that they can fit together.
- Engage the No. 4 gear shift fork with the groove of the No. 4 transmission hub sleeve.

18. INSTALL SHAFT SNAP RING

- (a) Select a shaft snap ring that is suitable to retain the specific thrust clearance between the No. 4 transmission clutch hub and shaft snap ring.

Standard clearance:

0 to 0.1 mm (0 to 0.00394 in.)

HINT:

Select the thickest shaft snap ring possible for installation.

Shaft Snap Ring Thickness

PART NO.	THICKNESS MM (IN.)	MARK
SU003-03552	2.80 (0.11023)	A
SU003-03553	2.85 (0.11220)	B
SU003-03554	2.90 (0.11417)	C
SU003-03555	2.95 (0.11614)	D
SU003-03556	3.00 (0.11811)	E
SU003-03557	3.05 (0.12007)	F

- (b) Using a brass bar and a hammer, install a new shaft snap ring to the counter shaft.

19. INSTALL NO. 2 GEAR SHIFT HEAD

(a) Install the No. 2 gear shift head to the No. 2 gear shift fork shaft.

(b) Using a 5 mm pin punch and a hammer, install a new slotted spring pin to the No. 2 gear shift fork shaft.

NOTICE:

Do not tap the pin too deep.

Standard depth:

0 mm (0 in.) (from the end surface of the No. 2 gear shift head)

20. INSTALL 5TH SHIFT HEAD

(a) Install the compression spring to the 5th shift head, and then, while holding down the ball with the 5 mm pin punch, install the 5th shift head to the No. 3 gear shift fork shaft.

(b) Install the washer.

(c) Using a brass bar and a hammer, install a new shaft snap ring to the No. 3 gear shift fork shaft.

21. INSTALL NO. 3 GEAR SHIFT FORK SHAFT

- (a) As shown in the illustration, insert the No. 3 gear shift fork shaft. Using a T40 "TORX" socket wrench, install the ball and compression spring, and then tighten with a new head straight screw plug.

Torque: 19 N·m (194 kgf·cm, 14ft·lbf)

22. INSTALL SHIFT ARM

- (a) Install the shift arm to the shift arm pivot.

- (b) Using a brass bar and a hammer, install a new E- ring to the shift arm pivot.

23. INSTALL NO. 2 GEAR SHIFT FORK SHAFT

- (a) Using a screwdriver, install the 2 balls to the No. 3 gear shift fork shaft.

HINT:

Support the ball with the screwdriver so that the ball does not fall off.

- (b) While the identification hole is facing towards the outside, insert the No. 2 gear shift fork shaft. And then, using a T40 "TORX" socket wrench, install the ball and compression spring, and then tighten 2 new head straight screw plugs.

Text in Illustration

*a	Identification Hole
----	---------------------

Torque: 19 N·m (194 kgf·cm, 14ft·lbf)

- (c) Using a 5 mm pin punch and a hammer, install a new slotted spring pin to the No. 2 gear shift fork shaft.

NOTICE:

Do not tap the pin too deep.

Standard depth:

0 mm (0 in.) (from the end surface of the No. 4 gear shift fork)

24. INSTALL NO. 3 GEAR SHIFT HEAD

(a) Install the No. 3 gear shift head to the No. 3 gear shift fork shaft.

HINT:

While rotating, install the No. 3 gear shift head so that the shift arm is engaged with the groove of the No. 3 gear shift head.

(b) Using a 5 mm pin punch and a hammer, install a new slotted spring pin to the No. 3 gear shift fork shaft.

NOTICE:

Do not tap the pin too deep.

Standard depth:

0 mm (0 in.) (from the end surface of the No. 3 gear shift head)

25. INSTALL NO. 1 GEAR SHIFT HEAD

(a) Install the No. 1 gear shift head to the No. 1 gear shift fork shaft.

(b) Using a 5 mm pin punch and a hammer, install a new slotted spring pin to the No. 1 gear shift fork shaft.

NOTICE:

Do not tap the pin too deep.

Standard depth:

0 mm (0 in.) (from the end surface of the No. 1 gear shift head)

26. INSTALL FRONT SHIFT INNER LEVER

(a) Apply adhesive 1324 to the 2nd and 3rd pitches from the tip of new bolt.

Text in Illustration

*1	Adhesive 1324
----	---------------

- (b) Install the front shift inner lever to the shift shaft with a new bolt.

Torque: 33 N·m (340 kgf·cm, 25ft·lbf)

27. INSTALL NO. 1 SHIFT INTER LOCK BLOCK

- (a) Install the No. 1 shift inter lock block to the shift shaft.

28. INSTALL SHIFT SHAFT

- (a) Install the shift shaft and No. 1 shift inter lock block by sliding them.

29. INSTALL NO. 1 EXTENSION HOUSING OIL RECEIVER PIPE

- (a) Install the straight pin.

- (b) Install the No. 1 extension housing oil receiver pipe and stopper plate with a new bolt.

Text in Illustration

*1	No. 1 Extension Housing Oil Receiver Pipe End
----	---

Torque: 8.5 N·m (87 kgf·cm, 75in·lbf)

NOTICE:

Confirm that the end of No. 1 extension housing oil receiver pipe is properly fitted in the groove.

30. INSTALL NO. 2 EXTENSION HOUSING OIL RECEIVER PIPE

- (a) Install the No. 2 extension housing oil receiver pipe.

31. INSTALL TRANSMISSION EXTENSION HOUSING OIL SEAL

- (a) Apply MP grease to the lip of the new transmission extension housing oil seal.

- (b) Using SST and a hammer, install a new transmission extension housing oil seal.

SST: 09325-20010

Installation depth:

0.1 to 1.1 mm (0.00394 to 0.0433 in.) (from the end surface of the transmission extension housing sub-assembly)

NOTICE:

Do not damage the lip of the transmission extension housing oil seal.

32. INSTALL EXTENSION HOUSING DUST DEFLECTOR

- (a) Using SST and a hammer, install a new extension housing dust deflector.

SST: 09950-60020

09951-00750

SST: 09950-70010

09951-07100

HINT:

Make sure to tap it until it touches the transmission extension housing sub-assembly.

33. INSTALL EXTENSION HOUSING REAR OIL SEAL

(a) Using SST and a hammer, install a new extension housing rear oil seal.

SST: 09612-70100

09612-07210

Installation depth:

1.0 to 2.0 mm (0.0394 to 0.0787 in.) (from the end surface of the transmission extension housing sub-assembly)

NOTICE:

Do not damage the lip of the extension housing rear oil seal.

(b) Apply MP grease to the lip of the extension housing rear oil seal.

34. INSTALL TRANSMISSION EXTENSION HOUSING SUB-ASSEMBLY

(a) Apply seal packing 1281 continuously to the transmission extension housing sub-assembly as shown in the illustration.

Text in Illustration

	Seal Packing 1281
---	-------------------

NOTICE:

Install it within 10 minutes of the seal packing application.

(b) Install the transmission extension housing sub-assembly and clamp with 8 new bolts.

Text in Illustration

*1	clamp
----	-------

Torque: 29 N·m (296 kgf·cm, 21ft·lbf)

NOTICE:

- Be sure to install the transmission extension housing sub-assembly while the transmission is in neutral.
- Make sure to align the knock pin with the hole securely.

(c) Install a new bolt.

Torque: 31 N·m (316 kgf·cm, 23ft·lbf)

35. INSTALL HOLDER

(a) Using a 27 mm deep socket wrench, install a new holder, compression spring and lock ball pin.

Torque: 39 N·m (400 kgf·cm, 29ft·lbf)

36. INSTALL LOCK BALL PIN

(a) Using a 10 mm hexagon socket wrench, install a new head straight screw plug, compression spring and lock ball pin.

Torque: 25 N·m (250 kgf·cm, 18ft·lbf)

37. INSTALL WIRE HARNESS CLAMP BRACKET

- (a) Install the wire harness clamp bracket with a new bolt.
Torque: 7.0 N·m (71 kgf·cm, 62in·lbf)

38. INSTALL NEUTRAL POSITION SWITCH ASSEMBLY

- (a) Using a 19 mm union nut wrench, install the neutral position switch assembly and a new gasket.
Torque: 32 N·m (329 kgf·cm, 24ft·lbf)

NOTICE:

Use the formula to calculate special torque values for situations where the union nut wrench is combined with a torque wrench **INFO** .

- (b) Engage the clamp and connect the neutral position switch assembly wire.

39. INSTALL BACK-UP LIGHT SWITCH ASSEMBLY

- (a) Using a 19 mm union nut wrench, install the back-up light switch assembly and a new gasket.
Torque: 32 N·m (329 kgf·cm, 24ft·lbf)

NOTICE:

Use the formula to calculate special torque values for situations where the union nut wrench is combined with a torque wrench **INFO** .

- (b) In the order indicated in the illustration, engage the 3 clamps in place, and connect the back-up light switch assembly wire and neutral position switch assembly wire.

HINT:

Install the wire harness so that there is slack on the connector side.

40. INSTALL RELEASE FORK SUPPORT

- (a) Using a 19 mm deep socket wrench, install the release fork support to the clutch housing.

Torque: 16 N·m (163 kgf·cm, 12ft·lbf)

41. INSTALL MANUAL TRANSMISSION DRAIN PLUG

- (a) Install the manual transmission drain plug with a new gasket to the transmission case.

Torque: 37 N·m (377 kgf·cm, 27ft·lbf)

42. INSTALL MANUAL TRANSMISSION FILLER PLUG

- (a) Install the manual transmission filler plug with a new gasket to the transmission case.

Torque: 37 N·m (377 kgf·cm, 27ft·lbf)

Title: TL70 MANUAL TRANSMISSION / TRANSAXLE: MANUAL TRANSMISSION ASSEMBLY: INSTALLATION (2013 FR-S)		

INSTALLATION

1. INSTALL CONTROL SHAFT

- (a) Install a new control shaft collar onto the shift shaft.
- (b) Install the shift lever damper and control shaft to the shift shaft.
- (c) Using a pin punch (5 mm (0.197 in.)) and a hammer, align the control shaft hole and the shift shaft hole with the cutout of the control shaft collar, and insert the shaft pin from above.
- (d) Slide the control shaft collar until it comes into contact with the stopper of the control shaft, then stake it to the cutout.

NOTICE:

Be careful to install the floor shift control shaft in the proper direction.

Text in Illustration

*1	Control Shaft Collar
*2	Shaft Pin
*3	Control Shaft
*4	Shift Lever Damper
*5	Shift Shaft

2. INSTALL FLOOR SHIFT CONTROL SHAFT

- (a) Apply a light coat of with MP grease to the floor shift control shaft.

Text in Illustration

--	--

MP grease

- (b) Install the 2 collars to the floor shift control shaft.
- (c) Install the plate washer and clip.

3. INSTALL SHIFT LEVER RETAINER BUSHING

- (a) Install the 4 shift lever retainer bushings.

4. INSTALL FLOOR SHIFT CONTROL SHIFT LEVER RETAINER

- (a) Apply a light coat of with MP grease to the new 2 shift lever pins.

Text in Illustration

MP grease

- (b) Install the floor shift control shift lever retainer with the 2 shift lever pins.

- (c) Secure the shift lever pins to the extension housing sub-assembly.

5. INSTALL FLOOR SHIFT CONTROL SHIFT LEVER RETAINER SUB-ASSEMBLY

- (a) Apply a light coat of with MP grease to the floor shift control shift lever retainer sub-assembly.

Text in Illustration

	MP grease
---	-----------

(b) Install the floor shift control shift lever retainer sub-assembly to the floor shift control shift lever retainer.

6. INSTALL REAR NO. 1 ENGINE MOUNTING INSULATOR

(a) Install the rear No. 1 engine mounting insulator to the manual transmission assembly with the 4 bolts.

Torque: 40 N·m (408 kgf·cm, 30ft·lbf)

7. INSTALL MANUAL TRANSMISSION ASSEMBLY

(a) Confirm that 2 knock pins are on the manual transmission assembly contact surface of the engine cylinder block before manual transmission assembly installation.

(b) Install the manual transmission assembly to the engine with the 3 bolts and 2 nuts.

Text in Illustration

*1	Knock Pin
	Bolt

	
	Nut

Torque: 50 N·m (510 kgf·cm, 37ft·lbf)

NOTICE:

- Do not apply excessive force to the transmission assembly as this will break the input shaft.
- Insert dowel pins into the dowel holes securely so that the end face of the transmission assembly fits close against the engine assembly before tightening the bolts.

8. INSTALL REAR NO. 2 ENGINE MOUNTING INSULATOR

- Tilt up the manual transmission assembly.
- Install the rear No. 2 engine mounting insulator to the rear No. 1 engine mounting insulator with the 2 washers and 2 nuts.

Torque: 40 N·m (408 kgf·cm, 30ft·lbf)

- Install the rear No. 2 engine mounting insulator to the body with the 4 bolts.

Torque: 65 N·m (663 kgf·cm, 48ft·lbf)

9. REMOVE EXHAUST PIPE BRACKET

- Install the exhaust pipe bracket with the 2 bolts.

Torque: 23 N·m (235 kgf·cm, 17ft·lbf)

10. INSTALL FLOOR SHIFT LEVER ASSEMBLY

- Apply a light coat of with MP grease to the floor shift control shaft.

Text in Illustration

	MP grease
---	-----------

- Install the new O-ring and 2 bushings to the shift lever assembly.
- Install the plate washer to the floor shift lever assembly.
- Install the shift lever assembly with the clip.
- Install the shift and select lever boot.

11. INSTALL SHIFT AND SELECT LEVER BOOT

- (a) Install the shift and select lever boot to the floor shift control shaft.

12. INSTALL FLOOR SHIFT CONTROL SHIFT LEVER RETAINER SUB-ASSEMBLY

- (a) Install the floor shift control shift lever retainer sub-assembly with the 2 bolts.

Torque: 18 N·m (184 kgf·cm, 13ft·lbf)

13. INSTALL EXHAUST MANIFOLD

INFO

14. INSTALL MANUAL TRANSMISSION ASSEMBLY

- (a) Install the bolt to the manual transmission assembly.

Torque: 50 N·m (510 kgf·cm, 37ft·lbf)

15. INSTALL CLUTCH RELEASE CYLINDER ASSEMBLY

- (a) Install the clutch release cylinder assembly with the 2 bolts.

Torque: 37 N·m (377 kgf·cm, 27ft·lbf)

16. CONNECT WIRE HARNESS

- (a) Install the wire harness clamp bracket with the bolt.

Torque: 10 N·m (102 kgf·cm, 7ft·lbf)

- (b) Engage the wire harness clamp.
- (c) Connect the ground cable with the bolt.

Torque: 13 N·m (133 kgf·cm, 10ft·lbf)

- (d) Connect the 2 connectors.

- (e) Connect the 2 connectors.

HINT:

Press down the lever until the claw of the connector A makes a connection sound.

17. INSTALL STARTER ASSEMBLY

INFO

18. INSTALL FRONT STABILIZER BAR

INFO

19. INSTALL PROPELLER SHAFT WITH CENTER BEARING ASSEMBLY

INFO

20. INSTALL SHIFT LEVER CAP

- (a) Install the shift lever cap with the 4 bolts.

Torque: 7.5 N·m (77 kgf·cm, 66in·lbf)

21. INSTALL SHIFT LEVER BOOT

- (a) Install the No. 1 shift and select lever boot and shift and select lever retainer with the 4 bolts.

Torque: 18 N·m (184 kgf·cm, 13ft·lbf)

- (b) Connect the wire harness clamp.
(c) Install the shift and select lever cover with the 2 clips.

22. INSTALL CONSOLE BOX ASSEMBLY

INFO

23. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

24. ADD MANUAL TRANSMISSION OIL

INFO

25. INSPECT MANUAL TRANSMISSION OIL

INFO

26. INSPECT FOR MANUAL TRANSMISSION OIL LEAK

27. INSTALL NO. 2 ENGINE UNDER COVER

INFO

28. INSTALL NO. 1 ENGINE UNDER COVER

INFO

Last Modified: 3-27-2012	6.4 A	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000001P1700TX
Title: TL70 MANUAL TRANSMISSION / TRANSAXLE: MANUAL TRANSMISSION ASSEMBLY: REMOVAL (2013 FR-S)		

REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL INFO

2. REMOVE CONSOLE BOX ASSEMBLY

INFO

3. REMOVE SHIFT LEVER BOOT

(a) Remove the 2 clips and the shift and select lever cover.

(b) Disconnect the wire harness clamp.

(c) Remove the 4 bolts, the shift and select lever retainer and the select lever boot.

4. REMOVE SHIFT LEVER CAP

(a) Remove the 4 bolts and the shift lever cap.

5. REMOVE NO. 1 ENGINE UNDER COVER **INFO**

6. REMOVE NO. 2 ENGINE UNDER COVER **INFO**

7. DRAIN MANUAL TRANSMISSION OIL **INFO**

8. REMOVE PROPELLER SHAFT WITH CENTER BEARING ASSEMBLY

INFO

9. REMOVE FRONT STABILIZER BAR

INFO

10. REMOVE STARTER ASSEMBLY

INFO

11. SEPARATE WIRE HARNESS

HINT:

Fix the disconnected harness components with tape to keep them out of the way.

(a) Release the lock of connector (A) and disconnect the connector.

(b) Disconnect the connector (B).

(c) Disconnect the 2 connectors.

(d) Remove the bolt and disconnect the ground cable.

(e) Disengage the wire harness clamp.

(f) Remove the bolt and the wire harness clamp bracket.

12. SEPARATE CLUTCH RELEASE CYLINDER ASSEMBLY

(a) Remove the 2 bolts and separate the clutch release cylinder assembly.

13. SEPARATE MANUAL TRANSMISSION ASSEMBLY

(a) Remove the bolt from the manual transmission assembly.

14. REMOVE EXHAUST MANIFOLD

INFO

15. SUSPEND ENGINE ASSEMBLY

(a) Support the engine assembly with an engine lifter so that it is stable, as shown in the illustration.

Text in Illustration

	Attachment Placement Positions
---	--------------------------------

NOTICE:

- Set the engine assembly with transmission so that it is horizontal.
- Never attach the attachment and plate lift attachment to the oil pan section of the engine assembly.

16. REMOVE FLOOR SHIFT LEVER ASSEMBLY

(a) Turn over the shift and select lever boot.

(b) Using a screwdriver, remove the clip and the floor shift lever assembly.

(c) Remove the plate washer from the floor shift lever assembly.

(d) Remove the 2 bushings and O-ring from the floor shift lever assembly.

17. REMOVE SHIFT LEVER BOOT

(a) Remove the shift lever boot from the floor shift lever assembly.

18. SEPARATE FLOOR SHIFT CONTROL SHIFT LEVER RETAINER SUB-ASSEMBLY

(a) Remove the 2 bolts and separate the floor shift control shift lever retainer sub-assembly.

19. REMOVE EXHAUST PIPE BRACKET

(a) Remove the 2 bolts and the exhaust pipe bracket.

20. SUPPORT MANUAL TRANSMISSION ASSEMBLY

(a) Support the manual transmission assembly with a transmission jack.

NOTICE:

- Check that the manual transmission assembly is centered on the transmission jack plate.
- When removing the manual transmission assembly, support the engine assembly so that it does not tilt.

21. REMOVE REAR NO. 2 ENGINE MOUNTING INSULATOR

(a) Remove the 4 bolts, 2 washers, 2 nuts and rear No. 2 engine mounting insulator.

Text in Illustration

	Bolt
	Nut

22. REMOVE MANUAL TRANSMISSION ASSEMBLY

(a) Remove the 3 bolts, 2 nuts and manual transmission assembly.

Text in Illustration

	Bolt
	Nut

NOTICE:

- Do not apply excessive force to the transmission assembly as this will break the input shaft.
- To prevent damage to the knock pins, do not pry between the manual transmission assembly and the engine assembly.

23. REMOVE REAR NO. 1 ENGINE MOUNTING INSULATOR

(a) Remove the 4 bolts and rear No. 1 engine mounting insulator.

24. REMOVE FLOOR SHIFT CONTROL SHIFT LEVER RETAINER SUB-ASSEMBLY

(a) Remove the floor shift control shift lever retainer sub-assembly.

25. REMOVE FLOOR SHIFT CONTROL SHIFT LEVER RETAINER

- (a) Pull up the locks of the shift lever pins, and remove the 2 shift lever pins.

- (b) Remove the floor shift control shift lever retainer.

26. REMOVE SHIFT LEVER RETAINER BUSHING

- (a) Remove the 4 shift lever retainer bushings.

27. REMOVE FLOOR SHIFT CONTROL SHAFT

- (a) Using a screwdriver, remove the clip, plate washer and floor shift control shaft.
- (b) Remove the 2 collars from the control shaft.

28. REMOVE CONTROL SHAFT

- (a) Using a hammer and a screwdriver, cut off the control shaft collar and remove it from the shift shaft.
- (b) Using a pin punch (5 mm (0.197 in.)) and a hammer, remove the shaft pin and control shaft from the shift shaft.
- (c) Remove the shift lever damper from the floor shift control shaft.

REPLACEMENT

1. REMOVE PROPELLER SHAFT WITH CENTER BEARING ASSEMBLY

INFO

2. REMOVE MANUAL TRANSMISSION EXTENSION HOUSING OIL SEAL

- (a) Using SST, remove the manual transmission extension housing oil seal.

SST: 09308-00010

3. INSTALL MANUAL TRANSMISSION EXTENSION HOUSING OIL SEAL

- (a) Coat the lip of a new manual transmission extension housing oil seal with MP grease.

- (b) Using SST and a hammer, tap in the manual transmission extension housing oil seal.

SST: 09325-20010

Installation depth:

0.1 to 1.1 mm (0.00394 to 0.0433 in.)

NOTICE:

- Keep the lip free of foreign matter.
- Do not tap the oil seal at an angle.

4. INSTALL PROPELLER SHAFT WITH CENTER BEARING ASSEMBLY

INFO

Title: TL70 MANUAL TRANSMISSION / TRANSAXLE: MANUAL TRANSMISSION OIL: ON-VEHICLE INSPECTION (2013 FR-S)		

ON-VEHICLE INSPECTION

1. INSPECT MANUAL TRANSMISSION OIL

(a) Stop the vehicle in a level place.

(b) Remove the manual transmission filler plug and the gasket.

(c) Check that the oil surface is within 5 mm (0.197 in.) of the bottom of the manual transmission filler plug opening.

Text in Illustration

*a	0 to 5 mm (0 to 0.197 in.)
----	----------------------------

NOTICE:

- Excessively large or small amounts of oil may cause problems.
- After replacing the oil, drive the vehicle and check the oil level again.

(d) Check for oil leakage when the oil level is low.

(e) Install the manual transmission filler plug and a new gasket.

Torque: 37 N·m (377 kgf·cm, 27ft·lbf)

Last Modified: 3-27-2012	6.4 A	From: 201203

Title: TL70 MANUAL TRANSMISSION / TRANSAXLE: MANUAL TRANSMISSION OIL: REPLACEMENT (2013 FR-S)		

REPLACEMENT

1. DRAIN MANUAL TRANSMISSION OIL

- (a) Remove the manual transmission filler plug and the gasket.
- (b) Remove the manual transmission drain plug and gasket, and then drain the manual transaxle oil.
- (c) Install a new gasket and the manual transmission drain plug.

Torque: 37 N·m (377 kgf·cm, 27ft·lbf)

2. ADD MANUAL TRANSMISSION OIL

- (a) Add manual transmission oil until the oil level is within 5 mm (0.197 in.) from the bottom of the manual transmission filler plug opening.

Text in Illustration

*a	0 to 5 mm (0 to 0.197 in.)
----	----------------------------

Standard capacity (Reference):

2.2 liters (2.3 US qts, 1.9 Imp. qts)

Gear oil type:

Toyota Genuine Manual Transmission Gear Oil "LV GL-3 and SAE 75W-90"

- (b) Check for oil leakage when the oil level is low.
- (c) Install the transmission filler plug and a new gasket.

Torque: 37 N·m (377 kgf·cm, 27ft·lbf)

3. INSPECT FOR MANUAL TRANSMISSION OIL INFO

4. INSPECT FOR MANUAL TRANSMISSION OIL LEAK

Title: TL70 MANUAL TRANSMISSION / TRANSAXLE: MANUAL TRANSMISSION SYSTEM: PROBLEM SYMPTOMS TABLE (2013 FR-S)		

PROBLEM SYMPTOMS TABLE

HINT:

Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

Title: TL70 MANUAL TRANSMISSION / TRANSAXLE: NEUTRAL POSITION SWITCH: INSPECTION (2013 FR-S)		

INSPECTION

1. INSPECT NEUTRAL POSITION SWITCH ASSEMBLY

- (a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
1 - 2	Pushed	Below 1 Ω
1 - 2	Released	10 k Ω or higher

Text in Illustration

*a	Component without harness connected (Neutral Position Switch Assembly)
----	---

If the result is not as specified, replace the neutral position switch assembly.

Title: TL70 MANUAL TRANSMISSION / TRANSAXLE: NEUTRAL POSITION SWITCH: INSTALLATION (2013 FR-S)		

INSTALLATION

1. INSTALL NEUTRAL POSITION SWITCH ASSEMBLY

- (a) Using a 19 mm union nut wrench, install the neutral position switch assembly with a new gasket to the manual transmission assembly.

Torque: 32 N·m (329 kgf·cm, 24ft·lbf)

NOTICE:

Use the formula to calculate special torque values for situations where a union nut wrench is combined with a torque wrench [INFO](#) .

- (b) In the order indicated in the illustration, engage the 3 clamps in place, and connect the back-up light switch assembly wire and neutral position switch assembly wire.

HINT:

Install the wire harness so that there is slack on the connector side.

2. INSTALL MANUAL TRANSMISSION ASSEMBLY

[INFO](#)

Last Modified: 3-27-2012	6.4 A	From: 201203

Title: TL70 MANUAL TRANSMISSION / TRANSAXLE: OUTPUT SHAFT: DISASSEMBLY (2013 FR-S)		

DISASSEMBLY

1. INSPECT THRUST CLEARANCE

- (a) Using a feeler gauge, measure the thrust clearance of the 1st gear, 2nd gear and reverse gear.

Text in Illustration

*a	Reverse gear thrust clearance
*b	2nd gear thrust clearance
*c	1st gear thrust clearance

Standard Clearance:

GEAR	STANDARD CLEARANCE MM (IN.)	MAXIMUM CLEARANCE MM (IN.)
1st gear	0.15 to 0.40 (0.00590 to 0.0157)	0.40 (0.0157)
2nd gear	0.10 to 0.45 (0.000394 to 0.0177)	0.45 (0.0177)
Reverse gear	0.10 to 0.45 (0.000394 to 0.0177)	0.45 (0.0177)

HINT:

If the clearance exceeds the maximum, replace the corresponding gear, transmission clutch hub, needle roller bearing and output shaft with a new ones.

2. INSPECT RADIAL CLEARANCE

- (a) Using a dial indicator, measure the radial clearance of the 1st gear, 2nd gear and reverse gear.

Text in Illustration

*a	Reverse gear radial clearance
*b	2nd gear radial clearance
*c	1st gear radial clearance

Standard Clearance:

--	--	--

GEAR	STANDARD CLEARANCE MM (IN.)	MAXIMUM CLEARANCE MM (IN.)
1st gear	0.015 to 0.066 (0.000590 to 0.00260)	0.066 (0.00260)
2nd gear	0.015 to 0.066 (0.000590 to 0.00260)	0.066 (0.00260)
Reverse gear	0.015 to 0.066 (0.000590 to 0.00260)	0.066 (0.00260)

HINT:

If the clearance exceeds the maximum, replace the corresponding gear, needle roller bearing and output shaft with a new ones.

3. REMOVE REVERSE GEAR

(a) Using a snap ring expander, remove the shaft snap ring.

(b) Using SST and a press, remove the No. 3 transmission clutch hub, No. 3 transmission hub sleeve, reverse gear, No. 3 synchronizer ring and reverse gear bearing from the output shaft.

SST: 09950-00020

SST: 09950-60010

09951-00230

SST: 09950-70010

09951-07100

4. REMOVE NO. 3 TRANSMISSION HUB SLEEVE

(a) Remove the No. 3 transmission hub sleeve, and then remove the 3 No. 1 synchronmesh shifting keys, 3 No. 1 synchronmesh shifting key springs and 3 balls from the No. 3 transmission clutch hub.

NOTICE:

- Use a cloth to prevent the No. 1 synchronmesh shifting

keys, No. 1 synchronesh shifting key springs and balls from popping out.

- Do not deform the No. 1 synchronesh shifting key spring.

HINT:

During this operation, keep intact the No. 3 transmission clutch hub and No. 1 synchronesh shifting key.

5. REMOVE 6TH GEAR

- (a) Using 2 screwdrivers and a hammer, remove the shaft snap ring.

- (b) Using SST and a press, remove the 6th gear.

SST: 09950-00020

6. REMOVE 1ST GEAR

- (a) Using SST and a press, remove the rear output shaft bearing, 1st gear and 1st gear bearing inner race.

SST: 09950-00020

- (b) Remove the 1st gear needle roller bearing, 1st shift restrict ball and No. 1 synchronizer ring set.

7. REMOVE 2ND GEAR

- (a) Using SST and a press, remove the 2nd gear, No. 1 transmission clutch hub and 2nd gear needle roller bearing from the output shaft.

SST: 09950-00020

8. REMOVE NO. 1 SYNCHRONIZER RING SET

- (a) Remove the No. 1 synchronizer ring set.

9. REMOVE NO. 1 TRANSMISSION HUB SLEEVE

- (a) Remove the No. 1 transmission hub sleeve, and then remove the 3 No. 1 synchromesh shifting keys, 3 No. 1 synchromesh shifting key springs and 3 balls from the No. 1 transmission clutch hub.

NOTICE:

- Use a cloth to prevent the No. 1 synchromesh shifting keys, No. 1 synchromesh shifting key springs and balls from popping out.
- Do not deform the No. 1 synchromesh shifting key spring.

HINT:

During this operation, keep the No. 1 transmission clutch hub and No. 1 synchromesh shifting key intact.

Last Modified: 3-27-2012	6.4 G	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM00000590T000X
Title: TL70 MANUAL TRANSMISSION / TRANSAXLE: OUTPUT SHAFT: INSPECTION (2013 FR-S)		

INSPECTION

1. INSPECT REAR OUTPUT SHAFT BEARING

(a) Check the rear output shaft bearing.

Standard:

Abnormal fitting, interfering, abnormal noise, or looseness should not be found.

HINT:

If any abnormality is found, replace the rear output shaft bearing with a new one.

2. INSPECT OUTPUT SHAFT

(a) Using a micrometer, measure the outer diameter of each point.

Standard Outer Diameter:

PART	STANDARD OUTER DIAMETER MM (IN.)	MINIMUM OUTER DIAMETER MM (IN.)
A	31.984 to 32.000 (1.25921 to 1.25984)	31.984 (1.25921)
B	42.984 to 43.000 (1.69228 to 1.69291)	42.984 (1.69228)
C	40.984 to 41.000 (1.61354 to 1.61417)	40.984 (1.61354)

HINT:

If the outer diameter is less than minimum, replace the output shaft with a new one.

(b) Using V-blocks and a dial indicator, measure the runout of each location as shown in the illustration.

Standard runout:

0.03 mm (0.00118 in.) or less

HINT:

If the runout is outside the specification, replace the output shaft with a new one.

3. INSPECT REVERSE GEAR

- (a) Using a cylinder gauge, measure the inner diameter of the reverse gear.

Standard inside diameter:

47.015 to 47.040 mm (1.85098 to 1.85197 in.)

Maximum inside diameter:

47.040 mm (1.85197 in.)

HINT:

If the inner diameter exceeds the maximum, replace the reverse gear with a new one.

4. INSPECT 1ST GEAR

- (a) Using a cylinder gauge, measure the inside diameter of the 1st gear.

Standard inside diameter:

46.315 to 46.340 mm (1.82343 to 1.82441 in.)

Maximum inside diameter:

46.340 mm (1.82441 in.)

HINT:

If the inside diameter exceeds the maximum, replace the 1st gear with a new one.

5. INSPECT 2ND GEAR

- (a) Using a cylinder gauge, measure the inside diameter of the 2nd gear.

Standard inside diameter:

49.015 to 49.040 mm (1.92972 to 1.93071 in.)

Maximum inside diameter:

49.040 mm (1.93071 in.)

HINT:

If the inside diameter exceeds the maximum, replace the 2nd gear with a new one.

6. INSPECT 1ST GEAR BEARING INNER RACE

- (a) Using a micrometer, measure the outside diameter of the 1st gear bearing inner race.

Standard outer diameter:
40.284 to 40.300 mm (1.58598 to 1.58661 in.)

Minimum outer diameter:
40.284 mm (1.58598 in.)

HINT:

If the outside diameter is less than minimum, replace the 1st gear bearing inner race with a new one.

7. INSPECT NO. 1 TRANSMISSION HUB SLEEVE CLEARANCE

- (a) Using a vernier caliper, measure the claw width of the No. 1 gear shift fork.

Standard width:
7.9 to 8.0 mm (0.311 to 0.315 in.)

Minimum width:
7.9 mm (0.311 in.)

HINT:

If the width is less than the minimum, replace the No. 1 gear shift fork with a new one.

- (b) Using a vernier caliper, measure the groove of the No. 1 transmission hub sleeve, and then calculate the clearance with the No. 1 gear shift fork.

Standard clearance:
0.15 to 0.35 mm (0.00590 to 0.0138 in.)

Maximum clearance:
0.35 mm (0.0138 in.)

HINT:

If the clearance exceeds the maximum, replace both the No. 1 gear shift fork and No. 1 transmission hub sleeve with a new ones.

8. INSPECT NO. 3 TRANSMISSION HUB SLEEVE CLEARANCE

- (a) Using a vernier caliper, measure the claw width of the No. 3 gear shift fork.

Standard width:
7.9 to 8.0 mm (0.311 to 0.315 in.)

Minimum width:
7.9 mm (0.311 in.)

HINT:

If the width is less than the minimum, replace the No. 3 gear

shift fork with a new one.

- (b) Using a vernier caliper, measure the groove of the No. 3 transmission hub sleeve, and then calculate the clearance with the No. 3 gear shift fork.

Standard clearance:

0.15 to 0.35 mm (0.00590 to 0.0138 in.)

Maximum clearance:

0.35 mm (0.0138 in.)

HINT:

If the clearance exceeds the maximum, replace both the No. 3 gear shift fork and No. 3 transmission hub sleeve with a new ones.

9. INSPECT NO. 1 TRANSMISSION HUB SLEEVE

- (a) Check that the spline gear edges of the No. 1 transmission hub sleeve are not worn down.

HINT:

If it shows any sign of wear, replace the No. 1 transmission hub sleeve with a new one.

- (b) Install the No. 1 transmission hub sleeve to the No. 1 transmission clutch hub, and then check that it slides smoothly.

HINT:

If it does not slide smoothly, replace the No. 1 transmission hub sleeve and No. 1 transmission clutch hub with a new one.

10. INSPECT NO. 3 TRANSMISSION HUB SLEEVE

- (a) Check that the spline gear edges of the No. 3 transmission hub sleeve are not worn down.

HINT:

If it shows any sign of wear, replace the No. 3 transmission hub sleeve with a new one.

- (b) Install the No. 3 transmission hub sleeve to the No. 3 transmission clutch hub, and then check that it slides smoothly.

HINT:

If it does not slide smoothly, replace the No. 3 transmission hub sleeve and No. 3 transmission clutch hub with a new one.

11. INSPECT NO. 1 SYNCHRONIZER RING SET (for 1st Gear)

- (a) Apply manual transmission gear oil to the taper cone of the 1st gear and No. 1 synchronizer ring set, and then hold the No. 1 synchronizer ring set in position with your hand to measure the clearance between the No. 1 synchronizer ring set and the 1st gear by using a feeler gauge.

Text in Illustration

*a	Inner	*b	Middle
*c	Outer	-	-

Standard Clearance:

LOCATION	STANDARD CLEARANCE MM (IN.)
Inner	0.48 to 1.12 (0.0189 to 0.0441)
Middle	0.38 to 1.22 (0.0150 to 0.0480)
Outer	0.8 to 1.8 (0.0315 to 0.0709)

NOTICE:

Check the entire circumference of the gear.

HINT:

If the result is not as specified, replace the No. 1 synchronizer ring set with a new one.

- (b) Apply manual transmission gear oil to the taper cone of the 1st gear, and then hold the No. 1 synchronizer ring set in position with your hand to check that it does not slide in the circumferential direction.

HINT:

If the No. 1 synchronizer ring set slides, replace the No. 1 synchronizer ring set with a new one.

12. INSPECT NO. 1 SYNCHRONIZER RING SET (for 2nd Gear)

- (a) Apply manual transmission gear oil to the taper cone of the 2nd gear and No. 1 synchronizer ring set, and then hold the No. 1 synchronizer ring set in position with your hand to measure the

clearance between the No. 1 synchronizer ring set and the 2nd gear by using a feeler gauge.

Text in Illustration

*a	Inner	*b	Middle
*c	Outer	-	-

Standard Clearance:

LOCATION	STANDARD CLEARANCE MM (IN.)
Inner	0.48 to 1.12 (0.0189 to 0.0441)
Middle	0.38 to 1.22 (0.0150 to 0.0480)
Outer	0.8 to 1.8 (0.0315 to 0.0709)

NOTICE:

Check the entire circumference of the gear.

HINT:

If the result is not as specified, replace the No. 1 synchronizer ring set with a new one.

(b) Apply manual transmission gear oil to the taper cone of the 2nd gear, and then hold the No. 1 synchronizer ring in position with your hand to check that it does not slide in the circumferential direction.

HINT:

If the No. 1 synchronizer ring set slides, replace the No. 1 synchronizer ring set with a new one.

Last Modified: 3-27-2012	6.4 A	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000002RHZ006X
Title: TL70 MANUAL TRANSMISSION / TRANSAXLE: OUTPUT SHAFT: REASSEMBLY (2013 FR-S)		

REASSEMBLY

1. INSTALL REVERSE GEAR

- (a) Apply manual transmission gear oil to the mounting point of the output shaft, reverse gear bearing and inside surface and taper cone of the reverse gear.

- (b) Install the reverse gear bearing and reverse gear to the output shaft.

2. INSTALL NO. 3 TRANSMISSION HUB SLEEVE

- (a) Apply manual transmission gear oil to the moving parts of the No. 3 transmission clutch hub.

Text in Illustration

*1	No. 3 Transmission Clutch Hub
*2	No. 3 Transmission Hub Sleeve
*3	Ball
*4	No. 1 Synchromesh Shifting Key
*5	No. 1 Synchromesh Shifting Key Spring
	Front Side

(b) As shown in the illustration, install the No. 3 transmission hub sleeve to the No. 3 transmission clutch hub. And install the 3 No. 1 synchronesh shifting keys and 3 synchronesh shifting key springs all together, and then install the 3 balls.

HINT:

- Install the ball while holding down the No. 1 synchronesh shifting key spring.
- After the installation, let the No. 1 synchronesh shifting key spring settle down.

3. INSTALL NO. 3 TRANSMISSION CLUTCH HUB

(a) Install the No. 3 synchronizer ring to the reverse gear.

(b) Using SST and a press, install the No. 3 transmission clutch hub.

SST: 09309-37010

HINT:

- Align the No. 3 transmission clutch hub and the No. 3 synchronizer ring so that they can fit together.
- After the No. 3 transmission clutch hub is installed, check that the No. 3 synchronizer ring moves in the thrust direction.
- Make sure to press fit the No. 3 transmission clutch hub until it touches the output shaft.

4. INSTALL SHAFT SNAP RING (for No. 3 transmission clutch hub)

(a) Select a shaft snap ring that is suitable to retain the specific thrust clearance between the No. 3 transmission clutch hub and shaft snap ring.

Standard clearance:

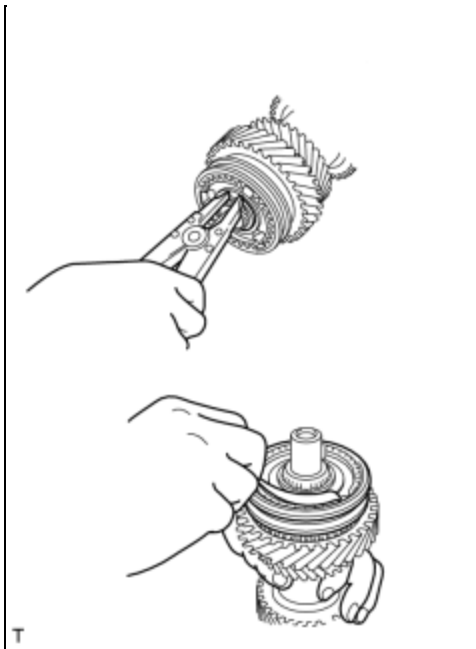

0 to 0.1 mm (0 to 0.00394 in.)

HINT:

Select the thickest shaft snap ring possible for installation.

Shaft Snap Ring Thickness

PART NO.	THICKNESS MM (IN.)	MARK
SU003-03581	1.80 (0.07086)	A
SU003-03582	1.85 (0.07283)	B

SU003-03583	1.90 (0.07480)	C
SU003-03584	1.95 (0.07677)	D
SU003-03585	2.00 (0.07874)	E
SU003-03586	2.05 (0.08070)	F

(b) Using a snap ring expander, install a new shaft snap ring to the output shaft.

5. INSTALL 2ND GEAR

(a) Apply manual transmission gear oil to the mounting point of the output shaft, 2nd gear needle roller bearing and inside surface and taper cone of the reverse gear.

(b) Install the 2nd gear needle roller bearing and 2nd gear to the output shaft.

6. INSTALL NO. 1 TRANSMISSION HUB SLEEVE

(a) Apply manual transmission gear oil to the moving parts of the No. 1 transmission clutch hub.

Text in Illustration

*1	No. 1 Transmission Clutch Hub
*2	No. 1 Transmission Hub Sleeve
*3	Ball
*4	No. 1 Synchronesh Shifting Key
*5	No. 1 Synchronesh Shifting Key Spring
	Front Side

(b) As shown in the illustration, install the No. 1 transmission hub sleeve to the No. 1 transmission clutch hub. And install the 3 No. 1 synchronesh shifting keys and 3 synchronesh shifting key springs all together, and then install the 3 balls.

HINT:

- Install the ball while holding down the No. 1 synchronesh shifting key spring.
- After the installation, let the No. 1 synchronesh shifting key spring settle down.

7. INSTALL NO. 1 TRANSMISSION CLUTCH HUB

(a) Align and install the No. 1 synchronizer ring set (for 2nd gear) in the position, as shown in the illustration.

HINT:

- Align the middle ring claw with the groove in the 2nd gear.
- Align the inner ring claw with the groove in the outer ring.

(b) Using SST and a press, install the No. 1 transmission clutch hub.

SST: 09309-35010

SST: 09631-12090

HINT:

- Align the No. 1 transmission clutch hub and the No. 1 synchronizer ring set (for 2nd gear) so that they can fit together.
- After the No. 1 transmission clutch hub is installed, check that the No. 1 synchronizer ring set (for 2nd gear) moves in the thrust direction.
- Make sure to press fit the No. 1 transmission clutch hub until it touches the output shaft.

- (c) Align and install the No. 1 synchronizer ring set (for 1st gear) in the position, as shown in the illustration.

HINT:

- Align the outer ring claw with the groove in No. 1 transmission clutch hub.
- Align the inner ring claw with the groove in the outer ring.

8. INSTALL 1ST GEAR

- (a) After the output shaft is installed, apply manual transmission gear oil to the mounting point of the output shaft, needle roller bearing inner race, and inside surface and taper cone of the 1st gear.

- (b) Install the 1st shift restrict ball, 1st gear, 1st gear needle roller bearing and 1st gear bearing inner race to the output shaft.

Text in Illustration

*1	1st Shift Restrict Ball
----	-------------------------

HINT:

Align the middle ring claw with the groove in the 1st gear.

9. INSTALL REAR OUTPUT SHAFT BEARING

- (a) Using SST and a press, as shown in the illustration, install the rear output shaft bearing.

Text in Illustration

*1	Rear Output Shaft Bearing
	Front Side

SST: 09309-35010

SST: 09316-60011

09316-00021

HINT:

Make sure to press fit the rear output shaft bearing until it touches the 1st gear bearing inner race.

10. INSTALL 6TH GEAR

(a) Using SST and a press, install the 6th gear.

SST: 09309-35010

HINT:

Make sure to press fit the 6th gear until it touches the rear output shaft bearing.

11. INSTALL SHAFT SNAP RING (for 6th gear)

(a) Select a shaft snap ring that is suitable to retain the specific thrust clearance between the 6th gear and shaft snap ring.

Standard clearance:

0 to 0.11 mm (0 to 0.00433 in.)

HINT:

Select the thickest shaft snap ring possible for installation.

Shaft Snap Ring Thickness

PART NO.	THICKNESS MM (IN.)	MARK
SU003-03564	2.67 (0.10511)	A

T

SU003-03565	2.73 (0.10748)	B
SU003-03566	2.79 (0.10984)	C
SU003-03567	2.85 (0.11220)	D
SU003-03568	2.91 (0.11456)	E
SU003-03569	2.97 (0.11692)	F
SU003-03570	3.03 (0.11929)	G
SU003-03571	3.09 (0.12165)	H
SU003-03572	3.15 (0.12401)	J
SU003-03573	3.21 (0.01053)	K
SU003-03574	3.27 (0.12874)	L

(b) Using a brass bar and hammer, install a new shaft snap ring to the output shaft.

Title: TX6A AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSMISSION ASSEMBLY: INSTALLATION (2013 FR-S)		

INSTALLATION

1. INSTALL TORQUE CONVERTER ASSEMBLY

(a) Engage the splines of the input shaft and turbine runner.

(b) Engage the splines of the stator shaft and stator while turning the torque converter assembly.

HINT:

If the stator shaft splines are difficult to engage with the stator splines, move the torque converter back approximately 10 mm (0.394 in.) and engage the splines while rotating the torque converter assembly.

(c) Turn the torque converter assembly to engage the key of the oil pump drive gear into the slot on the torque converter assembly.

(d) Using a vernier caliper and straightedge, measure dimension A between the transmission contact surface of

the engine and the torque converter contact surface of the drive plate.

- (e) Using a vernier caliper and straightedge, measure dimension B shown in the illustration and check that dimension B is more than dimension A, which was measured in the first step.

Standard: :

$$B = A + 1 \text{ mm (0.0394 in.) or more}$$

NOTICE:

- Make sure to deduct the thickness of the straightedge.
- If the transmission is installed to the engine with the torque converter not sufficiently inserted, the torque converter may be damaged.

2. INSTALL OIL COOLER TUBE

- (a) Install the oil cooler tube with the bolt to the automatic transmission assembly.

Torque: 21 N·m (214 kgf·cm, 16ft·lbf)

- (b) Connect the 2 water by-pass hoses to the transmission oil cooler with the 4 hose clamps.

3. INSTALL WIRE HARNESS

- (a) Install the wire harness to the automatic transmission assembly with engage the 6 wire harness clamps.
- (b) Connect the park/neutral position switch connector, transmission wire connector and the transmission revolution sensor connector.

HINT:

Push up the lever until the claw of the transmission wire connector makes a connection sound.

4. INSTALL REAR NO. 1 ENGINE MOUNTING INSULATOR

- (a) Install the rear No. 1 engine mounting insulator to the automatic transmission assembly with the 4 bolts.

Torque: 40 N·m (408 kgf·cm, 30ft·lbf)

5. INSTALL AUTOMATIC TRANSMISSION ASSEMBLY

- (a) Confirm that 2 knock pins are on the automatic transmission assembly contact surface of the engine cylinder block before automatic transmission assembly installation.

- (b) Keeping the engine assembly and the automatic transmission assembly in a horizontal position, align the knock pins with each hole on the automatic transmission assembly and install the 2 bolts and 2nuts.

Text in Illustration

*1	Knock Pin
	Bolt
	Nut

Torque: 50 N·m (510 kgf·cm, 37ft·lbf)

NOTICE:

- Make sure not to pinch or damage any wire harness.
- Make sure the knock pin is fully engaged with the knock pin hole.
- Do not forcibly pry the automatic transmission assembly.
- After installing the automatic transmission assembly, confirm that the torque converter assembly can be rotated by hand.

6. INSTALL REAR NO. 2 ENGINE MOUNTING INSULATOR

- (a) Install the rear No. 2 engine mounting insulator to the rear No. 1 engine mounting insulator with 2 washers and 2 nuts.

Torque: 40 N·m (408 kgf·cm, 30ft·lbf)

- (b) Install the rear No. 2 engine mounting insulator to the body with the 4 bolts.

Torque: 65 N·m (663 kgf·cm, 48ft·lbf)

7. INSTALL EXHAUST PIPE BRACKET

- (a) Install the exhaust pipe bracket with the 2 bolts.

Torque: 21 N·m (214 kgf·cm, 16ft·lbf)

8. INSTALL FLOOR SHIFT GEAR SHIFTING ROD SUB-ASSEMBLY

- (a) Apply MP grease to the pin.
(b) Install the floor shift gear shifting rod sub-assembly to the transmission control shaft lever RH with the pin and a clip.
(c) While pushing the shift lock release button, move the shift lever to N.

- (d) Using tape, hold a 0.3 mm feeler gauge on the floor shift control select lever.

- (e) Using tape, attach the floor shift control select lever to the console box assembly.

NOTICE:

Make sure that the feeler gauge is not on the area shown in the illustration.

- (f) Turn the transmission control shaft lever RH of the park/neutral position switch assembly counterclockwise until it stops, and turn it clockwise 2 notches to set it to the N position.

- (g) Temporarily install the floor shift gear shifting rod sub-assembly with the nut.
(h) Tighten the nut while lightly pushing the lever rearward.

Torque: 18 N·m (184 kgf·cm, 13ft·lbf)

NOTICE:

Do not push the lever too hard.

9. INSTALL TRANSMISSION REVOLUTION SENSOR (NT)

INFO

10. CONNECT OIL COOLER TUBE

- (a) Fasten the oil cooler pipe with the oil cooler tube using 2 bolts.

Torque: 21 N·m (214 kgf·cm, 16ft·lbf)

11. INSTALL TRANSMISSION OIL COOLER HOSE

- (a) Install the 2 transmission oil cooler hoses to the transmission oil cooler with the 4 hose clamps.

12. INSTALL EXHAUST MANIFOLD

INFO

13. CONNECT AUTOMATIC TRANSMISSION ASSEMBLY

- (a) Install the 2 bolts to the automatic transmission assembly.

Torque: 50 N·m (510 kgf·cm, 37ft·lbf)

14. INSTALL DRIVE PLATE AND TORQUE CONVERTER SETTING BOLT

- (a) Install the 6 drive plate and torque converter setting bolt.

Torque: 25 N·m (255 kgf·cm, 18ft·lbf)

NOTICE:

- Make sure that the drive plate and torque converter setting bolts do not fall into the clutch housing.
- Make sure not to damage the drive plate and torque converter setting bolts.

15. INSTALL FLYWHEEL HOUSING UNDER COVER

- (a) Install the flywheel housing side cover.

16. CONNECT VACUUM TUBE CONNECTOR HOSE

- (a) Connect the vacuum tube connector hose with the 2 bolts.

Torque: 18 N·m (184 kgf·cm, 13ft·lbf)

17. CONNECT WIRE HARNESS

- (a) Install the No. 2 engine hanger with the 2 bolts.

Torque: 21 N·m (214 kgf·cm, 16ft·lbf)

- (b) Install the wire harness clamp bracket with the bolt.

Torque: 10 N·m (102 kgf·cm, 7ft·lbf)

- (c) Engage the wire harness clamp.

- (d) Connect the 3 connectors.

HINT:

Push down the lever until the claw of the connector (A) makes a connection sound.

(e) Engage the 4 wire harness clamps.

(f) Install the ground cable to the automatic transmission assembly with the bolt

Torque: 13 N·m (133 kgf·cm, 10ft·lbf)

(g) Connect the 2 connectors.

HINT:

Push down the lever until the claw of the connector (A) makes a connection sound.

Title: TX6A AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSMISSION ASSEMBLY: REMOVAL (2013 FR-S)		

REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL INFO
2. REMOVE NO. 1 ENGINE UNDER COVER INFO
3. REMOVE NO. 2 ENGINE UNDER COVER INFO
4. DRAIN AUTOMATIC TRANSMISSION FLUID INFO
5. REMOVE PROPELLER WITH CENTER BEARING SHAFT ASSEMBLY INFO
6. REMOVE FRONT STABILIZER BAR INFO
7. REMOVE STARTER ASSEMBLY INFO
8. DISCONNECT WIRING HARNESS CONNECTOR

HINT:

Fix disconnected harness components with tape to keep them out of the way.

(a) Release the lock of connector (A) and disconnect the connector.

(b) Disconnect the connector (B).

(c) Remove the bolt and disconnect the ground cable.

(d) Disengage the 4 wire harness clamps.

(e) Release the lock of connector (A) and disconnect the connector.

(f) Disconnect the connector (B) and (C).

(g) Disengage the wire harness clamp.

(h) Remove the bolt and the wire harness clamp bracket.

(i) Remove the 2 bolts and the No. 2 engine hanger.

9. DISCONNECT VACUUM TUBE CONNECTOR HOSE

(a) Remove the 2 bolts and the disconnect the union to check valve hose.

10. REMOVE FLYWHEEL HOUSING UNDER COVER

(a) Remove the flywheel housing side cover from the automatic transmission assembly.

11. REMOVE DRIVE PLATE AND TORQUE CONVERTER SETTING BOLT

(a) Using SST, hold the crankshaft pulley.

SST: 09960-10010

09962-01000

09963-01000

(b) Remove the 6 drive plate and torque converter setting bolt.

12. DISCONNECT AUTOMATIC TRANSMISSION ASSEMBLY

(a) Remove the 2 bolts from the automatic transmission assembly.

13. REMOVE EXHAUST MANIFOLD

INFO

14. SUSPEND ENGINE ASSEMBLY

(a) Support the engine assembly with an engine lifter so that it is stable shown in the illustration.

Text in Illustration

	<p>Attachment Placement Positions</p>
--	---------------------------------------

NOTICE:

- Set the engine assembly with transmission so that it is horizontal.
- Never attach the attachment and plate lift attachment to the oil pan section of the engine assembly.

15. REMOVE TRANSMISSION OIL COOLER HOSE

- (a) Loosen the 4 hose clamps and remove the 2 transmission oil cooler hoses.

NOTICE:

Use a container to catch any coolant which flows out of the transmission oil cooler hoses.

16. SEPARATE OIL COOLER TUBE

- (a) Remove the 2 bolts and separate the oil cooler tube.

17. REMOVE TRANSMISSION REVOLUTION SENSOR (NT) INFO

18. REMOVE FLOOR SHIFT GEAR SHIFTING ROD SUB-ASSEMBLY

- (a) While pushing the shift lock release button, move the shift lever to N.

- (b) Remove the clip, pin and the floor shift gear shifting rod sub-assembly from the transmission control shaft lever RH.

- (c) Remove the nut and disconnect the floor shift gear shifting rod sub-assembly.

19. REMOVE EXHAUST PIPE BRACKET

- (a) Remove the 2 bolts and the exhaust pipe bracket from the automatic transmission assembly.

20. SUPPORT AUTOMATIC TRANSMISSION ASSEMBLY

- (a) Support the automatic transmission assembly with a high transmission jack.

NOTICE:

To prevent damage to and deformation of the oil pan, never place a jack under the oil pan area of the automatic transmission assembly.

21. REMOVE REAR NO. 2 ENGINE MOUNTING INSULATOR

- (a) Remove the 4 bolts, 2 washers and 2 nuts and the rear No. 2 engine mounting insulator from the rear No. 1 engine mounting insulator.

Text in Illustration

	Bolt
	Nut

22. REMOVE REAR NO. 1 ENGINE MOUNTING INSULATOR

- (a) Remove the 4 bolts and the rear No. 1 engine mounting insulator from the automatic transmission assembly.

23. REMOVE AUTOMATIC TRANSMISSION ASSEMBLY

- (a) Remove the 2 bolts and 2 nuts and the automatic transmission assembly from the engine assembly.

Text in Illustration

	Bolt
	Nut

NOTICE:

- To prevent damage to the knock pins, do not pry between the automatic transmission assembly and the engine assembly.
- Do not allow the torque converter to fall off.

24. DISCONNECT WIRE HARNESS

- (a) Disconnect the park/neutral position switch connector, transmission wire connector and the transmission revolution sensor connector.

HINT:

Disengage the claw, press down the lever, and disconnect the transmission wire connector.

- (b) Disengage the 6 wire harness clamps and the wire harness from the automatic transmission assembly.

25. REMOVE OIL COOLER TUBE

- (a) Loosen the 4 hose clamps and remove the 2 oil cooler hoses.

NOTICE:

Use a container to catch any coolant which flows out of the oil cooler hoses.

- (b) Remove the 2 bolts and the oil cooler tube from the automatic transmission assembly.

26. REMOVE TORQUE CONVERTER ASSEMBLY

- (a) Remove the torque converter assembly from the automatic transmission assembly.

NOTICE:

Remove the torque converter assembly from the input shaft horizontally.

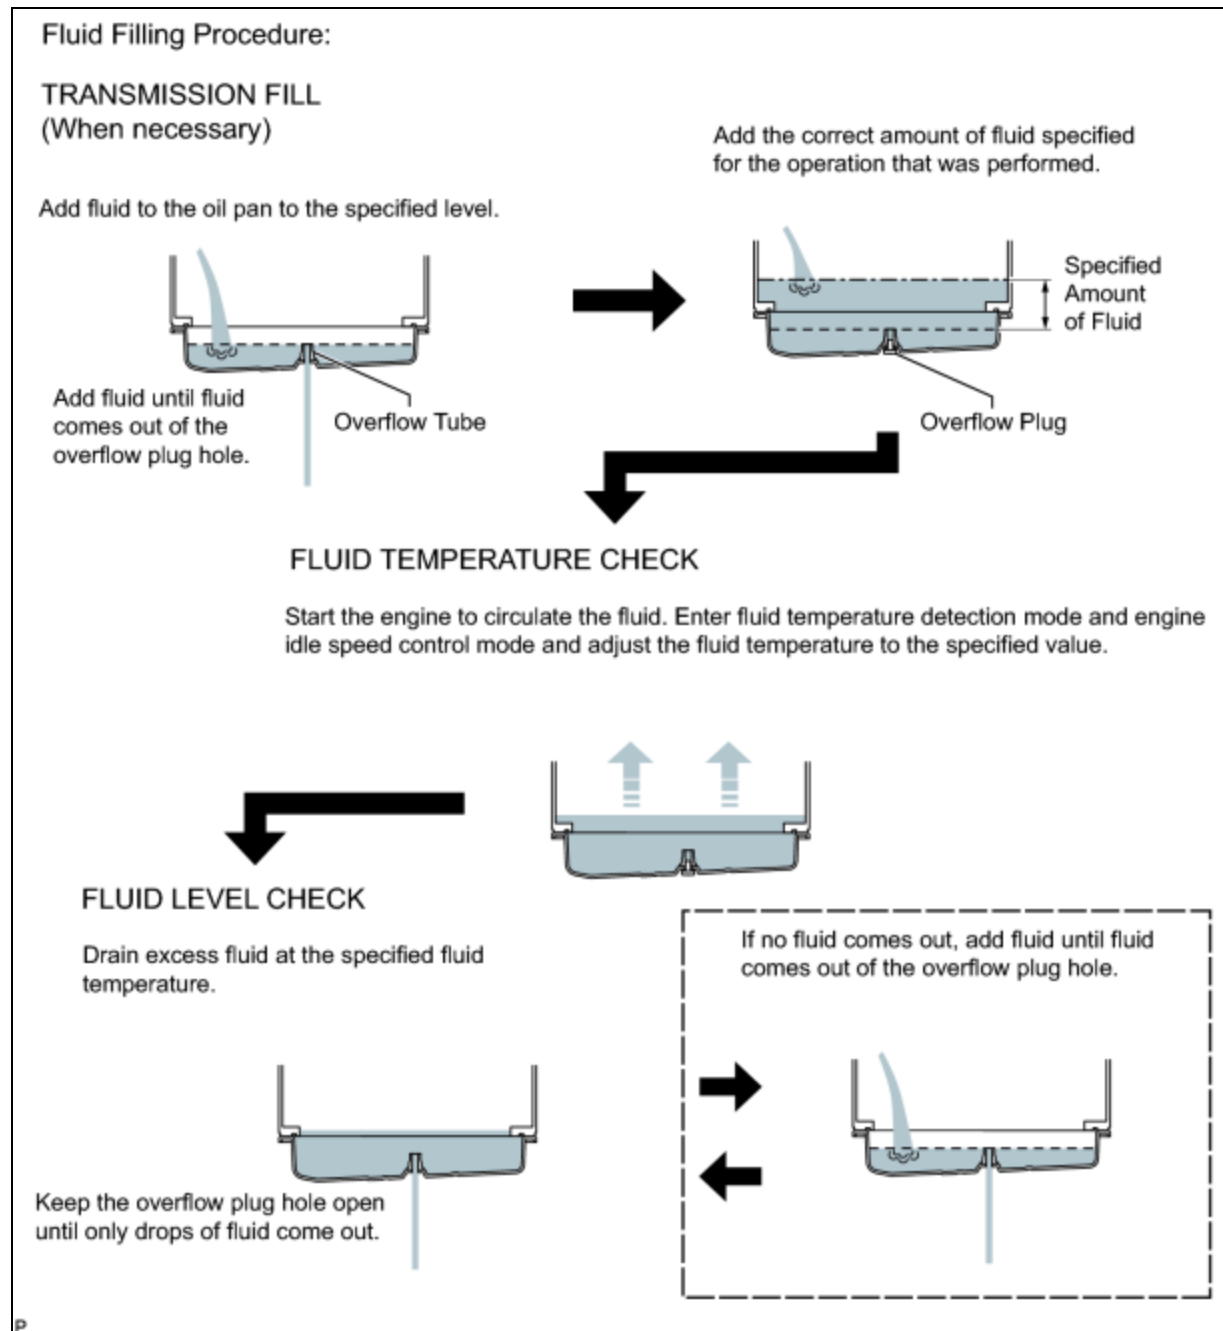

27. INSPECT TORQUE CONVERTER ASSEMBLY

INFO

Last Modified: 3-27-2012	6.4 N	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM0000013BU08VX
Title: TX6A AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSMISSION FLUID: ADJUSTMENT (2013 FR-S)		

ADJUSTMENT

NOTICE:

- This transmission requires Toyota Genuine ATF WS.
- After servicing the transmission, you must follow the ATF adjustment procedure.
- Maintain the vehicle in a horizontal position while adjusting the fluid level.

1. BEFORE FILLING TRANSMISSION

- When you have replaced the entire automatic transmission, automatic transmission oil pan, drain plug, transmission valve body and/or torque converter, proceed to the "TRANSMISSION FILL" procedures.
- When you have replaced the automatic transmission extension housing oil seal and/or repaired a fluid leak, proceed to the "FLUID TEMPERATURE CHECK" procedures.

2. FILL TRANSMISSION PAN WITH FLUID

- (a) Lift the vehicle.

NOTICE:

Set the vehicle on a lift so that the vehicle is kept level when it is lifted up (make sure that the tilt angle from the front to rear of the vehicle is within $\pm 1^\circ$).

- (b) Remove the No. 2 engine under cover INFO.

- (c) Remove the refill plug with O-ring, overflow plug and gasket.

Text in Illustration

*1	Refill Plug
*2	Overflow Plug
*a	Refill Hole

- (d) Fill the transmission through the refill hole until fluid begins to trickle out of the overflow tube.

Text in Illustration

*1	Overflow Tube
*a	Specified Fluid Level

- (e) Wait until the fluid flow slows and only drops come out.
 (f) Temporarily install the overflow plug and gasket.

HINT:

Reuse the old gasket. The overflow plug will be removed again to adjust the fluid level.

(g) Fill the transmission with the amount of fluid listed in the table below.

Reference Capacity:

PERFORMED REPAIR	FILL AMOUNT
Automatic transmission oil pan and drain plug removal/installation	2.0 liters (2.1 US qts, 1.8 Imp. qts)
Transmission valve body removal/installation	3.0 liters (3.2 US qts, 2.6 Imp. qts)
Torque converter removal/installation	4.5 liters (4.8 US qts, 4.0 Imp. qts)

HINT:

If you cannot fill the listed amount of fluid, perform the following:

(1) Temporarily install the refill plug with O-ring.

HINT:

Reuse the old O-ring. The refill plug will be removed again to adjust the fluid level.

(2) Start the engine and idle it.

NOTICE:

Check that electrical systems such as the air conditioning system, audio system and lighting system are off.

(3) Slowly move the shift lever from P to M. Then return the shift lever to P.

HINT:

Slowly move the shift lever to circulate the fluid through each part of the transmission.

(4) Wait for 30 seconds with the engine idling.

(5) Stop the engine.

(6) Remove the refill plug with O-ring.

(7) Fill the transmission with the remaining fluid until the amount in the table has been filled.

(h) Temporarily install the refill plug with O-ring.

HINT:

Reuse the old O-ring. The refill plug will be removed again to adjust the fluid level.

(i) Lower the vehicle.

3. FLUID TEMPERATURE CHECK

NOTICE:

The ATF temperature can be confirmed by using the Techstream.

(a) Turn the ignition switch OFF.

(b) Connect the Techstream to the DLC3.

(c) Turn the ignition switch to ON.

(d) Enter the following menus: Powertrain / ECT / Data List / A/T Oil Temperature 1.

(e) Check the ATF temperature.

NOTICE:

If the ATF temperature is higher than 43°C (109°F), turn the ignition switch OFF and wait until the fluid temperature drops to below 43°C (109°F).

4. FLUID LEVEL CHECK

CAUTION:

- It is necessary to change to temperature detection mode in order to idle the vehicle appropriately.
- The ATF temperature must be between 43 and 47°C (109 and 117°F) to accurately check the fluid level.

(a) When using the Techstream:

Enter the following menus: Powertrain / ECT / Active Test / Connect the TC and TE1.

Standard condition:

Indicator lights in the combination meter blink.

(b) When not using the Techstream:

Using SST, connect terminals 13 (TC) and 4 (CG) of the DLC3.

Text in Illustration

*a	Front view of DLC3
----	--------------------

SST: 09843-18040

Standard condition:

Indicator lights in the combination meter blink.

(c) Start the engine and idle it.

NOTICE:

Check that electrical systems such as the air conditioning system, audio system and lighting system are off.

(d) Slowly move the shift lever from P to M. Then return the shift lever to P.

HINT:

Slowly move the shift lever to circulate the fluid through each part of the transmission.

(e) Move the shift lever to D, and then quickly move it back and forth between N and D (once within 1.5 seconds) for at least 6 seconds. This will activate the fluid temperature detection mode.

Standard condition:

When switching to the oil temperature detecting mode, regardless of the shift position, the indicator lights [▲] and [▼] turn on for 2 seconds, and then go off.

(f) When using the Techstream:

Return the shift lever to P and terminate the Active Test on the Techstream.

(g) When not using the Techstream:

Return the shift lever to P and disconnect SST from the DLC3.

(h) While watching the state of the indicator lights [▲] and [▼], idle the engine to rise the oil temperature.

NOTICE:

If only the indicator light [▲] turns on or the indicator lights [▲] and [▼] turn on simultaneously, stop the operation. And then, wait until the fluid temperature is lowered and only the indicator light [▼] turns on in the oil temperature detecting mode.

(i) Allow the engine to idle until the fluid temperature reaches 43 to 47°C (109 to 117°F).

Indicator [D] Indication of ATF Temperature:

BELOW PROPER TEMPERATURE	PROPER TEMPERATURE	HIGHER THAN PROPER TEMPERATURE
Below 43°C (109°F)	43 to 47°C (109 to 117°F)	Higher than 47°C (117°F)
Indicator lights [▼] turns on	Indicator lights [▲] and [▼] turn on	Indicator lights [▲] turns on

(j) Remove the overflow plug and gasket with the engine idling.

Text in Illustration

*1	Overflow Tube
*a	Specified Fluid Level

(k) Wait until the overflow slows to a trickle.

NOTICE:

If the fluid does not overflow, perform the following:

- (1) Remove the refill plug with O-ring.
 - (2) Refill the transmission through the refill hole until fluid begins to trickle out of the overflow tube.
 - (3) Wait until the overflow slows to a trickle.
- (l) Install the overflow plug and a new gasket.

Torque: 20 N·m (204 kgf·cm, 15ft·lbf)

(m) Coat a new O-ring with ATF and install it to the refill plug.

(n) Install the refill plug with O-ring.

Torque: 39 N·m (400 kgf·cm, 29ft·lbf)

(o) Install the No. 2 engine under cover INFO.

(p) Lower the vehicle.

5. COMPLETE

(a) Turn the ignition switch OFF.

(b) When using the Techstream:

Disconnect the Techstream from the DLC3.

(c) Inspect for automatic transmission fluid leak.

Last Modified: 3-27-2012	6.4 A	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000004LXE008X
Title: TX6A AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSMISSION FLUID: REPLACEMENT (2013 FR-S)		

REPLACEMENT

1. REPLACE AUTOMATIC TRANSMISSION FLUID

- (a) Lift the vehicle. [*1]

NOTICE:

Set the vehicle on a lift so that the vehicle is kept level when it is lifted up (make sure that the tilt angle from the front to rear of the vehicle is within +/- 1°).

- (b) Remove the No. 2 engine under cover INFO.
- (c) Remove the drain plug and gasket, and drain the ATF. [*2]
- (d) Temporarily install the drain plug and gasket. [*3]

HINT:

Reuse the old gasket. The drain plug will be removed again to adjust the fluid level.

- (e) Remove the refill plug with O-ring, overflow plug and gasket. [*4]

Text in Illustration

*1	Refill Plug
*2	Overflow Plug
*a	Refill Hole

- (f) Add fluid to the refill hole until it flows out of the overflow tube. [*5]

Text in Illustration

*1	Overflow Tube
*a	Specified Fluid Level

NOTICE:

Use Toyota Genuine ATF WS.

(g) Wait until the fluid flow slows and only drops come out. [*6]

(h) Temporarily install the overflow plug and gasket. [*7]

HINT:

Reuse the old gasket. The overflow plug will be removed again to adjust the fluid level.

(i) Add fluid to the refill hole using the amount of fluid specified for removal and installation of the oil pan. [*8]

HINT:

Specified amount of fluid is 2.0 liters (2.1 US qts, 1.8 Imp. qts).

(j) Temporarily install the refill plug with O-ring. [*9]

HINT:

Reuse the old O-ring. The refill plug will be removed again to adjust the fluid level.

(k) Lower the vehicle. [*10]

(l) Start the engine. [*11]

NOTICE:

Make sure that the A/C switch is off.

(m) Slowly move the shift lever from P to M. Then return the shift lever to P. [*12]

HINT:

Slowly move the shift lever to circulate the fluid through each part of the transmission.

(n) Allow the engine to idle for 30 seconds to warm it up. [*13]

(o) Turn the ignition switch off. [*14]

(p) Repeat steps [*1] to [*14].

(q) Repeat steps [*1] to [*2].

(r) Install the drain plug and a new gasket.

Torque: 20 N·m (204 kgf·cm, 15ft·lbf)

(s) Repeat steps [*4] to [*10].

(t) Adjust the fluid level INFO.

(u) Install the No. 2 engine under cover INFO.

(v) Lower the vehicle.

(w) Operation complete.

Title: TX6A AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSMISSION SYSTEM: B1016: Shift Lock Circuit (2013 FR-S)		

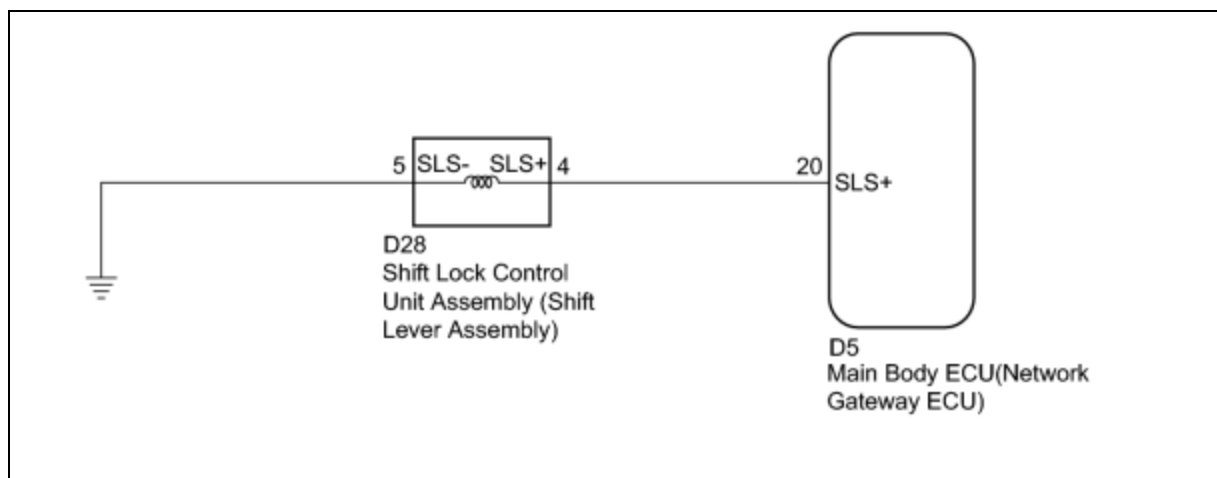

DTC	B1016	Shift Lock Circuit
------------	--------------	---------------------------

DESCRIPTION

When an IGN signal, P switch signal, and STP signal are input into the main body ECU (network gateway ECU), a signal is output to the shift lock control unit assembly.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B1016	<ol style="list-style-type: none"> 1. DIAGNOSIS CONDITION 2. MALFUNCTION STATUS 3. MALFUNCTION TIME 4. OTHER <ol style="list-style-type: none"> 1. Ignition switch is turned to ON 2. Shift lock circuit open, short to B+, or short to ground 3. For 3 seconds or more 4. 1-trip detection logic 	<ul style="list-style-type: none"> • Shift lock control unit assembly • Wire harness or connector • Main body ECU (Network Gateway ECU)

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	INSPECT SHIFT LOCK CONTROL UNIT ASSEMBLY
-----------	---

(a) Perform inspection of the shift lock control unit assembly  .

NG  **REPLACE SHIFT LOCK CONTROL UNIT ASSEMBLY**

OK

2.	CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - SHIFT LOCK CONTROL UNIT ASSEMBLY)
-----------	---

(a) Disconnect the D5 main body ECU (network gateway ECU) connector.

(b) Disconnect the D28 shift lock control unit assembly connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D5-20(SLS+) - D28-4(SLS+)	Always	Below 1 Ω
D5-20(SLS+) or D28-4(SLS+) - Body ground	Always	10 k Ω or higher

(d) Connect the D5 main body ECU (network gateway ECU) connector.

(e) Connect the D28 shift lock control unit assembly connector.

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3.	CHECK HARNESS AND CONNECTOR (SHIFT LOCK CONTROL UNIT ASSEMBLY - BODY GROUND)
-----------	---

(a) Disconnect the D28 shift lock control unit assembly connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D28-5(SLS-) - Body ground	Always	Below 1 Ω

(c) Connect the D28 shift lock control unit assembly connector.

NG ▶ REPAIR OR REPLACE HARNESS OR
CONNECTOR (SHIFT LOCK CONTROL UNIT
ASSEMBLY - BODY GROUND)

OK ▶ REPLACE MAIN BODY ECU (NETWORK
GATEWAY ECU)

Last Modified: 3-27-2012	6.4 D	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000W780NLX
Title: TX6A AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSMISSION SYSTEM: CHECK MODE PROCEDURE (2013 FR-S)		

CHECK MODE PROCEDURE

HINT:

Check mode has a higher sensitivity to malfunctions and can detect malfunction that normal mode cannot detect. Check mode can also detect all the malfunctions that normal mode can detect. In check mode, DTCs are detected with 1-trip detection logic.

1. DTC CHECK (CHECK MODE)

HINT:

Techstream only: Compared to the normal mode, the check mode is more sensitive for detecting malfunctions. Furthermore, the same diagnostic items which are detected in the normal mode can also be detected in the check mode.

(a) Procedure for Check Mode using the Techstream.

(1) Check the initial conditions.

- Battery positive voltage 11 V or more
- Throttle valve fully closed
- Transmission in the P or N position
- A/C switch is off

(2) Turn the ignition switch off.

(3) Connect the Techstream to the DLC3.

(4) Turn the ignition switch ON and turn the Techstream main switch on.

(5) Enter the following menus: Powertrain / ECT / Utility / Check Mode.

NOTICE:

All DTCs and freeze frame data recorded will be erased if: 1) Techstream is used to change the ECM from normal mode to check mode or vice-versa; or 2) during check mode, the ignition switch is turned from the on to on (ACC) or turned OFF.

(6) Start the engine (the MIL goes off after the engine starts).

(7) Perform "MONITOR DRIVE PATTERN" for the ECT test , or simulate the conditions of the malfunction described by the customer.

NOTICE:

Leave the ignition switch ON until you have checked the DTCs, etc.

(8) After simulating malfunction conditions, use the Techstream diagnosis selector to check the DTCs and freeze frame data, etc.

(9) When you use Techstream: Enter the following menus: Powertrain / ECT / Trouble Codes.

(10) After checking the DTC, inspect the applicable circuit.

(11)  to confirm the details of the DTCs.

2. DTC CLEAR

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch ON and turn the Techstream main switch on.

(c) When you use Techstream: Enter the following menus: Powertrain / ECT / Trouble Codes / Clear.

HINT:

When operating Techstream to erase the codes, the DTCs and freeze frame data will be erased. (See the Techstream instruction book for operating instructions.)

Last Modified: 3-27-2012	6.4 U	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000W7E0PNX
Title: TX6A AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSMISSION SYSTEM: DATA LIST / ACTIVE TEST (2013 FR-S)		

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

- (a) Warm up the engine.
- (b) Turn the ignition switch off.
- (c) Connect the Techstream to the DLC3.
- (d) Turn the ignition switch ON.
- (e) Turn the Techstream on.
- (f) Enter the following menus: "Powertrain / ECT / Data List" or "Body Electrical / Main Body / Data List".
- (g) According to the display on the Techstream, read the "Data List".

"Powertrain / ECT / Data List"

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Vehicle Speed	Vehicle speed / Min.: 0 km/h (0 mph), Max.: 255 km/h (158 mph)	Actual vehicle speed	-

2. ACTIVE TEST

HINT:

Using Techstream to perform Active Test allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Test early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Test.

- Warm up the engine.
- Turn the ignition switch off.
- Connect the Techstream to the DLC3.
- Turn the ignition switch on position.
- Turn the Techstream on.
- Enter the following menus: "Powertrain / ECT / Active Test" or "Body Electrical / Main Body / Active Test".
- According to the display on the Techstream, perform the "Active Test".

"Powertrain / ECT / Active Test"

Model Year: 2013	Model: FR-S	Doc ID: RM000000W710MMX
Title: TX6A AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSMISSION SYSTEM: DEFINITION OF TERMS (2013 FR-S)		

DEFINITION OF TERMS

TERM	DEFINITION
Monitor description	Description of what the TCM monitors and how it detects malfunctions (monitoring purpose and its details).
Related DTCs	Diagnostic code
Typical enabling condition	Preconditions that allow the TCM to detect malfunctions. With all preconditions satisfied, the TCM sets the DTC when the monitored value(s) exceeds the malfunction threshold(s).
Sequence of operation	The priority order that is applied to monitoring, if multiple sensors and components are used to detect the malfunction. While another sensor is being monitored, the next sensor or component will not be monitored until the previous monitoring has concluded.
Required sensor/components	The sensors and components that are used by the TCM to detect malfunctions.
Frequency of operation	The number of times that the TCM checks for malfunctions per driving cycle. "Once per driving cycle" means that the TCM detects malfunction only one time during a single driving cycle. "Continuous" means that the TCM detects malfunction every time when enabling condition is met.
Duration	The minimum time that the TCM must sense a continuous deviation in the monitored value(s) before setting a DTC. This timing begins after the "typical enabling conditions" are met.
Malfunction thresholds	Beyond this value, the TCM will conclude that there is a malfunction and set a DTC.
MIL operation	MIL illumination timing after a defect is detected. "Immediately" means that the TCM illuminates MIL the instant the TCM determines that there is a malfunction. "2 driving cycle" means that the TCM illuminates MIL if the same malfunction is detected again in the 2nd driving cycle.
Component operating range	Normal operation range of sensors and solenoids under normal driving conditions. Use these ranges as a reference. They cannot be used to judge if a sensor or solenoid is defective or not.

Title: TX6A AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSMISSION SYSTEM: DIAGNOSIS SYSTEM (2013 FR-S)		

DIAGNOSIS SYSTEM

1. DESCRIPTION

When troubleshooting OBD II (On-Board Diagnostics) vehicles, an OBD II scan tool (complying with SAE J1987) must be connected to the DLC3 (Data Link Connector 3) of the vehicle. Various data in the vehicle TCM (Transmission Control Module) can be then read.

OBD II regulations require that the vehicle on-board computer illuminate the MIL (Malfunction Indicator Lamp) on the instrument panel when the computer detects a malfunction in:

- a. The emission control system components.
- b. The powertrain control components (which affect vehicle emissions).
- c. The computer itself.

In addition, the applicable DTCs prescribed by SAE J2012 are recorded in the TCM memory. If the malfunction does not recur in 3 consecutive trips, the MIL turns off automatically but the DTCs remain recorded in the TCM memory.

To check for DTCs, connect the Techstream to the DLC3. The Techstream displays DTCs, freeze frame data, and a variety of the engine data. The DTCs and freeze frame data can be cleared with the Techstream. In order to enhance OBD function on vehicles and develop the off-board diagnosis system, Controller Area Network (CAN) communication is used in this system. CAN is a network which uses a pair of data transmission lines spanning multiple computers and sensors. It allows for high speed communications between the systems and simplification of the wire harness connections.

2. NORMAL MODE AND CHECK MODE

The diagnosis system operates in normal mode during normal vehicle use. In normal mode, 2 trip detection logic is used to ensure accurate detection of malfunctions. Check mode is also available as an option for technicians. In check mode, 1 trip detection logic is used for duplicating malfunction symptoms and increasing the system's ability to detect malfunctions, including intermittent problems (the Techstream only).

3. 2 TRIP DETECTION LOGIC

When a malfunction is first detected, the malfunction is temporarily stored in the TCM memory (1st trip). If the same malfunction is detected during the subsequent driving cycle, the MIL is illuminated (2nd trip).

4. FREEZE FRAME DATA

The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

5. DLC3 (Data Link Connector 3)

- (a) Check the DLC3  .

6. BATTERY VOLTAGE

Standard Voltage:
11 to 14 V

If voltage is below 11 V, replace or recharge the battery before proceeding to the next step.

7. MIL (Malfunction Indicator Lamp)

- (a) The MIL illuminates when the ignition switch is first turned on (the engine is not running).
(b) The MIL should turn off when the engine is started. If the MIL remains illuminated, the diagnosis system has detected a malfunction or abnormality in the system.

HINT:

If the MIL does not illuminate when the ignition switch is first turned on, check the MIL circuit  .

Title: TX6A AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSMISSION SYSTEM: DTC CHECK / CLEAR (2013 FR-S)		

DTC CHECK / CLEAR

NOTICE:

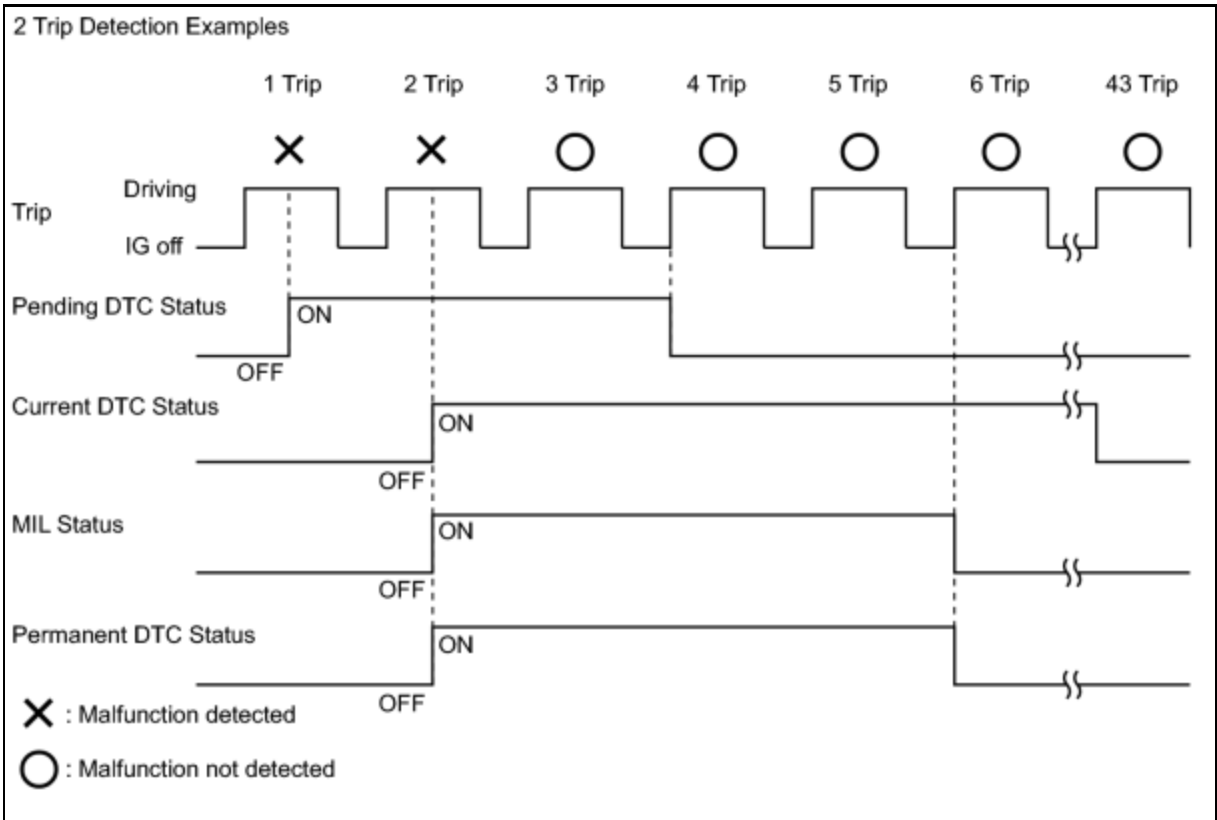

When the diagnosis system is changed from normal mode to check mode or vice versa, all DTCs and freeze frame data recorded in normal mode are cleared. Before changing modes, always check and make a note of DTCs and freeze frame data.

HINT:

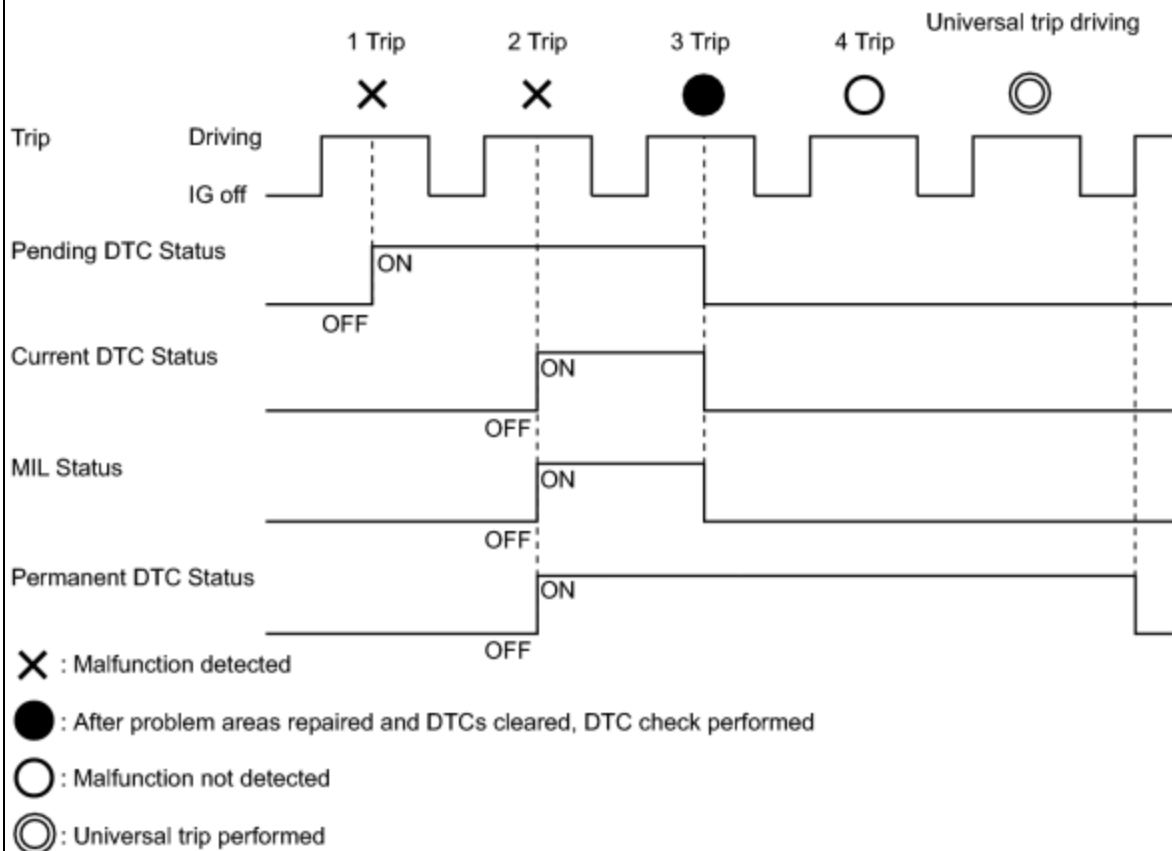

- DTCs which are stored in the ECM can be displayed on the Techstream. The Techstream can display the current, pending and permanent DTCs.
- If a malfunction is detected during the current driving cycle, current and permanent DTCs are stored.
- Some DTCs are not stored if the ECM does not detect the same malfunction again during a second consecutive driving cycle. However, such malfunctions, detected on only one occasion, are stored as pending DTCs.
- Current and pending DTCs can be cleared by using the Techstream. However, permanent DTCs cannot be cleared using either of these two methods.
- After clearing current DTCs using the Techstream, permanent DTCs can be cleared when the system is determined to be normal for the relevant DTCs and then the universal trip is performed.

2 Trip Detection Examples

Pending DTC	Store condition	Malfunction detected
	Clear condition	System determined to be normal or DTCs cleared using Techstream or Cable disconnected from negative battery terminal
Current DTC	Store condition	Malfunction detected (2nd trip)
	Clear condition	No malfunctions in 40 driving cycles or DTCs cleared using Techstream
Permanent DTC	Store condition	Malfunction detected (2nd trip)
	Clear condition	One trip is confirmed with no abnormality after no malfunction is detected in 3 consecutive driving cycles or After DTCs cleared using Techstream, malfunction not detected when universal trip driving performed
MIL	ON	Malfunction detected (2nd trip)
	OFF	One trip is confirmed with no abnormality after no malfunction is detected in 3 consecutive driving cycles or

2 Trip Detection Examples (Instance when DTCs were cleared midway through by using the Techstream)

1. CHECK DTC

- Connect the Techstream to the DLC3.
- Turn the ignition switch ON.
- Turn the Techstream on.
- Enter the following menus: Powertrain / ECT / Trouble Codes.
- Check the DTC(s) and freeze frame data, and then write them down.
- Check the details of the DTC(s) **INFO** .

2. CLEAR DTC (Pending and Current DTC)

- Connect the Techstream to the DLC3.
- Turn the ignition switch ON.
- Turn the Techstream on.
- Enter the following menus: Powertrain / ECT / Trouble Codes.
- Clear the DTCs.

3. CLEAR PERMANENT DTC

HINT:

Even if the following procedure is not performed, permanent DTCs are cleared if no malfunction are detected during 3 consecutive driving cycles.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Powertrain / ECT / Trouble Codes.
- (e) Check if permanent DTCs are stored.

HINT:

If permanent DTCs are not output, it is not necessary to continue this procedure.

- (f) Clear DTCs.
- (g) Perform the universal trip.
 1. Idle the engine for 30 seconds or more.
 2. Drive the vehicle at 40 km/h (25 mph) or more for a total of 5 minutes or more.

HINT:

- It is possible to complete the drive pattern even if the vehicle decelerates to less than 40 km/h (25 mph) during the driving cycle provided that the vehicle is driven at 40 km/h (25 mph) or more for a total of 5 minutes.
 - When accelerating through the gears, make sure the vehicle is driven so all gears are used in order and no gears are skipped.
3. Allow 10 minutes or more to elapse from the time the engine is started.
- (h) Turn the ignition switch off.
 - (i) Wait 15 seconds.
 - (j) Turn the ignition switch ON.
 - (k) Enter the following menus: Powertrain / ECT / Trouble Codes.
 - (l) Check that the permanent DTCs have been cleared.

HINT:

- If the permanent DTCs have not been cleared, perform the universal trip again.
- The permanent DTCs are cleared when the universal trip is completed.

Title: TX6A AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSMISSION SYSTEM: FAIL-SAFE CHART (2013 FR-S)		

FAIL-SAFE CHART

1. FAIL-SAFE CHART

This function minimizes the loss of the ECT functions when any malfunction occurs in each sensor or solenoid.

MALFUNCTION PART	FUNCTION
DTC P0717: Input Speed Sensor NT	During an input speed sensor malfunction, shift control is effected through the output speed sensor signal SP2. During an input speed sensor malfunction, up-shift to the 5th and 6th, AI-SHIFT *1 and flex lock-up clutch control are prohibited.
DTC P0722: Output Speed Sensor SP2	During an output speed sensor malfunction, shift control is effected through the input speed sensor signal NT. During an output speed sensor malfunction, up-shift to the 5th and 6th, AI-SHIFT *1 and flex lock-up clutch control are prohibited.
DTC P0711, P0712, P0713: ATF Temperature Sensor	During an ATF temperature sensor malfunction, up-shift to the 5th and 6th and flex lock-up clutch control are prohibited.
Shift Solenoid Valve S1, S2, S3, S4 and SR	The current to the failed solenoid valve is cut off and control is effected by operating the other solenoid valves. Shift control is effected depending on the failed solenoid as described in the table on the next page.
DTC P0776, P0961, P0962, P0963, P0965, P0966, P0967: Shift Solenoid Valve SL1 and SL2	During a solenoid valve SL1 or SL2 malfunction, up-shift to the 5th and 6th and flex lock-up clutch control are prohibited.
DTC P2757, P2758, P2762, P2763, P2764: Shift Solenoid Valve SLU	During a solenoid valve SLU malfunction, the current to the solenoid valve is stopped. This stops lock-up control and flex lock-up control, fuel economy decreases.
DTC P2714, P2719, P2720, P2721: Shift Solenoid Valve SLT	During a solenoid valve SLT malfunction, the current to the solenoid valve is stopped. This stops line pressure optimal control, the shift shock increases. However, shifting is effected through normal clutch pressure control.

*: AI (Artificial Intelligence) -SHIFT control

In addition to the switching of the shift pattern through the pattern select switch, the AI-SHIFT control enables the ECM to estimate the road conditions and the driver's intention in order to automatically select

the optimal shift pattern. As a result, a comfortable ride has been realized.

(a) Fail-safe operation for electronically malfunctioning shift solenoid valve (S1, S2, S3, S4 and SR):

HINT:

Fail-safe operation in the event of an electric system malfunction.

Fail safe function:

If either of the shift solenoid valve circuits has an open or short failure, the ECM turns the other shift solenoid "ON" and "OFF" in order to shift into the gear positions shown in the table below.

In case of a short circuit, the ECM stops sending current to the short circuited solenoid.

Even if starting the engine again in the fail-safe mode, the gear position remains in the same position.

Operating Condition of Shift Solenoid Valves

SHIFT LEVER POSITION OR SHIFT RANGE	GEAR POSITION	SHIFT SOLENOID VALVE								
		S1	S2	S3	S4	SR	SL1	SL2	SLU

M1	1st*	Off	On	On	Off	On	Off	Off	Off	

HINT:

*: Engine braking occurs

(b) Fail-safe operation for mechanically malfunction:

HINT:

Fail-safe operation in the event of a mechanical system malfunction.

Fail safe function:

The ECM controls the gear position as shown in the table below when malfunctions occur.

Fail-safe chart for mechanical malfunction:

DTC	CONDITION	GEAR *1					
		1st	2nd	3rd	4th	5th	6th
-	Normal	1st	2nd	3rd	4th	5th	6th
P0751	Shift solenoid valve S1: Stuck OFF malfunction	1st *2	2nd	↑	3rd	3rd	3rd
P0762	Shift solenoid S3: Stuck ON malfunction	1st	2nd	↑	3rd	3rd	3rd
P0766	Shift solenoid valve S4, Shift solenoid valve SL2 or Valve body (Brake control valve): Malfunction	1st	2nd	↑	3rd	3rd	3rd
P0781	Valve body (1-2 shift valve): Malfunction	1st *2	2nd	↑	3rd	3rd	3rd
P0729	Valve body (Sequence valve): Malfunction	1st	2nd	↑	4th	5th	5th

HINT:

- *1: Actual gear shift (gear position) under fail-safe operation
- *2: Under engine braking, downshifting to 1st or 2nd gear is prohibited.

Title: TX6A AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSMISSION SYSTEM: HYDRAULIC TEST (2013 FR-S)		

HYDRAULIC TEST

1. PERFORM HYDRAULIC TEST

- (a) Measure the line pressure.

Text in Illustration

*1	SST	*2	Test Plug
----	-----	----	-----------

NOTICE:

- Perform the test at the normal operating ATF (Automatic Transmission Fluid) temperature: 60 to 90°C (140 to 194°F)
- The line pressure test should always be carried out in pairs. One technician should observe the conditions of wheels or wheel stoppers outside the vehicle while the other is performing the test.
- Be careful to prevent SST hose from interfering with the exhaust pipe.
- This Check must be conducted after checking and adjusting engine.
- Perform under condition that A/C is OFF.
- When conducting stall test, do not continue more than 5 seconds.

(1) Warm up the ATF (Automatic Transmission Fluid).

(2) Lift the vehicle up.

(3) Remove the test plug on the transmission case center right side and connect SST.

SST: 09992-00095

09992-00231

09992-00271

- (4) Lower the vehicle.
- (5) Fully apply the parking brake and check the 4 wheels.
- (6) Start the engine and check idling speed.
- (7) Keep your left foot pressing firmly on the brake pedal and shift into D position.
- (8) Measure the line pressure when the engine is idling.
- (9) Depress the accelerator pedal all the way down. Quickly read the highest line pressure when engine speed reaches stall speed.
- (10) In the same manner, do the test in R position.

Specified line pressure:

CONDITION	D POSITION KPA (KGF / CM ² , PSI)	R POSITION KPA (KGF / CM ² , PSI)
Idling	350 to 430 kPa (3.6 to 4.4 kgf/cm ² , 51 to 62 psi)	760 to 950 kPa (7.7 to 9.7 kgf/cm ² , 110 to 138 psi)
Stall test	1200 to 1380 kPa (12.5 to 14.0 kgf/cm ² , 174 to 200 psi)	1410 to 1630 kPa (14.4 to 16.6 kgf/cm ² , 204 to 236 psi)

Evaluation:

PROBLEM	POSSIBLE CAUSE
If the measured values at all position are higher	<ul style="list-style-type: none"> • Shift solenoid valve SLT defective • Regulator valve defective
If the measured values at all position are lower	<ul style="list-style-type: none"> • Shift solenoid valve SLT defective • Regulator valve defective • Oil pump defective
If pressure is low in the D position only	<ul style="list-style-type: none"> • D position circuit fluid leak • Clutch No.1 (C₁) defective
If pressure is low in the R position only	<ul style="list-style-type: none"> • R position circuit fluid leak • Clutch No.3 (C₃) defective • Brake No.4 (B₄) defective

Title: TX6A AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSMISSION SYSTEM: INITIALIZATION (2013 FR-S)		

INITIALIZATION

1. RESET MEMORY

NOTICE:

- Perform the RESET MEMORY (AT initialization) when replacing the automatic transmission assembly, valve body, engine assembly or TCM.
- The RESET MEMORY can be performed only with the Techstream.

HINT:

The TCM memorizes the condition that the ECT controls the automatic transmission assembly and engine assembly according to those characteristics. Therefore, when the automatic transmission assembly, valve body, transmission wire, engine assembly, or TCM has been replaced, it is necessary to reset the memory so that the TCM can memorize the new information.

Reset procedure is as follows.

- Turn the ignition switch off.
- Connect the Techstream to the DLC3.
- Turn the ignition switch to ON position.
- Turn the Techstream main switch on.
- Enter the following menu: Powertrain / ECT / Utility / Reset Memory. Then, press "Next".
- Perform the reset memory procedure from the main menu.

CAUTION:

After performing the RESET MEMORY, be sure to perform the ROAD TEST  described earlier.

HINT:

The TCM is learned by performing the ROAD TEST.

Last Modified: 3-27-2012	6.4 D	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000W7C0Q5X
Title: TX6A AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSMISSION SYSTEM: MANUAL SHIFTING TEST (2013 FR-S)		

MANUAL SHIFTING TEST

1. PERFORM MANUAL SHIFTING TEST

HINT:

- With this test, it can be determined whether the trouble occurs in the electrical circuit or is a mechanical problem in the transmission.
- If any abnormalities are found in the following test, the problem is in the transmission itself.

(a) Disconnect the connector of the transmission wire.

(b) Drive with the transmission wire disconnected.

Shifting the shift lever to the D position to check whether the shifting condition changes the table below.

SHIFT POSITION	SHIFTING CONDITION
D	No Shift (Not Change)

HINT:

When driving with the transmission wire disconnected, the gear position will be as follows:

- When the shift lever is in the D position, the gear is held in the 4th position.
- When the shift lever is in the R or the P position, the gear is also in the R or the P position respectively.

(c) Connect the connector of the transmission wire.

(d) Clear the DTC  .

Last Modified: 3-27-2012	6.4 D	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000W7AONMX
Title: TX6A AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSMISSION SYSTEM: MECHANICAL SYSTEM TESTS (2013 FR-S)		

MECHANICAL SYSTEM TESTS

1. PERFORM MECHANICAL SYSTEM TESTS

(a) Measure the stall speed.

The object of this test is to check the overall performance of the transmission and engine by measuring the stall speeds in the D position.

NOTICE:

- Driving test should be done on a paved road (a nonskid road).
- Perform the test at the normal operating ATF (Automatic Transmission Fluid) temperature 60 to 90°C (140 to 194°F).
- Do not continuously run this test for longer than 5 seconds.
- To ensure safety, do this test in a wide, clear level area which provides good traction.
- The stall test should always be carried out in pairs. One technician should observe the conditions of wheels or wheel stoppers outside the vehicle while the other is doing the test.
- Be sure to perform a road test after inspecting and adjusting the engine.

(1) Check the 4 wheels.

(2) Connect the Techstream to the DLC3.

(3) Fully apply the parking brake.

(4) Keep your left foot pressed firmly on the brake pedal.

(5) Start the engine.

(6) Shift into the D position. Press all the way down on the accelerator pedal with your right foot.

(7) Quickly read the stall speed at this time.

Stall speed:

2350 +- 250 rpm

Evaluation:

PROBLEM	POSSIBLE CAUSE
(a) Stall engine speed is low in D position	<ul style="list-style-type: none"> • Engine power output may be insufficient • Stator one-way clutch not operating properly <p>HINT:</p> <p>If the value is less than the specified value by 600 rpm or more, the torque converter could be faulty.</p>
(b) Stall engine speed is high in D position	<ul style="list-style-type: none"> • Line pressure is too low • Clutch No. 1 (C₁) slipping • One-way clutch No. 3 (F₃) not operating properly • One-way clutch No. 4 (F₄) not operating properly • Improper fluid level

(b) Measure the time lag.

(1) When the shift lever is shifted while the engine is idling, there will be a certain time lapse or lag before the shock can be felt. This is used for checking the condition of the clutch, and brake.

NOTICE:

- Be sure to perform a road test after inspecting and adjusting the engine.
- Fully apply the parking brake and chock the 4 wheels.
- Perform the test at the normal operating ATF (Automatic Transmission Fluid) temperature: 60 to 90°C (140 to 194°F).
- Be sure to allow 1 minute interval between tests.
- Perform the test three times, and measure the time lags. Calculate the average value of the three time lags.

(2) Connect the Techstream to the DLC3.

(3) Fully apply the parking brake.

(4) Start and warm up the engine and check idle speed.

Idle speed:

approx. 700 rpm (In N position and A/C OFF)

(5) Shift the lever from N to D position. Using a stop watch, measure the time from when the lever is shifted until the shock is felt.

Time lag:

N → D less than 1.2 seconds

(6) In the same way, measure the time lag for N → R.

Time lag:

N → R less than 1.5 seconds

Evaluation (If N → D or N → R time lag is longer than the specified):

PROBLEM	POSSIBLE CAUSE
N → D time lag is longer	<ul style="list-style-type: none">• Line pressure is too low• Clutch No.1 (C₁) worn• One-way clutch No. 3 (F₃) not operating properly• One-way clutch No. 4 (F₄) not operating properly
N → R time lag is longer	<ul style="list-style-type: none">• Line pressure is too low• Clutch No. 3 (C₃) worn• Brake No. 4 (B₄) worn• One-way clutch No. 1 (F₁) not operating properly

Title: TX6A AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSMISSION SYSTEM: MONITOR DRIVE PATTERN (2013 FR-S)		

MONITOR DRIVE PATTERN

1. MONITOR DRIVE PATTERN FOR ECT TEST

- (a) Perform this drive pattern as one method to simulate the detection conditions of the ECT malfunctions. (The DTCs may not be detected due the actual driving conditions. And some codes may not be detected through this drive pattern.)

HINT:

Preparation for driving

- Warm up the engine sufficiently. (Engine coolant temperature is 60°C (140°F) or higher)

Notice in driving

- Drive the vehicle through all gears.

Stop → 1st → 2nd → 3rd → 4th → 5th → 6th → 6th (lock-up ON).

- Perform engine brake test in the M position.

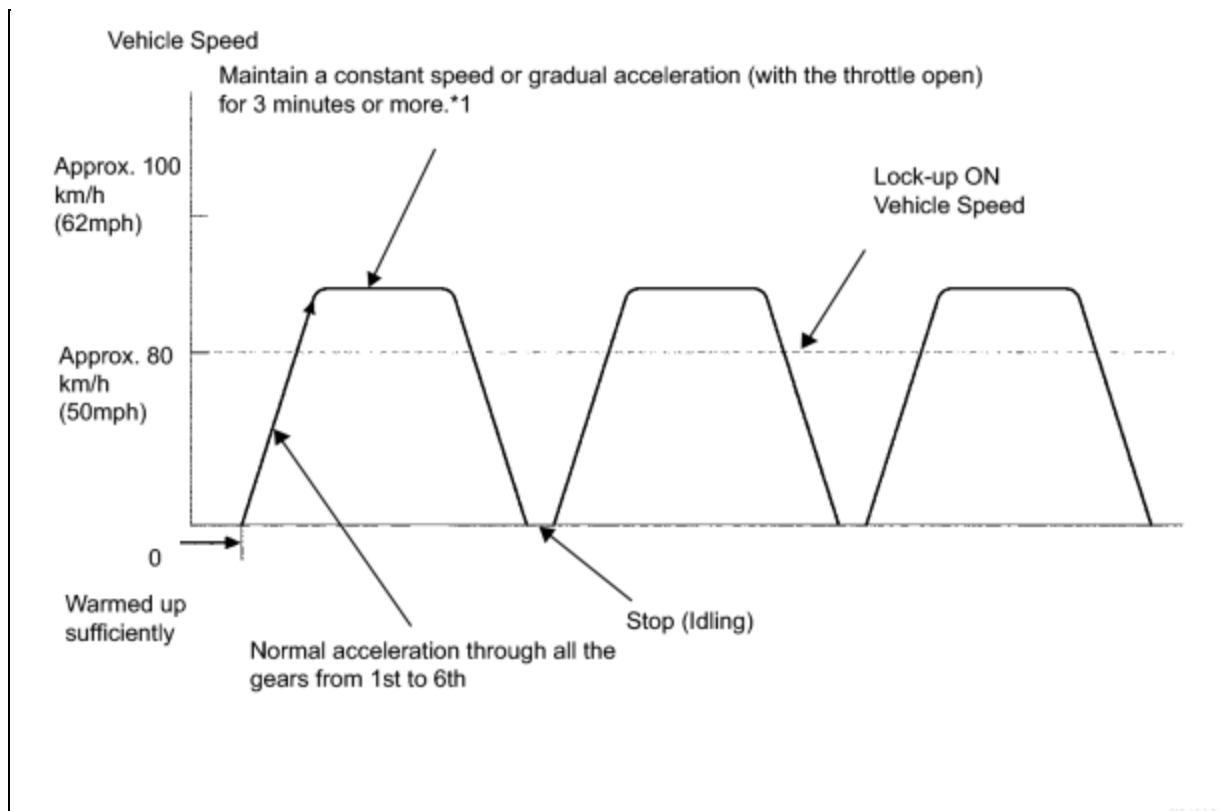

While driving in the 6(M) position and 6th gear lock-up, shift into the "-" position and down-shift from 6th to 5th, 5th to 4th, 4th to 3rd, 3rd to 2nd, 2nd to 1st.

Check that the engine brake performs properly whenever down-shift takes place.

- Repeat the above driving pattern three times or more.

NOTICE:

- The monitor status can be checked using Techstream. When using Techstream, monitor status can be found in the "Powertrain / ECT / Data List".
- In the event that the drive pattern must be interrupted (possibly due to traffic conditions or other factors), the drive pattern can be resumed and, in most cases, the monitor can be completed.
- Perform this drive pattern on a level road as much as possible and strictly observe the posted speed limits and traffic laws while driving.

HINT:

*1: Drive at such a speed in the uppermost gear, to engage lock-up. The vehicle can be driven at a speed lower than that in the above diagram under the lock-up condition.

Title: TX6A AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSMISSION SYSTEM: P0707,P0708: Transmission Range Sensor "A" Circuit Low (2013 FR-S)		

DTC	P0707	Transmission Range Sensor "A" Circuit Low
------------	--------------	--

DTC	P0708	Transmission Range Sensor "A" Circuit High
------------	--------------	---

DESCRIPTION

A signal from the park/neutral position switch assembly input into the TCM detects the shift position. The engine can only be started when the shift lever is in P or N.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
	<ol style="list-style-type: none"> 1. DIAGNOSIS CONDITION 2. MALFUNCTION STATUS 3. MALFUNCTION TIME 4. OTHER 	
P0707	<ol style="list-style-type: none"> 1. The output speed sensor SP2 is normal, not learning control prohibited status, and the vehicle speed is 30 km/h or more Not learning control prohibited status 2. All contacts for shift position P, R, N, and D are off 3. Continues for 30 sec. 4. 2-trip detection logic 	<ul style="list-style-type: none"> • Open or short in park/neutral position switch circuit • Park/neutral position switch • TCM
P0708	<ol style="list-style-type: none"> 1. Not learning control prohibited status 2. 2 or more shift positions are detected at the same time 3. Continues for 10 sec. 4. 1-trip detection logic 	<ul style="list-style-type: none"> • Open or short in park/neutral position switch circuit • Park/neutral position switch • TCM

MONITOR DESCRIPTION

These DTCs indicate a problem with the park/neutral position switch and the wire harness in the park/neutral position switch circuit.

The park/neutral position switch detects the shift lever position and sends a signal to the TCM.

For security, the park/neutral position switch detects the shift lever position so that engine can be started only when the shift lever is in the P or N position.

The park/neutral position switch sends a signal to the TCM according to the shift position (P, R, N, D, or M). The TCM determines that there is a problem with the switch or related parts if it receives more than 1

position signal simultaneously. The TCM will turn on the MIL and store the DTC.

MONITOR STRATEGY

Related DTCs	P0707: Range switch (Open/GND Short) P0708: Range switch (Battery Short)

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

Perform the universal trip to clear permanent DTCs INFO.

1. DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

- (a) Warm up the engine.
- (b) Turn the ignition switch off.
- (c) Connect the Techstream to the DLC3.
- (d) Turn the ignition switch on position.
- (e) Turn the Techstream on.
- (f) Enter the following menus: Powertrain / ECT / Data List.
- (g) According to the display on the Techstream, read the "Data List".

ITEM	MEASUREMENT ITEM/ RANGE (DISPLAY)	NORMAL CONDITION	DIAGNOSTIC NOTE

Shift SW Status (R Range)	PNP switch status/ ON or OFF	Shift lever position is; R: ON Except R: OFF	When shift lever position displayed on the Techstream differs from actual position, adjustment of PNP switch or shift cable may be incorrect
Shift SW Status (P Range)	PNP switch status/ ON or OFF	Shift lever position is; P: ON Except P: OFF	↑
Shift SW Status (N Range)	PNP switch status/ ON or OFF	Shift lever position is; N: ON Except N: OFF	↑
Shift SW Status (D Range)	PNP switch status/ ON or OFF	Shift lever position is; D and M: ON Except D and M: OFF	↑
Sports Mode Selection SW	Sport mode select switch status/ ON or OFF	Shift lever position is; M, "+" and "-": ON Except M, "+" and "- ": OFF	-

NOTICE:

Inspect the fuses circuits related to this system before performing the following inspection procedure.

PROCEDURE

1.	INSPECT PARK/NEUTRAL POSITION SWITCH ASSEMBLY
-----------	--

- (a) Disconnect the A19 TCM connector.
- (b) Measure resistance according to the value(s) in the table below when the shift lever is moved to each position.

Standard resistance:

TESTER CONNECTION	SHIFT POSITION	SPECIFIED CONDITION
A19-3(P) - L2-2(RB)	P	Below 1 Ω
	Except P	10 kΩ or higher
A19-10(R) - L2-2(RB)	R	Below 1 Ω
	Except R	10 kΩ or higher

A19-21(N) - L2-2(RB)	N	Below 1 Ω
	Except N	10 k Ω or higher
A19-9(D) - L2-2(RB)	D	Below 1 Ω
	Except D	10 k Ω or higher

(c) Connect the A19 TCM connector.

NG  **CHECK HARNESS AND CONNECTOR (PARK/NEUTRAL POSITION SWITCH - TCM)**

OK

2.	CHECK PARK / NEUTRAL POSITION SWITCH
-----------	---

(a) Disconnect the L2 park/neutral position switch connector.

(b) Turn the ignition switch on.

(c) Measure the voltage according to the value(s) in the table below.

Standard voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
L2-2(RB) - Body ground	Ignition Switch ON	11 to 14 V

(d) Connect the L2 park/neutral position switch connector.

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3.	REPLACE TCM
-----------	--------------------

(a) Replace the TCM  .

NEXT  **PERFORM THE RESET MEMORY**

4.	CHECK HARNESS AND CONNECTOR (PARK/NEUTRAL POSITION SWITCH - TCM)
-----------	---

- (a) Disconnect the A19 TCM connector.
- (b) Disconnect the L2 park/neutral position switch connector.
- (c) Measure the resistance according to the value(s) in the table below.

Standard resistance:

TESTER CONNECTION	SHIFT POSITION	SPECIFIED CONDITION
A19-3(P) - L2-6(PL)	Always	Below 1 Ω
A19-10(R) - L2-1(RL)	Always	Below 1 Ω
A19-21(N) - L2-9(NL)	Always	Below 1 Ω
A19-9(D) - L2-7(DL)	Always	Below 1 Ω
A19-3(P) - Body ground()	Always	10 k Ω or higher
A19-10(R) - Body ground	Always	10 k Ω or higher
A19-21(N) - Body ground	Always	10 k Ω or higher
A19-9(D) - Body ground	Always	10 k Ω or higher

- (d) Measure the voltage according to the value(s) in the table below.

Standard voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
A19-3(P) - Body ground	Ignition Switch ON	Below 1 V
A19-10(R) - Body ground	Ignition Switch ON	Below 1 V
A19-21(N) - Body ground	Ignition Switch ON	Below 1 V
A19-9(D) - Body ground	Ignition Switch ON	Below 1 V

- (e) Connect the TCM connector.
- (f) Connect the L2 park/neutral position switch connector.

NG ► **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ► **REPLACE PARK/NEUTRAL POSITION SWITCH ASSEMBLY**

Last Modified: 3-27-2012	6.4 C	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000W7Z0K0X
Title: TX6A AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSMISSION SYSTEM: P0711: Transmission Fluid Temperature Sensor "A" Performance (2013 FR-S)		

DTC	P0711	Transmission Fluid Temperature Sensor "A" Performance
------------	--------------	--

DESCRIPTION

The oil temperature sensor within the valve body detects the oil temperature within the transmission hydraulic control circuit, and inputs into the TCM a signal corresponding to the oil temperature.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
	<ol style="list-style-type: none"> 1. DIAGNOSIS CONDITION 2. MALFUNCTION STATUS 3. MALFUNCTION TIME 4. OTHER 	
P0711	<ol style="list-style-type: none"> 1. Detects that the park/neutral position switch assembly is normal, the shift position sensor is in D, the ATF temperature with ignition switch ON is less than 20°C (68°F) , the present ATF temperature is less than 20°C (68°F) , and the vehicle speed is 40 km/h or more 2. If any of the following conditions are met: <ol style="list-style-type: none"> a. While diagnostic conditions are satisfied, the variation in oil temperature sensor input voltage is 0.05V or less after the ignition switch is turned to on b. While diagnostic conditions are satisfied, the variation in oil temperature sensor input voltage is 0.05V or less 3. Continues for 600 sec. 4. 2-trip detection logic 	<ul style="list-style-type: none"> • Transmission wire (ATF temperature sensor) • Harness and connector

MONITOR DESCRIPTION

This DTC indicates that there is a problem with output from the automatic transmission fluid (ATF) temperature sensor and that the sensor itself is defective. The ATF temperature sensor converts the ATF temperature to an electrical resistance value. Based on the resistance, the TCM determines the ATF temperature and detects an opens or shorts in the ATF temperature circuit or a fault of the ATF temperature sensor.

After running the vehicle for a certain period, the ATF temperature should increase. If the ATF temperature is below 20°C (68°F) after running the vehicle for a certain period, the TCM interprets this as a fault, and turns on the MIL.

MONITOR STRATEGY

Related DTCs	P0711: ATF Temperature Sensor (Stuck)
--------------	---------------------------------------

Required sensors/Components	ATF temperature sensor
Frequency of operation	Continuous
Duration	10 min.
MIL operation	2 driving cycles

WIRING DIAGRAM

INSPECTION PROCEDURE

1. DATA LIST

NOTICE:

- Perform the universal trip to clear permanent DTCs INFO.
- In the table below, the value listed under "Normal Condition" are reference values.

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

- Warm up the engine.
- Turn the ignition switch off.
- Connect the Techstream to the DLC3.
- Turn the ignition switch on position.
- Turn the Techstream on.
- Enter the following menus: Powertrain / ECT / Data List.
- According to the display on the Techstream, read the "Data List".

ITEM	MEASUREMENT ITEM/ RANGE (DISPLAY)	NORMAL CONDITION
A/T Oil Temperature 1	ATF Temp. Sensor Value/ min.: -40°C (-40°F) max.: 215°C (419°F)	<ul style="list-style-type: none"> • After Stall Test; Approx. 80°C (176°F) • Equal to ambient temperature when cold soak

HINT:

When DTC P0712 is output and Techstream output is -40°C (-40°F), there is a short circuit.

When DTC P0713 is output and Techstream output is 171°C (340°F), there is an open circuit.

TEMPERATURE DISPLAYED	MALFUNCTION
171°C (340°F)	Open circuit
-40°C (-40°F) or more	Short circuit

PROCEDURE

1.	CHECK OTHER DTCS OUTPUT (IN ADDITION TO DTC P0711)
-----------	---

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch on position and push the Techstream main switch ON.
- (c) When you use Techstream:
Enter the following menus: Powertrain / ECT / Trouble Codes.
- (d) Read the DTCs using the Techstream.

Result:

DISPLAY (DTC OUTPUT)	PROCEED TO
Only "P0711" is output	A
"P0711" and other DTCs	B

HINT:

If any other codes besides "P0711" are output, perform troubleshooting for those DTCs first.

B ► GO TO DTC CHART

A

2.	CHECK TRANSMISSION FLUID LEVEL
-----------	---------------------------------------

OK:
Automatic transmission fluid level is correct.

NG ► ADD FLUID

OK ► REPLACE TRANSMISSION WIRE

Last Modified: 3-27-2012	6.4 C	From: 201203

Title: TX6A AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSMISSION SYSTEM: P0712,P0713: Transmission Fluid Temperature Sensor "A" Circuit Low Input (2013 FR-S)		

DTC	P0712	Transmission Fluid Temperature Sensor "A" Circuit Low Input
------------	--------------	--

DTC	P0713	Transmission Fluid Temperature Sensor "A" Circuit High Input
------------	--------------	---

DESCRIPTION

The oil temperature sensor within the valve body detects the oil temperature within the transmission hydraulic control circuit, and inputs into the TCM a signal corresponding to the oil temperature.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
	<ol style="list-style-type: none"> 1. DIAGNOSIS CONDITION 2. MALFUNCTION STATUS 3. MALFUNCTION TIME 4. OTHER 	
P0712	<ol style="list-style-type: none"> 1. Not learning control prohibited status 2. The oil temperature sensor input voltage is 0.05 V or less 3. Detects a malfunction that continues for 10 seconds 6 times consecutively 4. 1-trip detection logic 	<ul style="list-style-type: none"> • Transmission wire (ATF temperature sensor) • Harness and connector • TCM
	<ol style="list-style-type: none"> 1. Park/neutral position switch assembly is normal, 	

P0713	and shift lever is in D or R for 1 min. or more	<ul style="list-style-type: none"> • Transmission wire (ATF temperature sensor) • Harness and connector • TCM
	Not learning control prohibited status	
	2. The oil temperature sensor input voltage is 4.94 V or more	
	3. Detects a malfunction that continues for 1 second 12 times consecutively	
	4. 1-trip detection logic	

MONITOR DESCRIPTION

These DTCs indicate an open or short in the automatic transmission fluid (ATF) temperature sensor circuit. The automatic transmission fluid (ATF) temperature sensor converts ATF temperature to an electrical resistance value. Based on the resistance, the TCM determines the ATF temperature, and the TCM detects an open or short in the ATF temperature circuit. If the resistance value of the ATF temperature is less than 0.049 V or more than 4.932 V, the TCM interprets this as a fault in the ATF sensor or wiring. The TCM will turn on the MIL and store the DTC.

MONITOR STRATEGY

Title: TX6A AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSMISSION SYSTEM: P0717: Turbine Speed Sensor Circuit No Signal (2013 FR-S)		

DTC	P0717	Turbine Speed Sensor Circuit No Signal
------------	--------------	---

DESCRIPTION

The input speed sensor NT inputs signal into the TCM as a signal of the input axis revolutions.

The TCM carries out shift timing control based upon signals from the input speed sensor NT and the output speed sensor SP2.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
	<ol style="list-style-type: none"> 1. DIAGNOSIS CONDITION 2. MALFUNCTION STATUS 3. MALFUNCTION TIME 4. OTHER 	
P0717	<ol style="list-style-type: none"> 1. The shift solenoid valve (S1, S2, S3, S4, SR, SL1, SL2, SLT), output speed sensor SP2 and shift position sensor are normal. While the vehicle is driven with shift lever in D, when the input speed sensor NT revolutions calculated from the shift solenoid valve SP2 are 550 rpm or more. (2.5 seconds or more have elapsed after moving the shift lever to D. However, if there is a malfunction with the oil temperature sensor, or the oil temperature is 20°C (68°F) or less, then 10 seconds or more after moving the shift lever to D) 2. While the shift solenoid valve SP2 outputs 12 pulses, the input speed sensor NT does not detect even 1 pulse. 3. Detected 500 times consecutively. 4. 1-trip detection logic 	<ul style="list-style-type: none"> • Input speed sensor NT • TCM • Harness and connector

MONITOR DESCRIPTION

This DTC indicates that pulse is not output from the input speed sensor NT or is output only little. The input speed sensor NT terminal of the TCM detects the revolving signal from input speed sensor NT (input RPM). The TCM outputs a gearshift signal comparing the input speed sensor NT with the output speed sensor SP2.

While the vehicle is operating in the shift position of D, the output shaft revolution is 550rpm or more ^{*}, the TCM detects the trouble, illuminates the MIL and stores the DTC.

*: The engine speed is 400 rpm or more.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

Perform the universal trip to clear permanent DTCs  .

1. DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

- (a) Warm up the engine.
- (b) Turn the ignition switch OFF.
- (c) Connect the Techstream to the DLC3.
- (d) Turn the ignition switch to ON position.
- (e) Turn the Techstream on.
- (f) Enter the following menus: Powertrain / ECT / Data List.
- (g) According to the display on the Techstream, read the "Data List".

ITEM	MEASUREMENT ITEM/ RANGE (DISPLAY)	NORMAL CONDITION
SPD (SP2)	Output shaft speed/ Min.: 0 km/h (0 mph) Max.: 255 km/h (158 mph)	HINT: Vehicle stopped: 0 km/h (0 mph) (output shaft speed is equal to vehicle speed)

HINT:

- SPD (SP2) is always 0 while driving:
 - Open or short in the sensor or circuit.
- SPD (SP2) is always more than 0 and less than 300 rpm while driving the vehicle at 50 km/h (31 mph) or more:
 - Sensor trouble, improper installation, or intermittent connection trouble of the circuit.

PROCEDURE

1. INSPECT SPEED SENSOR INSTALLATION

(a) Check the output speed sensor SP2 installation.

OK:

The installation bolt is tightened properly and there is no clearance between the sensor and transmission case.

NG ► **SECURELY INSTALL SPEED SENSOR OR REPLACE SPEED SENSOR**

OK

2. INSPECT OUTPUT SPEED SENSOR SP2

- Disconnect the speed sensor connector.
- Perform inspection of the output speed sensor SP2 INFO.
- Connect the speed sensor connector.

REPLACE OUTPUT SPEED SENSOR SP2

NG 

OK

3. CHECK HARNESS AND CONNECTOR (OUTPUT SPEED SENSOR SP2 - TCM)

- (a) Disconnect the A19 TCM connector.
- (b) Disconnect the L3 output speed sensor SP2 connector.
- (c) Measure the resistance according to the value(s) in the table below.

Standard resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L3-1(SP2+) - A19-18(SP2+)	Always	Below 1 Ω
L3-2(SP2-) - A19-7(SP2-)	Always	Below 1 Ω
A19-18(SP2+) - Body ground	Always	10 k Ω or higher
A19-7(SP2-) - Body ground	Always	10 k Ω or higher

- (d) Connect the A19 TCM connector.
- (e) Connect the L3 output speed sensor SP2 connector.

**REPAIR OR REPLACE HARNESS OR
NG  CONNECTOR**

OK

4. REPLACE TCM

- (a) Replace the TCM  .

NEXT  PERFORM THE RESET MEMORY

Last Modified: 3-27-2012	6.4 C	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000W8I05FX
Title: TX6A AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSMISSION SYSTEM: P0729: Gear 6 Incorrect Ratio (2013 FR-S)		

DTC	P0729	Gear 6 Incorrect Ratio
------------	--------------	-------------------------------

SYSTEM DESCRIPTION

The TCM uses signals from the output speed sensor SP2 and input speed sensor NT to detect the actual gear position (1st, 2nd, 3rd, 4th, 5th or 6th gear). Then the TCM compares the actual gear with the shift schedule in the TCM memory to detect mechanical problems of the shift solenoid valves, valve body or automatic transmission (clutch, brake or gear, etc.).

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
	1. DIAGNOSIS CONDITION 2. MALFUNCTION STATUS 3. MALFUNCTION TIME 4. OTHER	
P0729	<ol style="list-style-type: none"> While driving with the shift lever in D, the ATF temperature 20°C (68°F) or more, and coolant temperature 40°C (104°F) or more. (However, abnormalities with the shift solenoid valve S1, S2, S3, S4, SR, SL1, SL2, SLT), input speed sensor NT, output speed sensor SP2, park/neutral position switch, CAN bus, ECM communication, coolant temperature sensor, air flow sensor, electronically control throttle, and accelerator pedal sensor are not detected) If any of the following conditions are met: <ol style="list-style-type: none"> When the TCM commands shifting to 5th, the actual gear position is also switched to 5th. When the TCM commands 6th gear, the actual position is switched to 4th. - 1-trip detection logic 	<ul style="list-style-type: none"> Transmission valve body assy Shift solenoid valve SLT

HINT:

- Gear positions in the event of a solenoid valve mechanical problem:

TCM command gearshift	1st	2nd	3rd	4th	5th	6th
Actual gear position under malfunction	↑	↑	↑	↑	↑	4th

- Gear position during fail-safe operation:

If any malfunction is detected, the TCM changes into the fail-safe mode to shift into the gear positions as shown in the table below.

Gear position under normal conditions	1st	2nd	3rd	4th	5th	6th
---------------------------------------	-----	-----	-----	-----	-----	-----

MONITOR DESCRIPTION

The TCM commands gear shifts by turning the shift solenoid valves "ON/OFF" and switching oil pressure to the valves in the valve body.

The DTC indicates that the sequence valve is locked in the direction the spring stretches and that shifting to the 6th gear is impossible.

MONITOR STRATEGY

Related DTCs	P0729: 6th Error

2. CHECK THE GEAR POSITION

- Drive the vehicle with shift lever in the M.
- Check the shift position.

TCM gearshift	1st	2nd	3rd	4th	5th	6th
Actual gear position under malfunction	↑	↑	↑	↑	↑	4th

HINT:

- Perform the test at the normal operating ATF (Automatic Transmission Fluid) temperature: 60 to 90°C (140 to 194°F)
- Perform under condition that A/C is OFF.

OK:

Gear position changes.

NG  **REPLACE TRANSMISSION VALVE BODY ASSEMBLY**

OK

3. HYDRAULIC TEST

Text in Illustration

*1	SST	*2	Test Plug
----	-----	----	-----------

NOTICE:

- Perform the test at the normal operating ATF (Automatic Transmission Fluid) temperature: 60 to 90°C (140 to 194°F)
- The line pressure test should always be carried out in pairs. One technician should observe the conditions of wheels or wheel stoppers outside the vehicle while the other is performing the test.
- Be careful to prevent SST hose from interfering with the exhaust pipe.
- This Check must be conducted after checking and adjusting engine.
- Perform under condition that A/C is OFF.
- When conducting stall test, do not continue more than 5 seconds.

(a) Warm up the ATF (Automatic Transmission Fluid).

(b) Lift the vehicle up.

(c) Remove the test plug on the transmission case center right side and connect SST.

SST: 09992-00095

09992-00231

09992-00271

(d) Lower the vehicle.

(e) Fully apply the parking brake and check the 4 wheels.

(f) Start the engine and check idling speed.

- (g) Keep your left foot pressing firmly on the brake pedal and shift into D position.
- (h) Measure the line pressure when the engine is idling.
- (i) Depress the accelerator pedal all the way down. Quickly read the highest line pressure when engine speed reaches stall speed.
- (j) In the same manner, do the test in R position.

Specified line pressure:

CONDITION	D POSITION KPA (KGF / CM ² , PSI)	R POSITION KPA (KGF / CM ² , PSI)
Idling	350 to 430 kPa (3.6 to 4.4 kgf/cm ² , 51 to 62 psi)	760 to 950 kPa (7.7 to 9.7 kgf/cm ² , 110 to 138 psi)
Stall test	1200 to 1380 kPa (12.5 to 14.0 kgf/cm ² , 174 to 200 psi)	1410 to 1630 kPa (14.4 to 16.6 kgf/cm ² , 204 to 236 psi)

NG ► REPLACE SHIFT SOLENOID VALVE SLT

OK

4.	CLEAR THE DTC AND RUNNING TEST
-----------	---------------------------------------

- (a) Clear the DTC, and check DTC again after conducting the "MONITOR DRIVE PATTERN FOR ECT TEST" INFO .

OK:
No DTC code

NG ► REPLACE TRANSMISSION VALVE BODY ASSEMBLY

OK ► END

TYPICAL MALFUNCTION THRESHOLDS

P0756: Shift solenoid 2 (OFF Stuck)

Compare target gear instructed from TCM and gear ratio calculated from turbine shaft speed and vehicle speed.

Both of the following condition are met: Condition (A) and (B)

Condition (A)

Shift position	D position
Target gear position.	1st
Gear ratio calculated from turbine shaft speed and vehicle speed.	3rd

Condition (B)

Shift position	D position
Target gear position.	6th
Gear ratio calculated from turbine shaft speed and vehicle speed.	5th

Both of the following condition are met: Condition (C) and (D)

Condition (C)

Shift position	M position
Target gear position.	1st

Gear ratio calculated from turbine shaft speed and vehicle speed.	3rd
---	-----

Condition (D)

Shift position	M position
Target gear position.	6th
Gear ratio calculated from turbine shaft speed and vehicle speed.	5th

P0757: Shift solenoid 2 (ON Stuck)

Compare target gear instructed from TCM and gear ratio calculated from turbine shaft speed and vehicle speed.

Both of the following condition are met: Condition (A) and (B)

Condition (A)

Shift position	D position
Target gear position.	5th
Gear ratio calculated from turbine shaft speed and vehicle speed.	6th

Condition (B)

Shift position	D position
Target gear position.	6th
Gear ratio calculated from turbine shaft speed and vehicle speed.	6th

Both of the following condition are met: Condition (C) and (D)

Condition (C)

Shift position	M position
Target gear position.	5th
Gear ratio calculated from turbine shaft speed and vehicle speed.	6th

Condition (D)

Shift position	M position
Target gear position.	6th
Gear ratio calculated from turbine shaft speed and vehicle speed.	6th

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

Perform the universal trip to clear permanent DTCs [INFO](#) .

1. CHECK THE SHIFT POSITION

- (a) Drive the vehicle with shift lever in the M.
- (b) Check the shift position.

HINT:

- The shift solenoid valve S2 is turned on/off normally when the shift lever is in the D position:

TCM command gearshift	1st	2nd	3rd	4th	5th	6th
Shift solenoid valve S2	ON	ON	OFF	OFF	OFF	ON

PROCEDURE

1. CHECK OTHER DTCS OUTPUT

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON and push the Techstream main switch ON.
- (c) Read the DTCs using the Techstream [INFO](#) .

Result:

DISPLAY (DTC OUTPUT)	PROCEED TO
Only "P0756 and P2714" or "P0757" is output	A
"P0756 and P2714" or "P0757" and other DTCs	B

A

2.	HYDRAULIC TEST
-----------	-----------------------

Text in Illustration

*1	SST	*2	Test Plug
----	-----	----	-----------

NOTICE:

- Perform the test at the normal operating ATF (Automatic Transmission Fluid) temperature: 60 to 90°C (140 to 194°F)
- The line pressure test should always be carried out in pairs. One technician should observe the conditions of wheels or wheel stoppers outside the vehicle while the other is performing the test.
- Be careful to prevent SST hose from interfering with the exhaust pipe.
- This Check must be conducted after checking and adjusting engine.
- Perform under condition that A/C is OFF.
- When conducting stall test, do not continue more than 5 seconds.

(a) Warm up the ATF (Automatic Transmission Fluid).

(b) Lift the vehicle up.

(c) Remove the test plug on the transmission case center right side and connect SST.

SST: 09992-00095

09992-00231

09992-00271

(d) Lower the vehicle.

(e) Fully apply the parking brake and check the 4 wheels.

(f) Start the engine and check idling speed.

(g) Keep your left foot pressing firmly on the brake pedal and shift into D position.

(h) Measure the line pressure when the engine is idling.

(i) Depress the accelerator pedal all the way down. Quickly read the highest line pressure when engine speed reaches stall speed.

(j) In the same manner, do the test in R position.

Specified line pressure:

CONDITION	D POSITION KPA (KGF / CM ² , PSI)	R POSITION KPA (KGF / CM ² , PSI)
Idling	350 to 430 kPa (3.6 to 4.4 kgf/cm ² , 51 to 62 psi)	760 to 950 kPa (7.7 to 9.7 kgf/cm ² , 110 to 138 psi)
Stall test	1200 to 1380 kPa (12.5 to 14.0 kgf/cm ² , 174 to 200 psi)	1410 to 1630 kPa (14.4 to 16.6 kgf/cm ² , 204 to 236 psi)

NG ► REPLACE SHIFT SOLENOID VALVE SLT

OK

3.	INSPECT SHIFT SOLENOID VALVE S2
-----------	--

(a) Remove the shift solenoid valve S2.

(b) Perform inspection of the shift solenoid valve S2 **INFO** .

NG ► REPLACE SHIFT SOLENOID VALVE S2

OK

4.	INSPECT TRANSMISSION VALVE BODY ASSEMBLY
-----------	---

(a) Perform inspection of the transmission valve body assembly  .

OK:

There are no foreign objects on each valve.

NG  **REPAIR OR REPLACE TRANSMISSION VALVE BODY ASSEMBLY**

OK  **REPAIR OR REPLACE AUTOMATIC TRANSMISSION ASSEMBLY**

SYSTEM DESCRIPTION

The TCM carries out detection of the gear position based upon signals from the input speed sensor NT and the output speed sensor SP2. Subsequently, if the gear position as detected by the TCM is different to the commanded gear position, then a related solenoid valve, valve body, or automatic transmission mechanical problem is detected.

MONITOR DESCRIPTION

This DTC indicates "stuck ON malfunction" or "stuck OFF malfunction" of the shift solenoid valve S3.

The TCM commands gear shifts by turning the shift solenoid valves "ON/OFF". When the gear position commanded by the TCM and the actual gear position are not same, the TCM illuminates the MIL and stores the DTC.

Target gear position.	1st
Gear ratio calculated from turbine shaft speed and vehicle speed.	2nd

Condition (B)

Shift position	M position
Target gear position.	5th
Gear ratio calculated from turbine shaft speed and vehicle speed.	5th

P0776: Linear Solenoid 2 (ON Stuck)

Compare target gear instructed from TCM and gear ratio calculated from turbine shaft speed and vehicle speed.

Both of the following condition are met: Condition (A) and (B)

Condition (A)

Shift position	D position
Target gear position.	5th
Gear ratio calculated from turbine shaft speed and vehicle speed.	4th

Condition (B)

Shift position	D position
Target gear position.	6th
Gear ratio calculated from turbine shaft speed and vehicle speed.	4th

Both of the following condition are met: Condition (C) and (D)

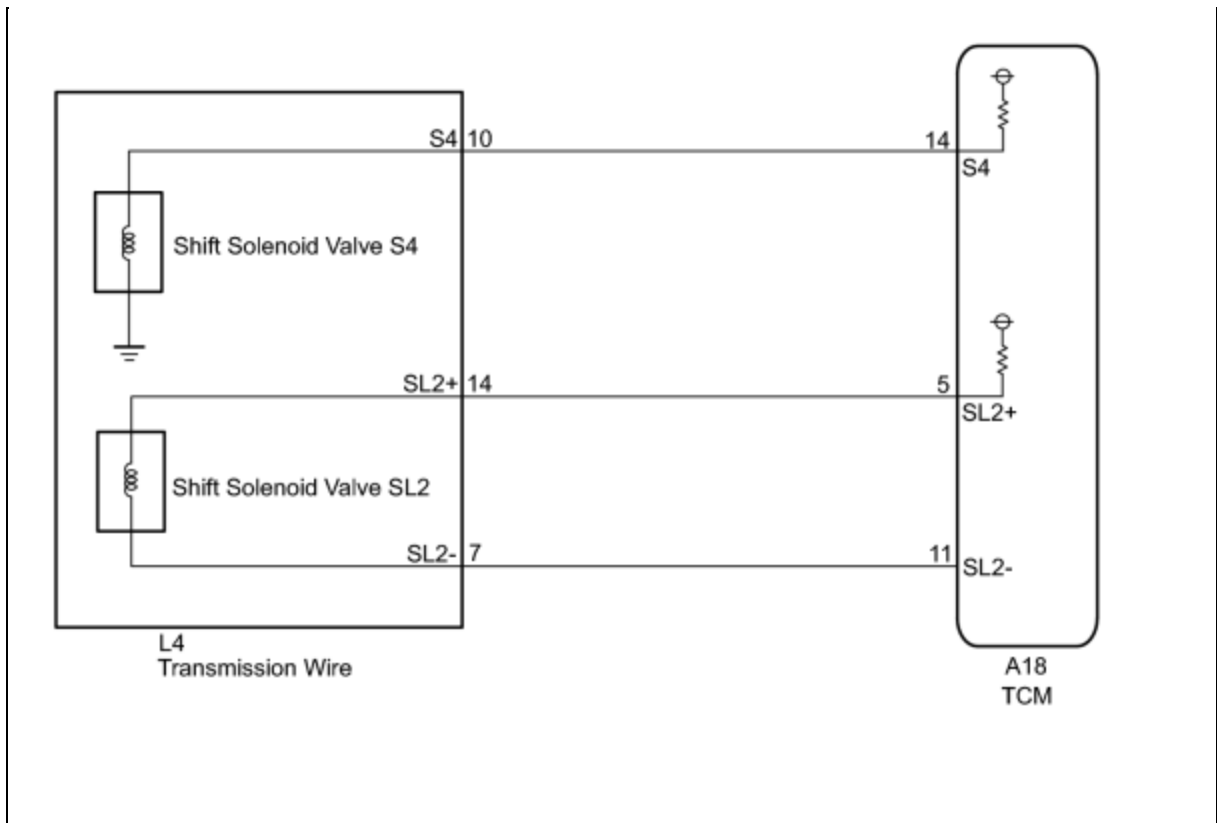

Condition (C)

Shift position	M position
Target gear position.	5th
Gear ratio calculated from turbine shaft speed and vehicle speed.	4th

Condition (D)

Shift position	M position
Target gear position.	6th
Gear ratio calculated from turbine shaft speed and vehicle speed.	4th

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

Perform the universal trip to clear permanent DTCs INFO.

1. ACTIVE TEST

- (a) Drive the vehicle with shift lever in the M.
- (b) Check the shift position.

HINT:

- The shift solenoid valve S4 and SL2 are turned on/off normally when the shift lever is in the D position:

TCM command gearshift	1st	2nd	3rd	4th	5th	6th
Shift solenoid valve S4	OFF	ON	OFF	OFF	ON	ON
Shift solenoid valve SL2	ON	ON	ON	ON	OFF	OFF

PROCEDURE

1.	CHECK OTHER DTCS OUTPUT
-----------	--------------------------------

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON and push the Techstream main switch ON.
- (c) Read the DTCs using the Techstream INFO.

Result:

DISPLAY (DTC OUTPUT)	PROCEED TO
Only "P0766, P0776 and P2714" or "P0752 and P0767" is output	A
"P0766, P0776 and P2714" or "P0752 and P0767" and other DTCs are output	B

B ► GO TO DTC CHART

A

2.	HYDRAULIC TEST
-----------	-----------------------

Text in Illustration

*1	SST	*2	Test Plug
----	-----	----	-----------

NOTICE:

- Perform the test at the normal operating ATF (Automatic Transmission Fluid) temperature: 60 to 90°C (140 to 194°F)
- The line pressure test should always be carried out in pairs. One technician should observe the conditions of wheels or wheel stoppers outside the vehicle while the other is performing the test.
- Be careful to prevent SST hose from interfering with the exhaust pipe.

- This Check must be conducted after checking and adjusting engine.
- Perform under condition that A/C is OFF.
- When conducting stall test, do not continue more than 5 seconds.

(a) Warm up the ATF (Automatic Transmission Fluid).

(b) Lift the vehicle up.

(c) Remove the test plug on the transmission case center right side and connect SST.

SST: 09992-00095

09992-00231

09992-00271

(d) Lower the vehicle.

(e) Fully apply the parking brake and check the 4 wheels.

(f) Start the engine and check idling speed.

(g) Keep your left foot pressing firmly on the brake pedal and shift into D position.

(h) Measure the line pressure when the engine is idling.

(i) Depress the accelerator pedal all the way down. Quickly read the highest line pressure when engine speed reaches stall speed.

(j) In the same manner, do the test in R position.

Specified line pressure:

CONDITION	D POSITION KPA (KGF / CM ² , PSI)	R POSITION KPA (KGF / CM ² , PSI)
Idling	350 to 430 kPa (3.6 to 4.4 kgf/cm ² , 51 to 62 psi)	760 to 950 kPa (7.7 to 9.7 kgf/cm ² , 110 to 138 psi)
Stall test	1200 to 1380 kPa (12.5 to 14.0 kgf/cm ² , 174 to 200 psi)	1410 to 1630 kPa (14.4 to 16.6 kgf/cm ² , 204 to 236 psi)

NG  **REPLACE SHIFT SOLENOID VALVE SLT**

OK

3.	INSPECT SHIFT SOLENOID VALVE S4
-----------	--

(a) Remove the shift solenoid valve S4  .

(b) Perform inspection of the shift solenoid valve S4  .

NG  **REPLACE SHIFT SOLENOID VALVE S4**

OK

4. INSPECT SHIFT SOLENOID VALVE SL2

- (a) Remove the shift solenoid valve S4  .
- (b) Perform inspection of the shift solenoid valve S4  .

NG  **REPLACE SHIFT SOLENOID VALVE SL2**

OK

5. INSPECT TRANSMISSION VALVE BODY ASSEMBLY

- (a) Check the transmission valve body assembly  .

OK:

There are no foreign objects on each valve.

NG  **REPAIR OR REPLACE TRANSMISSION VALVE BODY ASSEMBLY**

OK  **REPAIR OR REPLACE AUTOMATIC TRANSMISSION ASSEMBLY**

Last Modified: 3-27-2012	6.4 C	From: 201203

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

Inspect the fuses circuits related to this system before performing the following inspection procedure.

PROCEDURE

1. CHECK TCM (POWER SOURCE, GROUND)

- (a) Disconnect the A18 TCM connector.
- (b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A18-34(IG1) - Body ground	Ignition switch ON	11 to 14 V
A18-35(IG2) - Body ground	Ignition switch ON	11 to 14 V

- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A18-3(E02) - Body ground	Always	Below 1 Ω
A18-33(E01) - Body ground	Always	Below 1 Ω

- (d) Connect the A18 TCM connector.

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR (TCM - BATTERY, BODY GROUND)**

OK

2.	REPLACE TCM
----	-------------

(a) Replace the TCM  .

NEXT  **PERFORM THE RESET MEMORY**

Title: TX6A AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSMISSION SYSTEM: P0894,P2714: Transmission Component Slipping (2013 FR-S)		

DTC	P0894	Transmission Component Slipping
------------	--------------	--

DTC	P2714	Pressure Control Solenoid "D" Performance (Shift Solenoid Valve SLT)
------------	--------------	---

DESCRIPTION

The shift solenoid valve SLT is controlled by the duty ratio as determined in advance by the transmission control computer, based upon signals from the accelerator position sensor, input speed sensor NT and output speed sensor SP2. In this way, the line pressure is adjusted to match the throttle valve opening angle and engine output. The TCM uses the revolution signals from the input speed sensor NT and output speed sensor SP2 to detect clutch and other slipping.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
	1. DIAGNOSIS CONDITION 2. MALFUNCTION STATUS 3. MALFUNCTION TIME 4. OTHER	
P0894	1. While driving with the shift lever in D, the ATF temperature 10°C or more, and coolant temperature 40°C or more. predetermined value or more.	• Automatic transmission
3. -	
4. 2-trip detection logic	

MONITOR DESCRIPTION

The TCM calculates the amount of heat absorbed by the friction material based on the difference in revolution (clutch slippage) between the turbine and output shaft. The TCM illuminates the MIL and outputs this DTC when the amount of heat absorption exceeds the specified value.

NOTICE:

If you continue driving under these conditions, the clutch will burn out and the vehicle will no longer be drivable.

MONITOR STRATEGY

Related DTCs	P0894: Line Pressure Linear Solenoid (AT Slip) P2714: Line Pressure Linear Solenoid (ON Stuck)
Required sensors/Components	Shift solenoid valve SLT

DTC	P0963	Pressure Control Solenoid "A" Circuit High (SL1 Solenoid)
------------	--------------	--

DESCRIPTION

Based upon a signal from the TCM, the combination of shift solenoid valve (S1, S2, S3, S4, SR, SL1, SL2) changes the gear position from 1st to 6th. As a fail-safe function if the solenoid valve system is open or shorted, the TCM cuts power to all solenoids, leaving just the mechanical hydraulic circuit, requiring manual shifting.

-------	---	--

Reference (Using an oscilloscope):

Check the waveform between the terminals SL1+ and SL1- of the TCM connector

Standard:
Refer to the illustration.

Terminal	SL1+ - SL1-
Tool setting	5 V/DIV., 1 ms./DIV.
Vehicle condition	5th or 6th gear

MONITOR DESCRIPTION

This DTC indicates an open or short in the shift solenoid valve SL1 circuit. The TCM commands gearshift by turning the shift solenoid valves "ON/OFF". When there is an open or short circuit in any shift solenoid valve circuit, the TCM detects the problem and illuminates the MIL and stores the DTC.

-------	---	--

Reference (Using an oscilloscope):

Check the waveform between the terminals SL2+ and SL2- of the TCM connector

Standard:
Refer to the illustration.

Terminal	SL2+ - SL2-
Tool setting	5 V/DIV., 1 ms./DIV.
Vehicle condition	Engine idle speed

MONITOR DESCRIPTION

This DTC indicates an open or short in the shift solenoid valve SL2 circuit. The TCM commands gear shifts by turning the shift solenoid valves "ON/OFF". When there is an open or short circuit in any shift solenoid valve circuit, the TCM detects the problem and illuminates the MIL and stores the DTC.

INSPECTION PROCEDURE

NOTICE:

Perform the universal trip to clear permanent DTCs INFO.

HINT:

- The shift solenoid valve SL2 is turned on/off normally when the shift lever is in the D position:

TCM command gearshift	1st	2nd	3rd	4th	5th	6th
Shift solenoid valve SL2	ON	OFF	OFF	ON	OFF	OFF

PROCEDURE

1. INSPECT TRANSMISSION WIRE (SL2)

- Disconnect the L4 transmission wire connector.
- Measure the resistance according to the value(s) in the table below.

Standard resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L4-14(SL2+) - L4-7(SL2-)	20°C(68°F)	5.0 to 5.6 Ω
L4-14(SL2+) - Body ground	Always	10 kΩ or higher
L4-7(SL2-) - Body ground	Always	10 kΩ or higher

(c) Connect the L4 transmission wire connector.

NG ▶ **INSPECT SHIFT SOLENOID SL2**

OK

2.	CHECK HARNESS AND CONNECTOR (TRANSMISSION WIRE - TCM)
-----------	--

(a) Disconnect the TCM connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A18-5(SL2+) - A18-11(SL2-)	20°C(68°F)	5.0 to 5.6 Ω
A18-5(SL2+) - Body ground	Always	10 kΩ or higher
A18-11(SL2-) - Body ground	Always	10 kΩ or higher

(c) Connect the TCM connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3.	REPLACE TCM
-----------	--------------------

(a) Replace the TCM  .

NEXT ▶ **THE RESET MEMORY**

4.	INSPECT SHIFT SOLENOID SL2
-----------	-----------------------------------

(a) Remove the shift solenoid valve SL2  .

(b) Perform inspection of the shift solenoid valve SL2  .

NG ▶ REPLACE SHIFT SOLENOID SL2

OK ▶ REPAIR OR REPLACE TRANSMISSION WIRE

INSPECTION PROCEDURE

PROCEDURE

1.	CHECK MANUAL MODE SWITCH
-----------	---------------------------------

- (a) Disconnect the A19 TCM connector.
- (b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	SHIFT POSITION	SPECIFIED CONDITION
A19-8(M) - Body ground	M	Below 1 Ω
A19-8(M) - Body ground	Except M	10 k Ω or higher

- (c) Connect the A19 TCM connector.

NG ► **CHECK HARNESS AND CONNECTOR (MANUAL MODE SWITCH - SHIFT POSITION INDICATOR)**

OK
▼

2.	REPLACE TCM
-----------	--------------------

- (a) Replace the TCM INFO.

NEXT ► **PERFORM THE RESET MEMORY**

3.	CHECK HARNESS AND CONNECTOR (MANUAL MODE SWITCH - SHIFT POSITION INDICATOR)
-----------	--

- (a) Disconnect the D36 shift position indicator connector.
- (b) Disconnect the D28 manual mode switch connector.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D36-6(MM) - D28-10(MM+)	Always	Below 1 Ω
D36-6(MM) - Body ground	Always	10 k Ω or higher
D28-10(MM+) - Body ground	Always	10 k Ω or higher

- (d) Connect the D36 shift position indicator connector.

(e) Connect the D28 manual mode switch connector.

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4.	INSPECT MANUAL MODE SWITCH
-----------	-----------------------------------

(a) Disconnect the D28 manual mode switch connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	SHIFT POSITION	SPECIFIED CONDITION
D28-10(MM+) - D28-11(MM-)	M	Below 1 Ω
	Except M	10 k Ω or higher

(c) Disconnect the D28 manual mode switch connector.

NG  **REPLACE MANUAL MODE SWITCH**

OK

5.	CHECK HARNESS AND CONNECTOR (TCM - SHIFT POSITION INDICATOR)
-----------	---

(a) Disconnect the A19 TCM connector.

(b) Disconnect the D36 shift position indicator connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D36-5(M) - A19-8(M)	Always	Below 1 Ω
D36-5(M) - Body ground	Always	10 k Ω or higher
A19-8(M) - Body ground	Always	10 k Ω or higher

(d) Connect the A19 TCM connector.

(e) Connect the D36 shift position indicator connector.

NG ▶ REPAIR OR REPLACE HARNESS OR
CONNECTOR

OK ▶ REPLACE SHIFT POSITION INDICATOR

INSPECTION PROCEDURE

NOTICE:

Perform the universal trip to clear permanent DTCs INFO.

PROCEDURE

1.	CHECK HARNESS AND CONNECTOR
-----------	------------------------------------

- (a) Disconnect the A18 TCM connector.
- (b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A18-4(SLT+) - A18-9(SLT-)	20°C(68°F)	5.0 to 5.6 Ω

- (c) Disconnect the A18 TCM connector.

NG ▶ **CHECK HARNESS AND CONNECTOR
(TRANSMISSION WIRE - TCM)**

OK

2.	REPLACE TCM
-----------	--------------------

(a) Replace the TCM  .

NEXT  **PERFORM THE RESET MEMORY**

3. CHECK HARNESS AND CONNECTOR (TRANSMISSION WIRE - TCM)

- (a) Disconnect the A18 TCM connector.
- (b) Disconnect the L4 transmission wire connector.
- (c) Measure the resistance according to the value(s) in the table below.

Standard resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A18-4(SLT+) - L4-11(SLT+)	Always	Below 1 Ω
A18-9(SLT-) - L4-4(SLT-)	Always	Below 1 Ω

- (d) Measure the voltage according to the value(s) in the table below.

Standard voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A18-4(SLT+) - Body ground	Ignition switch ON	Below 1 V
A18-9(SLT-) - Body ground	Ignition switch ON	Below 1 V

- (e) Connect the A18 TCM connector.
- (f) Connect the L4 transmission wire connector.

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4. INSPECT SHIFT SOLENOID VALVE SLT

- (a) Remove the shift solenoid valve SLT  .
- (b) Perform inspection of the shift solenoid valve SLT  .

NG  **REPLACE SHIFT SOLENOID VALVE SLT**

OK  **REPAIR OR REPLACE TRANSMISSION WIRE**

MONITOR DESCRIPTION

Torque converter lock-up is controlled by the TCM based on the input speed sensor NT, output speed sensor SP2, engine rpm, engine load, engine temperature, vehicle speed, transmission temperature, and gear selection. The TCM determines the lock-up status of the torque converter by comparing the engine rpm (NE) to the input turbine rpm (NT). The TCM calculates the actual transmission gear by comparing input turbine rpm (NT) to output shaft rpm (SP2). When conditions are appropriate, the TCM requests "lock-up" by applying control voltage to the shift solenoid SLU. When the SLU is turned on, it applies pressure to the lock-up relay valve and locks the torque converter clutch.

If the TCM detects no lock-up after lock-up has been requested or if it detects lock-up when it is not requested, the TCM interprets this as a fault in the shift solenoid valve SLU or lock-up system performance.

The TCM will turn on the MIL and store the DTC.

MONITOR STRATEGY

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

Perform the universal trip to clear permanent DTCs INFO.

1. ACTIVE TEST

HINT:

Using the Techstream to perform Active Test allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Test early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Test.

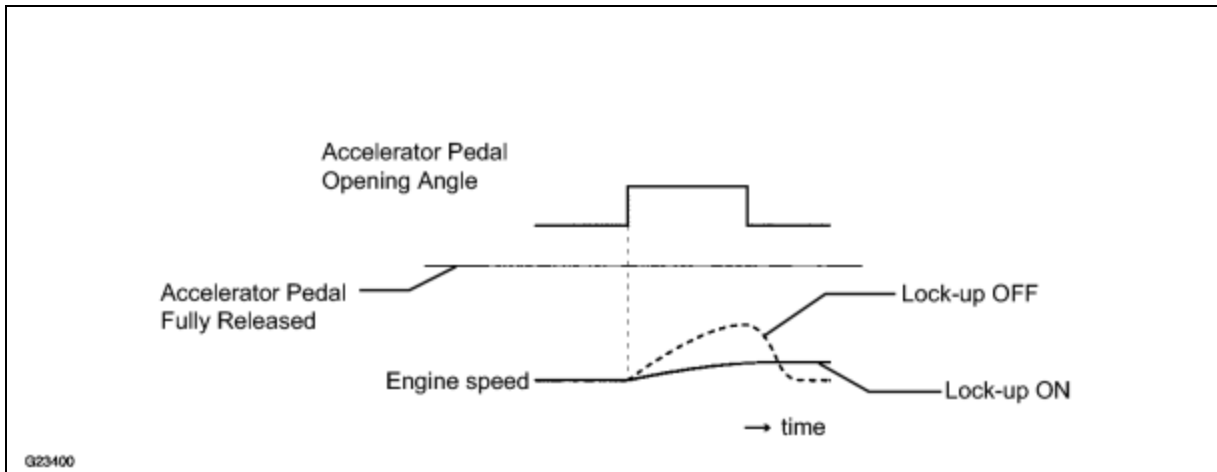

- (a) Warm up the engine.
- (b) Turn the ignition switch off.
- (c) Connect the Techstream to the DLC3.
- (d) Turn the ignition switch to ON.
- (e) Turn the Techstream on.
- (f) Enter the following menus: Powertrain / ECT / Data List.
- (g) According to the display on the Techstream, perform the "Active Test".

ITEM	TEST DETAILS	DIAGNOSTIC NOTE
Activate the Lock Up	[Test Details] Control the shift solenoid SLU to set the automatic transmission to the lock-up condition. [Vehicle Condition] <ul style="list-style-type: none"> Throttle valve opening angle: Less than 35 % Vehicle Speed: 50 km/h (30 mph) or more 	Possible to check the SLU operation.

HINT:

- This test can be conducted when the vehicle speed is 50 km/h (30 mph) or more.
- This test can be conducted with the 5th or 6th gear.

(h) Lightly depress the accelerator pedal and check that the engine speed does not change abruptly.

HINT:

- When changing the accelerator pedal opening angle while driving, if the engine speed does not change, lock-up is on.
- Slowly release, but not fully, the accelerator pedal in order to decelerate. (Fully releasing the pedal will close the throttle valve and lock-up may be turned off automatically.)

PROCEDURE

1.	CHECK OTHER DTCS OUTPUT
-----------	--------------------------------

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON and push the Techstream main switch ON.
- (c) Read the DTCs using the Techstream INFO.

Result:

DISPLAY (DTC OUTPUT)	PROCEED TO
Only "P2757" or "P2758" is output	A
"P2757" or "P2758" and other DTCs	B

B ▶ **GO TO DTC CHART**

Standard resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
A19-24(SNOW) - D35-6	Always	Below 1 Ω
D35-8 - Body ground	Always	Below 1 Ω
A19-24(SNOW) - Body ground	Always	10 k Ω or higher

- (d) Connect the TCM connector.
- (e) Connect the pattern select switch assembly connector.

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

8.	REPLACE TCM
-----------	--------------------

(a) Replace the TCM  .

NEXT  **PERFORM THE RESET MEMORY**

Last Modified: 3-27-2012	6.4 L	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM00000007H0C0X
Title: TX6A AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSMISSION SYSTEM: PRECAUTION (2013 FR-S)		

PRECAUTION

NOTICE:

Perform the **RESET MEMORY (AT initialization)** when replacing the automatic transmission assembly, engine assembly, valve body assembly or TCM  .

HINT:

RESET MEMORY can not be completed by only disconnecting the battery cable.

1. REMOVAL AND INSTALLATION PROCEDURE PRECAUTIONS

- (a) The automatic transmission is composed of highly precision-finished parts which need careful inspection before reassembly. Even a small nick could cause fluid leakage or affect the performance. The instructions here are organized so that you work on only one component group at a time. This will help avoid confusion caused by similar-looking parts of different sub-assemblies being on your workbench at the same time. The component groups are inspected and repaired from the converter housing side. Complete the inspection, repair and reassembly before proceeding to the next component group as much as possible. If a defect is found in a certain component group during reassembly, inspect and repair this group immediately. If a component group cannot be assembled because some parts are being ordered, be sure to keep all parts of the group in a separate container while proceeding with disassembly, inspection, repair and reassembly of other component groups. Recommended: Toyota Genuine ATF WS
- (b) All disassembled parts should be washed clean and any fluid passages and holes should be blown through with compressed air.
- (c) Dry all parts with compressed air. Never use a shop rag or a piece of cloth to dry them.
- (d) When using compressed air, always aim away from yourself to prevent accidentally spraying ATF or kerosene in your face.
- (e) Only recommended automatic transmission fluid or kerosene should be used for cleaning.
- (f) After cleaning, the parts should be arranged in the correct order for efficient inspection, repair, and reassembly.
- (g) When disassembling a valve body, be sure to match each valve together with the corresponding spring.
- (h) New discs for the brakes and clutches that are to be used for replacement must be soaked in ATF for at least 15 minutes before reassembly.
- (i) All oil seal rings, clutch discs, clutch plates, rotating parts, and sliding surfaces should be coated with ATF prior to reassembly.
- (j) All gaskets and rubber O-rings should be replaced with new ones.
- (k) Do not apply adhesive cements to gaskets and similar parts.
- (l) Make sure that the ends of a snap ring are not aligned with one of the cutouts and are installed in the groove correctly.
- (m) When replacing a worn bushing, the sub-assembly containing the bushing must also be replaced.
- (n) Check thrust bearings and races for wear or damage. Replace them as necessary.
- (o) When working with FIPG material, you must observe the following:

- Using a razor blade and a gasket scraper, remove all the old packing (FIPG) material from the gasket surface.
- Thoroughly clean all components to remove any loose material.
- Clean both sealing surfaces with a non-residue solvent.
- Parts must be reassembled within 10 minutes of application. Otherwise, the packing (FIPG) material must be removed and reapplied.

Title: TX6A AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSMISSION SYSTEM: PROBLEM SYMPTOMS TABLE (2013 FR-S)		

PROBLEM SYMPTOMS TABLE

HINT:

If a normal code is displayed during the diagnostic trouble code check although the trouble still occurs, check the electrical circuits for each symptom in the order given in the charts on the following pages and proceed to the page given for troubleshooting.

The Matrix Chart is divided into 2 chapters.

Chapter 1:

Refer to the table below when the trouble cause is considered to be electrical.

If the instruction "Proceed to next circuit inspection shown on matrix chart" is given in the flow chart of each circuit, proceed to the circuit with the next highest number in the table to continue the check.

If the trouble still occurs even though there are no abnormalities in any of the other circuits, check and replace the TCM.

Model Year: 2013	Model: FR-S	Doc ID: RM000000W790M5X
Title: TX6A AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSMISSION SYSTEM: ROAD TEST (2013 FR-S)		

ROAD TEST

1. PROBLEM SYMPTOM CONFIRMATION

- (a) Based on the result of the customer problem analysis, try to reproduce the symptoms. If the problem is that the transaxle does not shift up, shift down, or the shift point is too high or too low, conduct the following road test referring to the automatic shift schedule and simulate the problem symptoms.

2. ROAD TEST

- (a) Perform a road test.

CAUTION:

Check for safety before performing any tests.

NOTICE:

- Be sure to inspect and adjust the engine before performing these tests.
- Perform the road test with the engine coolant temperature between 60 and 90°C (140 and 194°F) and the ATF temperature between 40 and 110°C (104 and 230°F).
- Perform these tests with the air conditioning and cruise control off.

INSPECTION	PROCEDURE
Transmission Control Switch Test	With the vehicle stationary and the shift lever in D, move the shift lever to M and return it to D. Check that the meter display changes from D to the appropriate M position and then back again.
M Position Test	With the vehicle stationary and the shift lever in M, move the shift lever to "+" and "-". Check that the meter display changes between M position properly.
D Position Shift Test	While driving the vehicle normally, check that the transmission shifts up and down through each gear properly.
Lock-up Function	While driving on a level surface at a constant speed in the lock-up range (50 km/h (30 mph) or more) with the shift lever in D, lightly depress the accelerator pedal and check that the engine speed does not change abruptly.
P Position Test	Stop the vehicle on an incline (approximately 5° or more). Then move the shift lever to P and release the parking brake. Check that the parking lock pawl holds the vehicle in place.
Abnormal Noise and Vibration	Check for abnormal noise and vibration while driving the vehicle forward and backward, and during shift operations.
Fluid Leakage	After performing all other road test inspections, check for fluid leakage.

Title: TX6A AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSMISSION SYSTEM: Shift Paddle Switch Circuit (2013 FR-S)		

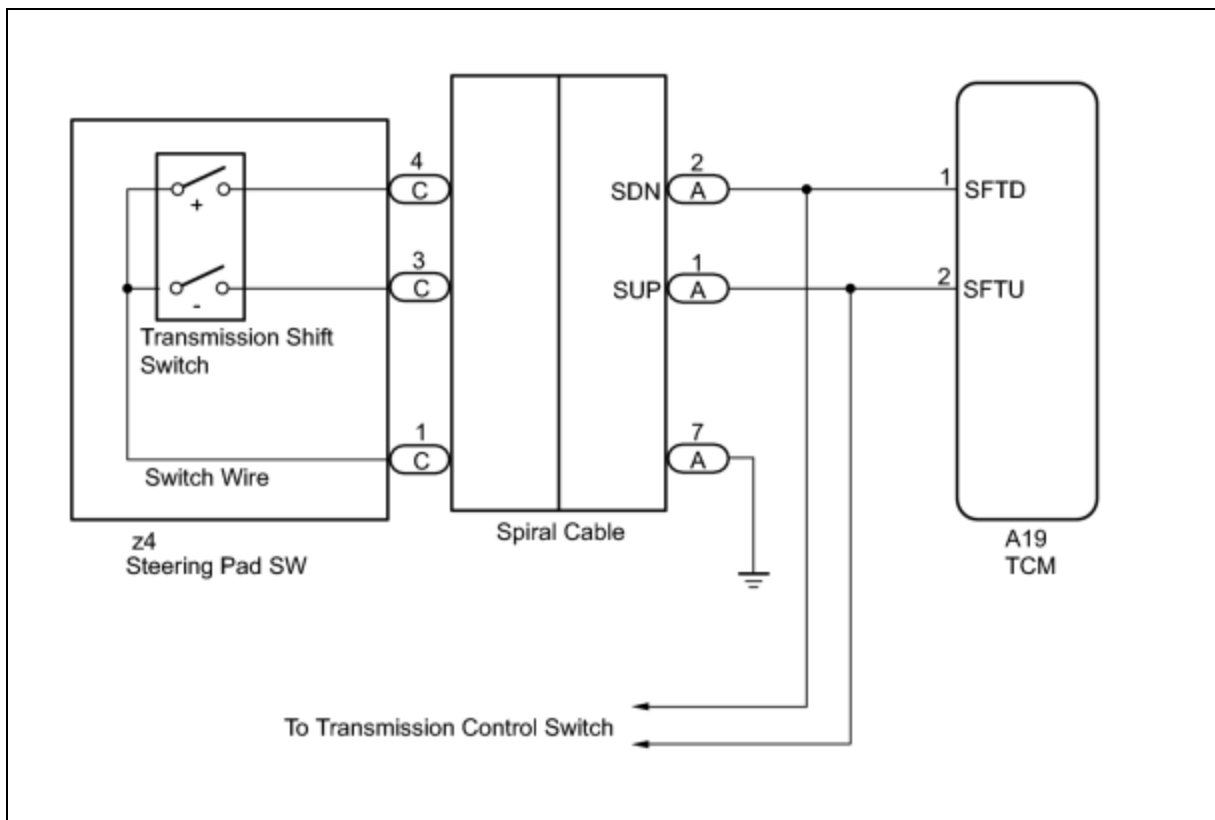

Shift Paddle Switch Circuit

DESCRIPTION

When the shift lever is in M, it is possible to change into any gear using the steering assembly transmission shift switch.

Additionally, when the vehicle is being driving with the shift lever in D, operating the steering assembly transmission shift switch changes to selection of gears with the shift lever in D, enabling shifting to any gear.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	READ VALUE USING TECHSTREAM
----	-----------------------------

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Read the value displayed on the Techstream.

OK

TESTER DISPLAY	CONDITION	STANDARD
Sport Shift Up SW	Continuously shift to "+" (upshift): ON Release "+" (up-shift): OFF	-
Sport Shift Down SW	Continuously shift to "-" (down-shift): ON Release "-" (down-shift): OFF	-

NG ► **CHECK HARNESS AND CONNECTOR
(TRANSMISSION SHIFT SWITCH - TCM)**

OK ► **CHECK INTERMITTENT PROBLEMS**

2.	CHECK HARNESS AND CONNECTOR (TRANSMISSION SHIFT SWITCH - TCM)
-----------	--

- (a) Disconnect the TCM connector.
- (b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A19-1(SFTD) - Body ground	Pull continuously "+" (Up shift)	Below 1 Ω
	Release "+" or "-"	10 kΩ or higher
A19-2(SFTU) - Body ground	Pull continuously "-" (Down shift)	Below 1 Ω
	Release "+" or "-"	10 kΩ or higher

- (c) Connect the TCM connector.

NG ► **CHECK HARNESS AND CONNECTOR (SPIRAL
CABLE - BODY GROUND)**

OK
▼

--	--

3. REPLACE TCM

(a) Replace the TCM .

NEXT  **PERFORM THE RESET MEMORY**

4. CHECK HARNESS AND CONNECTOR (SPIRAL CABLE - BODY GROUND)

- (a) Disconnect the spiral cable connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A-7 - Body ground	Always	Below 1 Ω

(c) Connect the spiral cable connector.

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

5. CHECK HARNESS AND CONNECTOR (SPIRAL CABLE - TCM)

- (a) Disconnect the TCM connector.
(b) Disconnect the spiral cable connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A19-1(SFTD) - A-2	Always	Below 1 Ω
A19-2(SFTU) - A-1	Always	Below 1 Ω
A19-1(SFTD) or A-2 - Body ground	Always	10 k Ω or higher
A19-2(SFTU) or A-1 - Body ground	Always	10 k Ω or higher

- (d) Connect the TCM connector.
(e) Connect the spiral cable connector.

OK

6.	CHECK TRANSMISSION SHIFT SWITCH (TRANSMISSION SHIFT SWITCH - SPIRAL CABLE)
-----------	---

- (a) Disconnect the spiral cable connector.
- (b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
C-4 - C-1	Pull continuously "+" (Up shift)	Below 1 Ω
	Release "+" or "-"	10 kΩ or higher
C-3 - C-1	Pull continuously "-" (Down shift)	Below 1 Ω
	Release "+" or "-"	10 kΩ or higher

- (c) Connect the spiral cable connector.

NG ▶ **INSPECT TRANSMISSION SHIFT SWITCH ASSEMBLY**

OK ▶ **INSPECT SPIRAL CABLE SUB-ASSEMBLY**

7.	INSPECT TRANSMISSION SHIFT SWITCH ASSEMBLY
-----------	---

- (a) Inspect the transmission shift switch assembly  .

NG ▶ **REPLACE TRANSMISSION SHIFT SWITCH ASSEMBLY**

OK ▶ **REPLACE SWITCH NO.1 WIRE**

Title: TX6A AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSMISSION SYSTEM: SYSTEM DESCRIPTION (2013 FR-S)		

SYSTEM DESCRIPTION

1. SYSTEM DESCRIPTION

(a) The ECT (Electronic controlled automatic transmission) is an automatic transmission that electronically controls shift timing using the TCM. The TCM detects electrical signals that indicate engine and driving conditions, and controls the shift point, based on driver habits and road conditions. As a result, fuel efficiency and power transmission performance are improved.

Shift shock has been reduced by controlling the engine and transmission simultaneously.

In addition, the ECT has features such as follows:

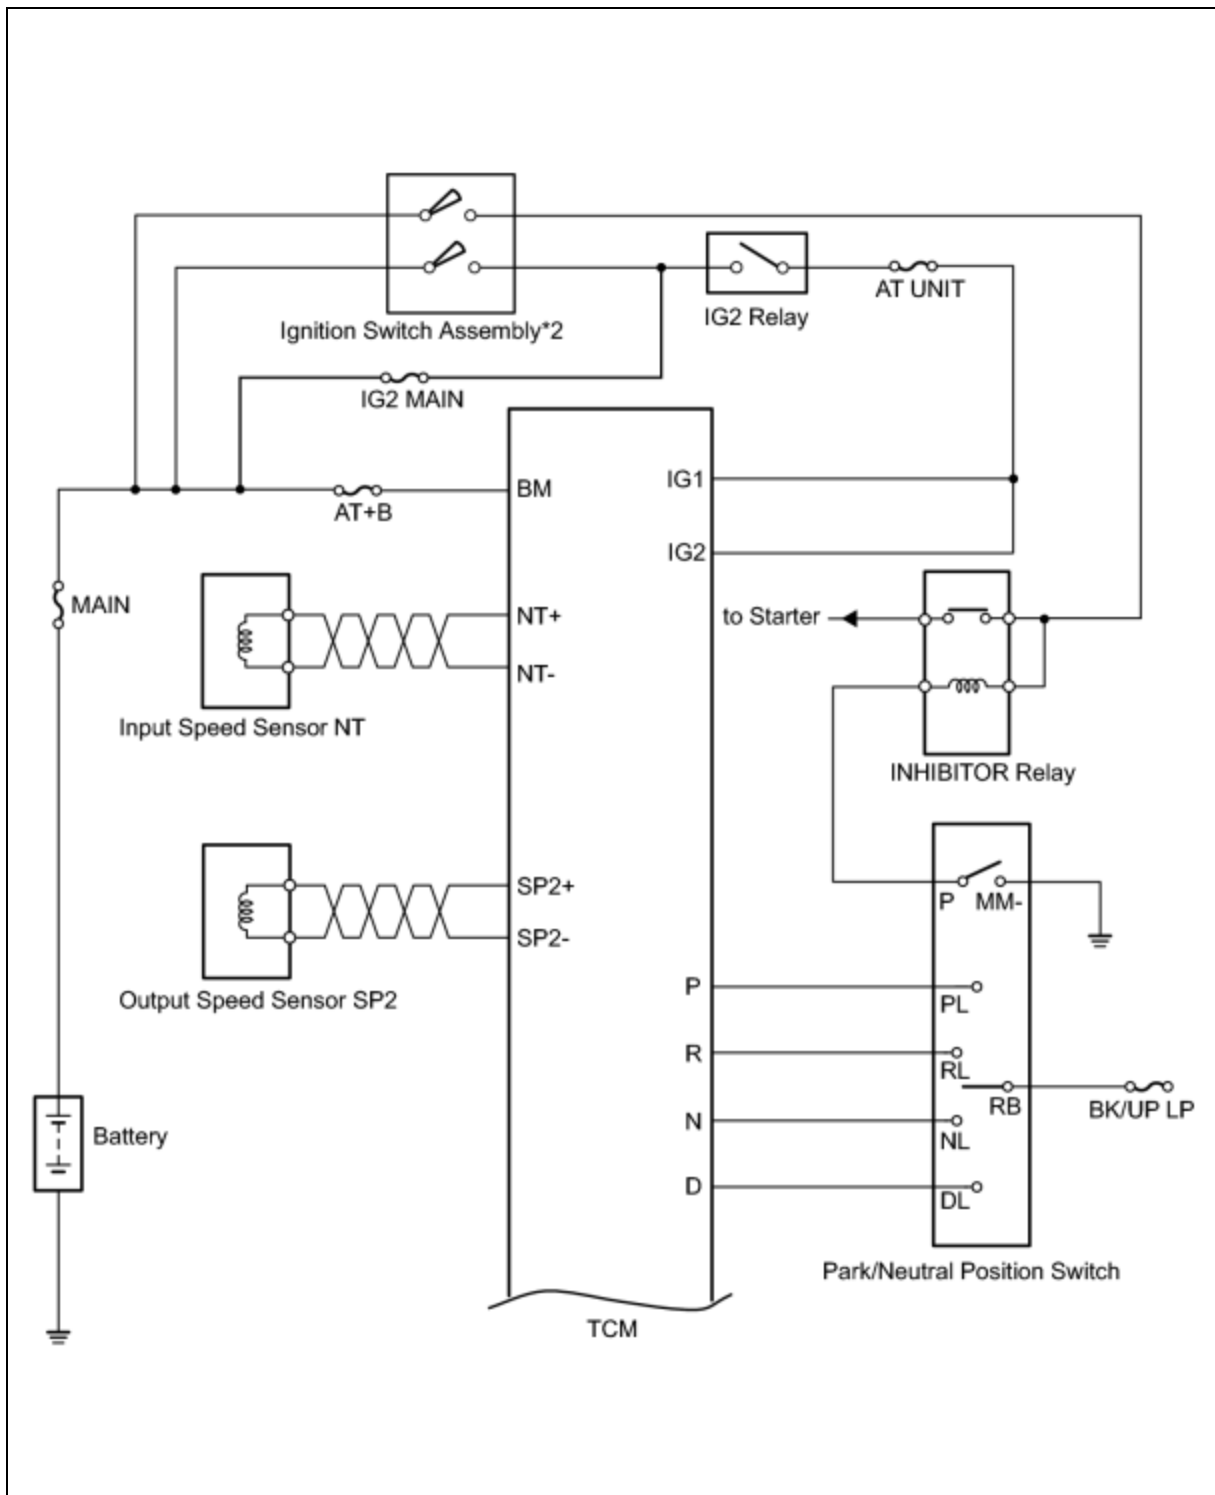

- Diagnostic function.
- Fail-safe function when a malfunction occurs.

Title: TX6A AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSMISSION SYSTEM: TERMINALS OF ECU (2013 FR-S)		

TERMINALS OF ECU

1. TCM

HINT:

Each TCM terminal's standard voltage is shown in the table below.

In the table, first follow the information under "Condition". Look under "Symbols (Terminal No.)" for the terminals to be inspected. The standard voltage between the terminals is shown under "Specific Condition".

Use the illustration above as a reference for the TCM terminals.

TERMINALS NO. (SYMBOLS)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
A19-9(D) - A18-33(E01)	BR - B-Y	D shift position switch signal	Ignition switch ON and shift lever in D and M	11 to 14 V
			Ignition switch ON and shift lever except in D and M	Below 1 V
A19-10(R) - A18-33(E01)	V - B-Y	R shift position switch signal	Ignition switch ON and shift lever in R	11 to 14 V
			Ignition switch ON and shift lever except in R	Below 1 V
A19-1(SFTD) - A18-33(E01)	BE - B-Y	Down shift switch signal	Ignition switch ON and shift lever in "-" (Down shift)	Below 1 V
A19-2(SFTU) - A18-33(E02)	SB - B-Y	Up shift switch signal	Ignition switch ON and shift lever in "+" (Up shift)	Below 1 V
A19-8(M) - A18-33(E01)	O-B - B-Y	M shift position switch signal	Ignition switch ON and shift lever in M	11 to 14 V
			Ignition switch ON and shift lever except in M	Below 1 V

A19-3(P) - A18-33(E01)	BR - B-Y	Park position switch signal	Ignition switch ON and shift lever in P	11 to 14 V
			Ignition switch ON and shift lever except in P	Below 1 V
A19-21(N) - A18-33(E01)	B-G - B-Y	Neutral position switch signal	Ignition switch ON and shift lever in N	11 to 14 V
			Ignition switch ON and shift lever except in N	Below 1 V
A18-13(SLU+) - A18-1(SLU-)	LG - LG-Y	SLU solenoid signal	2nd, 3rd, 4th, 5th or 6th gear (each gear lock-up, M position)	Pulse generation (See waveform 2)
A18-15(SR) - A18-33(E01)	R-B - B-Y	SR solenoid signal	1st, 2nd, 3rd or 4th gear	11 to 14 V
			5th or 6th gear	Below 1 V
A18-14(S4) - A18-33(E01)	L-W - B-Y	S4 solenoid signal	2nd, 5th or 6th gear	11 to 14 V
			1st, 3rd or 4th gear	Below 1 V
A18-6(S3) - A18-33(E01)	L-Y - B-Y	S3 solenoid signal	1st, 2nd or 3rd gear	11 to 14 V
			4th, 5th or 6th gear	Below 1 V
A18-17(S2) - A18-33(E01)	L-O - B-Y	S2 solenoid signal	1st, 2nd or 6th gear	11 to 14 V
			3rd, 4th or 5th gear	Below 1 V
A18-7(S1) - A18-33(E01)	Y - B-Y	S1 solenoid signal	1st gear	Below 1 V
			Except 1st gear	11 to 14 V
A18-5(SL2+) - A18-11(SL2-)	BR-A - BR-B	SL2 solenoid signal	Engine idle speed	Pulse generation (See waveform 3)
A18-16(SL1+) - A18-12(SL1-)	BR - BR-Y	SL1 solenoid signal	5th or 6th gear	Pulse generation (See waveform 4)
A19-18(SP2+) - A19-7(SP2-)	B - W	Output speed sensor SP2 signal	Vehicle speed 20 km/h (12 mph)	Pulse generation (See waveform 6)
A19-17(NT+) - A19-28(NT-)	G - L	Input speed sensor NT signal	Engine idle speed (P or N position)	Pulse generation (See waveform 5)
A18-4(SLT+) - A18-9(SLT-)	L-R - R-W	SLT solenoid signal	Engine idle speed	Pulse generation (See waveform 1)
A18-22(OIL) - A18-23(EOIL)	R - G-B	ATF temperature sensor signal	ATF temperature: 115°C (239°F) or more	Below 1 V
A18-33(E01) -	B-Y - Body	Ground	Always	Below 1 Ω

Body ground	ground			
A18-3(E02) - Body ground	B-Y - Body ground	Ground	Always	Below 1 Ω
A18-29(CANH) - A18-33(E01)	B-W - B-Y	CAN communication line	Ignition switch ON	Pulse generation (See waveform 7)
A18-28(CANL) - A18-33(E01)	L - B-Y	CAN communication line	Ignition switch ON	Pulse generation (See waveform 8)
A18-34(IG1) - A18-33(E01)	P - B-Y	Starter signal	Ignition switch ON	11 to 14 V
A18-35(IG2) - A18-33(E01)	P - B-Y	Starter signal	Ignition switch ON	11 to 14 V
A18-26(BM) - A18-33(E01)	Y-R - B-Y	Battery	Always	11 to 14 V
A19-13(SPORT) - Body ground	L - B-Y	SPORT switch signal	Ignition switch ON and pattern select switch pressed continuously (SPORT)	11 to 14 V

2. Main Body ECU RH (Cowl Side Junction Block RH)

*1

*2

*1	Instrument Panel Junction Block Assembly	*2	Main Body ECU (Network Gateway ECU)
----	--	----	-------------------------------------

HINT:

Each ECU terminal's standard voltage is shown in the table below.

In the table, first follow the information under "Condition". Look under "Symbols (Terminal No.)" for the terminals to inspected. The standard voltage between the terminals is shown under "Specific Condition".

Use the illustration above as a reference for the ECU terminals.

TERMINALS NO. (SYMBOLS)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
D5-20(SLS+) - Body ground	R	Shift lock control unit assembly signal	Ignition switch ON, Shift lever P position, and Stop light switch ON	11 to 14 V
			Ignition switch ON, Shift lever P position, and Stop light switch OFF	Below 1 V
3C-8 - Body ground	R	Stop light switch signal	Stop light switch ON	11 to 14 V
			Stop light switch OFF	Below 1 V
3D-23 - Body ground	WL	Park position switch signal	Shift lever except P position	11 to 14 V
			Shift lever P position	Below 1 V

HINT:

***1: Voltage is input intermittently as this is an intermittent circuit. (Voltage varies between a peak of 7.5 to 14 V and a low of 0 to 1.5 V.)**

Title: TX6A AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSMISSION SYSTEM: Transmission Control Switch Circuit (2013 FR-S)		

Transmission Control Switch Circuit

DESCRIPTION

When the shift lever is in M, it is possible to change into any gear using the floor shift lever assembly sequential gate.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	INSPECT TRANSMISSION CONTROL SWITCH
-----------	--

(a) Disconnect the D28 transmission control switch connector.

(b) Perform inspection of the transmission control switch INFO.

NG ▶ **REPLACE TRANSMISSION CONTROL SWITCH**

OK

2.	CHECK HARNESS AND CONNECTOR (TRANSMISSION CONTROL SWITCH - TCM)
-----------	--

(a) Disconnect the A19 TCM connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

TESTER CONNECTION	SHIFT POSITION	SPECIFIED CONDITION
A19-1(SFTU) - Body ground	Press continuously "+" (Up shift)	Below 1 Ω
	M	10 k Ω or higher
A19-2(SFTD) - Body ground	Press continuously "-" (Down shift)	Below 1 Ω
	M	10 k Ω or higher

(c) Connect the A19 TCM connector.

**REPAIR OR REPLACE HARNESS OR
NG CONNECTOR**

OK

3.	REPLACE TCM
-----------	--------------------

(a) Replace the TCM .

NEXT PERFORM THE RESET MEMORY

Model Year: 2013	Model: FR-S	Doc ID: RM000000O9Z03PX
Title: TX6A AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSMISSION UNIT: DISASSEMBLY (2013 FR-S)		

DISASSEMBLY

1. REMOVE REFILL PLUG

- (a) Remove the refill plug.
- (b) Remove the O-ring from the refill plug.

2. REMOVE TRANSMISSION CONTROL SHAFT LEVER RH

- (a) Remove the nut, spring washer and the transmission control shaft lever RH from the park/neutral position switch assembly.

3. REMOVE PARK/NEUTRAL POSITION SWITCH ASSEMBLY

- (a) Using a screwdriver, bend the tabs of the lock washer.

- (b) Remove the nut and the lock washer.
- (c) Remove the bolt and the park/neutral position switch assembly from the automatic transmission case sub-assembly.

HINT:

Make sure that the manual valve lever shaft has not been rotated prior to installing the park/neutral position switch assembly as the detent spring may become detached from the manual valve lever shaft.

4. REMOVE OIL COOLER TUBE UNION

- (a) Remove the 2 oil cooler tube union from the automatic transmission case sub-assembly.

5. REMOVE TRANSMISSION REVOLUTION SENSOR

- (a) Remove the 2 bolts and the 2 transmission revolution sensors from the automatic transmission case sub-assembly.

- (b) Remove the 2 O-rings from the 2 transmission revolution sensors.

6. REMOVE AUTOMATIC TRANSMISSION BREATHER TUBE

- (a) Remove the 2 bolts and the automatic transmission breather tube from the automatic transmission case sub-assembly.

7. REMOVE AUTOMATIC TRANSMISSION CASE PLUG

(a) Remove the 5 automatic transmission case plugs from the automatic transmission case sub-assembly.

(b) Remove the 5 O-rings from the 5 automatic transmission case plugs.

(c) Using "TORX" socket wrench T55, remove the automatic transmission case plug from the automatic transmission case sub-assembly.

(d) Remove the O-ring from the automatic transmission case plug.

8. REMOVE AUTOMATIC TRANSMISSION HOUSING

(a) Remove the 10 bolts and the automatic transmission housing from the automatic transmission case sub-assembly.

9. REMOVE EXTENSION HOUSING DUST DEFLECTOR

- (a) Using a brass bar and a hammer, tap out the extension housing dust deflector from the extension housing sub-assembly.

NOTICE:

Be careful not to damage the extension housing sub-assembly.

10. REMOVE EXTENSION HOUSING SUB-ASSEMBLY

- (a) Remove the 6 bolts.

- (b) Using a screwdriver, remove the extension housing sub-assembly from the automatic transmission case sub-assembly.

Text in Illustration

*1	Protective Tape
----	-----------------

NOTICE:

Do not pry the surface where the extension housing sub-assembly contacts the automatic transmission case sub-assembly.

HINT:

Tape the screwdriver tip before use.

11. REMOVE TRANSMISSION CASE ADAPTER RADIAL BALL BEARING

- (a) Using snap ring pliers, remove the snap ring from the extension housing sub-assembly.

- (b) Remove the transmission case adapter radial ball bearing from the extension housing sub-assembly.

12. REMOVE AUTOMATIC TRANSMISSION EXTENSION HOUSING OIL SEAL

- (a) Using a screwdriver, pry out the automatic transmission extension housing oil seal from the extension housing sub-assembly.

Text in Illustration

*1	Protective Tape
----	-----------------

NOTICE:

Be careful not to damage the extension housing sub-assembly.

HINT:

Tape the screwdriver tip before use.

13. REMOVE OUTPUT SHAFT THRUST BEARING

- (a) Using a snap ring expander, remove the snap ring from the output shaft of the rear planetary gear assembly.

- (b) Remove the rear output shaft thrust bearing race, output shaft thrust bearing and the output shaft thrust bearing race.

14. SECURE AUTOMATIC TRANSMISSION CASE SUB-ASSEMBLY

- (a) Install the automatic transmission case sub-assembly to an overhaul attachment.

15. REMOVE AUTOMATIC TRANSMISSION OIL PAN SUB-ASSEMBLY

NOTICE:

Do not turn the transmission over as this will contaminate the valve body with foreign matter

located at the bottom of the oil pan.

- (a) Using a socket hexagon wrench 5 mm, remove the overflow plug and gasket.
- (b) Remove the drain plug and gasket.

- (c) Remove the 20 bolts, automatic transmission oil pan sub-assembly and the automatic transmission oil pan gasket.

- (d) Remove the 3 transmission oil cleaner magnets from the automatic transmission oil pan sub-assembly.

Text in Illustration

*1	Transmission Oil Cleaner Magnet
----	---------------------------------

- (e) Examine the particles in the automatic transmission oil pan sub-assembly.
 - (1) Collect any steel chips with the removed transmission oil cleaner magnets. Carefully inspect the foreign matter and particles in the automatic transmission oil pan sub-assembly and on the transmission oil cleaner magnets to anticipate the type of wear you will find in the automatic transmission assembly.
 - Steel (magnetic): bearing, gear and clutch plate wear
 - Brass (non-magnetic): bush wear

16. REMOVE VALVE BODY OIL STRAINER ASSEMBLY

- (a) Turn over the automatic transmission case sub-assembly.

- (b) Remove the 4 bolts and the valve body oil strainer assembly from the transmission valve body assembly.

(c) Remove the O-ring from the valve body oil strainer assembly.

Text in Illustration

*1	O-ring
----	--------

17. REMOVE TRANSMISSION WIRE

(a) Remove the bolt and the temperature sensor clamp, and separate the ATF temperature sensor.

(b) Remove the bolt and the valve body wire harness clamp.

(c) Disengage the wire harness clamp.

(d) Disconnect the 9 solenoid valve connectors.

(e) Remove the bolt and pull out the transmission wire.

(f) Remove the O-ring from the transmission wire.

Text in Illustration

*1	O-ring
----	--------

18. REMOVE TRANSMISSION VALVE BODY ASSEMBLY

(a) Remove the bolt, detent spring cover and the detent spring from the transmission valve body assembly.

(b) Remove the 19 bolts and the transmission valve body assembly from the automatic transmission case sub-assembly.

(c) Disconnect the manual valve connecting rod sub-assembly from the manual valve lever sub-assembly.

Text in Illustration

*1	Manual Valve Connecting Rod Sub-assembly
*2	Manual Valve Lever Sub-assembly

19. REMOVE TRANSMISSION CASE GASKET

- (a) Remove the 3 transmission case gaskets from the automatic transmission case sub-assembly.

20. REMOVE BRAKE DRUM GASKET

- (a) Remove the 3 brake drum gaskets from the automatic transmission case sub-assembly.

21. REMOVE CHECK BALL BODY

- (a) Remove the check ball body and the compression spring from the automatic transmission case sub-assembly.

Text in Illustration

*1	Check Ball Body
*2	Compression Spring

22. REMOVE C-2 ACCUMULATOR PISTON

- (a) While blowing compressed air into the oil hole, remove the C-2 accumulator piston and the spring from the automatic transmission case sub-assembly.

NOTICE:

Take care as the C-3 and B-3 accumulator pistons may jump out.

- (b) Remove the 2 O-rings from the C-2 accumulator piston.

- (c) Using a screwdriver, remove the snap ring and the spring sub-assembly from the C-2 accumulator piston.

NOTICE:

Be careful not to damage the C-2 accumulator piston.

HINT:

Tape the screwdriver tip before use.

23. REMOVE B-3 ACCUMULATOR PISTON

- (a) While blowing compressed air into the oil hole, remove the B-3 accumulator piston and the spring from the automatic transmission case sub-assembly.

NOTICE:

Take care as the C-3 accumulator piston may jump out.

- (b) Remove the 2 O-rings from the B-3 accumulator piston.

- (c) Using a screwdriver, remove the snap ring and the spring sub-assembly from the B-3 accumulator piston.

NOTICE:

Be careful not to damage the B-3 accumulator piston.

HINT:

Tape the screwdriver tip before use.

24. REMOVE C-3 ACCUMULATOR PISTON

- (a) While blowing compressed air into the oil hole, remove

the C-3 accumulator piston and the 2 springs from the automatic transmission case sub-assembly.

(b) Remove the 2 O-rings from the C-3 accumulator piston.

(c) Using a screwdriver, remove the snap ring and the spring sub-assembly from the C-3 accumulator piston.

NOTICE:

Be careful not to damage the C-3 accumulator piston.

HINT:

Tape the screwdriver tip before use.

25. REMOVE B-1 ACCUMULATOR VALVE

(a) Remove the B-1 accumulator valve and the spring from the automatic transmission case sub-assembly.

26. REMOVE PARKING LOCK PAWL BRACKET

(a) Remove the 3 bolts and the parking lock pawl bracket from the automatic transmission case sub-assembly.

27. REMOVE PARKING LOCK ROD SUB-ASSEMBLY

- (a) Remove the parking lock rod sub-assembly from the manual valve lever sub-assembly.

28. REMOVE PARKING LOCK PAWL SHAFT

- (a) Pull out the parking lock pawl shaft from the front side, and remove the parking lock pawl and the torsion spring.

Text in Illustration

*1	Parking Lock Pawl
*2	E-ring
*3	Parking Lock Pawl Shaft
*4	Torsion Spring

- (b) Remove the E-ring from the parking lock pawl shaft.

29. REMOVE MANUAL VALVE LEVER SUB-ASSEMBLY

- (a) Using a screwdriver and a hammer, cut off the spacer and remove it from the manual valve lever shaft.

Text in Illustration

*1	Protective Tape
----	-----------------

NOTICE:

Be careful not to damage the manual valve lever shaft.

HINT:

Tape the screwdriver tip before use.

- (b) Using a pin punch 3 mm and a hammer, drive out the spring pin.

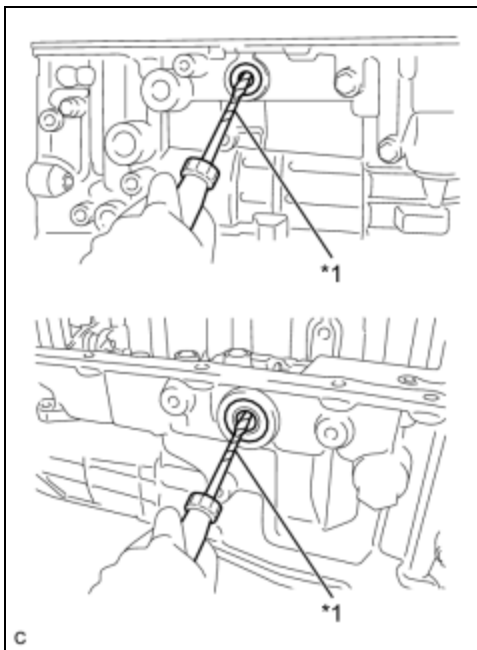

HINT:

Slowly drive out the spring pin so that it does not fall into the automatic transmission case sub-assembly.

(c) Pull the manual valve lever shaft out through the case and remove the manual valve lever sub-assembly.

30. REMOVE MANUAL VALVE LEVER SHAFT OIL SEAL

(a) Using a screwdriver, pry out the 2 manual valve lever shaft oil seals from the automatic transmission case sub-assembly.

Text in Illustration

*1	Protective Tape
----	-----------------

NOTICE:

Be careful not to damage the automatic transmission case sub-assembly.

HINT:

Tape the screwdriver tip before use.

31. REMOVE OIL PUMP ASSEMBLY

(a) Remove the 9 bolts.

(b) Using a screwdriver, pull out the oil pump assembly from the automatic transmission case sub-assembly.

Text in Illustration

*1	Protective Tape
----	-----------------

NOTICE:

Be careful not to damage the oil pump assembly or automatic transmission case sub-assembly.

HINT:

Tape the screwdriver tip before use.

(c) Remove the No. 1 thrust bearing race from the oil pump assembly.

Text in Illustration

*1	No. 1 Thrust Bearing Race
*2	Oil Pump Assembly
*3	O-ring

(d) Remove the O-ring from the oil pump assembly.

32. REMOVE CLUTCH DRUM AND INPUT SHAFT ASSEMBLY

(a) Remove the clutch drum and input shaft assembly from the automatic transmission case sub-assembly.

(b) Remove the clutch drum thrust washer, thrust needle roller bearing, input shaft front thrust bearing race and the input shaft front thrust needle roller bearing from the clutch drum and input shaft assembly.

Text in Illustration

*1	Thrust Needle Roller Bearing
*2	Input Shaft Front Thrust Bearing Race
*3	Input Shaft Front Thrust Needle Roller Bearing
*4	Clutch Drum Thrust Washer

33. REMOVE NO. 2 ONE-WAY CLUTCH ASSEMBLY

- (a) Remove the No. 2 one-way clutch assembly and the input shaft clutch drum thrust washer from the clutch drum and input shaft assembly.

Text in Illustration

*1	No. 2 One-way Clutch Assembly
*2	Input Shaft Clutch Drum Thrust Washer

34. SUPPORT CLUTCH DRUM AND INPUT SHAFT ASSEMBLY

- (a) Place the oil pump assembly onto the torque converter assembly, and then place the clutch drum and input shaft assembly onto the oil pump assembly.

Text in Illustration

*1	Torque Converter Assembly
*2	Oil Pump Assembly

35. REMOVE REVERSE CLUTCH HUB SUB-ASSEMBLY

- (a) Using a screwdriver, remove the snap ring from the reverse clutch piston sub-assembly.

Text in Illustration

*1	Protective Tape
----	-----------------

NOTICE:

Be careful not to damage the reverse clutch piston sub-assembly.

HINT:

Tape the screwdriver tip before use.

- (b) Remove the reverse clutch hub sub-assembly from the reverse clutch drum sub-assembly.

36. REMOVE REVERSE CLUTCH REACTION SLEEVE

- (a) Remove the reverse clutch reaction sleeve from the reverse clutch hub sub-assembly.

37. REMOVE NO. 3 CLUTCH DISC (REAR CLUTCH DISC)

- (a) Remove the clutch cushion plate, reverse clutch flange, 4 No. 3 clutch discs and the 3 No. 3 clutch plates from the reverse clutch hub sub-assembly.

Text in Illustration

*1	No. 3 Clutch Disc
*2	No. 3 Clutch Plate
*3	Reverse Clutch Flange
*4	Clutch Cushion Plate

38. REMOVE FORWARD CLUTCH HUB SUB-ASSEMBLY

- (a) Remove the forward clutch hub sub-assembly and the No. 3 clutch hub thrust washer from the reverse clutch drum sub-assembly.

Text in Illustration

*1	Forward Clutch Hub Sub-assembly
*2	No. 3 Clutch Hub Thrust Washer

- (b) Remove the 2 thrust needle roller bearings and the No. 2 thrust bearing race from the forward clutch hub sub-assembly.

Text in Illustration

*1	Thrust Needle Roller Bearing
----	------------------------------

*2	No. 2 Thrust Bearing Race

39. REMOVE COAST CLUTCH HUB SUB-ASSEMBLY

- (a) Remove the coast clutch hub sub-assembly from the reverse clutch drum sub-assembly.

40. REMOVE NO. 4 ONE-WAY CLUTCH ASSEMBLY

- (a) Remove the No. 4 one-way clutch assembly and the No. 2 clutch hub thrust washer from the coast clutch hub sub-assembly.

Text in Illustration

*1	Coast Clutch Hub Sub-assembly
*2	No. 2 Clutch Hub Thrust Washer
*3	No. 4 One-way Clutch Assembly

41. REMOVE NO. 1 CLUTCH DISC (FORWARD CLUTCH DISC)

- (a) Using a screwdriver, remove the snap ring.

Text in Illustration

*1	Protective Tape
----	-----------------

NOTICE:

Be careful not to damage the input shaft.

HINT:

Tape the screwdriver tip before use.

(b) Remove the forward clutch flange, 4 No. 1 clutch discs, 4 No. 1 clutch plates and the clutch cushion plate from the input shaft.

Text in Illustration

*1	Clutch Cushion Plate
*2	No. 1 Clutch Plate
*3	No. 1 Clutch Disc
*4	Forward Clutch Flange

42. REMOVE NO. 4 CLUTCH DISC (COAST CLUTCH DISC)

(a) Using a screwdriver, remove the snap ring.

Text in Illustration

*1	Protective Tape
----	-----------------

NOTICE:

Be careful not to damage the forward clutch piston sub-assembly.

HINT:

Tape the screwdriver tip before use.

(b) Remove the coast clutch flange, 4 No. 4 clutch discs and the 4 No. 4 clutch plates from the forward clutch piston sub-assembly.

Text in Illustration

*1	No. 4 Clutch Plate
*2	No. 4 Clutch Disc
*3	Coast Clutch Flange

43. REMOVE INPUT SHAFT

(a) Remove the thrust needle roller bearing and the input

shaft rear thrust bearing race from the input shaft.

Text in Illustration

*1	Thrust Needle Roller Bearing
*2	Input Shaft Rear Thrust Bearing Race

(b) Remove the input shaft from the reverse clutch drum sub-assembly.

44. REMOVE CLUTCH DRUM OIL SEAL RING

(a) Remove the 4 clutch drum oil seal rings from the input shaft.

45. REMOVE NO. 1 CLUTCH BALANCER

(a) Place SST on the No. 1 clutch balancer, and compress the forward clutch return spring sub-assembly with a press.

SST: 09387-00110

(b) Using SST, remove the snap ring.

SST: 09350-30020

09350-07070

(c) Remove the No. 1 clutch balancer and the forward clutch return spring sub-assembly from the input shaft.

Text in Illustration

*1	No. 1 Clutch Balancer
*2	Forward Clutch Return Spring Sub-assembly

(d) Remove the D-ring from the No. 1 clutch balancer.

Text in Illustration

*1	D-ring
----	--------

46. REMOVE FORWARD CLUTCH PISTON SUB-ASSEMBLY

(a) Hold the forward clutch piston sub-assembly and apply compressed air (392 kPa, 4.0 kgf/cm², 57 psi) to the input shaft to remove the forward clutch piston sub-assembly.

(b) Remove the coast clutch piston from the forward clutch piston sub-assembly.

Text in Illustration

*1	Coast Clutch Piston
*2	Forward Clutch Piston Sub-assembly

(c) Remove the O-ring from the input shaft.

Text in Illustration

*1	O-ring
----	--------

47. REMOVE REVERSE CLUTCH FLANGE

(a) Remove the reverse clutch flange from the reverse clutch drum sub-assembly.

48. REMOVE NO. 2 CLUTCH DISC (DIRECT CLUTCH DISC)

(a) Using a screwdriver, remove the 2 snap rings from the reverse clutch drum sub-assembly.

Text in Illustration

*1	Protective Tape
----	-----------------

NOTICE:

Be careful not to damage the reverse clutch drum sub-assembly.

HINT:

Tape the screwdriver tip before use.

(b) Remove the direct clutch flange, 5 No. 2 clutch discs and the 5 No. 2 clutch plates from the reverse clutch drum sub-assembly.

Text in Illustration

*1	No. 2 Clutch Plate
*2	No. 2 Clutch Disc
*3	Direct Clutch Flange

49. REMOVE NO. 3 CLUTCH BALANCER

- (a) Place SST on the No. 3 clutch balancer, and compress the reverse clutch return spring sub-assembly with a press.

SST: 09387-00070

- (b) Using SST, remove the snap ring.

SST: 09350-30020

09350-07070

- (c) Remove the No. 3 clutch balancer.

50. REMOVE REVERSE CLUTCH RETURN SPRING SUB-ASSEMBLY

- (a) Remove the reverse clutch return spring sub-assembly and O-ring from the reverse clutch piston sub-assembly.

Text in Illustration

*1	Reverse Clutch Return Spring Sub-assembly
*2	O-ring
*3	Reverse Clutch Piston Sub-assembly

51. REMOVE REVERSE CLUTCH PISTON SUB-ASSEMBLY

- (a) Remove the reverse clutch piston sub-assembly from the reverse clutch drum sub-assembly.

Text in Illustration

*1	Reverse Clutch Piston Sub-assembly
*2	Reverse Clutch Drum Sub-assembly

- (b) Remove the O-ring from the reverse clutch piston sub-assembly.

Text in Illustration

*1	O-ring
----	--------

- (c) Remove the O-ring from the reverse clutch drum sub-assembly.

Text in Illustration

*1	O-ring
----	--------

52. REMOVE DIRECT CLUTCH PISTON SUB-ASSEMBLY

- (a) Place SST on the No. 2 clutch balancer, and compress the direct clutch return spring sub-assembly with a press.

SST: 09320-89010

(b) Using SST, remove the snap ring.

SST: 09350-30020

09350-07070

(c) Remove the No. 2 clutch balancer and the direct clutch return spring sub-assembly.

Text in Illustration

*1	No. 2 Clutch Balancer
*2	O-ring
*3	Direct Clutch Return Spring Sub-assembly

(d) Remove the O-ring from the No. 2 clutch balancer.

(e) Using 2 screwdrivers, remove the direct clutch piston sub-assembly from the reverse clutch drum sub-assembly.

Text in Illustration

*1	Protective Tape
----	-----------------

NOTICE:

Be careful not to damage the direct clutch piston sub-assembly.

HINT:

Tape the screwdriver tip before use.

(f) Remove the 2 O-rings from the direct clutch piston sub-assembly.

Text in Illustration

*1	O-ring
----	--------

53. REMOVE NO. 3 BRAKE DISC (2ND BRAKE DISC SET)

(a) Using a screwdriver, remove the snap ring from the automatic transmission case sub-assembly.

Text in Illustration

*1	Protective Tape
----	-----------------

NOTICE:

Be careful not to damage the automatic transmission case sub-assembly.

HINT:

Tape the screwdriver tip before use.

(b) Remove the No. 3 brake flange, 3 No. 3 brake discs and the 3 No. 3 brake plates from the automatic transmission case sub-assembly.

Text in Illustration

*1	No. 3 Brake Plate
*2	No. 3 Brake Disc
*3	No. 3 Brake Flange

54. REMOVE 2ND BRAKE CYLINDER

(a) Using SST, remove the snap ring from the automatic transmission case sub-assembly.

SST: 09350-30020

09350-07060

(b) Remove the 2nd brake cylinder from the automatic transmission case sub-assembly.

55. REMOVE 2ND BRAKE PISTON

(a) Using a screwdriver, remove the snap ring and the No. 3 brake piston return spring sub-assembly from the 2nd brake cylinder.

Text in Illustration

*1	Snap Ring
*2	No. 3 Brake Piston Return Spring Sub-assembly
*3	2nd Brake Cylinder

NOTICE:

Be careful not to damage the 2nd brake cylinder.

HINT:

Tape the screwdriver tip before use.

(b) Hold the 2nd brake piston and apply compressed air (392 kPa, 4.0 kgf/cm², 57 psi) to the 2nd brake cylinder to remove the 2nd brake piston.

(c) Remove the 2 O-rings from the 2nd brake piston.

Text in Illustration

*1	O-ring
----	--------

56. REMOVE ONE-WAY CLUTCH ASSEMBLY

- (a) Remove the one-way clutch assembly and the No. 1 planetary carrier thrust washer from the automatic transmission case sub-assembly.

Text in Illustration

*1	One-way Clutch Assembly
*2	No. 1 Planetary Carrier Thrust Washer

57. REMOVE FRONT PLANETARY GEAR ASSEMBLY

- (a) Remove the front planetary gear assembly and the one-way clutch inner race sub-assembly from the automatic transmission case sub-assembly.

Text in Illustration

*1	One-way Clutch Inner Race Sub-assembly
*2	Front Planetary Gear Assembly

- (b) Remove the front planetary flange rear thrust bearing race, front planetary flange thrust needle roller bearing and the No. 2 planetary carrier thrust washer from the automatic transmission case sub-assembly.

Text in Illustration

*1	Front Planetary Flange Rear Thrust Bearing Race
*2	Front Planetary Flange Thrust Needle Roller Bearing
*3	No. 2 Planetary Carrier Thrust Washer

58. REMOVE FRONT PLANETARY RING GEAR

- (a) Remove the front planetary ring gear from the automatic transmission case sub-assembly.

59. REMOVE CENTER PLANETARY RING GEAR

(a) Using a screwdriver, remove the snap ring.

Text in Illustration

*1	Protective Tape
----	-----------------

NOTICE:

Be careful not to damage the front planetary ring gear.

HINT:

Tape the screwdriver tip before use.

(b) Remove the center planetary ring gear from the front planetary ring gear.

(c) Using a screwdriver, remove the snap ring.

Text in Illustration

*1	Protective Tape
----	-----------------

NOTICE:

Be careful not to damage the center planetary ring gear.

HINT:

Tape the screwdriver tip before use.

(d) Remove the front planetary ring gear flange sub-assembly from the center planetary ring gear.

60. REMOVE NO. 1 BRAKE DISC

(a) Remove the No. 1 brake flange, 3 No. 1 brake discs and the 3 No. 1 brake plates from the automatic transmission case sub-assembly.

Text in Illustration

*1	No. 1 Brake Plate
*2	No. 1 Brake Disc
*3	No. 1 Brake Flange

61. REMOVE BRAKE PISTON RETURN SPRING SUB-ASSEMBLY

- (a) Using a screwdriver, remove the snap ring from the automatic transmission case sub-assembly.

Text in Illustration

*1	Protective Tape
----	-----------------

NOTICE:

Be careful not to damage the automatic transmission case sub-assembly.

HINT:

Tape the screwdriver tip before use.

- (b) Remove the brake piston return spring sub-assembly and the No. 1 brake cylinder from the automatic transmission case sub-assembly.

Text in Illustration

*1	Brake Piston Return Spring Sub-assembly
*2	No. 1 Brake Cylinder

62. REMOVE NO. 1 BRAKE PISTON

- (a) Hold the No. 1 brake piston and apply compressed air (392 kPa, 4.0 kgf/cm², 57 psi) to the No. 1 brake cylinder to remove the No. 1 brake piston.

HINT:

If the piston does not pop out with compressed air, lift the piston out with needle-nose pliers.

- (b) Remove the 2 O-rings from the No. 1 brake piston.

63. REMOVE NO. 2 BRAKE DISC

- (a) Using a screwdriver, remove the snap ring from the automatic transmission case sub-assembly.

Text in Illustration

*1	Protective Tape
----	-----------------

--	--

NOTICE:

Be careful not to damage the automatic transmission case sub-assembly.

HINT:

Tape the screwdriver tip before use.

- (b) Remove the 2 No. 2 brake flanges, 4 No. 2 brake discs, 3 No. 2 brake plates and the No. 2 brake piston return spring sub-assembly from the automatic transmission case sub-assembly.

Text in Illustration

*1	No. 2 Brake Flange
*2	No. 2 Brake Disc
*3	No. 2 Brake Plate
*4	No. 2 Brake Piston Return Spring Sub-assembly

64. REMOVE NO. 2 BRAKE PISTON

- (a) Hold the No. 2 brake piston and apply compressed air (392 kPa, 4.0 kgf/cm², 57 psi) to the transmission case to remove the No. 2 brake piston and the No. 2 brake cylinder.

HINT:

If the piston does not pop out with compressed air, lift the piston out with needle-nose pliers.

- (b) Remove the No. 2 brake piston from the No. 2 brake cylinder.

- (c) Remove the 2 O-rings from the No. 2 brake piston.

65. REMOVE CENTER PLANETARY GEAR ASSEMBLY

- (a) Remove the center planetary gear assembly, planetary sun gear, thrust needle roller bearing and the No. 4 thrust bearing race from the automatic transmission case sub-assembly.

Text in Illustration

*1	Thrust Needle Roller Bearing

*2	No. 4 Thrust Bearing Race
*3	Center Planetary Gear Assembly
*4	Planetary Sun Gear

66. REMOVE INTERMEDIATE SHAFT

- (a) Using SST, remove the snap ring from the automatic transmission case sub-assembly.

SST: 09350-30020

09350-07060

- (b) Remove the intermediate shaft together with the No. 3 one-way clutch assembly from the automatic transmission case sub-assembly.

67. REMOVE NO. 3 ONE-WAY CLUTCH ASSEMBLY

- (a) Remove the No. 3 one-way clutch assembly and the one-way clutch inner race from the intermediate shaft.

Text in Illustration

*1	No. 3 One-way Clutch Assembly
*2	One-way Clutch Inner Race

68. REMOVE REAR PLANETARY RING GEAR FLANGE SUB-ASSEMBLY

- (a) Remove the rear planetary ring gear flange sub-assembly, No. 7 thrust bearing race, thrust needle roller bearing and the No. 8 thrust bearing race from the intermediate shaft.

Text in Illustration

*1	Rear Planetary Ring Gear Flange Sub-assembly
*2	No. 7 Thrust Bearing Race
*3	Thrust Needle Roller Bearing
*4	No. 8 Thrust Bearing Race

69. REMOVE BRAKE PLATE STOPPER SPRING

- (a) Remove the brake plate stopper spring from the automatic transmission case sub-assembly.

70. REMOVE NO. 4 BRAKE DISC

- (a) Remove the 2 No. 4 brake flanges, 5 No. 4 brake discs and the 4 No. 4 brake plates from the automatic transmission case sub-assembly.

Text in Illustration

*1	No. 4 Brake Flange
*2	No. 4 Brake Disc
*3	No. 4 Brake Plate

71. REMOVE REAR PLANETARY GEAR ASSEMBLY

- (a) Remove the rear planetary gear assembly from the automatic transmission case sub-assembly.

(b) Remove the thrust bearing race, thrust needle roller bearing and the No. 9 thrust bearing race from the rear planetary gear assembly.

Text in Illustration

*1	Thrust Bearing Race
*2	Thrust Needle Roller Bearing
*3	No. 9 Thrust Bearing Race

(c) Remove the thrust needle roller bearing from the automatic transmission case sub-assembly.

72. REMOVE 1ST AND REVERSE BRAKE RETURN SPRING SUB-ASSEMBLY

(a) Place SST on the 1st and reverse brake return spring sub-assembly and compress the 1st and reverse brake return spring sub-assembly.

Text in Illustration

*1	Snap Ring
----	-----------

SST: 09350-30020

09350-07050

(b) Using SST, remove the snap ring and the 1st and reverse brake return spring sub-assembly.

SST: 09350-30020

09350-07070

73. REMOVE BRAKE APPLY TUBE

(a) Remove the brake apply tube from the automatic transmission case sub-assembly.

74. REMOVE 1ST AND REVERSE BRAKE PISTON

- (a) Hold the 1st and reverse brake piston and apply compressed air (392 kPa, 4.0 kgf/cm², 57 psi) to the transmission case to remove the 1st and reverse brake piston.

HINT:

If the piston does not pop out with compressed air, lift the piston out with needle-nose pliers.

- (b) Remove the O-ring from the 1st and reverse brake piston.

75. REMOVE BRAKE REACTION SLEEVE

- (a) Using SST, remove the brake reaction sleeve from the automatic transmission case sub-assembly.

SST: 09350-30020

09350-07080

- (b) Remove the 2 O-rings from the brake reaction sleeve.

76. REMOVE NO. 4 BRAKE PISTON

- (a) Using SST, remove the No. 4 brake piston from the automatic transmission case sub-assembly.

SST: 09350-30020

09350-07090

(b) Remove the 2 O-rings from the No. 4 brake piston.

Last Modified: 3-27-2012	6.4 G	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM00000009W03YX
Title: TX6A AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSMISSION UNIT: INSPECTION (2013 FR-S)		

INSPECTION

1. INSPECT 1ST AND REVERSE BRAKE RETURN SPRING SUB-ASSEMBLY

- (a) Using a vernier caliper, measure the free length of the spring together with the spring seat.

Standard free length:
23.74 mm (0.935 in.)

If the free length is shorter than the standard free length, replace the 1st and reverse brake return spring sub-assembly.

2. INSPECT REAR PLANETARY GEAR ASSEMBLY

- (a) Using a feeler gauge, measure the rear planetary gear pinion thrust clearance.

Standard clearance:
0.2 to 0.6 mm (0.00788 to 0.0236 in.)

If the clearance is more than the standard clearance, replace the rear planetary gear assembly.

- (b) Using a caliper gauge, measure the inside diameter of the rear planetary gear bushing.

Standard inside diameter:
18.025 mm (0.710 in.)

If the inside diameter is more than the standard inside diameter, replace the rear planetary gear assembly.

3. INSPECT PACK CLEARANCE OF NO. 4 BRAKE

- (a) Make sure that the 1st and reverse brake piston moves smoothly when applying and releasing compressed air (392 kPa, 4.0 kgf/cm², 57 psi).

- (b) Using a vernier caliper, measure the level difference (dimension A) between the upper surface of the brake apply tube and the contact surface of the No. 4 brake flange at both ends across the 1st and reverse brake piston diameter, and calculate the average.

NOTICE:

The 1st and reverse brake piston must be securely installed to the end face of the transmission case.

HINT:

Dimension A = 23.32 to 24.18 mm (0.919 to 0.951 in.)

- (c) Using a vernier caliper, and while applying compression of 4.9 N (0.5 kgf, 1.1 lbf) or less, measure the thickness (dimension B) of the 2 No. 4 brake flanges, 4 No. 4 brake plates and the 5 No. 4 brake discs altogether at both ends across a diameter, and calculate the average.

HINT:

Dimension B = 23.64 to 26.00 mm (0.931 to 1.023 in.)

Pack clearance = Dimension A - Dimension B - 0.18 mm (0.00709 in.) + 1.8 mm (0.0709 in.)

Pack clearance:

0.5 to 0.8 mm (0.0197 to 0.0314 in.)

- (d) If the pack clearance is outside the standard range, select and install a No. 4 brake flange that brings the pack clearance to be within the standard range.

HINT:

There are 8 types of No. 4 brake flanges that can be used to adjust the pack clearance. Select the one

with the most appropriate thickness.

Thickness H:

PART NO.	MARK	THICKNESS H
SU003-03786	0	0 mm (0 in.)
SU003-03787	2	0.2 mm (0.00787 in.)
SU003-03788	4	0.4 mm (0.0157 in.)
SU003-03789	6	0.6 mm (0.0236 in.)
SU003-03790	8	0.8 mm (0.0315 in.)
SU003-03791	10	1.0 mm (0.0394 in.)
SU003-03792	12	1.2 mm (0.0472 in.)
SU003-03793	14	1.4 mm (0.0551 in.)

4. INSPECT NO. 4 BRAKE DISC

(a) Check whether the sliding surfaces of the discs, plates and the flanges are worn or burnt.

If necessary, replace them.

NOTICE:

- If the linings of the discs are peeled off or discolored, or if any part of the printed numbers is damaged, replace all the discs.
- Before assembling new discs, soak them in ATF for at least 15 minutes.

5. INSPECT INTERMEDIATE SHAFT

(a) Using a dial indicator, check the intermediate shaft runout.

Standard runout:
0.03 mm (0.00118 in.)

If the runout is more than the standard, replace the intermediate shaft with a new one.

(b) Using a micrometer, check the outer diameter of the intermediate shaft at each point shown in the illustration.

Standard diameter:

A

22.962 to 22.975 mm (0.9041 to 0.9045 in.)

B

27.759 to 27.775 mm (1.0929 to 1.0935 in.)

If the outer diameter is less than the standard, replace the intermediate shaft with a new one.

6. INSPECT NO. 3 ONE-WAY CLUTCH ASSEMBLY

- (a) Hold the rear planetary ring gear flange sub-assembly and turn the No. 3 one-way clutch assembly.

Text in Illustration

	Lock
	Free

- (b) Check that the No. 3 one-way clutch assembly turns freely when turned counterclockwise and locks when turned clockwise.

If there is a problem with the No. 3 one-way clutch assembly, replace it.

7. INSPECT CENTER PLANETARY GEAR ASSEMBLY

- (a) Using a feeler gauge, measure the center planetary gear

pinion thrust clearance.

Standard clearance:

0.12 to 0.68 mm (0.00473 to 0.0267 in.)

If the clearance is more than the standard clearance, replace the center planetary gear assembly.

8. INSPECT NO. 2 BRAKE DISC

(a) Check whether the sliding surfaces of the discs, plates and the flanges are worn or burnt.

If necessary, replace them.

NOTICE:

- If the linings of the discs are peeled off or discolored, or if any part of the printed numbers is damaged, replace all the discs.
- Before assembling new discs, soak them in ATF for at least 15 minutes.

9. INSPECT NO. 2 BRAKE PISTON RETURN SPRING SUB-ASSEMBLY

(a) Using a vernier caliper, measure the free length of the spring together with the spring seat.

Standard free length:

22.66 mm (0.892 in.)

If the free length is shorter than the standard free length, replace the No. 2 brake piston return spring sub-assembly.

10. INSPECT PISTON STROKE OF NO. 2 BRAKE PISTON

(a) Make sure that the No. 2 brake piston moves smoothly when applying and releasing compressed air (392 kPa, 4.0 kgf/cm², 57 psi).

(b) Using SST and a dial indicator, measure the moving distance (distance A) of the No. 2 brake disc at both ends across a diameter while blowing air (392 kPa, 4.0 kgf/cm², 57 psi) into the oil hole as shown in the illustration, and calculate the average.

SST: 09350-30020

09350-06120

Piston stroke:

0.6 to 0.9 mm (0.0237 to 0.0354 in.)

(c) If the piston stroke is outside the standard range, select and install a No. 2 brake flange that brings the piston stroke within the standard range.

HINT:

There are 8 types of No. 2 brake flanges that can be used to adjust the piston stroke. Select one with the most appropriate thickness.

Flange Thickness:

PART NO.	MARK	THICKNESS
SU003-03771	0	2.0 mm (0.0787 in.)
SU003-03772	1	2.1 mm (0.0827 in.)
SU003-03773	2	2.2 mm (0.0866 in.)
SU003-03774	3	2.3 mm (0.0906 in.)
SU003-03775	4	2.4 mm (0.0945 in.)
SU003-03776	5	2.5 mm (0.0984 in.)
SU003-03777	6	2.6 mm (0.102 in.)
SU003-03778	7	2.7 mm (0.106 in.)

11. INSPECT BRAKE PISTON RETURN SPRING SUB-ASSEMBLY

(a) Using a vernier caliper, measure the free length of the spring together with the spring seat.

Standard free length:

17.05 mm (0.671 in.)

If the free length is shorter than the standard free length, replace the brake piston return spring sub-assembly.

12. INSPECT FRONT PLANETARY GEAR ASSEMBLY

- (a) Using a feeler gauge, measure the front planetary gear pinion thrust clearance.

Standard clearance:

0.20 to 0.60 mm (0.00788 to 0.0236 in.)

If the clearance is more than the standard clearance, replace the front planetary gear assembly.

- (b) Using a cylinder gauge, measure the inside diameter of the front planetary gear bushing.

Standard inside diameter:

48.78 mm (1.92 in.)

If the inside diameter is more than the standard inside diameter, replace the front planetary gear assembly.

13. INSPECT ONE-WAY CLUTCH ASSEMBLY

- (a) Install the one-way clutch assembly to the one-way clutch inner race sub-assembly.

Text in Illustration

	
	Free

- (b) Hold the one-way clutch inner race sub-assembly and turn the one-way clutch assembly.
- (c) Check that the one-way clutch assembly turns freely when turned counterclockwise and locks when turned clockwise.
If there is a problem with the one-way clutch assembly, replace it.
- (d) Remove the one-way clutch assembly from the one-way clutch inner race sub-assembly.

14. INSPECT PISTON STROKE OF NO. 1 BRAKE PISTON

- (a) Make sure that the No. 1 brake piston moves smoothly when applying and releasing compressed air (392 kPa, 4.0 kgf/cm², 57 psi).

- (b) Using a vernier caliper, and while applying compression of 4.9 N (0.5 kgf, 1.1 lbf) or less, measure the level difference (dimension A) between the upper surface of the No. 1 brake piston and the contact surface of the No. 1 brake flange at both ends across the No. 1 brake piston diameter.

- (c) Using a vernier caliper, measure the thickness (dimension B) of the No. 1 brake flange, 3 No. 1 brake plates and the 3 No. 1 brake discs altogether at both ends across a diameter, and calculate the average.

HINT:

Dimension A = 15.27 to 15.92 mm (0.602 to 0.626 in.)

Dimension B = 14.50 to 15.54 mm (0.571 to 0.611 in.)

Piston stroke = Dimension A - Dimension B

Piston stroke:

0.42 to 0.72 mm (0.0166 to 0.0283 in.)

- (d) If the piston stroke is outside the standard range, parts may have been assembled incorrectly, so check and reassemble them again.
- (e) If the piston stroke is still outside the standard range, select another No. 1 brake flange that brings the piston stroke within the standard range.

HINT:

There are 4 types of No. 1 brake flanges that can be used to adjust the piston stroke. Select one with the most appropriate thickness.

Flange Thickness:

PART NO.	MARK	THICKNESS
SU003-03765	0	2.0 mm (0.0787 in.)
SU003-03766	1	2.2 mm (0.0866 in.)
SU003-03767	2	2.4 mm (0.0945 in.)
SU003-03768	3	2.6 mm (0.102 in.)

15. INSPECT NO. 1 BRAKE DISC

- (a) Check whether the sliding surfaces of the discs, plates and the flange are worn or burnt.

If necessary, replace them.

NOTICE:

- If the linings of the discs are peeled off or discolored, or if any part of the groove is damaged, replace all the discs.
- Before assembling new discs, soak them in ATF for at least 15 minutes.

16. INSPECT NO. 3 BRAKE PISTON RETURN SPRING SUB-ASSEMBLY

- (a) Using a vernier caliper, measure the free length of the spring together with the spring seat.

Standard free length:

15.72 mm (0.619 in.)

If the free length is shorter than the standard free length, replace the No. 3 brake piston return spring sub-assembly.

17. INSPECT NO. 3 BRAKE DISC (2ND BRAKE DISC SET)

- (a) Check whether the sliding surfaces of the discs, plates and the flange are worn or burnt.
If necessary, replace them.

NOTICE:

- If the linings of the discs are peeled off or discolored, or if any part of the printed numbers is damaged, replace all the discs.
- Before assembling new discs, soak them in ATF for at least 15 minutes.

18. INSPECT NO. 2 ONE-WAY CLUTCH ASSEMBLY

- (a) Hold the reverse clutch hub sub-assembly and turn the No. 2 one-way clutch assembly.

Text in Illustration

	Lock
	Free

- (b) Check that the No. 2 one-way clutch assembly turns freely when turned clockwise and locks when turned counterclockwise.
If there is a problem with the No. 2 one-way clutch assembly, replace it.

19. INSPECT INDIVIDUAL PISTON OPERATION

- (a) Check the operating sound while applying compressed air into the oil holes indicated in the illustration.

Text in Illustration

*a	No. 1 Clutch
*b	No. 2 Clutch
*c	No. 3 Clutch
*d	No. 4 Clutch

*e	No. 1 Brake
*f	No. 2 Brake
*g	No. 3 Brake
*h	No. 4 Brake (In)
*i	No. 4 Brake (Out)

HINT:

When inspecting the direct clutch, check the operating sound with the C3 accumulator piston hole closed.

If there is no sound, disassemble the parts and check the installation condition of the parts.

20. INSPECT NO. 4 ONE-WAY CLUTCH ASSEMBLY

(a) Hold the coast clutch hub sub-assembly and turn the No. 4 one-way clutch assembly.

Text in Illustration

	Lock
	Free

(b) Check that the No. 4 one-way clutch assembly turns freely when turned clockwise and locks when turned counterclockwise.

If there is a problem with the No. 4 one-way clutch assembly, replace it.

21. INSPECT DIRECT CLUTCH RETURN SPRING SUB-ASSEMBLY

- (a) Using a vernier caliper, measure the free length of the spring together with the spring seat.

Standard free length:
20.02 mm (0.788 in.)

If the free length is shorter than the standard free length, replace the direct clutch return spring sub-assembly.

22. INSPECT REVERSE CLUTCH RETURN SPRING SUB-ASSEMBLY

- (a) Using a vernier caliper, measure the free length of the spring together with the spring seat.

Standard free length:
21.03 mm (0.828 in.)

If the free length is shorter than the standard free length, replace the reverse clutch return spring sub-assembly.

23. INSPECT NO. 2 CLUTCH DISC (DIRECT CLUTCH DISC)

- (a) Check whether the sliding surfaces of the discs, plates and the flange are worn or burnt.

If necessary, replace them.

NOTICE:

- If the linings of the discs are peeled off or discolored, or even a part of the printed numbers is damaged, replace all the discs.
- Before assembling new discs, soak them in ATF for at least 15 minutes.

24. INSPECT PACK CLEARANCE OF NO. 2 CLUTCH

- (a) Using a dial indicator, measure the moving distance (distance A) of the direct clutch flange at both ends across a diameter while blowing air (392 kPa, 4.0 kgf/cm², 57 psi) into the oil hole as shown in the illustration, and calculate the average.

HINT:

Flange moving distance A = 0.24 to 1.12 mm (0.00944 to 0.0440 in.)

Pack clearance = Flange moving distance A - 0.03 mm (0.00118 in.)

Pack clearance:
0.5 to 0.8 mm (0.0197 to 0.0314 in.)

NOTICE:

When measuring the moving distance, install a standard flange {thickness: 3.4 mm (0.134 in.)} to the position indicated by the shaded area in the illustration.

- (b) If the pack clearance is outside the standard range, select and install a direct clutch flange that brings the pack clearance within the standard range.

HINT:

There are 9 types of direct clutch flanges that can be used to adjust the pack clearance. Select the one with the most appropriate thickness.

Flange Thickness:

PART NO.	MARK	THICKNESS
SU003-03756	0	3.0 mm (0.118 in.)
SU003-03757	1	3.1 mm (0.122 in.)
SU003-03758	2	3.2 mm (0.126 in.)
SU003-03759	3	3.3 mm (0.130 in.)
SU003-03760	4	3.4 mm (0.134 in.)
SU003-03761	5	3.5 mm (0.138 in.)
SU003-03762	6	3.6 mm (0.142 in.)
SU003-03763	7	3.7 mm (0.146 in.)
SU003-03764	8	3.8 mm (0.150 in.)

25. INSPECT PACK CLEARANCE OF NO. 3 CLUTCH

- (a) Using a dial indicator, measure the reverse clutch piston stroke (distance A) and the moving distance (distance B) of the reverse clutch flange at both ends across a diameter while blowing air (392 kPa, 4.0 kgf/cm², 57 psi) into the oil hole as shown in the illustration, and calculate the average.

HINT:

Piston stroke A = 1.62 to 2.68 mm (0.0638 to 0.105 in.)

Flange moving distance B = 1.22 to 1.67 mm (0.0481 to 0.0657 in.)

Pack clearance = Piston stroke A - Flange moving distance B - 0.02 mm (0.000787 in.)

Pack clearance:

0.4 to 0.7 mm (0.0158 to 0.0275 in.)

NOTICE:

When measuring the moving distance, install a standard flange {thickness: 2.8 mm (0.110 in.)} to the position indicated by the shaded area in the illustration.

(b) If the pack clearance is outside the standard range, select and install a reverse clutch flange that brings the pack clearance within the standard range.

HINT:

There are 12 types of reverse clutch flanges that can be used to adjust the pack clearance. Select the one with the most appropriate thickness.

Flange Thickness:

PART NO.	MARK	THICKNESS
SU003-03725	0	2.4 mm (0.0945 in.)
SU003-03726	1	2.5 mm (0.0984 in.)
SU003-03727	2	2.6 mm (0.102 in.)
SU003-03728	3	2.7 mm (0.106 in.)
SU003-03729	4	2.8 mm (0.110 in.)
SU003-03730	5	2.9 mm (0.114 in.)
SU003-03731	6	3.0 mm (0.118 in.)
SU003-03732	7	3.1 mm (0.122 in.)

SU003-03733	8	3.2 mm (0.126 in.)
SU003-03734	9	3.3 mm (0.130 in.)
SU003-03735	A	3.4 mm (0.134 in.)
SU003-03736	B	3.5 mm (0.138 in.)

26. INSPECT FORWARD CLUTCH RETURN SPRING SUB-ASSEMBLY

- (a) Using a vernier caliper, measure the free length of the spring together with the spring seat.

Standard free length:
26.29 mm (1.04 in.)

If the free length is shorter than the standard free length, replace the forward clutch return spring sub-assembly.

27. INSPECT NO. 4 CLUTCH DISC (COAST CLUTCH DISC)

- (a) Check whether the sliding surfaces of the discs, plates and the flange are worn or burnt.

If necessary, replace them.

NOTICE:

- If the linings of the discs are peeled off or discolored, or even a part of the printed numbers is damaged, replace all the discs.
- Before assembling new discs, soak them in ATF for at least 15 minutes.

28. INSPECT PACK CLEARANCE OF NO. 1 CLUTCH

- (a) Using a dial indicator, measure the moving distance (distance A) of the forward clutch flange at both ends across a diameter while blowing air (196 kPa, 2.0 kgf/cm², 28 psi) into the oil hole as shown in the illustration, and calculate the average.

HINT:

Flange moving distance A = 0.14 to 0.17 mm (0.00552 to 0.00669 in.)

Pack clearance = Flange moving distance A - 0.01 mm (0.000394 in.)

Pack clearance:

0.56 to 0.86 mm (0.0221 to 0.0338 in.)

NOTICE:

When measuring the moving distance, install a standard flange {thickness: 3.5 mm (0.138 in.)} to the position indicated by the shaded area in the illustration.

- (b) If the pack clearance is outside the standard range, select and install a forward clutch flange that brings the pack clearance within the standard range.

HINT:

There are 10 types of forward clutch flanges that can be used to adjust the pack clearance. Select the one with the most appropriate thickness.

Flange Thickness:

PART NO.	MARK	THICKNESS
SU003-03712	0	3.0 mm (0.118 in.)
SU003-03713	1	3.1 mm (0.122 in.)
SU003-03714	2	3.2 mm (0.126 in.)
SU003-03715	3	3.3 mm (0.130 in.)
SU003-03716	4	3.4 mm (0.134 in.)
SU003-03717	5	3.5 mm (0.138 in.)
SU003-03718	6	3.6 mm (0.142 in.)
SU003-03719	7	3.7 mm (0.146 in.)
SU003-03720	8	3.8 mm (0.150 in.)
SU003-03721	9	3.9 mm (0.154 in.)

29. INSPECT NO. 1 CLUTCH DISC (FORWARD CLUTCH DISC)

- (a) Check whether the sliding surfaces of the discs, plates and the flange are worn or burnt.

If necessary, replace them.

NOTICE:

- If the linings of the discs are peeled off or discolored, or even a part of the printed numbers is damaged, replace all the discs.
- Before assembling new discs, soak them in ATF for at least 15 minutes.

30. INSPECT PACK CLEARANCE OF NO. 4 CLUTCH

- (a) Using a dial indicator, measure the moving distance (distance A) of the coast clutch flange at both ends across a diameter while blowing air (196 kPa, 2.0 kgf/cm², 28 psi) into the oil hole as shown in the illustration, and calculate the average.

HINT:

Flange moving distance A = 0.02 to 1.01 mm (0.000787 to 0.0397 in.)

Pack clearance = Flange moving distance A - 0.01 mm (0.000394 in.)

Pack clearance:

0.4 to 0.7 mm (0.0158 to 0.0275 in.)

NOTICE:

When measuring the moving distance, install a standard flange {thickness: 3.5 mm (0.138 in.)} to the position indicated by the shaded area in the illustration.

- (b) If the pack clearance is outside the standard range, select and install a coast clutch flange that brings the pack clearance within the standard range.

HINT:

There are 10 types of coast clutch flanges that can be used to adjust the pack clearance. Select the one with the most appropriate thickness.

Flange Thickness:

PART NO.	MARK	THICKNESS
SU003-03746	0	3.0 mm (0.118 in.)
SU003-03747	1	3.1 mm (0.122 in.)
SU003-03748	2	3.2 mm (0.126 in.)
SU003-03749	3	3.3 mm (0.130 in.)
SU003-03750	4	3.4 mm (0.134 in.)
SU003-03751	5	3.5 mm (0.138 in.)

SU003-03752	6	3.6 mm (0.142 in.)
SU003-03753	7	3.7 mm (0.146 in.)
SU003-03754	8	3.8 mm (0.150 in.)
SU003-03755	9	3.9 mm (0.154 in.)

31. INSPECT FORWARD CLUTCH HUB SUB-ASSEMBLY

- (a) Using a caliper gauge, measure the inside diameter of the forward clutch hub bushing.

Standard inside diameter:

23.037 to 23.062 mm (0.9070 to 0.9079 in.)

If the inside diameter is more than the standard inside diameter, replace the forward clutch hub sub-assembly.

32. INSPECT NO. 3 CLUTCH DISC (REAR CLUTCH DISC)

- (a) Check whether the sliding surfaces of the discs, plates and the flange are worn or burnt.

If necessary, replace them.

NOTICE:

- If the linings of the discs are peeled off or discolored, or even a part of the printed numbers is damaged, replace all the discs.
- Before assembling new discs, soak them in ATF for at least 15 minutes.

33. INSPECT REVERSE CLUTCH HUB SUB-ASSEMBLY

- (a) Using a caliper gauge, measure the inside diameter of the reverse clutch hub bushing.

Standard inside diameter:

33.312 to 33.337 mm (1.3115 to 1.3124 in.)

If the inside diameter is more than the standard inside diameter, replace the reverse clutch hub sub-assembly.

2. INSTALL NO. 4 BRAKE PISTON

(a) Coat 2 new O-ring with ATF, and install them to the brake reaction sleeve.

Text in Illustration

*1	Brake Reaction Sleeve
*2	No. 4 Brake Piston
*3	O-ring

(b) Coat 2 new O-rings with ATF, and install them to the No. 4 brake piston.

(c) Install the No. 4 brake piston to the brake reaction sleeve.

NOTICE:

Be careful not to damage the O-rings.

3. INSTALL BRAKE REACTION SLEEVE

(a) With the No. 4 brake piston underneath (the rear side), install the brake reaction sleeve and the No. 4 brake piston to the automatic transmission case sub-assembly.

Text in Illustration

*1	Brake Reaction Sleeve
*2	No. 4 Brake Piston

NOTICE:

Be careful not to damage the O-rings.

4. INSTALL 1ST AND REVERSE BRAKE PISTON

- (a) Coat a new O-rings with ATF, and install it to the 1st and reverse brake piston.

Text in Illustration

*1	1st and Reverse Brake Piston
----	------------------------------

- (b) With the spring seat of the 1st and reverse brake piston facing upwards (the front side), place the 1st and reverse brake piston in the automatic transmission case sub-assembly.

NOTICE:

Be careful not to damage the O-ring.

5. INSTALL 1ST AND REVERSE BRAKE RETURN SPRING SUB-ASSEMBLY

- (a) Place the 1st and reverse brake return spring sub-assembly onto the 1st and reverse brake piston.

- (b) Place SST on the 1st and reverse brake return spring sub-assembly, and compress the 1st and reverse brake return spring sub-assembly.

Text in Illustration

*1	Snap Ring
----	-----------

SST: 09350-30020

09350-07050

- (c) Using SST, install the snap ring.

SST: 09350-30020

09350-07070

6. INSTALL BRAKE APPLY TUBE

- (a) Install the brake apply tube with its protruding part fitting into the groove of the automatic transmission case sub-assembly as shown in the illustration.

NOTICE:

Engage the 1st and reverse brake piston claw with the

protrusion of the brake apply tube.

7. INSTALL REAR PLANETARY GEAR ASSEMBLY

- (a) Install the thrust needle roller bearing to the automatic transmission case sub-assembly.

Bearing Diameter

ITEM	INSIDE	OUTSIDE
Thrust needle roller bearing	40.6 mm (1.598 in.)	58.0 mm (2.284 in.)

- (b) Install the thrust needle roller bearing to the rear planetary gear assembly.

Text in Illustration

*1	Thrust Bearing Race
*2	Thrust Needle Roller Bearing
*3	No. 9 Thrust Bearing Race

Bearing and Race Diameter

ITEM	INSIDE	OUTSIDE
Thrust needle roller bearing	20.8 mm (0.819 in.)	38.5 mm (1.516 in.)
Thrust bearing race	19.0 mm (0.748 in.)	35.0 mm (1.378 in.)
No. 9 thrust bearing	43.3 mm (1.705 in.)	56.7 mm (2.232 in.)

(c) Coat the No. 9 thrust bearing race and the thrust bearing race with petroleum jelly, and install them onto the rear planetary gear assembly.

(d) Install the rear planetary gear assembly to the automatic transmission case sub-assembly.

8. INSPECT PACK CLEARANCE OF NO. 4 BRAKE INFO

9. INSTALL NO. 4 BRAKE DISC

(a) Install the 2 No. 4 brake flanges, 5 No. 4 brake discs and the 4 No. 4 brake plates to the automatic transmission case sub-assembly.

Text in Illustration

*1	No. 4 Brake Flange
*2	No. 4 Brake Disc
*3	No. 4 Brake Plate

Installation order:

*1 - *2 - *3 - *2 - *3 - *2 - *3 - *2 - *3 - *2 - *1

NOTICE:

Make sure that the discs, plates and the flanges are installed in the correct order.

10. INSTALL BRAKE PLATE STOPPER SPRING

(a) Install the brake plate stopper spring to the automatic transmission case sub-assembly.

11. INSTALL REAR PLANETARY RING GEAR FLANGE SUB-ASSEMBLY

- (a) Install the No. 8 thrust bearing race, thrust needle roller bearing, No. 7 thrust bearing race and the rear planetary ring gear flange sub-assembly to the intermediate shaft.

Text in Illustration

*1	Rear Planetary Ring Gear Flange Sub-assembly
*2	No. 7 Thrust Bearing Race
*3	Thrust Needle Roller Bearing
*4	No. 8 Thrust Bearing Race

Bearing and Race Diameter

ITEM	INSIDE	OUTSIDE
No. 7 thrust bearing race	29.6 mm (1.165 in.)	44.9 mm (1.768 in.)
Thrust needle roller bearing	27.8 mm (1.095 in.)	43.8 mm (1.726 in.)
No. 8 thrust bearing race	27.8 mm (1.095 in.)	43.7 mm (1.721 in.)

12. INSTALL NO. 3 ONE-WAY CLUTCH ASSEMBLY

- (a) Install the No. 3 one-way clutch assembly and the one-way clutch inner race to the intermediate shaft.

Text in Illustration

*1	No. 3 One-way Clutch Assembly
*2	One-way Clutch Inner Race

13. INSTALL INTERMEDIATE SHAFT

- (a) Install the intermediate shaft together with the No. 3 one-way clutch assembly to the automatic transmission case sub-assembly.

(b) Using SST, install the snap ring to the automatic transmission case sub-assembly.

SST: 09350-30020

09350-07060

14. INSTALL CENTER PLANETARY GEAR ASSEMBLY

(a) Install the center planetary gear assembly and the planetary sun gear to the automatic transmission case sub-assembly.

Text in Illustration

*1	Thrust Needle Roller Bearing
*2	No. 4 Thrust Bearing Race
*3	Center Planetary Gear Assembly
*4	Planetary Sun Gear

Bearing and Race Diameter

ITEM	INSIDE	OUTSIDE
Thrust needle roller bearing	58.5 mm (2.303 in.)	73.5 mm (2.894 in.)
No. 4 thrust bearing race	55.2 mm (2.173 in.)	71.2 mm (2.803 in.)

(b) Coat the No. 4 thrust bearing race with petroleum jelly, and install it onto the center planetary gear assembly.

(c) Install the thrust needle roller bearing to the center planetary gear assembly.

15. INSTALL NO. 2 BRAKE PISTON

(a) Coat 2 new O-rings with ATF, and install them to the No. 2 brake piston.

Text in Illustration

*1	O-ring
----	--------

(b) Press the No. 2 brake piston into the No. 2 brake cylinder.

NOTICE:

Be careful not to damage the O-rings.

(c) Install the No. 2 brake piston to the automatic transmission case sub-assembly.

HINT:

Install the No. 2 brake cylinder so that the projection protrudes from the upside of the automatic transmission case sub-assembly.

(d) Check that the oil pressure apply hole of the No. 2 brake cylinder aligns with the oil pressure apply hole of the automatic transmission case sub-assembly.

16. INSTALL NO. 2 BRAKE DISC

(a) Install the No. 2 brake piston return spring sub-assembly to the automatic transmission case sub-assembly as shown in the illustration.

Text in Illustration

*a	Identification shape
----	----------------------

NOTICE:

Make sure that the identification shape of the No. 2 brake piston return spring sub-assembly faces the upper right side as shown in the illustration.

(b) Install the 2 No. 2 brake flanges, 4 No. 2 brake discs and the 3 No. 2 brake plates to the automatic transmission case sub-assembly.

Text in Illustration

*1	No. 2 Brake Flange
*2	No. 2 Brake Disc
*3	No. 2 Brake Plate

Installation order:

*1 - *2 - *3 - *2 - *3 - *2 - *3 - *2 - *1

NOTICE:

Make sure that the discs, plates and the flanges are installed in the correct order.

- (c) Using SST and a screwdriver, compress the No. 2 brake piston return spring sub-assembly and install the snap ring to the automatic transmission case sub-assembly.

HINT:

Tape the screwdriver tip before use.

17. INSPECT PISTON STROKE OF NO. 2 BRAKE PISTON INFO

18. INSTALL NO. 1 BRAKE PISTON

- (a) Coat 2 new O-rings with ATF, and install them to the No. 1 brake piston.

Text in Illustration

*1	O-ring
----	--------

- (b) Press the No. 1 brake piston into the No. 1 brake cylinder.

NOTICE:

Be careful not to damage the O-rings.

19. INSTALL BRAKE PISTON RETURN SPRING SUB-ASSEMBLY

- (a) Install the brake piston return spring sub-assembly and the No. 1 brake cylinder to the automatic transmission case sub-assembly.

Text in Illustration

*1	Brake Piston Return Spring Sub-assembly
*2	No. 1 Brake Cylinder

HINT:

Install the No. 1 brake cylinder so that the projection protrudes from the upside of the automatic transmission case sub-assembly.

- (b) Check that the oil pressure apply hole of the No. 1 brake cylinder aligns with the oil pressure apply hole of the automatic transmission case sub-assembly.

- (c) Using SST and a screwdriver, compress the brake piston return spring sub-assembly and install the snap ring to the automatic transmission case sub-assembly.

23. INSPECT PISTON STROKE OF NO. 1 BRAKE PISTON INFO

24. INSTALL NO. 1 BRAKE DISC

(a) Install the No. 1 brake flange, 3 No. 1 brake discs and the 3 No. 1 brake plates to the automatic transmission case sub-assembly.

Text in Illustration

*1	No. 1 Brake Plate
*2	No. 1 Brake Disc
*3	No. 1 Brake Flange

Installation order:

*1 - *2 - *1 - *2 - *1 - *2 - *3

NOTICE:

Make sure that the discs, plates and the flange are installed in the correct order.

25. INSTALL ONE-WAY CLUTCH ASSEMBLY

- (a) Install the No. 1 planetary carrier thrust washer and the one-way clutch assembly to the automatic transmission case sub-assembly.

Text in Illustration

*1	One-way Clutch Assembly
*2	No. 1 Planetary Carrier Thrust Washer

26. INSTALL 2ND BRAKE PISTON

- (a) Coat 2 new O-rings with ATF, and install them to the 2nd brake piston.

Text in Illustration

*1	O-ring
----	--------

- (b) Press the 2nd brake piston into the 2nd brake cylinder.

NOTICE:

Be careful not to damage the O-rings.

- (c) Using a screwdriver, install the No. 3 brake piston return spring sub-assembly to the 2nd brake cylinder with the snap ring.

Text in Illustration

*1	Snap Ring
*2	No. 3 Brake Piston Return Spring Sub-assembly
*3	2nd Brake Cylinder

NOTICE:

- Be sure that the end gap of the snap ring is not aligned with the spring retainer claw.
- Be careful not to damage the 2nd brake cylinder.

HINT:

Tape the screwdriver tip before use.

27. INSTALL 2ND BRAKE CYLINDER

- (a) Install the 2nd brake cylinder to the automatic transmission case sub-assembly.

- (b) Check that the oil pressure apply hole of the 2nd brake cylinder aligns with the oil pressure apply hole of the automatic transmission case sub-assembly.

- (c) Using SST, install the snap ring to the automatic transmission case sub-assembly.

SST: 09350-30020

09350-07060

28. INSTALL NO. 3 BRAKE DISC (2ND BRAKE DISC SET)

- (a) Install the No. 3 brake flange, 3 No. 3 brake discs and the 3 No. 3 brake plates to the automatic transmission case sub-assembly.

Text in Illustration

*1	No. 3 Brake Plate
*2	No. 3 Brake Disc
*3	No. 3 Brake Flange

Installation order:

*1 - *2 - *1 - *2 - *1 - *2 - *3

NOTICE:

Make sure that the discs, plates and the flange are installed in the correct order.

(b) Using a screwdriver, install the snap ring to the automatic transmission case sub-assembly.

*1	Protective Tape
----	-----------------

NOTICE:

Be careful not to damage the automatic transmission case sub-assembly.

HINT:

Tape the screwdriver tip before use.

29. INSTALL DIRECT CLUTCH PISTON SUB-ASSEMBLY

(a) Coat 2 new O-rings with ATF, and install them to the direct clutch piston sub-assembly.

Text in Illustration

*1	O-ring
----	--------

(b) Coat a new O-ring with ATF, and install it to the No. 2 clutch balancer.

Text in Illustration

*1	O-ring
----	--------

(c) Install the No. 2 clutch balancer and the direct clutch return spring sub-assembly to the direct clutch piston sub-assembly.

Text in Illustration

*1	Direct Clutch Piston Sub-assembly
*2	Direct Clutch Return Spring Sub-assembly
*3	No. 2 Clutch Balancer

(d) Press the direct clutch piston sub-assembly into the reverse clutch drum sub-assembly by hands.

NOTICE:

Be careful not to damage the O-rings.

(e) Place SST on the No. 2 clutch balancer, and compress the direct clutch return spring sub-assembly with a press.

SST: 09320-89010

NOTICE:

Stop pressing when the spring sheet is lowered to the place 1 to 2 mm (0.0394 to 0.0787 in.) from the snap ring groove to prevent the spring sheet from being deformed.

(f) Using SST, install the snap ring.

SST: 09350-30020

09350-07070

NOTICE:

- Be sure that the end gap of the snap ring is not aligned with the spring retainer claw.
- Do not expand the snap ring excessively.

(g) Set the end gap of the snap ring in the No. 2 clutch balancer as shown in the illustration.

Text in Illustration

*1	Stopper
----	---------

30. INSTALL REVERSE CLUTCH PISTON SUB-ASSEMBLY

(a) Coat a new O-ring with ATF, and install it to the reverse clutch drum sub-assembly.

Text in Illustration

*1	O-ring
----	--------

(b) Coat a new O-ring with ATF, and install it to the reverse clutch piston sub-assembly.

Text in Illustration

*1	O-ring
----	--------

(c) Press the reverse clutch drum sub-assembly into the reverse clutch piston sub-assembly with both hands.

Text in Illustration

*1	Reverse Clutch Piston Sub-assembly
*2	Reverse Clutch Drum Sub-assembly

NOTICE:

Be careful not to damage the O-rings.

31. INSTALL REVERSE CLUTCH RETURN SPRING SUB-ASSEMBLY

(a) Coat a new O-ring with ATF, and install it to the reverse clutch piston sub-assembly.

Text in Illustration

*1	Reverse Clutch Return Spring Sub-assembly
*2	O-ring
*3	Reverse Clutch Piston Sub-assembly

(b) Install the reverse clutch return spring sub-assembly to the reverse clutch piston sub-assembly.

32. INSTALL NO. 3 CLUTCH BALANCER

(a) Install the No. 3 clutch balancer to the reverse clutch return spring sub-assembly.

(b) Place SST on the No. 3 clutch balancer, and compress the reverse clutch return spring sub-assembly with a press.

SST: 09387-00070

NOTICE:

Stop pressing when the spring sheet is lowered to the place 1 to 2 mm (0.0394 to 0.0787 in.) from the snap ring groove to prevent the spring sheet from being deformed.

(c) Using SST, install the snap ring.

SST: 09350-30020

09350-07070

NOTICE:

- Be sure that the end gap of the snap ring is not aligned with the spring retainer claw.
- Do not expand the snap ring excessively.

(d) Set the end gap of the snap ring in the No. 3 clutch balancer as shown in the illustration.

Text in Illustration

*1	Snap Ring
*a	Correct
*b	Incorrect

33. INSTALL NO. 2 CLUTCH DISC (DIRECT CLUTCH DISC)

(a) Install the direct clutch flange, 5 No. 2 clutch discs and the 5 No. 2 clutch plates to the reverse clutch drum sub-assembly.

Text in Illustration

*1	No. 2 Clutch Plate
----	--------------------

*2	No. 2 Clutch Disc
*3	Direct Clutch Flange

Installation order:

*1 - *2 - *1 - *2 - *1 - *2 - *1 - *2 - *1 - *2 - *3

NOTICE:

Make sure that the discs, plates and the flange are installed in the correct order.

(b) Using a screwdriver, install the 2 snap rings to the reverse clutch drum sub-assembly.

Text in Illustration

*1	Protective Tape
----	-----------------

NOTICE:

Be careful not to damage the reverse clutch drum sub-assembly.

HINT:

Tape the screwdriver tip before use.

34. INSPECT PACK CLEARANCE OF NO. 2 CLUTCH INFO

35. INSTALL REVERSE CLUTCH FLANGE

(a) Install the reverse clutch flange to the reverse clutch drum sub-assembly.

36. INSTALL REVERSE CLUTCH REACTION SLEEVE

(a) Install the clutch cushion plate, reverse clutch flange, 4

No. 3 clutch discs, 3 No. 3 clutch plates and the reverse clutch reaction sleeve to the reverse clutch drum sub-assembly.

Text in Illustration

*1	No. 3 Clutch Disc
*2	No. 3 Clutch Plate
*3	Reverse Clutch Flange
*4	Clutch Cushion Plate
*5	Reverse Clutch Reaction Sleeve

Installation order:

*1 - *2 - *1 - *2 - *1 - *2 - *1 - *3 - *4 - *5

NOTICE:

Make sure that the discs, plates, flange, sleeve and the cushion plate are installed in the correct order.

(b) Using a screwdriver, install the snap ring to the reverse clutch piston sub-assembly.

Text in Illustration

*1	Protective Tape
----	-----------------

NOTICE:

Be careful not to damage the reverse clutch piston sub-assembly.

HINT:

Tape the screwdriver tip before use.

37. INSPECT PACK CLEARANCE OF NO. 3 CLUTCH INFO

38. REMOVE REVERSE CLUTCH REACTION SLEEVE

(a) Using a screwdriver, remove the snap ring from the reverse clutch piston sub-assembly.

Text in Illustration

*1	Protective Tape
----	-----------------

NOTICE:

Be careful not to damage the reverse clutch piston sub-assembly.

HINT:

Tape the screwdriver tip before use.

(b) Remove the reverse clutch reaction sleeve, clutch cushion plate, reverse clutch flange, 4 No. 3 clutch discs and the 3 No. 3 clutch plates from the reverse clutch drum sub-assembly.

39. INSTALL FORWARD CLUTCH PISTON SUB-ASSEMBLY

(a) Install the coast clutch piston to the forward clutch piston sub-assembly.

Text in Illustration

*1	Coast Clutch Piston
*2	Forward Clutch Piston Sub-assembly

(b) Coat a new O-ring with ATF, and install it to the input shaft.

Text in Illustration

*1	O-ring
----	--------

(c) Install the forward clutch piston sub-assembly to the input shaft.

40. INSTALL NO. 1 CLUTCH BALANCER

(a) Coat a new D-ring with ATF, and install it to the No. 1 clutch balancer.

Text in Illustration

*2	D-ring
----	--------

(b) Install the No. 1 clutch balancer and the forward clutch return spring sub-assembly to the input shaft.

Text in Illustration

*1	No. 1 Clutch Balancer
*2	Forward Clutch Return Spring Sub-assembly

NOTICE:

Be careful not to damage the D-ring.

(c) Place SST on the No. 1 clutch balancer, and compress the forward clutch return spring sub-assembly with a press.

SST: 09387-00110

NOTICE:

Stop pressing when the spring sheet is lowered to the place 1 to 2 mm (0.0394 to 0.0787 in.) from the snap ring groove to prevent the spring sheet from being deformed.

(d) Using SST, Install the snap ring.

SST: 09350-30020

09350-07070

NOTICE:

- Be sure that the end gap of the snap ring is not aligned with the spring retainer claw.
- Do not expand the snap ring excessively.

(e) Set the end gap of the snap ring in the No. 1 clutch balancer as shown in the illustration.

Text in Illustration

*1	Snap Ring
*a	Correct
*b	Incorrect

41. INSTALL NO. 4 CLUTCH DISC (COAST CLUTCH DISC)

- (a) Install the coast clutch flange, 4 No. 4 clutch discs and the 4 No. 4 clutch plates to the forward clutch piston sub-assembly.

Text in Illustration

*1	No. 4 Clutch Plate
*2	No. 4 Clutch Disc
*3	Coast Clutch Flange

Installation order:

*1 - *2 - *1 - *2 - *1 - *2 - *1 - *2 - *3

NOTICE:

Make sure that the discs, plates and the flange are installed in the correct order.

- (b) Using a screwdriver, install the snap ring.

Text in Illustration

*1	Protective Tape
----	-----------------

NOTICE:

Be careful not to damage the forward clutch piston sub-assembly.

HINT:

Tape the screwdriver tip before use.

42. INSPECT PACK CLEARANCE OF NO. 4 CLUTCH INFO

43. INSTALL NO. 1 CLUTCH DISC (FORWARD CLUTCH DISC)

- (a) Install the forward clutch flange, 4 No. 1 clutch discs, 4 No. 1 clutch plates and the clutch cushion plate to the input shaft.

Text in Illustration

*1	Clutch Cushion Plate
*2	No. 1 Clutch Plate
*3	No. 1 Clutch Disc
*4	Forward Clutch Flange

Installation order:

*1 - *2 - *3 - *2 - *3 - *2 - *3 - *2 - *3 - *4

NOTICE:

Make sure that the discs, plates, flange and the cushion plate are installed in the correct order.

(b) Using a screwdriver, install the snap ring.

Text in Illustration

*1	Protective Tape
----	-----------------

NOTICE:

Be careful not to damage the input shaft.

HINT:

Tape the screwdriver tip before use.

44. INSPECT PACK CLEARANCE OF NO. 1 CLUTCH INFO

45. INSTALL CLUTCH DRUM OIL SEAL RING

(a) Coat 4 new clutch drum oil seal rings with ATF.

(b) Squeeze the ends of the 4 clutch drum oil seal rings together, and install them to the input shaft groove.

NOTICE:

Do not expand the ring ends excessively.

HINT:

After installing the clutch drum oil seal rings, check that they rotate smoothly.

46. INSTALL INPUT SHAFT

(a) Install the input shaft to the reverse clutch drum sub-assembly.

(b) Install the input shaft rear thrust bearing race and the thrust needle roller bearing to the input shaft.

Text in Illustration

*1	Thrust Needle Roller Bearing
*2	Input Shaft Rear Thrust Bearing Race

Bearing and Race Diameter

ITEM	INSIDE	OUTSIDE
Thrust needle roller bearing	20.0 mm (0.787 in.)	41.0 mm (1.614 in.)
Input shaft rear thrust bearing race	20.0 mm (0.787 in.)	35.6 mm (1.402 in.)

47. INSTALL NO. 4 ONE-WAY CLUTCH ASSEMBLY

(a) Install the No. 2 clutch hub thrust washer and the No. 4 one-way clutch assembly to the coast clutch hub sub-assembly.

Text in Illustration

*1	Coast Clutch Hub Sub-assembly
*2	No. 2 Clutch Hub Thrust Washer
*3	No. 4 One-way Clutch Assembly

48. INSTALL COAST CLUTCH HUB SUB-ASSEMBLY

- (a) Install the coast clutch hub sub-assembly to the reverse clutch drum sub-assembly.

49. INSTALL FORWARD CLUTCH HUB SUB-ASSEMBLY

- (a) Install the 2 thrust needle roller bearings and the No. 2 thrust bearing race to the forward clutch hub sub-assembly.

Text in Illustration

*1	Thrust Needle Roller Bearing A
*2	Thrust Needle Roller Bearing B
*3	No. 2 Thrust Bearing Race

Bearing and Race Diameter

ITEM	INSIDE	OUTSIDE
Thrust needle roller bearing A	42.5 mm (1.673 in.)	61.2 mm (2.409 in.)
Thrust needle roller bearing B	33.3 mm (1.311 in.)	51.2 mm (2.016 in.)
No. 2 thrust bearing race	31.0 mm (1.220 in.)	48.0 mm (1.890 in.)

- (b) Install the No. 3 clutch hub thrust washer and the forward clutch hub sub-assembly to the reverse clutch drum sub-assembly.

Text in Illustration

*1	Forward Clutch Hub Sub-Assembly
*2	No. 3 Clutch Hub Thrust Washer

50. INSTALL NO. 3 CLUTCH DISC (REAR CLUTCH DISC)

- (a) Install the clutch cushion plate, reverse clutch flange, 4 No. 3 clutch discs and the 3 No. 3 clutch plates to the reverse clutch hub sub-assembly.

Text in Illustration

*1	No. 3 Clutch Disc
*2	No. 3 Clutch Plate
*3	Reverse Clutch Flange
*4	Clutch Cushion Plate

Installation order:

*1 - *2 - *1 - *2 - *1 - *2 - *1 - *3 - *4

NOTICE:

Make sure that the discs, plates, flange and the cushion plate are installed in the correct order.

51. INSTALL REVERSE CLUTCH REACTION SLEEVE

- (a) Install the reverse clutch reaction sleeve to the reverse clutch hub.

52. INSTALL REVERSE CLUTCH HUB SUB-ASSEMBLY

- (a) Install the reverse clutch hub sub-assembly to the reverse clutch drum sub-assembly.

- (b) Using a screwdriver, install the snap ring to the reverse clutch piston sub-assembly.

Text in Illustration

*1	Protective Tape
----	-----------------

NOTICE:

Be careful not to damage the reverse clutch piston sub-assembly.

--	--

HINT:

Tape the screwdriver tip before use.

53. INSTALL NO. 2 ONE-WAY CLUTCH ASSEMBLY

- (a) Install the input shaft clutch drum thrust washer and the No. 2 one-way clutch assembly to the clutch drum and input shaft assembly.

Text in Illustration

*1	No. 2 One-way Clutch Assembly
*2	Input Shaft Clutch Drum Thrust Washer

54. INSTALL CLUTCH DRUM AND INPUT SHAFT ASSEMBLY

- (a) Install the input shaft front thrust needle roller bearing and the thrust needle roller bearing to the clutch drum and input shaft assembly.

Text in Illustration

*1	Thrust Needle Roller Bearing
*2	Input Shaft Front Thrust Bearing Race
*3	Input Shaft Front Thrust Needle Roller Bearing
*4	Clutch Drum Thrust Washer

Bearing and Race Diameter

ITEM	INSIDE	OUTSIDE
Thrust needle roller bearing	71.9 mm (2.831 in.)	85.6 mm (3.370 in.)
Input shaft front thrust bearing race	37.0 mm (1.457 in.)	51.2 mm (2.016 in.)
Input shaft front thrust needle roller bearing	33.5 mm (1.319 in.)	48.0 mm (1.890 in.)

- (b) Coat the input shaft front thrust bearing race and the clutch drum thrust washer with petroleum

jelly, and install them onto the clutch drum and input shaft assembly.

(c) Install the clutch drum and input shaft assembly to the automatic transmission case sub-assembly.

55. INSTALL OIL PUMP ASSEMBLY

(a) Install the No. 1 thrust bearing race to the oil pump assembly.

Text in Illustration

*1	No. 1 Thrust Bearing Race
*2	Oil Pump Assembly
*3	O-ring

Race Diameter

ITEM	INSIDE	OUTSIDE
No. 1 thrust bearing race	74.2 mm (2.921 in.)	87.7 mm (3.453 in.)

(b) Coat a new O-ring with ATF, and install it to the oil pump assembly.

(c) Place the oil pump assembly through the input shaft, and align the bolt holes of the oil pump assembly with the automatic transmission case sub-assembly.

NOTICE:

Be careful not to damage the O-ring.

(d) Hold the input shaft, and lightly press the oil pump assembly to slide the clutch drum oil seal rings into the clutch drum and input shaft assembly.

(e) Install the 9 bolts.

Torque: 21 N·m (215 kgf·cm, 16ft·lbf)

56. INSPECT INDIVIDUAL PISTON OPERATION INFO

57. INSTALL MANUAL VALVE LEVER SHAFT OIL SEAL

- (a) Using SST and a hammer, drive in 2 new manual valve lever shaft oil seals to the automatic transmission case sub-assembly.

SST: 09350-30020

09350-07110

- (b) Coat the manual valve lever shaft oil seal lips with MP grease.

58. INSTALL MANUAL VALVE LEVER SUB-ASSEMBLY

- (a) Install a new spacer to the manual valve lever sub-assembly.

Text in Illustration

*1	Spacer
*2	Manual Valve Lever Sub-assembly

- (b) Install the manual valve lever shaft to the automatic transmission case sub-assembly through the manual valve lever sub-assembly.

- (c) Using a hammer, drive in a new spring pin.

(d) Align the manual valve lever indentation with the spacer hole, and stake them together with a punch.

(e) Make sure that the shaft rotates smoothly.

59. INSTALL PARKING LOCK PAWL SHAFT

(a) Install a new E-ring to the parking lock pawl shaft.

(b) Install the parking lock pawl, parking lock pawl shaft and the torsion spring to the automatic transmission case sub-assembly.

Text in Illustration

*1	Parking Lock Pawl
*2	E-ring
*3	Parking Lock Pawl Shaft
*4	Torsion Spring

60. INSTALL PARKING LOCK ROD SUB-ASSEMBLY

(a) Install the parking lock rod sub-assembly to the manual valve lever sub-assembly.

61. INSTALL PARKING LOCK PAWL BRACKET

(a) Install the parking lock pawl bracket to the automatic transmission case sub-assembly with the 3 bolts.

Torque: 7.3 N·m (74 kgf·cm, 65in·lbf)

- (b) Shift the manual valve lever sub-assembly to the P position, and confirm that the rear planetary gear is correctly locked by the parking lock pawl.

Text in Illustration

*1	Rear Planetary Gear
*2	Manual Valve Lever Sub-assembly
*3	Parking Lock Pawl

62. INSTALL B-1 ACCUMULATOR VALVE

- (a) Install the spring and the B-1 accumulator valve to the hole.

B-1 Accumulator Spring

FREE LENGTH	OUTER DIAMETER	COLOR
46.36 mm (1.825 in.)	17.1 mm (0.673 in.)	Natural

63. INSTALL C-3 ACCUMULATOR PISTON

- (a) Using a screwdriver, install the spring sub-assembly to the C-3 accumulator piston with the snap ring.

C-3 Accumulator Spring Sub-assembly

FREE LENGTH	COIL OUTER DIAMETER	COLOR
23.0 mm (0.906 in.)	14.0 mm (0.551 in.)	Pink

NOTICE:

Be careful not to damage the C-3 accumulator piston.

HINT:

Tape the screwdriver tip before use.

(b) Coat 2 new O-rings with ATF, and install them to the C-3 accumulator piston.

Text in Illustration

*1	O-ring
*2	Inner Spring
*3	Outer Spring

(c) Install the 2 springs and the C-3 accumulator piston to the hole.

C-3 Accumulator Spring

SPRING	FREE LENGTH	OUTER DIAMETER	COLOR
Inner	44.0 mm (1.732 in.)	14.0 mm (0.551 in.)	Yellow
Outer	76.65 mm (3.018 in.)	20.1 mm (0.791 in.)	White

64. INSTALL B-3 ACCUMULATOR PISTON

(a) Using a screwdriver, install the spring sub-assembly to the B-3 accumulator piston with the snap ring.

B-3 Accumulator Spring Sub-assembly

FREE LENGTH	COIL OUTER DIAMETER	COLOR
30.0 mm (1.181 in.)	16.2 mm (0.638 in.)	White

NOTICE:

Be careful not to damage the B-3 accumulator piston.

HINT:

Tape the screwdriver tip before use.

(b) Coat 2 new O-rings with ATF, and install them to the B-3 accumulator piston.

Text in Illustration

*1	O-ring
*2	Spring

(c) Install the spring and the B-3 accumulator piston to the hole.

B-3 Accumulator Spring

--	--	--

FREE LENGTH	OUTER DIAMETER	COLOR
64.50 mm (2.539 in.)	19.5 mm (0.768 in.)	Orange

65. INSTALL C-2 ACCUMULATOR PISTON

- (a) Using a screwdriver, install the spring sub-assembly to the C-2 accumulator piston with the snap ring.

C-2 Accumulator Spring Sub-assembly

FREE LENGTH	COIL OUTER DIAMETER	COLOR
18.50 mm (0.728 in.)	14.0 mm (0.551 in.)	Green

NOTICE:

Be careful not to damage the C-2 accumulator piston.

HINT:

Tape the screwdriver tip before use.

- (b) Coat 2 new O-rings with ATF, and install them to the C-2 accumulator piston.

Text in Illustration

*1	O-ring
*2	Spring

- (c) Install the spring and the C-2 accumulator piston to the hole.

C-2 Accumulator Spring

FREE LENGTH	OUTER DIAMETER	COLOR
65.07 mm (2.562 in.)	16.2 mm (0.638 in.)	Pink

66. INSTALL CHECK BALL BODY

- (a) Install the check ball body and the compression spring to the automatic transmission case sub-assembly.

Text in Illustration

*1	Check Ball Body
*2	Compression Spring

67. INSTALL BRAKE DRUM GASKET

- (a) Install 3 new brake drum gaskets to the automatic transmission case sub-assembly.

68. INSTALL TRANSMISSION CASE GASKET

- (a) Install 3 new transmission case gaskets to the automatic transmission case sub-assembly.

69. INSTALL TRANSMISSION VALVE BODY ASSEMBLY

- (a) Connect the manual valve connecting rod sub-assembly to the manual valve lever sub-assembly.

Text in Illustration

*1	Manual Valve Connecting Rod Sub-assembly
*2	Manual Valve Lever Sub-assembly

- (b) Install the transmission valve body assembly to the automatic transmission case sub-assembly with the 19 bolts.

Torque: 11 N·m (112 kgf·cm, 8ft·lbf)

HINT:

Each bolt length is indicated below.

Bolt length:

Bolt A

25 mm (0.984 in.)

Bolt B

36 mm (1.42 in.)

Bolt C

45 mm (1.77 in.)

Bolt D

50 mm (1.97 in.)

- (c) Install the detent spring and the detent spring cover to the transmission valve body assembly with the bolt.

Torque: 10 N·m (102 kgf·cm, 7ft·lbf)

70. INSTALL TRANSMISSION WIRE

- (a) Coat a new O-ring with ATF, and install it to the transmission wire.

Text in Illustration

*1	O-ring
----	--------

- (b) Install the transmission wire with the bolt.

Torque: 5.4 N·m (55 kgf·cm, 48in·lbf)

(c) Connect the 9 solenoid valve connectors.

(d) Coat the ATF temperature sensor O-ring with ATF.

(e) Install the ATF temperature sensor and the temperature sensor clamp with the bolt.

Torque: 10 N·m (102 kgf·cm, 7ft·lbf)

(f) Install the valve body wire harness clamp with the 2 bolt.

Torque: 6.4 N·m (65 kgf·cm, 57in·lbf)

(g) Engage the wire harness clamp.

71. INSTALL VALVE BODY OIL STRAINER ASSEMBLY

(a) Coat a new O-ring with ATF, and install it to the valve body oil strainer assembly.

Text in Illustration

*1	O-ring
----	--------

- (b) Install the valve body oil strainer assembly to the transmission valve body assembly with the 4 bolts.

Torque: 10 N·m (102 kgf·cm, 7ft·lbf)

72. INSTALL AUTOMATIC TRANSMISSION OIL PAN SUB-ASSEMBLY

- (a) Install the 3 transmission oil cleaner magnets to the automatic transmission oil pan sub-assembly.

Text in Illustration

*1	Transmission Oil Cleaner Magnet
----	---------------------------------

- (b) Install a new automatic transmission oil pan gasket and the automatic transmission oil pan sub-assembly with the 20 bolts.

Torque: 7.0 N·m (71 kgf·cm, 62in·lbf)

- (c) Install the drain plug and a new gasket.

Torque: 20 N·m (204 kgf·cm, 15ft·lbf)

- (d) Using a socket hexagon wrench 5 mm, install the overflow plug and a new gasket.

Torque: 20 N·m (204 kgf·cm, 15ft·lbf)

73. INSTALL OUTPUT SHAFT THRUST BEARING

- (a) Install the output shaft thrust bearing race, output shaft thrust bearing and the rear output shaft thrust bearing race to the output shaft of the rear planetary gear assembly.

Bearing and Race Diameter

ITEM	INSIDE	OUTSIDE
Output shaft thrust bearing race	37.0 mm (1.457 in.)	51.2 mm (2.016 in.)
Output shaft thrust bearing	36.1 mm (1.421 in.)	52.5 mm (2.067 in.)

Rear output shaft thrust bearing race	36.1 mm (1.421 in.)	51.0 mm (2.007 in.)
---------------------------------------	---------------------	---------------------

(b) Using a snap ring expander, install the snap ring.

(c) Using a feeler gauge, measure the clearance between the snap ring and the rear output shaft thrust bearing race.

Standard clearance:

0.02 to 0.12 mm (0.000787 to 0.00472 in.)

If the clearance is outside the standard range, select another rear output shaft thrust bearing race that brings the clearance within the standard range.

HINT:

There are 12 different thicknesses for the rear output shaft thrust bearing race.

Race Thickness

PART NO.	MARK	THICKNESS
SU003-03819		3.80 mm (0.150 in.)
SU003-03820		3.85 mm (0.152 in.)
SU003-03821		3.90 mm (0.154 in.)

SU003-03822		3.95 mm (0.156 in.)
SU003-03823		4.00 mm (0.157 in.)
SU003-03824		4.05 mm (0.159 in.)
SU003-03825		4.10 mm (0.161 in.)
SU003-03826		4.15 mm (0.163 in.)
SU003-03827		4.20 mm (0.165 in.)
SU003-03828		4.25 mm (0.167 in.)
SU003-03829		4.30 mm (0.169 in.)
SU003-0383		4.35 mm (0.171 in.)

74. INSTALL AUTOMATIC TRANSMISSION EXTENSION HOUSING OIL SEAL

- (a) Using SST and a hammer, drive in the automatic transmission extension housing oil seal to the extension housing sub-assembly.

SST: 09309-37010

Drive in depth:

5.4 to 5.8 mm (0.213 to 0.228 in.)

(b) Coat the lip of a new automatic transmission extension housing oil seal with MP grease.

75. INSTALL EXTENSION HOUSING DUST DEFLECTOR

(a) Using SST and a press, install a new extension housing dust deflector to the extension housing sub-assembly.

SST: 09950-60020

09951-01030

76. INSTALL TRANSMISSION CASE ADAPTER RADIAL BALL BEARING

(a) Install the transmission case adapter radial ball bearing to the extension housing sub-assembly.

(b) Using snap ring pliers, install the snap ring to the extension housing sub-assembly.

77. INSTALL EXTENSION HOUSING SUB-ASSEMBLY

(a) Clean and degrease the threads of the 6 bolts and the contact surfaces of the case and the housing with non-residue solvent.

(b) Apply seal packing to the extension housing sub-assembly as shown in the illustration.

Text in Illustration

*a	Seal Packing (Seal Diameter: 1.2 mm (0.0472 in.))
----	--

--	--

Seal packing:
Toyota Genuine Seal Packing 1281, Three Bond 1281 or equivalent

NOTICE:

Assemble the extension housing sub-assembly within 10 minutes after the seal packing application.

(c) Apply adhesive to 2 or 3 threads on the end of the 6 bolts.

Text in Illustration

*1	Adhesive
----	----------

Adhesive:
Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

(d) Install the extension housing sub-assembly to the automatic transmission case sub-assembly with the 6 bolts.

Torque: 34 N·m (345 kgf·cm, 25ft·lbf)

HINT:

Each bolt length is indicated below.

Bolt length:
for Bolt A
35 mm (1.378 in.)
for Bolt B
45 mm (1.772 in.)

78. INSTALL AUTOMATIC TRANSMISSION HOUSING

(a) Clean and degrease the bolts and the bolt holes with non-residue solvent.

(b) Install the automatic transmission housing to the automatic transmission case sub-assembly with the 6 bolts.

Torque: 34 N·m (345 kgf·cm, 25ft·lbf)

(c) Apply adhesive to 2 or 3 threads on the end of the 4 bolts.

Text in Illustration

*1	Adhesive
----	----------

Adhesive:

Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

(d) Install the automatic transmission housing to the automatic transmission case sub-assembly with the 4 bolts.

Bolt A (M10 bolt) - Torque: 34 N·m (345 kgf·cm, 25ft·lbf)

Bolt B (M12 bolt) - Torque: 57 N·m (579 kgf·cm, 42ft·lbf)

79. INSTALL AUTOMATIC TRANSMISSION CASE PLUG

(a) Coat a new O-ring with ATF, and install it to the automatic transmission case plug.

(b) Using "TORX" socket wrench T55, install the automatic transmission case plug to the automatic transmission case sub-assembly.

Torque: 39 N·m (400 kgf·cm, 29ft·lbf)

(c) Coat 5 new O-ring with ATF, and install it to the 5 automatic transmission case plug.

(d) Install the 5 automatic transmission case plugs to the automatic transmission case sub-assembly.

Torque: 7.4 N·m (75 kgf·cm, 65in·lbf)

80. INSTALL AUTOMATIC TRANSMISSION BREATHER TUBE

(a) Install the automatic transmission breather tube to the automatic transmission case sub-assembly with the 2 bolts.

Torque: 5.4 N·m (55 kgf·cm, 48in·lbf)

81. INSTALL TRANSMISSION REVOLUTION SENSOR

(a) Coat 2 new O-rings with ATF, and install them to the 2 transmission revolution sensors.

- (b) Install the 2 transmission revolution sensors to the automatic transmission case sub-assembly with the 2 bolts.

Torque: 5.4 N·m (55 kgf·cm, 48in·lbf)

82. INSTALL OIL COOLER TUBE UNION

- (a) Coat 2 new O-rings with ATF, and install the 2 oil cooler tube unions.

- (b) Install the 2 oil cooler tube unions to the automatic transmission case sub-assembly.

Torque: 39 N·m (393 kgf·cm, 28ft·lbf)

83. INSTALL PARK/NEUTRAL POSITION SWITCH ASSEMBLY

- (a) Clean the bolt and the bolt hole.

- (b) Apply adhesive to 2 or 3 threads on the end of the bolt.

Text in Illustration

*1	Adhesive
----	----------

Adhesive:

Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

- (c) Temporarily install the park/neutral position switch assembly to the automatic transmission case sub-assembly with the bolt.

- (d) Install a new lock washer and the nut.

Torque: 6.9 N·m (70 kgf·cm, 61 in·lbf)

- (e) Turn the transmission control shaft lever RH counterclockwise until it stops, and turn it clockwise 2 notches to set it to the N position.

- (f) Align the neutral basic line with the groove as shown in the illustration, and tighten the bolt.

Text in Illustration

*a	Neutral Basic Line
*b	Groove

Torque: 13 N·m (130 kgf·cm, 9ft·lbf)

- (g) Using a screwdriver, bend the tabs of the lock washer.

84. INSTALL TRANSMISSION CONTROL SHAFT LEVER RH

- (a) Install the transmission control shaft lever RH to the park/ neutral position switch assembly with the spring washer and nut.

Torque: 16 N·m (160 kgf·cm, 12ft·lbf)

85. INSTALL REFILL PLUG

- (a) Coat a new O-ring with ATF, and install it to the refill plug.
(b) Install the refill plug.

Torque: 39 N·m (400 kgf·cm, 29ft·lbf)

REPLACEMENT

1. REMOVE PROPELLER SHAFT WITH CENTER BEARING ASSEMBLY

INFO

2. REMOVE AUTOMATIC TRANSMISSION EXTENSION HOUSING OIL SEAL

- (a) Using SST, remove the automatic transmission extension housing oil seal.

SST: 09308-00010

3. INSTALL AUTOMATIC TRANSMISSION EXTENSION HOUSING OIL SEAL

- (a) Coat the lip of a new automatic transmission extension housing oil seal with MP grease.

- (b) Using SST and a hammer, tap in the automatic transmission extension housing oil seal.

SST: 09325-40010

Standard depth:

5.4 to 5.8 mm (0.213 to 0.228 in.)

NOTICE:

- Keep the lip free of foreign matter.
- Do not tap the oil seal at an angle.

4. INSTALL PROPELLER SHAFT WITH CENTER BEARING ASSEMBLY

INFO

Title: TX6A AUTOMATIC TRANSMISSION / TRANSAXLE: OIL COOLER: INSTALLATION (2013 FR-S)		

INSTALLATION

1. INSTALL TRANSMISSION OIL COOLER ASSEMBLY

(a) Install the transmission oil cooler to the transmission oil cooler bracket with the 2 bolts.

Torque: 23 N·m (235 kgf·cm, 17ft·lbf)

(b) Connect the 2 new oil cooler hoses to the transmission oil cooler with the 2 hose clamps.

(c) Install the transmission oil cooler with the 3 bolts.

Torque: 23 N·m (235 kgf·cm, 17ft·lbf)

2. CONNECT WATER BY-PASS HOSE

(a) Connect the 2 water by-pass hoses to the transmission oil cooler with the 2 hose clamps.

3. CONNECT TRANSMISSION OIL COOLER HOSE

(a) Connect the 2 oil cooler hoses with the 2 hose clamps.

(b) Install the clip as shown in the illustration.

Title: TX6A AUTOMATIC TRANSMISSION / TRANSAXLE: SHIFT LEVER: DISASSEMBLY (2013 FR-S)		

DISASSEMBLY

1. REMOVE FLOOR SHIFT SHIFT LEVER HOUSING

- (a) Using a screw driver, disengage the claw and disconnect the connector.

- (b) Using a thin-bladed screwdriver, lift up the terminal retainer of the transmission control switch connector to release the lock.

- (c) Using a thin-bladed screwdriver, pull out terminals 2, 3, 10 and 11 of the transmission control switch connector.

(d) Remove the shift lever lock nut and shift lever lock pin.

(e) Disengage the 2 claws and remove the floor shift shift lever housing from the base plate.

2. REMOVE SHIFT LOCK CONTROL UNIT ASSEMBLY

- (a) Remove the pin then remove the shift lock release arm and shift lock control unit assembly.
- (b) Remove the shift lock release arm from the shift lock control unit assembly.

3. REMOVE DETENT ROD

- (a) Remove the detent lock clamp.
- (b) Remove the detent lock spring and detent lock rod.
- (c) Remove the cushion detent lock from the detent lock rod.
- (d) Remove the bush detent lock.

4. REMOVE SHIFT LEVER PLATE GROMMET

- (a) Remove the shift lever plate grommet from the base plate.

5. REMOVE FLOOR SHIFT CONTROL SHAFT LEVER

- (a) Using a pin punch (3 mm (0.118 in.)) and a hammer, drive out the spring pin.

- (b) Remove the floor shift control shaft lever from the base plate.

6. REMOVE FLOOR SHIFT CONTROL SELECT LEVER

- (a) Remove the floor shift support bracket and the floor shift control shaft lever from the base plate.

7. REMOVE FLOOR SHIFT SUPPORT BRACKET

- (a) Remove the floor shift support bracket from the floor shift control shaft lever.

- (b) Remove the pin and the spring from the floor shift support bracket.

8. REMOVE SHIFT LEVER SEAT SUB-ASSEMBLY

- (a) Remove the 4 spacer plates and shift lever seat sub-assembly from the base plate.

9. REMOVE FLOOR SHIFT CONNECTING ROD SWIVEL

- (a) Remove the clip, 2 washers, grommet, pin and floor shift connecting rod swivel from the select lever.

Title: TX6A AUTOMATIC TRANSMISSION / TRANSAXLE: SHIFT LEVER: INSPECTION (2013 FR-S)		

INSPECTION

1. INSPECT TRANSMISSION CONTROL SWITCH (SHIFT LEVER ASSEMBLY)

(a) Measure the resistance according to the value(s) in the table below.

Text in Illustration

*a	Component without harness connected (Transmission Control Switch (Shift Lever Assembly))
----	---

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 3	Shift lever not in P	Below 1 Ω
2 - 3	Shift lever in P	
8 - 9	Shift lever in M Shift lever held in "+" (Up shift)	
10 - 11	Shift lever in M	
12 - 13	Shift lever in M Shift lever held in "-" (Down shift)	
1 - 3	Shift lever in P	
2 - 3	Shift lever not in P	
8 - 9	Shift lever in M Shift lever not in "+"	
10 - 11	Shift lever not in M	
12 - 13	Shift lever in M Shift lever not in "-"	

If the result is not as specified, replace the transmission control switch.

2. INSPECT SHIFT LOCK CONTROL UNIT ASSEMBLY (SHIFT LEVER ASSEMBLY)

(a) Measure the resistance according to the value(s) in the table below.

Text in Illustration

*a	Component without harness connected (Shift Lock Control Unit Assembly)
----	---

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
4 - 5	20°C (68°F)	27.6 to 30.5 Ω

If the result is not as specified, replace the shift lock control unit assembly.

Title: TX6A AUTOMATIC TRANSMISSION / TRANSAXLE: SHIFT LEVER: ON-VEHICLE INSPECTION (2013 FR-S)		

ON-VEHICLE INSPECTION

1. INSPECT SHIFT LEVER POSITION

- (a) When moving the shift lever from P to R with the ignition switch to ON and the brake pedal depressed, make sure that it moves smoothly and correctly into position.
- (b) Check that the shift lever does not stop when moving the shift lever from R to P, and check that the shift lever does not stick when moving the shift lever from D to M.
- (c) Start the engine and make sure that the vehicle moves forward after moving the shift lever from N to D and moves rearward after moving the shift lever to R.

If the operation cannot be performed as specified, inspect the park/neutral position switch assembly and check the shift lock control unit assembly installation condition.

2. INSPECT SHIFT LOCK OPERATION

- (a) Move the shift lever to P.
- (b) Turn the ignition switch off.
- (c) Check that the shift lever cannot be moved from P.
- (d) Turn the ignition switch to ON, depress the brake pedal and check that the shift lever can be moved to other positions.

If the operation cannot be performed as specified, inspect the shift lock control unit assembly.

3. INSPECT SHIFT LOCK RELEASE BUTTON OPERATION

- (a) When operating the shift lever with the shift lock release button pressed, check that the lever can be moved to any position.

If the operation cannot be performed as specified, check the shift lock control unit assembly.

Title: TX6A AUTOMATIC TRANSMISSION / TRANSAXLE: SHIFT LEVER: REASSEMBLY (2013 FR-S)		

REASSEMBLY

1. INSTALL FLOOR SHIFT CONNECTING ROD SWIVEL

- (a) Install the 2 washers, grommet, pin and floor shift connecting rod swivel to the select lever with the clip.

2. INSTALL SHIFT LEVER SEAT SUB-ASSEMBLY

- (a) Install the shift lever seat sub-assembly and the 4 spacer plates to the base plate.

3. INSTALL FLOOR SHIFT SUPPORT BRACKET

- (a) Apply MP grease to the spring and pin.

- (b) Install the spring and pin to the floor shift support bracket.

(c) Apply MP grease to the floor shift control shaft lever and floor shift support bracket.

(d) Install the floor shift support bracket to the floor shift control shaft lever.

4. INSTALL FLOOR SHIFT CONTROL SELECT LEVER

(a) Install the floor shift support bracket and floor shift control shaft lever to the base plate.

5. INSTALL FLOOR SHIFT CONTROL SHAFT LEVER

(a) Install the floor shift control shaft lever to the base plate.

- (b) Using a pin punch (3 mm (0.118 in.)) and a hammer, install a new spring pin.

6. INSTALL SHIFT LEVER PLATE GROMMET

- (a) Install the shift lever plate grommet to the base plate.

7. INSTALL DETENT ROD

- (a) Install the bush detent lock.
- (b) Install the cushion detent lock to the detent lock rod.
- (c) Apply MP grease to the detent lock spring and detent lock rod.
- (d) Install the detent lock rod and detent lock spring.
- (e) Install the detent lock clamp.

8. INSTALL SHIFT LOCK CONTROL UNIT ASSEMBLY

- (a) Apply MP grease to the pin.
- (b) Install the shift lock release arm to the shift lock control unit assembly.
- (c) Install the shift lock control unit assembly to the base plate.

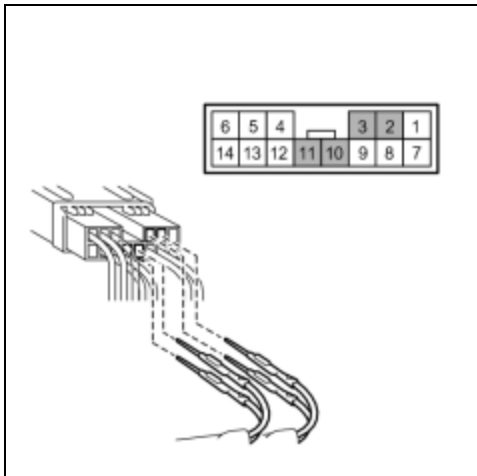

9. INSTALL FLOOR SHIFT SHIFT LEVER HOUSING

(a) Engage the 2 claws and install the floor shift lever housing to the base plate.

(b) Install the shift lever lock nut and shift lever lock pin.

(c) Install the terminals 2, 3, 10 and 11 of the transmission control switch connector.

(d) Lock the harness connector terminals.

(e) Engage the claw and install the connector.

Title: TX6A AUTOMATIC TRANSMISSION / TRANSAXLE: SHIFT PADDLE SWITCH: INSPECTION (2013 FR-S)		

INSPECTION

1. INSPECT SHIFT PADDLE SWITCH (TRANSMISSION SHIFT SWITCH ASSEMBLY)

- (a) Measure the resistance according to the value(s) in the table below.

Text in Illustration

*a	Component without harness connected (Shift Paddle Switch (transmission shift switch assembly))
----	---

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
1 - 3	Pull continuously "+" (Up shift)	Below 1 Ω
	Release "+"	10 Ω or higher
1 - 4	Pull continuously "-" (Down shift)	Below 1 Ω
	Release "-"	10 Ω or higher

If the resistance value are not as specified, replace the shift paddle switch (transmission shift switch assembly).

Title: TX6A AUTOMATIC TRANSMISSION / TRANSAXLE: TORQUE CONVERTER AND DRIVE PLATE: INSPECTION (2013 FR-S)		

INSPECTION

1. INSPECT TORQUE CONVERTER ASSEMBLY

- (a) Inspect the one-way clutch.

- (1) Install SST into the inner race of the one-way clutch.

SST: 09350-32014

09351-32010

- (2) Set SST so that it fits in the notch of the torque converter hub and the outer race of the one-way clutch.

SST: 09350-32014

09351-32020

- (3) With the torque converter assembly standing on its side, check that the clutch locks when SST is turned counterclockwise and rotates freely and smoothly when SST is turned clockwise.

Text in Illustration

	Lock
	Free

If the results are not as specified, clean the torque converter assembly and recheck the one-way clutch.

If the results still are not as specified even after cleaning the torque converter assembly, replace the torque converter assembly.

- (b) Determine the condition of the torque converter assembly.

Text in Illustration

*a	Sample showing maximum allowable amount of powder in ATF
----	--

- (1) Check that the following conditions are met:

- During the stall test or when the shift lever is in N, metallic sounds are not emitted from the torque converter assembly.
- The one-way clutch turns in one direction and locks in the other direction.
- The amount of powder in the ATF is not more than the sample shown in the illustration.

If the results are not as specified, replace the torque converter assembly.

HINT:

The sample illustration shows approximately 0.025 liters (0.026 US qts, 0.022 Imp. qts) of ATF taken from a removed torque converter assembly.

- (c) Replace the ATF in the torque converter assembly.

- (1) If the ATF is discolored and/or has a foul odor, stir the ATF in the torque converter assembly thoroughly and drain the ATF with the torque converter assembly facing upward.

- (d) Clean and check the transmission oil cooler.

- (1) If the torque converter assembly is inspected or the ATF is replaced, clean the transmission oil cooler.

HINT:

- Apply compressed air at 196 kPa (2.0 kgf/cm², 28 psi) into the inlet hose.
- If a large amount of powder is found in the ATF, add new ATF using a bucket pump and clean the transmission oil cooler and oil pipe line again.

- (2) If the ATF is cloudy, inspect the transmission oil cooler.

- (e) Prevent deformation of the torque converter assembly and damage to the oil pump gear.

Text in Illustration

*a	Correct
*b	Incorrect
*c	Bottom is damaged

- (1) When any marks due to interference are found on the end of a bolt for the torque converter assembly and on the bottom of the bolt hole, replace the bolt and torque converter assembly.
- (2) Make sure all of the bolts are the same length.
- (3) Make sure no spring washers are missing.

2. INSPECT DRIVE PLATE

- (a) Check the drive plate for damage.
- (b) Set up a dial indicator and measure the runout of the 6 portions around the torque converter contact surfaces.

Text in Illustration

	Measuring Point
---	-----------------

Maximum runout:
0.30 mm (0.0118 in.)

If the runout is more than the maximum, or the drive plate is damaged, replace the drive plate

Title: TX6A AUTOMATIC TRANSMISSION / TRANSAXLE: TRANSMISSION WIRE: INSPECTION (2013 FR-S)		

INSPECTION

1. INSPECT ATF TEMPERATURE SENSOR (TRANSMISSION WIRE)

- (a) Measure the resistance according to the value(s) in the table below.

Text in Illustration

*a	Component without harness connected (ATF Temperature Sensor (Transmission Wire))
----	---

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 (E2) - 9 (OIL)	Always	79 Ω to 156 k Ω
1 (E2) - Body ground	Always	10 k Ω or higher
9 (OIL) - Body ground	Always	10 k Ω or higher

HINT:

If the resistance is out of the specified range at any of the ATF temperatures shown in the table below, the driveability of the vehicle may decrease.

Standard Resistance:

ATF TEMPERATURE	SPECIFIED CONDITION
10°C (50°F)	5 to 8 k Ω
25°C (77°F)	2.5 to 4.5 k Ω
110°C (230°F)	0.22 to 0.28 k Ω

If the result is not as specified, replace the ATF temperature sensor (transmission wire).

Model Year: 2013	Model: FR-S	Doc ID: RM000000NRE01GX
Title: TX6A AUTOMATIC TRANSMISSION / TRANSAXLE: TRANSMISSION WIRE: INSTALLATION (2013 FR-S)		

INSTALLATION

1. INSTALL TRANSMISSION WIRE

- (a) Coat a new O-ring with ATF and install it to the transmission wire.
- (b) Install the transmission wire with the bolt.

Torque: 5.4 N·m (55 kgf·cm, 48in·lbf)

- (c) Connect the transmission wire connector.

HINT:

Push up the lever until the claw of the transmission wire connector makes a connection sound.

2. CONNECT TRANSMISSION WIRE

- (a) Connect the 9 solenoid valve connectors.
- (b) Coat the ATF temperature sensor O-ring with ATF.
- (c) Install the ATF temperature sensor and the temperature sensor clamp with the bolt.

Torque: 10 N·m (102 kgf·cm, 7ft·lbf)

- (d) Engage the wire harness clamp.
- (e) Install the valve body wire harness clamp with the bolt.

Torque: 6.4 N·m (65 kgf·cm, 57in·lbf)

3. INSTALL VALVE BODY OIL STRAINER ASSEMBLY

- (a) Coat a new O-ring with ATF and install it to the valve body oil strainer assembly.
- (b) Install the valve body oil strainer assembly with the 4 bolts.

Torque: 10 N·m (102 kgf·cm, 7ft·lbf)

4. INSTALL TRANSMISSION OIL CLEANER MAGNET

- (a) Install the 3 transmission oil cleaner magnets to the automatic transmission oil pan sub-assembly as shown in the illustration.

Text in Illustration

*1	Transmission Oil Cleaner Magnet
----	---------------------------------

5. INSTALL AUTOMATIC TRANSMISSION OIL PAN SUB-ASSEMBLY

- (a) Install a new automatic transmission oil pan gasket and the automatic transmission oil pan sub-assembly with the 20 bolts.

Torque: 7.0 N·m (71 kgf·cm, 62in·lbf)

NOTICE:

Remove the gasket and be careful not to spill oil on the contacting surfaces of the transmission case and oil pan.

6. INSTALL AUTOMATIC TRANSMISSION ASSEMBLY

INFO

Last Modified: 3-27-2012	6.4 A	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000NRH01GX
Title: TX6A AUTOMATIC TRANSMISSION / TRANSAXLE: TRANSMISSION WIRE: REMOVAL (2013 FR-S)		

REMOVAL

1. REMOVE AUTOMATIC TRANSMISSION ASSEMBLY

INFO

2. REMOVE AUTOMATIC TRANSMISSION OIL PAN SUB-ASSEMBLY

- (a) Remove the 20 bolts, automatic transmission oil pan sub-assembly and the automatic transmission oil pan gasket.

NOTICE:

Some fluid will remain in the automatic transmission oil pan sub-assembly. Remove all the bolts and carefully remove the automatic transmission oil pan sub-assembly.

3. REMOVE TRANSMISSION OIL CLEANER MAGNET

- (a) Remove the 3 transmission oil cleaner magnets from the automatic transmission oil pan sub-assembly.

Text in Illustration

*1	Transmission Oil Cleaner Magnet
----	---------------------------------

- (b) Examine the particles in the automatic transmission oil pan sub-assembly.
- (1) Collect any steel chips with the removed transmission oil cleaner magnets. Carefully inspect the foreign matter and particles in the automatic transmission oil pan sub-assembly and on the transmission oil cleaner magnets to anticipate the type of wear you will find in the automatic transmission assembly.
- Steel (magnetic): bearing, gear and clutch plate wear
 Brass (non-magnetic): bush wear

4. REMOVE VALVE BODY OIL STRAINER ASSEMBLY

- (a) Remove the 4 bolts and the valve body oil strainer assembly.

NOTICE:

Be careful as some fluid will come out of the valve body oil strainer assembly.

- (b) Remove the O-ring from the valve body oil strainer assembly.

Text in Illustration

*1	O-ring
----	--------

5. DISCONNECT TRANSMISSION WIRE

- (a) Remove the bolt and the temperature sensor clamp.

- (b) Separate the ATF temperature sensor.

- (c) Remove the bolt and the valve body wire harness clamp.

- (d) Disengage the wire harness clamp.

(e) Disconnect the 9 solenoid valve connectors.

6. REMOVE TRANSMISSION WIRE

(a) Disconnect the transmission wire connector.

HINT:

Disengage the claw, press down the lever, and disconnect the transmission wire connector.

(b) Remove the bolt and pull out the transmission wire.

(c) Remove the O-ring from the transmission wire.

Text in Illustration

*1	O-ring

Title: TX6A AUTOMATIC TRANSMISSION / TRANSAXLE: VALVE BODY ASSEMBLY: INSPECTION (2013 FR-S)		

INSPECTION

1. INSPECT SHIFT SOLENOID VALVE SL1 AND SL2

(a) Measure the resistance according to the value(s) in the table below.

Text in Illustration

*a	Component without harness connected (Shift Solenoid Valve SL1 and SL2)
----	---

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	20°C (68°F)	5.0 to 5.6 Ω

(b) Connect the positive (+) lead with a 21 W bulb to terminal 1 and the negative (-) lead to terminal 2 of the shift solenoid valve connector, then check the movement of the valve.

OK:

The solenoid makes an operating sound.

If the result is not as specified, replace the shift solenoid valve.

2. INSPECT SHIFT SOLENOID VALVE S1

(a) Measure the resistance according to the value(s) in the table below.

Text in Illustration

*a	Component without harness connected (Shift Solenoid Valve S1)
----	--

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION

--	--

Shift solenoid valve S1 connector terminal - Shift solenoid valve S1 body	20°C (68°F)	11 to 15 Ω

(b) Connect the positive (+) lead to the terminal of the shift solenoid valve S1 connector, and the negative (-) lead to the shift solenoid valve S1 body.

OK:

The solenoid makes an operating sound.

If the result is not as specified, replace the shift solenoid valve S1.

3. INSPECT SHIFT SOLENOID VALVE S2

(a) Measure the resistance according to the value(s) in the table below.

Text in Illustration

*a	Component without harness connected (Shift Solenoid Valve S2)
----	---

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Shift solenoid valve S2 connector terminal - Shift solenoid valve S2 body	20°C (68°F)	11 to 15 Ω

(b) Connect the positive (+) lead to the terminal of the shift solenoid valve S2 connector, and the negative (-) lead to the shift solenoid valve S2 body.

OK:

The solenoid makes an operating sound.

If the result is not as specified, replace the shift solenoid valve S2.

4. INSPECT SHIFT SOLENOID VALVE S3

(a) Measure the resistance according to the value(s) in the table below.

Text in Illustration

	Component without harness connected
--	-------------------------------------

*a	(Shift Solenoid Valve S3)
----	---------------------------

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Shift solenoid valve S3 connector terminal - Shift solenoid valve S3 body	20°C (68°F)	11 to 15 Ω

(b) Connect the positive (+) lead to the terminal of the shift solenoid valve S3 connector, and the negative (-) lead to the shift solenoid valve S3 body.

OK:

The solenoid makes an operating sound.

If the result is not as specified, replace the shift solenoid valve S3.

5. INSPECT SHIFT SOLENOID VALVE S4

(a) Measure the resistance according to the value(s) in the table below.

Text in Illustration

*a	Component without harness connected (Shift Solenoid Valve S4)
----	---

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Shift solenoid valve S4 connector terminal - Shift solenoid valve S4 body	20°C (68°F)	11 to 15 Ω

(b) Connect the positive (+) lead to the terminal of the shift solenoid valve S4 connector, and the negative (-) lead to the shift solenoid valve S4 body.

OK:

The solenoid makes an operating sound.

If the result is not as specified, replace the shift solenoid valve S4.

6. INSPECT SHIFT SOLENOID VALVE SR

(a) Measure the resistance according to the value(s) in the table below.

Text in Illustration

	Component without harness connected
--	-------------------------------------

*a	(Shift Solenoid Valve SR)
----	---------------------------

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Shift solenoid valve SR connector terminal - Shift solenoid valve SR body	20°C (68°F)	11 to 15 Ω

(b) Connect the positive (+) lead to the terminal of the shift solenoid valve SR connector, and the negative (-) lead to the shift solenoid valve SR body.

OK:

The solenoid makes an operating sound.

If the result is not as specified, replace the shift solenoid valve SR.

7. INSPECT SHIFT SOLENOID VALVE SLT

(a) Measure the resistance according to the value(s) in the table below.

Text in Illustration

*a	Component without harness connected (Shift Solenoid Valve SLT)
----	--

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	20°C (68°F)	5.0 to 5.6 Ω

(b) Connect the positive (+) lead with a 21 W bulb to terminal 2 and the negative (-) lead to terminal 1 of the shift solenoid valve SLT connector, then check the movement of the valve.

OK:

The solenoid makes an operating sound.

If the result is not as specified, replace the shift solenoid valve SLT.

8. INSPECT SHIFT SOLENOID VALVE SLU

(a) Measure the resistance according to the value(s) in the table below.

Text in Illustration

*a	Component without harness connected (Shift Solenoid Valve SLU)
----	---

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	20°C (68°F)	5.0 to 5.6 Ω

(b) Connect the positive (+) lead with a 21 W bulb to terminal 2 and the negative (-) lead to terminal 1 of the shift solenoid valve SLU connector, then check the movement of the valve.

OK:

The solenoid makes an operating sound.

If the result is not as specified, replace the shift solenoid valve SLU.

INFO

3. DRAIN AUTOMATIC TRANSMISSION FLUID

- (a) Remove the drain plug and gasket, and drain the ATF.
- (b) Install the drain plug and a new gasket.

Torque: 20 N·m (204 kgf·cm, 15ft·lbf)

4. REMOVE AUTOMATIC TRANSMISSION OIL PAN SUB-ASSEMBLY INFO

5. REMOVE TRANSMISSION OIL CLEANER MAGNET INFO

6. REMOVE VALVE BODY OIL STRAINER ASSEMBLY INFO

7. DISCONNECT TRANSMISSION WIRE INFO

8. REMOVE TRANSMISSION VALVE BODY ASSEMBLY

- (a) Remove the bolt, detent spring cover and the detent spring.

- (b) Remove the 19 bolts and the transmission valve body assembly.

(c) Disconnect the manual valve connecting rod sub-assembly from the manual valve lever sub-assembly.

Text in Illustration

*1	Manual Valve Connecting Rod Sub-assembly
*2	Manual Valve Lever Sub-assembly

(d) Remove the check ball body and the compression spring.

Text in Illustration

*1	Check Ball Body
*2	Compression Spring

NOTICE:

Do not drop the check ball body and compression spring.

Last Modified: 3-27-2012	6.4 A	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM00000419K00HX
Title: FA20 COOLING: COOLANT: REPLACEMENT (2013 FR-S)		

REPLACEMENT

1. DRAIN ENGINE COOLANT

NOTICE:

Do not remove the radiator cap, cylinder block drain cock plugs and radiator drain cock plug while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

HINT:

Collect the coolant in a container and dispose of it according to the local regulations.

- (a) Remove the service hole cover from the front bumper under cover.

- (b) Connect a hose with an inside diameter of 8 mm (0.315 in.) to the drain plug.

- (c) Loosen the radiator drain cock plug.

- (d) Open the air bleed plug on the heater hose side.

- (e) Remove the radiator cap and drain the coolant.

2. ADD ENGINE COOLANT

HINT:

Before replenishing the coolant, turn the A/C switch off.

- (a) Tighten the radiator drain cock plug.
(b) Pour in coolant of the specified density until it reaches the base of the entrance to the water inlet.

HINT:

- The coolant contains anti-freeze and anti-rust agents for use with engines with aluminum cylinder blocks. Using other than the specified coolant may cause rust, so be sure to use Toyota SLLC 50 Blue.
- Crimp the inlet and outlet radiator hoses several times by hand, and add water if the water level in the entrance water inlet drops.
- The coolant quantity includes the quantity in the reserve tank.

- (c) Open the air bleed plug on the heater hose side.

- (d) If the water level in the entrance to the water inlet drops, pour coolant in until it reaches the base of the entrance to the water inlet.
(e) Close the air bleed plug when the coolant begins to come out of the air bleed valve on the heater hose side.
(f) Pour in coolant of the specified concentration until it reaches the "FULL" level of the radiator reserve tank.
(g) Close the radiator cap. [*1]
(h) Start the engine, race it 5 to 6 times at under 3000 rpm or less, and then stop the engine. [*2]

HINT:

Finish this operation within 40 seconds.

- (i) 1 minute after stopping the engine, remove the radiator cap and pour coolant in if the water level in the entrance to the water inlet has dropped. [*3]
(j) Repeat operations [*1], [*2], and [*3] until the water level in the entrance to the water inlet does not drop.

HINT:

Perform before the engine warms up, as the air that comes out of the inlet radiator hose will travel to the radiator side when the engine warms up and the thermostat opens.

- (k) Close the radiator cap and the radiator reserve tank cap.

- (l) Start the engine, set the heater on full warm, and then run it with the blower speed set to "LO".
- (m) Run the engine at 2000 rpm or less until the radiator fan starts and stops. [*4]

HINT:

To prevent overheating, pay attention to the water temperature.

- (n) Stop the engine and wait until the coolant temperature drops to 30 °C (86 °F) or less. [*5]
- (o) Remove the radiator cap and, if the volume of coolant has dropped, pour coolant in until it reaches the base of the entrance to the water inlet and until it reaches the "FULL" level in the radiator reserve tank. [*6]
- (p) Close the radiator cap. [*7]
- (q) Set the heater to full warm, and, with the blower speed set to "LO", race the engine at 3000 rpm or less. [*8]
- (r) At this point, if the engine coolant can be heard flowing in the heater core, repeat operations [*4], [*5], [*6], [*7], and [*8].

- (s) When the water level no longer drops, adjust the water level so that the water level in the radiator reserve tank reaches the "FULL" line.

Title: FA20 COOLING: COOLING FAN MOTOR: INSTALLATION (2013 FR-S)		

INSTALLATION

1. INSTALL NO. 2 COOLING FAN MOTOR

- (a) Install the No. 2 cooling fan motor with the 3 screws.

Torque: 3.9 N·m (40 kgf·cm, 35in·lbf)

2. INSTALL COOLING FAN MOTOR

- (a) Install the cooling fan motor with the 3 screws.

Torque: 3.9 N·m (40 kgf·cm, 35in·lbf)

- (b) Connect the wire harness to the 2 cooling fan motors.

3. INSTALL NO. 2 FAN

- (a) Install the No. 2 fan with the nut.

Torque: 6.3 N·m (64 kgf·cm, 56in·lbf)

4. INSTALL FAN

- (a) Install the fan with the nut.

Torque: 6.3 N·m (64 kgf·cm, 56in·lbf)

5. INSTALL FAN SHROUD

HINT:

Insert a cardboard or a blanket between the radiator assembly and the fan shroud to protect the radiator assembly.

- (a) Engage the fitting sections in the bottom of the fan shroud with the fitting sections of the radiator assembly.

NOTICE:

Do not damage the outlet radiator hose, inlet radiator hose, No.1 radiator hose, water filler sub-assembly, or air conditioner tube and accessory assembly.

- (b) Attach the 2 claws and install the fan shroud to the radiator assembly.
(c) Connect the 2 cooling fan motor connectors and 2 clamps to the radiator assembly.

6. INSTALL RADIATOR SUPPORT SUB-ASSEMBLY INFO

7. INSTALL RADIATOR COVER PLATE INFO

8. REMOVE AIR CLEANER DUCT INFO

9. CONNECT HOOD LOCK ASSEMBLY INFO

10. INSTALL WATER FILLER SUB-ASSEMBLY

- (a) Install the water filler sub-assembly with the 4 bolts.

Torque: 7.5 N·m (77 kgf·cm, 66in·lbf)

11. INSTALL RADIATOR RESERVE TANK ASSEMBLY [INFO](#)

12. INSTALL FRONT BUMPER COVER

Title: FA20 COOLING: COOLING FAN MOTOR: ON-VEHICLE INSPECTION (2013 FR-S)		

ON-VEHICLE INSPECTION

1. INSPECT COOLING FAN MOTOR

- (a) Check that the motor operates smoothly when the battery is connected to the cooling fan motor connector.

Text in Illustration

*a	Component without harness connected (Cooling fan motor)
----	--

If the motor does not operate smoothly, replace the cooling fan motor.

- (b) Measure the current while the motor is operating.

Standard Current:

ITEM	CONDITION	SPECIFIED CONDITION
Cooling fan motor	20°C (68°F)	7.4 to 11.4 A at 12 V

If the result is not as specified, replace the cooling fan motor.

2. INSPECT NO. 2 COOLING FAN MOTOR

- (a) Check that the motor operates smoothly when the battery is connected to the No. 2 cooling fan motor connector.

Text in Illustration

*a	Component without harness connected (No. 2 cooling fan motor)
----	--

If the motor does not operate smoothly, replace the No. 2 cooling fan motor.

- (b) Measure the current while the motor is operating.

Standard Current:

ITEM	CONDITION	SPECIFIED CONDITION
No. 2 cooling fan motor	20°C (68°F)	7.4 to 11.4 A at 12 V

If the result is not as specified, replace the No. 2 cooling fan motor.

7. DISCONNECT HOOD LOCK ASSEMBLY INFO

8. REMOVE RADIATOR SUPPORT SUB-ASSEMBLY INFO

9. REMOVE FAN SHROUD

(a) Disconnect the 2 wire harness clamps and the 2 cooling fan motor connectors.

Text in Illustration

*1	Cooling fan motor connector
*2	No. 2 cooling fan motor connector

NOTICE:

Be careful not to damage the connectors.

(b) Mark the sponge on the upper surface of the fan shroud, and use scissors, etc. to cut the sponge.

HINT:

Cut the radiator packing at the position between the corner of the radiator packing and the edge of the fan shroud.

Text in Illustration

*1	Cutting Line
----	--------------

(c) Detach the 2 claws and separate the fan shroud from the radiator assembly.

Text in Illustration

*1	Cardboard or Blanket
----	----------------------

HINT:

Insert a cardboard or a blanket between the radiator assembly and the fan shroud to protect the radiator assembly.

(d) Remove the fan shroud from the radiator assembly.

NOTICE:

Do not apply any excessive force to the outlet radiator hose, inlet radiator hose, No.1 radiator hose, pipe or water filler sub-assembly when removing the fan shroud.

10. REMOVE FAN

(a) Remove the nut and fan.

11. REMOVE NO. 2 FAN

(a) Remove the nut and No. 2 fan.

12. REMOVE COOLING FAN MOTOR

(a) Disengage the connector clamp, and disconnect the connector from cooling fan motor.

(b) Remove the 3 screws and cooling fan motor.

13. REMOVE NO. 2 COOLING FAN MOTOR

(a) Remove the 3 screws and the No. 2 cooling fan motor.

Title: FA20 COOLING: COOLING FAN SYSTEM: Cooling Fan Circuit (2013 FR-S)		

[Cooling Fan Circuit](#)

DESCRIPTION

The ECM turns on or off the fan relays using signals calculated from the engine coolant temperature, air conditioning (ON/OFF), air conditioner refrigerant pressure, engine speed and vehicle speed signals.

The ECM switches the circuit of the cooling fan motors between series and parallel by turning on or off the fan relays in order to control the speed of the cooling fan motors in two steps.

WIRING DIAGRAM

Refer to System Diagram [#FO](#) .

INSPECTION PROCEDURE

NOTICE:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1.	PERFORM ACTIVE TEST USING TECHSTREAM (CONTROL THE ELECTRIC COOLING FAN)
-----------	--

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Powertrain / Engine / Active Test / Control the Electric Cooling Fan.
- (e) Check the operation of the cooling fans while operating them using the Techstream.

OK:

TESTER OPERATION	SPECIFIED CONDITION
ON	Cooling fans operate
OFF	Cooling fans stop

NG  **PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE**

OK
▼

2. INSPECT ENGINE ROOM RELAY BLOCK (FAN NO. 1 RELAY VOLTAGE)

(a) Remove the FAN No. 1 relay from the engine room relay block.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
5 (FAN NO. 1 relay terminal) - Body ground	Always	11 to 14 V

Text in Illustration

*1	Engine Room Relay Block
*2	FAN No. 1 Relay Terminals

(c) Reinstall the FAN No. 1 relay.

NG ► REPAIR OR REPLACE HARNESS OR
CONNECTOR (BATTERY - FAN NO. 1 RELAY)

OK
▼

3. INSPECT ENGINE ROOM RELAY BLOCK (FAN NO. 3 RELAY VOLTAGE)

(a) Remove the FAN No. 3 relay from the engine room relay block.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
5 (FAN NO. 3 relay terminal) - Body ground	Always	11 to 14 V

Text in Illustration

*1	Engine Room Relay Block
*2	FAN No. 3 Relay Terminals

(c) Reinstall the FAN No. 3 relay.

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR (BATTERY - FAN NO. 3 RELAY)

OK

4.	CHECK HARNESS AND CONNECTOR (FAN NO. 1, NO. 2 OR NO. 3 RELAY)
-----------	--

(a) Remove the FAN No. 1, FAN No. 2 and FAN No. 3 relays from the engine room relay block.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2 (FAN NO. 1 relay terminal) - Body ground	Ignition switch ON	11 to 14 V
1 (FAN NO. 2 relay terminal) - Body ground	Ignition switch ON	11 to 14 V
2 (FAN NO. 3 relay terminal) - Body ground	Ignition switch ON	11 to 14 V

Text in Illustration

*1	Engine Room Relay Block
*2	FAN No. 1 Relay Terminals
*3	FAN No. 2 Relay Terminals
*4	FAN No. 3 Relay Terminals

(d) Reinstall the FAN No. 1, FAN No. 2 and FAN No. 3 relay.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (FAN NO. 1, NO. 2 OR NO. 3 RELAY)**

OK
▼

5. INSPECT FAN NO. 1 RELAY

(a) Inspect the FAN No. 1 relay  .

NG  **REPLACE FAN NO. 1 RELAY**

OK

6. INSPECT FAN NO. 2 RELAY

(a) Inspect the FAN No. 2 relay  .

NG  **REPLACE FAN NO. 2 RELAY**

OK

7. INSPECT FAN NO. 3 RELAY

(a) Inspect the FAN No. 3 relay  .

NG  **REPLACE FAN NO. 3 RELAY**

OK

8. CHECK HARNESS AND CONNECTOR (FAN NO. 2 RELAY - BODY GROUND)

(a) Remove the FAN No. 2 relay from the engine room relay block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
5 (FAN NO. 2 relay terminal) - Body ground	Always	Below 1 Ω

(c) Reinstall the FAN No. 2 relay.

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR (FAN NO. 2 RELAY - BODY GROUND)

OK

9.	INSPECT COOLING FAN MOTOR
-----------	----------------------------------

(a) Inspect the cooling fan motor  .

NG ► REPLACE COOLING FAN MOTOR

OK

10.	CHECK HARNESS AND CONNECTOR (COOLING FAN MOTOR - BODY GROUND)
------------	--

(a) Disconnect the A45 cooling fan motor connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A45-1 - Body ground	Always	Below 1 Ω

(c) Reconnect the A45 cooling fan motor connector.

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR (COOLING FAN MOTOR - BODY GROUND)

OK

	CHECK HARNESS AND CONNECTOR (COOLING FAN MOTOR - ENGINE ROOM)
--	--

11.	RELAY BLOCK)
------------	---------------------

- (a) Disconnect the A45 cooling fan motor connector.
- (b) Remove the FAN No. 1 and FAN No. 2 relays from the engine room relay block.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A45-2 - 3 (FAN NO. 1 relay terminal)	Always	Below 1 Ω
A45-2 - 4 (FAN NO. 2 relay terminal)	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A45-2 or 3 (FAN NO. 1 relay terminal) or 4 (FAN NO. 2 relay terminal) - Body ground	Always	10 kΩ or higher

- (d) Reconnect the A45 cooling fan motor connector.
- (e) Reinstall the FAN No. 1 and FAN No. 2 relays.

NG ► **REPAIR OR REPLACE HARNESS OR CONNECTOR (COOLING FAN MOTOR - ENGINE ROOM RELAY BLOCK)**

OK
▼

12.	INSPECT NO. 2 COOLING FAN MOTOR
------------	--

- (a) Inspect the No. 2 cooling fan motor INFO.

NG ► **REPLACE NO. 2 COOLING FAN MOTOR**

OK
▼

13.	CHECK HARNESS AND CONNECTOR (NO. 2 COOLING FAN MOTOR - ENGINE ROOM RELAY BLOCK)
------------	--

- (a) Disconnect the A46 No. 2 cooling fan motor connector.
- (b) Remove the FAN No. 2 and FAN No. 3 relays from the engine room relay block.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A46-1 - 3 (FAN NO. 2 relay terminal)	Always	Below 1 Ω
A46-2 - 3 (FAN NO. 3 relay terminal)	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A46-1 or 3 (FAN NO. 2 relay terminal) - Body ground	Always	10 k Ω or higher
A46-2 or 3 (FAN NO. 3 relay terminal) - Body ground	Always	10 k Ω or higher

- (d) Reconnect the A46 No. 2 cooling fan motor connector.
- (e) Reinstall the FAN No. 2 and FAN No. 3 relays.

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR (NO. 2 COOLING FAN MOTOR - ENGINE ROOM RELAY BLOCK)**

OK

14.	INSPECT ENGINE ROOM RELAY BLOCK (FAN NO. 1 RELAY - FAN NO. 2 RELAY)
------------	--

- (a) Remove the FAN No. 1 and FAN No. 2 relays from the engine room relay block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 (FAN NO. 1 relay terminal) - 2 (FAN NO. 2 relay terminal)	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 (FAN NO. 1 relay terminal) or 2 (FAN NO. 2 relay terminal) - Body ground	Always	10 k Ω or higher

Text in Illustration

*1	Engine Room Relay Block
*2	FAN NO. 1 Relay Terminals
*3	FAN NO. 2 Relay Terminals

(c) Reinstall the FAN No. 1 and FAN No. 2 relays.

NG  **REPLACE ENGINE ROOM RELAY BLOCK**

OK

15.	CHECK HARNESS AND CONNECTOR (ECM - ENGINE ROOM RELAY BLOCK)
------------	--

(a) Disconnect the A35 ECM connector.

(b) Remove the FAN No. 2 and FAN No. 3 relays from the engine room relay block.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A35-11 (FAN1) - 1 (FAN NO. 1 relay terminal)	Always	Below 1 Ω
A35-11 (FAN1) - 2 (FAN NO. 2 relay terminal)	Always	Below 1 Ω
A35-12 (FAN2) - 1 (FAN NO. 3 relay terminal)	Always	Below 1 Ω

Standard Resistance (Check for Short):

--	--	--

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A35-11 (FAN1) or 1 (FAN NO. 1 relay terminal) or 2 (FAN NO. 2 relay terminal) - Body ground	Always	10 kΩ or higher
A35-12 (FAN2) or 1 (FAN NO. 3 relay terminal) - Body ground	Always	10 kΩ or higher

(d) Reconnect the A35 ECM connector.

(e) Reinstall the FAN No. 2 and FAN No. 3 relays.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (ECM - ENGINE ROOM RELAY BLOCK)**

OK ▶ **REPLACE ECM**

Title: FA20 COOLING: COOLING FAN SYSTEM: ON-VEHICLE INSPECTION (2013 FR-S)		

ON-VEHICLE INSPECTION

1. INSPECT COOLING FAN OPERATION AT LOW TEMPERATURES (Below 83 °C (181 °F))

(a) Turn the ignition switch to ON.

(b) Check that the cooling fans stop.

If it does not, check the cooling fan relays and engine coolant temperature sensor, and check whether there is a disconnection or an open circuit between them.

(c) Disconnect the engine coolant temperature sensor connector.

(d) Check that the cooling fans operate.

If it does not, check the fuses, cooling fan relays, ECM and cooling fans, and check for a short circuit between the cooling fan relays and the engine coolant temperature sensor.

(e) Reconnect the engine coolant temperature sensor connector.

2. INSPECT COOLING FAN OPERATION AT HIGH TEMPERATURES (Above 96 °C (205 °F))

(a) Start the engine, and raise the engine coolant temperature to above 96 °C (205 °F).

HINT:

The engine coolant temperature is detected by the engine coolant temperature sensor on the water outlet.

(b) Check that the cooling fans operate.

If it does not, replace the engine coolant temperature sensor.

Title: FA20 COOLING: COOLING SYSTEM: ON-VEHICLE INSPECTION (2013 FR-S)		

ON-VEHICLE INSPECTION

1. INSPECT FOR COOLANT LEAK

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized hot engine coolant and steam may be released and cause serious burns.

NOTICE:

Before performing each inspection, turn the A/C switch off.

- (a) Fill the radiator with coolant and attach a radiator cap tester.

- (b) Warm up the engine.

- (c) Using a radiator cap tester, increase the pressure inside the radiator to 137 kPa (1.4 kgf/cm², 20 psi), and check that the pressure does not drop.

If the pressure drops, check the hoses, radiator and water pump for leaks. If no external leaks are found, check the heater core, cylinder block and cylinder head.

2. INSPECT ENGINE COOLANT LEVEL

- (a) Check that the engine coolant level is between the low and full lines when the engine is cold.

If the engine coolant level is low, check for leaks and add TOYOTA Genuine 50/50 Pre-mixed Super Long Life Coolant BLUE or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite and non-borate coolant with long-life hybrid organic acid technology to the full line.

NOTICE:

Do not substitute plain water for engine coolant.

3. INSPECT ENGINE COOLANT QUALITY

- (a) Remove the radiator cap.

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

(b) Check if there are any excessive deposits of rust or scales around the radiator cap and radiator filler hole. Also, the coolant should be free of oil.

If excessively dirty, clean the coolant passage and replace the coolant.

(c) Install the radiator cap.

Title: FA20 COOLING: RADIATOR: INSTALLATION (2013 FR-S)		

INSTALLATION

1. REMOVE RADIATOR PACKING (LOWER)

- (a) Install the new radiator packing.

2. REMOVE NO. 2 RADIATOR PACKING

- (a) Install the new No. 2 radiator packing.

3. REMOVE NO. 1 RADIATOR PACKING

- (a) Install the new No. 1 radiator packing.

4. REMOVE RADIATOR PACKING (UPPER)

- (a) Install the new radiator packing.

Text in Illustration

*1	Radiator Packing
----	------------------

HINT:

Cut the radiator packing at the same position in the removal.

5. INSTALL OUTLET RADIATOR HOSE

- (a) Since the radiator hose must be attached in the correct position, apply match marks before removing it.
- (b) Install the outlet radiator hose to the radiator assembly and secure it with the clamp.

6. INSTALL NO. 1 RADIATOR HOSE

- (a) Since the radiator hose must be attached in the correct position, apply match marks before removing it.
- (b) Install the No. 1 radiator hose to the water filler sub-assembly and secure it with the clamp.

7. INSTALL INLET RADIATOR HOSE

- (a) Since the radiator hose must be attached in the correct position, apply match marks before removing it.
- (b) Install the inlet radiator hose to the radiator assembly and secure it with the clamp.

8. INSTALL RADIATOR ASSEMBLY

- (a) Install the 2 radiator support cushions to the radiator assembly.
- (b) While lifting the outlet radiator hose, install the radiator assembly.

NOTICE:

Push a blanket or a cardboard against the cooler condenser assembly to protect it.

(c) Attach the claw and install the thermistor assembly.

(d) Install the radiator support RH with the 2 bolts.

Torque: 7.5 N·m (77 kgf·cm, 66in·lbf)

(e) Install the radiator support LH with the 2 bolts.

Torque: 7.5 N·m (77 kgf·cm, 66in·lbf)

9. REMOVE FAN SHROUD INFO

10. INSTALL COOLER CONDENSER ASSEMBLY

(a) Install the cooler condenser assembly to the radiator assembly with the 5 bolts.

Torque: 6.0 N·m (61 kgf·cm, 53in·lbf)

11. INSTALL RADIATOR SUPPORT SUB-ASSEMBLY

(a) Install the 6 bolts and radiator support sub-assembly.

Torque: 18 N·m (184 kgf·cm, 13ft·lbf)

12. INSTALL HOOD LOCK ASSEMBLY INFO

13. INSTALL WATER FILLER SUB-ASSEMBLY

(a) Install the water filler sub-assembly and water filler bracket with the 4 bolts.

Torque: 7.5 N·m (77 kgf·cm, 66in·lbf)

(b) Connect the inlet radiator hose and No. 1 radiator hose to the radiator assembly with the 2 clamps.

(c) Connect the radiator cap hose to the water filler sub-assembly.

14. INSTALL RADIATOR COVER PLATE

(a) Install the radiator cover plate with the 6 clips.

15. INSTALL AIR CLEANER DUCT

(a) Install the air cleaner duct with the 2 bolts.

Torque: 6.0 N·m (61 kgf·cm, 53in·lbf)

16. INSTALL RADIATOR RESERVE TANK ASSEMBLY

(a) Install the radiator reserve tank assembly with the 2 bolts.

Torque: 7.5 N·m (77 kgf·cm, 66in·lbf)

17. CONNECT OUTLET RADIATOR HOSE INFO

18. ADD ENGINE COOLANT INFO

19. INSPECT FOR COOLANT LEAK INFO

20. INSTALL NO. 1 ENGINE UNDER COVER INFO

21. INSTALL FRONT BUMPER COVER

INFO

22. INSTALL AIR CLEANER CASE SUB-ASSEMBLY

(a) Connect the hose.

Torque: 3.0 N·m (31 kgf·cm, 27in·lbf)

HINT:

When connecting the hose, align the protrusion of the air cleaner case sub-assembly with the cutout of the hose, and push in the hose until it contacts the stopper of the air cleaner case sub-assembly.

Model Year: 2013	Model: FR-S	Doc ID: RM000000XYW08QX
Title: FA20 COOLING: RADIATOR: ON-VEHICLE INSPECTION (2013 FR-S)		

ON-VEHICLE INSPECTION

1. CHECK RADIATOR CAP SUB-ASSEMBLY

(a) Measure the valve opening pressure.

- (1) If there are water stains or foreign matter on rubber packings 1, 2 or 3, clean the part(s) with water and finger scouring.
- (2) Check that rubber packings 1, 2 or 3 are not deformed, cracked or swollen.
- (3) Check that rubber packings 3 and 4 are not stuck together.
- (4) Apply engine coolant to rubber packings 2 and 3 before using the radiator cap tester.

(5) When using the cap tester, tilt it 30° or more.

Text in Illustration

*1	Radiator Cap Tester
*2	Radiator cap sub-assembly
*a	30° or more

(6) Pump the cap tester several times, and check the maximum pressure*1.

Pumping speed:
1 pump per second

HINT:

*1: Even if the cap cannot maintain the maximum pressure, it is not a defect.

Judgment Criterion:

ITEM	SPECIFIED CONDITION
Standard valve (for brand-new cap)	93 to 123 kPa (0.95 to 1.25 kgf/cm ² , 14 to 18 psi)

Minimum standard valve
(for used cap)

83 kPa (0.85 kgf/cm² , 12 psi)

If the maximum pressure is less than the minimum standard valve, replace the radiator cap sub-assembly.

Title: FA20 COOLING: RADIATOR: REMOVAL (2013 FR-S)		

REMOVAL

1. REMOVE AIR CLEANER CASE SUB-ASSEMBLY

(a) Disengage the clamp, and disconnect the mass air flow meter connector.

(b) Remove the 3 bolts.

(c) Loosen the hose clamp, and disconnect the hose.

(d) Remove the air cleaner case sub-assembly.

2. REMOVE FRONT BUMPER COVER

INFO

3. REMOVE NO. 1 ENGINE UNDER COVER

INFO

4. DRAIN ENGINE COOLANT

INFO

5. DISCONNECT OUTLET RADIATOR HOSE

INFO

6. REMOVE RADIATOR RESERVE TANK ASSEMBLY

(a) Remove the 2 bolts and radiator reserve tank assembly.

7. REMOVE AIR CLEANER DUCT

(a) Remove the 2 bolts and air cleaner duct.

8. REMOVE RADIATOR COVER PLATE

(a) Remove the 6 clips and radiator cover plate.

9. REMOVE WATER FILLER SUB-ASSEMBLY

(a) Disconnect the radiator cap hose.

(b) Detach the 2 water hose clamps.

(c) Disconnect the inlet radiator hose and No. 1 radiator hose.

HINT:

Since the radiator hose must be attached in the correct position, apply match marks before removing it.

(d) Remove the 4 bolts and the water filler sub-assembly with water filler bracket.

10. REMOVE HOOD LOCK ASSEMBLY INFO

11. REMOVE RADIATOR SUPPORT SUB-ASSEMBLY

(a) Remove the 2 bolts.

(b) Remove the 4 bolts and radiator support sub-assembly.

12. SEPARATE COOLER CONDENSER ASSEMBLY

(a) Remove the bolt.

(b) Remove the bolt.

(c) Remove the bolt.

(d) Remove the bolt A.

(e) Remove the bolt B and separate the cooler condenser assembly from the radiator assembly.

13. REMOVE FAN SHROUD INFO

14. REMOVE RADIATOR ASSEMBLY

(a) Remove the 2 bolts and radiator support RH.

(b) Remove the 2 bolts and radiator support LH.

(c) Detach the claw and disconnect the thermistor assembly.

(d) While lifting the outlet radiator hose, remove the radiator assembly.

NOTICE:

Insert cardboard or a blanket between the radiator assembly and the cooler condenser assembly to protect the cooler condenser assembly.

Text in Illustration

*1	Cooler condenser assembly
*2	Cardboard or Blanket
*3	Radiator assembly

(e) Remove the 2 radiator support cushions.

15. REMOVE INLET RADIATOR HOSE

(a) Remove the clamp and the inlet radiator hose from the water filler sub-assembly.

HINT:

Since the radiator hose must be attached in the correct position, apply match marks before removing it.

16. REMOVE NO. 1 RADIATOR HOSE

(a) Remove the clamp and No. 1 radiator hose from the radiator assembly.

Text in Illustration

*1	No. 1 radiator hose
----	---------------------

HINT:

Since the radiator hose must be attached in the correct position, apply match marks before removing it.

17. REMOVE OUTLET RADIATOR HOSE

(a) Remove the clamp and outlet radiator hose from the radiator assembly.

Text in Illustration

*1	Outlet radiator hose
----	----------------------

HINT:

Since the radiator hose must be attached in the correct position, apply match marks before removing it.

18. REMOVE RADIATOR PACKING (UPPER)

(a) Remove the radiator packing.

Text in Illustration

*1	Radiator Packing
----	------------------

19. REMOVE NO. 1 RADIATOR PACKING

(a) Remove the No. 1 radiator packing.

Text in Illustration

*1	No. 1 Radiator Packing

Title: FA20 COOLING: RELAY: ON-VEHICLE INSPECTION (2013 FR-S)		

ON-VEHICLE INSPECTION

1. FAN NO. 1 RELAY

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3 - 5	Battery voltage is not applied between terminals 1 and 2	10 kΩ or higher
3 - 5	Battery voltage is applied between terminals 1 and 2	Below 1 Ω

If the result is not as specified, replace the relay.

2. FAN NO. 2 RELAY

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3 - 4	Battery voltage is not applied between terminals 1 and 2	Below 1 Ω
3 - 5	Battery voltage is not applied between terminals 1 and 2	10 kΩ or higher
3 - 4	Battery voltage is applied between terminals 1 and 2	10 kΩ or higher
3 - 5	Battery voltage is applied between terminals 1 and 2	Below 1 Ω

If the result is not as specified, replace the relay.

3. FAN NO. 3 RELAY

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3 - 5	Battery voltage is not applied between terminals 1 and 2	10 k Ω or higher
3 - 5	Battery voltage is applied between terminals 1 and 2	Below 1 Ω

If the result is not as specified, replace the relay.

INSPECTION

1. INSPECT THERMOSTAT

- (a) Immerse the thermostat in water and then gradually heat the water.

HINT:

Hold the thermostat with a wire or the like, so that the thermostat does not come into contact with the bottom of the container.

- (b) Check the valve opening temperature of the thermostat.

Valve opening temperature:
48 to 52°C (118 to 126°F)

HINT:

If the valve opening temperature is not as specified, replace the thermostat.

- (c) Check the valve lift.

Text in Illustration

*a	Valve Lift
----	------------

Valve lift:
6.0 mm (0.236 in.) or more at 63°C (145°F)

HINT:

If the valve lift is not as specified, replace the thermostat.

- (d) Check that the valve is fully closed when the water inlet with thermostat is at low temperatures (below 45°C (113°F)).

HINT:

If it is not fully closed, replace the thermostat.

Title: CRUISE CONTROL: CRUISE CONTROL SYSTEM: CANCEL CODE (2013 FR-S)		

CANCEL CODE

1. DESCRIPTION

The ECM stores cancellation of cruise control due to driver operation and system abnormality as a "CANCEL CODE". In troubleshooting, the "CANCEL CODE" can be used to specify the cause of the malfunction.

HINT:

- The "CANCEL CODE" for canceled cruise control resulting from a driver operation is also stored. Therefore, fault troubleshooting needs to determine whether the "CANCEL CODE" is due to a driver operation or a system abnormality.
- Storage of a "CANCEL CODE" due to the driver canceling cruise control is normal, and not a system abnormality.
- The "CANCEL CODE" is cleared by turning off the ignition switch. So, does not turn the ignition switch off until the "CANCEL CODE" has been checked.

2. READ CANCEL CODE

- Connect the Techstream to the DLC3.
- Turn the ignition switch to ON.
- Turn the Techstream on.
- Perform a cruise control road test, and recreate the driving conditions in which cruise control was previously canceled.
- After cruise control is canceled, check the DATA LIST INFO.
- Check the stored "CANCEL CODE".

*: "(MEMORY)" displays the storage history of the "CANCEL CODE", and is not deleted by turning the ignition switch off. When clearing, perform to clear the DTC INFO.

Cruise Cancel : Main Switch

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	TROUBLE AREA
Cruise Cancel : Main Switch	Cruise control was canceled through a cruise control main switch operation or cruise control main switch signal abnormality. / ON or OFF	<ul style="list-style-type: none"> • Operation of cruise control main switch • Cruise control main switch assembly malfunction • Cruise control main switch circuit malfunction

Title: CRUISE CONTROL: CRUISE CONTROL SYSTEM: Clutch Switch Circuit (2013 FR-S)		

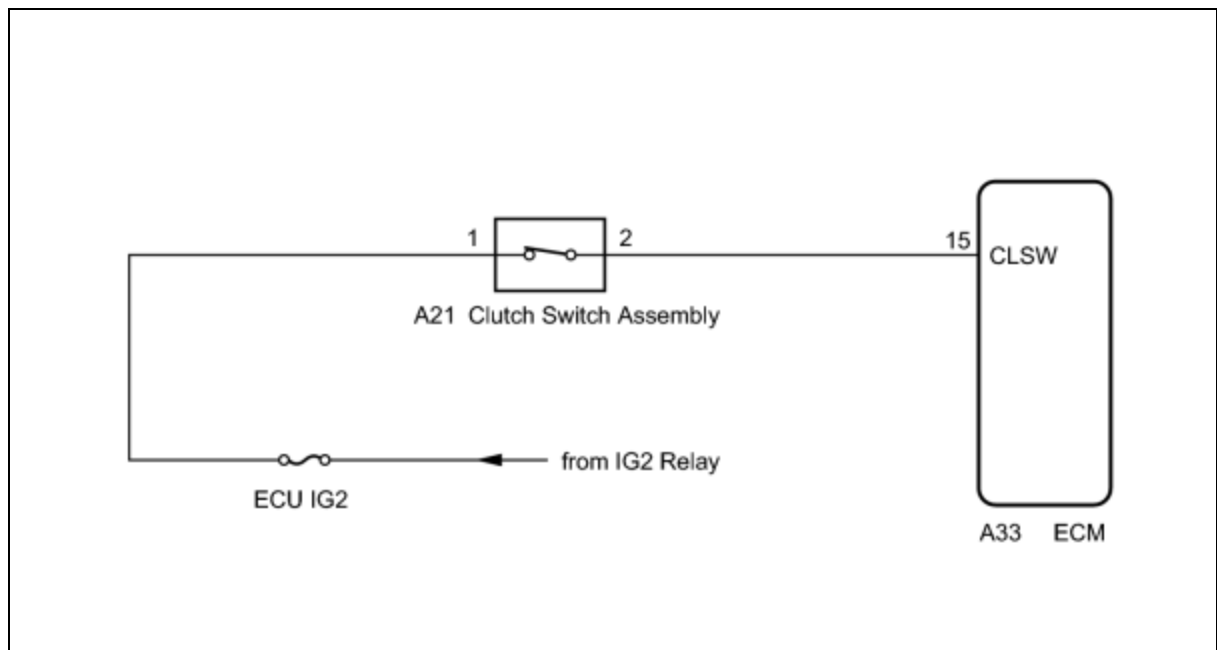

Clutch Switch Circuit

DESCRIPTION

Clutch switch circuit inspection is necessary for M/T vehicles.

When the clutch pedal is released, the ECM receives positive (+) battery voltage through the ECU IG2 fuse. While depressing the clutch pedal, the clutch switch sends a signal to terminal CLSW of the ECM. The ECM cancels cruise control drive when terminal CLSW receives the signal.

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

Clutch switch assembly conditions can be checked using the Techstream.

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON.
3. Turn the Techstream on.
4. Enter the following menus: Powertrain / Engine / Data List / All Data / Clutch Switch INFO.

Engine

CLUTCH PEDAL OPERATION	CLUTCH SWITCH
Depressed	ON

PROCEDURE

1. CHECK ECM (TERMINAL VOLTAGE)

(a) Turn the ignition switch to ON.

(b) Measure the voltage according to the value(s) in the table below.

Standard voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A33-15 (CLSW) - Body ground	Clutch pedal depressed	Below 1 V
	Clutch pedal released	11 to 14 V

Text in Illustration

*a	Component with harness connected (ECM)
----	--

NG ► INSPECT CLUTCH SWITCH ASSEMBLY

OK ► PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE

2. INSPECT CLUTCH SWITCH ASSEMBLY

(a) Inspect the clutch switch assembly **INFO** .

NG ► REPLACE CLUTCH SWITCH ASSEMBLY

OK

3. CHECK HARNESS AND CONNECTOR (ECM - CLUTCH SWITCH ASSEMBLY)

- (a) Disconnect the clutch switch assembly connector.
- (b) Disconnect the ECM connector.
- (c) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A33-15 (CLSW) - A21-2	Always	Below 1 Ω

Standard resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A33-15 (CLSW) or A21-2 - Body ground	Always	10 k Ω or higher

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR (ECM - CLUTCH SWITCH ASSEMBLY)**

OK  **INSPECT ECM POWER SOURCE CIRCUIT**

Title: CRUISE CONTROL: CRUISE CONTROL SYSTEM: Cruise Control Switch Circuit (2013 FR-S)		

Cruise Control Switch Circuit

DESCRIPTION

The cruise control main switch is used to turn the cruise control system on and off, as well as operate 7 functions: SET, - (COAST), TAP-DOWN, RES (RESUME), + (ACCEL), TAP-UP and CANCEL. The SET, TAP-DOWN and - (COAST) functions, and the RES (RESUME), TAP-UP and + (ACCEL) functions are operated with the same switch. The cruise control main switch is an automatic return type switch which turns on only while operating it in the direction of each arrow and turns off after releasing it. The internal contact points of the cruise control main switch turn on with switch operation. Then the ECM reads the voltage value that has been changed by the switch operation to control SET, - (COAST), RES (RESUME), + (ACCEL), and CANCEL.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	READ VALUE ON TECHSTREAM
-----------	---------------------------------

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Select the following menu items: Powertrain / Cruise Control / Data List.
- (e) Check the Data List to confirm proper functioning of the cruise control main switch.

Title: CRUISE CONTROL: CRUISE CONTROL SYSTEM: Cruise Main Indicator Light Circuit (2013 FR-S)		

Cruise Main Indicator Light Circuit

DESCRIPTION

- The ECM turns on the cruise control indicator light by sending indicator output demand signals to the combination meter assembly using CAN communication.
- The cruise control indicator light illuminates in green when the cruise control system has been turned on using the ON-OFF switch. If a malfunction is detected, the cruise control indicator light changes to amber.
- The cruise control indicator light circuit uses CAN communication. If the cruise control indicator light is not functioning correctly, check for CAN communication DTCs before troubleshooting this circuit.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1. PERFORM ACTIVE TEST USING TECHSTREAM

- Connect the Techstream to the DLC3.
- Turn the ignition switch to ON.
- Turn the Techstream on.
- Select the following menu items: Body Electrical / Combination Meter / Active Test.
- Check the cruise control indicator light by performing the Active Test.

Combination Meter

Title: CRUISE CONTROL: CRUISE CONTROL SYSTEM: DATA LIST / ACTIVE TEST (2013 FR-S)		

[DATA LIST / ACTIVE TEST](#)

1. READ DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

- Connect the Techstream to the DLC3.
- Turn the ignition switch to ON.
- Turn the Techstream on.
- Select the following menu items: Powertrain / Cruise Control / Data List.
- Read the Data List according to the display on the Techstream.

[Powertrain / Cruise Control / Data List]

2. PERFORM ACTIVE TEST

HINT:

Using the Techstream to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Select the following menu items: Body Electrical / Combination Meter / Active Test.
- (e) Perform "Active Test" according to the display on Techstream.

HINT:

The ignition switch must be turned on to proceed with the Active Test using the Techstream.

[Body Electrical / Combination Meter / Active Test]

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Indicat. Lamp Cruise	Cruise control indicator light	Cruise control indicator light (illuminated in green) ON / OFF	-
Indicat. SET	Cruise control SET indicator light	Cruise control SET indicator light ON / OFF	-
Cruise Warning	Cruise control indicator light	Cruise control indicator light (illuminated in amber) ON / OFF	-

Title: CRUISE CONTROL: CRUISE CONTROL SYSTEM: DIAGNOSIS SYSTEM (2013 FR-S)		

DIAGNOSIS SYSTEM

1. DESCRIPTION

The ECM controls the cruise control system of the vehicle. The data and DTCs relating to the cruise control system can be read from the DLC3 of the vehicle. Use the Techstream to check and solve the problem.

HINT:

If a speed sensor, stop light switch or any other related part malfunctions, the ECM cancels cruise control operation automatically.

2. CHECK INDICATOR

(a) Turn the ignition switch to ON.

(b) Check that the cruise control indicator light illuminates in green when the cruise control system is turned on using the cruise control main switch (ON-OFF button), and that the indicator light turns off when the cruise control system is turned off using the cruise control main switch (ON-OFF button). If the results are not as specified, perform the Cruise Main Indicator Light Circuit inspection procedure [INFO](#).

Text in Illustration

*1	Cruise Control Indicator Light (Green)
----	--

HINT:

While driving with the cruise control system controlling vehicle speed, the ECM will automatically cancel cruise control system control of vehicle speed when a malfunction occurs in one of the following: speed sensors, stop light switch assembly, or other related parts. When control of vehicle speed by the cruise control system is automatically canceled, the cruise control indicator changes to amber. At the same time, a DTC is stored.

Title: CRUISE CONTROL: CRUISE CONTROL SYSTEM: HOW TO PROCEED WITH TROUBLESHOOTING (2013 FR-S)		

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedure to troubleshoot the cruise control system.
- *: Use the Techstream.

1.	VEHICLE BROUGHT TO WORKSHOP
-----------	------------------------------------

NEXT

2.	INSPECT BATTERY VOLTAGE
-----------	--------------------------------

(a) Measure the battery voltage with the ignition switch off.

Standard Voltage:

11 to 14 V

If the voltage is below 11 V, replace or recharge the battery before proceeding to the next step.

NEXT

3.	CHECK COMMUNICATION FUNCTION OF CONTROLLER AREA NETWORK (CAN)*
-----------	---

(a) Use the Techstream to check if the CAN communication system is functioning normally.

Result:

RESULT	PROCEED TO
CAN DTC is not output	A
CAN DTC is output	B

B **GO TO CAN COMMUNICATION SYSTEM**

A

4.	CHECK FOR DTC*
-----------	-----------------------

Refer to DTC Check / Clear  .

- (a) Check for DTCs and note any codes that are output.
- (b) Clear the DTCs.
- (c) Recheck for DTCs. Try to reproduce the DTCs by duplicating the conditions indicated by the DTCs.

Result:

RESULT	PROCEED TO
DTC does not reoccur	A
DTC reoccurs	B

B  **GO TO DTC CHART**

A

5.	ROAD TEST
-----------	------------------

- (a) Perform the road test  .
- (b) Check that cruise control is not canceled by other than canceling operations by the driver.

Result:

RESULT	PROCEED TO
Cruise control is cancelled	A
Cruise control is not cancelled	B

B  **GO TO STEP 8**

A

6.	CHECK "CANCEL CODE"*
-----------	-----------------------------

HINT:

The driver's history of canceling cruise control is also stored.

(a) Check "CANCEL CODE"  .

Result:

RESULT	PROCEED TO
"CANCEL CODE" is not detected	A
"CANCEL CODE" is detected	B

B  **ADJUST, REPAIR OR REPLACE ACCORDING TO "CANCEL CODE"**

A

7. PROBLEM SYMPTOMS TABLE

Refer to Problem Symptoms Table  .

Result:

RESULT	PROCEED TO
Fault is not listed in Problem Symptoms Table	A
Fault is listed in Problem Symptoms Table	B

B  **ADJUST, REPAIR OR REPLACE IN ACCORDANCE WITH PROBLEM SYMPTOMS TABLE**

Title: CRUISE CONTROL: CRUISE CONTROL SYSTEM: PRECAUTION (2013 FR-S)		

PRECAUTION

1. HANDLING PRECAUTION FOR CRUISE CONTROL SYSTEM

- (a) Turn the cruise control system off using the cruise control main switch (ON-OFF button) when not using the cruise control system.
- (b) Be careful as the vehicle speed increases when driving downhill with the cruise control system controlling vehicle speed.
- (c) The + (ACCEL)/RES (RESUME) operation changes according to the cruise control system status. When the cruise control system is controlling vehicle speed, the + (ACCEL) function operates. When the cruise control system is not controlling vehicle speed, the RES (RESUME) function operates.
- (d) While the cruise control system is controlling vehicle speed, if the cruise control indicator light changes to amber, turn the cruise control system off using the cruise control main switch (ON-OFF button) to reset the cruise control system. After the cruise control system is reset, if the cruise control system does not turn on, or if the cruise control system stops functioning immediately after being turned on, there may be a malfunction.
- (e) Do not use the cruise control system where the road conditions are as follows:
 - Heavy traffic
 - Steep downhill roads
 - Roads with sharp turns
 - Icy or snowy roads
 - Slippery roads
- (f) Do not use the cruise control system while towing.

Title: CRUISE CONTROL: CRUISE CONTROL SYSTEM: PROBLEM SYMPTOMS TABLE (2013 FR-S)		

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

Title: CRUISE CONTROL: CRUISE CONTROL SYSTEM: ROAD TEST (2013 FR-S)		

ROAD TEST

1. PROBLEM SYMPTOM CONFIRMATION

(a) Inspect the SET function.

- (1) Turn the cruise control system on using the cruise control main switch (ON-OFF button).
- (2) Check that the cruise control indicator light illuminates in green on the combination meter assembly.
- (3) Drive at a speed between 40 km/h (25 mph) and 145 km/h (90 mph).
- (4) Push the cruise control main switch to -/SET.

- (5) Check that the cruise control SET indicator light illuminates at this time.

Text in Illustration

*1	Cruise Control Indicator Light (Green)
*2	Cruise Control SET Indicator

- (6) After releasing the switch, check that the vehicle maintains the set speed.

(b) Inspect the + (ACCEL) function.

- (1) Turn the cruise control system on using the cruise control main switch (ON-OFF button).
- (2) Drive at a speed between 40 km/h (25 mph) and 145 km/h (90 mph).
- (3) Push the cruise control main switch to -/SET.
- (4) Check that vehicle speed increases while the cruise control main switch is pushed to +/RES, and that the vehicle maintains the newly set speed when the switch is released.

- (5) Push the cruise control main switch to +/RES and then release it immediately. Check that vehicle speed increases by approximately 1.6 km/h (1.0 mph) (tap-up control).

(c) Inspect the - (COAST) function.

- (1) Turn the cruise control system on using the cruise control main switch (ON-OFF button).
- (2) Drive at a speed between 40 km/h (25 mph) and 145 km/h (90 mph).
- (3) Push the cruise control main switch to -/SET.
- (4) Check that vehicle speed decreases while the cruise control main switch is pushed to -/SET, and the vehicle maintains the newly set speed when the switch is released.
- (5) Push the cruise control main switch to -/SET, and then release it immediately. Check that vehicle speed decreases by approximately 1.6 km/h (1.0 mph) (tap-down control).

(d) Inspect the CANCEL function.

- (1) Turn the cruise control system on using the cruise control main switch (ON-OFF button).
- (2) Drive at a speed between 40 km/h (25 mph) and 145 km/h (90 mph).
- (3) Push the cruise control main switch to -/SET.
- (4) When any of the following are performed, check that cruise control system control of vehicle speed is canceled and that the normal driving mode (no control of vehicle speed by the cruise control system) resumes.

- Depressing the brake pedal
- Moving the shift lever to 1st or R position (for Manual Transmission)
- Moving the shift lever from D or M to any other position (for Automatic Transmission)
- Selecting the 3rd, 2nd or 1st range with the shift lever in M (for Automatic Transmission)
- Selecting the 3rd, 2nd or 1st range using the shift paddle switch with the shift lever in M (w/ shift paddle switch) (for Automatic Transmission)
- Pulling the cruise control main switch to CANCEL
- Turning the cruise control system off using the cruise control main switch (ON-OFF button)

(e) Inspect the RES (RESUME) function.

- (1) Turn the cruise control system on using the cruise control main switch (ON-OFF button).
- (2) Drive at a speed between 40 km/h (25 mph) and 145 km/h (90 mph).
- (3) Push the cruise control main switch to -/SET.
- (4) Cancel cruise control system control of vehicle speed by performing any of the above operations (other than turning the cruise control system off using the cruise control main switch (ON-OFF button)).
- (5) After pushing the cruise control main switch to +/RES at a speed of more than 40 km/h (25 mph), check that the vehicle resumes the speed set prior to cancellation.

Title: CRUISE CONTROL: CRUISE CONTROL SYSTEM: Stop Light Switch Circuit (2013 FR-S)		

Stop Light Switch Circuit

DESCRIPTION

When the brake pedal is released, terminal STP of the ECM receives positive (+) battery voltage through the ECU IG2 fuse. While depressing the brake pedal, the stop light switch sends a signal to terminals STP and ST1- of the ECM. The ECM cancels cruise control drive when terminal STP receives the signal.

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

Stop light switch assembly conditions can be checked using the Techstream.

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON.
3. Turn the Techstream on.
4. Enter the following menus: Powertrain / Cruise Control / Data List / Stop Light Switch 1 and Stop Light Switch 2.

Cruise Control

BRAKE PEDAL OPERATION	STOP LIGHT SWITCH 1	STOP LIGHT SWITCH 2
Depressed	ON	ON
Released	OFF	OFF

PROCEDURE

1.	CHECK ECM (TERMINAL VOLTAGE)
-----------	-------------------------------------

(a) Turn the ignition switch to ON.

(b) Measure the voltage according to the value(s) in the table below.

Standard voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A33-7 (STP) - Body ground	Brake pedal released	11 to 14 V
	Brake pedal depressed	Below 1 V

Text in Illustration

*a	Component with harness connected (ECM)
----	--

NG ► **CHECK TERMINAL VOLTAGE (POWER SOURCE OF STOP LIGHT SWITCH ASSEMBLY)**

OK

2.	CHECK ECM (TERMINAL VOLTAGE)
-----------	-------------------------------------

(a) Turn the ignition switch to ON.

(b) Measure the voltage according to the value(s) in the table below.

Standard voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A33-3 (ST1-) - Body ground	Brake pedal depressed	11 to 14 V
	Brake pedal released	Below 1 V

Text in Illustration

*a	Component with harness connected (ECM)
----	--

NG ► CHECK TERMINAL VOLTAGE (POWER SOURCE OF STOP LIGHT SWITCH ASSEMBLY)

OK ► PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE

3.	CHECK TERMINAL VOLTAGE (POWER SOURCE OF STOP LIGHT SWITCH ASSEMBLY)
----	--

(a) Disconnect the stop light switch assembly connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION

A22-3 - Body ground

Ignition switch ON

11 to 14 V

Text in Illustration

*a

Front view of wire harness connector
(to Stop Light Switch Assembly)

NG  **INSPECT ECM POWER SOURCE CIRCUIT**

OK

4. CHECK HARNESS AND CONNECTOR (ECM - STOP LIGHT SWITCH ASSEMBLY)

- (a) Disconnect the ECM connector.
- (b) Disconnect the stop light switch assembly connector.
- (c) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A33-7 (STP) - A22-4	Always	Below 1 Ω

Standard resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A33-7 (STP) or A22-4 - Body ground	Always	10 k Ω or higher

NG  **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

5. INSPECT STOP LIGHT SWITCH ASSEMBLY

- (a) Inspect the stop light switch assembly  .

NG  **REPLACE STOP LIGHT SWITCH ASSEMBLY**

6. CHECK TERMINAL VOLTAGE (POWER SOURCE OF STOP LIGHT SWITCH ASSEMBLY)

(a) Disconnect the stop light switch assembly connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A22-1 - Body ground	Always	11 to 14 V

Text in Illustration

*a	Front view of wire harness connector (to Stop Light Switch Assembly)
----	---

NG ► CHECK HARNESS AND CONNECTOR (NOISE FILTER - STOP LIGHT SWITCH ASSEMBLY)

OK

7. CHECK HARNESS AND CONNECTOR (ECM - STOP LIGHT SWITCH ASSEMBLY)

(a) Disconnect the ECM connector.

(b) Disconnect the stop light switch assembly connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A33-3 (ST1-) - A22-2	Always	Below 1 Ω

Standard resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A33-3 (ST1-) or A22-2 - Body ground	Always	10 k Ω or higher

NG  **CHECK HARNESS AND CONNECTOR (STOP LIGHT SWITCH ASSEMBLY - NOISE FILTER)**

OK

8.	INSPECT STOP LIGHT SWITCH ASSEMBLY
-----------	---

(a) Inspect the stop light switch assembly  .

NG  **REPLACE STOP LIGHT SWITCH ASSEMBLY**

OK  **REPLACE ECM**

9.	CHECK HARNESS AND CONNECTOR (NOISE FILTER - STOP LIGHT SWITCH ASSEMBLY)
-----------	--

(a) Disconnect the stop light switch assembly connector.

(b) Disconnect the noise filter connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A22-1 - A13-2	Always	Below 1 Ω

Standard resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A22-1 or A13-2 - Body ground	Always	10 k Ω or higher

NG  **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

10.	INSPECT NOISE FILTER
------------	-----------------------------

(a) Inspect the noise filter  .

NG  **REPLACE NOISE FILTER**

OK  **REPAIR OR REPLACE HARNESS AND CONNECTOR (NOISE FILTER - BATTERY)**

11.	CHECK HARNESS AND CONNECTOR (STOP LIGHT SWITCH ASSEMBLY - NOISE FILTER)
------------	--

- (a) Disconnect the stop light switch assembly connector.
- (b) Disconnect the noise filter connector.
- (c) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A22-2 - A13-1	Always	Below 1 Ω

Standard resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A22-2 or A13-1 - Body ground	Always	10 k Ω or higher

NG  **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

12.	INSPECT NOISE FILTER
------------	-----------------------------

(a) Inspect the noise filter  .

OK

13.	CHECK HARNESS AND CONNECTOR (ECM - NOISE FILTER)
------------	---

- (a) Disconnect the ECM connector.
- (b) Disconnect the noise filter connector.
- (c) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A33-3 (ST1-) - A13-4	Always	Below 1 Ω

Standard resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A33-3 (ST1-) or A13-4 - Body ground	Always	10 k Ω or higher

NG  REPAIR OR REPLACE HARNESS AND CONNECTOR

OK  REPLACE ECM

Model Year: 2013	Model: FR-S	Doc ID: RM000000PLZOAFX
Title: CRUISE CONTROL: CRUISE CONTROL SYSTEM: SYSTEM DESCRIPTION (2013 FR-S)		

SYSTEM DESCRIPTION

1. CRUISE CONTROL SYSTEM

This system is controlled by the ECM, and control is performed using the throttle with motor body assembly. The ECM controls the following functions: ON-OFF, - (COAST)/SET, + (ACCEL)/RES (RESUME), CANCEL, vehicle speed operation and shift down control.

- The ECM compares the vehicle speed from the speed sensor with the stored vehicle speed set using the cruise control main switch. The ECM instructs the throttle valve motor of the throttle with motor body assembly to close the valve when the vehicle speed is greater than the stored speed, and instructs it to open the valve when the vehicle speed is less than the stored speed.
- The ECM receives signals such as ON-OFF, - (COAST)/SET, + (ACCEL)/RES (RESUME), and CANCEL from the cruise control main switch and executes the command.
- The ECM illuminates the combination meter assembly cruise control indicator light in green when the cruise control system is turned on using the cruise control main switch (ON-OFF button).
- The ECM illuminates the combination meter assembly cruise control indicator light in amber when a malfunction occurs during cruise control driving.

The ECM illuminates the combination meter assembly cruise control SET indicator light when vehicle speed control begins after the cruise control main switch is pushed to -/SET while driving.

Text in Illustration

*1	Cruise Control Indicator Light (Illuminated in Green or in Amber)
*2	Cruise Control SET Indicator

2. LIMIT CONTROL

(a) Low speed limit

The lowest possible set speed is approximately 40 km/h (25 mph). The cruise control system cannot be set when the vehicle speed is below the low speed limit. Control of vehicle speed will be automatically canceled but the stored vehicle speed will be retained when the vehicle speed drops below the low speed limit while the cruise control is controlling vehicle speed.

(b) High speed limit

The highest possible set speed is approximately 145 km/h (90 mph). The cruise control system cannot be set when the vehicle speed is over the high speed limit. Also, + (ACCEL)/RES (RESUME) cannot be used to increase the speed beyond the high speed limit.

3. OPERATION OF CRUISE CONTROL

The cruise control main switch is used to turn the cruise control system on and off, as well as operate 7 functions: SET, - (COAST), TAP-DOWN, RES (RESUME), + (ACCEL), TAP-UP, and CANCEL. The SET, TAP-DOWN, and - (COAST) functions, and the RES (RESUME), TAP-UP, and + (ACCEL) functions are operated with the same switch. The cruise control main switch is an automatic return type switch which turns on only while operating it in the direction of each arrow, and turns off after it is released.

(a) SET CONTROL

The vehicle speed is stored and speed control begins when the cruise control main switch is pushed to -/SET while driving with the cruise control system on (while the cruise control indicator light is illuminated in green), and the vehicle speed is within the set speed range (between the low and high speed limits).

(b) - (COAST) CONTROL

When the cruise control system is controlling vehicle speed and the cruise control main switch is pushed to -/SET and held in that position, the cruise control system sends a "required engine torque = 0 Nm" demand signal to the ECM. Following this, the vehicle speed is stored and maintained when the cruise control main switch is released.

(c) TAP-DOWN CONTROL

When the cruise control system is controlling vehicle speed and the cruise control main switch is tapped to the -/SET side (for approximately 0.6 seconds), the stored vehicle speed decreases by approximately 1.6 km/h (1.0 mph) for each time the switch is tapped. When the cruise control main switch is tapped to -/SET and the difference between the current and stored vehicle speed is more than 5 km/h (approximately 3 mph), the current vehicle speed is stored and speed control is performed.

(d) ACCELERATION CONTROL

When the cruise control system is controlling vehicle speed and the cruise control main switch is pushed to +/RES and held in that position, the cruise control system sends a signal to the ECM to operate the throttle valve motor of the throttle with motor body assembly to open the throttle valve. Following this, the vehicle speed is stored and maintained when the cruise control main switch is released.

(e) TAP-UP CONTROL

When the cruise control system is controlling vehicle speed and the cruise control main switch is tapped to the +/RES side (for approximately 0.6 seconds), the stored vehicle speed increases by approximately 1.6 km/h (1.0 mph) for each time the switch is tapped. When the cruise control main switch is tapped to +/RES and the difference between the current and stored vehicle speed is more than 5 km/h (approximately 3 mph), the stored vehicle speed will not be changed.

(f) RESUME CONTROL

If cruise control system control of vehicle speed was canceled due to any of the manual cancel conditions (other than turning the cruise control system off using the ON-OFF switch), and if the vehicle speed is between the low and high speed limits, the stored vehicle speed from the time of cancelation will be resumed and maintained when the cruise control main switch is pushed to +/RES.

(g) SHIFT DOWN CONTROL (for Automatic Transmission)

When the vehicle is cruising uphill, the transmission may shift down according to ECT control. After the ECM judges that uphill cruising has ended based on the throttle valve angle, the transmission will shift up. If the transmission shifts down during acceleration or resume control, it will shift up after acceleration or resume control is completed.

(h) MANUAL CANCEL CONTROL

Performing any of the following cancels the cruise control system control of vehicle speed (the stored vehicle speed in the ECM is maintained).

- Depressing the brake pedal.
- Moving the shift lever to 1st or R position. (for Manual Transmission)
- Moving the shift lever from D or M to any other position. (for Automatic Transmission)
- Selecting the 3rd, 2nd or 1st range with the shift lever in M. (for Automatic Transmission)
- Selecting the 3rd, 2nd or 1st range using the shift paddle switch with the shift lever in M (w/ shift paddle switch). (for Automatic Transmission)
- Pulling the cruise control main switch to CANCEL
- Turning the cruise control system off using the cruise control main switch (ON-OFF button) (the stored vehicle speed in the ECM is not maintained)

4. AUTO CANCEL

The ECM cancels the cruise control under the specified conditions. The cause for cancellation can be confirmed by referring to the "CANCEL CODE"  .

Title: FA20 EMISSION CONTROL: CANISTER: INSPECTION (2013 FR-S)		

INSPECTION

1. INSPECT CHARCOAL CANISTER ASSEMBLY

NOTICE:

When applying vacuum, the needle may waver but, as long as the needle returns to its initial position immediately, it is not a malfunction.

(a) Visually check the charcoal canister assembly for cracks or damage.

If cracks or damage is found, replace the charcoal canister assembly.

(b) Check the air flow.

(1) Using a vacuum pump, check the air flow according to the procedures below.

OK:

MEASUREMENT CONDITION	SPECIFIED CONDITION
Ports B and C closed, and vacuum applied to port A (2 kPa (15 mmHg, 0.590 in.Hg))	No air leaks
Port C closed, and vacuum applied to port A (2 kPa (15 mmHg, 0.590 in.Hg))	Air flows from port B
Port C closed and air blown into port A (5 kPa (0.1 kgf/cm ² , 0.725 psi))	Air flows from port B
Air blown into port A (5 kPa (0.1 kgf/cm ² , 0.725 psi))	Air flows from ports B and C

If the result is not as specified, replace the charcoal canister assembly.

2. INSPECT CANISTER PUMP MODULE

(a) Measure the resistance according to the value in the table below.

Standard Resistance:

--	--	--

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 5	20°C (68°F)	25 to 30 Ω
1 - 5	60°C (140°F)	27 to 35 Ω

Text in Illustration

*a	Component without harness connected (Canister Pump Module)
----	---

(b) Check the operation of the check valve.

(1) Install a clean hose to the purge valve.

(2) Check that air flows from port A to port B.

Text in Illustration

*1	Port A
*2	Port B

(3) Connect the positive (+) lead of the battery to terminal 1 and the negative (-) lead to terminal 5.

(4) Check that air does not flow from port A to port B.

Text in Illustration

*1	Port A
*2	Port B
*a	Component without harness connected (Canister Pump Module)

(5) Connect the positive (+) lead of the battery to terminal 3 and the negative (-) lead to terminal 4.

Text in Illustration

*a	Component without harness connected (Canister Pump Module)
----	---

(6) Check that the vacuum pump operates.

NOTICE:

Do not operate vacuum pump for 5 minutes or more.

(7) Connect the positive (+) lead of the battery to terminal 6 and the negative (-) lead to terminal 8.

Text in Illustration

*1	1.5 V
*2	4.8 to 5.2 V
*a	Component without harness connected (Canister Pump Module)

(8) Measure the voltage according to the value in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION

- (9) Connect the positive (+) lead of the battery to terminal 6 and the negative (-) lead to terminal 8.

Text in Illustration

*1	1.5 V
*2	4.8 to 5.2 V
*a	Component without harness connected (Canister Pump Module)

- (10) Connect the positive (+) lead of the battery to terminal 3 and the negative (-) lead to terminal 4. Check that the voltage drops slightly from 3.5 volts.

Model Year: 2013	Model: FR-S	Doc ID: RM000003ION00CX
Title: FA20 EMISSION CONTROL: CANISTER: INSTALLATION (2013 FR-S)		

INSTALLATION

1. INSTALL CHARCOAL CANISTER ASSEMBLY

- (a) Install the canister base bracket to the charcoal canister assembly with 2 nuts.

Torque: 18 N·m (184 kgf·cm, 13ft·lbf)

- (b) Install the charcoal canister assembly with canister base bracket with the 2 bolts and the nut.

Bolt - Torque: 7.5 N·m (77 kgf·cm, 66in·lbf)

Nut - Torque: 18 N·m (184 kgf·cm, 13ft·lbf)

- (c) Connect the drain hose D as indicated by the arrows, in the order shown in the illustration.

- (d) Connect the drain hose C as shown in the illustration.

2. INSTALL CANISTER PUMP MODULE

- (a) Install the drain hose E.
- (b) Connect the drain hose A and the drain hose B.
- (c) Engage the clamp.
- (d) Install the nuts and bracket B.
- Torque: 18 N·m (184 kgf·cm, 13ft·lbf)**
- (e) Install the 2 nuts and bracket A.
- Torque: 18 N·m (184 kgf·cm, 13ft·lbf)**
- (f) Engage the clip.
- (g) Install the check valve with 3 bolts.

Torque: 7.5 N·m (77 kgf·cm, 66in·lbf)

- (h) Connect the evaporation hose to the fuel pipe assembly.
- (i) Engage the clip.
- (j) Connect the drain hose A to the fuel filler pipe.
- (k) Connect the drain hose B to the charcoal canister assembly.

3. INSTALL REAR SUSPENSION MEMBER SUB-ASSEMBLY

INFO

4. INSTALL REAR DIFFERENTIAL CARRIER ASSEMBLY

INFO

3. REMOVE CANISTER PUMP MODULE

- (a) Disconnect the drain hose B as indicated by the arrows, in the order shown in the illustration.

- (b) Disconnect the drain hose A as indicated by the arrows, in the order shown in the illustration.

- (c) Disconnect the evaporation hose from the fuel filler pipe assembly.

(d) Disengage the clip.

(e) Remove the 3 bolts and check valve.

(f) Disengage the clip.

(g) Disengage the clamp.

(h) Remove the nut and bracket B.

(i) Remove the 2 nuts and bracket A.

(j) Disconnect the drain hose A and drain hose B as indicated by the arrows, in the order shown in the illustration.

Text in Illustration

*1	Drain hose A
*2	Drain hose B

(k) Disconnect the 2 quick connector as indicated by the arrows, in the order shown in the illustration, and remove the drain hose E.

4. REMOVE CHARCOAL CANISTER ASSEMBLY

(a) Disconnect the drain hose D as indicated by the arrows, in the order shown in the illustration.

(b) Disconnect the drain hose C as indicated by the arrows, in the order shown in the illustration.

(c) Remove the nut.

(d) Remove the 2 bolts and charcoal canister assembly along with the canister base bracket B.

(e) Remove the 2 nuts and canister base bracket.

Title: FA20 EMISSION CONTROL: EMISSION CONTROL SYSTEM: ON-VEHICLE INSPECTION (2013 FR-S)		

ON-VEHICLE INSPECTION

1. CHECK PURGE VALVE

- (a) Disconnect the No. 2 fuel vapor feed hose (on the canister side) of the fuel pipe.

Text in Illustration

*1	Fuel pipe
*2	No.2 fuel vapor feed hose

- (b) Connect the Techstream to the DLC3.
(c) Start the engine.
(d) Turn the Techstream on.
(e) Enter the following menus: Engine / Active Test / Activate the VSV for Evap Control.
(f) When the purge valve is operated using the tester, check whether the port of the purge valve applies suction to your finger.

OK:

TESTER OPERATION	SPECIFIED CONDITION
Check valve: OFF	Purge valve has no suction
Check valve: ON	Purge valve has suction

If the result is not as specified, check the valve [INFO](#), wire harness and ECM.

- (g) Connect the No. 2 fuel vapor feed hose (on the canister side) of the purge valve.

2. INSPECT FUEL CUT-OFF RPM

- (a) Start and warm up the engine.
(b) Use a sound scope to check for injector operation noise.
(c) Increase the engine speed to at least 3000 rpm.
(d) Check that when the accelerator pedal is released, the injector operation noise stops momentarily and then resumes.

Standard:

ITEM	SPECIFIED CONDITION
Fuel cut off rpm	2500 rpm or more

If the result is not as specified, check the injector **INFO** , wire harness and ECM.

3. VISUALLY INSPECT HOSES, CONNECTIONS AND GASKETS EMISSION HOSE

(a) Check that there are no cracks, leaks or damage.

NOTICE:

- Detachment or other problems with the engine oil dipstick, filler cap, ventilation hose and other components may cause the engine to run improperly.
- Air suction caused by disconnections, looseness or cracks in the parts of the air induction system between the throttle with motor body assembly and cylinder head will cause engine failure or engine malfunctions.

If the result is not as specified, replace parts as necessary.

4. CHECK HOSES AND CONNECTORS

(a) Visually check for loose connections, sharp bends or damage.

Title: FA20 ENGINE CONTROL: CAMSHAFT OIL CONTROL VALVE: INSTALLATION (2013 FR-S)		

INSTALLATION

1. INSTALL CAMSHAFT TIMING OIL CONTROL VALVE (for Exhaust Side of Bank 2)

- (a) Install the back-up ring to the camshaft timing oil control valve.
- (b) Apply a light coat of engine oil to a new O-ring and install it to the camshaft timing oil control valve.
- (c) Install the camshaft timing oil control valve with the 2 bolts.

Torque: 6.4 N·m (65 kgf·cm, 57in·lbf)

NOTICE:

- If a component has been dropped or subjected to a strong impact, replace it.
- Make sure that the O-ring is not damaged or does not jump out of position during installation.

- (d) Connect the camshaft timing oil control valve connector.

2. INSTALL CAMSHAFT TIMING OIL CONTROL VALVE (for Intake Side of Bank 2)

- (a) Install the back-up ring to the camshaft timing oil control valve.
- (b) Apply a light coat of engine oil to a new O-ring and install it to the camshaft timing oil control valve.
- (c) Install the camshaft timing oil control valve with the 2 bolts.

Torque: 6.4 N·m (65 kgf·cm, 57in·lbf)

NOTICE:

- If a component has been dropped or subjected to a strong impact, replace it.
- Make sure that the O-ring is not damaged or does not jump out of position during installation.

- (d) Connect the camshaft timing oil control valve connector.

3. INSTALL AIR CLEANER CAP WITH AIR CLEANER HOSE

4. INSTALL CAMSHAFT TIMING OIL CONTROL VALVE (for Exhaust Side of Bank 1)

- (a) Install the back-up ring to the camshaft timing oil control valve.
- (b) Apply a light coat of engine oil to a new O-ring and install it to the camshaft timing oil control valve.
- (c) Install the camshaft timing oil control valve with the 2 bolts.

Torque: 6.4 N·m (65 kgf·cm, 57in·lbf)

NOTICE:

- If a component has been dropped or subjected to a strong impact, replace it.
- Make sure that the O-ring is not damaged or does not jump out of position during installation.

- (d) Connect the camshaft timing oil control valve connector.

5. INSTALL CAMSHAFT TIMING OIL CONTROL VALVE (for Intake Side of Bank 1)

- (a) Install the back-up ring to the camshaft timing oil control valve.

(b) Apply a light coat of engine oil to a new O-ring and install it to the camshaft timing oil control valve.

(c) Install the camshaft timing oil control valve with the 2 bolts.

Torque: 6.4 N·m (65 kgf·cm, 57in·lbf)

NOTICE:

- If a component has been dropped or subjected to a strong impact, replace it.
- Make sure that the O-ring is not damaged or does not jump out of position during installation.

(d) Connect the camshaft timing oil control valve connector.

6. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL INFO

ON-VEHICLE INSPECTION

1. INSPECT CAMSHAFT TIMING OIL CONTROL VALVE

- (a) Connect the Techstream to the DLC3.
- (b) Start the engine.
- (c) Turn the Techstream on.
- (d) Turn the A/C switch on.
- (e) Inspect the camshaft timing oil control valve (for intake side).
 - (1) Enter the following menus: Powertrain / Engine / Active Test / Control the VVT Linear (Bank 1).
 - (2) Check the engine speed while operating the camshaft timing oil control valve assembly (for intake side) using the Techstream.

OK:

TESTER OPERATION	SPECIFIED CONDITION
0 deg (CA)	Normal engine speed
36 deg (CA)	Engine idles roughly or stalls

If the operation is not as specified, check the camshaft timing oil control valve, wire harness and ECM.

- (3) Enter the following menus: Powertrain / Engine / Active Test / Control the VVT Linear (Bank 2).
- (4) Check the engine speed while operating the camshaft timing oil control valve assembly (for intake side) using the Techstream.

OK:

TESTER OPERATION	SPECIFIED CONDITION
0 deg (CA)	Normal engine speed
36 deg (CA)	Engine idles roughly or stalls

If the operation is not as specified, check the camshaft timing oil control valve, wire harness and ECM.

- (f) Inspect the camshaft timing oil control valve (for exhaust side).
 - (1) Enter the following menus: Powertrain / Engine / Active Test / Control the VVT Exhaust Linear (Bank 1).
 - (2) Check the engine speed while operating the camshaft timing oil control valve assembly (for exhaust side) using the Techstream.

OK:

TESTER OPERATION	SPECIFIED CONDITION
0 deg (CA)	Normal engine speed

51 deg (CA)	Engine idles roughly or stalls
-------------	--------------------------------

If the operation is not as specified, check the camshaft timing oil control valve, wire harness and ECM.

- (3) Enter the following menus: Powertrain / Engine / Active Test / Control the VVT Exhaust Linear (Bank 2).
- (4) Check the engine speed while operating the camshaft timing oil control valve assembly (for exhaust side) using the Techstream.

OK:

TESTER OPERATION	SPECIFIED CONDITION
0 deg (CA)	Normal engine speed
51 deg (CA)	Engine idles roughly or stalls

If the operation is not as specified, check the camshaft timing oil control valve, wire harness and ECM.

Last Modified: 3-27-2012	6.4 A	From: 201203

Title: FA20 ENGINE CONTROL: CAMSHAFT OIL CONTROL VALVE: REMOVAL (2013 FR-S)		

REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL INFO

2. REMOVE CAMSHAFT TIMING OIL CONTROL VALVE (for Intake Side of Bank 1)

(a) Disconnect the camshaft timing oil control valve connector.

(b) Remove the 2 bolts and the camshaft timing oil control valve.

(c) Remove the O-ring from the camshaft timing oil control valve.

Text in Illustration

*1	O-ring
*2	Back-up Ring

(d) Remove the back-up ring from the camshaft timing oil control valve.

3. REMOVE CAMSHAFT TIMING OIL CONTROL VALVE (for Exhaust Side of Bank 1)

(a) Disconnect the camshaft timing oil control valve connector.

(b) Remove the 2 bolts and the camshaft timing oil control valve.

(c) Remove the O-ring from the camshaft timing oil control valve.

Text in Illustration

*1	O-ring
*2	Back-up Ring

(d) Remove the back-up ring from the camshaft timing oil control valve.

4. REMOVE AIR CLEANER CAP WITH AIR CLEANER HOSE INFO

5. REMOVE CAMSHAFT TIMING OIL CONTROL VALVE (for Intake Side of Bank 2)

(a) Disconnect the camshaft timing oil control valve connector.

(b) Remove the 2 bolts and the camshaft timing oil control valve.

(c) Remove the O-ring from the camshaft timing oil control valve.

Text in Illustration

*1	O-ring
*2	Back-up Ring

(d) Remove the back-up ring from the camshaft timing oil control valve.

6. REMOVE CAMSHAFT TIMING OIL CONTROL VALVE (for Exhaust Side of Bank 2)

(a) Disconnect the camshaft timing oil control valve connector.

(b) Remove the 2 bolts and the camshaft timing oil control valve.

(c) Remove the O-ring from the camshaft timing oil control valve.

Text in Illustration

*1	O-ring
*2	Back-up Ring

(d) Remove the back-up ring from the camshaft timing oil control valve.

Title: FA20 ENGINE CONTROL: CAMSHAFT POSITION SENSOR: INSTALLATION (2013 FR-S)		

INSTALLATION

1. INSTALL VVT SENSOR (for Exhaust Side of Bank 2)

- (a) Apply a light coat of engine oil to the new O-ring of the VVT sensor.
- (b) Install the VVT sensor with the bolt.
Torque: 6.4 N·m (65 kgf·cm, 57in·lbf)
- (c) Connect the VVT sensor connector.

2. INSTALL NO. 1 ENGINE UNDER COVER INFO

3. INSTALL VVT SENSOR (for Intake Side of Bank 2)

- (a) Apply a light coat of engine oil to the new O-ring of the VVT sensor.
- (b) Install the VVT sensor with the bolt.
Torque: 6.4 N·m (65 kgf·cm, 57in·lbf)
- (c) Connect the VVT sensor connector

4. INSTALL VVT SENSOR (for Exhaust Side of Bank 1)

- (a) Apply a light coat of engine oil to the new O-ring of the VVT sensor.
- (b) Install the VVT sensor with the bolt.
Torque: 6.4 N·m (65 kgf·cm, 57in·lbf)
- (c) Connect the VVT sensor connector.

5. INSTALL VVT SENSOR (for Intake Side of Bank 1)

- (a) Apply a light coat of engine oil to the new O-ring of the VVT sensor.
- (b) Install the VVT sensor with the bolt.
Torque: 6.4 N·m (65 kgf·cm, 57in·lbf)
- (c) Connect the VVT sensor connector.

6. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL INFO

Title: FA20 ENGINE CONTROL: ECM: INSTALLATION (2013 FR-S)		

INSTALLATION

1. INSTALL ECM BRACKET

(a) Engage the 2 claws, and install the new ECM bracket to the ECM.

NOTICE:

- After attaching the ECM bracket to the ECM, do not remove the ECM bracket.
- If the ECM bracket is attached to the ECM the wrong way around, replace ECM bracket with new items.

2. INSTALL ECM

NOTICE:

When replacing the ECM, do not use ECM with different specifications.

(a) Install the ECM with the 2 nuts.

Torque: 7.5 N·m (77 kgf·cm, 66in·lbf)

(b) Connect the 4 connectors to the ECM.

NOTICE:

Be sure to securely connect the connectors.

3. INSTALL CONTROL UNIT RELAY ASSEMBLY INFO

4. INSTALL GLOVE COMPARTMENT DOOR ASSEMBLY INFO

5. INSTALL INSTRUMENT SIDE PANEL RH INFO

6. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL INFO

Title: FA20 ENGINE CONTROL: IGNITION COIL AND SPARK PLUG: INSTALLATION (2013 FR-S)		

INSTALLATION

1. INSTALL SPARK PLUG (for Bank 1)

- (a) Using the spark plug wrench 14 mm, tilt extension bar 35 mm and universal joint 54 mm, and install the 2 spark plugs onto the cylinder head sub-assembly.

Torque: 17 N·m (173 kgf·cm, 13ft·lbf)

NOTICE:

If a component has been dropped or subjected a strong impact, replace it.

2. INSTALL IGNITION COIL ASSEMBLY (for Bank 1)

- (a) Install the 2 ignition coils onto the cylinder head cover sub-assembly with the 2 bolts.

Torque: 8.5 N·m (87 kgf·cm, 75in·lbf)

NOTICE:

If a component has been dropped or subjected a strong impact, replace it.

- (b) Connect the 2 ignition coil connectors to the ignition coil.

3. INSTALL INJECTOR DRIVER INFO

4. INSTALL SPARK PLUG (for Bank 2)

- (a) Using the spark plug wrench 14 mm, tilt extension bar 35 mm and universal joint 54 mm, and install the 2 spark plugs onto the cylinder head sub-assembly.

Torque: 17 N·m (173 kgf·cm, 13ft·lbf)

NOTICE:

If a component has been dropped or subjected a strong impact, replace it.

5. INSTALL IGNITION COIL ASSEMBLY (for Bank 2)

- (a) Install the 2 ignition coils onto the cylinder head cover sub-assembly with the 2 bolts.

Torque: 8.5 N·m (87 kgf·cm, 75in·lbf)

NOTICE:

If a component has been dropped or subjected a strong impact, replace it.

(b) Connect the 2 ignition coil connectors to the ignition coil.

6. INSTALL INJECTOR COVER (for Bank 2)

(a) Install the injector cover with the 2 bolts.

Torque: 19 N·m (194 kgf·cm, 14ft·lbf)

(b) Engage the clamp, and install the fuel hoses.

7. REMOVE SST

(a) Hoist the engine assembly up with an engine sling device and a mini crane.

(b) Remove the SST.

SST: 09250-53010

(c) Install the 2 nuts.

(d) Remove the rope that is tying the front exhaust pipe sub-assembly to the front suspension cross member sub-assembly.

8. REMOVE ENGINE HANGER INFO

9. INSTALL EXHAUST MANIFOLD

INFO

10. CONNECT ENGINE WIRE

(a) Connect the engine wire with the wire harness clamp bracket mount bolt and 3 clamps.

Torque: 11 N·m (112 kgf·cm, 8ft·lbf)

(b) Connect the engine wire with the 4 clamps.

11. INSTALL AIR CLEANER CAP WITH AIR CLEANER HOSE INFO

12. INSTALL FRONT SUSPENSION UPPER TO COWL BRACE SUB-ASSEMBLY LH INFO

13. INSTALL FRONT SUSPENSION UPPER TO COWL BRACE SUB-ASSEMBLY RH INFO

14. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL INFO

Last Modified: 3-27-2012	6.4 A	From: 201203

Title: FA20 ENGINE CONTROL: IGNITION COIL AND SPARK PLUG: REMOVAL (2013 FR-S)		

REMOVAL

1. SET HOOD SUB-ASSEMBLY INFO
2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL INFO
3. REMOVE FRONT SUSPENSION UPPER TO COWL BRACE SUB-ASSEMBLY LH INFO
4. REMOVE FRONT SUSPENSION UPPER TO COWL BRACE SUB-ASSEMBLY RH INFO
5. REMOVE AIR CLEANER CAP WITH AIR CLEANER HOSE INFO
6. DISCONNECT ENGINE WIRE

(a) Disengage the 4 clamps, and disconnect the engine wire.

(b) Disengage the 3 clamps and wire harness clamp bracket mount bolt, and disconnect the engine wire.

7. REMOVE EXHAUST MANIFOLD

INFO

8. INSTALL ENGINE HANGER INFO

9. SET SST

(a) Tie the front exhaust pipe sub-assembly onto the front

suspension cross member sub-assembly using rope.

HINT:

This operation is necessary in order to prevent the front exhaust pipe sub-assembly from falling off.

(b) Remove the 2 nuts.

(c) Install the engine hanger with the bolt.

INFO

Torque: 33 N·m (337 kgf·cm, 24ft·lbf)

(d) Hoist the engine assembly up with an engine sling device and a mini crane.

(e) Install the SST to between the engine mount and front.

SST: 09250-53010

10. REMOVE INJECTOR COVER (for Bank 2)

(a) Disengage the clamp, and disconnect the fuel hoses.

(b) Remove the 2 bolts and injector cover.

11. REMOVE IGNITION COIL ASSEMBLY (for Bank 2)

(a) Disconnect the 2 ignition coil connectors from the ignition coil assembly.

(b) Remove the 2 bolts and remove the 2 ignition coils.

12. REMOVE SPARK PLUG (for Bank 2)

(a) Using the spark plug wrench 14 mm, tilt extension bar 35 mm and universal joint 54 mm, and remove the 2 spark plugs.

13. REMOVE INJECTOR DRIVER INFO

14. REMOVE IGNITION COIL ASSEMBLY (for Bank 1)

(a) Disconnect the 2 ignition coil connectors from the ignition coil assembly.

(b) Remove the 2 bolts and remove the 2 ignition coils.

15. REMOVE SPARK PLUG (for Bank 1)

(a) Using the spark plug wrench 14 mm, tilt extension bar 35 mm and universal joint 54 mm, and remove the 2 spark plugs.

Model Year: 2013	Model: FR-S	Doc ID: RM000003IGF006X
Title: FA20 ENGINE CONTROL: IGNITION SYSTEM: ON-VEHICLE INSPECTION (2013 FR-S)		

ON-VEHICLE INSPECTION

1. PERFORM SPARK TEST

- (a) Check for DTCs [INFO](#) .

NOTICE:

If any DTC is present, perform troubleshooting in accordance with the procedure for that DTC.

- (b) Remove the 4 ignition coils and 4 spark plugs [INFO](#) .
(c) Hoist the engine assembly up with an engine sling device and a mini crane.

- (d) Remove the SST.

SST: 09250-53010

- (e) Install the 2 nuts.

Torque: 45 N·m (459 kgf·cm, 33ft·lbf)

- (f) Remove the 2 bolts and injector cover (bank 1).

(g) Disconnect the 2 fuel injector connectors.

(h) Install the injector cover (bank 1).

(i) Install the injector driver with the 3 bolts.

Torque: 6.4 N·m (65 kgf·cm, 57in·lbf)

HINT:

Do not connect the upper side 2 connectors.

(j) Disconnect the 2 fuel injector connectors.

(k) Connect the cable to the negative battery terminal.

(l) Install the air cleaner case sub-assembly with the hose.

(m) Install a spark plug to each ignition coil and connect the ignition coil connector.

(n) Ground the spark plug.

(o) Check that spark occurs while the engine is being cranked.

(p) Check whether sparks occur.

NOTICE:

- Ground the spark plugs when checking them.
- Do not crank the engine for more than 2 seconds.
- Do not use an ignition coil and spark plug that has been dropped or subjected to a strong impact.

(q) If spark does not occur, perform the following procedure.

2. INSPECT IGNITION COIL AND SPARK PLUG

(a) Perform the spark test in accordance with the following procedure.

(1) Check that the wire harness side connector of the ignition coil assembly is securely connected.

Result:

RESULT	PROCEED TO
NG	Connect securely
OK	Go to next step

(2) Perform a spark test on each ignition coil assembly.

1. If there is a cylinder where sparks do not occur, replace its ignition coil with the ignition coil of a cylinder where sparks occur normally.
2. Crank the engine and visually check that sparks occur at the cylinder with the normally operating ignition coil.

Result:

RESULT	PROCEED TO
OK	Replace ignition coil assembly
NG	Go to next step

(3) Perform a spark test on each spark plug.

1. If there is a cylinder where sparks do not occur, replace its spark plug with the spark plug of a cylinder where sparks occur normally.
2. Crank the engine and visually check that sparks occur at the cylinder with the normally operating spark plug.

Result:

RESULT	PROCEED TO
OK	Replace spark plug
NG	Inspect the ignition system INFO

(b) Disconnect the cable from the negative battery terminal.

(c) Remove the air cleaner case sub-assembly with hose.

(d) Remove the 3 bolts and the injector driver.

(e) Remove the 2 bolts and the injector cover (bank 1).

(f) Connect the 2 fuel injector connectors.

(g) Install the 2 bolts and the injector cover.

(h) Install the 3 bolts and the injector driver.

(i) Connect the 4 connectors to the injector driver. Move the lock levers in the direction indicated by the arrow to lock the 3 connectors.

Text in Illustration

*1	Lock Lever
	Connector with Lock Lever

(j) Connect the 2 fuel injector connectors.

(k) Install the injector cover (bank 1) with the 2 bolts.

Torque: 19 N·m (194 kgf·cm, 14ft·lbf)

(l) Remove the 2 nuts.

(m) Hoist the engine assembly up with an engine sling device and a mini crane.

(n) Install the SST.

SST: 09250-53010

(o) Install the ignition coil assembly and spark plug [INFO](#) .

(p) Clear the DTCs [INFO](#) .

(q) Check for DTCs **INFO** .

HINT:

Reinstall the sensors, connectors, etc. and restore the previous vehicle conditions before rechecking for DTCs.

3. INSPECT SPARK PLUG

NOTICE:

- When replacing a spark plug, make sure to use the designated spark plug because an ion current type misfire detection system is used for the spark plug.
- Do not damage the platinum tip. If the spark plug has been dropped, make sure to replace it with a designated new spark plug.
- Do not use a wire brush for cleaning.
- Do not attempt to adjust the electrode gap of a used spark plug.
- Make sure to use SST to check gaps, preventing the platinum tip from being damaged.
- If damaged, replace it with a designated new spark plug.

(a) Check the electrode using a megohmmeter:

Text in Illustration

*a	Ground
----	--------

(1) Measure the resistance according to the value(s) in the table below.

Standard Insulation Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Spark plug (terminal part) - Body ground	Always	10 MΩ or higher

HINT:

- If the result is not as specified, clean the spark plug with a spark plug cleaner and measure the resistance again.
- If a megohmmeter is not available, perform the following simple inspection instead.

(b) Alternative inspection method:

(1) Quickly accelerate the engine to 4000 rpm 5 times.

(2) Remove the spark plug **INFO** .

(3) Visually check the spark plug.

If the electrode is dry, the spark plug is functioning

properly. If the electrode is damp, proceed to the next step.

HINT:

If a megohmmeter is not available, perform the following simple inspection instead.

- (4) Install the spark plug INFO.
- (c) Check the spark plug for any damage to its threads and insulator.

HINT:

If there is any damage, replace the spark plug.

Recommended Spark Plug:

MANUFACTURER	PRODUCT
DENSO made	ZXE27HBR8

- (d) Reference:

- (1) Using SST, check the spark plug electrode gap.

Text in Illustration

*a	Spark Plug Electrode Gap
----	--------------------------

SST: 09240-00020

Maximum electrode gap for a used spark plug:

1.0 mm (0.0394 in.)

If the gap exceeds the maximum, replace the spark plug.

NOTICE:

Never attempt to adjust the gap of a used plug.

Electrode gap for a new spark plug:

0.7 to 0.8 mm (0.0276 to 0.0315 in.)

- (e) Clean the spark plugs.

If the electrode has traces of wet carbon, clean the electrode with a spark plug cleaner and then dry it.

Standard air pressure:

588 kPa (6.0 kgf/cm² , 85 psi)

Standard duration:

20 seconds or less

HINT:

Only use a spark plug cleaner when the electrode is free of oil. If the electrode has traces of oil, use gasoline to clean off the oil before using the spark plug cleaner.

Title: FA20 ENGINE CONTROL: MASS AIR FLOW METER: ON-VEHICLE INSPECTION (2013 FR-S)		

ON-VEHICLE INSPECTION

NOTICE:

- Perform the mass air flow meter inspection according to the procedures below.
- Only replace the mass air flow meter when the mass air flow value in the Data List is not within the normal operating range (with the engine stopped) or there is foreign matter on the mass air flow meter platinum hot wire (heater).

1. INSPECT MASS AIR FLOW METER

(a) Read the value using the Techstream.

NOTICE:

- Perform the inspection with the vehicle indoors and on a level surface.
- Perform the inspection of the mass air flow meter while it is installed to the air cleaner case (installed to the vehicle).
- During the test, do not use the exhaust air duct to perform suction on the exhaust pipe.

(1) Connect the Techstream to the DLC3.

(2) Turn the ignition switch to ON.

(3) Turn the Techstream on.

(4) Enter the following menus: Data List / MAF.

(5) Wait for 30 seconds, and read the values on the Techstream.

Standard:

TESTER DISPLAY	CONDITION	STANDARD CONDITION
MAF	<ul style="list-style-type: none"> • Engine not running • 30 seconds after turning ignition switch to ON 	0.47 gm/sec or less

- If the result is not as specified, replace the mass air flow meter.
- If the result is within the specified range, inspect the mass air flow meter INFO.

Title: FA20 ENGINE CONTROL: RELAY: ON-VEHICLE INSPECTION (2013 FR-S)		

ON-VEHICLE INSPECTION

1. INSPECT EFI MAIN 1 RELAY

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3 - 5	Battery voltage not applied to 1 and 2 terminals	10 k Ω or higher
	Battery voltage applied to 1 and 2 terminals	Below 1 Ω

If the result is not as specified, replace the EFI main 1 relay.

2. INSPECT EFI MAIN 2 RELAY

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3 - 5	Battery voltage not applied to 1 and 2 terminals	10 k Ω or higher
	Battery voltage applied to 1 and 2 terminals	Below 1 Ω

If the result is not as specified, replace the EFI main 2 relay.

3. INSPECT EFI MAIN 3 RELAY

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
-------------------	-----------	---------------------

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3 - 5	Battery voltage not applied to 1 and 2 terminals	10 kΩ or higher
	Battery voltage applied to 1 and 2 terminals	Below 1 Ω

If the result is not as specified, replace the EFI main 3 relay.

4. INSPECT IG2 RELAY

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3 - 5	Battery voltage not applied to 1 and 2 terminals	10 kΩ or higher
	Battery voltage applied to 1 and 2 terminals	Below 1 Ω

If the result is not as specified, replace the IG2 relay.

5. INSPECT INJ RELAY

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3 - 5	Battery voltage not applied to 1 and 2 terminals	10 kΩ or higher
	Battery voltage applied to 1 and 2 terminals	Below 1 Ω

If the result is not as specified, replace the INJ relay.

6. INSPECT ETCS RELAY

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3 - 5	Battery voltage not applied to 1 and 2 terminals	10 kΩ or higher
3 - 5	Battery voltage applied to 1 and 2 terminals	Below 1 Ω

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3 - 5	Battery voltage not applied to 1 and 2 terminals	10 k Ω or higher
	Battery voltage applied to 1 and 2 terminals	Below 1 Ω

If the result is not as specified, replace the ETCS relay.

7. INSPECT C/OPEN RELAY

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3 - 5	Battery voltage not applied to 1 and 2 terminals	10 k Ω or higher
	Battery voltage applied to 1 and 2 terminals	Below 1 Ω

If the result is not as specified, replace the C/OPEN relay.

Title: FA20 ENGINE CONTROL: SFI SYSTEM: BASIC INSPECTION (2013 FR-S)		

BASIC INSPECTION

When a malfunction is not confirmed by the DTC check, troubleshooting should be carried out for all circuits considered to be possible causes of the problem. In many cases, by carrying out the basic engine check shown in the following procedure, the location of the problem can be found quickly and efficiently. Therefore, using this check is essential when engine troubleshooting.

1.	CHECK BATTERY VOLTAGE
-----------	------------------------------

NOTICE:

Carry out this check with the engine stopped and the ignition switch off.

Result

RESULT	PROCEED TO
11 V or higher	OK
Below 11 V	NG

NG ► CHARGE OR REPLACE BATTERY

OK

2.	CHECK WHETHER ENGINE CRANKS
-----------	------------------------------------

NG ► PROCEED TO PROBLEM SYMPTOMS TABLE

OK

3.	CHECK WHETHER ENGINE STARTS
-----------	------------------------------------

NG ► GO TO STEP 6

OK

4.	CHECK AIR CLEANER FILTER ELEMENT SUB-ASSEMBLY
-----------	--

(a) Visually check that the air cleaner filter element sub-assembly is not excessively contaminated with dirt or oil.

NG ▶ **REPLACE AIR CLEANER FILTER ELEMENT SUB-ASSEMBLY**

OK

5.	CHECK IDLING SPEED
-----------	---------------------------

(a) Check the engine idling speed  .

NG ▶ **TROUBLESHOOT IDLING SPEED AND PROCEED TO NEXT STEP**

OK

6.	CHECK FUEL PRESSURE
-----------	----------------------------

(a) Check the fuel pressure  .

NG ▶ **TROUBLESHOOT FUEL PRESSURE AND PROCEED TO NEXT STEP**

OK

7.	CHECK FOR SPARK
-----------	------------------------

(a) Perform a spark test  .

NG ▶ TROUBLESHOOT SPARK AND PROCEED TO NEXT STEP

OK ▶ PROCEED TO PROBLEM SYMPTOMS TABLE

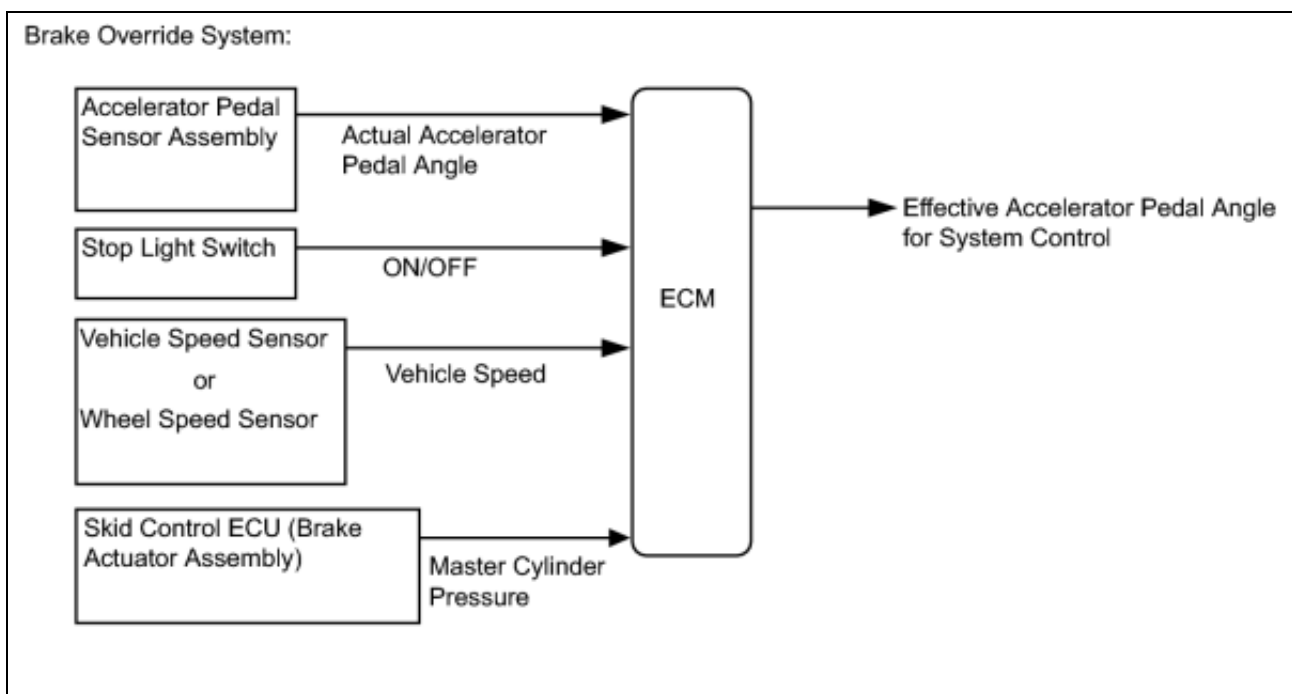

Last Modified: 4-14-2014	6.6 J	Doc ID: RM000004G8F0CEX
Model Year: 2013	Model: FR-S	Prod Date Range: [03/2012 -]
Title: FA20 ENGINE CONTROL: SFI SYSTEM: Brake Override System; 2013 MY FR-S [03/2012 -]		

Brake Override System

DESCRIPTION

When the vehicle is being driven with the accelerator pedal depressed, depressing the brake pedal without releasing the accelerator pedal will activate the brake override system to restrict driving torque. The conditions for activating the brake override system as well as the items that are controlled are explained below.

Activation Conditions:

- Vehicle is running at or above the specified speed.
- The accelerator pedal is depressed, and then the brake pedal is depressed.

NOTICE:

The vehicle may not enter the brake override system control due to the relation of the accelerator pedal angle and the vehicle's speed.

Items Controlled:

- Driving torque is restricted.

HINT:

During brake override system control, the value for the accelerator pedal angle (which is used for engine control) is forcibly reduced to a specified value. For this reason, the Data List value for Accelerator Position will be replaced with a specified value regardless of the actual accelerator

pedal angle (Accel Sens. No. 1 Volt %, Accel Sens. No. 2 Volt %)

Deactivation Conditions:

- When the Stop Light Switch turns OFF or the actual accelerator pedal angle increases or decreases beyond the specified range.

INSPECTION PROCEDURE

Inspection Method

Drive at 10 km/h (6.25 mph), depress the accelerator pedal by 1/2 to 3/4 and keep it in that position. Under these conditions, if the brake pedal is depressed, then the brake override system has been activated.

CAUTION:

When carrying out the inspection, use a place where you are able to carry it out safely and also pay close attention to your surroundings.

Also, when driving make absolutely sure that all road traffic laws, such as speed limits, are observed.

HINT:

- Under normal conditions, the Accelerator Position value changes in response to the Accel Sens. No. 1 Volt % value. For more information on the numerical values, refer to the Data List INFO.
- If the Data List values of Accelerator Position and Accel Sens. No. 1 Volt % do not match, and the value of Accelerator Position changes but the value of Accel Sens. No. 1 Volt % is constant, this confirms that brake override system has activated. (Data can be captured relatively easily by using the snapshot function in the Data List. Confirm the data after performing the drive test.)

NOTICE:

The brake override system restricts driving torque if the brake pedal is depressed when driving with the accelerator pedal depressed. If a customer reports experiencing loss of torque after the accelerator and brake pedals have both been intentionally depressed, explain to the customer that this is not a malfunction, and that the customer should avoid depressing both the accelerator and brake pedals at the same time.

Example: While operating the accelerator pedal, the customer uses their left foot to operate the brake pedal.

PROCEDURE

1.	CHECK DTC OUTPUT
-----------	-------------------------

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON and turn the Techstream on.
- (c) Enter the following menus: System Select / Health Check.
- (d) Check DTCs.

Result

RESULT	PROCEED TO
--------	------------

DTC is not output	A
DTCs are output	B

B  **GO TO DTC CHART**

A

2. READ VALUE USING TECHSTREAM (STOP LIGHT SWITCH AND ST1)

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON and turn the Techstream on.
- (c) Enter the following menus: Powertrain / Engine / Data List / Stop Light Switch and ST1.
- (d) Check the Data List indication when the brake pedal is depressed and released.

OK:

TECHSTREAM DISPLAY	CONDITION	SPECIFIED CONDITION
Stop Light Switch	Brake pedal released	OFF
	Brake pedal depressed	ON
ST1	Brake pedal released	OFF
	Brake pedal depressed	ON

NG  **INSPECT STOP LIGHT SWITCH ASSEMBLY**

OK

3. INSPECT BRAKE PEDAL

- (a) Inspect and adjust the brake pedal (for Manual Transmission)  .
- (b) Inspect and adjust the brake pedal (for Automatic Transmission)  .

HINT:

If the stop light switch turns ON too late, the start of brake override system control may be delayed; if it turns ON too soon, brake override system control may begin too early, so conduct

inspection of the brake pedal and stop light switch assembly.

RESULT	PROCEED TO
OK	A
NG (for Manual Transmission)	B
NG (for Automatic Transmission)	C

B ▶ REPAIR OR REPLACE BRAKE PEDAL

C ▶ REPAIR OR REPLACE BRAKE PEDAL

A

4. READ VALUE USING TECHSTREAM (ACCELERATOR PEDAL SENSOR)

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON and turn the Techstream on.
- (c) Enter the following menus: Powertrain / Engine / Data List / Accel Sens. No. 1 Volt % and Accel Sens. No. 2 Volt %.
- (d) Read the value displayed on the Techstream.

OK:

TECHSTREAM DISPLAY	CONDITION	SPECIFIED CONDITION
Accel Sens. No. 1 Volt %	Accelerator Pedal Released → Depressed → Released	Values smoothly change following accelerator pedal operation
Accel Sens. No. 2 Volt %		

HINT:

For numerical values of Accel Sens. No. 1 Volt % and Accel Sens. No. 2 Volt %, refer to the Data List

INFO

NG ▶ REPLACE ACCELERATOR PEDAL SENSOR ASSEMBLY

OK

**5. READ VALUE USING TECHSTREAM (VEHICLE SPEED)**

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON and turn the Techstream on.
- (c) Start the engine.
- (d) Enter the following menus: Powertrain / Engine / Data List / Vehicle Speed.
- (e) Read the value displayed on the Techstream.

Standard:

TECHSTREAM DISPLAY	CONDITION	SPECIFIED CONDITION
Vehicle Speed	Vehicle stopped, engine running	0 km/h (0 mph)
	Vehicle running at constant speed between 16.1 to 64.4 km/h (10 to 40 mph)	No large fluctuations when driving at a constant speed

CAUTION:

When performing the confirmation driving pattern, obey all speed limits and traffic laws.

HINT:

Data can be captured relatively easily by using the snapshot function in the Data List. Confirm the data after performing the drive test.

NG  **GO TO METER / GAUGE SYSTEM**

OK**6. READ VALUE USING TECHSTREAM (FR, FL, RR, RL WHEEL SPEED)**

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON and turn the Techstream on.
- (c) Start the engine.
- (d) Enter the following menus: Chassis / ABS/VSC/TRAC / Data List / FR Wheel Speed, FL Wheel Speed, RR Wheel Speed and RL Wheel Speed.

(e) Read the value displayed on the Techstream.

Standard:

TECHSTREAM DISPLAY	CONDITION	SPECIFIED CONDITION
FR Wheel Speed	Vehicle stopped, engine running	0 km/h (0 mph)
FL Wheel Speed		
RR Wheel Speed	Vehicle running at constant speed between 16.1 to 64.4 km/h (10 to 40 mph)	No large fluctuations when driving at a constant speed
RL Wheel Speed		
Speed		

CAUTION:

When performing the confirmation driving pattern, obey all speed limits and traffic laws.

HINT:

Data can be captured relatively easily by using the snapshot function in the Data List. Confirm the data after performing the drive test.

NG  **INSPECT FRONT OR REAR SPEED SENSOR**

OK  **END**

Model Year: 2013	Model: FR-S	Doc ID: RM000000PDQ0U4X
Title: FA20 ENGINE CONTROL: SFI SYSTEM: CHECK FOR INTERMITTENT PROBLEMS (2013 FR-S)		

CHECK FOR INTERMITTENT PROBLEMS

HINT:

Inspect the vehicle ECM using check mode. Intermittent problems are easier to detect with the Techstream when the ECM is in check mode. In check mode, the ECM uses 1 trip detection logic, which is more sensitive to malfunctions than normal mode (default), which uses 2 trip detection logic.

1. Clear DTCs  .
2. Switch the ECM from normal mode to check mode using the Techstream  .
3. Perform a simulation test.
4. Check and wiggle the harness(es), connector(s) and terminal(s).

Last Modified: 3-27-2012	6.4 D	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000PDLOOBX
Title: FA20 ENGINE CONTROL: SFI SYSTEM: CHECK MODE PROCEDURE (2013 FR-S)		

CHECK MODE PROCEDURE

HINT:

Compared to normal mode, check mode is more sensitive to malfunctions. Therefore, check mode can detect malfunctions that cannot be detected in normal mode.

NOTICE:

All the stored DTCs and freeze frame data are cleared if: 1) the ECM is changed from normal mode to check mode or vice versa; or 2) the ignition switch is turned from ON to ACC or off while in check mode. Before changing modes, always check and note any DTCs and freeze frame data.

1. CHECK MODE PROCEDURE

- (a) Check and ensure the following conditions:
 - (1) Battery voltage is 11 V or higher.
 - (2) Throttle valve is fully closed.
 - (3) Shift lever is in P, N or neutral.
 - (4) A/C switch is off.
- (b) Turn the ignition switch off.
- (c) Connect the Techstream to the DLC3.
- (d) Turn the ignition switch to ON.
- (e) Turn the Techstream on.
- (f) Enter the following menus: Powertrain / Engine / Utility / Check Mode.
- (g) Switch the ECM from normal mode to check mode.

- (h) Check that the MIL flashes as shown in the illustration.

- (i) Start the engine.
- (j) Check that the MIL turns off.
- (k) Simulate the conditions of the malfunction described by the customer.
- (l) Check DTCs and freeze frame data using the Techstream.

Last Modified: 3-27-2012	6.4 D	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000PDR0C4X
Title: FA20 ENGINE CONTROL: SFI SYSTEM: CHECKING MONITOR STATUS (2013 FR-S)		

CHECKING MONITOR STATUS

The purpose of the monitor result (mode 06) is to allow access to the results of on-board diagnostic monitoring tests of specific components/systems that are not continuously monitored. Examples are catalysts and evaporative emissions (EVAP) systems.

The monitor result allows the OBD II scan tool to display the monitor status, test value, minimum test limit and maximum test limit. These data are displayed after the vehicle has been driven to run the monitor.

When the test value is not between the minimum and maximum test limits, the ECM (PCM) interprets this as a malfunction. If the test value is on the borderline of the test limits, the component is likely to malfunction in the near future.

Perform the following procedures to view the monitor status. Although these procedures refer to the Lexus/Toyota Techstream, the monitor status can be checked using a generic OBD II scan tool. Refer to your scan tool operator's manual for specific procedural information.

1. PERFORM MONITOR DRIVE PATTERN

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON and turn the Techstream on.
- (c) Clear DTCs  .
- (d) Operate the vehicle in accordance with the applicable drive pattern described in Readiness Monitor Drive Pattern  . Do not turn the ignition switch off.

NOTICE:

The test results will be lost if the ignition switch is turned off.

2. ACCESS MONITOR RESULT

- (a) Enter the following menus: Powertrain / Engine / Monitor / Current Monitor / Result.
- (b) Confirm the monitor status for each component.

HINT:

The monitor status for each component is displayed in the Result column.

- **Pass:** The component is functioning normally.
- **Fail:** The component is malfunctioning.

- (c) Display the test results and test values for a monitor by selecting the icon in the Details column for that monitor.

3. CHECK COMPONENT STATUS

- (a) Compare the test value with the minimum test limit (Min Limit) and maximum test limit (Max Limit).
- (b) If the test value is between the minimum and maximum test limits, the component is functioning normally. If not, the component is malfunctioning. The test value is usually not near the test limits. If the test value is on the borderline of the test limits, the component is likely to malfunction in the near future.

HINT:

The monitor result might on rare occasions be Pass even if the Malfunction Indicator Lamp (MIL) is illuminated. This indicates the system malfunctioned on a previous driving cycle. This might be caused by an intermittent problem.

4. MONITOR RESULT INFORMATION

When using a generic scan tool, multiply the test value by the scaling value.

Refer to "Monitor Result" in each DTC related to the monitor .

Advance / Retarded Intake Side (for Bank 1):

MONITOR ID	TEST ID	SCALING	UNIT	DESCRIPTION
\$35	\$8B	Multiply by 0.5	°CA	VVT slow response (Advance)
\$35	\$8C	Multiply by 0.5	°CA	VVT slow response (Retarded)

\$35	\$8E	Multiply by 0.5	°CA	VVT slow response (Retarded)

Advance / Retarded Exhaust Side (for Bank 2):

MONITOR ID	TEST ID	SCALING	UNIT	DESCRIPTION
\$36	\$8D	Multiply by 0.5	°CA	VVT slow response (Advance)
\$36	\$8E	Multiply by 0.5	°CA	VVT slow response (Retarded)

A/F Sensor Bank 1 Sensor 1:

MONITOR ID	TEST ID	SCALING	UNIT	DESCRIPTION
\$01	\$84	Multiply by 0.004	No dimension	A/F sensor minimum value
\$01	\$85	Multiply by 0.004	No dimension	A/F sensor maximum value
\$01	\$86	Multiply by 0.004	No dimension	A/F sensor response
\$01	\$8F	Multiply by 0.004	No dimension	A/F sensor fluctuation (Width)
\$01	\$90	Multiply by 0.004	No dimension	A/F sensor fluctuation (Time)
\$01	\$91	Multiply by 0.004	No dimension	Rich to lean delay level
\$01	\$92	Multiply by 0.001	Second	Rich / lean time ratio
\$01	\$A3	Multiply by 0.004	No dimension	Lean to rich delay level

\$01	\$A4	Multiply by 0.001	Second	Lean / rich time ratio
\$01	\$AC	Multiply by 0.001	Second	Waiting time for rich side
\$01	\$AD	Multiply by 0.001	Second	Rich / lean time difference
\$01	\$AE	Multiply by 0.001	Second	Waiting time for lean side
\$01	\$AF	Multiply by 0.001	Second	Lean / rich time difference

HO2 Sensor Bank 1 Sensor 2:

MONITOR ID	TEST ID	SCALING	UNIT	DESCRIPTION
\$02	\$05	Multiply by 0.004	Second	Rich to lean sensor threshold time (calculated)
\$02	\$06	Multiply by 0.004	Second	Lean to rich sensor threshold time (calculated)
\$02	\$07	Multiply by 0.005	V	Minimum sensor voltage for test cycle (calculation)
\$02	\$08	Multiply by 0.005	V	Maximum sensor voltage for test cycle (calculation)

Catalyst:

MONITOR ID	TEST ID	SCALING	UNIT	DESCRIPTION
\$21	\$89	Multiply by 0.004	No dimension	Oxygen storage capacity of catalyst

EVAP Monitor (Cap Off):

MONITOR ID	TEST ID	SCALING	UNIT	DESCRIPTION
\$39	\$93	Multiply by 0.00025	kPa	Mode B test result

EVAP Monitor (0.040"):

MONITOR ID	TEST ID	SCALING	UNIT	DESCRIPTION
\$3B	\$94	Multiply by 0.00025	kPa	Mode C test result
\$3B	\$95	Multiply by 0.00025	kPa	Mode D test result

EVAP Monitor (0.020"):

MONITOR ID	TEST ID	SCALING	UNIT	DESCRIPTION
\$3C	\$96	Multiply by 0.00025	kPa	Mode D test result
\$3C	\$97	Multiply by 0.00025	kPa	Mode E test result
\$3C	\$C1	Multiply by 0.00025	kPa	Mode 4-1 test result
\$3C	\$C2	Multiply by 0.00025	kPa	Mode 4-2 test result
\$3C	\$C3	Multiply by 0.00025	kPa	Mode 5 test result
\$3C	\$C4	Multiply by 0.00025	kPa	Mode 7 test result
\$3C	\$C5	Multiply by 0.00025	kPa	Mode 8 test result
\$3C	\$C6	Multiply by 0.01	Second	Mode 9 test result
\$3C	\$C7	Multiply by 0.00025	kPa	Mode 13 test result

\$3C	\$C8	Multiply by 0.00025	kPa	Mode 15-1 test result
\$3C	\$C9	Multiply by 0.00025	kPa	Mode 15-2 test result
\$3C	\$CA	Multiply by 0.00025	kPa	Mode 16 test result

Purge Flow Monitor:

MONITOR ID	TEST ID	SCALING	UNIT	DESCRIPTION
\$3D	\$98	Multiply by 0.00025	kPa	0.04" mode Z test result
\$3D	\$CB	Multiply by 0.01	Second	Test 1 result
\$3D	\$CC	Multiply by 0.00025	kPa	Test 2 result

A/F Sensor Heater Bank 1 Sensor 1:

MONITOR ID	TEST ID	SCALING	UNIT	DESCRIPTION
\$41	\$9B	Multiply by 1	Time	Oxygen sensor heater test result

Oxygen Sensor Heater Bank 1 Sensor 2:

MONITOR ID	TEST ID	SCALING	UNIT	DESCRIPTION
\$42	\$A2	Multiply by 1	Ω	A/F sensor heater impedance

Misfire:

MONITOR ID	TEST ID	SCALING	UNIT	DESCRIPTION
\$A1	\$0B	Multiply by 1	Time	Total EWMA misfire count of all cylinders in last ten driving cycles
\$A1	\$0C	Multiply by 1	Time	<ul style="list-style-type: none"> When ignition switch ON, total misfire count of all cylinders in last driving cycle is displayed. While engine is running, total misfire count of all cylinders in current driving cycle is displayed.
\$A2	\$0B	Multiply by 1	Time	Total EWMA* misfire count of cylinder 1 in last ten driving cycles
\$A2	\$0C	Multiply by 1	Time	<ul style="list-style-type: none"> When ignition switch ON, total misfire count of cylinder 1 in last driving cycle is displayed. While engine is running, total misfire count of cylinder 1 in current driving cycle is displayed.
\$A3	\$0B	Multiply by 1	Time	Total EWMA* misfire count of cylinder 2 in last ten driving cycles
\$A3	\$0C	Multiply by 1	Time	<ul style="list-style-type: none"> When ignition switch ON, total misfire count of cylinder 2 in last driving cycle is displayed. While engine is running, total misfire count of cylinder 2 in current driving cycle is displayed.

\$A4	\$OB	Multiply by 1	Time	Total EWMA* misfire count of cylinder 3 in last ten driving cycles
\$A4	\$OC	Multiply by 1	Time	<ul style="list-style-type: none"> • When ignition switch ON, total misfire count of cylinder 3 in last driving cycle is displayed. • While engine is running, total misfire count of cylinder 3 in current driving cycle is displayed.
\$A5	\$OB	Multiply by 1	Time	Total EWMA* misfire count of cylinder 4 in last ten driving cycles
\$A5	\$OC	Multiply by 1	Time	<ul style="list-style-type: none"> • When ignition switch ON, total misfire count of cylinder 4 in last driving cycle is displayed. • While engine is running, total misfire count of cylinder 4 in current driving cycle is displayed.

HINT:

*: EWMA (Exponential Weighted Moving Average) misfire counts for last 10 driving cycles (calculated)
 Calculation: $0.1 \times (\text{current counts}) + 0.9 \times (\text{previous average})$ Initial value for (previous average) = 0

Last Modified: 3-27-2012	6.4 U	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000SXS076X
Title: FA20 ENGINE CONTROL: SFI SYSTEM: DATA LIST / ACTIVE TEST (2013 FR-S)		

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

- In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.
- The actual values may differ from the values listed in the chart under "Results of real-vehicle check" due to climate, weather conditions, etc.

HINT:

Normal Condition: If no conditions are specifically stated for "idling", the shift lever should be in P, N or neutral, the A/C switch should be off and all accessory switches should be off.

- Warm up the engine.
- Turn the A/C switch off.
- Turn the ignition switch off.
- Connect the Techstream to the DLC3.
- Turn the ignition switch to ON.
- Turn the Techstream on.
- Enter the following menus: Powertrain / Engine / Data List.

HINT:

- To display the list box, press the pull down menu button next to Primary. Then select a measurement group.
- When you select a measurement group, the ECU data belonging to that group is displayed.
- Measurement Group List / Description
 - All Data / All data
 - Primary / -
 - Engine Control / Engine control system related data
 - Gas General / -
 - Gas AF Control / Air fuel ratio control system related data
 - Gas AF O2 Sensor / Air fuel ratio sensor and heated oxygen sensor related data
 - Gas Throttle / Gasoline throttle system related data
 - Gas Intake Control / Intake control system related data
 - Gas Valve Control / Valve control system related data
 - Gas Misfire / "Misfire" related data
 - Gas Starting / "Difficult to start" related data
 - Gas Rough Idle / "Rough idle" related data

- Gas Evaporative / Evaporative system related data
- o Gas CAT Converter / Catalyst converter related data
- o Check Mode / Check mode related data
- o Monitor Status / Monitor status related data
- o Ignition / Ignition system related data
- o Charging Control / Charging control system related data
- o Compression / Data used during "Check the Cylinder Compression" Active Test
- o AT / Continuously variable transaxle system related data
- o Vehicle Information / Vehicle information

(h) According to the display on the Techstream, read the Data List.

HINT:

- The title used for each group of Data List items in this repair manual does not appear on the Techstream. However, the name in parentheses after the title, which is a Measurement Group, does appear on the Techstream. When the name shown in parentheses is selected on the Techstream, all the Data List items listed for that group will be displayed.
- "Result of real-vehicle check" is the assessment of one vehicle. Use it only for reference.

2. Various Vehicle Conditions 1 (All Data)

Vehicle Speed

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Vehicle Speed	Vehicle speed/ Min.: 0 km/h (0 mph), Max.: 255 km/h (158 mph)	Actual vehicle speed	Yes
	Diagnostic Note: <ul style="list-style-type: none"> • This is the current vehicle speed • The vehicle speed is detected using the wheel speed sensors. <ul style="list-style-type: none"> o Vehicle speed data is delayed when it is displayed. Therefore, even if the vehicle speed listed in the freeze frame data is 0 km/h (0 mph), this does not always mean that the malfunction occurred when the vehicle was stopped. o To accurately confirm whether the vehicle was stopped or not, use "SPD (SP2)" which is the transmission output speed. 		

Engine Speed

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Engine Speed	Engine speed/ Min.: 0 rpm, Max.: 16383 rpm	650 to 800 rpm: Idling	Yes
	Diagnostic Note: When the crankshaft position sensor is malfunctioning, "Engine Speed" is approximately 0 or varies greatly from the actual engine speed.		

Calculate Load

TESTER	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
--------	------------------------	------------------	-----------------------------

DISPLAY			
Calculate Load	Load calculated by ECM/ Min.: 0%, Max.: 100%	15 to 40%: Idling	Yes
	Diagnostic Note: This is the engine load calculated based on the estimated intake manifold pressure. Calculate Load = Estimated intake manifold pressure / maximum intake manifold pressure x 100 (%) (For example, when the estimated intake manifold pressure is the same as atmospheric pressure, Calculate Load is 100%.)		

Vehicle Load

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Vehicle Load	Vehicle load/ Min.: 0%, Max.: 25700%	-	Yes
	Diagnostic Note: This is the engine intake air charging efficiency. Vehicle Load = Current intake airflow (g/rev.) / maximum intake airflow Maximum intake airflow = Displacement (L) / 2 x 1.2 (g/rev.) HINT: Due to individual engine differences, intake air temperature, etc., the value may exceed 100%. Intake airflow (g/rev.) = Intake airflow (gm/sec) x 60 / Engine speed (rpm) (Intake airflow (gm/sec) is MAF)		

MAF

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
MAF	Airflow rate from Mass Air Flow (MAF) meter/ Min.: 0 gm/sec, Max.: 655.35 gm/sec	1.0 to 3.0 gm/sec: Idling 8 to 13 gm/sec: 3000 rpm (without load)	Yes
	Diagnostic Note: This is the intake air amount from the mass air flow meter.		

Atmosphere Pressure

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Atmosphere	Atmospheric pressure/ Min.: 0 kPa (0 mmHg), Max.: 255 kPa (1912 mmHg)	Equivalent to atmospheric pressure (absolute pressure): Ignition switch ON	Yes

Pressure	Diagnostic Note: <ul style="list-style-type: none"> • This value is calculated from the intake air amount. • Standard atmospheric pressure: 101 kPa (757 mmHg) • For every 100 m increase in altitude, pressure drops by 1 kPa. This varies by weather.
----------	--

MAP

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
MAP	intake manifold pressure/ Min.: 0 kPa (0 mmHg), Max.: 255 kPa (1912 mmHg)	80 to 110 kPa: Ignition switch ON 20 to 48 kPa: Idling (A/C off)	Yes
	Diagnostic Note: Intake manifold pressure is calculated by manifold absolute pressure sensor.		

Engine Oil Temperature Sensor

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Engine Oil Temperature Sensor	Engine oil temperature/ Min.: -40°C, Max.: 215°C	More than 85°C (185°F): After warming up	Yes
	Diagnostic Note: Engine oil temperature is calculated by engine oil temperature sensor.		

Coolant Temp

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Coolant Temp	Coolant temperature/ Min.: -40°C, Max.: 215°C	75 to 100°C (167 to 212°F): After warming up	Yes
	Diagnostic Note: This is the engine coolant temperature. <p>HINT:</p> <ul style="list-style-type: none"> • After warming up the engine, the engine coolant temperature is 75 to 100°C. • After a long soak, the engine coolant temperature, intake air temperature and ambient air temperature are approximately equal. • If the value is -40°C (-40°F) or higher than 215°C (419°F), the sensor circuit may be open or shorted. 		

Intake Air

TESTER	MEASUREMENT	NORMAL CONDITION	STORED AS FREEZE
--------	-------------	------------------	------------------

DISPLAY	ITEM/RANGE		FRAME DATA
Intake Air	Intake air temperature/ Min.: -40°C, Max.: 215°C	Equivalent to temperature at location of mass air flow meter: Ignition switch ON	Yes
	Diagnostic Note: This is the intake air temperature. HINT: <ul style="list-style-type: none"> • After a long soak, the engine coolant temperature, intake air temperature and ambient air temperature are approximately equal. • If the value is -40°C (-40°F) or higher than 215°C (419°F), the sensor circuit is open or shorted. 		

Ambient Temperature

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Ambient Temperature	Ambient temperature/ Min.: -40°C, Max.: 215°C	Equivalent to ambient air temperature: Ignition switch ON	Yes
	Diagnostic Note: This is the ambient temperature. HINT: <ul style="list-style-type: none"> • After a long soak, the engine coolant temperature, intake air temperature and ambient air temperature are approximately equal. 		

Engine Run Time

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Engine Run Time	Engine run time/ Min.: 0 s, Max.: 65535 s	Time after engine start	Yes
	Diagnostic Note: This is the time elapsed since the engine started. HINT: The time is counted only while the engine is running.		

Initial Engine Coolant Temp

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
	Initial engine coolant temperature/	-	Yes

Initial Engine Coolant Temp	Min.: -40°C, Max.: 119.3°C		
	Diagnostic Note: This is the coolant temperature stored when the ignition switch is turned to ON.		

Initial Intake Air Temp

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Initial Intake Air Temp	Initial intake air temperature/ Min.: -40°C, Max.: 119.3°C	-	Yes
	Diagnostic Note: This is the intake air temperature stored when the ignition switch is turned to ON.		

Battery Voltage

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Battery Voltage	Battery voltage/ Min.: 0 V, Max.: 65.535 V	11 to 14 V: Idling	Yes
	Diagnostic Note: If 11 V or less, characteristics of some electrical components may change.		

3. Throttle Control 1 (Gas Throttle)

Accelerator Position

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Accelerator Position	Accelerator pedal position/ Min.: 0%, Max.: 399.9%	Actual accelerator pedal position	No
	Diagnostic Note: This is the accelerator pedal position defined using the learned fully released position (sensor output) of accelerator pedal position sensor as 0% and the fully depressed position as 100%.		

Accel Sens. No.1 Volt %

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Accel Sens. No.1 Volt %	Absolute Accelerator Pedal Position (APP) No. 1/ Min.: 0%, Max.: 100%	10 to 20%: Accelerator pedal released 50 to 70%: Accelerator pedal fully depressed	Yes
	Diagnostic Note: The accelerator pedal position sensor No. 1 output is converted using 5 V = 100%. HINT: If there are no accelerator pedal position sensor DTCs stored, it is possible to conclude		

that the accelerator pedal position sensor system is normal.

Accel Sens. No.2 Volt %

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Accel Sens. No.2 Volt %	Absolute APP No. 2/ Min.: 0%, Max.: 100%	10 to 20%: Accelerator pedal released 50 to 70%: Accelerator pedal fully depressed	Yes
	Diagnostic Note: The accelerator pedal position sensor No. 2 output is converted using 5 V = 100%.		

Accel Sensor Out No.1

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Accel Sensor Out No.1	APP sensor No. 1 voltage/ Min.: 0 V, Max.: 4.980 V	0.5 to 0.8 V: Accelerator pedal released 2.4 to 3.5 V: Accelerator pedal fully depressed	No
	Diagnostic Note: This is the raw voltage from the accelerator pedal position sensor No. 1.		

Accel Sensor Out No.2

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Accel Sensor Out No.2	APP sensor No. 2 voltage/ Min.: 0 V, Max.: 4.980 V	0.5 to 0.8 V: Accelerator pedal released 2.4 to 3.5 V: Accelerator pedal fully depressed	No
	Diagnostic Note: This is the raw voltage from the accelerator pedal position sensor No. 2. Accelerator pedal position sensor No. 2 is used to monitor accelerator pedal position sensor No. 1. When there is a malfunction in sensor No. 1, the ECM uses sensor No. 2 to control the engine.		

Accelerator Idle Position

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Accelerator Idle Position	Whether or not accelerator pedal position sensor detecting released accelerator pedal/ ON or OFF	ON: Accelerator pedal released	No
	Diagnostic Note: This is a parameter calculated by the ECM which indicates whether the accelerator pedal		

is in the learned idle position.

Accel Fully Close Learn #1

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Accel Fully Close Learn #1	Accelerator fully released learned value No. 1/ Min.: 0 deg, Max.: 124.5 deg	2.5 to 6.5 deg: Ignition switch ON	No
	Diagnostic Note: This is the value of accelerator pedal position sensor No. 1 learned when the accelerator pedal is released.		

Accel Fully Close Learn #2

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Accel Fully Close Learn #2	Accelerator fully released learned value No. 2/ Min.: 0 deg, Max.: 124.5 deg	2.5 to 6.5 deg: Ignition switch ON	No
	Diagnostic Note: This is the value of accelerator pedal position sensor No. 2 learned when the accelerator pedal is released.		

Throttle Sensor Volt %

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Throttle Sensor Volt %	Absolute throttle position sensor/ Min.: 0%, Max.: 100%	<ul style="list-style-type: none"> • 10 to 22%: Throttle fully closed • 80 to 90%: Throttle fully open 	Yes
	Diagnostic Note: The throttle position sensor No. 1 output is converted using 5 V = 100%.		

Throttl Sensor #2 Volt %

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Throttl Sensor #2 Volt %	Throttle sensor position #2/ Min.: 0%, Max.: 100%	<ul style="list-style-type: none"> • 35 to 45%: Throttle fully closed • 80 to 90%: Throttle fully open 	Yes
	Diagnostic Note: The throttle position sensor No. 2 output is converted using 5 V = 100%.		

ST1

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
ST1	Brake pedal signal/ ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released	No
Diagnostic Note: This is the stop light switch signal.			

Throttle Idle Position

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Throttle Idle Position	Whether or not throttle position sensor detecting idle/ ON or OFF	ON: Accelerator pedal released	No
Diagnostic Note: This is a parameter calculated by the ECM. The value is ON when the throttle is at the idle position and OFF when the throttle is open.			

Throttle Require Position

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Throttle Require Position	Required throttle position/ Min.: 0 V, Max.: 4.980 V	0.5 to 1.1 V: Idling at P, N or neutral (A/C off)	No
Diagnostic Note: This is a value calculated by the ECM showing the voltage for the target throttle valve position.			

Throttle Sensor Position

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Throttle Sensor Position	Throttle sensor position/ Min.: 0%, Max.: 100%	<ul style="list-style-type: none"> • 3 to 5%: Throttle fully closed • 65 to 75%: Throttle fully open 	Yes
Diagnostic Note: This is the throttle valve opening amount used for engine control. This value has no meaning when the ignition switch is ON and the engine is stopped.			

Throttle Position No. 1

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Throttle Position No. 1	Throttle position sensor No. 1 output voltage/ Min.: 0 V, Max.: 4.980 V	<ul style="list-style-type: none">• 0.5 to 1.1 V: Throttle fully closed• 3.2 to 4.8 V: Throttle fully open• 0.6 to 1.4 V: Fail-safe operating	No
	Diagnostic Note: This is the throttle position sensor No. 1 output voltage.		

Throttle Position No. 2

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Throttle Position No. 2	Throttle position sensor No. 2 output voltage/ Min.: 0 V, Max.: 4.980 V	<ul style="list-style-type: none">• 1.5 to 2.2 V: Throttle fully closed• 4.0 to 4.5 V: Throttle fully open• 1.9 to 2.6 V: Fail-safe operating	No
	Diagnostic Note: This is the throttle position sensor No. 2 output voltage.		

Throttle Position Command

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Throttle Position Command	Throttle position command value/ Min.: 0 V, Max.: 4.980 V	-	No
	Diagnostic Note: Throttle Position Command is the same value as Throttle Require Position.		

Throttle Sens Open Pos #1

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Throttle Sens Open Pos #1	Throttle position sensor No. 1/ Min.: 0 V, Max.: 4.980 V	0.7 to 1.1 V: Ignition switch ON	No
	Diagnostic Note: This is the throttle position sensor No. 1 output voltage when there is no current supplied to the electronic throttle actuator. The accelerator pedal is released but the throttle valve is kept open by the throttle valve opener with the ignition switch ON.		

Throttle Sens Open Pos #2

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Throttle Sens Open Pos #2	Throttle position sensor No. 2/ Min.: 0 V, Max.: 4.980 V	0.7 to 1.1 V: Ignition switch ON	No
	Diagnostic Note: This is the throttle position sensor No. 2 output voltage when there is no current supplied to the electronic throttle actuator. The accelerator pedal is released but the throttle valve is kept open by the throttle valve opener with the ignition switch ON.		

Throttle Motor Power Supply Relay

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Throttle Motor Power Supply Relay	Throttle motor power supply relay/ ON or OFF	ON: Ignition switch ON	Yes

Throttle Motor DUTY

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Throttle Motor DUTY	Throttle actuator/ Min.: 0%, Max.: 100%	2 to 5%: Idling at P, N or neutral (A/C off)	Yes
	Diagnostic Note: This is the output duty ratio of the throttle actuator drive circuit.		

Throttle Motor Duty (Open)

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Throttle Motor Duty (Open)	Throttle actuator duty ratio (open)/ Min.: 0%, Max.: 255%	0 to 40%: Idling at P, N or neutral (A/C off)	No
	Diagnostic Note: This is the duty ratio used to drive the throttle actuator and open the throttle valve. It is an ECM command signal.		

Throttle Motor Duty (Close)

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
	Throttle actuator duty ratio (close)/ Min.: 0%, Max.: 255%	0 to 40%: Idling at P, N or neutral (A/C off)	No

Throttle Motor Duty (Close)	<p>Diagnostic Note: This is the duty ratio used to drive the throttle actuator and close the throttle valve. It is an ECM command signal.</p> <p>HINT: During idling, the throttle valve opening angle is usually controlled using a duty ratio drive signal which closes the throttle valve. However, when carbon deposits build up, it may be necessary to open the throttle valve more than the throttle valve opener does. In that case, the opening angle is controlled using a "Throttle Motor Duty (Open)" signal which opens the throttle valve.</p>
-----------------------------	---

Throttle Fully Close Learn

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Throttle Fully Close Learn	Throttle valve fully closed (learned value)/ Min.: 0 V, Max.: 4.980 V	0.35 to 0.85 V: Ignition switch ON	No
	Diagnostic Note: <ul style="list-style-type: none"> The ECM uses this learned value to determine the fully closed (and fully open) position of the throttle valve. Learning is performed immediately after the ignition switch is turned to ON. 		

+BM Voltage

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
+BM Voltage	+BM voltage/ Min.: 0 V, Max.: 79.998 V	11 to 14 V: Ignition switch ON	No
	Diagnostic Note: This is the power supply for the electronic throttle actuator.		

Actuator Power Supply

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Actuator Power Supply	Actuator power supply/ ON or OFF	ON: Ignition switch ON	No
	Diagnostic Note: If +BM power is lost, this item changes to OFF.		

Throttle Position

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
	Throttle valve opening angle/		

Throttle Position	Min.: 0 deg, Max.: 499.99 deg	-	Yes
Diagnostic Note: This value has no meaning when the ignition switch is ON and the engine is stopped.			

4. Idle Speed Control (Gas Rough Idle)

ISC Flow

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
ISC Flow	Flow rate calculated using information from each sensor/ Min.: 0 g/s, Max.: 299.99 g/s	-	Yes
	Diagnostic Note: This is the total ISC airflow amount (the amount of intake air necessary to maintain idling). HINT: ISC Flow (total ISC airflow amount) = ISC Learning Value + ISC Feedback Value + each compensation amount		

ISC Position

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
ISC Position	Requested throttle opening amount calculated using ISC control/ Min.: 0 deg, Max.: 499.99 deg	-	Yes
	Diagnostic Note: This is the throttle valve opening amount while the engine is idling (the throttle valve opening amount necessary to maintain ISC air flow).		

ISC Feedback Value

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
ISC Feedback Value	ISC feedback amount/ Min.: -150 g/s, Max.: 149.99 g/s	-	Yes
	Diagnostic Note: This is the feedback amount necessary to adjust the airflow amount to maintain the target idling speed. HINT: When the idling speed differs from the target, the feedback amount is adjusted. If the feedback amount becomes more than a certain value, this will be reflected in the ISC learned airflow value.		

ISC Learning Value

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
ISC Learning Value	ISC learned airflow value/ Min.: -150 g/s, Max.: 149.99 g/s	-	Yes
	Diagnostic Note: This is the learned value of the airflow amount necessary for engine idling. HINT: <ul style="list-style-type: none"> If ISC Feedback Value becomes more than a certain value, this will be reflected in ISC Learning Value. ISC Flow (total ISC airflow amount) = ISC Learning Value + ISC Feedback Value + each compensation amount 		

Electric Load Feedback Val

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Electric Load Feedback Val	Compensation flow rate according to electrical load/ Min.: -150 g/s, Max.: 149.99 g/s	-	Yes
	Diagnostic Note: This is the ISC compensation amount determined according to the electrical load.		

Air Conditioner FB Val

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Air Conditioner FB Val	Compensation flow rate according to air conditioner load/ Min.: -150 g/s, Max.: 149.99 g/s	-	Yes
	Diagnostic Note: This is the ISC compensation amount determined according to the air conditioner load.		

Deposit Loss Flow

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Deposit	Flow loss due to deposits/ Min.: -150 g/s, Max.: 149.99 g/s	-	Yes
	Diagnostic Note: <ul style="list-style-type: none"> This value indicates the amount of compensation for a decrease in flow passage area due to the buildup of deposits on the throttle valve. Check this value for reference when the engine stalls, is difficult to start, or idles roughly. 		

Loss Flow	<p>When the ISC learned value is initialized by disconnecting the battery negative terminal or removing the EFI(+B) fuse , performing the following procedures in order to quickly relearn the Deposit Loss Flow value. After the Deposit Loss Flow has been relearned, gradual fine adjustments will continue automatically.</p> <ul style="list-style-type: none"> ○ Start the engine cold and allow the engine to idle. ○ After the engine is warmed up (engine coolant temperature is above 80°C [176°F]), allow the engine to idle for an additional 5 minutes. ○ Turn the ignition switch off and wait for 30 seconds. ○ Start the engine again, and allow the engine to idle for 5 minutes.
-----------	--

5. Fuel System (Gas General)

Fuel Press

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Fuel Press	Fuel pressure/ Min.: 0 kPa (0 kgf/cm ² , 0 psi), Max.: 655350 kPa (6683 kgf/cm ² , 95050 psi)	3000 to 5000 kPa (30.6 to 51.0 kgf/cm ² , 435 to 725 psi): Idling at P, N or neutral after warming up (A/C off)	Yes
Diagnostic Note: This item indicates the fuel pressure on the high-pressure side.			

Fuel Pump Duty

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Fuel Pump Duty	Fuel pump duty/ Min.: 0%, Max.: 399.9%	20 to 70%: Idling	Yes

Fuel Level Sensor Impedance

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Fuel Level Sensor Impedance	Fuel Level Sensor Impedance/ Min.: 0 Ohm, Max.: 511.5 Ohm	About 100 Ohm: Fuel receiver gauge is F position	No

Injector (Port)

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Injector (Port)	Injection period of the No. 1 cylinder/ Min.: 0 μs, Max.: 65535 μs	1000 to 2000 μs Idling after warming up	Yes
Diagnostic Note: This is the injection period of the No. 1 cylinder (the command value from the ECM).			

Injection Volum (Cylinder 1)

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Injection Volum (Cylinder 1)	Injection volume (cylinder 1)/ Min.: 0 ml, Max.: 2.047 ml	0 to 0.15 ml: Idling after warming up	Yes
	Diagnostic Note: This is the fuel injection volume for 10 injections.		

Fuel Pressure Target Value

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Fuel Pressure Target Value	Target fuel pressure/ Min.: 0 MPa, Max.: 65.535 MPa	<ul style="list-style-type: none"> • 3 to 5 MPa (31 to 51 kgf/cm², 435 to 725 psi): Idling after warming up • 7 to 9 MPa (72 to 91 kgf/cm², 1024 to 8924 psi): 2500 rpm (without load) 	Yes
	Diagnostic Note: This item indicates the target fuel pressure for the high-pressure fuel pump.		

HP FP Discharge Rate

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
HP FP Discharge Rate	Fuel volume required by the high pressure fuel pump/ Min.: 0 ml, Max.: 2.047 ml	0.04 to 0.08 ml: Idling at P, N or neutral after warming up (A/C off)	Yes
	Diagnostic Note: This item indicates the high-pressure fuel pump discharge amount.		

Injection Way

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Injection Way	Injection mode/ Port / Direct / Either	-	Yes
	Diagnostic Note: This item indicates the injection mode.		

Injection Switching Status

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA

Injection Switching Status	Prohibition of changing the D-4S injection method/ OK or NG	-	Yes
	Diagnostic Note: This item indicates whether the Control the Injection Way Active Test is prohibited.		

Injection Timing (D4)

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Injection Timing (D4)	Injection timing/ Min.: -3277 deg(CA), Max.: 3276.7 deg(CA)	320 to 340 deg(CA): Idling at P, N or neutral after warming up (A/C off)	Yes
	Diagnostic Note: This item indicates the injection timing of the main injector.		

Injection Time (D4)

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Injection Time (D4)	Injection time/ Min.: 0 μ s, Max.: 65535 μ s	0 to 2000 μ s: Idling at P, N or neutral after warming up (A/C off)	Yes
	Diagnostic Note: This item indicates the last injection time of the injector for the number 1 cylinder.		

6. EVAP System 1 (All Data)

Vacuum Pump

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Vacuum Pump	Key-off EVAP system pump status/ ON or OFF	-	Yes
	Diagnostic Note: This item changes to ON during the key-off EVAP monitor which is performed approximately 5 hours after the ignition switch is turned off  .		

7. EVAP System 2 (Gas Evaporative)

EVAP (Purge) VSV

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
	Purge valve control duty/ Min.: 0%, Max.: 100%	-	Yes
	Diagnostic Note: <ul style="list-style-type: none"> This is the command signal from the ECM. 		

EVAP (Purge) VSV	<ul style="list-style-type: none"> This is the purge valve control duty ratio. When EVAP (Purge) VSV is any value except 0%, EVAP purge* is being performed. *: Gasoline vapor from the fuel tank is being introduced into the intake system via the purge VSV. When the engine is cold or immediately after the engine is started, EVAP (Purge) VSV is 0%.
------------------------	--

Evap Purge Flow

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Evap Purge Flow	Purge flow/ Min.: 0%, Max.: 399.9%	-	Yes
	Diagnostic Note: This is the percentage of total engine airflow contributed by EVAP purge operation. (Evap Purge Flow = Purge flow / Engine airflow x 100 (%))		

Purge Density Learn Value

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Purge Density Learn Value	Purge density learned value/ Min.: -200%, Max.: 199.993%	-	Yes
	Diagnostic Note: Purge Density Learn Value is the proportion of the decrease in injection volume (based on the change in the air fuel ratio feedback compensation value) related to a 1% purge flow rate. When Purge Density Learn Value is a large negative value, the purge effect is large. The purge density is determined from the change in the air fuel ratio feedback compensation value when purge flow is introduced. Purge density learning is performed so that the feedback compensation value is 0 +/-2%. HINT: <ul style="list-style-type: none"> Usually, the value is approximately +/-1%. 1%: The concentration of HC in the purge gas is relatively low. 0%: The concentration of HC in the purge gas is approximately equal to the stoichiometric air fuel ratio. Large negative values indicate that the concentration of HC in the purge gas is relatively high. 		

Vapor Pressure Pump

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
	Vapor pressure/ Min.: 0 kPa (0 mmHg), Max.: 1441.77 kPa (10814.17 mmHg)	Approximately 100 kPa (750 mmHg): Ignition switch ON	No
	Diagnostic Note: This is the EVAP system pressure monitored by the canister pressure sensor.		

Vapor Pressure Pump	<p>HINT:</p> <ul style="list-style-type: none"> • Except for when the monitor is running, this value should be approximately the same as atmospheric pressure. • As Vapor Pressure Pump is almost the same as Atmosphere Pressure when the engine is stopped, these items can be used to help determine if the canister pressure sensor characteristics are abnormal, if there is noise, or if the sensor output is stuck at a certain value.
---------------------	--

EVAP System Vent Valve

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
EVAP System Vent Valve	Key-off EVAP system vent valve status/ ON or OFF	OFF: Vent ON: Close	Yes

EVAP Purge VSV

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
EVAP Purge VSV	VSV status for EVAP control/ ON or OFF	-	Yes
Diagnostic Note: This parameter displays ON when EVAP (Purge) VSV is 30% or more, and displays OFF when the VSV duty ratio is less than 30%.			

Purge Cut VSV Duty

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Purge Cut VSV Duty	Purge valve duty/ Min.: 0%, Max.: 399.9%	-	Yes
Results of real-vehicle check: <ul style="list-style-type: none"> • Idling (warm up the engine): 0.0% • Running without load (3000 rpm): 33.3% 			

8. Air Fuel Ratio Control 1 (All Data)

Target Air-Fuel Ratio

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Target Air-Fuel	Target air fuel ratio/ Min.: 0, Max.: 1.99	0.8 to 1.2: During idling	Yes
Diagnostic Note: This is the target air fuel ratio used by the ECM.			

Ratio	1.0 is the stoichiometric air fuel ratio. Values that are more than 1 indicate the system attempting to make the air fuel ratio leaner. Values that are less than 1 indicate the system attempting to make the air fuel ratio richer. Target Air-Fuel Ratio and AF Lambda B1S1 are related.
-------	--

9. Air Fuel Ratio Control 2 (Gas AF O2 Sensor)

AF Lambda B1S1

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
AF Lambda B1S1	Output air fuel ratio associated/ Min.: 0, Max.: 1.999	<ul style="list-style-type: none"> Value less than 1 (0.000 to 0.999) = Rich 1 = Stoichiometric air fuel ratio Value more than 1 (1.001 to 1.999) = Lean 	Yes
	Diagnostic Note: This is the actual air fuel ratio calculated based on the air fuel ratio sensor output. Performing the "Control the Injection Volume" or "Control the Injection Volume for A/F Sensor" function of the Active Test enables the technician to check the voltage output of the sensor.		

AFS Voltage B1S1

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
AFS Voltage B1S1	Air fuel ratio sensor output voltage/ Min.: 0 V, Max.: 7.999 V	About 2.2 V: Idling (warming up the engine)	Yes
	Diagnostic Note: <ul style="list-style-type: none"> This is the voltage output of the air fuel ratio sensor (the voltage cannot be measured at the terminals of the sensor). This value is calculated by the ECM based on the current output of the air fuel ratio sensor (refer to AFS Current B1S1 below for the actual sensor output). Performing the "Control the Injection Volume" or "Control the Injection Volume for A/F Sensor" function of the Active Test enables the technician to check the voltage output of the sensor. 		

AFS Current B1S1

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
AFS Current B1S1	Air fuel ratio sensor output current / Min.: -128 mA, Max.: 127.99 mA	-0.5 to 0.5 mA: Idling	Yes
	Diagnostic Note: <ul style="list-style-type: none"> With a stoichiometric air fuel ratio (for example, during idling after the engine is 		

warmed up), the air fuel ratio sensor current output is approximately -0.5 to 0.5 mA.

- When the value is outside the range of 0.7 to 2.2 mA when the fuel-cut is being performed, there is a malfunction in the air fuel ratio sensor or sensor circuit.

A/F Sensor Impedance B1S1

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
A/F Sensor Impedance B1S1	Air fuel ratio sensor impedance/ Min.: 0 Ohm, Max.: 6553.5 Ohm	About 32 Ohm: Idling after warming up	Yes

A/F Heater Duty #1

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
A/F Heater Duty #1	Air fuel ratio sensor heater duty ratio/ Min.: 0%, Max.: 399.9%	0 to 100%	Yes
	Diagnostic Note: When the value is any value except 0%, current is being supplied to the heater.		

O2S B1S2

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
O2S B1S2	Heated oxygen sensor output voltage / Min.: 0 V, Max.: 1.275 V	0 to 0.9 V: Vehicle driven at constant speed of 70 km/h (44mph)	Yes
	Diagnostic Note: This is the output voltage of the heated oxygen sensor. Values close to 0 V indicate an air fuel ratio leaner than the stoichiometric ratio. Values close to 1 V indicate an air fuel ratio richer than the stoichiometric ratio. During air fuel ratio feedback control, the value moves back and forth in the range of 0 to 1 V. Performing the "Control the Injection Volume" or "Control the Injection Volume for A/F Sensor" function of the Active Test enables the technician to check voltage output of the sensor.		

O2 Heater B1S2

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
O2 Heater B1S2	Heated oxygen sensor heater/ Not Act or Active	-	Yes

O2 Sensor Heater Duty

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
O2 Sensor Heater Duty	Oxygen sensor heater duty ratio/ Min.: 0%, Max.: 400%	0 to 100%	Yes
Diagnostic Note: When the vehicle is any valve except 0%, current is being supplied to the heater.			

Short FT #1

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Short FT #1	Short-term fuel trim / Min.: -100%, Max.: 99.2%	-15 to +15%	Yes
Diagnostic Note: This item is the "short-term fuel injection volume compensation ratio" used to maintain the air fuel ratio at the stoichiometric ratio using the air fuel ratio sensor for feedback.			

Long FT #1

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Long FT #1	Long-term fuel trim / Min.: -100%, Max.: 99.2%	-15 to +15%	Yes
Diagnostic Note: The ECM will learn the Long FT values based on Short FT. The goal is to keep Short FT at 0% to keep the A/F mixture at the stoichiometric ratio. This value is used to determine whether the system related to air fuel ratio control is malfunctioning. The condition of the system is determined based on the sum of Short FT and Long FT (excluding times when the system is in transition).			
<ul style="list-style-type: none"> • +15% or more: There may be a lean air fuel ratio. • -15 to +15%: The air fuel ratio can be determined to be normal. • -15% or less: There may be a rich air fuel ratio. • The learned value is cleared when the battery cable is disconnected. • Air fuel ratio feedback leaning is divided up according to the engine operating range (engine speed * load), and separate value are stored for each operating range. "Long FT #1" indicates the learned value for the current operating range. [A/F Learn Value Idle #1], [A/F Learn Value Low #1], [A/F Learn Value Mid1 #1], [A/F Learn Value Mid2 #1] and [A/F Learn Value High #1] indicate the leaned values for the different operating ranges. The learned value that is the same as "Long FT #1" indicates the current engine operating range. 			

Fuel System Status #1

--	--	--	--

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Fuel System Status #1	Fuel system status/ ON or OFF	-	Yes

10. Ignition System (Ignition)

IGN Advance

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
IGN Advance	Ignition timing advance for No. 1 cylinder/ Min.: -64 deg., Max.: 63.5 deg.	BTDC -5 to 10 deg.: Idling at N position	Yes

Knock Feedback Value

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Knock Feedback Value	Knocking feedback value/ Min.: -1024 deg(CA), Max.: 1023.9 deg(CA)	-	Yes
	<p>Diagnostic Note: This is the ignition timing retard compensation amount determined by the presence or absence of knocking. Ignition timing = Most retarded timing value*1 + Knock Correct Learn Value*2 + Knock Feedback Value*3 Example: 21 deg(CA) = 10° + 14° - 3° *1: The most retarded timing value is a constant determined by the engine speed and engine load. *2: The knock correction learned value is calculated as shown below in order to keep Knock Feedback Value as close to -3 deg(CA) as possible. When Knock Feedback Value is less than -4 deg(CA), Knock Correct Learn Value is slowly decreased. When Knock Feedback Value is more than -2 deg(CA), Knock Correct Learn Value is slowly increased. *3: The base value is -3 deg(CA) and is adjusted based on the presence or absence of knocking. When there is no knocking, the value is increased, and when knocking is present, the value is decreased.</p> <p>HINT:</p> <p>If Knock Feedback Value does not change around the time when knocking occurs even though knocking continues (for example, stays at -3 deg(CA)), it can be determined that knocking is not being detected.</p> <p>Possible Causes:</p> <ul style="list-style-type: none"> • There is a problem with the knock sensor sensitivity. • The knock sensor is improperly installed. • There is a problem with a wire harness. 		

Knock Correct Learn Value

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Knock Correct Learn Value	Knocking correction learned value/ Min.: -1024 deg(CA), Max.: 1023.9 deg(CA)	-	Yes
	<p>Diagnostic Note: Refer to "Knock Feedback Value". When there is knocking or a lack of power, compare the following values to another vehicle of the same model.</p> <ul style="list-style-type: none"> • Engine speed • Calculate Load • IGN Advance • Knock Feedback Value • Knock Correct Learn Value <p>Knock Correct Learn Value is large: There is no knocking and the ignition timing is advanced. Knock Correct Learn Value is small: Knocking is present and the ignition timing is being retarded.</p> <p>HINT:</p> <p>When knocking continues even though Knock Correct Learn Value is less than that of the vehicle being used for comparison (in other words, the ignition timing is being retarded but the knocking is not stopping), there may be a buildup of deposits or other such problems due to deterioration over time (oil entering the cylinders, poor quality fuel, etc.).</p>		

Idle Spark Advn Ctrl #1 to #4

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Idle Spark Advn Ctrl #1 Idle Spark Advn Ctrl #2 Idle Spark Advn Ctrl #3 Idle Spark Advn Ctrl #4	Individual cylinder timing advance compensation amount (No. 1 to No. 4)/ Min.: -16 deg(CA), Max.: 15.875 deg(CA)	-	Yes
	<p>Diagnostic Note:</p> <ul style="list-style-type: none"> • This is the ignition timing advance compensation amount used to stabilize idling (each cylinder has a separate value). When the speed for a certain cylinder drops, the system advances the timing for that particular cylinder in an attempt to restore the speed and stabilize idling. • It may be possible to use this item to help determine specific cylinders which are not operating normally. 		

11. VVT Control 1 (All Data)

VVT Aim Angle #1, #2

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
VVT Aim Angle #1, #2	VVT hold duty learned value for bank 1 (bank 2)/ Min.: 0%, Max.: 399.9%	-	Yes
	Diagnostic Note: This value represents the duty ratio necessary to operate the camshaft timing oil control valve in order to block the camshaft timing oil control valve path and maintain the advanced state of the VVT controller. This is only available during the Active Test.		

VVT Change Angle #1, #2

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
VVT Change Angle #1, #2	VVT displacement angle for bank 1 (bank2)/ Min.: -320 DegFR, Max.: 320 DegFR	-	Yes
	Diagnostic Note: This is the VVT displacement angle during forced operation. This is only available during the Active Test. By checking the VVT Change Angle during the Active Test, it is also possible to determine whether or not the camshaft position sensor signal is being output.		

VVT OCV Duty #1, #2

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
VVT OCV Duty #1, #2	VVT camshaft timing oil control valve operation duty for bank 1 (bank2)/ Min.: 0%, Max.: 399.9%	-	Yes
	Diagnostic Note: This is the requested duty value for forced operation. This is only available during the Active Test.		

VVT Ex Hold Lrn Val #1, #2

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
VVT Ex Hold Lrn Val #1, #2	VVT exhaust hold duty ratio learned value for bank 1 (bank2)/ Min.: 0%, Max.: 399.9%	-	Yes
	Diagnostic Note: This value represents the duty ratio necessary to operate the camshaft timing oil control valve in order to block the camshaft timing oil control valve path and maintain the advanced state of the VVT controller. This is only available during the Active Test.		

VVT Ex Chg Angle #1, #2

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
VVT Ex Chg Angle #1, #2	VVT exhaust displacement angle for bank 1 (bank2)/ Min.: 0 DegFR, Max.: 639.9 DegFR	-	Yes
Diagnostic Note: This is the displacement angle during forced operation. This is only available during the Active Test.			

VVT Ex OCV Duty #1, #2

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
VVT Ex OCV Duty #1, #2	VVT exhaust camshaft timing oil control valve duty for bank 1 (bank2)/ Min.: 0%, Max.: 399.9%	-	No
Diagnostic Note: This is the requested duty value for forced operation. This is only available during the Active Test.			

Target VVT Angle #1, #2

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Target VVT Angle #1, #2	Target VVT angle for bank 1 (bank2)/ Min.: -320 DegFR, Max.: 320 DegFR	-	Yes
Diagnostic Note: This is only available during the Active Test.			

Target VVT Ex Angle #1, #2

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Target VVT Ex Angle #1, #2	Target VVT exhaust angle for bank 1 (bank2)/ Min.: 0 DegFR, Max.: 640 DegFR	-	Yes
Diagnostic Note: This is only available during the Active Test.			

VVT OCV Current #1, #2

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
	VVT camshaft timing oil control valve	0.55 to 0.85 A: Idling	

VVT OCV Current #1, #2	output current for bank 1 (bank2)/ Min.: 0 A, Max.: 1.99 A	after warming up	Yes
Diagnostic Note: This is only available during the Active Test.			

VVT Ex OCV Current #1, #2

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
VVT Ex OCV Current #1, #2	VVT exhaust camshaft timing oil control valve output current for bank 1 (bank2)/ Min.: 0 A, Max.: 1.99 A	0.55 to 0.85 A: Idling after warming up	Yes
Diagnostic Note: This is only available during the Active Test.			

12. VN Turbo (All Data)

VN Turbo Type

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
VN Turbo Type	Turbo type/ Not/Commo/Vacuum/CAN	Not	No
Diagnostic Note: This is the type of the turbo charger.			

13. Catalyst (Gas CAT Converter)

Catalyst Temp B1S1

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Catalyst Temp B1S1	Catalyst temperature/ Min.: -40°C, Max.: 6513.5°C	-	Yes
Diagnostic Note: This is the temperature of the front catalyst estimated by the ECM.			

14. Various Vehicle Conditions 2 (All Data)

Starter Signal

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Starter Signal	Starter signal/ ON or OFF	ON: Starter operating OFF: Starter not operating	Yes

Starter Control

--	--	--	--

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Starter Control	Starter signal/ ON or OFF	ON: Starter operating OFF: Starter not operating	Yes

Starter Cut Relay

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Starter Cut Relay	Starter cut relay/ ON or OFF	-	Yes

ACC Relay

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
ACC Relay	ACC relay/ ON or OFF	-	Yes

Neutral Position SW Signal

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Neutral Position SW Signal	PNP switch status/ ON or OFF	ON: Shift lever in P, N or neutral	Yes

Clutch Switch

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Clutch Switch	Clutch switch status/ ON or OFF	ON: Clutch pedal depressed OFF: Clutch pedal released	Yes

Stop Light Switch

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Stop Light Switch	Stop light switch status/ ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released	Yes

A/C Signal

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
A/C Signal	A/C switch status/ ON or OFF	ON: A/C on	Yes

A/C Pressure Normal SW

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
A/C Pressure Normal SW	Air conditioning pressure sensor status/ ON or OFF	ON: Air conditioning pressure sensor on	Yes

Closed Throttle Position SW

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Closed Throttle Position SW	Closed throttle position switch/ ON or OFF	<ul style="list-style-type: none"> • ON: Throttle fully closed • OFF: Throttle open 	Yes

Rear Defogger SW

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Rear Defogger SW	Rear defogger switch/ ON or OFF	ON: Rear defogger switch ON	No

Blower Fan SW

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Blower Fan SW	Blower fan switch/ ON or OFF	ON: Blower fan switch ON	No

Head Light Switch

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Head Light Switch	Head light switch/ ON or OFF	ON: light control switch tail on	No

Front Wiper Switch

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Front Wiper Switch	Front wiper switch/ ON or OFF	ON: Front wiper switch ON	No

Ignition Status

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Ignition Status	Ignition switch/ ON or OFF	ON: Ignition switch ON	Yes

Fuel Cut Condition

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Fuel Cut Condition	Fuel cut condition/ ON or OFF	ON: Fuel cut operating	Yes

15. Check Mode (Check Mode)

Check Mode

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Check Mode	Check mode/ ON or OFF	ON: Check mode on	No

16. Test Result (Monitor Status)

Monitor Information 1

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE	STORED AS FREEZE FRAME DATA
NSW Test Result	N position monitor/ Compl or Incmpl	-	*1	No
OXS1 Test Result	Check mode result for heated oxygen sensor / Compl or Incmpl	-	*1	No
A/F Test Results #1	Check mode result for air fuel ratio sensor/ Compl or Incmpl	-	*1	No
Starter SW Test Result	Check mode result for starter switch/ Compl or Incmpl	-	*1	No
Complete Parts Monitor	Comprehensive component monitor/ Not Avl or Avail	-	*1	No
Fuel System Monitor	Fuel system monitor/ Not Avl or Avail	-	*1	No
Misfire Test Result	Check mode result for misfire monitor/ Not Avl or Avail	-	*1	No
EGR/VVT Monitor	EGR/VVT monitor/ Not Avl or Avail	-	*1	No
EGR/VVT Monitor	EGR/VVT monitor/ Not Avl or Avail	-	*1	No

	Compl or Incmpl			
O2S(A/FS) Heater Monitor	O2S (A/FS) heater monitor/ Not Avl or Avail	-	*1	No
O2S(A/FS) Heater Monitor	O2S (A/FS) heater monitor/ Compl or Incmpl	-	*1	No
O2S(A/FS) Monitor	O2S (A/FS) monitor/ Not Avl or Avail	-	*1	No
O2S(A/FS) Monitor	O2S (A/FS) monitor/ Compl or Incmpl	-	*1	No
A/C Monitor	A/C monitor/ Not Avl or Avail	-	*1	No
A/C Monitor	A/C monitor/ Compl or Incmpl	-	*1	No
2nd Air Monitor	2nd air monitor/ Not Avl or Avail	-	*1	No
2nd Air Monitor	2nd air monitor/ Compl or Incmpl	-	*1	No
EVAP Monitor	EVAP monitor/ Not Avl or Avail	-	*1	No
EVAP Monitor	EVAP monitor/ Compl or Incmpl	-	*1	No
Heated Catalyst Monitor	Heated catalyst monitor/ Not Avl or Avail	-	*1	No
Heated Catalyst Monitor	Heated catalyst monitor/ Compl or Incmpl	-	*1	No
Catalyst Monitor	Catalyst monitor/ Not Avl or Avail	-	*1	No
Catalyst Monitor	Catalyst monitor/ Compl or Incmpl	-	*1	No

*1:

Avail: The monitor is available on the vehicle.

Not Avl: The monitor is not available on the vehicle.

Incmpl / Compl: The item changes from Incmpl to Compl if the monitor was completed at least once at some time in the past. This item does not change when the ignition switch is turned off. However, the item changes back to Incmpl when DTCs are cleared or the battery cable is disconnected.

Monitor result (mode 06): The last judgment result is output. This is not cleared when the ignition switch is turned off, but is cleared when DTCs are cleared.

Monitor Information 2

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE	STORED AS FREEZE FRAME DATA
Component Monitor ENA	Comprehensive component monitor/ Unable or Enable	-	*2	No

Component Monitor CMPL	Comprehensive component monitor/ Compl or Incmpl	-	*2	No
Fuel System Monitor ENA	Fuel system monitor/ Unable or Enable	-	*2	No
Fuel System Monitor CMPL	Fuel system monitor/ Compl or Incmpl	-	*2	No
Misfire Monitor ENA	Misfire monitor/ Unable or Enable	-	*2	No
Misfire Monitor CMPL	Misfire monitor/ Compl or Incmpl	-	*2	No
EGR/VVT Monitor ENA	EGR monitor/ Unable or Enable	-	*2	No
EGR/VVT Monitor CMPL	EGR monitor/ Compl or Incmpl	-	*2	No
Heater Monitor ENA	O2S (A/FS) heater monitor/ Unable or Enable	-	*2	No
Heater Monitor CMPL	O2S (A/FS) heater monitor/ Compl or Incmpl	-	*2	No
O2S(A/FS) Monitor ENA	O2S (A/FS) monitor/ Unable or Enable	-	*2	No
O2S(A/FS) Monitor CMPL	O2S (A/FS) monitor/ Compl or Incmpl	-	*2	No
A/C Monitor ENA	A/C monitor/ Unable or Enable	-	*2	No
A/C Monitor CMPL	A/C monitor/ Compl or Incmpl	-	*2	No
2nd Air Monitor ENA	2nd air monitor/ Unable or Enable	-	*2	No
2nd Air Monitor CMPL	2nd air monitor/ Compl or Incmpl	-	*2	No
EVAP Monitor ENA	EVAP monitor/ Unable or Enable	-	*2	No
EVAP Monitor CMPL	EVAP monitor/ Compl or Incmpl	-	*2	No
Heated Cat Monitor ENA	Heated catalyst monitor/ Unable or Enable	-	*2	No
Heated Cat Monitor CMPL	Heated catalyst monitor/ Compl or Incmpl	-	*2	No
Catalyst Monitor ENA	Catalyst monitor/ Unable or Enable	-	*2	No
Catalyst Monitor	Catalyst monitor/			

CMPL	Compl or Incmpl	-	*2	No
------	-----------------	---	----	----

*2:
 Enable: The monitor is available on the vehicle.
 Unable: The monitor is not available on the vehicle.
 Incmpl / Compl: The item changes from Incmpl to Compl if the monitor was completed during the current trip. The item changes back to Incmpl when the ignition switch is turned off.
 Monitor result (mode 06): The last judgment result is output. This is not cleared when the ignition switch is turned off, but is cleared when DTCs are cleared. Therefore, only when DTCs are cleared at the beginning of a trip do the system monitor (Monitor Information 2) and monitor result (mode 06) match.

17. Various Vehicle Conditions 3 (All Data)

TC Terminal

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
TC Terminal	TC terminal status/ ON or OFF	-	No

Codes (Include History)

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
# Codes (Include History)	Number of codes/ Min.: 0, Max.: 255	0	No

MIL

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
MIL	MIL status/ ON or OFF	-	No

MIL ON Run Distance

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
MIL ON Run Distance	Distance driven with MIL on/ Min.: 0 km, Max.: 65535 km	-	No
Diagnostic Note: This is the distance driven after a DTC is stored.			

Running Time from MIL ON

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Running Time from MIL ON	Running time from MIL ON/ Min.: 0 min, Max.: 65535	-	No

	min		
--	-----	--	--

Time after DTC Cleared

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Time after DTC Cleared	Time after DTCs cleared/ Min.: 0 min, Max.: 65535 min	Time after DTCs cleared	Yes
	Diagnostic Note: This is the time elapsed after DTCs were cleared. Time elapsed after the ignition switch is turned off is not counted.		

Distance from DTC Cleared

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Distance from DTC Cleared	Distance driven after DTCs cleared/ Min.: 0 km, Max.: 65535 km	Distance driven after DTCs cleared	Yes
	Diagnostic Note: This is the distance driven after DTCs were cleared.		

Warmup Cycle Cleared DTC

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Warmup Cycle Cleared DTC	Warmup cycles after DTCs cleared/ Min.: 0, Max.: 255	-	Yes
	Diagnostic Note: This is the number of warmup cycles after the DTCs were cleared. This is the number of times the engine was warmed up* after DTCs were cleared (or after the vehicle left the factory). *: An engine warmup is defined as the engine coolant temperature rising 20°C (104°F) or more and reaching a temperature of 70°C (158°F) or higher after the engine is started.		

Dist Batt Cable Disconnect

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Dist Batt Cable Disconnect	Distance driven after battery cable disconnected/ Min.: 0 km, Max.: 65535 km	Total distance vehicle driven after battery cable disconnected	Yes

IG OFF Elapsed Time

--	--	--	--

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
IG OFF Elapsed Time	Time after ignition switch off/ Min.: 0 min, Max.: 655350 min	-	Yes

OBD Requirements

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
OBD Requirements	OBD requirement	OBD II (California ARB)	No

Number of Emission DTC

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Number of Emission DTC	Emissions-related DTCs	-	No
	Diagnostic Note: This is the number of emissions-related DTCs.		

TC and TE1

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
TC and TE1	TC and CG (TE1) terminals of DLC3/ ON or OFF	-	Yes

18. Misfire (Gas Misfire)

Cylinder #1 Misfire Count to Cylinder #4 Misfire Count

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Cylinder #1 Misfire Count Cylinder #2 Misfire Count Cylinder #3 Misfire Count Cylinder #4 Misfire Count	Misfire count of cylinders 1 to 4/ Min.: 0, Max.: 255	0 to 16	Yes
Diagnostic Note: This is the misfire count for each individual cylinder. This counter is incremented by one for each misfire and is cleared every 200 revolutions. Check this item to help determine the malfunctioning cylinder.			

19. Various Vehicle Conditions 4 (All Data)

Engine Speed (Starter Off)

TESTER DISPLAY	MEASUREMENT	NORMAL	STORED AS FREEZE FRAME
----------------	-------------	--------	------------------------

	ITEM/RANGE	CONDITION	DATA
Engine Speed (Starter Off)	Engine speed when starter off/ Min.: 0 rpm, Max.: 51199 rpm	-	Yes
	Diagnostic Note: This is the engine speed immediately after starting the engine.		

Starter Count

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Starter Count	Number of times starter turned on after ignition switch turned to ON/ Min.: 0, Max.: 255	-	Yes
	Diagnostic Note: This is the number of times the starter turned on during the current trip.		

Run Dist of Previous Trip

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Run Dist of Previous Trip	Distance driven during previous trip/ Min.: 0 km, Max.: 655.35 km	-	Yes
	Diagnostic Note: Before 5 seconds elapse after starting the engine, which is DTC P1604 (Startability Malfunction) detection duration, this parameter indicates the distance driven during the previous trip. After 5 seconds elapse after starting the engine, this parameter indicates the distance driven during the current trip calculated from the vehicle speed signal. HINT: Run Dist of Previous Trip in freeze frame data which were present when the startability malfunction occurred (DTC P1604 detected) indicates the distance driven during the previous trip, but in all other cases, such as for the snapshot data of Data List (real-time measurements), or for freeze frame data which were present when the DTCs other than P1604 were detected, the value indicates the distance driven during the current trip.		

Engine Starting Time

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Engine Starting Time	Time elapsed before engine starts/ Min.: 0 ms, Max.: 655350 ms	-	Yes
	Diagnostic Note: This is the time elapsed after the starter turns on until the engine speed reaches 400 rpm.		

This value is cleared 5 seconds after the engine is started and the value is displayed as 0 ms.

Previous Trip Coolant Temp

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Previous Trip Coolant Temp	Engine coolant temperature during previous trip/ Min.: -40°C, Max.: 215°C	-	Yes
	Diagnostic Note: Before 120 seconds elapse after starting the engine, this parameter indicates the engine coolant temperature at the end of the previous trip. After 120 seconds elapse after starting the engine, this parameter indicates the engine coolant temperature during the current trip.		

Previous Trip Intake Temp

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Previous Trip Intake Temp	Intake air temperature during previous trip/ Min.: -40°C, Max.: 215°C	-	Yes
	Diagnostic Note: Before 120 seconds elapse after starting the engine, this parameter indicates the intake air temperature at the end of the previous trip. After 120 seconds elapse after starting the engine, this parameter indicates the intake air temperature during the current trip.		

Engine Oil Temperature

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Engine Oil Temperature	Engine oil temperature (estimated temperature)/ Min.: -40°C, Max.: 215°C	-	Yes

Previous Trip Eng Oil Temp

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Previous Trip Eng Oil Temp	Engine oil temperature during previous trip/ Min.: -40°C, Max.: 215°C	-	Yes

Ambient Temp for A/C

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
----------------	------------------------	------------------	-----------------------------

Ambient Temp for A/C	Ambient temperature for A/C/ Min.: -40°C, Max.: 215°C	-	Yes
----------------------	--	---	-----

Previous Trip Ambient Temp

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Previous Trip Ambient Temp	Ambient temperature during previous trip/ Min.: -40°C, Max.: 215°C	-	Yes

Engine Start Hesitation

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Engine Start Hesitation	History of hesitation during engine start/ ON or OFF	-	Yes
	Diagnostic Note: This value changes to ON when the engine speed does not reach 500 rpm during cranking.		

Low Rev for Eng Start

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Low Rev for Eng Start	History of low engine speed after engine start/ ON or OFF	-	Yes
	Diagnostic Note: This flag changes to ON when the engine speed drops to 200 rpm or less within approximately 2 seconds of starting the engine.		

Fuel Cut Elps Time

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Fuel Cut Elps Time	Time elapsed before engine starts/ Time elapsed after fuel cut/ Min.: 0 sec, Max.: 67107 sec	-	Yes

Engine Oil Temp for Eng Start

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Engine Oil Temp for	History of engine oil temperature		

Eng Start	during engine start/ Min.: -40 deg, Max.: 215 deg	-	Yes
-----------	--	---	-----

A/F Learn Value Idle #1

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
A/F Learn Value Idle #1	Air fuel ratio learn value of idle area/ Min.: -50%, Max.: 49.6%	-15 to +15%	Yes
	Diagnostic Note: Learning is performed when idling with the engine warmed up (engine coolant temperature is 80°C [176°F] or higher).		

A/F Learn Value Idle #1 (Dual)

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
A/F Learn Value Idle #1 (Dual)	Air fuel ratio learn value of idle area/ Min.: -50%, Max.: 49.6%	-15 to +15%	Yes
	Diagnostic Note: Learning is performed when idling with the engine warmed up (engine coolant temperature is 80°C [176°F] or higher).		

A/F Learn Value Low #1

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
A/F Learn Value Low #1	Air fuel ratio learn value of low load area/ Min.: -50%, Max.: 49.6%	-15 to +15%	Yes
	Diagnostic Note: Learning is performed when driving with the engine warmed up (engine coolant temperature is 80°C [176°F] or higher) and operating in the low load range (when the range of engine loads is divided into four parts).		

A/F Learn Value Mid1 #1

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
A/F Learn Value Mid1 #1	Air fuel ratio learn value of middle1 load area/ Min.: -50%, Max.: 49.6%	-15 to +15%	Yes
	Diagnostic Note: Learning is performed when driving with the engine warmed up (engine coolant temperature is 80°C [176°F] or higher) and operating in the mid-size load range closer to the low load range (when the range of engine loads is divided into four parts).		

A/F Learn Value High #1

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
A/F Learn Value High #1	Air fuel ratio learn value of high load area/ Min.: -50%, Max.: 49.6%	-15 to +15%	Yes
	Diagnostic Note: Learning is performed when driving with the engine warmed up (engine coolant temperature is 80°C [176°F] or higher) and operating in the high load range (when the range of engine loads is divided into four parts).		

A/F Learn Value Low #1 (Dual)

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
A/F Learn Value Low #1	Air fuel ratio learn value of low load area/ Min.: -50%, Max.: 49.6%	-15 to +15%	Yes
	Diagnostic Note: Learning is performed when driving with the engine warmed up (engine coolant temperature is 80°C [176°F] or higher) and operating in the low load range (when the range of engine loads is divided into four parts).		

A/F Learn Value Mid1 #1 (Dual)

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
A/F Learn Value Mid1 #1	Air fuel ratio learn value of middle1 load area/ Min.: -50%, Max.: 49.6%	-15 to +15%	Yes
	Diagnostic Note: Learning is performed when driving with the engine warmed up (engine coolant temperature is 80°C [176°F] or higher) and operating in the mid-size load range closer to the low load range (when the range of engine loads is divided into four parts).		

A/F Learn Value High #1 (Dual)

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
A/F Learn Value High #1	Air fuel ratio learn value of high load area/ Min.: -50%, Max.: 49.6%	-15 to +15%	Yes
	Diagnostic Note: Learning is performed when driving with the engine warmed up (engine coolant temperature is 80°C [176°F] or higher) and operating in the high load range (when the range of engine loads is divided into four parts).		

A/C Magnetic Clutch Relay

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
A/C Magnetic Clutch Relay	A/C magnetic clutch relay/ ON or OFF	ON: A/C on	Yes

Electrical Fan Motor

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Electrical Fan Motor	Electric fan motors operation status/ ON or OFF	-	Yes

Electric Cooling Fan Relay #1

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Electric Cooling Fan Relay #1	Electric cooling fan relay No. 1/ ON or OFF	ON: Cooling fan relay No. 1 ON	Yes

Electric Cooling Fan Relay #2

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Electric Cooling Fan Relay #2	Electric cooling fan relay No. 2/ ON or OFF	ON: Cooling fan relay No. 2 ON	Yes

Brake Override System

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Brake Override System	Brake override system operation/ ON or OFF	ON: Brake override system ON	Yes

Idle Fuel Cut

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Idle Fuel Cut	Fuel cut at idle/ ON or OFF	ON: Fuel cut operating	Yes
	Diagnostic Note: Idle Fuel Cut = "ON" when the throttle valve is fully closed and the engine speed is		

high.

FC TAU

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
FC TAU	Fuel cut TAU (fuel cut during very light load)/ ON or OFF	ON: Fuel cut operating	Yes
	Diagnostic Note: This is the fuel cut performed under a very light load to prevent the engine combustion from becoming incomplete.		

Immobiliser Fuel Cut

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Immobiliser Fuel Cut	Status of immobiliser fuel cut/ ON or OFF	-	Yes

Immobiliser Fuel Cut History

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Immobiliser Fuel Cut History	Status of the immobiliser fuel cut history/ ON or OFF	-	Yes

Fuel Dilution Estimate

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Fuel Dilution Estimate	Fuel dilution estimate/ Min.: 0 ml, Max.: 1279.9 ml	-	No

20. Compression (Compression)

Engine Speed of Cyl #1 to #4

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Engine Speed of Cyl #1 Engine Speed of Cyl	Engine speed for cylinder No. 1 to No. 4/ Min.: 0 rpm, Max.: 51199 rpm	-	Yes
	Diagnostic Note: This is output only when Check the Cylinder Compression is performed using the Active Test.		

#2 Engine Speed of Cyl	This is the engine speed for each cylinder measured during the engine cranking. When there is compression loss, the engine speed for that cylinder increases.
#3 Engine Speed of Cyl	HINT: When multiple cylinders have compression loss, the engine speeds for multiple cylinders increase and it is not possible to determine which cylinders have compression loss. At this time, it is necessary to actually perform a compression measurement.
#4	

Av Engine Speed of All Cyl

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Av Engine Speed of All Cyl	Average engine speed for all cylinders/ Min.: 0 rpm, Max.: 51199 rpm	-	No
	Diagnostic Note: This is output only when Check the Cylinder Compression is performed using the Active Test.		

21. Automatic Transmission (All Data)

Refer to Automatic Transmission System [INFO](#) .

Received MIL from ECT

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Received MIL from ECT	MIL status/ ON or OFF	-	Yes

Shift Position Sig from ECT

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Shift Position Sig from ECT	Received Shift Position Signal from ECT/ 1st, 2nd, 3rd, 4th, 5th, 6th, 7th or 8th	Same as actual gear ratio	Yes

SPD (NT)

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
SPD (NT)	Input turbine speed (speed sensor NT)/ Min.: 0 rpm, Max.:	<ul style="list-style-type: none"> Lock-up ON (After warming up engine): Input turbine speed (NT) equal to engine speed Lock-up OFF (Idling at P or N position): 	Yes

	12750 rpm	Input turbine speed (NT) nearly equal to engine speed	
--	-----------	---	--

ECT Lock Up

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
ECT Lock Up	ECT lock up status/ ON or OFF	-	Yes

Shift SW Status (P Range)

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Shift SW Status (P Range)	Park/neutral position switch status/ ON or OFF	ON: Shift lever in P OFF: Shift lever not in P	Yes

Shift SW Status (R Range)

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Shift SW Status (R Range)	Park/neutral position switch status/ ON or OFF	ON: Shift lever in R OFF: Shift lever not in R	Yes

Shift SW Status (N Range)

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Shift SW Status (N Range)	Park/neutral position switch status/ ON or OFF	ON: Shift lever in N OFF: Shift lever not in N	Yes

Sports Mode Selection SW

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Sports Mode Selection SW	Sport mode select switch status/ ON or OFF	ON: Shift lever in M, "+" or "-" OFF: Shift lever not in M, "+" or "-"	Yes

Shift SW Status (D Range)

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Shift SW Status (D Range)	Park/neutral position switch status/	ON: Shift lever in D OFF: Shift lever not	Yes

	ON or OFF	in D
--	-----------	------

Spark Timing Retard Request from ECT

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Spark Timing Retard Request from ECT	Status of the spark timing retard request from ECT/ ON or OFF	-	Yes

Fuel Cut Request from ECT

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Fuel Cut Request from ECT	Status of the fuel cut request from ECT/ ON or OFF	-	Yes

Torque Down Prohibit Request to ECT

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Torque Down Prohibit Request to ECT	Status of the torque down prohibit request to ECT/ ON or OFF	-	Yes

Torque Down Request from VSC

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Torque Down Request from VSC	Status of the torque down request from VSC/ ON or OFF	-	Yes

Torque Up Request from VSC

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Torque Up Request from VSC	Status of the torque up request from VSC/ ON or OFF	-	Yes

Torque Down Prohibit Request to VSC

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Torque Down Prohibit Request to VSC	Status of the torque down prohibit request to VSC/ ON or OFF	-	Yes

Torque Up Prohibit Request to VSC

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	STORED AS FREEZE FRAME DATA
Torque Up Prohibit Request to VSC	Status of the torque up prohibit request to VSC/ ON or OFF	-	Yes

22. ACTIVE TEST

HINT:

Using the Techstream to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

- (a) Warm up the engine.
- (b) Turn the ignition switch off.
- (c) Connect the Techstream to the DLC3.
- (d) Turn the ignition switch to ON.
- (e) Turn the Techstream on.
- (f) Enter the following menus: Powertrain / Engine / Active Test.
- (g) According to the display on the Techstream, perform the Active Test.

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Control the Injection Volume	Change injection volume	Between -12.5% and 24.8%	<ul style="list-style-type: none"> • All injectors are tested at the same time. • This test is possible when the following conditions are met: <ul style="list-style-type: none"> ◦ Engine speed is 3000 rpm or less. ◦ Engine coolant temperature is 80°C (80°F) or more. • Injection volume can be changed in fine gradations within control range. • Control the Injection Volume enables the checking and graphing of the air fuel ratio sensor and the heated oxygen sensor voltage outputs. • To conduct the test, enter the following menus: Active Test / Control the Injection Volume /

			<p>AFS Voltage B1S1 and O2S B1S2.</p> <ul style="list-style-type: none"> • During the Active Test, air fuel ratio feedback control and feedback learning are stopped.
Control the Injection Volume for A/F Sensor	Change injection volume	-12%/0%/12%	<ul style="list-style-type: none"> • All injectors are tested at the same time. • This test is possible when the following conditions are met: <ul style="list-style-type: none"> ◦ Engine speed is 3000 rpm or less. ◦ Engine coolant temperature is 80°C (80°F) or more. • Control the Injection Volume for A/F Sensor enables the checking and graphing of the air fuel ratio sensor and the heated oxygen sensor voltage outputs. • To conduct the test, enter the following menus: Active Test / Control the Injection Volume for A/F Sensor / AFS Voltage B1S1 and O2S B1S2. • During the Active Test, air fuel ratio feedback control and feedback learning are stopped.
Activate the VSV for Evap Control	Activate purge VSV control	ON/OFF	<ul style="list-style-type: none"> • Engine is stopped.
Control the A/C Magnet Clutch	A/C magnet clutch control	ON/OFF	<p>Perform this test when the following conditions are met:</p> <ul style="list-style-type: none"> • Ignition switch is ON. • Engine is stopped. • Shift lever is in P, N or neutral.
Control the Fuel Pump / Speed	Activate fuel pump	ON/OFF	<p>Perform this test when the following conditions are met:</p> <ul style="list-style-type: none"> • Ignition switch is ON. • Engine is stopped. • Shift lever is in P, N or neutral.
			Perform this test when the following

Control the Fuel Pump Duty	Fuel pump control	25%/80%	<p>conditions are met:</p> <ul style="list-style-type: none"> • Ignition switch is ON. • Engine is stopped. • Shift lever is in P, N or neutral.
Connect the TC and TE1	Turn on and off TC and TE1 connection	ON/OFF	<ul style="list-style-type: none"> • ON: TC and TE1 are connected. • OFF: TC and TE1 are disconnected. • Perform this test when the following conditions are met: <ul style="list-style-type: none"> ◦ Ignition switch is ON. ◦ Engine is stopped. ◦ Shift lever is in P, N or neutral.
Control the Electric Cooling Fan	Control electric cooling fan	ON/OFF	Perform this test when the ignition switch is ON.
Activate the ACC Cut Relay	Activate ACC cut relay	ON/OFF	<p>Perform this test when the following conditions are met:</p> <ul style="list-style-type: none"> • Ignition switch is ON. • Engine is stopped. • Shift lever is in P, N or neutral.
Control the ETCS Open/Close Slow Speed	Throttle actuator	Close/Open	<p>This test is possible when the following conditions are met:</p> <ul style="list-style-type: none"> • Ignition switch is ON. • Engine is stopped. • Accelerator pedal is fully depressed. • Shift lever is in P, N or neutral.
Control the ETCS Open/Close Fast Speed	Throttle actuator	Close/Open	<ul style="list-style-type: none"> • Same as above.
Control the Injection Timing #1	Control injection timing #1	Between -16 deg(CA) and 15.87 deg(CA)	Test possible during vehicle stopping and engine idling.
Control the Injection Timing #2	Control injection timing #2	Between -16 deg(CA) and 15.87 deg(CA)	Test possible during vehicle stopping and engine idling.
Control the Injection Timing #3	Control injection timing #3	Between -16 deg(CA) and 15.87 deg(CA)	Test possible during vehicle stopping and engine idling.

Control the Injection Timing #4	Control injection timing #4	Between -16 deg(CA) and 15.87 deg(CA)	Test possible during vehicle stopping and engine idling.
Control the Target Fuel Pressure	Control the target fuel pressure	-12.5 to 24.8%	Perform the test at below 3000 rpm.
Control the Voltage of Alternator	Control the voltage of alternator	12.8 to 14.3 V	Perform this test when the following conditions are met: <ul style="list-style-type: none"> • Engine is idling. • Shift lever is in P, N or neutral.
Control the Injection Way	Perform 3 pattern in order to operate fuel injection	Either/Port/Direct	This test is possible when the following conditions are met: <ul style="list-style-type: none"> • Engine speed is 3000 rpm or less • Engine coolant temperature is 80°C (176°F) or more. • Shift lever is in P, N or neutral. Perform the port mode within 3 minutes.
D-4S (A/F Control)	Perform 3 pattern in order to operate air fuel ratio control	<ul style="list-style-type: none"> • Either/Port/Direct • -12.5 to 24.8% 	This test is possible when the following conditions are met: <ul style="list-style-type: none"> • Engine speed is 3000 rpm or less • Engine coolant temperature is 80°C (176°F) or more. • Shift lever is in P, N or neutral. Perform the port mode within 3 minutes.
D-4S (Fuel Cut)	Perform 3 pattern in order to operate fuel cut	<ul style="list-style-type: none"> • Either/Port/Direct • Selected cylinder (cylinder #1 to #4) 	This test is possible when the following conditions are met: <ul style="list-style-type: none"> • Engine speed is 3000 rpm or less • Engine coolant temperature is 80°C (176°F) or more. • Shift lever is in P, N or neutral. Perform the port mode within 3 minutes.
D-4S (Injection Volume)	Perform 3 pattern in order to operate injection volume	<ul style="list-style-type: none"> • Either/Port/Direct • -12.5 to 24.8% 	This test is possible when the following conditions are met: <ul style="list-style-type: none"> • Engine speed is 3000 rpm or less • Engine coolant temperature is 80°C (176°F) or more. • Shift lever is in P, N or neutral.

			Perform the port mode within 3 minutes.
Control the Select Cylinder Fuel Cut	Selected cylinder (cylinder #1 to #4) injector fuel cut	#1/#2/#3/#4 ON/OFF	<p>This test is possible when the following conditions are met</p> <ul style="list-style-type: none"> • Vehicle is stopped. • Engine is idling. • Shift lever is in P, N or neutral. • Speed sensor is normal. <p>*1</p>
Control the All Cylinders Fuel Cut	All cylinder fuel cut	ON/OFF	<p>This test is possible when the following conditions are met</p> <ul style="list-style-type: none"> • Vehicle is stopped. • Engine is idling. • Shift lever is in P, N or neutral. • Speed sensor is normal. <p>*1</p>
Check the Cylinder Compression	Check the cylinder compression pressure	ON/OFF	<p>This test is possible when the following conditions are met</p> <ul style="list-style-type: none"> • Vehicle is stopped. • Engine is idling. • Shift lever is in P, N or neutral. • Speed sensor is normal. <p>*1 Fuel injection and ignition stop in all cylinders. *2</p>
Activate the Starter Cut Relay	Activate starter cut relay	ON/OFF	<p>Perform this test when the following conditions are met:</p> <ul style="list-style-type: none"> • Ignition switch is ON. • Engine is stopped. • Shift lever is in P, N or neutral.
Control the Target Engine Speed	Control the target engine speed	500 to 2000 rpm	Test possible during vehicle stopping and engine idling.
Control the VVT Linear (Bank 1)	Control VVT (for intake side of bank 1)	-27 to 36 deg (CA)	<ul style="list-style-type: none"> • Engine stalls or idles roughly when the VVT actuator is operated. • Perform this test when the following conditions are met: <ul style="list-style-type: none"> ◦ Engine is idling. ◦ Shift lever is in P, N or neutral.

			<ul style="list-style-type: none"> • DTCs related to the VVT system may be stored due to Active Test operation, but this does not indicate a malfunction.
Control the VVT Linear (Bank 2)	Control VVT (for intake side of bank 2)	-27 to 36 deg (CA)	<ul style="list-style-type: none"> • Engine stalls or idles roughly when the VVT actuator is operated. • Perform this test when the following conditions are met: <ul style="list-style-type: none"> ◦ Engine is idling. ◦ Shift lever is in P, N or neutral. • DTCs related to the VVT system may be stored due to Active Test operation, but this does not indicate a malfunction.
Control the VVT Exhaust Linear (Bank 1)	Control VVT (for exhaust side of bank 1)	0 to 51 deg (CA)	<ul style="list-style-type: none"> • Engine stalls or idles roughly when the VVT actuator is operated. • Perform this test when the following conditions are met: <ul style="list-style-type: none"> ◦ Engine is idling. ◦ Shift lever is in P, N or neutral. • DTCs related to the VVT system may be stored due to Active Test operation, but this does not indicate a malfunction.
Control the VVT Exhaust Linear (Bank 2)	Control VVT (for exhaust side of bank 2)	0 to 51 deg (CA)	<ul style="list-style-type: none"> • Engine stalls or idles roughly when the VVT actuator is operated. • Perform this test when the following conditions are met: <ul style="list-style-type: none"> ◦ Engine is idling. ◦ Shift lever is in P, N or neutral. • DTCs related to the VVT system may be stored due to Active Test operation, but this does not indicate a malfunction.

NOTICE:

***1:**

- If the display of the Data List item Catalyst OT MF F/C item is Not Avl, perform this Active Test with the vehicle stopped and the engine idling.
- If the display of the Data List item Catalyst OT MF F/C item is Avail, perform this Active Test as described below.
 - a. Stop the engine, turn the ignition switch to ON.
 - b. Enter the Control the Select Cylinder Fuel Cut.
 - c. Select the cylinder for fuel cut (cylinder #1 to #4) and turn the Active Test ON (press the RIGHT or LEFT button).
 - d. Start the engine.

HINT:

***2: When cranking the engine, each cylinder measures the engine speed. In this Active Test, the fuel and ignition of all cylinders is cut. The engine must then be cranked for approximately 10 seconds. At this time, the speed of each cylinder is measured. If the speed of one cylinder is more than the other cylinders, it can be determined that the compression pressure of that cylinder is lower than the other cylinders.**

1. Warm up the engine.
2. Turn the ignition switch off.
3. Connect the Techstream to the DLC3.
4. Turn the ignition switch to ON.
5. Turn the Techstream on.
6. Enter the following menus: Powertrain / Engine / Active Test / Check the Cylinder Compression.

HINT:

To display the entire Data List, press the pull down menu button next to Primary. Then select Compression.

7. Push the snapshot button to turn the snapshot function on.

HINT:

Using the snapshot function, data can be recorded during the Active Test.

8. While the engine is not running, press the RIGHT or LEFT button to change Check the Cylinder Compression to ON.

HINT:

After performing the above procedure, Check the Cylinder Compression will start. Fuel injection for all cylinders is prohibited and each cylinder engine speed measurement enters standby mode.

9. Crank the engine for about 10 seconds.

HINT:

Continue to crank the engine until the values change from the default value (51199 rpm).

10. Monitor the engine speed (Engine Speed of Cyl #1 to #4) displayed on the Techstream.

HINT:

At first, the Techstream displays extremely high cylinder engine speed values. After approximately 10 seconds of engine cranking, each cylinder engine speed measurement will change to the actual engine speed.

NOTICE:

- o Do not crank the engine continuously for 20 seconds or more.
- o If it is necessary to crank the engine again after Check the Cylinder Compression has been changed to ON and the engine has been cranked once, press Exit to return to the Active Test menu screen. Then change Check the Cylinder Compression to ON and crank the engine.
- o Use a fully-charged battery.

23. SYSTEM CHECK

HINT:

Performing a System Check enables the system, which consists of multiple actuators, to be operated without removing any parts. In addition, it can show whether or not any DTCs are stored, and can detect potential malfunctions in the system. The System Check can be performed with the Techstream.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Powertrain / Engine / Utility.
- (e) Perform the System Check by referring to the table below.

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Evaporative System Check (Automatic Mode)	Perform 5 steps in order to operate EVAP key-off monitor automatically	35°C (95°F) or less	<ul style="list-style-type: none">• If no pending DTCs are output after performing this test, the system is functioning normally.• Refer to EVAP Inspection Procedure  .
Evaporative System Check (Manual Mode)	Perform 5 steps in order to operate EVAP key-off monitor manually	35°C (95°F) or less	<ul style="list-style-type: none">• Used to detect malfunctioning parts.• Refer to EVAP Inspection Procedure  .

Title: FA20 ENGINE CONTROL: SFI SYSTEM: DEFINITION OF TERMS (2013 FR-S)		

DEFINITION OF TERMS

TERM	DEFINITION
Monitor Description	Description of what ECM monitors and how it detects malfunctions (monitoring purpose and details).
Related DTCs	Group of diagnostic trouble codes that are output by ECM based on same malfunction detection logic.
Typical Enabling Condition	Preconditions that allow ECM to detect malfunctions. With all preconditions satisfied, ECM stores DTC when monitored value(s) exceeds malfunction threshold(s).
Sequence of Operation	Order of monitor priority, applied if multiple sensors and components are involved in single malfunction detection process. Each sensor and component is monitored in turn, when previous detection operation is completed.
Required Sensor/Components	Sensors and components used by ECM to detect each malfunction.
Frequency of Operation	Number of times ECM checks for each malfunction during each driving cycle. "Once per driving cycle" means ECM only performs checks for that malfunction once during single driving cycle. "Continuous" means ECM performs checks for that malfunction whenever enabling conditions are met.
Duration	Minimum time for which ECM must detect continuous deviation in monitored value(s) in order to store DTC. Timing begins when Typical Enabling Conditions are met.
Malfunction Thresholds	Value beyond which ECM determines malfunctions exist and stores DTCs.
MIL Operation	Timing of MIL illumination after malfunction is detected. "Immediate" means ECM illuminates MIL as soon as malfunction is detected. "2 driving cycles" means ECM illuminates MIL if same malfunction is detected second time during next sequential driving cycle.

Title: FA20 ENGINE CONTROL: SFI SYSTEM: DIAGNOSIS SYSTEM (2013 FR-S)		

DIAGNOSIS SYSTEM

1. DESCRIPTION

When troubleshooting OBD II (On-Board Diagnostics) vehicles, the Techstream (complying with SAE J1987) must be connected to the DLC3 (Data Link Connector 3) of the vehicle. Various data in the vehicle's ECM (Engine Control Module) can be then read.

OBD II regulations require that the vehicle's on-board computer illuminates the MIL (Malfunction Indicator Lamp) on the instrument panel when the computer detects a malfunction in:

- a. The emission control system and components.
- b. The powertrain control components (which affect vehicle emissions).
- c. The computer itself.

In addition, the applicable DTCs prescribed by SAE J2012 are stored in the ECM memory. If the malfunction does not recur in 3 consecutive trips, the MIL turns off automatically but the DTCs remain stored in the ECM memory.

To check the DTCs, connect the Techstream to the DLC3. The Techstream displays output DTCs, freeze frame data, and a variety of engine data. The DTCs and freeze frame data can be cleared with the Techstream. In order to enhance OBD function on vehicles and develop the Off-Board diagnosis system, Controller Area Network (CAN) communication is used in this system. CAN is a network which uses a pair of data transmission lines spanning multiple computers and sensors. It allows for high speed communications between the systems and simplification of the wire harness connections.

2. NORMAL MODE AND CHECK MODE

The diagnosis system operates in normal mode during normal vehicle use. In normal mode, 2 trip detection logic is used to ensure accurate detection of malfunctions. Check mode is also available as an option for technicians. In check mode, 1 trip detection logic is used for duplicating malfunction symptoms and increasing the system's ability to detect malfunctions, including intermittent problems (Techstream only).

3. 2 TRIP DETECTION LOGIC

When a malfunction is first detected, the malfunction is temporarily stored in the ECM memory (1st trip). If the same malfunction is detected during the next subsequent drive cycle, the MIL is illuminated (2nd trip).

4. DLC3 (Data Link Connector 3)

- (a) Check the DLC3 INFO .

5. FREEZE FRAME DATA

The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was moving or stationary, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data stored at the time of a malfunction.

6. BATTERY VOLTAGE

Standard voltage:

11 to 14 V

If voltage is below 11 V, replace or recharge the battery.

7. MIL (Malfunction Indicator Lamp)

- (a) The MIL is illuminated when the ignition switch is first turned to ON (the engine is not running).
 (b) The MIL turns off when the engine is started. If the MIL remains illuminated, the diagnosis system has detected a malfunction or abnormality in the system.

HINT:

If the MIL is not illuminated when the ignition switch is first turned to ON, check the MIL circuit INFO .

8. ALL READINESS

HINT:

- With "All Readiness", you can check whether or not the DTC judgment has been completed by using the Techstream.
 - You should check "All Readiness" after simulating malfunction symptoms or for validation after finishing repairs.
- (a) Connect the Techstream to the DLC3.
 (b) Turn the ignition switch to ON.
 (c) Turn the Techstream on.
 (d) Clear DTCs INFO .
 (e) Turn the ignition switch off and wait for at least 30 seconds.
 (f) Turn the ignition switch to ON and turn the Techstream on.
 (g) Perform the DTC judgment driving pattern to run the DTC judgment.
 (h) Enter the following menus: Powertrain / Engine / Utility / All Readiness.
 (i) Input the DTCs to be confirmed.
 (j) Check the DTC judgment result.

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	<ul style="list-style-type: none"> • DTC judgment completed • System normal
ABNORMAL	<ul style="list-style-type: none"> • DTC judgment completed

	System abnormal
INCOMPLETE	<ul style="list-style-type: none"> • DTC judgment not completed • Perform the driving pattern after confirming DTC enabling conditions
N/A	<ul style="list-style-type: none"> • Unable to perform DTC judgment • Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

Model Year: 2013	Model: FR-S	Doc ID: RM000000PDKOXX
Title: FA20 ENGINE CONTROL: SFI SYSTEM: DTC CHECK / CLEAR (2013 FR-S)		

DTC CHECK / CLEAR

NOTICE:

When the diagnosis system is changed from normal mode to check mode or vice versa, all DTCs and freeze frame data recorded in normal mode are cleared. Before changing modes, always check and make a note of DTCs and freeze frame data.

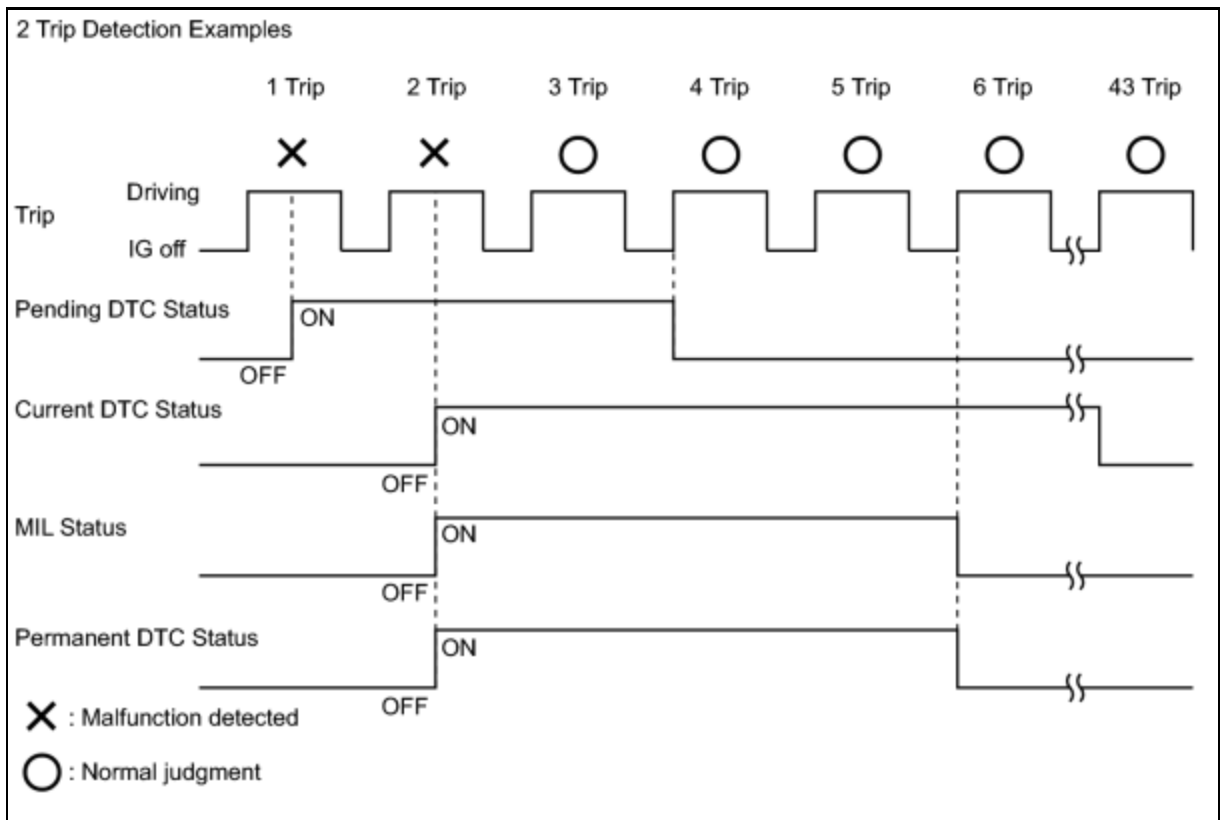

HINT:

- DTCs which are stored in the ECM can be displayed on the Techstream. The Techstream can display the current, pending and permanent DTCs.
- If a malfunction is detected during the current driving cycle, current and permanent DTCs are stored.
- Some DTCs are not stored if the ECM does not detect the same malfunction again during a second consecutive driving cycle. However, such malfunctions, detected on only one occasion, are stored as pending DTCs.
- Current and pending DTCs can be cleared by using the Techstream or by disconnecting the cable from the negative (-) battery terminal. However, permanent DTCs cannot be cleared using either of these two methods.
- After clearing current DTCs using the Techstream (or by disconnecting the cable from the negative battery terminal), permanent DTCs can be cleared when the system is determined to be normal for the relevant DTCs and then the universal trip is performed. The driving pattern to obtain a normal judgment is described under the "Confirmation Driving Pattern" for the respective DTC.

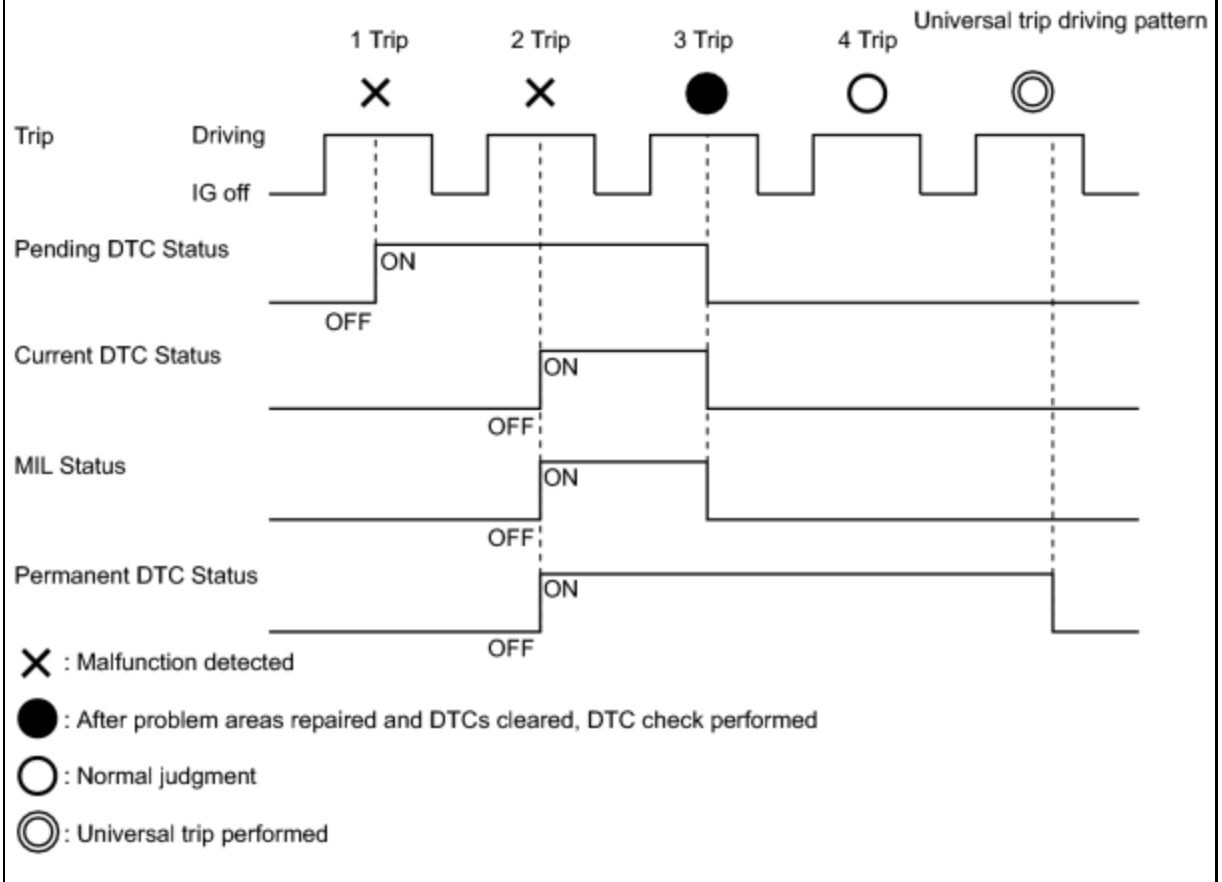

2 Trip Detection Examples

Pending DTC	Store condition	Malfunction detected
	Clear condition	System determined to be normal or DTCs cleared using Techstream or Cable disconnected from negative (-) battery terminal
Current DTC	Store condition	Malfunction detected (2nd trip)
	Clear condition	No malfunctions in 40 driving cycles or DTCs cleared using Techstream or Cable disconnected from negative (-) battery terminal
Permanent DTC	Store condition	Malfunction detected (2nd trip)
	Clear condition	Ignition switch turned to ON after normal judgment obtained in 3 consecutive driving cycles or After DTCs cleared using Techstream or cable disconnected from negative (-) battery terminal, normal judgment obtained and universal trip performed (not for misfire and fuel system DTCs)

		or After DTCs cleared using Techstream or cable disconnected from negative (-) battery terminal, malfunction not detected when universal trip driving performed (misfire and fuel system DTCs)
MIL	ON	Malfunction detected (2nd trip)
	OFF	Ignition switch turned to ON after normal judgment obtained in 3 consecutive driving cycles or DTCs cleared using Techstream or Cable disconnected from negative (-) battery terminal

2 Trip Detection Examples (Instance when DTCs were cleared midway through by using the Techstream or by disconnecting the cable from the negative battery terminal)

HINT:

- Obtaining a normal judgment and performing a universal trip driving pattern can be done in the same driving cycle or in different driving cycles.
- It is unnecessary to obtain a normal judgment if the DTCs are misfire or fuel system DTCs.

1. CHECK DTC

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Powertrain / Engine / Trouble Codes.
- (e) Check DTCs and freeze frame data, and then write them down.
- (f) Check the details of the DTCs INFO.

2. CLEAR DTC (Pending and Current DTC)

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Powertrain / Engine / Trouble Codes.
- (e) Clear DTCs.

3. CLEAR DTC (Pending and Current DTC without using Techstream)

(a) Perform either of the following operations:

NOTICE:

After turning ignition switch off, waiting time may be required before disconnecting the cable from the negative (-) battery terminal. Therefore, make sure to read the disconnecting the cable from the negative (-) battery terminal notices before proceeding with work **INFO** .

(1) Disconnect the cable from the negative (-) battery terminal for more than 1 minute.

(2) Remove the EFI (+B) fuse from the engine room relay block assembly located inside the engine compartment for more than 1 minute.

4. CLEAR PERMANENT DTC

HINT:

Even if the following procedure is not performed, permanent DTCs are cleared by obtaining a normal judgment during 3 consecutive driving cycles.

- Connect the Techstream to the DLC3.
- Turn the ignition switch to ON.
- Turn the Techstream on.
- Enter the following menus: Powertrain / Engine / Trouble Codes.
- Check if permanent DTCs are stored.

HINT:

If permanent DTCs are not output, it is not necessary to continue this procedure.

- Clear DTCs.
- Perform the respective confirmation driving patterns in order to obtain a normal judgment for the output DTCs.

HINT:

- Confirmation driving patterns do not need to be performed for misfire and fuel system DTCs.
- For the confirmation driving pattern, refer to the procedures for the relevant DTC **INFO** .

(h) Perform the universal trip.

HINT:

The driving pattern to obtain a normal judgment and the universal trip driving can be performed consecutively in the same driving cycle.

1. Idle the engine for 30 seconds or more.
2. Drive the vehicle at 40 km/h (25 mph) or more for a total of 5 minutes or more.

CAUTION:

When performing the confirmation driving pattern, obey all speed limits and traffic laws.

HINT:

It is possible to complete the drive pattern even if the vehicle decelerates to less than 40 km/h (25 mph) during the driving cycle provided that the vehicle is driven at 40 km/h (25 mph) or more for a total of 5 minutes.

3. Allow 10 minutes or more to elapse from the time the engine is started.
 - (i) Enter the following menus: Powertrain / Engine / Trouble Codes.
 - (j) Check that the permanent DTCs have been cleared.

HINT:

The permanent DTCs are cleared when the universal trip is completed.

Title: FA20 ENGINE CONTROL: SFI SYSTEM: ECM Power Source Circuit; 2013 MY FR-S [03/2012 - 05/2013]		

ECM Power Source Circuit

DESCRIPTION

When the ignition switch is turned to ON, the IGSW signal is input into the ECM. This turns the internal transistor ON, causing the current to flow to the EFI MAIN1 relay coil, which closes the relay, supplying power to the ECM +B and +B2 terminals.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1. INSPECT ECM (POWER SOURCE VOLTAGE)

- (a) Turn the ignition switch to ON.
- (b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A34-6 (+B) - A36-4 (E01)	Ignition switch ON	12 to 14 V
A33-1 (+B2) - A36-4 (E01)	Ignition switch ON	12 to 14 V

Text in Illustration

*a	Component with harness connected (ECM)
----	--

NG **GO TO STEP 4**

OK

2. CHECK HARNESS AND CONNECTOR (ECM - BODY GROUND)

- (a) Disconnect the ECM connector.
- (b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A36-4 (E01) - Body ground	Always	Below 1 Ω

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK
▼

3. INSPECT ECM (IGSW TERMINAL VOLTAGE)

- (a) Turn the ignition switch to ON.
- (b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A33-27 (IGSW) - A36-4 (E01)	Ignition switch ON	10 to 13 V

Text in Illustration

*a	Component without harness connected (ECM)
----	---

NG ▶ **GO TO STEP 8**

OK ▶ **REPLACE ECM**

4. INSPECT ECM (SSHUT TERMINAL VOLTAGE)

- (a) Turn the ignition switch to ON.
- (b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION

A35-13 (SSHUT) - A36-4
(E01)Ignition switch
ON

approximately 0 V

Component without harness connected
(ECM)**NG** ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR****OK****5. INSPECT RELAY (EFI MAIN1)**(a) Inspect the EFI MAIN1 relay  .**NG** ▶ **REPLACE RELAY (EFI MAIN1)****OK****6. CHECK HARNESS AND CONNECTOR (EFI MAIN1 RELAY - ECM)**

- (a) Remove the EFI MAIN1 relay from the engine room relay block assembly.
- (b) Disconnect the ECM connector.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
EFI MAIN1 relay terminal 1 - A35-13 (SSHUT)	Always	Below 1 Ω
EFI MAIN1 relay terminal 3 - A34-6 (+B)	Always	Below 1 Ω
EFI MAIN1 relay terminal 3 - A33-1 (+B2)	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
EFI MAIN1 relay terminal 1 or A35-13 (SSHUT) - Body ground	Always	10 k Ω or higher
EFI MAIN1 relay terminal 3, A34-6 (+B) or A33-1 (+B2) - Body ground	Always	10 k Ω or higher

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

7. INSPECT TERMINAL VOLTAGE (EFI MAIN1 RELAY)

(a) Remove the EFI MAIN1 relay from the engine room relay block assembly.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
EFI MAIN1 relay terminal 2 - Body ground	Always	11 to 14 V
EFI MAIN1 relay terminal 5 - Body ground	Always	11 to 14 V

Text in Illustration

*1	Engine Room Relay Block Assembly
*2	EFI MAIN1 Relay Terminal

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

8. CHECK HARNESS AND CONNECTOR (IG2 RELAY - ECM)

- (a) Remove the IG2 relay from the engine room relay block assembly.
- (b) Disconnect the ECM connector.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
IG2 relay terminal 3 - A33-27 (IGSW)	Always	Below 1 Ω
IG2 relay terminal 1 - Body ground	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
IG2 relay terminal 3 or A33-27 (IGSW) - Body ground	Always	10 k Ω or higher

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

9. INSPECT RELAY (IG2)

- (a) Inspect the IG2 relay  .

NG  **REPLACE RELAY (IG2)**

OK

10. INSPECT TERMINAL VOLTAGE (IG2 RELAY)

(a) Remove the IG2 relay from the engine room relay block assembly.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
IG2 relay terminal 5 - Body ground	Always	11 to 14 V

Text in Illustration

*1	Engine Room Relay Block Assembly
*2	IG2 Relay Terminal

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

11.	CHECK HARNESS AND CONNECTOR (IG2 RELAY - IGNITION OR STARTER SWITCH ASSEMBLY)
------------	--

- (a) Remove the IG2 relay from the engine room relay block assembly.
- (b) Disconnect the ignition or starter switch assembly connector.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
IG2 relay terminal 2 - D55-6 (IG2)	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
IG2 relay terminal 2 or D55-6 (IG2) - Body ground	Always	10 k Ω or higher

NG **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

12.	INSPECT IGNITION OR STARTER SWITCH ASSEMBLY
------------	--

- (a) Inspect the ignition or starter switch assembly .

NG **REPLACE IGNITION OR STARTER SWITCH ASSEMBLY**

OK **REPAIR OR REPLACE HARNESS OR CONNECTOR**

*13	Air Cleaner	-	-
*a	EVAP System Circuit	-	-

NOTICE:

In the EVAP system of this vehicle, turning ON the vent valve does not seal off the EVAP system. To check for leaks in the EVAP system, disconnect the air inlet drain hose and apply pressure from atmospheric side of the charcoal canister assembly.

While the engine is running, if a predetermined condition (closed-loop, etc.) is met, the purge valve is opened by the ECM and fuel vapors stored in the charcoal canister assembly are purged to the intake manifold. The ECM changes the duty cycle ratio of the purge valve to control purge flow volume.

The purge flow volume is also determined by the intake manifold pressure. Atmospheric pressure is allowed into the charcoal canister assembly through the vent valve to ensure that the purge flow is maintained when negative pressure (vacuum) is applied to the charcoal canister assembly.

The following two monitors run to confirm appropriate EVAP system operation.

1. Purge flow monitor

The purge flow monitor consists of the 2 monitors. The 1st monitor is conducted every time and the 2nd monitor is activated if necessary.

- The 1st monitor

While the engine is running and the purge valve (Vacuum Switching Valve) is on (open), the ECM monitors the purge flow by measuring the EVAP pressure change. If the variation in the pressure is less than threshold, the ECM begins the 2nd monitor.

- The 2nd monitor

The vent valve is turned ON (closed) and the EVAP pressure is then measured. If the variation in the pressure is less than threshold, the ECM interprets this as the purge valve being stuck closed, and illuminates the MIL and stores DTC P0441 (2 trip detection logic).

Atmospheric pressure check:

In order to ensure reliable malfunction detection, the variation between the atmospheric pressures, before and after of the purge flow monitor, is measured by the ECM.

COMPONENT	OPERATION
Charcoal Canister Assembly	Contains activated charcoal to absorb EVAP (Evaporative Emissions) generated in fuel tank.
Cut-off valve	Located in fuel tank. Valve closes by its own weight when vehicle overturns to prevent fuel from spilling out.
Purge valve (Vacuum Switching Valve)	Opens or closes line between charcoal canister assembly and intake manifold. ECM uses purge valve to control EVAP purge flow. In order to discharge EVAP absorbed by charcoal canister assembly to intake manifold, ECM opens purge valve. EVAP discharge volume to intake manifold controlled by purge valve duty cycle (current-carrying time). (Open: on, Close: off)
Fuel tank vent valve	Located in the fuel tank. Passes evaporative emissions occurring during fueling to the charcoal canister assembly. Additionally, this mechanism also detects when the fuel tank is full.
Soak timer	Built into ECM. To ensure accurate EVAP monitor, measures 5 hours (+/-15 min) after ignition switch is turned off. This allows fuel to cool down, stabilizing EVAP pressure. When approximately 5 hours elapsed, ECM activates (refer to fig. 3).
Canister pump module	Consists of (a) to (d) below. Canister pump module cannot be disassembled.
(a) Vent valve	Vents and closes EVAP system. When ECM turns valve on, EVAP system is closed. When ECM turns valve off, EVAP system is vented. Negative pressure (vacuum) is created in EVAP system to check for EVAP leaks by closing purge valve, turning on vent valve (closing it) and operating leak detection

	pump (refer to fig. 1).
(b) Canister pressure sensor	Indicates pressure as voltages. ECM supplies regulated 5 V to pressure sensor, and uses feedback from sensor to monitor EVAP system pressure (refer to fig. 2).
(c) Leak detection pump	Creates negative pressure (vacuum) in EVAP system for leak check.
(d) Reference orifice	Has opening with 0.02 inch diameter. Vacuum is produced through orifice by closing purge valve, turning off vent valve and operating leak detection pump, to monitor reference pressure. Reference pressure indicates a small leak of EVAP.

Canister Pressure Sensor Specification (fig.2)

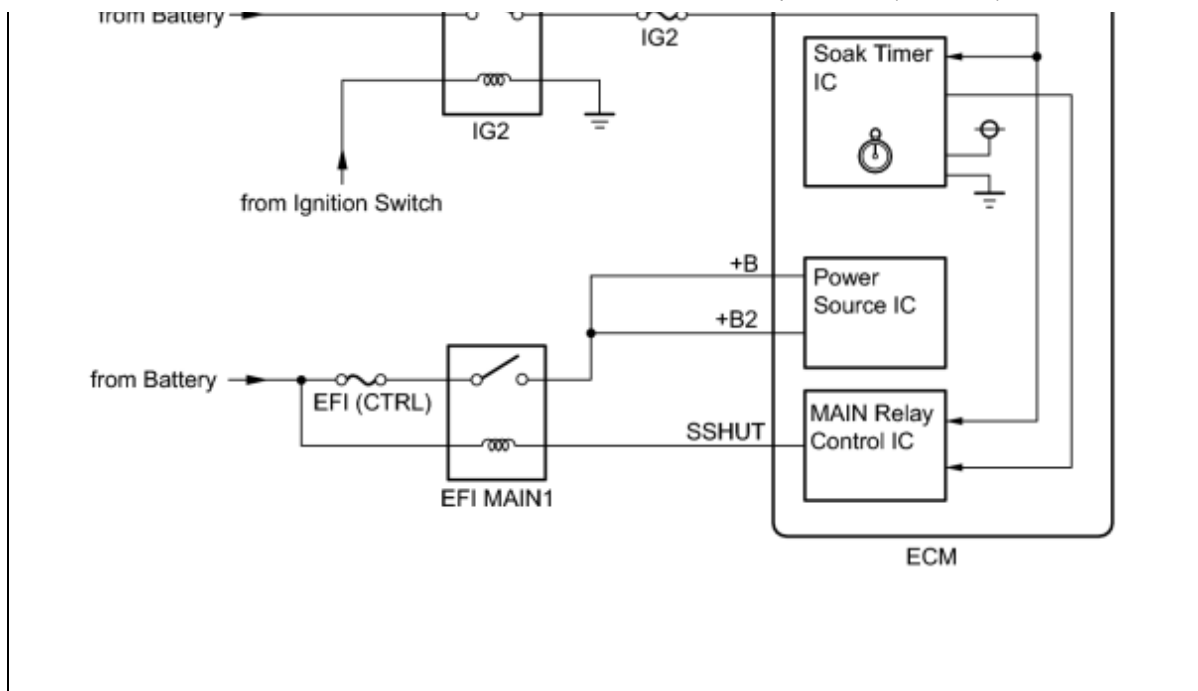

HINT:

Standard atmospheric pressure is 101.3 kPa (abs) [760 mmHg (abs)]

fig. 3

WIRING DIAGRAM

Refer to DTC P0451 INFO.

INSPECTION PROCEDURE

NOTICE:

- Inspect the fuses for circuits related to this system before performing the following inspection procedure.
- The Techstream is required to conduct the following diagnostic troubleshooting procedure.

HINT:

- Using the Techstream monitor results enables the EVAP (Evaporative Emission) system to be confirmed.
- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air fuel ratio was lean or rich, and other data from the time the malfunction occurred.

PROCEDURE

1.	CONFIRM DTC
-----------	--------------------

- Turn the ignition switch off and wait for 10 seconds.
- Turn the ignition switch to ON.
- Turn the ignition switch off and wait for 10 seconds.
- Connect the Techstream to the DLC3.
- Turn the ignition switch to ON and turn the Techstream on.
- Enter the following menus: Powertrain / Engine / Trouble Codes.
- Confirm DTCs and freeze frame data.

If any EVAP system DTCs are stored, the malfunctioning area can be determined using the table below.

Malfunctioning Areas	DTCs							
	P0441	P0451	P0452	P0453	P0455	P0456	P0458	P0459
Purge valve stuck open	●				●			
Purge valve stuck closed	●							
Purge valve low output							●	
Purge valve high output								●
Canister pressure sensor signal fixed		●						
Canister pressure sensor low output			●					
Canister pressure sensor high output				●

Pipe clogged	●						

NOTICE:

If the reference pressure difference between the first and second checks is more than the specification, all the DTCs relating to the reference pressure (P0455, P0456, P1451, P2404) will all be stored.

NEXT

2. PERFORM EVAP SYSTEM CHECK (AUTOMATIC MODE)

NOTICE:

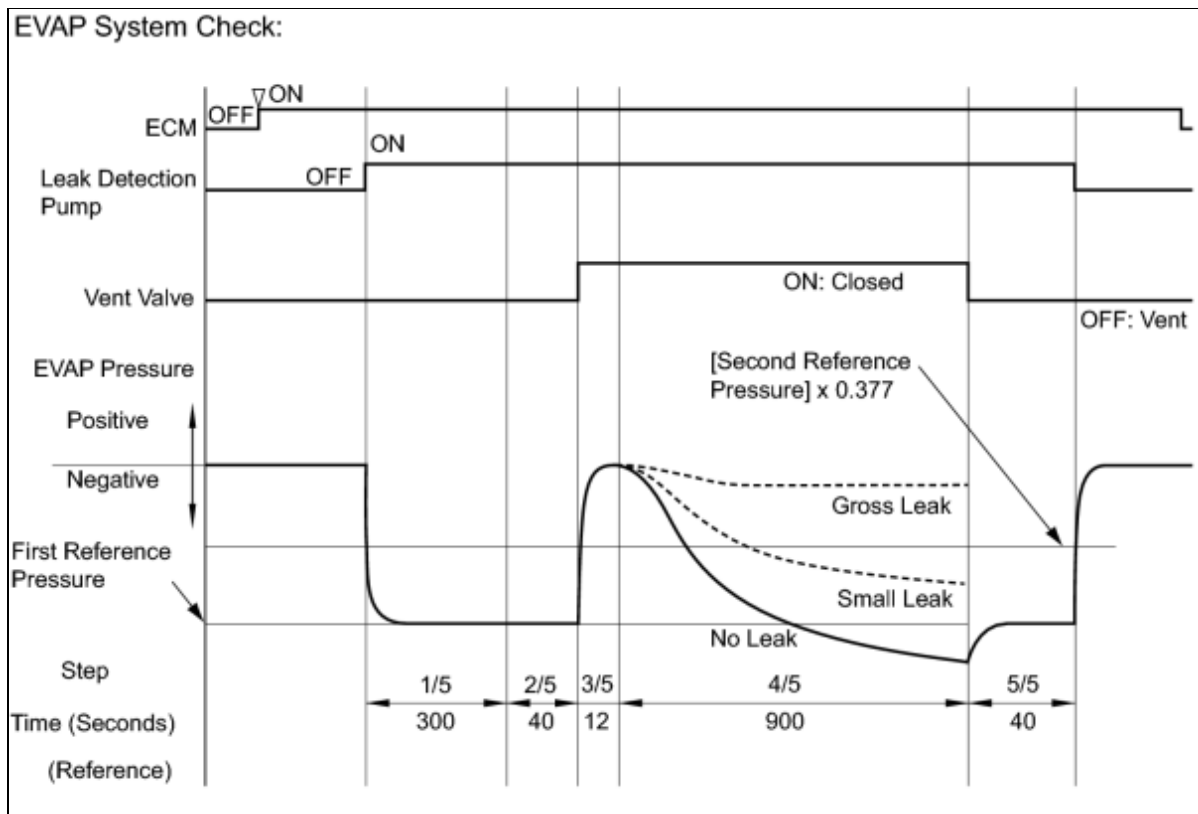

- The Evaporative System Check (Automatic Mode) consists of 5 steps performed automatically by the Techstream. It takes a maximum of approximately 24 minutes.
- Do not perform the Evaporative System Check when the fuel tank is more than 90% full because the cut-off valve may be closed, making the fuel tank leak check unavailable.
- Do not run the engine during this operation.
- When the temperature of the fuel is 35°C (95°F) or more, a large amount of vapor forms and any check results become inaccurate. When performing the Evaporative System Check, keep the fuel temperature below 35°C (95°F) and the coolant temperature below 45°C (113°F).

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Clear the DTCs INFO.
- (e) Enter the following menus: Powertrain / Engine / Utility / Evaporative System Check / Automatic Mode.
- (f) After the EVAP SYSTEM CHECK is completed, check for pending DTCs by entering the following menus: Powertrain / Engine / Trouble Codes.

NEXT

3. PERFORM EVAP SYSTEM CHECK (MANUAL MODE)

**NOTICE:**

- In the Evaporative System Check (Manual Mode), the series of 5 Evaporative System Check steps are performed manually using the Techstream.
- Do not perform the Evaporative System Check when the fuel tank is more than 90% full because the cut-off valve may be closed, making the fuel tank leak check unavailable.
- Do not run the engine during this operation.
- When the temperature of the fuel is 35°C (95°F) or more, a large amount of vapor forms and any check results become inaccurate. When performing the Evaporative System Check, keep the fuel temperature below 35°C (95°F) and the coolant temperature below 45°C (113°F).

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

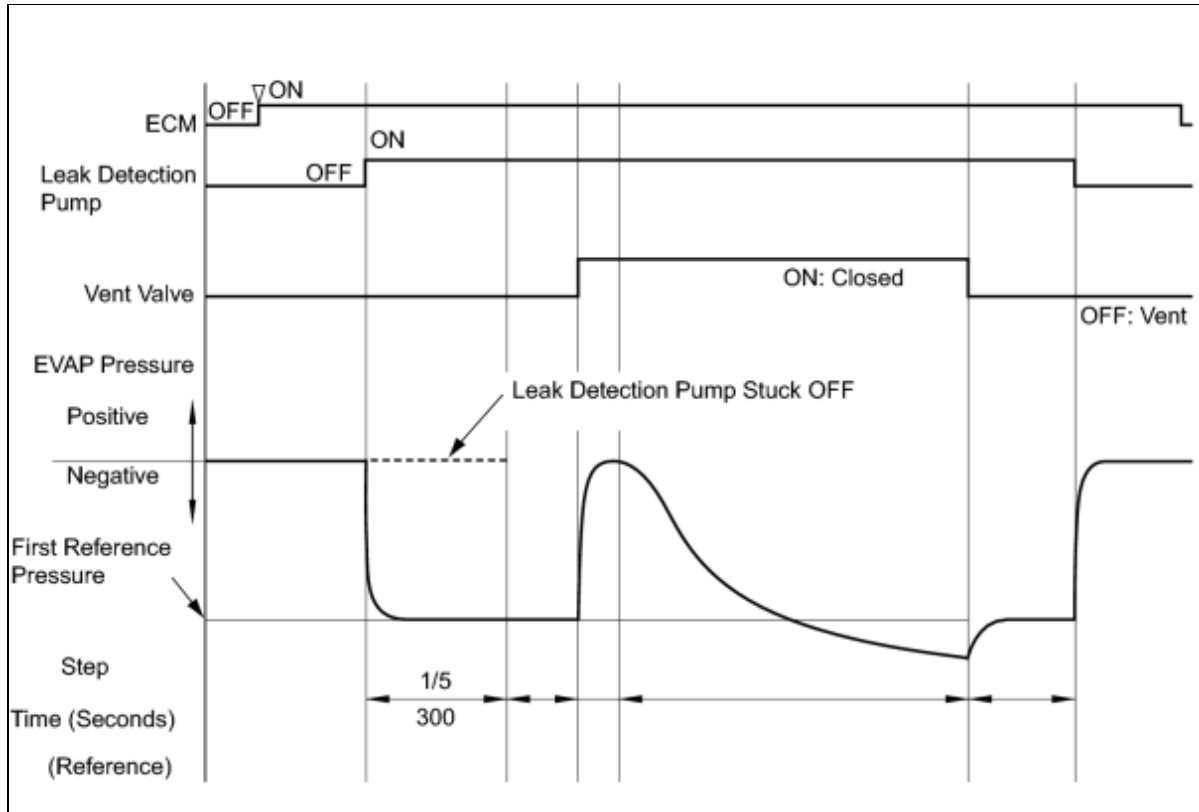

(c) Turn the Techstream on.

(d) Clear the DTCs INFO.

(e) Enter the following menus: Powertrain / Engine / Utility / Evaporative System Check / Manual Mode.

4. PERFORM EVAP SYSTEM CHECK (STEP 1/5)

(a) Check the EVAP pressure in step 1/5.

Result

DTC *	RESULT	SUSPECTED TROUBLE AREA	PROCEED TO
-	Virtually no variation in EVAP pressure	Not yet determined	A
P2404	EVAP pressure is less than -0.224 kPa(gauge) [2 mmHg(gauge)]	Leak detection pump stuck OFF	B

*: These DTCs are already present in the ECM when the vehicle arrives and are confirmed in the "Confirm DTC" procedure above.

B **GO TO STEP 9**

A

5. PERFORM EVAP SYSTEM CHECK (STEP 2/5)

5. PERFORM EVAP SYSTEM CHECK (STEP 2/5)

(a) Check the EVAP pressure in steps 2/5.

Result

DTC*	RESULT	SUSPECTED TROUBLE AREA	PROCEED TO
-	Virtually no variation in EVAP pressure	Not yet determined	A
P2404	EVAP pressure fluctuates by more than +/- 0.3 kPa (gauge) [2 mmHg (gauge)]	<ul style="list-style-type: none"> • Vent valve stuck close • Reference orifice high-flow • Reference orifice low-flow 	B

*: These DTCs are already present in the ECM when the vehicle arrives and are confirmed in the "Confirm DTC" procedure above.

HINT:

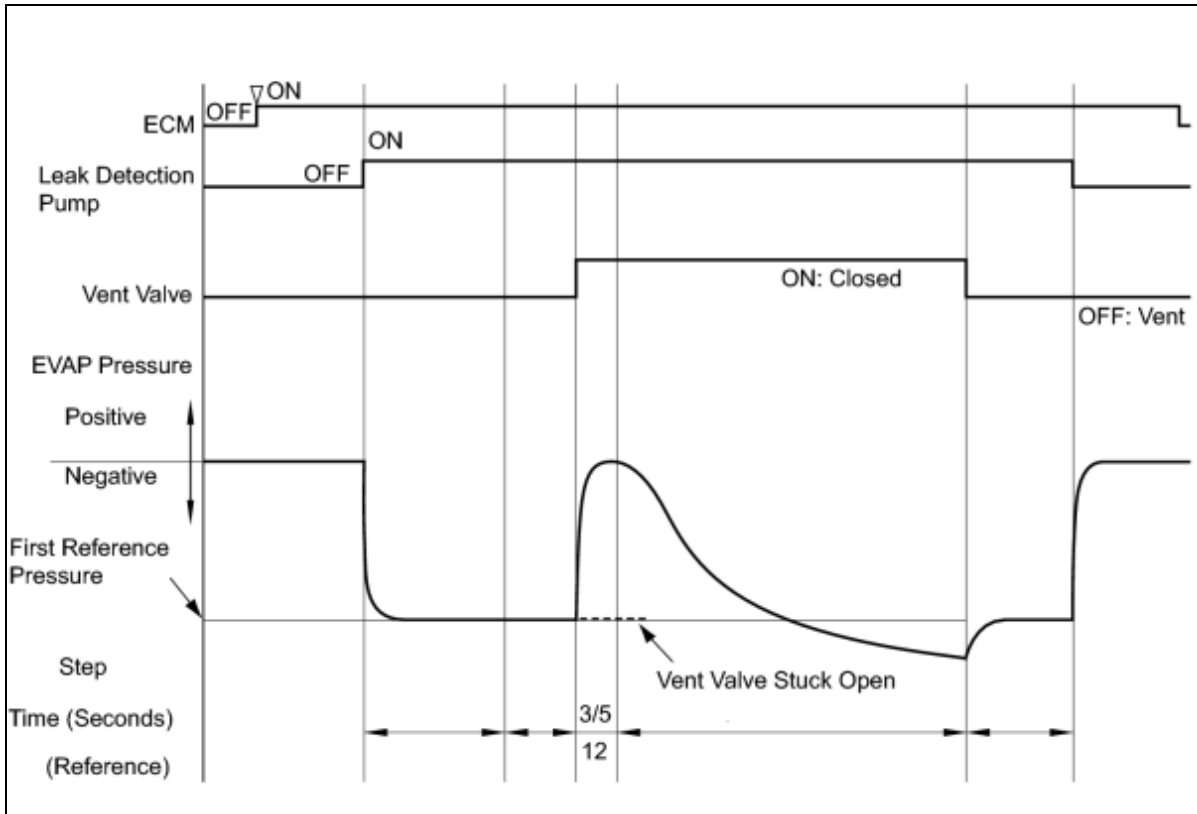

The first reference pressure is the value determined in step 2/5.

B **GO TO STEP 12**

A

6. PERFORM EVAP SYSTEM CHECK (STEP 3/5)

(a) Check the EVAP pressure in step 3/5.

Result

DTC*	RESULT	SUSPECTED TROUBLE AREA	PROCEED TO
-	EVAP pressure increases by 0.2 kPa (gauge) [2 mmHg (gauge)] or more within 12 seconds.	Not yet determined	A

Title: FA20 ENGINE CONTROL: SFI SYSTEM: FREEZE FRAME DATA (2013 FR-S)		

FREEZE FRAME DATA

1. DESCRIPTION

The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was moving or stationary, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

Freeze frame data records the engine conditions (fuel system information, calculated load, engine coolant temperature, fuel trim, engine speed, vehicle speed, etc.) when a malfunction is detected.

HINT:

If it is impossible to duplicate the problem even though a DTC is output, check the freeze frame data.

The ECM records engine conditions in the form of freeze frame data every 0.5 seconds. Using the Techstream, 5 separate sets of freeze frame data can be checked.

- 3 data sets from before the DTC was stored
- 1 data set from when the DTC was stored
- 1 data set from after the DTC was stored

These data sets can be used to simulate the condition of the vehicle from around the time of the occurrence of the malfunction. The data may assist in identifying the cause of the malfunction, and in judging whether it was temporary or not.

2. LIST OF FREEZE FRAME DATA

Refer to "Data List / Active Test" [INFO](#) .

Title: FA20 ENGINE CONTROL: SFI SYSTEM: Fuel Injector Circuit; 2013 MY FR-S [03/2012 - 05/2013]		

Fuel Injector Circuit

DESCRIPTION

The fuel injectors (for port injection) are attached to the intake manifold, and inject fuel into the intake manifold based on the ECM signals.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1. INSPECT FUEL INJECTOR ASSEMBLY (POWER SOURCE)

(a) Disconnect the fuel injector assembly connectors.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
C8-1 - Body ground	Ignition switch ON	11 to 14 V
C30-1 - Body ground	Ignition switch ON	11 to 14 V
C9-1 - Body ground	Ignition switch ON	11 to 14 V
C31-1 - Body ground	Ignition switch ON	11 to 14 V

C2-2 or A36-22 (#20) - Body ground	Always	10 k Ω or higher
C3-2 or A36-32 (#30) - Body ground	Always	10 k Ω or higher
C8-2 or A36-13 (#40) - Body ground	Always	10 k Ω or higher

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK  **REPLACE ECM**

4. CHECK HARNESS AND CONNECTOR (FUEL INJECTOR ASSEMBLY - EFI MAIN1 RELAY)

- (a) Disconnect the fuel injector assembly connector.
- (b) Remove the EFI MAIN1 relay from the engine room relay block assembly.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
C8-1 - EFI MAIN1 relay terminal 3	Always	Below 1 Ω
C30-1 - EFI MAIN1 relay terminal 3	Always	Below 1 Ω
C9-1 - EFI MAIN1 relay terminal 3	Always	Below 1 Ω
C31-1 - EFI MAIN1 relay terminal 3	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
C8-1 or EFI MAIN1 relay terminal 3 - Body ground	Always	10 k Ω or higher
C30-1 or EFI MAIN1 relay terminal 3 - Body ground	Always	10 k Ω or higher
C9-1 or EFI MAIN1 relay terminal 3 - Body ground	Always	10 k Ω or higher
C31-1 or EFI MAIN1 relay terminal 3 - Body ground	Always	10 k Ω or higher

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK  **CHECK ECM POWER SOURCE CIRCUIT**

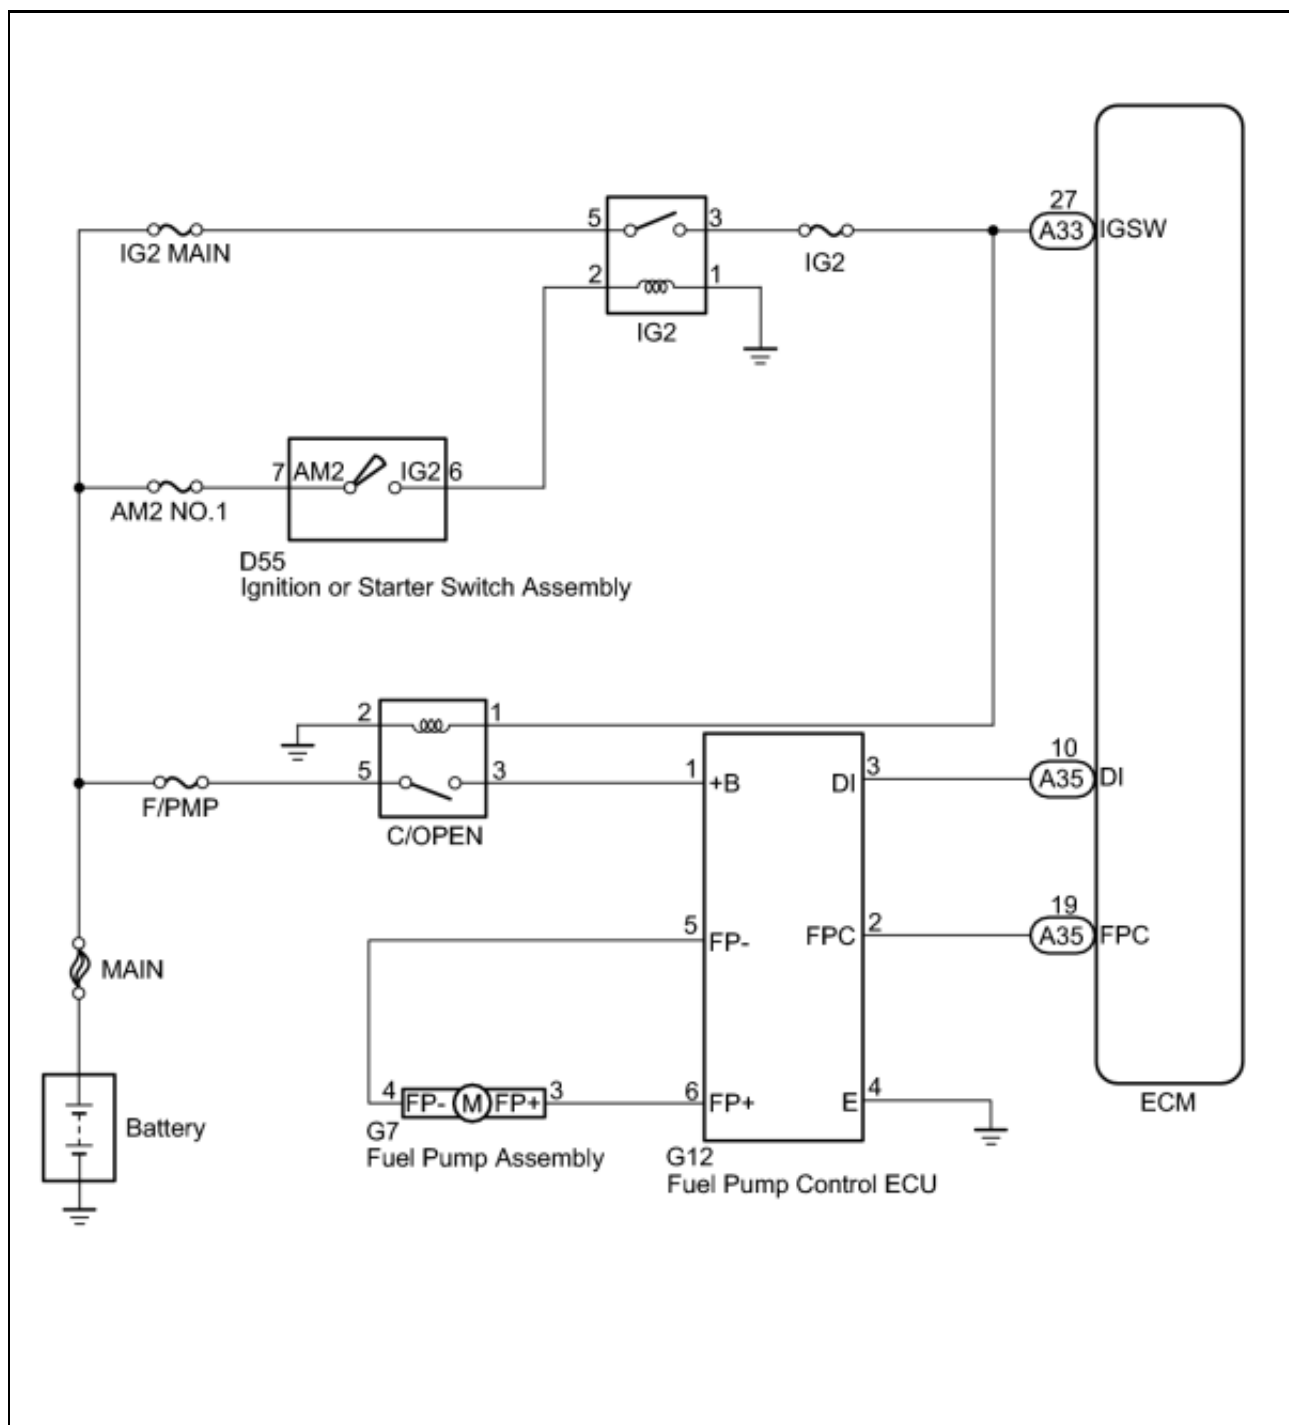

Last Modified: 4-14-2014	6.6 J	Doc ID: RM000001F70022X
Model Year: 2013	Model: FR-S	Prod Date Range: [03/2012 -]
Title: FA20 ENGINE CONTROL: SFI SYSTEM: Fuel Pump Control Circuit; 2013 MY FR-S [03/2012 -]		

Fuel Pump Control Circuit

DESCRIPTION

The fuel pump circuit (low pressure side) is comprised of the ECM, fuel pump assembly (low pressure side), and fuel pump control ECU assembly (which operates the fuel pump [low pressure side]). The ECM judges the speed of the fuel pump assembly (low pressure side) based on the engine output. This speed is converted into a loading signal, which is sent to the fuel pump control ECU assembly. The fuel pump control ECU assembly adjusts the fuel pump operating speed (low pressure side), based on the signal sent from the ECM.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

- PERFORM ACTIVE TEST USING TECHSTREAM (CONTROL THE FUEL PUMP/SPEED)**

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Powertrain / Engine / Active Test / Control the Fuel Pump/Speed.
- (e) Check whether the fuel pump operating sound occurs when performing the Active Test on the Techstream.

Result

RESULT	PROCEED TO
Fuel pump operating sound does not occur	A
Fuel pump operating sound occurs	B

B  **GO TO STEP 8**

A

2. PERFORM ACTIVE TEST USING TECHSTREAM (CONTROL THE FUEL PUMP)

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Powertrain / Engine / Active Test /Control the Fuel Pump Duty.
- (e) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3 (FP+) - 4 (FP-)	FPC Duty: 25%	3.2 to 4.05 V
3 (FP+) - 4 (FP-)	FPC Duty: 80%	8.8 to 12.5 V

Text in Illustration

*a	Component without harness connected
----	-------------------------------------

(Fuel Pump Assembly)

(f) Enter the following menus: Powertrain / Engine / Active Test / Control the Fuel Pump/Speed.

(g) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3 (FP+) - 4 (FP-)	ON (FPC Duty: 25%)	9.0 to 14.0 V

**HINT:**

- Be sure to measure the voltage with all the connectors connected.
- Before performing this inspection, check that the battery voltage is between 11 and 14 V (not depleted).

NG ▶ GO TO STEP 6

OK

3. CHECK HARNESS AND CONNECTOR (ECM - FUEL PUMP CONTROL ECU ASSEMBLY)

(a) Disconnect the ECM connector.

(b) Disconnect the fuel pump control ECU assembly connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A35-19 (FPC) - G12-2 (FPC)	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
-------------------	-----------	---------------------

A35-19 (FPC) or G12-2 (FPC) - Body ground	Always	10 kΩ or higher
---	--------	-----------------

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4. REPLACE FUEL PUMP ASSEMBLY

(a) Replace the fuel pump assembly  .

NEXT

5. CHECK CONFIRM WHETHER MALFUNCTION HAS BEEN SUCCESSFULLY REPAIRED

(a) Check the fuel pump operation  .

OK:

Malfunction has been repaired successfully.

NG ▶ **REPLACE ECM**

OK ▶ **END**

6. REPLACE FUEL PUMP CONTROL ECU ASSEMBLY

(a) Replace the fuel pump control ECU assembly  .

NEXT

------------	---

- (a) Disconnect the ECM connector.
- (b) Disconnect the fuel pump control ECU assembly connector.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A35-19 (FPC) - G12-2 (FPC)	Always	Below 1 Ω
G12-4 (E)- Body ground	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A35-19 (FPC) or G12-2 (FPC) - Body ground	Always	10 k Ω or higher

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

12. REPLACE FUEL PUMP CONTROL ECU ASSEMBLY

(a) Replace the fuel pump control ECU assembly  .

NEXT

13. CHECK CONFIRM WHETHER MALFUNCTION HAS BEEN SUCCESSFULLY REPAIRED

(a) Check the fuel pump operation  .

OK:

Malfunction has been repaired successfully.

NG  **REPLACE ECM**

OK  **END**

14. CHECK HARNESS AND CONNECTOR (C/OPEN RELAY - FUEL PUMP CONTROL ECU ASSEMBLY)

(a) Remove the C/OPEN relay from the engine room relay block assembly.

- (b) Disconnect the fuel pump control ECU assembly connector.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
C/OPEN relay terminal 3 - G12-1 (+B)	Always	Below 1 Ω
C/OPEN relay terminal 1 - Body ground	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
C/OPEN relay terminal 3 or G12-1 (+B) - Body ground	Always	10 k Ω or higher

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

15. INSPECT TERMINAL VOLTAGE (C/OPEN RELAY)

- (a) Remove the C/OPEN relay from the engine room relay block assembly.
- (b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
C/OPEN relay terminal 5 - Body ground	IG ON	11 to 14 V

Text in Illustration

*1	Engine Room Relay Block Assembly
*2	C/OPEN Relay Terminal

OK

16.	CHECK HARNESS AND CONNECTOR (C/OPEN RELAY - ECM - IG2 RELAY)
------------	---

- (a) Disconnect the ECM connector.
- (b) Remove the C/OPEN relay and IG2 relay from the engine room relay block assembly.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
C/OPEN relay terminal 2 - A33-27 (IGSW)	Always	Below 1 Ω
C/OPEN relay terminal 2 - IG2 relay terminal 3	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
C/OPEN relay terminal 2, A33-27 (IGSW) or IG2 relay terminal 3 - Body ground	Always	10 k Ω or higher

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK  **REPLACE ECM**

Title: FA20 ENGINE CONTROL: SFI SYSTEM: MIL Circuit; 2013 MY FR-S [03/2012 -]		

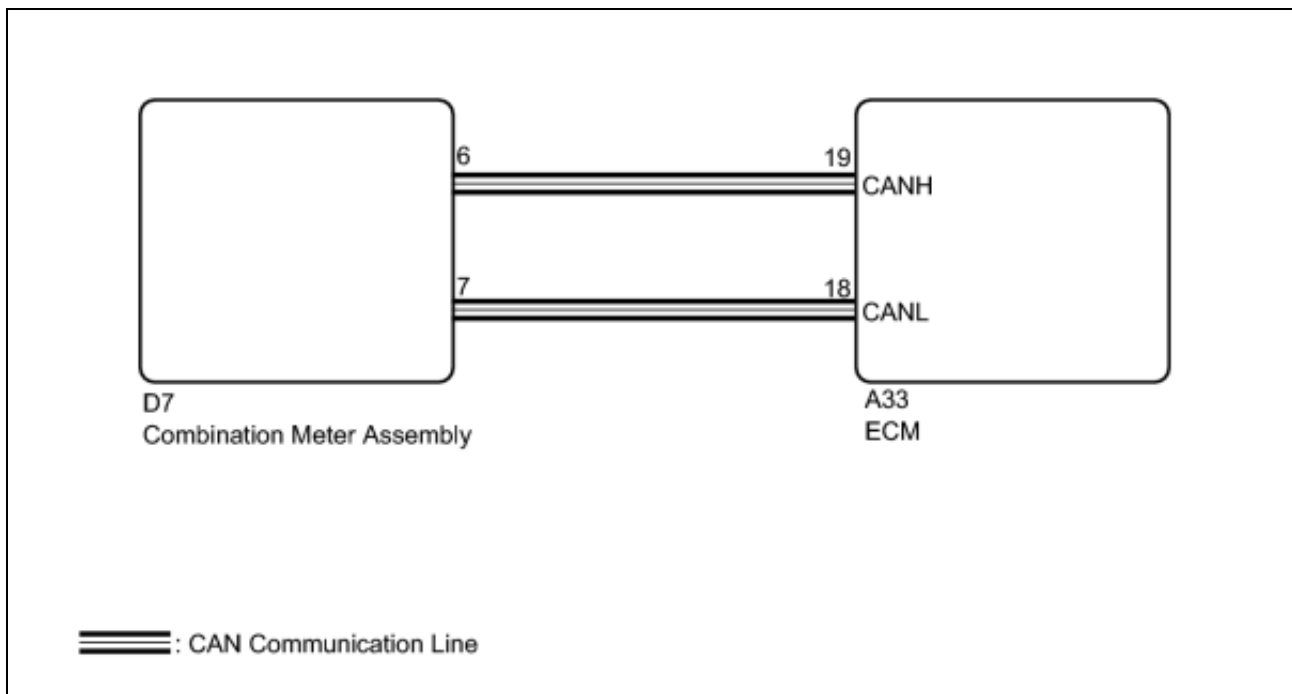

MIL Circuit

DESCRIPTION

The MIL (Malfunction Indicator Lamp) is used to indicate vehicle malfunctions detected by the ECM. When the ignition switch is turned to ON, power is supplied to the MIL circuit, which illuminates the MIL.

The MIL operation can be checked visually: When the ignition switch is turned to ON, the MIL should be illuminated and should turn off after engine is started. If the MIL remains illuminated or is not illuminated, conduct the following troubleshooting procedure using the Techstream.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

- CHECK THAT MIL IS ILLUMINATED**

(a) Perform troubleshooting in accordance with the table below.

Result

RESULT	PROCEED TO
MIL remains ON	A
MIL does not illuminate	B
MIL illuminates for several seconds, but turns off after engine is started	C

DTC	P0021	Camshaft Position "A" - Timing Over-Advanced or System Performance (Bank 2)
------------	--------------	--

DESCRIPTION

The Variable Valve Timing (VVT) system adjusts the intake valve timing to improve driveability. The engine oil pressure turns the VVT controller to adjust the valve timing.

The camshaft timing oil control valve is a solenoid valve and switches the engine oil line. The valve moves when the ECM applies 12 V to the solenoid. The ECM changes the energizing time to the solenoid (duty-cycle) in accordance with the camshaft position, crankshaft position, throttle position, etc.

VVT System:

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P000A	Integrated deviations in target intake valve timing and actual intake valve timing per specified time exceed thresholds for 15 seconds (bank 1). 	Deviation in target intake valve timing and actual intake valve	

P0021	timing exceeds thresholds (bank 2). (2 trip detection logic)	gear assembly (for intake side of bank 2) • ECM
-------	---	--

MONITOR DESCRIPTION

The ECM optimizes the intake valve timing using the Variable Valve Timing (VVT) system to control the intake camshaft. The VVT system includes the ECM, the camshaft timing oil control valve and the VVT controller (camshaft timing gear assembly). The ECM sends a target duty-cycle control signal to the camshaft timing oil control valve. This control signal regulates the oil pressure supplied to the VVT controller. The VVT controller can advance or retard the intake camshaft.

If the difference between the target and actual intake valve timings is large, and changes in the actual intake valve timing are small, the ECM interprets this as the VVT controller stuck malfunction and stores a DTC.

These DTCs indicate that the VVT controller cannot operate properly due to camshaft timing oil control valve malfunctions or the presence of foreign objects in the camshaft timing oil control valve.

MONITOR STRATEGY

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear DTCs (even if no DTCs are stored, perform the clear DTC operation) INFO.
4. Turn the ignition switch off and wait for at least 30 seconds.
5. Turn the ignition switch to ON and turn the Techstream on.
6. Start the engine and warm it up until the engine coolant temperature reaches 75°C (167°F) or higher.
7. Perform the following the confirmation driving pattern.

CAUTION:

When performing the confirmation driving pattern, obey all speed limits and traffic laws.

- a. Idle the engine for 10 seconds or more [A].
- b. Accelerate the vehicle to 97 km/h (60 mph) or more within 20 seconds [B].
- c. Drive the vehicle at 97 km/h (60 mph) or more for 20 seconds or more [C].
- d. Release the accelerator pedal to Decelerate until the vehicle speed decreases to less than 64 km/h (40 mph) [D].

HINT:

Release the accelerator pedal fully to perform the fuel-cut.

- e. Drive the vehicle at 60 km/h (40 mph) or less for 20 seconds or more [E].
 - f. Accelerate the vehicle to 97 km/h (60 mph) or more within 10 seconds [F].
 - g. Release the accelerator pedal and stop the vehicle [G].
8. Enter the following menus: Powertrain / Engine / Trouble Codes.
 9. Read pending DTCs.

HINT:

- o If a pending DTC is output, the system is malfunctioning.
- o If a pending DTC is not output, perform the following procedure.

10. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
11. Input the DTC: P000A, P000C, P0011 or P0021.
12. Check the DTC judgment result.

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	<ul style="list-style-type: none"> o DTC judgment completed o System normal

ABNORMAL	<ul style="list-style-type: none"> o DTC judgment completed o System abnormal
INCOMPLETE	<ul style="list-style-type: none"> o DTC judgment not completed o Perform driving pattern after confirming DTC enabling conditions
N/A	<ul style="list-style-type: none"> o Unable to perform DTC judgment o Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

- o If the judgment result shows NORMAL, the system is normal.
- o If the judgment result shows ABNORMAL, the system has a malfunction.

13. If the test result is INCOMPLETE or N/A and no DTC is output, perform a universal trip and check for permanent DTCs **INFO** .

HINT:

- o If a permanent DTC is output, the system is malfunctioning.
- o If no permanent DTC is output, the system is normal.

WIRING DIAGRAM

Refer to DTC P0010 **INFO** .

INSPECTION PROCEDURE

HINT:

- If DTC P000A or P0011 is displayed, check the intake camshaft circuit for the right bank VVT system (bank 1).
- If DTC P000C or P0021 is displayed, check the intake camshaft circuit for the left bank VVT system (bank 2).
- Bank 1 refers to the bank that includes the No. 1 cylinder*.

*: The No. 1 cylinder is the cylinder which is farthest from transmission.

- Bank 2 refers to the bank that does not include the No. 1 cylinder.
- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air fuel ratio was lean or rich, and other data from the time the malfunction occurred.

PROCEDURE

1.	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P000A, P000C, P0011 OR P0021)
-----------	--

(a) Connect the Techstream to the DLC3.

- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Powertrain / Engine / Trouble Codes.
- (e) Read DTCs.

Result

RESULT	PROCEED TO
DTC P000A, P000C, P0011 or P0021 is output	A
DTC P000A, P000C, P0011 or P0021 and other DTCs are output	B

HINT:

If any DTCs other than DTC P000A, P000C, P0011 or P0021 are output, troubleshoot those DTCs first.

B  [GO TO DTC CHART](#)

A

2.	PERFORM ACTIVE TEST USING TECHSTREAM (OPERATE CAMSHAFT TIMING OIL CONTROL VALVE)
-----------	---

- (a) Connect the Techstream to the DLC3.
- (b) Start the engine.
- (c) Turn the Techstream on.
- (d) Turn the A/C switch on.
- (e) Enter the following menus: Powertrain / Engine / Active Test / Control the VVT Linear (Bank 1), Control the VVT Linear (Bank 2).
- (f) Check the engine speed while operating the camshaft timing oil control valve (for intake camshaft) using the Techstream.

OK:

TECHSTREAM OPERATION	SPECIFIED CONDITION
0 deg (CA)	Normal engine speed
36 deg (CA)	Engine idles roughly or stalls

HINT:

Refer to "Data List / Active Test" [VVT OCV Duty #1, VVT OCV Duty #2 and VVT Change Angle #1, VVT Change Angle #2]  .

OK
▼

3.	CHECK WHETHER DTC OUTPUT RECURS (DTC P000A, P000C, P0011 OR P0021)
-----------	---

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Clear the DTCs INFO.
- (e) Turn the ignition switch off and wait for at least 30 seconds.
- (f) Turn the ignition switch to ON.
- (g) Turn the Techstream on.
- (h) Start the engine and warm it up.
- (i) Drive the vehicle in accordance with the driving pattern described in the Confirmation Driving Pattern.
- (j) Enter the following menus: Powertrain / Engine / Trouble Codes / Pending.
- (k) Read pending DTCs.

Result

RESULT	PROCEED TO
DTC is not output	A
DTC P000A, P000C, P0011 or P0021 is output	B

HINT:

DTC P000A, P000C, P0011 or P0021 may be stored when foreign objects in the engine oil are caught in some parts of the system. The DTC will remain stored even if the system returns to normal after a short time. These foreign objects may then be captured by the oil filter.

B ► CHECK VALVE TIMING (CHECK FOR LOOSE TIMING CHAIN AND JUMPED TEETH)

A ► CHECK FOR INTERMITTENT PROBLEMS

4.	CHECK VALVE TIMING (CHECK FOR LOOSE TIMING CHAIN AND JUMPED TEETH)
-----------	---

(a) Check the valve timing  .

NG  **ADJUST VALVE TIMING**

OK

5.	INSPECT CAMSHAFT TIMING OIL CONTROL VALVE (FOR INTAKE CAMSHAFT)

VVT target position - VVT actual position	More than 15°CA or less than -15°CA
---	-------------------------------------

MONITOR RESULT

Refer to detailed information in Checking Monitor Status [INFO](#).

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear DTCs (even if no DTCs are stored, perform the clear DTC operation) [INFO](#).
4. Turn the ignition switch off and wait for at least 30 seconds.
5. Turn the ignition switch to ON and turn the Techstream on.
6. Start the engine and warm it up until the engine coolant temperature reaches 75°C (167°F) or higher.
7. Perform the following the confirmation driving pattern.

CAUTION:

When performing the confirmation driving pattern, obey all speed limits and traffic laws.

- a. Idle the engine for 10 seconds or more [A].
- b. Accelerate the vehicle to 97 km/h (60 mph) or more within 20 seconds [B].
- c. Drive the vehicle at 97 km/h (60 mph) or more for 20 seconds or more [C].
- d. Release the accelerator pedal to Decelerate until the vehicle speed decreases to less

than 64 km/h (40 mph) [D].

HINT:

Release the accelerator pedal fully to perform the fuel-cut.

- e. Drive the vehicle at 60 km/h (40 mph) or less for 20 seconds or more [E].
 - f. Accelerate the vehicle to 97 km/h (60 mph) or more within 10 seconds [F].
 - g. Release the accelerator pedal and stop the vehicle [G].
8. Enter the following menus: Powertrain / Engine / Trouble Codes.
 9. Read pending DTCs.

HINT:

- o If a pending DTC is output, the system is malfunctioning.
 - o If a pending DTC is not output, perform the following procedure.
10. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
 11. Input the DTC: P000B, P000D, P0014 or P0024.
 12. Check the DTC judgment result.

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	<ul style="list-style-type: none">o DTC judgment completedo System normal
ABNORMAL	<ul style="list-style-type: none">o DTC judgment completedo System abnormal
INCOMPLETE	<ul style="list-style-type: none">o DTC judgment not completedo Perform driving pattern after confirming DTC enabling conditions
N/A	<ul style="list-style-type: none">o Unable to perform DTC judgmento Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

- o If the judgment result shows NORMAL, the system is normal.
 - o If the judgment result shows ABNORMAL, the system has a malfunction.
13. If the test result is INCOMPLETE or N/A and no DTC is output, perform a universal trip and check for permanent DTCs  .

HINT:

- o If a permanent DTC is output, the system is malfunctioning.
- o If no permanent DTC is output, the system is normal.

WIRING DIAGRAM

Refer to DTC P0013  .

INSPECTION PROCEDURE

HINT:

- If DTC P000B or P0014 is displayed, check the exhaust camshaft circuit for the right bank VVT system (bank 1).
- If DTC P000D or P0024 is displayed, check the exhaust camshaft circuit for the left bank VVT system (bank 2).
- DTC P0014 or P0024 may be stored when foreign objects in the engine oil are caught in some parts of the system. The DTC will remain stored even if the system returns to normal after a short time. Those foreign objects may then be captured by the oil filter.
- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air fuel ratio was lean or rich, and other data from the time the malfunction occurred.

PROCEDURE

1.	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P000B, P000D, P0014 OR P0024)
-----------	--

- Connect the Techstream to the DLC3.
- Turn the ignition switch to ON.
- Turn the Techstream on.
- Enter the following menus: Powertrain / Engine / Trouble Codes.
- Read DTCs.

Result

RESULT	PROCEED TO
DTC P000B, P000D, P0014 or P0024 is output	A
DTC P000B, P000D, P0014 or P0024 and other DTCs are output	B

HINT:

If any DTCs other than P000B, P000D, P0014 or P0024 are output, troubleshoot those DTCs first.

B  **GO TO DTC CHART**

A

2.	PERFORM ACTIVE TEST USING TECHSTREAM (OPERATE CAMSHAFT TIMING OIL CONTROL VALVE)
-----------	---

- (a) Connect the Techstream to the DLC3.
- (b) Start the engine.
- (c) Turn the Techstream on.
- (d) Turn the A/C switch on.
- (e) Enter the following menus: Powertrain / Engine / Active Test / Control the VVT Exhaust Linear (Bank 1), Control the VVT Exhaust Linear (Bank 2).
- (f) Check the engine speed while operating the camshaft timing oil control valve (for exhaust camshaft) using the Techstream.

OK:

TECHSTREAM OPERATION	SPECIFIED CONDITION
0 deg (CA)	Normal engine speed
51 deg (CA)	Engine idles roughly or stalls

HINT:

Refer to "Data List / Active Test" [VVT Ex OCV Duty #1, VVT Ex OCV Duty #2 and VVT Ex Chg Angle #1, VVT Ex Chg Angle #2]  .

NG  **CHECK VALVE TIMING (CHECK FOR LOOSE TIMING CHAIN AND JUMPED TEETH)**

OK

3.	CHECK WHETHER DTC OUTPUT RECURS (DTC P000B, P000D, P0014 OR P0024)
-----------	---

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Clear the DTCs  .
- (e) Turn the ignition switch off and wait for at least 30 seconds.
- (f) Turn the ignition switch to ON.
- (g) Turn the Techstream on.
- (h) Start the engine and warm it up.
- (i) Drive the vehicle in accordance with the driving pattern described in the Confirmation Driving Pattern.
- (j) Enter the following menus: Powertrain / Engine / Trouble Codes / Pending.

(k) Read pending DTCs.

Result

RESULT	PROCEED TO
DTC P000B, P000D, P0014 or P0024 is output	A
DTC is not output	B

HINT:

DTC P000B, P000D, P0014 or P0024 may be stored when foreign objects in the engine oil are caught in some parts of the system. The DTC will remain stored even if the system returns to normal after a short time. These foreign objects may then be captured by the oil filter.

B ▶ CHECK FOR INTERMITTENT PROBLEMS

A

4.	CHECK VALVE TIMING (CHECK FOR LOOSE TIMING CHAIN AND JUMPED TEETH)
-----------	---

(a) Check the valve timing  .

NG ▶ ADJUST VALVE TIMING

OK

5.	INSPECT CAMSHAFT TIMING OIL CONTROL VALVE (FOR EXHAUST CAMSHAFT)
-----------	---

(a) Inspect the camshaft timing oil control valve (for exhaust camshaft)  .

NG ▶ REPLACE CAMSHAFT TIMING OIL CONTROL VALVE (FOR EXHAUST CAMSHAFT)

OK

6.	INSPECT CAMSHAFT TIMING EXHAUST GEAR ASSEMBLY
-----------	--

(a) Inspect the camshaft timing exhaust gear assembly  .

HINT:

DTC P000B, P000D, P0014 or P0024 may be stored when foreign objects in the engine oil are caught in some parts of the system. The DTC will remain stored even if the system returns to normal after a short time. These foreign objects may then be captured by the oil filter.

NG  **REPLACE CAMSHAFT TIMING EXHAUST GEAR ASSEMBLY**

OK

7.	CHECK WHETHER DTC OUTPUT RECURS (DTC P000B, P000D, P0014 OR P0024)
-----------	---

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Clear the DTCs  .
- (e) Turn the ignition switch off and wait for at least 30 seconds.
- (f) Turn the ignition switch to ON.
- (g) Turn the Techstream on.
- (h) Start the engine and warm it up.
- (i) Drive the vehicle in accordance with the driving pattern described in the Confirmation Driving Pattern.
- (j) Enter the following menus: Powertrain / Engine / Trouble Codes / Pending.
- (k) Read pending DTCs.

Result

RESULT	PROCEED TO
DTC is not output	A
DTC P000B, P000D, P0014 or P0024 is output	B

HINT:

DTC P000B, P000D, P0014 or P0024 may be stored when foreign objects in the engine oil are caught in some parts of the system. The DTC will remain stored even if the system returns to normal after a short time. These foreign objects may then be captured by the oil filter.

DTC	P015B	A/F Sensor Delayed Response - Lean to Rich Bank 1 Sensor 1
------------	--------------	---

DESCRIPTION

Refer to DTC P2195  .

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P014C	The "Rich to Lean response rate deterioration level*" value is standard or less for 70 seconds. (2 trip detection logic)	<ul style="list-style-type: none"> • Air fuel ratio sensor • Air fuel ratio sensor heater • ECM
P014D	The "Lean to Rich response rate deterioration level*" value is standard or more for 70 seconds. (2 trip detection logic)	
P015A	The "Rich to Lean delay level*" value is standard or more. (2 trip detection logic)	
P015B	The "Lean to Rich delay level*" value is standard or more. (2 trip detection logic)	

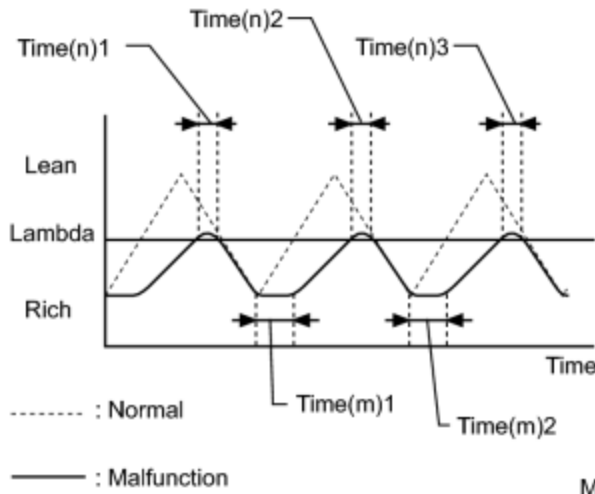

*: Calculated by ECM based on the air fuel ratio sensor output.

MONITOR DESCRIPTION

P014C, P014D (Asymmetric slow response)

The ECM monitors the time that the air fuel ratio sensor output waveform is at its maximum and minimum as time(m) and Time(n) respectively.

P014C:

n: Local Maximum

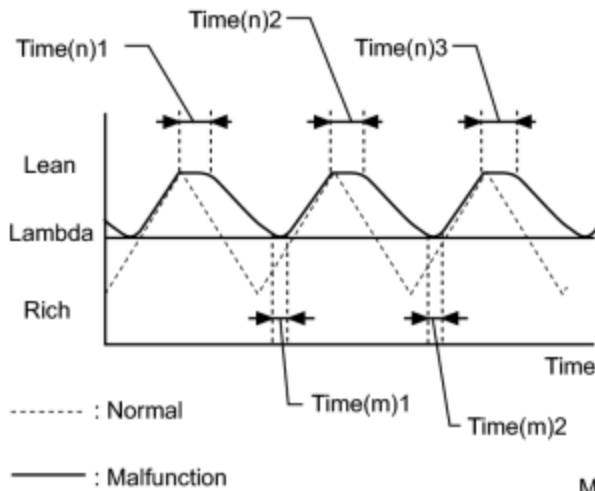

m: Local Minimum

$$\text{Average of Time}(n) = (\text{Time}(n)1 + \text{Time}(n)2 + \dots) / \text{Number of Peaks}$$

$$\text{Average of Time}(m) = (\text{Time}(m)1 + \text{Time}(m)2 + \dots) / \text{Number of Peaks}$$

$$\text{Malfunction: Average of Time}(m) - \text{Average of Time}(n) = 0.08 \text{ seconds or more}$$

P014D:

n: Local Maximum

m: Local Minimum

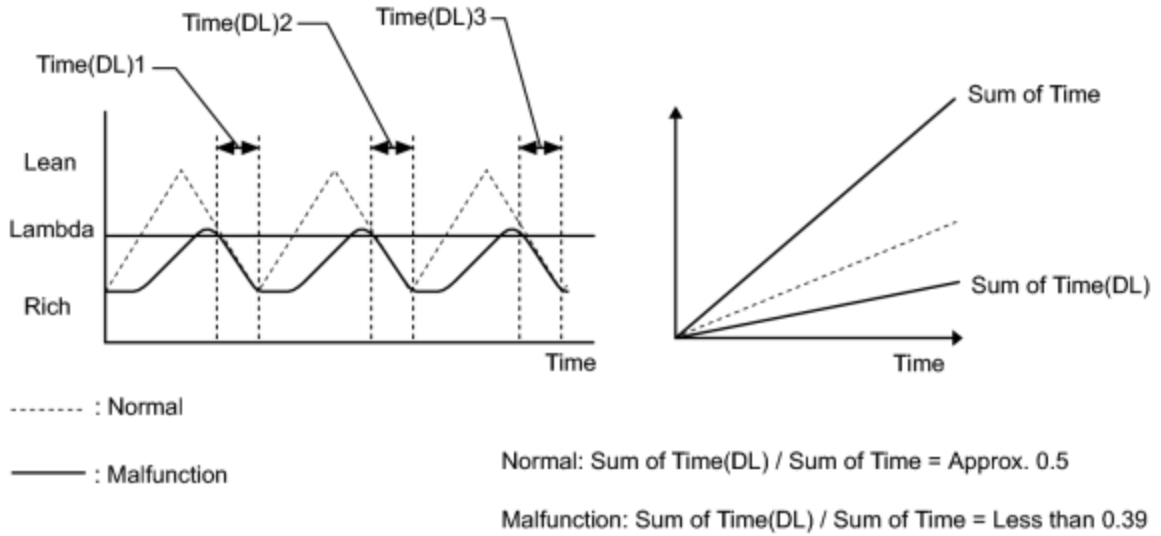

$$\text{Average of Time}(n) = (\text{Time}(n)1 + \text{Time}(n)2 + \dots) / \text{Number of Peaks}$$

$$\text{Average of Time}(m) = (\text{Time}(m)1 + \text{Time}(m)2 + \dots) / \text{Number of Peaks}$$

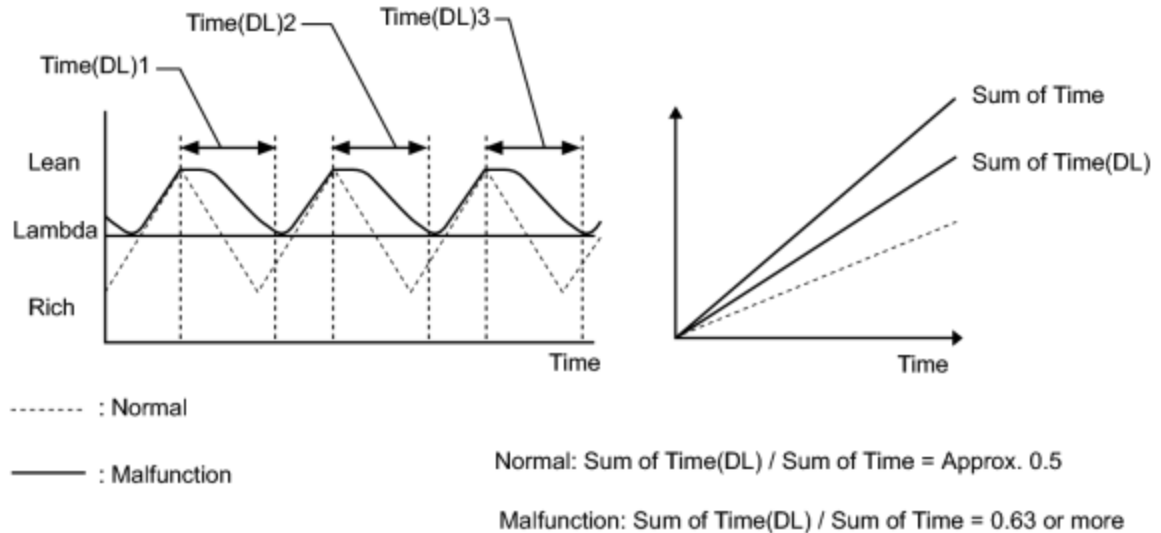

$$\text{Malfunction: Average of Time}(n) - \text{Average of Time}(m) = 0.1 \text{ seconds or more}$$

If the difference between the average time(m) and the average time(n) is the specified value or more, and the air fuel ratio sensor output waveform time of decreasing lambda is less than the air fuel ratio sensor output cumulative time, then P014C is stored, and if this is more, P014D is stored.

P014C:

P014D:

P014C, P014D (Symmetric slow response)

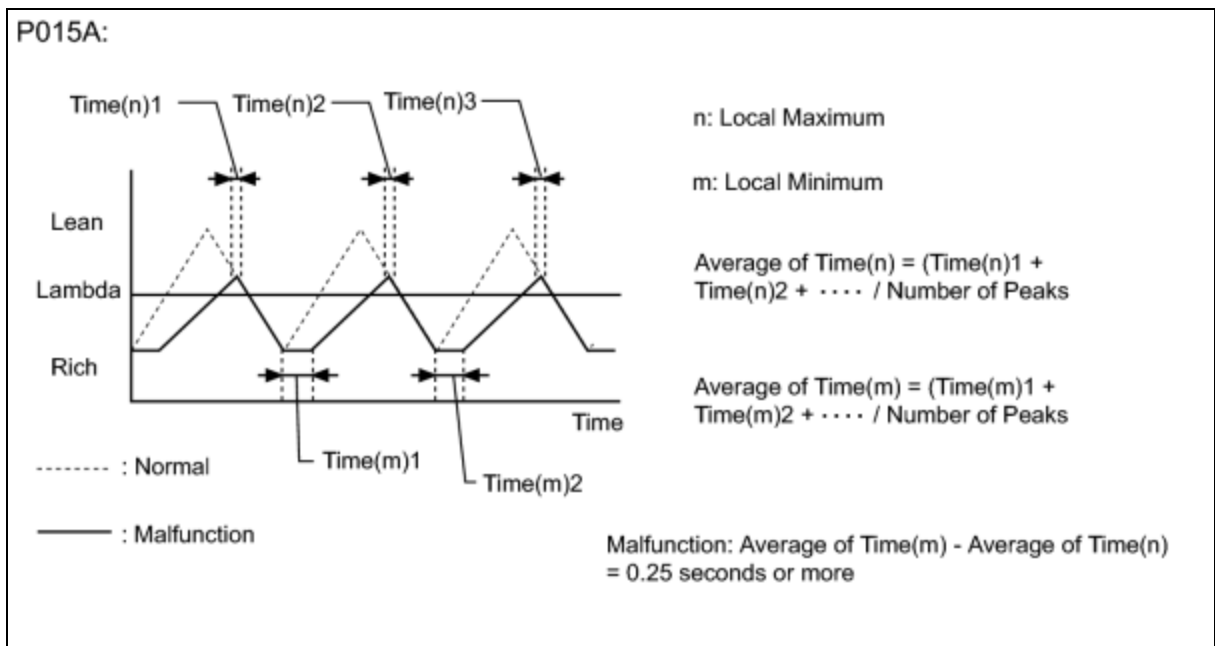

The ECM monitors the amount of change from the air fuel ratio sensor for each specified period, and when the total variation exceeds a specified value, P014C or P014D is stored.

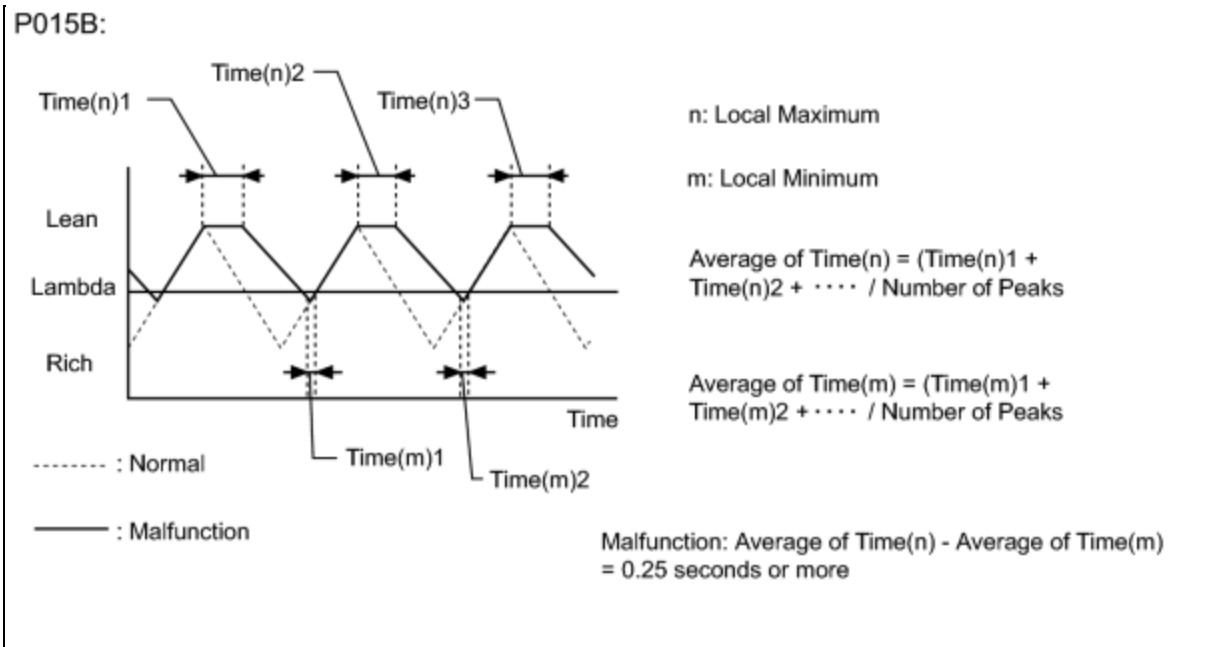

P015A, P015B (Asymmetric delayed start)

The ECM monitors the time that the air fuel ratio sensor output waveform is at its maximum and minimum as time(m) and time(n) respectively.

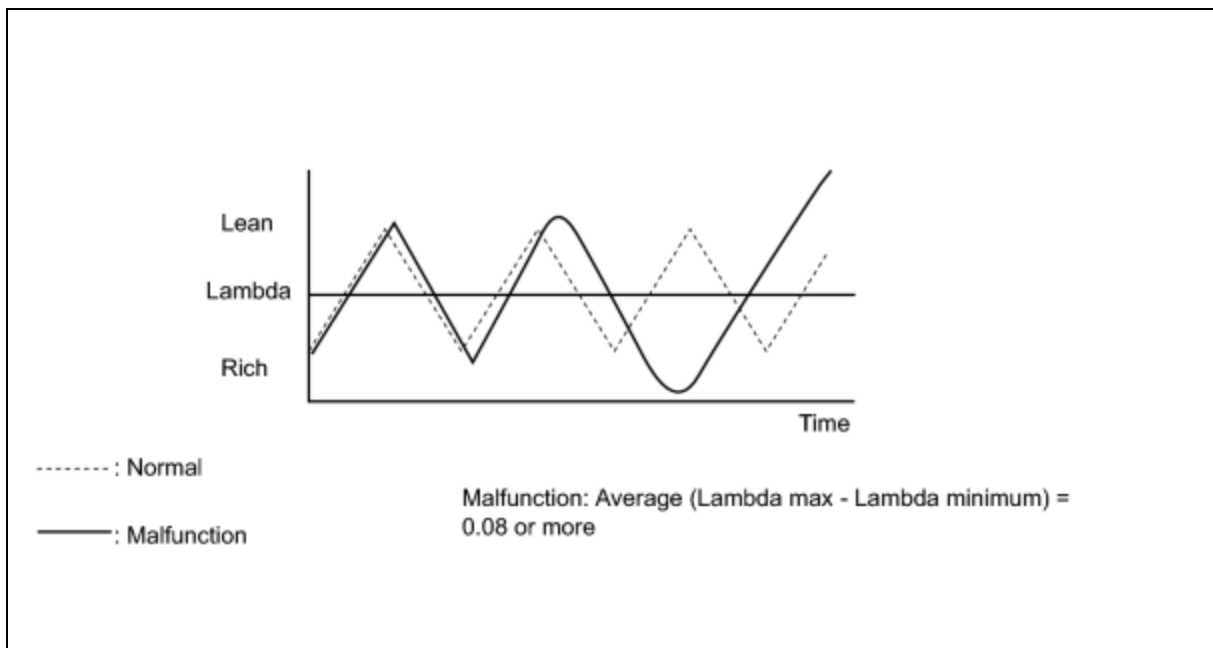

If the difference between the average time(m) and the average time(n) is the specified value or more, and time(m) is the specified value or more, then P015A is stored, and if time(n) is the specified value or more, then P015B is stored.

P015A, P015B (Symmetric delayed start)

If the average value for the Lambda maximum value and minimum value is the specified value or more, then P015A and P015B are stored.

MONITOR RESULT

Refer to Checking Monitor Status [INFO](#) .

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear DTCs (even if no DTCs are stored, perform the clear DTC operation) [INFO](#) .
4. Turn the ignition switch off and wait for at least 30 seconds.
5. Turn the ignition switch to ON and turn the Techstream on.
6. Start the engine and warm it up until the engine coolant temperature reaches 75°C (167°F) or higher.

HINT:

Check the engine coolant temperature is 20°C (68°F) or less at engine started.

7. Perform the following the confirmation driving pattern.

CAUTION:

When performing the confirmation driving pattern, obey all speed limits and traffic laws.

- a. Drive the vehicle at 80 km/h (50 mph) or more for 20 minutes or more [A].
- b. Stop the vehicle.
- c. Idle the engine for 1 minute or more [B].

8. Enter the following menus: Powertrain / Engine / Trouble Codes.

9. Read pending DTCs.

HINT:

- o If a pending DTC is output, the system is malfunctioning.
- o If a pending DTC is not output, perform the following procedure.

10. Enter the following menus: Powertrain / Engine / Utility / All Readiness.

11. Input the DTC: P014C, P014D, P015A or P015B.

12. Check the DTC judgment result.

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	<ul style="list-style-type: none">o DTC judgment completedo System normal
ABNORMAL	<ul style="list-style-type: none">o DTC judgment completedo System abnormal
INCOMPLETE	<ul style="list-style-type: none">o DTC judgment not completedo Perform driving pattern after confirming DTC enabling conditions
N/A	<ul style="list-style-type: none">o Unable to perform DTC judgmento Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

- o If the judgment result shows NORMAL, the system is normal.
- o If the judgment result shows ABNORMAL, the system has a malfunction.

13. If the test result is INCOMPLETE or N/A and no DTC is output, perform a universal trip and check for permanent DTCs .

HINT:

- o If a permanent DTC is output, the system is malfunctioning.
- o If no permanent DTC is output, the system is normal.

WIRING DIAGRAM

Refer to DTC P0030 INFO.

INSPECTION PROCEDURE

HINT:

- A low air fuel ratio sensor voltage could be caused by a rich air fuel mixture. Check for conditions that would cause the engine to run rich.
- A high air fuel ratio sensor voltage could be caused by a lean air fuel mixture. Check for conditions that would cause the engine to run lean.
- Bank 1 refers to the bank that includes the No. 1 cylinder*.

*: The No. 1 cylinder is the cylinder which is farthest from transmission.

- Bank 2 refers to the bank that does not include the No. 1 cylinder.
- Sensor 1 refers to the sensor closest to the engine assembly.
- Sensor 2 refers to the sensor farthest away from the engine assembly.
- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was moving or stationary, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P014C, P014D, P015A OR P015B)

DESCRIPTION

In the VVT (Variable Valve Timing) system, the appropriate intake and exhaust valve open and close timing is controlled by the ECM. The ECM performs intake and exhaust valve control by performing the following: 1) controlling the camshaft and camshaft timing oil control valve, and operating the camshaft timing gear; and 2) changing the relative positions of the camshaft and crankshaft.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0016	<p>One of the following conditions is met (2 trip detection logic):</p> <ul style="list-style-type: none"> Slip intake valve timing for 1 second (bank 1). MONITOR DESCRIPTION

To monitor the correlation of the intake camshaft position and crankshaft position, the ECM checks the VVT learned value while the engine is idling. The VVT learned value is calibrated based on the camshaft position and crankshaft position. The intake valve timing is set to the most retarded angle while the engine is idling. If the VVT learned value is out of the specified range in consecutive driving cycles, the ECM illuminates the MIL and stores DTC P0016 (bank 1) or P0018 (bank 2).

To monitor the correlation of the exhaust camshaft position and crankshaft position, the ECM checks the VVT learned value while the engine is idling. The VVT learned value is calibrated based on the camshaft position and crankshaft position. The exhaust valve timing is set to the most advanced angle while the engine is idling. If the VVT learned value is out of the specified range in consecutive driving cycles, the ECM illuminates the MIL and stores DTC P0017 (bank 1) or P0019 (bank 2).

------------	--------------	---

DTC	P0032	Oxygen (A/F) Sensor Heater Control Circuit High (Bank 1 Sensor 1)
------------	--------------	--

DESCRIPTION

Refer to DTC P2195 .

HINT:

- When any of these DTCs is stored, the ECM enters fail-safe mode. The ECM turns off the air fuel ratio sensor heater in fail-safe mode. Fail-safe mode continues until the ignition switch is turned off.
- Although the DTC titles say oxygen sensor, these DTCs relate to the air fuel ratio sensor.
- Sensor 1 refers to the sensor mounted in front of the three-way catalytic converter and located near the engine assembly.
- The ECM provides a pulse width modulated control circuit to adjust the current through the heater. The air fuel ratio sensor heater circuit uses a relay on the +B side of the circuit.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0030	Air fuel ratio sensor impedance is greater than 65 Ω for 10 seconds or more. (2 trip detection logic)	<ul style="list-style-type: none"> • Open or short in air fuel ratio sensor circuit • Air fuel ratio sensor • ECM
P0031	Air fuel ratio sensor heater voltage is less than 1.2 V for 1 second or more. (1 trip detection logic)	
P0032	Air fuel ratio sensor heater voltage is 1.2 V or more for 2 seconds or more. (1 trip detection logic)	

HINT:

- Sensor 1 refers to the sensor closest to the engine assembly.
- Sensor 2 refers to the sensor farthest away from the engine assembly.

MONITOR DESCRIPTION

The ECM uses information from the air fuel ratio sensor to regulate the air fuel ratio and keep it close to the stoichiometric level. This maximizes the ability of the three-way catalytic converter to purify the exhaust gases.

The air fuel ratio sensor detects oxygen levels in the exhaust gas and transmits the information to the ECM. The inner surface of the sensor element is exposed to the outside air. The outer surface of the sensor element is exposed to the exhaust gas. The sensor element is made of platinum-coated zirconia and includes an integrated heating element.

The zirconia element generates a small voltage when there is a large difference in the oxygen concentrations between the exhaust gas and outside air. The platinum coating amplifies this voltage generation.

The air fuel ratio sensor is more efficient when heated. When the exhaust gas temperature is low, the sensor cannot generate useful voltage signals without supplementary heating. The ECM regulates the supplementary heating using a duty-cycle approach to adjust the average current in the sensor heater element. If the heater current is outside the normal range, the signal transmitted by the air fuel ratio sensor becomes inaccurate. As a result, the ECM is unable to regulate the air fuel ratio properly.

When the current in the air fuel ratio sensor heater is outside the normal operating range, the ECM interprets this as a malfunction in the sensor heater and stores a DTC.

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear DTCs (even if no DTCs are stored, perform the clear DTC operation) INFO.
4. Turn the ignition switch off and wait for at least 30 seconds.
5. Turn the ignition switch to ON and turn the Techstream on.
6. Start the engine and warm it up until the engine coolant temperature reaches 75°C (167°F) or higher.
7. With the vehicle stationary, depress the accelerator pedal and maintain an engine speed of between 2500 and 3000 rpm for 40 seconds or more [A].
8. Drive the vehicle at 10 km/h (6.25 mph) or more for 1 minute or more [B].

CAUTION:

When performing the confirmation driving pattern, obey all speed limits and traffic laws.

9. Enter the following menus: Powertrain / Engine / Trouble Codes.
10. Read pending DTCs.

HINT:

- o If a pending DTC is output, the system is malfunctioning.
 - o If a pending DTC is not output, perform the following procedure.
11. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
 12. Input the DTC: P0030, P0031 or P0032.
 13. Check the DTC judgment result.

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	<ul style="list-style-type: none"> o DTC judgment completed o System normal

ABNORMAL	<ul style="list-style-type: none"> o DTC judgment completed o System abnormal
INCOMPLETE	<ul style="list-style-type: none"> o DTC judgment not completed o Perform driving pattern after confirming DTC enabling conditions
N/A	<ul style="list-style-type: none"> o Unable to perform DTC judgment o Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

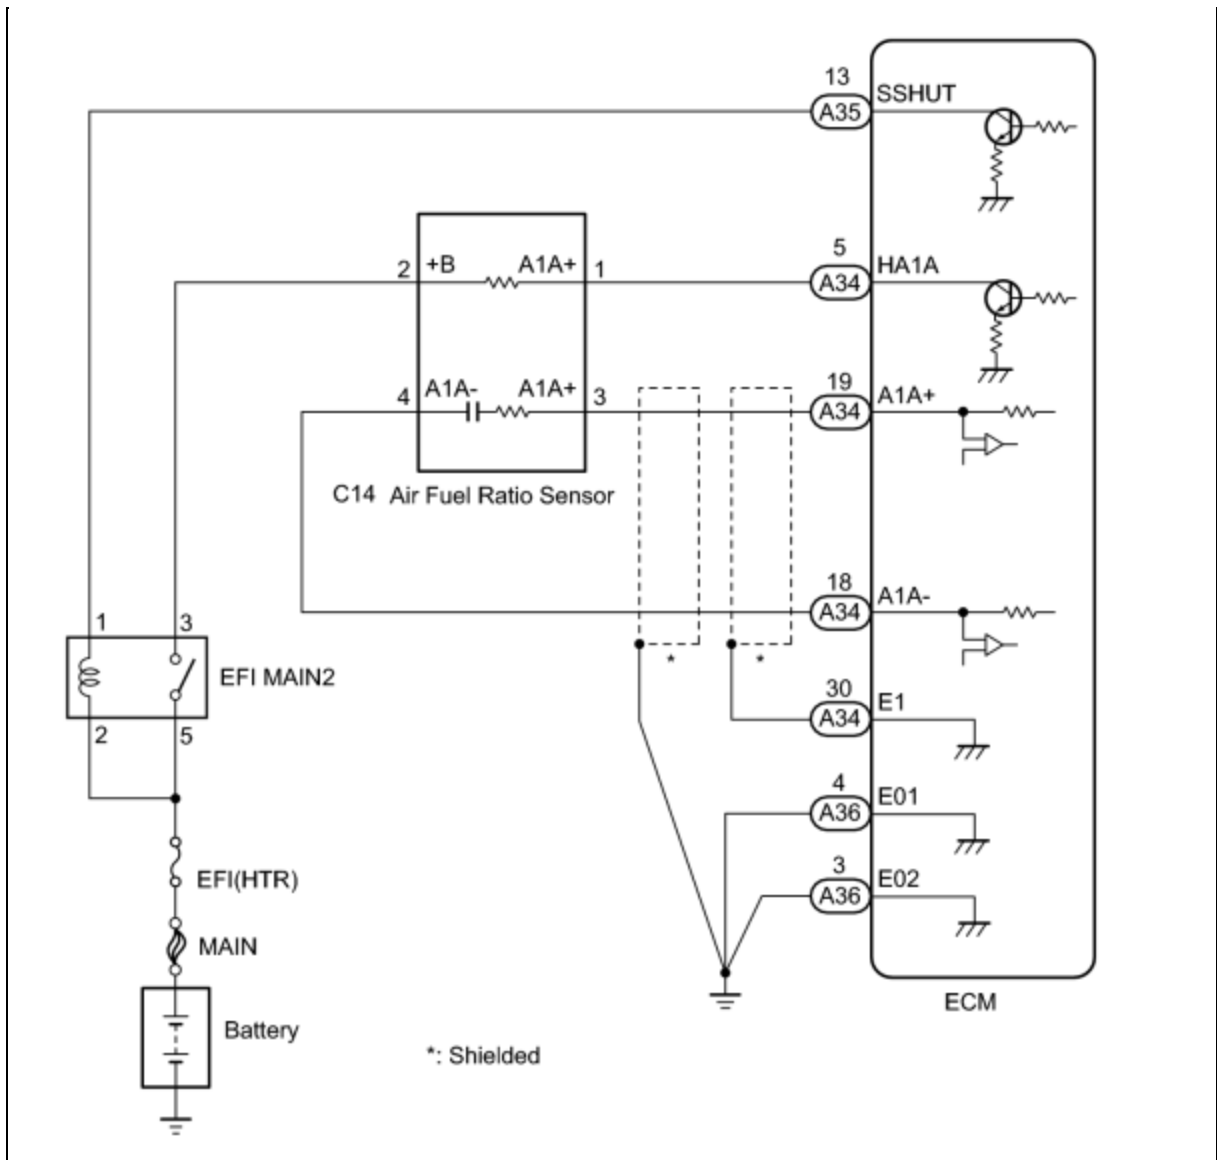

- o If the judgment result shows NORMAL, the system is normal.
- o If the judgment result shows ABNORMAL, the system has a malfunction.

14. If the test result is INCOMPLETE or N/A and no DTC is output, perform a universal trip and check for permanent DTCs  .

HINT:

- o If a permanent DTC is output, the system is malfunctioning.
- o If no permanent DTC is output, the system is normal.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

HINT:

- Refer to "Data List / Active Test" [A/F Heater Duty #1] [INFO](#) .
- Sensor 1 refers to the sensor closest to the engine assembly.
- Sensor 2 refers to the sensor farthest away from the engine assembly.
- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air fuel ratio was lean or rich, and other data from the time the malfunction occurred.
- Change the fuel injection volume using the Control the Injection Volume function provided in the Active Test and monitor the air fuel ratio sensor output voltage [INFO](#) . If the sensor output voltage does not change (almost no reaction) while performing the Active Test, the sensor may be malfunctioning.

PROCEDURE

1. INSPECT AIR FUEL RATIO SENSOR (HEATER RESISTANCE)

(a) Inspect the air fuel ratio sensor INFO .

NG ▶ REPLACE AIR FUEL RATIO SENSOR

OK
▼

2. INSPECT TERMINAL VOLTAGE (POWER SOURCE OF AIR FUEL RATIO SENSOR)

(a) Disconnect the air fuel ratio sensor connector.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
C14-2 (+B) - Body ground	Ignition switch ON	11 to 14 V

Text in Illustration

*a	Front view of wire harness connector (to Air Fuel Ratio Sensor)
----	---

NG ▶ INSPECT RELAY (EFI MAIN2)

OK
▼

3. CHECK HARNESS AND CONNECTOR (AIR FUEL RATIO SENSOR - ECM)

- (a) Disconnect the air fuel ratio sensor connector.
- (b) Disconnect the ECM connector.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A34-5 (HA1A) - C14-1(HA1A)	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A34-5 (HA1A) or C14-1 (HA1A) - Body ground	Always	10 kΩ or higher

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4.	CHECK WHETHER DTC OUTPUT RECURS (P0030, P0031 OR P0032)
-----------	--

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Clear the DTCs  .
- (e) Turn the ignition switch off and wait for at least 30 seconds.
- (f) Turn the ignition switch to ON.
- (g) Turn the Techstream on.
- (h) Start the engine.
- (i) Drive the vehicle in accordance with the driving pattern described in Confirmation Driving Pattern.
- (j) Enter the following menus: Powertrain / Engine / Trouble Codes.
- (k) Read DTCs.

Result

RESULT	PROCEED TO
--------	------------

DTC is not output	A
DTC P0030, P0031 or P0032 is output	B

B ▶ REPLACE ECM

A ▶ CHECK FOR INTERMITTENT PROBLEMS

5.	INSPECT RELAY (EFI MAIN2)
-----------	----------------------------------

(a) Check the EFI MAIN2 relay INFO.

NG ▶ REPLACE RELAY (EFI MAIN2)

OK

6.	CHECK HARNESS AND CONNECTOR (AIR FUEL RATIO SENSOR - EFI MAIN2 RELAY)
-----------	--

(a) Disconnect the air fuel ratio sensor connector.

(b) Remove the EFI MAIN2 relay from the engine room relay block assembly.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
EFI MAIN2 relay terminal 3 - C14-2 (+B)	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
EFI MAIN2 relay terminal 3 or C14-2 (+B) - Body ground	Always	10 k Ω or higher

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ▶ CHECK ECM POWER SOURCE CIRCUIT

Last Modified: 3-27-2012	6.4 C	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000PFA0P5X
Title: FA20 ENGINE CONTROL: SFI SYSTEM: P0037,P0038,P0141: Oxygen Sensor Heater Control Circuit Low (Bank 1 Sensor 2) (2013 FR-S)		

DTC	P0037	Oxygen Sensor Heater Control Circuit Low (Bank 1 Sensor 2)

DTC	P0038	Oxygen Sensor Heater Control Circuit High (Bank 1 Sensor 2)
------------	--------------	--

DTC	P0141	Oxygen Sensor Heater Circuit (Bank 1 Sensor 2)
------------	--------------	---

DESCRIPTION

Refer to DTC P0137 [INFO](#) .

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0037	Heated oxygen sensor heater voltage is less than battery voltage X 0.3 V for 10 seconds or more. (2 trip detection logic)	<ul style="list-style-type: none"> • Open or short in heated oxygen sensor heater circuit • Heated oxygen sensor • ECM
P0038	Heated oxygen sensor heater voltage is battery voltage X 0.2 V or more for 10 seconds or more. (2 trip detection logic)	
P0141	Heated oxygen sensor heater voltage is less than battery voltage X 0.88 V for 10 seconds or more. (2 trip detection logic)	

MONITOR DESCRIPTION

The sensing portion of the heated oxygen sensor has a zirconia element which is used to detect the oxygen concentration in the exhaust gas. If the zirconia element is at the appropriate temperature, and the difference between the oxygen concentrations surrounding the inside and outside surfaces of the sensor is large, the zirconia element generates voltage signals. In order to increase the oxygen concentration detecting capacity of the zirconia element, the ECM supplements the heat from the exhaust with heat from a heating element inside the sensor.

The ECM monitors the current applied to the heated oxygen sensor heater to check the heater for malfunctions.

If the heater current is outside the normal range, the signal transmitted by the heated oxygen sensor becomes inaccurate. When the current in the heated oxygen sensor heater is outside the normal operating range, the ECM interprets this as a malfunction in the sensor heater and stores a DTC.

MONITOR STRATEGY

Last Modified: 3-27-2012	6.4 C	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000001BFY08MX
Title: FA20 ENGINE CONTROL: SFI SYSTEM: P050A,P050B: Cold Start Idle Air Control System Performance (2013 FR-S)		

DTC	P050A	Cold Start Idle Air Control System Performance
------------	--------------	---

DTC	P050B	Cold Start Ignition Timing Performance
------------	--------------	---

DESCRIPTION

Cold start emission reduction strategy (CSERS) is employed to shorten the time to catalyst light-off from cold start. CSERS consists of retarded ignition timing and increased engine idle speed for a calibrated period of time. This monitor detects malfunctions of the estimated exhaust gas temperature, ECM commanded ignition timing and engine idle speed not reaching the target values.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P050A	The engine speed does not achieve the target engine speed for 7 seconds with engine cooled down. (2 trip detection logic)	<ul style="list-style-type: none"> • Throttle with motor body assembly • Mass air flow meter • PCV system • Air cleaner filter element • Intake system • VVT system • Wire harness or connector • ECM
P050B	The ignition timing is not retarded for 7 seconds, despite rapid warming control of the catalyst (to retard the ignition timing). (2 trip detection logic)	

MONITOR STRATEGY

Related DTCs	P050A: Cold start emission reduction strategy functional check P050B: Cold start emission reduction strategy functional check
Required Sensors/Components (Main)	Throttle with motor body assembly

P050B

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear DTCs (even if no DTCs are stored, perform the clear DTC operation)  .
4. Turn the ignition switch off and wait for at least 30 seconds.
5. Turn the ignition switch to ON and turn the Techstream on.
6. Enter the following menus: Powertrain / Engine / Data List / Coolant Temp, Intake Air.
7. Check that "Coolant Temp - Intake Air" is less than 5°C (9°F).

HINT:

If the conditions are not met, then turn the ignition switch off, and wait until the conditions are met.

8. Start the engine and warm it up until the engine coolant temperature reaches 75°C (167°F) or higher.
9. Enter the following menus: Powertrain / Engine / Trouble Codes.
10. Read pending DTCs.

HINT:

- If a pending DTC is output, the system is malfunctioning.
- If a pending DTC is not output, perform the following procedure.

11. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
12. Input the DTC: P050A or P50B.
13. Check the DTC judgment result.

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	<ul style="list-style-type: none"> ◦ DTC judgment completed ◦ System normal
ABNORMAL	<ul style="list-style-type: none"> ◦ DTC judgment completed ◦ System abnormal
INCOMPLETE	<ul style="list-style-type: none"> ◦ DTC judgment not completed ◦ Perform driving pattern after confirming DTC enabling conditions
N/A	<ul style="list-style-type: none"> ◦ Unable to perform DTC judgment ◦ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

- If the judgment result shows **NORMAL**, the system is normal.
- If the judgment result shows **ABNORMAL**, the system has a malfunction.

14. If the test result is INCOMPLETE or N/A and no DTC is output, perform a universal trip and

check for permanent DTCs  .

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

WIRING DIAGRAM

Refer to DTC P0102  .

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air fuel ratio was lean or rich, and other data from the time the malfunction occurred.

NOTICE:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1.	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P050A OR P050B)
-----------	--

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Powertrain / Engine / Trouble Codes.
- (e) Read DTCs.

Result

RESULT	PROCEED TO
DTC P050A or P050B is output	A
DTC P050A or P050B and other DTCs are output	B

HINT:

If any DTCs other than P050A or P050B are output, troubleshoot those DTCs first.

B  **GO TO DTC CHART**

A

2. READ VALUE USING TECHSTREAM (FUEL TRIM)

HINT:

Calculate the total fuel trim values to check the characteristic deviation of the mass air flow meter.

- (a) Connect the Techstream to the DLC3.
- (b) Start the engine.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Powertrain / Engine / Data List / Short FT #1 and Long FT #1.
- (e) Read the values displayed on the Techstream at engine idle.
- (f) Add together the Short FT #1 and Long FT #1 values to obtain the total fuel trim.

Standard:
Total of Short FT #1 and Long FT #1 values is between -20% and 20%.

NG ► CHECK PCV SYSTEM

OK
▼

3. INSPECT THROTTLE WITH MOTOR BODY ASSEMBLY (THROTTLE VALVE)

- (a) Check that there are no deposits around the throttle valve and throttle valve condition.

OK:
No deposits around the throttle valve and throttle valve moves smoothly.

Result

RESULT	PROCEED TO
NG	A
OK	B

B ► CHECK WHETHER DTC OUTPUT RECURS (DTC P050A OR P050B)

A
▼

4. REPLACE THROTTLE WITH MOTOR BODY ASSEMBLY

(a) Replace the throttle with motor body assembly  .

NEXT  **CHECK WHETHER DTC OUTPUT RECURS (DTC P050A OR P050B)**

5.	CHECK PCV SYSTEM
-----------	-------------------------

(a) Check the PCV hose connections  .

OK:

PCV valve and hose are connected correctly and are not damaged.

NG  **REPAIR OR REPLACE PCV HOSE**

OK

6.	CHECK INTAKE SYSTEM
-----------	----------------------------

(a) Check the intake system for vacuum leaks  .

OK:

No leaks from the intake system.

NG  **REPAIR OR REPLACE INTAKE SYSTEM**

OK

7.	CHECK AIR CLEANER FILTER ELEMENT SUB-ASSEMBLY
-----------	--

(a) Visually check that the air cleaner filter element is not excessively contaminated with dirt or oil.

OK:

The air cleaner filter element is not excessively contaminated with dirt or oil.

NG  **REPLACE AIR CLEANER FILTER ELEMENT SUB-ASSEMBLY**

OK

8.	PERFORM ACTIVE TEST USING TECHSTREAM (OPERATE CAMSHAFT TIMING OIL CONTROL VALVE)
-----------	---

(a) Operate the VVT system through the Active test, and check if the VVT system is operating normally.

(1) Perform the Active Test, referring to DTC P000A inspection procedure (VVT system for intake camshaft) INFO .

(2) Perform the Active Test, referring to DTC P000B inspection procedure (VVT system for exhaust camshaft) INFO .

NG ▶ **CHECK AND REPAIR VVT SYSTEM**

OK
▼

9.	READ VALUE USING TECHSTREAM (MAF) INFO
-----------	---

OK ▶ **CHECK WHETHER DTC OUTPUT RECURS (DTC P050A OR P050B)**

NG ▶ **CHECK HARNESS AND CONNECTOR (MASS AIR FLOW METER CONNECTOR CONNECTION)**

10.	REPAIR OR REPLACE PCV HOSE
------------	-----------------------------------

(a) Repair or replace the PCV valve or hose.

NEXT ▶ **CHECK WHETHER DTC OUTPUT RECURS (DTC P050A OR P050B)**

11.	REPAIR OR REPLACE INTAKE SYSTEM
------------	--

(a) Repair or replace the intake system.

NEXT ▶ **CHECK WHETHER DTC OUTPUT RECURS (DTC P050A OR P050B)**

12. REPLACE AIR CLEANER FILTER ELEMENT SUB-ASSEMBLY

(a) Replace the air cleaner filter element sub-assembly  .

NEXT  **CHECK WHETHER DTC OUTPUT RECURS (DTC P050A OR P050B)**

13. CHECK AND REPAIR VVT SYSTEM

(a) Check and repair the VVT system.

HINT:

- Refer to DTC P000A Inspection Procedure (VVT system for intake camshaft)  .
- Refer to DTC P000B Inspection Procedure (VVT system for exhaust camshaft)  .

NEXT

14. CHECK WHETHER DTC OUTPUT RECURS (DTC P050A OR P050B)

NOTICE:

In this operation, the engine must be cold (approximately the same as the engine coolant temperature recorded in the freeze frame data).

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Clear the DTCs  .
- (e) Turn the ignition switch off and wait for at least 30 seconds.
- (f) Drive the vehicle in accordance with the driving pattern described in Confirmation Driving Pattern.
- (g) Enter the following menus: Powertrain / Engine / Utility / All Readiness.
- (h) Input the DTC: P050A or P050B.
- (i) Check the DTC judgment result.

Result

RESULT	PROCEED TO
NORMAL (DTC is not output)	A
ABNORMAL (DTC P050A or P050B is output)	B

B ▶ CHECK HARNESS AND CONNECTOR (MASS AIR FLOW METER CONNECTOR CONNECTION)

A ▶ CHECK FOR INTERMITTENT PROBLEMS

15.	CHECK HARNESS AND CONNECTOR (MASS AIR FLOW METER CONNECTOR CONNECTION)
------------	---

(a) Check the connection and terminal contact pressure of connectors and wire harnesses between the mass air flow meter and ECM **INFO** .

HINT:

Repair any problems.

NEXT

16.	CHECK WHETHER DTC OUTPUT RECURS (DTC P050A OR P050B)
------------	---

NOTICE:

In this operation, the engine must be cold (approximately the same as the engine coolant temperature recorded in the freeze frame data).

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Clear the DTCs **INFO** .
- (e) Turn the ignition switch off and wait for at least 30 seconds.
- (f) Drive the vehicle in accordance with the driving pattern described in Confirmation Driving Pattern.
- (g) Enter the following menus: Powertrain / Engine / Utility / All Readiness.
- (h) Input the DTC: P050A or P050B.
- (i) Check the DTC judgment result.

Result

RESULT	PROCEED TO

DTC	P1263	DI Injector Circuit / Open - (Cylinder 3)
------------	--------------	--

DTC	P1264	DI Injector Circuit / Open - (Cylinder 4)
------------	--------------	--

DESCRIPTION

The D-4S system has two fuel injection methods. One is the in-cylinder direct injection method that directly injects pressurized fuel into the combustion chamber. The other is the intake port injection method. The ECM determines which fuel injection method to use in accordance with the engine conditions. For the in-cylinder direction injection method, the injector driver (EDU) in the engine room operates the fuel injectors (for direction injection) at high speeds. The EDU receives fuel injection request signals from the ECM and converts the signals to high voltage / high current injector operation signals to operate the fuel injectors (for direction injection).

The fuel injection sequence occurs in numerical order from No. 1 to No. 4.

The ECM monitors the EDU at all times. If drivers or fuel injectors are malfunctioning, the EDU sends fuel injector operation condition signals (fail signals IJF1 to IJF2) to the ECM. When the ECM receives the signals, the ECM stops the fuel injection control of the appropriate cylinders, cuts voltage to the appropriate injector relay, and illuminates the MIL.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P062D	When injection is finished in all cylinders, the diagnostic signal from the EDU does not change (open or short in the injector or EDU circuit). (1 trip detection logic)	<ul style="list-style-type: none"> • Open or short in injector driver (EDU) circuit • Injector driver (EDU) • ECM

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Record the Freeze Frame Data.
4. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO.
5. Turn the ignition switch off and wait for at least 30 seconds.
6. Turn the ignition switch to ON and turn the Techstream on.
7. Based on engine speed, engine load and other freeze frame data stored in the ECM, reproduce the conditions present when the DTC was stored.
8. Enter the following menus: Powertrain / Engine / Trouble Codes.
9. Read the DTC.

HINT:

- o If a DTC is output, the system is malfunctioning.
- o If a DTC is not output, perform the following procedure.

10. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
11. Input the DTC: P062D, P1261, P1262, P1263 or P1264.
12. Check the DTC judgment result.

TECHSTREAM DISPLAY	DESCRIPTION
--------------------	-------------

NORMAL	<ul style="list-style-type: none"> o DTC judgment completed o System normal
ABNORMAL	<ul style="list-style-type: none"> o DTC judgment completed o System abnormal
INCOMPLETE	<ul style="list-style-type: none"> o DTC judgment not completed o Perform driving pattern after confirming DTC enabling conditions
N/A	<ul style="list-style-type: none"> o Unable to perform DTC judgment o Number of DTCs which do not fulfill DTC preconditions has reached ECU's memory limit

HINT:

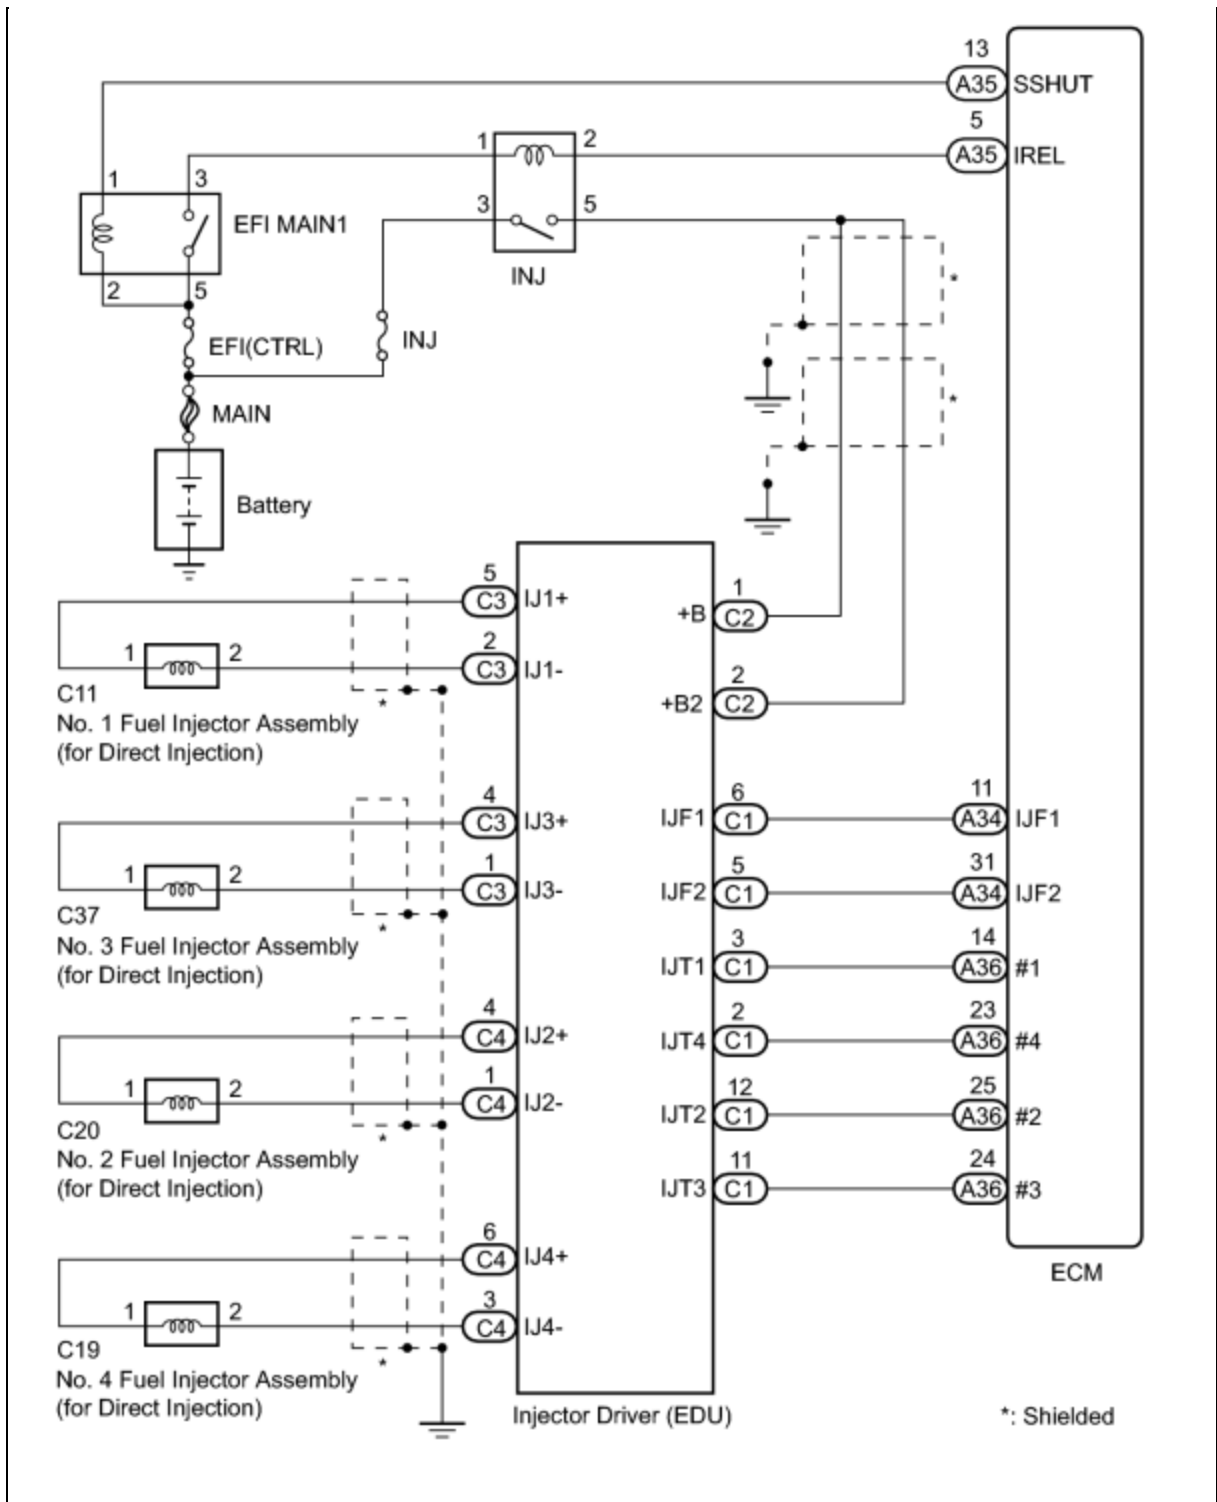

- o If the judgment result shown ABNORMAL, the system has a malfunction.
- o If the judgment result shows NORMAL, the system is normal.

13. If the test result is INCOMPLETE or N/A and no DTC is output, perform a universal trip and check for permanent DTCs  .

HINT:

- o If a permanent DTC is output, the system is malfunctioning.
- o If no permanent DTC is output, the system is normal.

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

- If DTC P1261 is output, check the No. 1 fuel injector (for direct injection) (No. 1 cylinder) circuit.
- If DTC P1262 is output, check the No. 2 fuel injector (for direct injection) (No. 2 cylinder) circuit.
- If DTC P1263 is output, check the No. 3 fuel injector (for direct injection) (No. 3 cylinder) circuit.
- If DTC P1264 is output, check the No. 4 fuel injector (for direct injection) (No. 4 cylinder) circuit.
- If the current from the INJ relay is cut because DTC P062D is stored, DTC P1235 will be stored even if the fuel pump assembly (for high pressure) is normal.
- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition

information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air fuel ratio was lean or rich, and other data from the time the malfunction occurred.

PROCEDURE

1.	CHECK DTC OUTPUT
-----------	-------------------------

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Powertrain / Engine / Trouble Codes.
- (e) Read the DTCs.

Result:

RESULT	PROCEED TO
P1261, P1262, P1263 and/or P1264 are output	A
DTC P062D is output	B

B ▶ **CHECK HARNESS OR CONNECTOR (ECM - INJECTOR DRIVER (EDU))**

A
▼

2.	CHECK HARNESS AND CONNECTOR
-----------	------------------------------------

- (a) Disconnect the injector driver (EDU) connectors.
- (b) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
C3-2 (IJ1-) - C3-5 (IJ1+)	20°C (68°F)	1.74 to 2.04 Ω
C4-1 (IJ2-) - C4-4 (IJ2+)	20°C (68°F)	1.74 to 2.04 Ω
C3-1 (IJ3-) - C3-4 (IJ3+)	20°C (68°F)	1.74 to 2.04 Ω
C4-3 (IJ4-) - C4-6 (IJ4+)	20°C (68°F)	1.74 to 2.04 Ω

HINT:

The standard values shown are fuel injector assembly resistance values.

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
C3-2 (IJ1-) or C3-5 (IJ1+) - Body ground	20°C (68°F)	1 MΩ or higher
C4-1 (IJ2-) or C4-4 (IJ2+) - Body ground	20°C (68°F)	1 MΩ or higher
C3-1 (IJ3-) or C3-4 (IJ3+) - Body ground	20°C (68°F)	1 MΩ or higher
C4-3 (IJ4-) or C4-6 (IJ4+) - Body ground	20°C (68°F)	1 MΩ or higher

NG  **INSPECT FUEL INJECTOR ASSEMBLY (FOR DIRECT INJECTION)**

OK

3. CHECK HARNESS AND CONNECTOR (ECM - INJECTOR DRIVER (EDU))

- (a) Disconnect the ECM connectors.
- (b) Disconnect the injector driver (EDU) connector.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A36-14 (#1) - C1-3 (IJT1)	Always	Below 1 Ω
A36-25 (#2) - C1-12 (IJT2)	Always	Below 1 Ω
A36-24 (#3) - C1-11 (IJT3)	Always	Below 1 Ω
A36-23 (#4) - C1-2 (IJT4)	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A36-14 (#1) or C1-3 (IJT1) - Body ground	Always	10 kΩ or higher
A36-25 (#2) or C1-12 (IJT2) - Body ground	Always	10 kΩ or higher
A36-24 (#3) or C1-11 (IJT3) - Body ground	Always	10 kΩ or higher
A36-23 (#4) or C1-2 (IJT4) - Body ground	Always	10 kΩ or higher

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4. CLEAR DTC

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Clear the DTCs INFO.
- (e) Turn the ignition switch off and wait for at least 30 seconds.

NEXT

5. CHECK ECM (ECM OUTPUT VOLTAGE)

- (a) Disconnect the injector driver (EDU) connector.

- (b) Inspect the ECM using an oscilloscope.

(1) While cranking the engine, check waveform the terminals of the ECM connector.

Standard:

Signal waveform appears as shown in the illustration.

ECM Terminal Name	A36-14 (#1) or A36-23 (#4) - Body ground A36-25 (#2) or A36-24 (#3) - Body ground
Tester Range	2 V/DIV., 4 ms./DIV.
Condition	Cranking

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear DTCs (even if no DTCs are stored, perform the clear DTC operation) INFO.
4. Turn the ignition switch off and wait for at least 30 seconds.
5. Turn the ignition switch to ON and turn the Techstream on.
6. Start the engine and warm it up until the engine coolant temperature reaches 75°C (167°F) or higher.
7. Perform the following the confirmation driving pattern.

CAUTION:

When performing the confirmation driving pattern, obey all speed limits and traffic laws.

- a. Idle the engine for 10 seconds or more [A].
- b. Accelerate the vehicle to 97 km/h (60 mph) or more within 20 seconds [B].
- c. Drive the vehicle at 97 km/h (60 mph) or more for 20 seconds or more [C].
- d. Release the accelerator pedal to Decelerate until the vehicle speed decreases to less than 64 km/h (40 mph) [D].

HINT:

Release the accelerator pedal fully to perform the fuel-cut.

- e. Drive the vehicle at 60 km/h (40 mph) or less for 20 seconds or more [E].
 - f. Accelerate the vehicle to 97 km/h (60 mph) or more within 10 seconds [F].
 - g. Release the accelerator pedal and stop the vehicle [G].
8. Enter the following menus: Powertrain / Engine / Trouble Codes.
 9. Read pending DTCs.

HINT:

- o If a pending DTC is output, the system is malfunctioning.
- o If a pending DTC is not output, perform the following procedure.

10. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
11. Input the DTC: P0068.
12. Check the DTC judgment result.

TECHSTREAM DISPLAY	DESCRIPTION

N/A	<ul style="list-style-type: none"> o Unable to perform DTC judgment o Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

- o If the judgment result shows NORMAL, the system is normal.
- o If the judgment result shows ABNORMAL, the system has a malfunction.

13. If the test result is INCOMPLETE or N/A and no DTC is output, perform a universal trip and check for permanent DTCs **INFO** .

HINT:

- o If a permanent DTC is output, the system is malfunctioning.
- o If no permanent DTC is output, the system is normal.

WIRING DIAGRAM

Refer to P0107 **INFO** .

INSPECTION PROCEDURE

NOTICE:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air fuel ratio was lean or rich, and other data from the time the malfunction occurred.

PROCEDURE

1.	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0068)
-----------	---

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Powertrain / Engine / Trouble Codes.

(e) Read DTCs.

Result

RESULT	PROCEED TO
DTC P0068 is output	A
DTC P0068 and other DTCs are output	B

B  **GO TO DTC CHART**

A

2.	CHECK INTAKE SYSTEM
-----------	----------------------------

(a) Check the intake system for vacuum leaks  .

OK:

PCV valve and hose are connected correctly and are not damaged.

NG  **REPAIR OR REPLACE INTAKE SYSTEM**

OK

3.	CHECK PCV HOSE CONNECTIONS
-----------	-----------------------------------

(a) Check the PCV hose connections  .

OK:

No leaks from intake system.

NG  **REPAIR OR REPLACE PCV HOSE**

OK

4.	REPLACE MANIFOLD ABSOLUTE PRESSURE SENSOR
-----------	--

(a) Replace the manifold absolute pressure sensor **INFO** .

NEXT

5. CONFIRM WHETHER MALFUNCTION HAS BEEN SUCCESSFULLY REPAIRED

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Clear the DTCs **INFO** .
- (e) Turn the ignition switch off and wait for at least 30 seconds.
- (f) Turn the ignition switch to ON.
- (g) Turn the Techstream on.
- (h) Start the engine and warm it up.
- (i) Drive the vehicle in accordance with the driving pattern described in Confirmation Driving Pattern.
- (j) Enter the following menus: Powertrain / Engine / Utility / All Readiness.
- (k) Input the DTC: P0068.
- (l) Check the DTC judgment.

Result:

TOYOTA

Last Modified: 3-27-2012	6.4 C	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000PG603AX
Title: FA20 ENGINE CONTROL: SFI SYSTEM: P0087: Fuel Rail / System Pressure - Too Low (2013 FR-S)		

DTC	P0087	Fuel Rail / System Pressure - Too Low
------------	--------------	--

DESCRIPTION

The high-pressure fuel system consists of the spill control valve, pump plunger and fuel pressure sensor. The spill control valve opens and closes the low-pressure fuel line (from the fuel tank), the pump plunger (operated by the camshaft) pressurizes fuel and the fuel pressure sensor located on the fuel delivery pipe monitors fuel pressure.

The fuel pump assembly (for high pressure) is installed to the cylinder head cover (bank 2) and is driven by the cam located at the intake camshaft.

The plunger moves up and down by the camshaft rotations, and produces a vacuum to suck fuel and pressurizes the fuel. This fuel flows into the fuel delivery pipe. The ECM opens and closes the spill control valve to regulate the fuel pressure to the target fuel pressure. In order to obtain and maintain the target pressure, the ECM monitors the fuel pressure using the fuel pressure sensor and performs the feedback control.

HINT:

The spill control valve, pump plunger are built into the fuel pump assembly (for high pressure).

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0087	Fuel pressure is lower than the target value. (1 trip detection logic)	<ul style="list-style-type: none"> • Leak of fuel • Fuel pipe (Fuel tank - Fuel pump assembly (for high pressure) [bank 1 or bank 2]) • Fuel pipe (Fuel pump assembly (for high pressure) - Fuel injector assembly [for direct injection]) • Fuel injector assembly (for direct injection) • Fuel pump assembly (for high pressure) • Injector driver (EDU) • Fuel pump assembly • ECM

MONITOR DESCRIPTION

If the fuel pressure decreases even after the ECM commands the high-pressure fuel pump to close the spill control valve, a DTC is output.

MONITOR STRATEGY

Related DTCs	P0087: High pressure fuel system monitor functional check (Pressure too low)
Required sensors/Components (Main)	Fuel pressure sensor

Required sensors/Components (Related)	-
Frequency of operation	Continuous
Duration	10 seconds
MIL operation	Immediately
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTC not stored	None
Elapsed time after engine start	10 seconds
Elapsed time after fuel cut	2 seconds or more
Target fuel pressure change during 64 msec	Less than 2.4 MPa (24.4 kgf/cm ² , 348 psi)
Direct injection ratio	0% or more

TYPICAL MALFUNCTION THRESHOLDS

Actual fuel pressure - Target fuel pressure	Less than -3.5 MPa (-35.7 kgf/cm ² , -508 psi)
---	---

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Record the Freeze Frame Data.
4. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO.
5. Turn the ignition switch off and wait for at least 30 seconds.
6. Turn the ignition switch to ON and turn the Techstream on.
7. Based on engine speed, engine load and other freeze frame data stored in the ECM, reproduce the conditions present when the DTC was stored.
8. Enter the following menus: Powertrain / Engine / Trouble Codes.
9. Read the DTC.

HINT:

- If a DTC is output, the system is malfunctioning.
- If a DTC is not output, perform the following procedure.

10. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
11. Input the DTC: P0087.
12. Check the DTC judgment result.

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	<ul style="list-style-type: none"> ◦ DTC judgment completed ◦ System normal
ABNORMAL	<ul style="list-style-type: none"> ◦ DTC judgment completed

	<ul style="list-style-type: none"> System abnormal
INCOMPLETE	<ul style="list-style-type: none"> DTC judgment not completed Perform driving pattern after confirming DTC enabling conditions
N/A	<ul style="list-style-type: none"> Unable to perform DTC judgment Number of DTCs which do not fulfill DTC preconditions has reached ECU's memory limit

HINT:

- If the judgment result shown ABNORMAL, the system has a malfunction.
- If the judgment result shows NORMAL, the system is normal.

13. If the test result is INCOMPLETE or N/A and no DTC is output, perform a universal trip and check for permanent DTCs .

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was moving or stationary, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	CHECK FUEL LEAK (HIGH PRESSURE SIDE)
-----------	---

(a) Check around and beneath the car for fuel leaks, fumes, etc.

OK:

No fuel leaks present.

NG  **REPAIR OR REPLACE FUEL LEAK POINT**

OK

2.	CHECK OTHER DTCS OUTPUT (IN ADDITION TO DTC P0087)
-----------	---

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON and turn the Techstream on.
- (c) Enter the following menus: Powertrain / Engine / Trouble Codes.
- (d) Read the DTCs.

Result:

RESULT	PROCEED TO
DTC P0087 is output	A
DTC P0087 and other DTCs are output	B

HINT:

If any DTCs other than P0087 are output, troubleshoot those DTCs first.

B ► [GO TO DTC CHART](#)

A

3.	CHECK IF VEHICLE HAS RUN OUT OF FUEL IN PAST
-----------	---

- (a) Has the vehicle run out of fuel in the past?

NO ► **DTC CAUSED BY RUNNING OUT OF FUEL**

YES

4.	READ VALUE USING TECHSTREAM (FUEL PRESS)
-----------	---

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON and turn the Techstream on.
- (c) Start the engine.
- (d) Enter the following menus: Powertrain / Engine / Data List / Fuel Press.
- (e) Read Fuel Press when racing the engine.

Result:

--	--

RESULT	PROCEED TO
Fuel Press value varies.	A
Fuel Press value does not increase.	B
Fuel Press value does not vary.	C

B ► CHECK FUEL LEAK (HIGH PRESSURE SIDE)

C ► REPLACE FUEL PRESSURE SENSOR

A

5.	PERFORM ACTIVE TEST USING TECHSTREAM (CONTROL THE FUEL PUMP / SPEED)
-----------	---

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON and turn the Techstream on.
- (c) Start the engine.
- (d) Enter the following menus: Powertrain / Engine / Active Test / Control the Fuel Pump / Speed.
- (e) When performing the Active Test, check for an operating sound from the fuel pump.

NG ► CHECK FUEL PUMP OPERATION

OK

6.	CHECK FUEL PRESSURE (LOW PRESSURE SIDE)
-----------	--

- (a) Check the fuel pressure (low pressure side) INFO .

NG ► REPLACE FUEL PRESSURE REGULATOR

OK

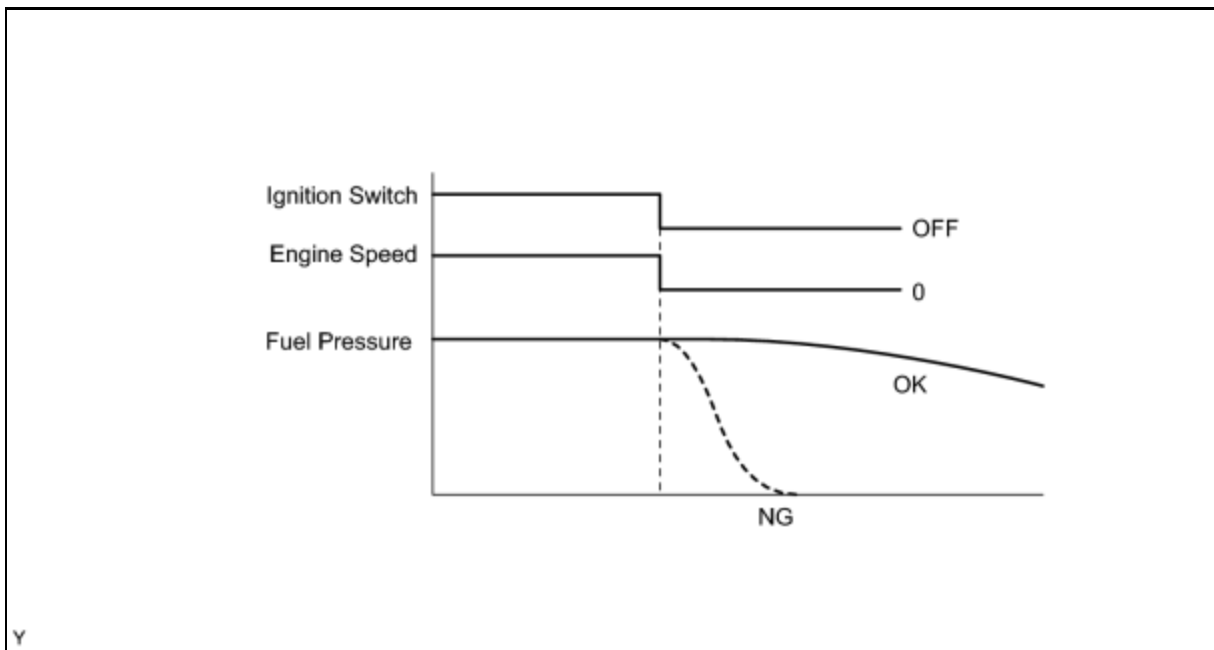

--	--

7. CHECK FUEL LEAK (HIGH PRESSURE SIDE)

- Connect the Techstream to the DLC3.
- Turn the ignition switch to ON and turn the Techstream on.
- Enter the following menus: Powertrain / Engine / Data List / Fuel Press.
- Check changes in the fuel pressure when the engine is stopped.

HINT:

Turn the ignition switch to ON immediately after turning the ignition switch off.

Result

RESULT	PROCEED TO
The fuel pressure drops immediately after turning the ignition switch off.	A
The fuel pressure is nearly maintained, or with moderate variations.	B

B ▶ REPLACE INJECTOR DRIVER (EDU)

A

8. INSPECT FUEL PUMP ASSEMBLY (FOR HIGH PRESSURE)

- Inspect the fuel pump assembly (for high pressure)  .

OK

9.	REPLACE INJECTOR DRIVER (EDU)
-----------	--------------------------------------

(a) Replace the fuel injector driver (EDU)  .

NEXT

10.	PERFORM CONFIRMATION DRIVING PATTERN
------------	---

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Clear the DTCs  .
- (e) Turn the ignition switch off and wait for at least 30 seconds.
- (f) Turn the ignition switch to ON and turn the Techstream on.
- (g) Start the engine and warm it up.
- (h) Drive the vehicle in accordance with the driving pattern described in Confirmation Driving Pattern.
- (i) Enter the following menus: Powertrain / Engine / Trouble Codes.
- (j) Read the DTC.

Result:

RESULT	PROCEED TO
DTC P0087 is output	A
DTC is not output	B

B  **END**

A

11.	REPLACE FUEL PUMP ASSEMBLY (FOR HIGH PRESSURE)
------------	---

(a) Replace the fuel pump assembly (high pressure side)  .

HINT:

If the fuel pump assembly (for high pressure) has been replaced in step 8, then proceed to step 13 without replacing the fuel pump assembly (for high pressure).

NEXT

12.	PERFORM CONFIRMATION DRIVING PATTERN
------------	---

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Clear the DTCs  .
- (e) Turn the ignition switch off and wait for at least 30 seconds.
- (f) Turn the ignition switch to ON and turn the Techstream on.
- (g) Start the engine and warm it up.
- (h) Drive the vehicle in accordance with the driving pattern described in Confirmation Driving Pattern.
- (i) Enter the following menus: Powertrain / Engine / Trouble Codes.
- (j) Read the DTC.

Result:

RESULT	PROCEED TO
DTC P0087 is output	A
DTC is not output	B

B  **END**

A

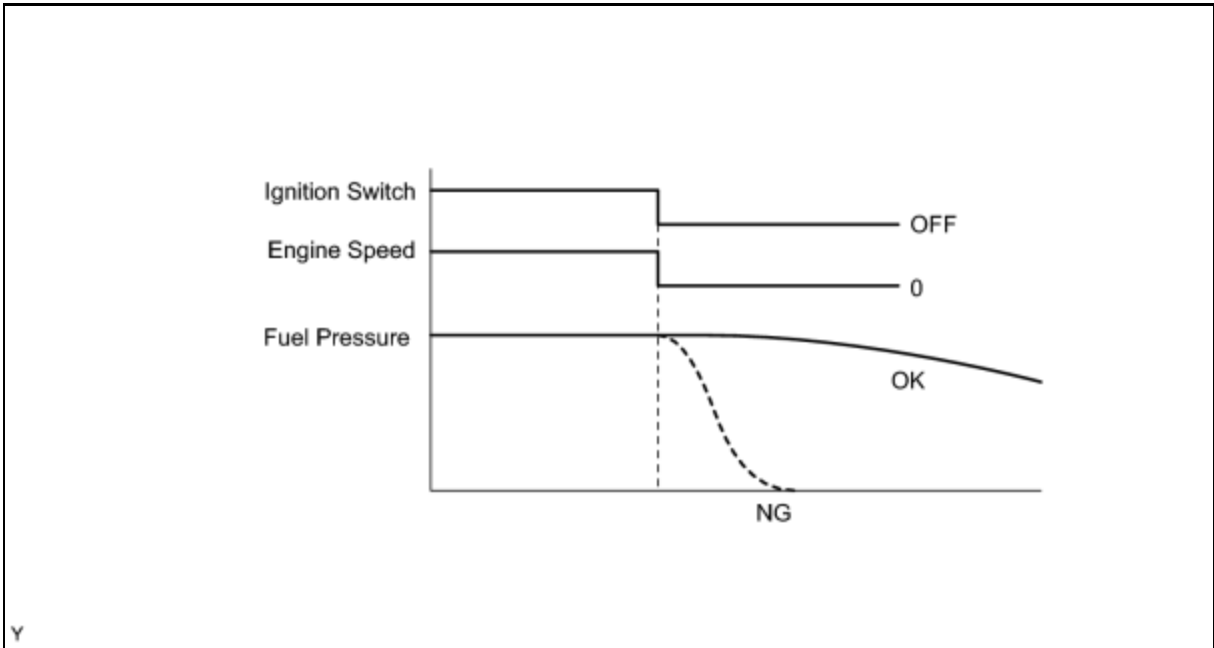

13. CHECK FUEL LEAK (HIGH PRESSURE SIDE)

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON and turn the Techstream on.
- (c) Enter the following menus: Powertrain / Engine / Data List / Fuel Press.
- (d) Check changes in the fuel pressure when the engine is stopped.

HINT:

Turn the ignition switch to ON immediately after turning the ignition switch off.

Result

RESULT	PROCEED TO
The fuel pressure drops immediately after turning the ignition off.	A
