The fuel pressure is nearly maintained, or with moderate variations.	B

B ▶ REPLACE FUEL INJECTOR ASSEMBLY (FOR DIRECT INJECTION)

A ▶ REPLACE ECM

Last Modified: 3-27-2012	6.4 C	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000PG7039X
Title: FA20 ENGINE CONTROL: SFI SYSTEM: P0088: Fuel Rail / System Pressure - Too High (2013 FR-S)		

DTC	P0088	Fuel Rail / System Pressure - Too High
------------	--------------	---

DESCRIPTION

Refer to DTC P0087 [INFO](#) .

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0088	Fuel pressure is higher than the target value for 10 seconds or more. (1 trip detection logic)	<ul style="list-style-type: none"> Fuel pump assembly (for high pressure) ECM

MONITOR DESCRIPTION

If the fuel pressure does not decrease even after the ECM commands the high-pressure fuel pump to open the spill control valve, a DTC is output.

If there is minimal difference between the fuel pressure before and after the fuel relief valve operates, a DTC is output.

MONITOR STRATEGY

Related DTCs	P0088: High pressure fuel system monitor functional check (Pressure too high)
Required sensors/Components (Main)	Fuel pressure sensor
Required sensors/Components (Related)	-
Frequency of operation	Continuous
Duration	10 seconds
MIL operation	Immediately
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTC not stored	None
Elapsed time after engine start	10 seconds
Elapsed time after fuel cut	2 seconds or more
Target fuel pressure change during 64 msec	Less than 2.4 MPa (24.4 kgf/cm ² , 348 psi)
Direct injection ratio	0% or more

TYPICAL MALFUNCTION THRESHOLDS

Actual fuel pressure - Target fuel pressure	More than 6 MPa (61.2 kgf/cm ² , 871 psi)
---	--

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Record the Freeze Frame Data.
4. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) **INFO** .
5. Turn the ignition switch off and wait for at least 30 seconds.
6. Turn the ignition switch to ON and turn the Techstream on.
7. Based on engine speed, engine load and other freeze frame data stored in the ECM, reproduce the conditions present when the DTC was stored.
8. Enter the following menus: Powertrain / Engine / Trouble Codes.
9. Read the DTC.

HINT:

- If a DTC is output, the system is malfunctioning.
 - If a DTC is not output, perform the following procedure.
10. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
 11. Input the DTC: P0088.
 12. Check the DTC judgment result.

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	<ul style="list-style-type: none">◦ DTC judgment completed◦ System normal
ABNORMAL	<ul style="list-style-type: none">◦ DTC judgment completed◦ System abnormal
INCOMPLETE	<ul style="list-style-type: none">◦ DTC judgment not completed◦ Perform driving pattern after confirming DTC enabling conditions
N/A	<ul style="list-style-type: none">◦ Unable to perform DTC judgment◦ Number of DTCs which do not fulfill DTC preconditions has reached ECU's memory limit

HINT:

- If the judgment result shows ABNORMAL, the system has a malfunction.
 - If the judgment result shows NORMAL, the system is normal.
13. If the test result is INCOMPLETE or N/A and no DTC is output, perform a universal trip and check for permanent DTCs **INFO** .

HINT:

- o If a permanent DTC is output, the system is malfunctioning.
- o If no permanent DTC is output, the system is normal.

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was moving or stationary, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	CHECK OTHER DTCS OUTPUT (IN ADDITION TO DTC P0088)
-----------	---

- Connect the Techstream to the DLC3.
- Turn the ignition switch to ON and turn the Techstream on.
- Enter the following menus: Powertrain / Engine / Trouble Codes.
- Read the DTCs.

Result:

RESULT	PROCEED TO
DTC P0088 is output	A
DTC P0088 and other DTCs are output	B

HINT:

If any DTCs other than P0088 are output, troubleshoot those DTCs first.

B  **GO TO DTC CHART**

A

2.	PERFORM ACTIVE TEST USING TECHSTREAM
-----------	---

- Connect the Techstream to the DLC3.
- Start the engine and turn the Techstream on.
- Enter the following menus: Powertrain / Engine / Active Test / Control the Target Fuel Pressure / Fuel Press.

(d) Check that the fuel pressure fluctuates when the target fuel pressure changes.

HINT:

The Active Test operation lowers the target fuel pressure by 12.5% or increase the target fuel pressure by 24.8%.

OK:

Fuel pressure fluctuates.

NG ► REPLACE FUEL PRESSURE SENSOR

OK

3.	REPLACE FUEL PUMP ASSEMBLY (FOR HIGH PRESSURE)
-----------	---

(a) Replace the fuel pump assembly (for high pressure) **INFO** .

NEXT

4.	CHECK IF DTC OUTPUT RECURS (SEE IF DTC P0088 IS OUTPUT AGAIN)
-----------	--

(a) Connect the Techstream to the DLC3.

(b) Turn the Techstream on.

(c) Clear the DTCs **INFO** .

(d) Drive the vehicle in accordance with the driving pattern described in the Confirmation Driving Pattern.

(e) Enter the following menus: Powertrain / Engine / Trouble Codes.

(f) Read the DTCs.

Result:

RESULT	PROCEED TO
DTC P0088 is output	A
DTC is not output	B

B ► END

A ► REPLACE ECM

Last Modified: 3-27-2012	6.4 C	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000PF40ACX
Title: FA20 ENGINE CONTROL: SFI SYSTEM: P0101: Mass Air Flow Circuit Range / Performance Problem (2013 FR-S)		

DTC	P0101	Mass Air Flow Circuit Range / Performance Problem
------------	--------------	--

DESCRIPTION

Refer to DTC P0102  .

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0101	<p>One of the following conditions is met (2 trip detection logic):</p> <ul style="list-style-type: none"> • Mass air flow meter voltage is less than 1.13 V for 5 seconds or more when throttle position is 16° or more with driving. • Mass air flow meter voltage is more than 1.88 V for 10 seconds or more when throttle position is 5.13° or less with driving. 	<ul style="list-style-type: none"> • Mass air flow meter • Intake system • PCV hose connections

MONITOR DESCRIPTION

The mass air flow meter is a sensor that measures the amount of air flowing through the throttle valve. The ECM uses this information to determine the fuel injection time and to provide an appropriate air fuel ratio. Inside the mass air flow meter, there is a heated platinum wire which is exposed to the flow of intake air. By applying a specific electrical current to the wire, the ECM heats it to a specific temperature. The flow of incoming air cools both the wire and an internal thermistor, affecting their resistance. To maintain a constant current value, the ECM varies the voltage applied to the mass air flow meter. The voltage level is proportional to the airflow through the sensor, and the ECM uses it to calculate the intake air volume.

The ECM monitors the average engine load value ratio to check the mass air flow meter for malfunctions. The average engine load value ratio is obtained by comparing the average engine load calculated from the MAF meter output to the average engine load estimated from the driving conditions, such as the engine speed and the throttle opening angle. If the average engine load value ratio is below the threshold value, the ECM determines that the intake air volume is low, and if the average engine load value ratio is above the threshold value, the ECM determines that the intake air volume is high.

If this is detected in 2 consecutive driving cycles, the MIL is illuminated and the DTC is stored.

MONITOR STRATEGY

Related DTCs	P0101: Mass air flow meter rationality check

More than 1.88 V [10.6 g/sec]

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear DTCs (even if no DTCs are stored, perform the clear DTC operation) .
4. Turn the ignition switch off and wait for at least 30 seconds.
5. Turn the ignition switch to ON and turn the Techstream on.
6. Start the engine and warm it up until the engine coolant temperature reaches 75°C (167°F) or higher.
7. Perform the following the confirmation driving pattern.

CAUTION:

When performing the confirmation driving pattern, obey all speed limits and traffic laws.

- a. Idle the engine for 10 seconds or more [A].
- b. Accelerate the vehicle to 97 km/h (60 mph) or more within 20 seconds [B].
- c. Drive the vehicle at 97 km/h (60 mph) or more for 20 seconds or more [C].
- d. Release the accelerator pedal to Decelerate until the vehicle speed decreases to less than 64 km/h (40 mph) [D].

HINT:

Release the accelerator pedal fully to perform the fuel-cut.

- e. Drive the vehicle at 60 km/h (40 mph) or less for 20 seconds or more [E].
 - f. Accelerate the vehicle to 97 km/h (60 mph) or more within 10 seconds [F].
 - g. Release the accelerator pedal and stop the vehicle [G].
8. Enter the following menus: Powertrain / Engine / Trouble Codes.
 9. Read pending DTCs.

HINT:

- o If a pending DTC is output, the system is malfunctioning.
- o If a pending DTC is not output, perform the following procedure.

10. Enter the following menus: Powertrain / Engine / Utility / All Readiness.

11. Input the DTC: P0101.
12. Check the DTC judgment result.

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	<ul style="list-style-type: none"> ○ DTC judgment completed ○ System normal

HINT:

- If the judgment result shows NORMAL, the system is normal.
- If the judgment result shows ABNORMAL, the system has a malfunction.

13. If the test result is INCOMPLETE or N/A and no DTC is output, perform a universal trip and check for permanent DTCs INFO.

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

WIRING DIAGRAM

Refer to DTC P0102 INFO.

INSPECTION PROCEDURE

NOTICE:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air fuel ratio was lean or rich, and other data from the time the malfunction occurred.

PROCEDURE

1.	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0101)
----	--

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Powertrain / Engine / Trouble Codes.
- (e) Read DTCs.

Result

RESULT	PROCEED TO
DTC P0101 is output	A
DTC P0101 and other DTCs are output	B

HINT:

If any DTCs other than P0101 are output, troubleshoot those DTCs first.

B ► GO TO DTC CHART

A

2.	CHECK INTAKE SYSTEM
-----------	----------------------------

- (a) Check the intake system for vacuum leaks INFO.

OK:

No leaks from intake system.

NG ► REPAIR OR REPLACE INTAKE SYSTEM

OK

3.	CHECK PCV HOSE CONNECTIONS
-----------	-----------------------------------

- (a) Check the PCV hose connections INFO.

OK:

PCV valve and hose are connected correctly and are not damaged.

NG ► REPAIR OR REPLACE PCV HOSE

OK

4.	REPLACE MASS AIR FLOW METER
-----------	------------------------------------

(a) Replace the mass air flow meter  .

NEXT

5.	CONFIRM WHETHER MALFUNCTION HAS BEEN SUCCESSFULLY REPAIRED
-----------	---

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Clear the DTCs  .
- (e) Turn the ignition switch off and wait for at least 30 seconds.
- (f) Turn the ignition switch to ON.
- (g) Turn the Techstream on.
- (h) Start the engine and warm it up.
- (i) Drive the vehicle in accordance with the driving pattern described in Confirmation Driving Pattern.
- (j) Enter the following menus: Powertrain / Engine / Utility / All Readiness.
- (k) Input the DTC: P0101.
- (l) Check the DTC judgment.

Result

Last Modified: 3-27-2012	6.4 C	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000U5B0MNX
Title: FA20 ENGINE CONTROL: SFI SYSTEM: P0102,P0103: Mass or Volume Air Flow Circuit Low Input (2013 FR-S)		

DTC	P0102	Mass or Volume Air Flow Circuit Low Input
------------	--------------	--

DTC	P0103	Mass or Volume Air Flow Circuit High Input
------------	--------------	---

DESCRIPTION

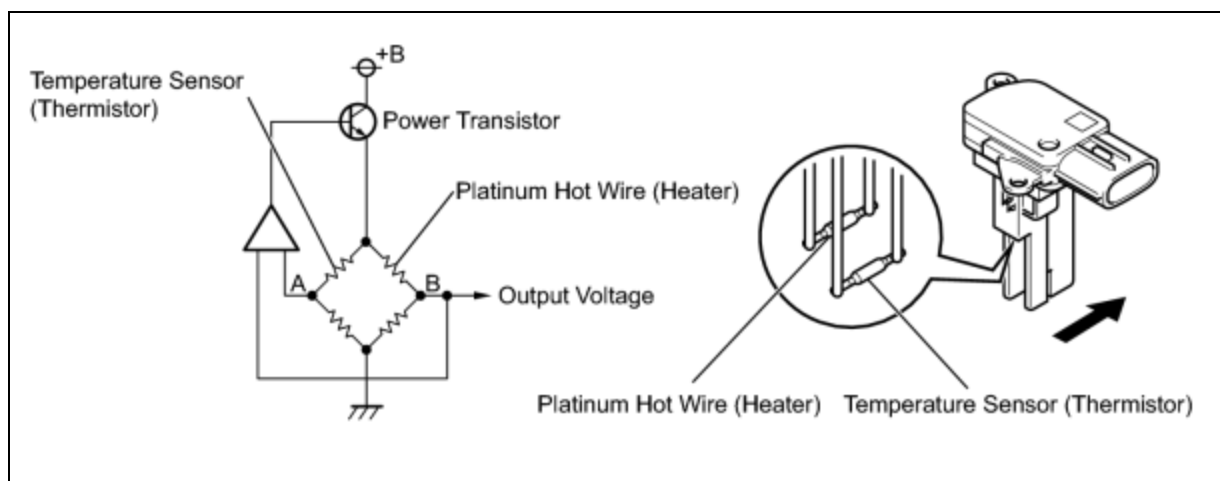

The mass air flow meter is a sensor that measures the amount of air flowing through the throttle valve. The ECM uses this information to determine the fuel injection time and to provide the appropriate air fuel ratio.

Inside the mass air flow meter, there is a heated platinum wire which is exposed to the flow of intake air. By applying a specific electrical current to the wire, the ECM heats it to a given temperature. The flow of incoming air cools both the wire and an internal thermistor, affecting their resistance. To maintain a constant current value, the ECM varies the voltage applied to the wire and internal thermistor. The voltage level is proportional to the airflow through the sensor, and the ECM uses it to calculate the intake air volume.

The circuit is constructed so that the platinum hot wire and the temperature sensor create a bridge circuit, and the power transistor is controlled so that the potentials of A and B remain equal to maintain the predetermined temperature.

HINT:

When any of these DTCs is stored, the ECM enters fail-safe mode. During fail-safe mode, the ignition timing is calculated by the ECM, according to the engine speed and throttle valve position. Fail-safe mode continues until a pass condition is detected.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA

P0102	Mass air flow meter voltage is 0.127 V or less for 0.5 seconds or more. (1 trip detection logic)	<ul style="list-style-type: none"> • Open or short in mass air flow meter circuit • Mass air flow meter • ECM
P0103	Mass air flow meter voltage is 4.723 V or more for 0.5 seconds or more. (1 trip detection logic)	

HINT:

When any of these DTCs are output, check the air-flow rate using the Techstream. Enter the following menus: Powertrain / Engine / Data List / MAF.

MASS AIR FLOW RATE (GM/SEC)	MALFUNCTION
Approximately 0.0	<ul style="list-style-type: none"> • Open in mass air flow meter power source circuit • Open or short in VG circuit
160.0 or more	<ul style="list-style-type: none"> • Open in E2G circuit

MONITOR DESCRIPTION

If there is a defect in the mass air flow meter or an open or short circuit, the voltage level deviates from the normal operating range. The ECM interprets this deviation as a malfunction in the mass air flow meter circuit and stores a DTC.

MONITOR STRATEGY

Related DTCs	P0102: Mass air flow meter circuit continuity (Low voltage) P0103: Mass air flow meter circuit continuity (High voltage)
Required Sensors/Components (Main)	Mass air flow meter

HINT:

- If the judgment result shows NORMAL, the system is normal.
- If the judgment result shows ABNORMAL, the system has a malfunction.

14. If the test result is INCOMPLETE or N/A and no DTC is output, perform a universal trip and check for permanent DTCs  .

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air fuel ratio was lean or rich, and other data from the time the malfunction occurred.

PROCEDURE

1. READ DTC OUTPUT

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Powertrain / Engine / Trouble Codes.
- (e) Read DTCs.

Result

RESULT	PROCEED TO
DTC P0102 is output	A
DTC P0103 is output	B

B ► CHECK HARNESS AND CONNECTOR (SENSOR GROUND)

A ▼

2.	CHECK TERMINAL VOLTAGE (POWER SOURCE OF MASS AIR FLOW METER)
-----------	---

(a) Disconnect the mass air flow meter connector.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

OK ► REPLACE MASS AIR FLOW METER

6. CHECK HARNESS AND CONNECTOR (MASS AIR FLOW METER - ECM)

- (a) Disconnect the mass air flow meter connector.
- (b) Disconnect the ECM connector.
- (c) Measure the resistance according to the value(s) in the table below.
- Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A33-29 (E2G) - C16-4 (E2G)	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A33-29 (E2G) or C16-4 (E2G) - Body-ground	Always	10 k Ω or higher

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ► REPLACE ECM

7. CHECK RELAY (EFI MAIN1)

(a) Inspect the EFI MAIN1 relay  .

NG  **REPLACE RELAY (EFI MAIN1)**

OK

8.	CHECK HARNESS AND CONNECTOR (MASS AIR FLOW METER - EFI MAIN1 RELAY)
-----------	--

(a) Disconnect the mass air flow meter connector.

(b) Remove the EFI MAIN1 relay from the engine room relay block assembly.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
EFI MAIN1 relay terminal 3 - C16-3 (+B)	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
EFI MAIN1 relay terminal 3 or C16-3 (+B) - Body ground	Always	10 k Ω or higher

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK  **CHECK ECM POWER SOURCE CIRCUIT**

Last Modified: 3-27-2012	6.4 C	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000U5B0MMX
Title: FA20 ENGINE CONTROL: SFI SYSTEM: P0107,P0108: Manifold Absolute Pressure / Barometric Pressure Circuit Low Input (2013 FR-S)		

DTC	P0107	Manifold Absolute Pressure / Barometric Pressure Circuit Low Input
------------	--------------	---

DTC	P0108	Manifold Absolute Pressure / Barometric Pressure Circuit High Input
------------	--------------	--

DESCRIPTION

Manifold absolute pressure sensor uses a built-in sensor to detect the intake manifold pressure as a voltage. Additionally, because this measures the absolute pressure as the pressure within the intake manifold without detecting the atmospheric pressure as a standard value, this enables measurements without being influenced by changes in atmospheric pressure from altitude or other causes.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0107	Manifold absolute pressure sensor voltage is 0.61 V or less for 0.5 seconds or more. (1 trip detection logic)	<ul style="list-style-type: none"> • Open or short in manifold absolute pressure sensor circuit • Manifold absolute pressure sensor • ECM
P0108	Manifold absolute pressure sensor voltage is 3.906 V or more for 0.5 seconds or more. (1 trip detection logic)	

HINT:

When any of these DTCs are output, check the manifold absolute pressure using the Techstream. Enter the following menus: Powertrain / Engine / Data List / MAP.

MANIFOLD ABSOLUTE PRESSURE (KPA [MMHG])	MALFUNCTION
Approximately 0 [0]	Short in MAP circuit
141 [1058] or more	<ul style="list-style-type: none"> • Short in VC circuit • Open in PIM circuit • Open in E1 circuit

MONITOR DESCRIPTION

The ECM calculates the manifold absolute pressure based upon the manifold absolute pressure sensor output voltage. If the manifold absolute pressure output voltage is outside the normal range, there may be an abnormality with the manifold absolute pressure, or an open or short in the circuit. In these cases, the ECM will light the check engine warning light, and store the DTC.

--	---

COMPONENT OPERATING RANGE

Manifold absolute pressure sensor voltage [Manifold absolute pressure]	0.647 to 3.897 V [1.56 to 109.9 kPa (12 to 824 mmHg)]
--	---

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear DTCs (even if no DTCs are stored, perform the clear DTC operation) INFO.
4. Turn the ignition switch off and wait for at least 30 seconds.
5. Turn the ignition switch to ON and turn the Techstream on.
6. Start the engine and warm it up until the engine coolant temperature reaches 75°C (167°F) or higher.
7. With the vehicle stationary, depress the accelerator pedal and maintain an engine speed of between 2500 and 3000 rpm for 40 seconds or more [A].
8. Drive the vehicle at 10 km/h (6.25 mph) or more for 1 minute or more [B].

CAUTION:

When performing the confirmation driving pattern, obey all speed limits and traffic laws.

9. Enter the following menus: Powertrain / Engine / Trouble Codes.
10. Read pending DTCs.

HINT:

- o If a pending DTC is output, the system is malfunctioning.
 - o If a pending DTC is not output, perform the following procedure.
11. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
 12. Input the DTC: P0107 or P0108.
 13. Check the DTC judgment result.

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	<ul style="list-style-type: none"> o DTC judgment completed o System normal

ABNORMAL	<ul style="list-style-type: none"> o DTC judgment completed o System abnormal
INCOMPLETE	<ul style="list-style-type: none"> o DTC judgment not completed o Perform driving pattern after confirming DTC enabling conditions
N/A	<ul style="list-style-type: none"> o Unable to perform DTC judgment o Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

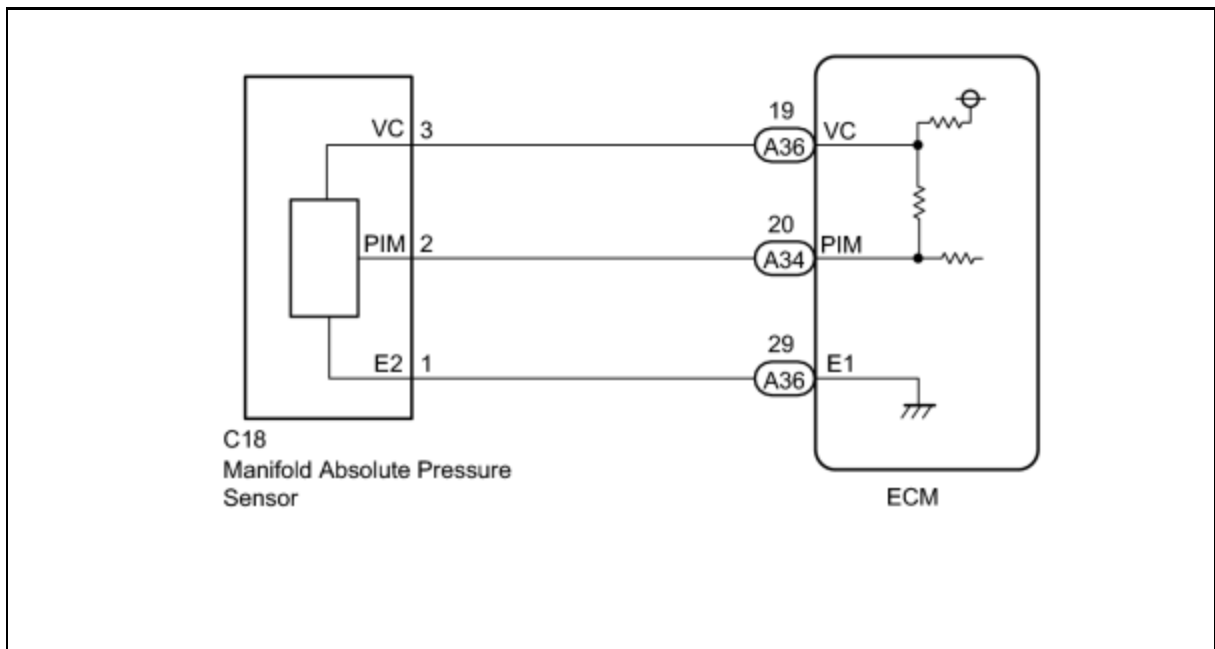

- o If the judgment result shows NORMAL, the system is normal.
- o If the judgment result shows ABNORMAL, the system has a malfunction.

14. If the test result is INCOMPLETE or N/A and no DTC is output, perform a universal trip and check for permanent DTCs INFO.

HINT:

- o If a permanent DTC is output, the system is malfunctioning.
- o If no permanent DTC is output, the system is normal.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air fuel ratio was lean or rich, and other data from the time the malfunction occurred.

PROCEDURE

1.	READ VALUE USING TECHSTREAM (MAP)
-----------	--

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Powertrain / Engine / Data List / MAP.
- (e) Read the value displayed on the Techstream.

Standard:

Nearly equal to atmosphere pressure

Reference Value

CONDITION	MAP
Ignition switch ON	80 to 110 kPa

HINT:

Standard atmospheric pressure is 101 kPa (758 mmHg). For every 100 m (328 ft) increase in altitude, pressure drops by 1 kPa. This varies by weather.

NG ► **CHECK TERMINAL VOLTAGE (POWER SOURCE OF MANIFOLD ABSOLUTE PRESSURE SENSOR)**

OK ► **CHECK INTERMITTENT PROBLEMS**

2.	CHECK TERMINAL VOLTAGE (POWER SOURCE OF MANIFOLD ABSOLUTE PRESSURE SENSOR)
-----------	---

- (a) Disconnect the manifold absolute pressure sensor connector.
- (b) Turn the ignition switch to ON.
- (c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH	SPECIFIED

	CONDITION	CONDITION
C18-3 (VC) - C18-1 (E2)	Ignition switch ON	4.5 to 5.5 V
C18-2 (PIM) - C18-1 (E2)	Ignition switch ON	4.0 to 5.0 V

Text in Illustration

*a	Front view of wire harness connector (to Manifold Absolute Pressure Sensor)
----	---

NG ► **CHECK HARNESS AND CONNECTOR (MANIFOLD ABSOLUTE PRESSURE SENSOR - ECM)**

OK

3. REPLACE MANIFOLD ABSOLUTE PRESSURE SENSOR

(a) Replace the manifold absolute pressure sensor **INFO**.

NEXT

4. PERFORM CONFIRMATION DRIVING PATTERN

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Clear the DTCs **INFO**.
- (e) Turn the ignition switch off and wait for at least 30 seconds.
- (f) Turn the ignition switch to ON and turn the Techstream on.
- (g) Start the engine and warm it up.

(h) Drive the vehicle in accordance with the driving pattern described in Confirmation Driving Pattern.

(i) Enter the following menus: Powertrain / Engine / Trouble Codes.

(j) Read the DTC.

Result:

RESULT	PROCEED TO
DTC P0107 or P0108 is output	A
DTC is not output	B

B ► END

A ► REPLACE ECM

5.	CHECK HARNESS AND CONNECTOR (MANIFOLD ABSOLUTE PRESSURE SENSOR - ECM)
-----------	--

(a) Disconnect the manifold absolute pressure sensor connector.

(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A36-19 (VC) - C18-3 (VC)	Always	Below 1 Ω
A34-20 (PIM) - C18-2 (PIM)	Always	Below 1 Ω
A36-29 (E1) - C18-1(E2)	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A36-19 (VC) or C18-3 (VC) - Body ground	Always	10 k Ω or higher
A34-20 (PIM) or C18-2 (PIM) - Body ground	Always	10 k Ω or higher
A36-29 (E1) or C18-1 (E2) or Body ground	Always	10 k Ω or higher

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ► REPLACE ECM

Last Modified: 3-27-2012	6.4 C	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000001WPH06PX
Title: FA20 ENGINE CONTROL: SFI SYSTEM: P0111: Intake Air Temperature Sensor Gradient Too High (2013 FR-S)		

DTC	P0111	Intake Air Temperature Sensor Gradient Too High
------------	--------------	--

DESCRIPTION

The intake air temperature sensor, mounted on the mass air flow meter, monitors the intake air temperature. The intake air temperature sensor has a built-in thermistor with a resistance that varies according to the temperature of the intake air. When the intake air temperature is low, the resistance of the thermistor increases. When the temperature is high, the resistance drops. These variations in resistance are transmitted to the ECM as voltage changes.

The intake air temperature sensor is powered by a 5 V supply from the THA terminal of the ECM, via resistor R.

Resistor R and the intake air temperature sensor are connected in series. When the resistance value of the intake air temperature sensor changes, according to changes in the intake air temperature, the voltage at terminal THA also varies. Based on this signal, the ECM increases the fuel injection volume when the engine is cold to improve driveability.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0111	The difference between maximum and minimum values for inlet air temperature sensor voltage is less than 0.02 V for 1 second or more. (2 trip detection logic)	Mass air flow meter

MONITOR DESCRIPTION

The ECM performs OBD II monitoring based on the values from the intake air temperature sensor. If there is no change of the sensor value within the normal range, the ECM will not be able to perform OBD II monitoring or will misdiagnose that there is a malfunction in the sensor. The ECM detects when the intake air temperature sensor value is stuck by performing monitoring after the ignition switch is turned off or the engine is started (short soak or long soak).

MONITOR STRATEGY

Related DTCs	P0111: Intake air temperature sensor rationality check
Required Sensors/Components (Main)	Intake air temperature sensor
Required Sensors/Components (Related)	-
Frequency of Operation	Once per driving cycle
Duration	Immediately

DTC P0111 is output	B

HINT:

If any DTCs other than P0111 are output, troubleshoot those DTCs first.

B ▶ REPLACE MASS AIR FLOW METER

A ▶ GO TO DTC CHART

Last Modified: 3-27-2012	6.4 C	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000PF30NNX
Title: FA20 ENGINE CONTROL: SFI SYSTEM: P0112,P0113: Intake Air Temperature Circuit Low Input (2013 FR-S)		

DTC	P0112	Intake Air Temperature Circuit Low Input
------------	--------------	---

DTC	P0113	Intake Air Temperature Circuit High Input
------------	--------------	--

DESCRIPTION

The intake air temperature sensor, mounted on the mass air flow meter, monitors the intake air temperature. The intake air temperature sensor has a built-in thermistor with a resistance that varies according to the temperature of the intake air. When the intake air temperature is low, the resistance of the thermistor increases. When the temperature is high, the resistance drops. These variations in resistance are transmitted to the ECM as voltage changes.

The intake air temperature sensor is powered by a 5 V supply from the THA terminal of the ECM, via resistor.

Resistor and the intake air temperature sensor are connected in series. When the resistance value of the intake air temperature sensor changes, according to changes in the intake air temperature, the voltage at terminal THA also varies. Based on this signal, the ECM increases the fuel injection volume when the engine is cold to improve driveability.

HINT:

When DTC P0112 or P0113 is stored, the ECM enters fail-safe mode. During fail-safe mode, the intake air temperature is estimated to be 20°C (68°F) by the ECM. Fail-safe mode continues until a pass condition is detected.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0112	Intake air temperature sensor voltage is less than 0.4 V for 0.5 seconds or more. (1 trip detection logic)	<ul style="list-style-type: none"> • Open or short in intake air temperature sensor circuit • Intake air temperature sensor (built into mass air flow meter) • ECM
P0113	Intake air temperature sensor voltage is 4.707 V or more for 0.5 seconds or more. (1 trip detection logic)	

HINT:

When any of these DTCs are output, check the intake air temperature using the Techstream. Enter the following menus: Powertrain / Engine / Data List / Intake Air.

TEMPERATURE DISPLAYED	MALFUNCTION
-40°C (-40°F)	Open circuit
215°C (419°F)	Short circuit

MONITOR DESCRIPTION

The ECM monitors the sensor voltage and uses this value to calculate the intake air temperature. When the sensor output voltage deviates from the normal operating range, the ECM interprets this as a malfunction in the intake air temperature sensor circuit and stores a DTC.

MONITOR STRATEGY

Related DTCs	P0112: Intake air temperature sensor range check (Low voltage) P0113: Intake air temperature sensor range check (High voltage)
Required Sensors/Components (Main)	Intake air temperature sensor

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the

air fuel ratio was lean or rich, and other data from the time the malfunction occurred.

PROCEDURE

1. READ VALUE USING TECHSTREAM (INTAKE AIR TEMPERATURE)

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Powertrain / Engine / Data List / Intake Air.
- (e) Read the value displayed on the Techstream.

OK:

Same as actual intake air temperature.

Result

RESULT	PROCEED TO
-40°C (-40°F)	A
215°C (419°F)	B
Same as actual intake air temperature	C

HINT:

- If there is an open circuit, the Techstream indicates -40°C (-40°F).
- If there is a short circuit, the Techstream indicates 215°C (419°F).

B ▶ READ VALUE USING TECHSTREAM (CHECK FOR SHORT IN WIRE HARNESS)

C ▶ CHECK FOR INTERMITTENT PROBLEMS

A

2. READ VALUE USING TECHSTREAM (CHECK FOR OPEN IN WIRE HARNESS)

(a) Disconnect the mass air flow meter connector.

- (b) Connect terminals 1 and 2 of the mass air flow meter connector on the wire harness side.
- (c) Connect the Techstream to the DLC3.
- (d) Turn the ignition switch to ON.
- (e) Turn the Techstream on.
- (f) Enter the following menus: Powertrain / Engine / Data List / Intake Air.
- (g) Read the value displayed on the Techstream.

Standard value:
215°C (419°F)

Text in Illustration

*1	Mass Air Flow Meter

Title: FA20 ENGINE CONTROL: SFI SYSTEM: P0116: Engine Coolant Temperature Circuit Range / Performance Problem (2013 FR-S)		

DTC	P0116	Engine Coolant Temperature Circuit Range / Performance Problem
------------	--------------	---

DESCRIPTION

Refer to DTC P0117  .

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0116	The engine coolant temperature has not dropped completely 6 hours after ignition switch turned off. (2 trip detection logic)	<ul style="list-style-type: none"> • Thermostat • Engine coolant temperature sensor

MONITOR DESCRIPTION

If the engine coolant temperature sensor value does not change after the warmed up engine is stopped and then the next cold engine start is performed, it is determined that a malfunction has occurred. If this is detected in 2 consecutive driving cycles, the MIL is illuminated and the DTC is stored.

MONITOR STRATEGY

Related DTCs	P0116: Engine coolant temperature sensor stuck rationality check
Required Sensors/Components (Main)	Engine coolant temperature sensor
Required Sensors/Components (Related)	Intake air temperature sensor
Frequency of Operation	Once per driving cycle
Duration	0.512 seconds
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs not stored	P0112, P0113 (Intake air temperature (IAT) sensor) P0117, P0118 (Engine coolant temperature (ECT) sensor) P0462, P0463 (Fuel level sensor (FL))
Battery voltage	10.9 V or higher
Soak time	6 hours or more
Elapsed time after electric circuit turned	

on (ignition switch ON)	Less than 60 seconds
Engine coolant temperature at the end of the previous driving cycle	70.2°C (158.2°F) or higher (varies with estimated ambient temperature at previous ignition switch off)

TYPICAL MALFUNCTION THRESHOLDS

Engine coolant temperature	45°C (113°F) or higher
Engine coolant temperature - Intake air temperature	15°C (59°F) or higher

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Enter the following menus: Powertrain / Engine / Data List / Coolant Temp.
4. Clear DTCs (even if no DTCs are stored, perform the clear DTC operation) INFO.
5. Turn the ignition switch off and wait for at least 30 seconds.
6. Turn the ignition switch to ON and turn the Techstream on.
7. Start the engine and warm it up until the engine coolant temperature reaches 80°C (176°F) or higher.
8. Turn the ignition switch off and leave the vehicle for 6 hours or more.
9. Turn the ignition switch to ON and turn the Techstream on.
10. Enter the following menus: Powertrain / Engine / Trouble Codes.
11. Read pending DTCs.

HINT:

- If a pending DTC is output, the system is malfunctioning.
 - If a pending DTC is not output, perform the following procedure.
12. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
 13. Input the DTC: P0116.
 14. Check the DTC judgment result.

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	<ul style="list-style-type: none"> ◦ DTC judgment completed ◦ System normal
ABNORMAL	<ul style="list-style-type: none"> ◦ DTC judgment completed ◦ System abnormal
INCOMPLETE	<ul style="list-style-type: none"> ◦ DTC judgment not completed ◦ Perform driving pattern after confirming DTC enabling conditions
N/A	<ul style="list-style-type: none"> ◦ Unable to perform DTC judgment ◦ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

- o If the judgment result shows NORMAL, the system is normal.
 - o If the judgment result shows ABNORMAL, the system has a malfunction.
1. If the test result is INCOMPLETE or N/A and no DTC is output, perform a universal trip and check for permanent DTCs INFO.

HINT:

- o If a permanent DTC is output, the system is malfunctioning.
- o If no permanent DTC is output, the system is normal.

INSPECTION PROCEDURE

HINT:

- If any of DTCs P0117, P0118 or P0125 are output simultaneously with DTC P0116, the engine coolant temperature sensor may have an open or a short circuit. Troubleshoot those DTCs first.
- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air fuel ratio was lean or rich, and other data from the time the malfunction occurred.
- When the DTC is output, check the engine coolant temperature using the Techstream. Enter the following menus: Powertrain / Engine / Data List / Coolant Temp. If the Coolant Temp value is lower than the actual engine coolant temperature, the engine coolant temperature sensor circuit may be malfunctioning. In this case, check the wire harnesses and connectors (and those connections) between the ECM and the engine coolant temperature sensor first.

PROCEDURE

1.	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0116)
-----------	---

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Powertrain / Engine / Trouble Codes.
- (e) Read DTCs.

Result

RESULT	PROCEED TO
DTC P0116 is output	A
DTC P0116 and other DTCs are output	B

HINT:

If any DTCs and other than P0116 are output, troubleshoot those DTCs first.

A

2.	INSPECT THERMOSTAT
-----------	---------------------------

(a) Inspect the thermostat (thermostat opening temperature)  .

NG ► **REPLACE THERMOSTAT**

OK ► **REPLACE ENGINE COOLANT TEMPERATURE
SENSOR**

------------	--------------	--

DESCRIPTION

A thermistor, whose resistance value varies according to the engine coolant temperature, is built into the engine coolant temperature sensor. The structure of the sensor and its connection to the ECM are the same as those of the intake air temperature sensor.

HINT:

When any of DTCs P0117 and P0118 is stored, the ECM enters fail-safe mode. During fail-safe mode, the engine coolant temperature is estimated to be 70°C (158°F) by the ECM. Fail-safe mode continues until a pass condition is detected.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0117	Engine coolant temperature sensor voltage is less than 0.47 V for 0.5 seconds or more. (1 trip detection logic)	<ul style="list-style-type: none"> • Short in engine coolant temperature sensor circuit • Engine coolant temperature sensor • ECM
P0118	Engine coolant temperature sensor voltage is more than 4.698 V for 0.5 seconds or more. (1 trip detection logic)	<ul style="list-style-type: none"> • Open in engine coolant temperature sensor circuit • Engine coolant temperature sensor • ECM

HINT:

When any of these DTCs are output, check the engine coolant temperature using the Techstream. Enter the following menus: Powertrain / Engine / Data List / Coolant Temp.

TEMPERATURE DISPLAYED	MALFUNCTION
-40°C (-40°F)	Open circuit
215°C (419°F)	Short circuit

MONITOR DESCRIPTION

The engine coolant temperature sensor is used to monitor the engine coolant temperature. The engine

coolant temperature sensor has a thermistor with a resistance that varies according to the temperature of the engine coolant. When the coolant temperature is low, the resistance in the thermistor increases. When the temperature is high, the resistance drops. These variations in resistance are reflected in the output voltage from the sensor. The ECM monitors the sensor voltage and uses this value to calculate the engine coolant temperature. When the sensor output voltage deviates from the normal operating range, the ECM interprets this as a fault in the engine coolant temperature sensor circuit and stores a DTC.

MONITOR STRATEGY

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear DTCs (even if no DTCs are stored, perform the clear DTC operation) INFO.
4. Turn the ignition switch off and wait for at least 30 seconds.
5. Turn the ignition switch to ON and turn the Techstream on.
6. Start the engine and warm it up until the engine coolant temperature reaches 75°C (167°F) or higher.
7. With the vehicle stationary, depress the accelerator pedal and maintain an engine speed of between 2500 and 3000 rpm for 40 seconds or more [A].
8. Drive the vehicle at 10 km/h (6.25 mph) or more for 1 minute or more [B].

CAUTION:

When performing the confirmation driving pattern, obey all speed limits and traffic laws.

9. Enter the following menus: Powertrain / Engine / Trouble Codes.
10. Read pending DTCs.

HINT:

- o If a pending DTC is output, the system is malfunctioning.
 - o If a pending DTC is not output, perform the following procedure.
11. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
 12. Input the DTC: P0117 or P0118.
 13. Check the DTC judgment result.

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	<ul style="list-style-type: none"> o DTC judgment completed o System normal

N/A	<ul style="list-style-type: none"> o Unable to perform DTC judgment o Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

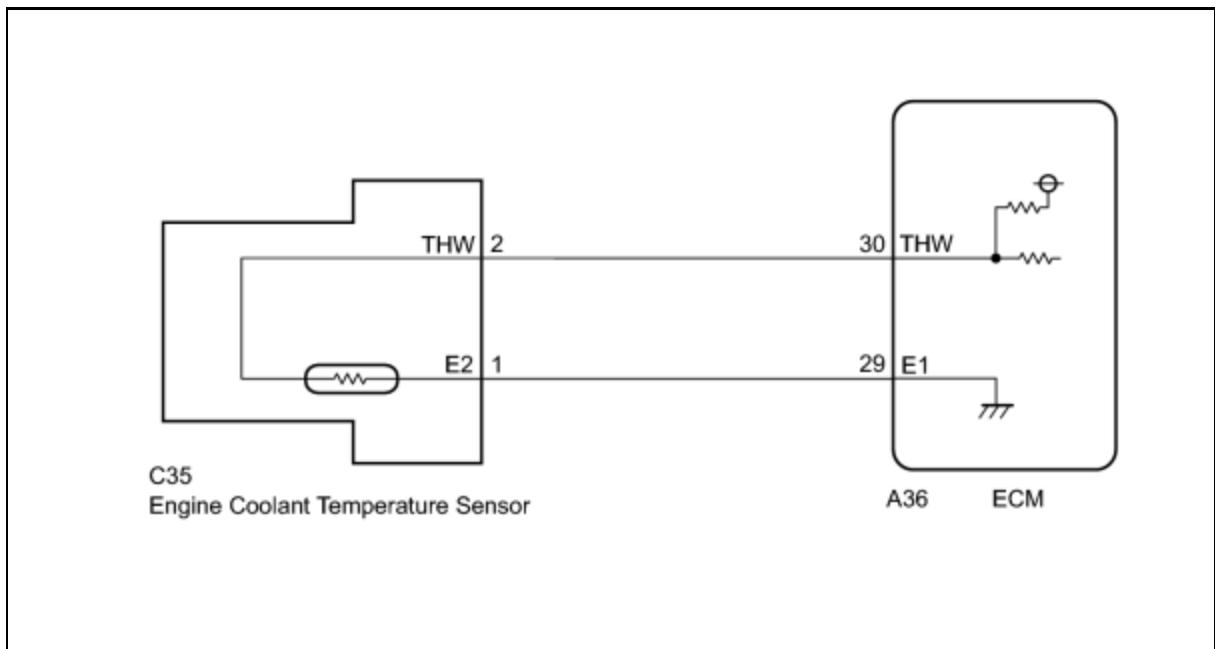

- o If the judgment result shows NORMAL, the system is normal.
- o If the judgment result shows ABNORMAL, the system has a malfunction.

14. If the test result is INCOMPLETE or N/A and no DTC is output, perform a universal trip and check for permanent DTCs INFO.

HINT:

- o If a permanent DTC is output, the system is malfunctioning.
- o If no permanent DTC is output, the system is normal.

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or

- not, if the air fuel ratio was lean or rich, and other data from the time the malfunction occurred.
- If DTC P0117 is stored, check that the engine does not overheat (the DTC P0117 may be stored due to engine overheating).

PROCEDURE

1.	READ VALUE USING TECHSTREAM (ENGINE COOLANT TEMPERATURE)
-----------	---

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Powertrain / Engine / Data List / Coolant Temp.
- (e) Read the value displayed on the Techstream.

Standard value:

Between 75 and 100°C (167 and 212°F) with warm engine.

Result

RESULT	PROCEED TO
-40°C (-40°F)	A
215°C (419°F)	B
Between 75 and 100°C (167 and 212°F)	C

HINT:

- If there is an open circuit, the Techstream indicates -40°C (-40°F).
- If there is a short circuit, the Techstream indicates higher than 215°C (419°F).

P219A	One of the following conditions is met (2 trip detection logic): <ul style="list-style-type: none"> • Air fuel ratio sensor signal fluctuates in air fuel ratio feedback control. • Crankshaft position sensor signal fluctuates in air fuel ratio feedback control. 	

MONITOR DESCRIPTION

Fuel System Air Fuel Ratio Cylinder Imbalance Monitor

The ECM uses the air fuel ratio sensor and crankshaft position sensor to monitor the difference in air fuel ratios between the cylinders caused by differences in injection volumes between the cylinders, leakage in the intake or exhaust system, etc.

When the air fuel ratios of the cylinders are lean or rich with respect to each other, the ECM determines that a problem is present and stores a DTC.

Air Fuel Ratio Sensor Monitoring Method

When the system detects a difference in air fuel ratios between the cylinders due to fluctuation in the air fuel ratio sensor output over 1 engine cycle (2 crankshaft revolutions), the system determines that there is a problem.

Crankshaft Position Sensor Monitoring Method

The system monitors the engine speed variation and when the variation becomes large, the system determines that there is a difference in air fuel ratios between the cylinders, which it determines to be a problem.

MONITOR STRATEGY

All

Monitor runs whenever the following DTCs are not stored	None
---	------

P119E, P119F and P219A (Crankshaft Position Sensor Monitoring Method)

Accelerator pedal position	0%
Engine speed	500 rpm or higher
Estimated time after engine start	30 seconds or more
Engine coolant temperature	Higher than 60°C (140°F)
Fuel system status (Air fuel ratio sensor)	Closed loop

P219A (Air Fuel Ratio Sensor Monitoring Method)

--	--

Estimated time after engine start	30 seconds or more
Engine speed	1600 to 3200 rpm
Engine coolant temperature	Higher than 60°C (140°F)
Fuel system status (Air fuel ratio sensor)	Closed loop
Intake air mass per revolution	0.55 to 0.8 g/rev (varies with engine speed)
Change of intake air mass during 1/2 engine revolution	Less than 0.005 g/rev

TYPICAL MALFUNCTION THRESHOLDS

P119E and P219A (Crankshaft Position Sensor Monitoring Method)

The average of the crankshaft speed fluctuation at port fuel injection	Higher than 30.7 rpm (for Automatic Transmission) (varies with engine speed) Higher than 18.3 rpm (for Manual Transmission) (varies with engine speed)
--	---

P119F and P219A (Crankshaft Position Sensor Monitoring Method)

The average of the crankshaft speed fluctuation at direct fuel injection	Higher than 25.5 rpm (for Automatic Transmission) (varies with engine speed) Higher than 16.5 rpm (for Manual Transmission) (varies with engine speed)
--	---

P219A (Air Fuel Ratio Sensor Monitoring Method)

Either following condition is met	A or B
A. The average of the positive gradient of air fuel ratio sensor output	More than 0.001125 (varies with engine speed and intake air mass per revolution)
B. The average of the negative gradient of air fuel ratio sensor output	Less than 0.000975 (varies with engine speed and intake air mass per revolution)

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear DTCs (even if no DTCs are stored, perform the clear DTC operation) INFO .
4. Turn the ignition switch off and wait for at least 30 seconds.
5. Turn the ignition switch to ON and turn the Techstream on.
6. Start the engine and warm it up until the engine coolant temperature reaches 75°C (167°F) or higher.

HINT:

Check the engine coolant temperature is 20°C (68°F) or less at engine started.

7. Perform the following the confirmation driving pattern.

CAUTION:

When performing the confirmation driving pattern, obey all speed limits and traffic laws.

- a. Drive the vehicle at 80 km/h (50 mph) or more for 20 minutes or more [A].
- b. Stop the vehicle.
- c. Idle the engine for 1 minute or more [B].

8. Enter the following menus: Powertrain / Engine / Trouble Codes.
9. Read pending DTCs.

HINT:

- If a pending DTC is output, the system is malfunctioning.
- If a pending DTC is not output, perform the following procedure.

10. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
11. Input the DTC: P119E, P119F or P219A.
12. Check the DTC judgment result.

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	<ul style="list-style-type: none"> ◦ DTC judgment completed ◦ System normal

HINT:

- If the judgment result shows NORMAL, the system is normal.
- If the judgment result shows ABNORMAL, the system has a malfunction.

13. If the test result is INCOMPLETE or N/A and no DTC is output, perform a universal trip and check for permanent DTCs  .

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

WIRING DIAGRAM

Refer to P0030  .

Refer to P0335  .

INSPECTION PROCEDURE

HINT:

- Read freeze frame data using the Techstream. Freeze frame data records the engine condition when malfunctions are detected. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air fuel ratio was lean or rich, and other data from the time the malfunction occurred.
- Bank 1 refers to the bank that includes the No. 1 cylinder*.

*: The No. 1 cylinder is the cylinder which is farthest from the transmission.

- Bank 2 refers to the bank that does not include the No. 1 cylinder.
- Sensor 1 refers to the sensor closest to the engine assembly.
- Sensor 2 refers to the sensor farthest away from the engine assembly.

PROCEDURE

1.	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P219A)
-----------	---

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Powertrain / Engine / Trouble Codes.

(e) Read the DTCs.

Result

RESULT	PROCEED TO
DTC P119E, P119F or P219A is output	A
DTC P119E, P119F, P219A and other DTCs are output	B

HINT:

If any DTCs other than P219A are output, troubleshoot those DTCs first.

B  **GO TO DTC CHART**

A

2. READ VALUE USING TECHSTREAM (FREEZE FRAME DATA)

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Using the Techstream, confirm the vehicle conditions recorded in the freeze frame data which were present when the DTC was stored  .

Freeze Frame Data Items for DTC P119E, P119F and P219A

- Vehicle Speed
- Engine Speed
- Calculate Load
- Accelerator Idle Position
- Short FT #1
- Long FT #1
- Cylinder #1 Misfire Count to Cylinder #4 Misfire Count

HINT:

When the sum of Short FT and Long FT is positive, the engine is running lean, and when the sum is negative, the engine is running rich.

DTC stored during idling	It is possible to conclude that the problem was detected due to a "lean imbalance" (detected using crankshaft speed variation).
DTC stored while vehicle being driven	It is possible to conclude that the problem was detected due to a "rich imbalance" (detected using the air fuel ratio sensor).

NEXT

3. PERFORM ACTIVE TEST USING TECHSTREAM (CONTROL THE INJECTION VOLUME)

- (a) Connect the Techstream to the DLC3.
- (b) Start the engine.
- (c) Turn the Techstream on.
- (d) Warm up the engine.

HINT:

The A/C switch and all accessory switches should be off and the shift lever should be in P, N or neutral position.

- (e) Enter the following menus: Powertrain / Engine / Active Test / Control the Injection Volume / Cylinder #1 to #4 Misfire Count.

HINT:

When the "Control the Injection Volume" Active Test is selected (injection volume is 0%), if a misfire count increases, proceed to step 6 (Check Intake System).

- (f) Perform the Control the Injection Volume operation with the engine idling.
- (g) Check the misfire counts ("Cylinder #1 Misfire Count" to "Cylinder #4 Misfire Count") while decreasing the injection volume in 5% increments.

NOTICE:

Do not decrease the injection volume by higher than 20%.

The cylinder whose misfire count has not increased can be assumed to be running rich. Therefore, perform inspections while focusing on that cylinder.

NEXT

4. CHECK FOR EXHAUST GAS LEAK

- (a) Check for exhaust gas leaks.
 - OK:
 - No gas leaks.

NG **REPAIR OR REPLACE EXHAUST SYSTEM**

OK

**5. CHECK INTAKE SYSTEM**

(a) Check the intake system for vacuum leaks  .

OK:

No leaks in the intake system.

NG  **REPAIR OR REPLACE INTAKE SYSTEM**

OK

**6. INSPECT SPARK PLUG**

(a) Inspect the spark plug of the cylinder causing the imbalance  .

NG  **REPLACE SPARK PLUG**

OK

**7. CHECK FOR SPARK (SPARK TEST)**

(a) Perform a spark test  .

HINT:

If the result of the spark test is normal, proceed to the next step.

NEXT

**8. CHECK CYLINDER COMPRESSION PRESSURE**

(a) Measure the cylinder compression pressure of the misfiring cylinder  .

NG CHECK ENGINE TO DETERMINE CAUSE OF LOW COMPRESSION

OK

9. CHECK HARNESS AND CONNECTOR (POWER SOURCE VOLTAGE)

(a) Disconnect the fuel injector assembly (for port injection) connector.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
C8-1 - Body ground	Ignition switch ON	11 to 14 V
C30-1 - Body ground	Ignition switch ON	11 to 14 V
C9-1 - Body ground	Ignition switch ON	11 to 14 V

------------	--------------	---

DTC	P2135	Throttle / Pedal Position Sensor / Switch "A" / "B" Voltage Correlation
------------	--------------	--

DESCRIPTION

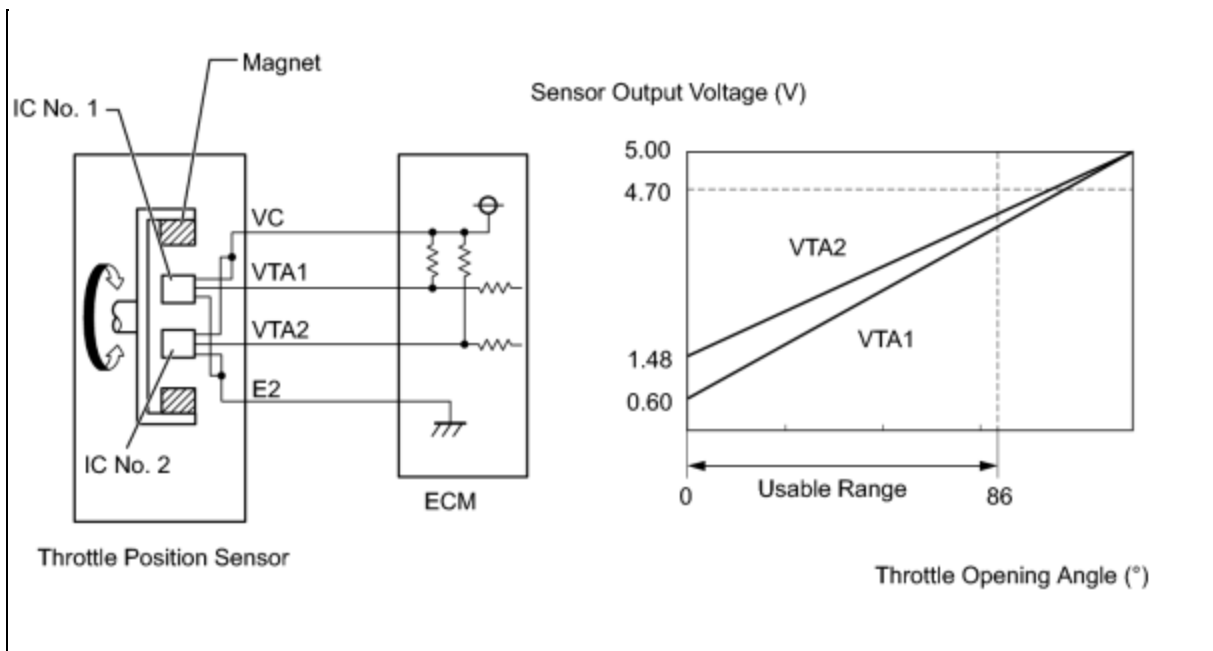

HINT:

These DTCs relate to the throttle position sensor.

The throttle position sensor is mounted on the throttle with motor body assembly, and detects the opening angle of the throttle valve. This sensor is a non-contact type sensor. It uses Hall-effect elements in order to yield accurate signals even in extreme driving conditions, such as at high speeds as well as very low speeds.

The throttle position sensor has 2 sensor circuits, each of which transmits a signal, VTA1 and VTA2. VTA1 is used to detect the throttle valve angle and VTA2 is used to detect malfunctions in VTA2. The sensor signal voltages vary between 0 V and 5 V in proportion to the throttle valve opening angle, and are transmitted to the VTA1 and VTA2 terminals of the ECM.

As the valve closes, the sensor output voltage decreases and as the valve opens, the sensor output voltage increases. The ECM calculates the throttle valve opening angle according to these signals and controls the throttle actuator in response to driver inputs. These signals are also used in calculations such as air fuel ratio correction, power increase correction and fuel-cut control.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA

--------------------------	--

HINT:

- When any of these DTCs are output, check the throttle valve opening angle using the Techstream. Enter the following menus: Powertrain / Engine / Data List / Throttle Position No. 1 and Throttle Position No. 2.
- Throttle Position No. 1 is the VTA1 signal, and Throttle Position No. 2 is the VTA2 signal.
Reference (Normal Condition):

TECHSTREAM DISPLAY	ACCELERATOR PEDAL FULLY RELEASED	ACCELERATOR PEDAL FULLY DEPRESSED
Throttle Position No. 1	0.5 to 1.1 V	3.2 to 4.8 V
Throttle Position No. 2	1.5 to 2.2 V	4.0 to 4.5 V

MONITOR DESCRIPTION

The ECM uses the throttle position sensor to monitor the throttle valve opening angle. There are several checks that the ECM performs to confirm the proper operation of the throttle position sensor.

- A specific voltage difference is expected between the sensor terminals, VTA1 and VTA2, for each throttle valve opening angle. If the difference between VTA1 and VTA2 is incorrect, the ECM interprets this as a malfunction in the sensor circuit, and stores a DTC.
- VTA1 and VTA2 each have a specific voltage range. If VTA1 or VTA2 is outside the normal operating range, the ECM interprets this as a malfunction in the sensor circuit, and stores a DTC.
- VTA1 and VTA2 should never be close to the same voltage level. If VTA1 is within 0.02 V of VTA2, the ECM determines that there is a short circuit in the sensor circuit, and stores a DTC.

If the malfunction is not repaired successfully, a DTC is stored 10 seconds after the engine is next started.

COMPONENT OPERATING RANGE

VTA1 voltage (Throttle position)	0.382 to 4.504 V (7.64 to 90.09%)
VTA2 voltage (Throttle position)	1.262 to 4.696 V (6.54 to 92.41%)

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear DTCs (even if no DTCs are stored, perform the clear DTC operation) INFO.
4. Turn the ignition switch off and wait for at least 30 seconds.
5. Turn the ignition switch to ON and turn the Techstream on.
6. Start the engine and warm it up until the engine coolant temperature reaches 75°C (167°F) or higher.
7. With the vehicle stationary, depress the accelerator pedal and maintain an engine speed of between 2500 and 3000 rpm for 40 seconds or more [A].
8. Drive the vehicle at 10 km/h (6.25 mph) or more for 1 minute or more [B].

CAUTION:

When performing the confirmation driving pattern, obey all speed limits and traffic laws.

9. Enter the following menus: Powertrain / Engine / Trouble Codes.
10. Read pending DTCs.

HINT:

- If a pending DTC is output, the system is malfunctioning.
 - If a pending DTC is not output, perform the following procedure.
11. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
 12. Input the DTC: P0122, P0123, P0222, P0223 or P2135.
 13. Check the DTC judgment result.

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	<ul style="list-style-type: none"> ○ DTC judgment completed ○ System normal

ABNORMAL	<ul style="list-style-type: none"> o DTC judgment completed o System abnormal
INCOMPLETE	<ul style="list-style-type: none"> o DTC judgment not completed o Perform driving pattern after confirming DTC enabling conditions
N/A	<ul style="list-style-type: none"> o Unable to perform DTC judgment o Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

- o If the judgment result shows NORMAL, the system is normal.
- o If the judgment result shows ABNORMAL, the system has a malfunction.

14. If the test result is INCOMPLETE or N/A and no DTC is output, perform a universal trip and check for permanent DTCs  .

HINT:

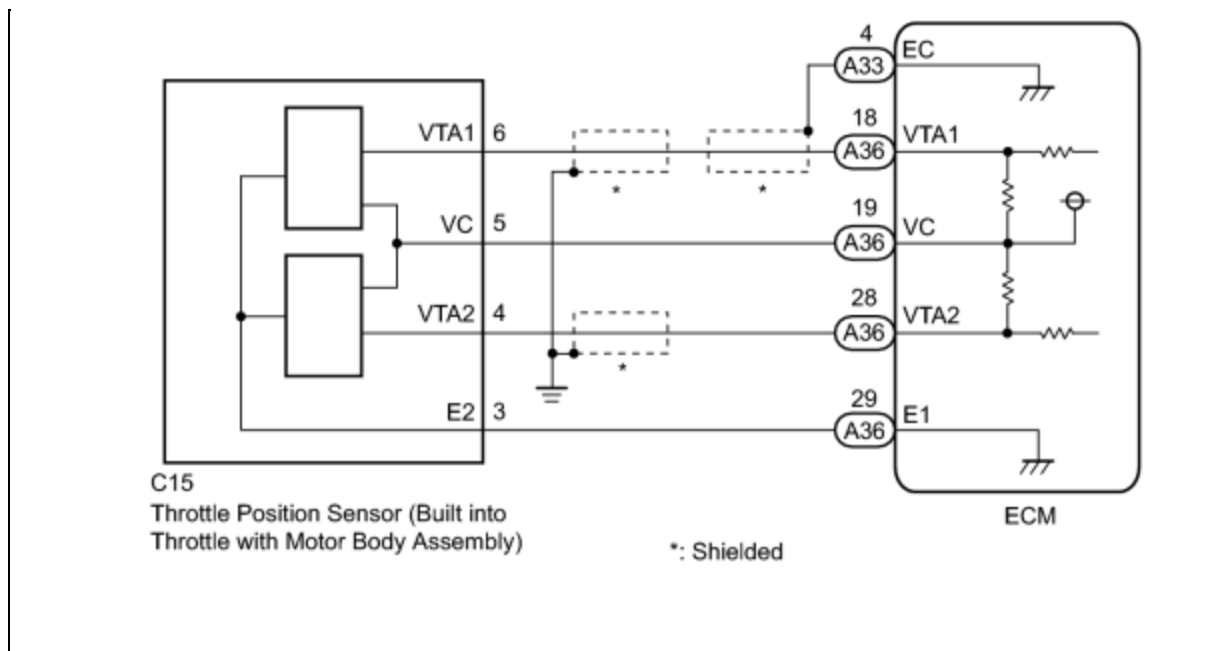

- o If a permanent DTC is output, the system is malfunctioning.
- o If no permanent DTC is output, the system is normal.

FAIL-SAFE

When any of these DTCs or other DTCs relating to Electronic Throttle Control System (ETCS) malfunctions are stored, the ECM enters fail-safe mode. During fail-safe mode, the ECM cuts the current to the throttle actuator, and the throttle valve is returned to a specified throttle angle by the return spring. The ECM then adjusts the engine output by controlling the fuel injection (intermittent fuel-cut) and ignition timing, in accordance with the accelerator pedal angle, to allow the vehicle to continue at a minimal speed. If the accelerator pedal is depressed firmly and gently, the vehicle can be driven slowly.

Fail-safe mode continues until a pass condition is detected, and the ignition switch is then turned off.

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air fuel ratio was lean or rich, and other data from the time the malfunction occurred.

PROCEDURE

1. READ VALUE USING TECHSTREAM (THROTTLE POSITION SENSOR)

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Powertrain / Engine / Data List / Throttle Position No. 1 and Throttle Position No. 2.
- (e) Read the values displayed on the Techstream.

Result

WHEN ACCELERATOR PEDAL RELEASED		WHEN ACCELERATOR PEDAL DEPRESSED		TROUBLE AREA	PROCEED TO
THROTTLE POSITION NO. 1 (VTA1)	THROTTLE POSITION NO. 2 (VTA2)	THROTTLE POSITION NO. 1 (VTA1)	THROTTLE POSITION NO. 2 (VTA2)

B ▶ CHECK WHETHER DTC OUTPUT RECURS
(THROTTLE POSITION SENSOR DTCS)

A

2.	CHECK HARNESS AND CONNECTOR (THROTTLE POSITION SENSOR - ECM)
-----------	---

- (a) Disconnect the throttle with motor body assembly connector.
- (b) Disconnect the ECM connector.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A36-19 (VC) - C15-5 (VC)	Always	Below 1 Ω
A36-18 (VTA1) - C15-6 (VTA1)	Always	Below 1 Ω
A36-28 (VTA2) - C15-4 (VTA2)	Always	Below 1 Ω
A36-29 (E1) - C15-3 (E2)	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A36-19(VC) or C15-5 (VC) - Body ground	Always	10 kΩ or higher
A36-18 (VTA1) or C15-6 (VTA1) - Body ground	Always	10 kΩ or higher
A36-29 (E1) or C15-3 (E2) - Body ground	Always	10 kΩ or higher
A36-29 (E1) or C15-4 (VTA2) - Body ground	Always	10 kΩ or higher

NG ▶ REPAIR OR REPLACE HARNESS OR
CONNECTOR

OK

3.	INSPECT ECM (VC VOLTAGE)
-----------	---------------------------------

(a) Disconnect the throttle with motor body assembly connector.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
C15-5 (VC) - C15-3 (E2)	Ignition switch ON	4.5 to 5.5 V

Text in Illustration

*a	Front view of wire harness connector (to Throttle with Motor Body Assembly)
----	--

NG **REPLACE ECM**

OK

4.	REPLACE THROTTLE WITH MOTOR BODY ASSEMBLY
-----------	--

(a) Replace the throttle with motor body assembly .

NEXT

5.	CHECK WHETHER DTC OUTPUT RECURS (THROTTLE POSITION SENSOR DTCS)
-----------	--

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Clear the DTCs  .
- (e) Start the engine.
- (f) Drive the vehicle in accordance with the driving pattern described in Confirmation Driving Pattern.
- (g) Enter the following menus: Powertrain / Engine / Trouble Codes.
- (h) Read DTCs.

Title: FA20 ENGINE CONTROL: SFI SYSTEM: P0125: Insufficient Coolant Temperature for Closed Loop Fuel Control (2013 FR-S)		

DTC	P0125	Insufficient Coolant Temperature for Closed Loop Fuel Control
------------	--------------	--

DESCRIPTION

Refer to DTC P0117 WFO.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0125	Despite estimated engine coolant temperature is 20°C (68 °F) or more, engine coolant temperature sensor value is less than 20°C (68 °F) for 300 seconds or more. (2 trip detection logic)	<ul style="list-style-type: none"> • Cooling system • Engine coolant temperature sensor • Thermostat

MONITOR DESCRIPTION

The diagnostic system monitors for a functional check of the engine coolant temperature sensor. If the engine coolant temperature does not reach the temperature to enable the closed loop air/fuel ratio control within a predetermined time after engine start, the diagnostic system determines a malfunction of engine coolant temperature sensor and stores the DTC.

MONITOR STRATEGY

Related DTCs	P0125: Engine coolant temperature sensor range check
Required Sensors/Components (Main)	Engine coolant temperature sensor Thermostat Cooling system
Required Sensors/Components (Related)	-
Frequency of Operation	Once per driving cycle
Duration	120 seconds: Closed loop temperature -10°C (14°F) 300 seconds: Closed loop temperature -10 to 20 °C (14 to 68°F)
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

3. CHECK COOLING SYSTEM

(a) Check for defects in the cooling system that might cause the system to be too cold, such as abnormal radiator fan operation or any modifications.

NG ► REPAIR OR REPLACE COOLING SYSTEM

OK ► REPLACE ENGINE COOLANT TEMPERATURE
SENSOR

Last Modified: 3-27-2012	6.4 C	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000TB3096X
Title: FA20 ENGINE CONTROL: SFI SYSTEM: P0128: Coolant Thermostat (Coolant Temperature Below Thermostat Regulating Temperature) (2013 FR-S)		

DTC	P0128	Coolant Thermostat (Coolant Temperature Below Thermostat Regulating Temperature)
------------	--------------	---

DESCRIPTION

At the same time as using the engine coolant temperature sensor to determine the engine coolant temperature, the ECM estimates the engine coolant temperature. If the difference between the estimated and actual engine coolant temperatures exceeds a predetermined value, then the DTC is stored, notifying of a malfunction in the functioning of the thermostat.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0128	Abnormal (open) thermostat functioning detected. (2 trip detection logic)	<ul style="list-style-type: none"> • Thermostat • Cooling system • Engine coolant temperature sensor • ECM

MONITOR DESCRIPTION

The ECM estimates the engine coolant temperature based on the starting temperature, engine loads, and engine speeds. The ECM then compares the estimated temperature with the actual engine coolant temperature. If the difference between the estimated engine coolant temperature and the actual engine coolant temperature exceeds the specified value, the ECM interprets this as a malfunction in the thermostat or the engine cooling system and stores the DTC.

MONITOR STRATEGY

Related DTCs	P0128: Thermostat functional check
Required Sensors/Components (Main)	Thermostat Engine coolant temperature sensor
Required Sensors/Components (Related)	Intake air temperature sensor Speed sensor
Frequency of Operation	Once per driving cycle

------------------------------------	--

Case 3

Modeled engine coolant temperature	47.1°C (116.8°F) or higher (varies with ambient temperature at engine start)
------------------------------------	--

TYPICAL MALFUNCTION THRESHOLDS

Case 1

Actual engine coolant temperature	Less than 60°C (140°F)
Sigma (Modeled engine coolant temperature - Actual engine coolant temperature)	1731.6°C (3148.9°F) or higher (varies with engine coolant temperature at engine start)

Case 2

Actual engine coolant temperature	Less than 77.8°C (172°F) (varies with ambient temperature at engine start)
-----------------------------------	--

Sigma (Modeled engine coolant temperature - Actual engine coolant temperature)	1731.6°C (3148.9°F) or higher (varies with engine coolant temperature at engine start)
--	--

Case 3

Modeled engine coolant temperature - Actual engine coolant temperature	11.1 °C (52°F) or higher
Sigma (Modeled engine coolant temperature - Actual engine coolant temperature)	1731.6°C (3148.9°F) or higher (varies with engine coolant temperature at engine start)

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear DTCs (even if no DTCs are stored, perform the clear DTC operation) INFO.
4. Turn the ignition switch off and wait for at least 30 seconds.
5. Turn the ignition switch to ON and turn the Techstream on.
6. Start the engine and warm it up until the engine coolant temperature reaches 75°C (167°F) or higher.
7. Perform the following the confirmation driving pattern.

CAUTION:

When performing the confirmation driving pattern, obey all speed limits and traffic laws.

- a. Drive the vehicle at 80 km/h (50 mph) or more for 20 minutes or more [A].
 - b. Stop the vehicle.
 - c. Idle the engine for 1 minute or more [B].
8. Enter the following menus: Powertrain / Engine / Trouble Codes.
 9. Read pending DTCs.

HINT:

- o If a pending DTC is output, the system is malfunctioning.
 - o If a pending DTC is not output, perform the following procedure.
10. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
 11. Input the DTC: P0128.
 12. Check the DTC judgment result.

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	<ul style="list-style-type: none"> o DTC judgment completed o System normal
ABNORMAL	<ul style="list-style-type: none"> o DTC judgment completed o System abnormal
INCOMPLETE	<ul style="list-style-type: none"> o DTC judgment not completed o Perform driving pattern after confirming DTC enabling conditions
N/A	<ul style="list-style-type: none"> o Unable to perform DTC judgment o Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

- o If the judgment result shows NORMAL, the system is normal.
- o If the judgment result shows ABNORMAL, the system has a malfunction.

13. If the test result is INCOMPLETE or N/A and no DTC is output, perform a universal trip and check for permanent DTCs .

HINT:

- o If a permanent DTC is output, the system is malfunctioning.
- o If no permanent DTC is output, the system is normal.

INSPECTION PROCEDURE

HINT:

- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air fuel ratio was lean or rich, and other data from the time the malfunction occurred.
- When the DTC is output, check the engine coolant temperature using the Techstream. Enter the following menus: Powertrain / Engine / Data List / Coolant Temp. If the Coolant Temp value is lower than the actual engine coolant temperature, the engine coolant temperature sensor circuit may be malfunctioning. In this case, check the wire harnesses and connectors (and those connections) between the ECM and the engine coolant temperature sensor first.

PROCEDURE

1.	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0128)
----	---

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine / Trouble Codes.

(e) Read DTCs.

Result

RESULT	PROCEED TO

Last Modified: 3-27-2012	6.4 C	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM0000028K60CZX
Title: FA20 ENGINE CONTROL: SFI SYSTEM: P0131,P0132,P0134: Oxygen Sensor Circuit Low Voltage (Bank 1 Sensor 1) (2013 FR-S)		

DTC	P0131	Oxygen Sensor Circuit Low Voltage (Bank 1 Sensor 1)
------------	--------------	--

DTC	P0132	Oxygen Sensor Circuit High Voltage Bank1 Sensor1
------------	--------------	---

DTC	P0134	Oxygen Sensor Circuit No Activity Detected (Bank 1 Sensor 1)
------------	--------------	---

DESCRIPTION

Refer to DTC P2195  .

HINT:

- o Although the DTC titles say oxygen sensor, these DTCs relate to the air fuel ratio sensor.
- o Sensor 1 refers to the sensor mounted in front of the three-way catalytic converter and located near the engine assembly.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0131	One of the following conditions is met for 1 second or more (1 trip detection logic): <ul style="list-style-type: none"> • The voltage of A1A+ is less than 0.4 V. • The voltage of A1A- is less than 0.4 V. • The difference between voltage of A1A+ and voltage of A1A- is less than 0.1 V and the voltage of A1A- is more than 3.8 V and less than 4.7 V. 	<ul style="list-style-type: none"> • Open or short in air fuel ratio sensor circuit • Air fuel ratio sensor • ECM
P0132	One of the following conditions is met for 1 second or more (1 trip detection logic): <ul style="list-style-type: none"> • The voltage of A1A+ is more than 4.7 V. • The voltage of A1A- is more than 4.7 V. 	
P0134	Air fuel ratio sensor impedance is 450 Ω or more for 5 seconds or more. (1 trip detection logic)	

MONITOR DESCRIPTION

These DTCs are output when there is an open or short in the air fuel ratio sensor circuit, or if the air fuel ratio sensor output drops. To detect these problems, the voltage of the air fuel ratio sensor is monitored when turning the ignition switch to ON, and the admittance (admittance is an electrical term that indicates the ease of flow of current) is checked while driving. If the voltage of the air fuel ratio sensor is between

0.6 V and 4.5 V, it is considered normal. If the voltage is out of the specified range, or the admittance is less than the standard value, the ECM determines that there is a malfunction in the air fuel ratio sensor. If the same malfunction is detected in next driving cycle, the MIL is illuminated and a DTC is stored.

MONITOR STRATEGY

------------------------------------	------------------------

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear DTCs (even if no DTCs are stored, perform the clear DTC operation) INFO.
4. Turn the ignition switch off and wait for at least 30 seconds.
5. Turn the ignition switch to ON and turn the Techstream on.
6. Start the engine and warm it up until the engine coolant temperature reaches 75°C (167°F) or higher.
7. Perform the following the confirmation driving pattern.

CAUTION:

When performing the confirmation driving pattern, obey all speed limits and traffic laws.

- a. Idle the engine for 10 seconds or more [A].
- b. Accelerate the vehicle to 97 km/h (60 mph) or more within 20 seconds [B].
- c. Drive the vehicle at 97 km/h (60 mph) or more for 20 seconds or more [C].
- d. Release the accelerator pedal to Decelerate until the vehicle speed decreases to less than 64 km/h (40 mph) [D].

HINT:

Release the accelerator pedal fully to perform the fuel-cut.

- e. Drive the vehicle at 60 km/h (40 mph) or less for 20 seconds or more [E].
- f. Accelerate the vehicle to 97 km/h (60 mph) or more within 10 seconds [F].
- g. Release the accelerator pedal and stop the vehicle [G].

8. Enter the following menus: Powertrain / Engine / Trouble Codes.
9. Read pending DTCs.

HINT:

- If a pending DTC is output, the system is malfunctioning.
- If a pending DTC is not output, perform the following procedure.

10. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
11. Input the DTC: P0131, P0132 or P0134.
12. Check the DTC judgment result.

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	<ul style="list-style-type: none"> ◦ DTC judgment completed ◦ System normal
ABNORMAL	<ul style="list-style-type: none"> ◦ DTC judgment completed ◦ System abnormal
INCOMPLETE	<ul style="list-style-type: none"> ◦ DTC judgment not completed ◦ Perform driving pattern after confirming DTC enabling conditions
N/A	<ul style="list-style-type: none"> ◦ Unable to perform DTC judgment ◦ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

- If the judgment result shows NORMAL, the system is normal.
- If the judgment result shows ABNORMAL, the system has a malfunction.

13. If the test result is INCOMPLETE or N/A and no DTC is output, perform a universal trip and check for permanent DTCs  .

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

WIRING DIAGRAM

Refer to DTC P0030  .

INSPECTION PROCEDURE

HINT:

- Sensor 1 refers to the sensor closest to the engine assembly.
- Sensor 2 refers to the sensor farthest away from the engine assembly.
- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or

- not, if the air fuel ratio was lean or rich, and other data from the time the malfunction occurred.
- Refer to "Data List / Active Test" [AFS Voltage B1S1] **INFO** .

NOTICE:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1.	CHECK HARNESS AND CONNECTOR (AIR FUEL RATIO SENSOR - ECM)
-----------	--

- (a) Disconnect the air fuel ratio sensor connector.
- (b) Disconnect the ECM connector.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A34-19 (A1A+) - C14-3 (A1A+)	Always	Below 1 Ω
A34-18 (A1A-) - C14-4 (A1A-)	Always	Below 1 Ω
A34-5 (HA1A) - C14-1 (HA1A)	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A34-19 (A1A+) or C14-3 (A1A+) - Body ground	Always	10 kΩ or higher
A34-18 (A1A-) or C14-4 (A1A-) - Body ground	Always	10 kΩ or higher
A34-5 (HA1A) or C14-1 (HA1A) - Body ground	Always	10 kΩ or higher

**REPAIR OR REPLACE HARNESS OR
NG  CONNECTOR**

OK

2.	REPLACE AIR FUEL RATIO SENSOR
-----------	--------------------------------------

- (a) Replace the air fuel ratio sensor **INFO** .

NEXT

3. CHECK WHETHER DTC OUTPUT RECURS (DTC P0131, P0132 OR P0134)

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Clear the DTCs  .
- (e) Turn the ignition switch off and wait for at least 30 seconds.
- (f) Turn the ignition switch to ON.
- (g) Turn the Techstream on.
- (h) Drive the vehicle in accordance with the driving pattern described in the Confirmation Driving Pattern.
- (i) Enter the following menus: Powertrain / Engine / Utility / All Readiness.
- (j) Input the DTC: P0131, P0132 or P0134.
- (k) Check the DTC judgment.

Result

RESULT	PROCEED TO
NORMAL (DTC is not output)	A
ABNORMAL (DTC P0131, P0132 or P0134 is output)	B

B ► REPLACE ECM

A ► END

------------	--------------	---

DESCRIPTION

In order to obtain a high purification rate of the carbon monoxide (CO), hydrocarbon (HC) and nitrogen oxide (NOx) components in the exhaust gas, a TWC (Three-Way Catalytic Converter) is used. For the most efficient use of the TWC, the air fuel ratio must be precisely controlled so that it is always close to the stoichiometric air fuel level. For the purpose of helping the ECM to deliver accurate air fuel ratio control, a Heated Oxygen (HO2) sensor is used.

The HO2 sensor is located behind the TWC, and detects the oxygen concentration in the exhaust gas. Since the sensor is integrated with the heater that heats the sensing portion, it is possible to detect the oxygen concentration even when the intake air volume is low (the exhaust gas temperature is low).

When the air fuel ratio becomes lean, the oxygen concentration in the exhaust gas is rich. The HO2 sensor informs the ECM that the post-TWC air fuel ratio is lean (low voltage, i.e. less than 0.45 V).

Conversely, when the air fuel ratio is richer than the stoichiometric air fuel level, the oxygen concentration in the exhaust gas becomes lean. The HO2 sensor informs the ECM that the post-TWC air fuel ratio is rich (high voltage, i.e. more than 0.45 V). The HO2 sensor has the property of changing its output voltage drastically when the air fuel ratio is close to the stoichiometric level.

The ECM uses the supplementary information from the HO2 sensor to determine whether the air fuel ratio after the TWC is rich or lean, and adjusts the fuel injection time accordingly. Thus, if the HO2 sensor is working improperly due to internal malfunctions, the ECM is unable to compensate for deviations in the primary air fuel ratio control.

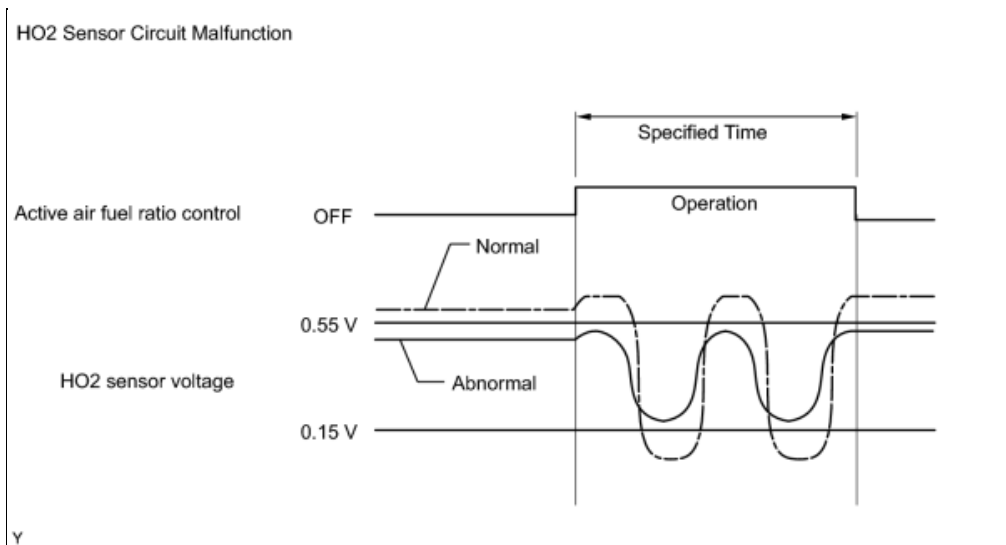

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0137	Heated Oxygen (HO2) sensor voltage is less than 0.03 V. (2 trip detection logic)	<ul style="list-style-type: none"> • Heated oxygen sensor circuit • Heated oxygen sensor • Gas leak from exhaust system
P0138	Heated Oxygen (HO2) sensor voltage is 1.2 V or more for 2.5 seconds or more. (2 trip detection logic)	
P013A	The response rate for heated oxygen sensor voltage to change from 0.5 V (rich) to 0.2 V (lean) is slow for 2 seconds or more. (2 trip detection logic)	
P013B	The response rate for heated oxygen sensor voltage to change from 300 mV (lean) to 500 mV (rich) is slow for 4 seconds or more. (2 trip detection logic)	
P013E	Heated oxygen sensor voltage is slow in dropping to 0.5 V or less for 4 seconds or more. (2 trip detection logic)	
P013F	Heated oxygen sensor voltage is slow in increasing to 0.3V or more for 120 seconds. (2 trip detection logic)	
P0140	One of the following conditions is met for 180 seconds or more (2 trip detection logic): <ul style="list-style-type: none"> • The minimum voltage of heated oxygen sensor does not drop below 0.15 V. • The maximum voltage of heated oxygen sensor does not exceed 0.55 V. 	

MONITOR DESCRIPTION

1. Abnormal Voltage Output of Heated Oxygen (HO2) Sensor (DTC P013B, P013F or P0140)

If the sensor is not functioning properly, the voltage output variation is small. For example, when the HO2 sensor voltage does not decrease to less than 0.15 V and does not increase to more than 0.55 V, the ECM determines that the sensor voltage output is abnormal and stores DTC P013B, P013F or P0140.

2. Open in Heated Oxygen (HO2) Sensor Circuit (DTC P0137)

During active air fuel ratio control, the ECM calculates the Oxygen Storage Capacity (OSC)* of the Three-Way Catalytic Converter (TWC) by forcibly regulating the air fuel ratio to become rich or lean.

If the HO2 sensor has an open or short, or the voltage output of the sensor noticeably decreases, the OSC indicates an extraordinarily high value. Even if the ECM attempts to continue regulating the air fuel ratio to become rich or lean, the HO2 sensor output does not change.

While performing active air fuel ratio control, when the target air fuel ratio is rich and the HO2 sensor voltage output is 0.03 V or less (lean), the ECM interprets this as an abnormally low sensor output voltage and stores DTC P0137.

HINT:

*: The TWC has the capability to store oxygen. The OSC and the emission purification capacity of the TWC are mutually related. The ECM determines whether the catalyst has deteriorated, based on the calculated OSC value INFO.

3. Extremely High Output Voltage of Heated Oxygen (HO2) Sensor (DTC P0138)

The ECM continuously monitors the HO2 sensor output voltage while the engine is running.

DTC P0138 is stored if the HO2 sensor voltage output is more than 1.2 V.

4. Abnormal Voltage Output of Heated Oxygen (HO2) Sensor During Fuel-cut (DTC P013A or P013E)

The sensor output voltage drops to below 0.2 V (extremely lean status) immediately when the vehicle decelerates and fuel cut is operating. If the voltage does not drop to below 0.5 V for 4 seconds or more, or voltage does not drop from 0.5 V to 0.2 V, the ECM determines that the sensor response has deteriorated, illuminates the MIL and stores a DTC.

TYPICAL ENABLING CONDITIONS

P0137 (Case 1)

Monitor runs whenever following DTC not stored	None
Fuel system	Closed loop
Short term fuel trim	0.7 to 1.35
Battery voltage	10.9 V or more
Intake air mass per second	10 g/sec

P0137 (Case 2)

Monitor runs whenever following DTC not stored	None
Fuel system	Closed loop
Short term fuel trim	0.7 to 1.35
Battery voltage	10.9 V or more
Intake air mass per second	10 g/sec
Continuous time of secondary oxygen sensor heating	30 seconds or more
Fuel shut-off	Not experienced

P0137 (Case 3)

Monitor runs whenever following DTC not stored	None
Fuel system	Closed loop
Short term fuel trim	0.7 to 1.35
Battery voltage	10.9 V or more
Intake air mass per second	10 g/sec
Continuous time of secondary oxygen sensor heating	30 seconds or more
Fuel shut-off	Experienced

P0138

Monitor runs whenever following DTC not stored	None
Fuel system	Closed loop
Short term fuel trim	0.7 to 1.35
Battery voltage	10.9 V or more

P013A

Monitor runs whenever following DTC not stored	None
Battery voltage	10.9 V or more

Fuel system	Closed loop
Integrated time of heated oxygen sensor heater operation	180 seconds or more
Engine speed when deceleration fuel cut starts	1000 rpm or higher
Heated oxygen sensor output voltage when fuel cut starts	0.55 V or more
Elapsed time for fuel cut	5 seconds or more
Engine coolant temperature when fuel cut starts	60°C (140°F) or higher
Estimated temperature of heated oxygen sensor element when fuel cut	500°C (932°F) or higher

P013B

Monitor runs whenever following DTC not stored	None
Battery voltage	10.9 V or more
Fuel system	Closed loop
Elapsed time for fuel cut	5 seconds or more
Fuel cut	Not active

P013E

Monitor runs whenever following DTC not stored	None
Battery voltage	10.9 V or more
Fuel system	Closed loop
Engine speed when deceleration fuel cut starts	1000 rpm or higher
Heated oxygen sensor output voltage when fuel cut starts	0.55 V or more
Elapsed time for fuel cut	5 seconds or more
Engine coolant temperature when fuel cut starts	60°C (140°F) or higher
Estimated temperature of heated oxygen sensor element when fuel cut	500°C (932°F) or higher
Air fuel ratio enrichment compensation	Not active

P013F

Monitor runs whenever following DTC not stored	None
Battery voltage	10.9 V or more
Fuel system	Closed loop
Engine speed when deceleration fuel cut finish	500 rpm or higher
Heated oxygen sensor output voltage when fuel cut finish	Less than 0.15 V
Elapsed time for fuel cut	5 seconds or more
Engine coolant temperature when fuel cut starts	60°C (140°F) or higher
Estimated temperature of heated oxygen sensor element when fuel cut	500°C (932°F) or higher
Fuel cut	Not active

P0140

Monitor runs whenever following DTCs not present	P0030 (Air fuel ratio sensor - heater) P0037, P0038 (Heated oxygen sensor - heater) P0068, P0107, P0108 (Manifold absolute pressure (MAP) sensor) P0101, P0102, P0103 (Mass air flow (MAF) sensor) P0111, P0112, P0113 (Intake air temperature (IAT) sensor) P0117, P0118 (Engine coolant temperature (ECT) sensor) P0122, P0123, P0222, P0223 (Throttle position sensor) P0300, P0301, P0302, P0303, P0304 (Misfire) P0604, P0605 (ROM in ECM)

Engine coolant temperature	60°C (140°F) or higher
Target commanded output voltage of heated oxygen sensor	0.6 V or more
Intake air mass per second	10 g/sec or higher
Battery voltage	10.9 V or more
Fuel system status	Closed loop
All of the following conditions are experienced.	A, B and C
A. Time of fuel cut in deceleration	5 seconds or more
B. Engine speed	1000 rpm or higher
C. Short term fuel trim	0.7 to 1.35

TYPICAL MALFUNCTION THRESHOLDS

P0137

Minimum output voltage caused by a lack of circuit continuity	Less than 0.03 V
---	------------------

P0138

Maximum output voltage caused by a lack of circuit continuity	1.2 V or more
---	---------------

P013A

Response time from rich (0.5 V) to lean (0.2 V) if output voltage decrease from 0.55 V to 0.15 V	0.491 seconds or more
--	-----------------------

P013B

Response time from lean (0.3 V) to rich (0.5 V) if output voltage increase from 0.25 V to 0.55 V	4 seconds or more
--	-------------------

P013E

Response time from fuel cut start to heated oxygen sensor output reaching 0.5 V	4 seconds or more
---	-------------------

P013F

Response time from fuel cut start to heated oxygen sensor output reaching 0.3 V	120 seconds or more (32 msec. X 3750 count)
---	---

P0140

Either of the following condition is met:	A or B
A. Maximum output voltage	Less than 0.55 V
B. Minimum output voltage	0.15 V or more

MONITOR RESULT

Refer to Checking Monitor Status  .

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear DTCs (even if no DTCs are stored, perform the clear DTC operation) INFO.
4. Turn the ignition switch off and wait for at least 30 seconds.
5. Turn the ignition switch to ON and turn the Techstream on.
6. Start the engine and warm it up until the engine coolant temperature reaches 75°C (167°F) or higher.
7. Perform the following the confirmation driving pattern.

CAUTION:

When performing the confirmation driving pattern, obey all speed limits and traffic laws.

- a. Idle the engine for 10 seconds or more [A].
- b. Accelerate the vehicle to 97 km/h (60 mph) or more within 20 seconds [B].
- c. Drive the vehicle at 97 km/h (60 mph) or more for 20 seconds or more [C].
- d. Release the accelerator pedal to Decelerate until the vehicle speed decreases to less than 64 km/h (40 mph) [D].

HINT:

Release the accelerator pedal fully to perform the fuel-cut.

- e. Drive the vehicle at 60 km/h (40 mph) or less for 20 seconds or more [E].
 - f. Accelerate the vehicle to 97 km/h (60 mph) or more within 10 seconds [F].
 - g. Release the accelerator pedal and stop the vehicle [G].
8. Enter the following menus: Powertrain / Engine / Trouble Codes.
 9. Read pending DTCs.

HINT:

- o If a pending DTC is output, the system is malfunctioning.
 - o If a pending DTC is not output, perform the following procedure.
10. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
 11. Input the DTC: P0137, P0138 P13A, P013B, P013E, P013F or P0140.
 12. Check the DTC judgment result.

TECHSTREAM DISPLAY	DESCRIPTION

INCOMPLETE	<ul style="list-style-type: none"> o DTC judgment not completed o Perform driving pattern after confirming DTC enabling conditions
N/A	<ul style="list-style-type: none"> o Unable to perform DTC judgment o Number of DTCs which do not fulfill DTC preconditions has reached ECU memory

limit

HINT:

- o If the judgment result shows NORMAL, the system is normal.
- o If the judgment result shows ABNORMAL, the system has a malfunction.

13. If the test result is INCOMPLETE or N/A and no DTC is output, perform a universal trip and check for permanent DTCs

INFO

HINT:

- o If a permanent DTC is output, the system is malfunctioning.
- o If no permanent DTC is output, the system is normal.

WIRING DIAGRAM

Refer to DTC P0037 **INFO**

INSPECTION PROCEDURE

HINT:

Malfunctioning areas can be identified by performing the Control the Injection Volume function provided in the Active Test. The Control the Injection Volume function can help to determine whether the air fuel ratio sensor, heated oxygen sensor and other potential trouble areas are malfunctioning.

The following instructions describe how to conduct the Control the Injection Volume operation using the Techstream.

1. Connect the Techstream to the DLC3.
2. Start the engine.
3. Turn the Techstream on.
4. Warm up the engine at an engine speed of 2500 rpm for approximately 90 seconds.
5. Enter the following menus: Powertrain / Engine / Active Test / Control the Injection Volume.
6. Perform the Active Test operation with the engine idling (press the RIGHT or LEFT button to change the fuel injection volume).
7. Monitor the output voltages of the air fuel ratio and heated oxygen sensors (AFS Voltage B1S1 and O2S B1S2) displayed on the Techstream.

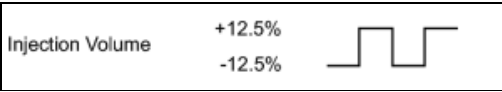

HINT:

- Change the fuel injection volume within the range of -12.5% to +12.5%. The injection volume can be changed in fine gradations.
- Each sensor reacts in accordance with increases and decreases in the fuel injection volume.

TECHSTREAM DISPLAY (SENSOR)	INJECTION VOLUME	STATUS	VOLTAGE
AFS Voltage B1S1 (Air fuel ratio)	+12.5%	Rich	Below 2.0 V
	-12.5%	Lean	Higher than 2.4 V
O2S B1S2 (Heated oxygen)	+12.5%	Rich	Higher than 0.55 V
	-12.5%	Lean	Below 0.4 V

NOTICE:

The air fuel ratio sensor has an output delay of a few seconds and the heated oxygen sensor has a maximum output delay of approximately 20 seconds.

CASE	AIR FUEL RATIO SENSOR OUTPUT VOLTAGE	HEATED OXYGEN SENSOR OUTPUT VOLTAGE	MAIN SUSPECTED TROUBLE AREA
1			-

	<p>Output Voltage</p> <p>Higher than 2.4 V</p> <p>Below 2.0 V</p>	<p>Output Voltage</p> <p>Higher than 0.55 V</p> <p>Below 0.4 V</p>

- Following the Control the Injection Volume procedure enables technicians to check and graph the voltage outputs of both the air fuel ratio and heated oxygen sensors.
- To display the graph, enter the following menus: Powertrain / Engine / Active Test / Control the Injection Volume / AFS Voltage B1S1 and O2S B1S2; and then press the graph button on the Data List view.

NOTICE:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

HINT:

- Sensor 1 refers to the sensor closest to the engine assembly.
- Sensor 2 refers to the sensor farthest away from the engine assembly.
- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air fuel ratio was lean or rich, and other data from the time the malfunction occurred.

PROCEDURE

--	--

1. READ OUTPUT DTC (DTC P0137, P0138, P013A, P013B, P013E, P013F AND P0140)

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Powertrain / Engine / Trouble Codes.
- (e) Read DTCs.

Result

RESULT	PROCEED TO
P0137, P0138, P013A, P013B, P013E, P013F or P0140 is output	A
P0137, P0138, P013A, P013B, P013E, P013F or P0140 and other DTCs are output	B

HINT:

If any DTCs other than P0136, P0137, P0138 or P0139 are output, troubleshoot those DTCs first.

B  **GO TO DTC CHART**

A

**2. PERFORM ACTIVE TEST USING TECHSTREAM (CONTROL THE INJECTION VOLUME)**

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Warm up the engine.
- (e) Enter the following menus: Powertrain / Engine / Active Test / Control the Injection Volume.
- (f) Change the fuel injection volume using the Techstream, and monitoring the voltage output of heated oxygen sensors displayed on the Techstream.
- (g) Read the heated oxygen (HO2) sensor output voltage while idling.

HINT:

- Change the fuel injection volume within the range of - 12.5% and +12.5%.
- The heated oxygen sensor is displayed as O2S B1S2, on the Techstream.
- The heated oxygen sensor has a maximum output delay of approximately 20 seconds.
- If the sensor output voltage does not change (almost no reaction) while performing the Active Test, the sensor may be malfunctioning.

Standard:

The heated oxygen (HO2) sensor output voltage alternates between more than 0.55 V and less than 0.4 V.

NG  **CHECK FOR EXHAUST GAS LEAK**

OK

3. PERFORM ACTIVE TEST USING TECHSTREAM (CONTROL THE INJECTION VOLUME)

- Connect the Techstream to the DLC3.
- Start the engine.
- Turn the Techstream on.
- Warm up the engine.
- Enter the following menus: Powertrain / Engine / Active Test / Control the Injection Volume.
- Change the fuel injection volume using the Techstream and monitor the voltage output of the air fuel ratio and heated oxygen sensors displayed on the Techstream.

HINT:

- Change the fuel injection volume within the range of -12% and +12%. The injection volume can be changed in fine gradations within the range.
- The air fuel ratio sensor is displayed as AFS Voltage B1S1, and the heated oxygen sensor is displayed as O2S B1S2, on the Techstream.
- The air fuel ratio sensor has an output delay of a few seconds and the heated oxygen sensor has a maximum output delay of approximately 20 seconds.
- If the sensor output voltage does not change (almost no reaction) while performing the Active Test, the sensor may be malfunctioning.

Result

TECHSTREAM DISPLAY (SENSOR)	VOLTAGE VARIATION	PROCEED TO
AFS Voltage B1S1 (A/F)	Alternates between more and less than 2.2 V	OK
	Remains at more than 2.2 V	NG
	Remains at less than 2.2 V	NG

HINT:

A normal heated oxygen sensor voltage (O2S B1S2) reacts in accordance with increases and decreases in fuel injection volumes. When the air fuel ratio sensor voltage remains at either less or more than 2.2 V despite the heated oxygen sensor indicating a normal reaction, the air fuel ratio sensor is malfunctioning.

NG ▶ REPLACE HEATED OXYGEN SENSOR

OK ▶ CHECK ENGINE TO DETERMINE CAUSE OF EXTREMELY RICH OR LEAN ACTUAL AIR FUEL RATIO (FUEL INJECTOR, FUEL SYSTEM, INTAKE SYSTEM, ETC.)

4. CHECK FOR EXHAUST GAS LEAK

(a) Inspect for exhaust gas leaks from the exhaust manifold sub-assembly and exhaust pipes.

OK:
No gas leakage.

NG ▶ REPAIR OR REPLACE EXHAUST GAS LEAK POINT

OK

5. INSPECT HEATED OXYGEN SENSOR (HEATER RESISTANCE)

(a) Inspect the heated oxygen sensor  .

NG ▶ REPLACE HEATED OXYGEN SENSOR

OK

6. CHECK HARNESS AND CONNECTOR (HEATED OXYGEN SENSOR - ECM)

(a) Disconnect the heated oxygen sensor connector.

(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A36-6 (HT1B) - C13-1 (HT1B)	Always	Below 1 Ω
A34-21 (OX1B) - C13-3 (OX1B)	Always	Below 1 Ω
A36-29 (E1) - C13-4 (E2)	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A36-6 (HT1B) or C13-1 (HT1B) - Body ground	Always	10 k Ω or higher
A34-21 (OX1B) or C13-3 (OX1B) - Body ground	Always	10 k Ω or higher

------------	--------------	---

DESCRIPTION

The fuel trim is related to the feedback compensation value, not to the basic injection time. The fuel trim consists of both the short-term and the long-term fuel trim.

The short-term fuel trim is fuel compensation that is used to constantly maintain the air fuel ratio at stoichiometric levels. The signal from the air fuel ratio sensor indicates whether the air fuel ratio is rich or lean compared to the stoichiometric ratio. This triggers a reduction in the fuel injection volume if the air fuel ratio is rich and an increase in the fuel injection volume if it is lean.

Factors such as individual engine differences, wear over time and changes in operating environment cause short-term fuel trim to vary from the ideal theoretical value. The long-term fuel trim controls overall fuel compensation. The long-term fuel trim compensates for long term deviations of the fuel trim from the ideal theoretical value. These long term deviations result from the corrections made by the short-term fuel trim.

If both the short-term fuel and long-term fuel trim are lean or rich beyond predetermined values, it is interpreted as a malfunction, the ECM illuminates the MIL and sets a DTC.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0171	With warm engine and stable air fuel ratio feedback, fuel trim considerably in error to lean side. (2 trip detection logic)	<ul style="list-style-type: none"> • Intake system • Fuel injector assembly (for port injection) • Fuel injector assembly (for direct injection) • Mass air flow meter • Engine coolant temperature sensor • Fuel pressure • Gas leaks from exhaust system • Open or short in air fuel ratio sensor circuit • Air fuel ratio sensor • PCV valve and hose • PCV hose connections • ECM • Wire harness or connector
		<ul style="list-style-type: none"> • Mass air flow meter • Engine coolant temperature sensor • Fuel injector assembly (for port injection)

P0172	With warm engine and stable air fuel ratio feedback, fuel trim considerably in error to rich side. (2 trip detection logic)	<ul style="list-style-type: none"> Fuel injector assembly (for direct injection) Ignition system Fuel pressure Gas leaks from exhaust system Open or short in air fuel ratio sensor circuit Air fuel ratio sensor ECM Wire harness or connector
P1170	Although a DTC is stored for a rich or lean condition, the amount of fuel trim during direct injection is normal for 9 seconds. (1 trip detection logic)	<ul style="list-style-type: none"> Fuel injector assembly (for port injection) Fuel pressure ECM
P117B	Although a DTC is stored for a rich or lean condition, the amount of fuel trim during port injection is normal for 9 seconds. (1 trip detection logic)	<ul style="list-style-type: none"> Fuel injector assembly (for direct injection) Fuel pressure ECM

HINT:

- When DTC P0171 is set, the actual air-fuel ratio is on the lean side. When DTC P0172 is set, the actual air-fuel ratio is on the rich side.
- If the vehicle runs out of fuel, the air-fuel ratio is lean and DTC P0171 may be set. The MIL is then illuminated.
- When DTC P1170 or P117B is output, it may not be possible to precisely determine whether the port injection or the direct injection is malfunctioning, depending on the conditions. In this case, perform an Active Test (control the injection way) to determine which injection system is malfunctioning.

MONITOR DESCRIPTION

Under closed loop fuel control, fuel injection volumes that deviate from those estimated by the ECM cause changes in the long-term fuel trim compensation value. The long-term fuel trim is adjusted when there are persistent deviations in the short-term fuel trim values. Deviations from the ECM's estimated fuel injection volumes also affect the average fuel trim learning value, which is a combination of the average short-term fuel trim (fuel feedback compensation value) and the average long-term fuel trim (learning value of the air fuel ratio). If the average fuel trim learning value exceeds the malfunction threshold, the ECM interprets this as a malfunction in the fuel system and sets a DTC.

MONITOR STRATEGY

Related DTCs	P0171: Fuel system main feedback control functional check (System too lean) P0172: Fuel system main feedback control functional check (System too rich) P1170: Fuel system main feedback control functional check (Direct injection fail) P117B: Fuel system main feedback control functional check (Port injection fail)

Less than 15% or higher than -15%

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear DTCs (even if no DTCs are stored, perform the clear DTC operation) INFO.
4. Turn the ignition switch off and wait for at least 30 seconds.
5. Turn the ignition switch to ON and turn the Techstream on.
6. Start the engine and warm it up until the engine coolant temperature reaches 75°C (167°F) or higher.

HINT:

Check the engine coolant temperature is 20°C (68°F) or less at engine started.

7. Perform the following the confirmation driving pattern.

CAUTION:

When performing the confirmation driving pattern, obey all speed limits and traffic laws.

- a. Drive the vehicle at 80 km/h (50 mph) or more for 20 minutes or more [A].
- b. Stop the vehicle.
- c. Idle the engine for 1 minute or more [B].
8. Enter the following menus: Powertrain / Engine / Trouble Codes.
9. Read pending DTCs.

HINT:

- o If a pending DTC is output, the system is malfunctioning.
 - o If a pending DTC is not output, perform the following procedure.
10. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
 11. Input the DTC: P0171, P0172, P1170 or P117B.
 12. Check the DTC judgment result.

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	<ul style="list-style-type: none"> o DTC judgment completed o System normal

ABNORMAL	<ul style="list-style-type: none"> o DTC judgment completed o System abnormal
INCOMPLETE	<ul style="list-style-type: none"> o DTC judgment not completed o Perform driving pattern after confirming DTC enabling conditions
N/A	<ul style="list-style-type: none"> o Unable to perform DTC judgment o Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

- o If the judgment result shows NORMAL, the system is normal.
- o If the judgment result shows ABNORMAL, the system has a malfunction.

13. If the test result is INCOMPLETE or N/A and no DTC is output, perform a universal trip and check for permanent DTCs

INFO

HINT:

- o If a permanent DTC is output, the system is malfunctioning.
- o If no permanent DTC is output, the system is normal.

INSPECTION PROCEDURE

HINT:

Malfunctioning areas can be identified by performing the Control the Injection Volume for A/F Sensor function provided in the Active Test. The Control the Injection Volume for A/F Sensor function can help to determine whether the air fuel ratio sensor, heated oxygen sensor and other potential trouble areas are malfunctioning.

The following instructions describe how to conduct the Control the Injection Volume for A/F Sensor operation using the Techstream.

1. Connect the Techstream to the DLC3.
2. Start the engine.
3. Turn the Techstream on.
4. Warm up the engine at an engine speed of 2500 rpm for approximately 90 seconds.
5. Enter the following menus: Powertrain / Engine / Active Test / Control the Injection Volume for A/F Sensor / Gas AF Control / AFS Voltage B1S1 and O2S B1S2.
6. Perform the Active Test operation with the engine idling (press the RIGHT or LEFT button to change the fuel injection volume).
7. Monitor the output voltages of the air fuel ratio and heated oxygen sensors (AFS Voltage B1S1 and O2S B1S2) displayed on the Techstream.

HINT:

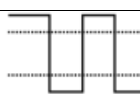

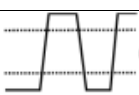

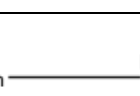

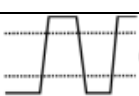

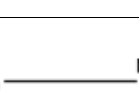

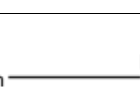

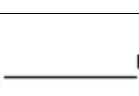

- Change the fuel injection volume within the range of -12.5% to +12.5%.
- Each sensor reacts in accordance with increases and decreases in the fuel injection volume.

TECHSTREAM DISPLAY (SENSOR)	INJECTION VOLUME	STATUS	VOLTAGE
AFS Voltage B1S1 (Air fuel ratio)	+12.5%	Rich	Below 2.0 V
	-12.5%	Lean	Higher than 2.4 V
O2S B1S2 (Heated oxygen)	+12.5%	Rich	Higher than 0.55 V
	-12.5%	Lean	Below 0.4 V

NOTICE:

The air fuel ratio sensor has an output delay of a few seconds and the heated oxygen sensor has a maximum output delay of approximately 20 seconds.

CASE	AIR FUEL RATIO SENSOR (SENSOR 1) OUTPUT VOLTAGE	HEATED OXYGEN SENSOR (SENSOR 2) OUTPUT VOLTAGE	MAIN SUSPECTED TROUBLE AREA

1	<p>Injection Volume +12.5% -12.5%</p>  <p>Output Voltage Higher than 2.4 V Below 2.0 V</p> 	<p>Injection Volume +12.5% -12.5%</p>  <p>Output Voltage Higher than 0.55 V Below 0.4 V</p> 	-
2	<p>Injection Volume +12.5% -12.5%</p>  <p>Output Voltage Almost no reaction NG</p> 	<p>Injection Volume +12.5% -12.5%</p>  <p>Output Voltage Higher than 0.55 V Below 0.4 V</p> 	<ul style="list-style-type: none"> • Air fuel ratio sensor • Air fuel ratio sensor heater • Air fuel ratio sensor circuit
3	<p>Injection Volume +12.5% -12.5%</p>  <p>Output Voltage Higher than 2.4 V Below 2.0 V</p> 	<p>Injection Volume +12.5% -12.5%</p>  <p>Output Voltage Almost no reaction NG</p> 	<ul style="list-style-type: none"> • Heated oxygen sensor • Heated oxygen sensor heater • Heated oxygen sensor circuit
4	<p>Injection Volume +12.5% -12.5%</p>  <p>Output Voltage Almost no reaction NG</p> 	<p>Injection Volume +12.5% -12.5%</p>  <p>Output Voltage Almost no reaction NG</p> 	<ul style="list-style-type: none"> • Fuel injector assembly • Fuel pressure • Gas leak from exhaust system (Air fuel ratio extremely rich or lean)

- Following the Control the Injection Volume for A/F Sensor procedure enables technicians to check and graph the voltage outputs of both the air fuel ratio and heated oxygen sensors.
- To display the graph, enter the following menus: Powertrain / Engine / Active Test / Control the Injection Volume for A/F Sensor / Gas AF Control / AFS Voltage B1S1 and O2S B1S2; and then press the graph button on the Data List view.

HINT:

- Bank 1 refers to the bank that includes the No. 1 cylinder*.

*: The No. 1 cylinder is the cylinder which is farthest from transmission.

- Bank 2 refers to the bank that does not include the No. 1 cylinder.
- Sensor 1 refers to the sensor closest to the engine assembly.
- Sensor 2 refers to the sensor farthest away from the engine assembly.
- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame

data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was moving or stationary, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

- A low air fuel ratio sensor voltage could be caused by a rich air fuel mixture. Check for conditions that would cause the engine to run rich.
- A high air fuel ratio sensor voltage could be caused by a lean air fuel mixture. Check for conditions that would cause the engine to run lean.

PROCEDURE

1. CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0171, P0172, P1170 AND/OR P117B)

- Connect the Techstream to the DLC3.
- Turn the ignition switch to ON.
- Turn the Techstream on.
- Enter the following menus: Powertrain / Engine / Trouble Codes.
- Read the DTCs.

Result:

RESULT	PROCEED TO
P0171, P0172, P1170 or P117B	A
P0171, P0172, P1170 and/or P117B and other DTCs	B

HINT:

If any DTCs other than P0171, P0172, P1170 or P117B are output, troubleshoot those DTCs first.

B  [GO TO DTC CHART](#)

A

2. PERFORM ACTIVE TEST USING TECHSTREAM (CONTROL THE INJECTION VOLUME FOR A/F SENSOR)

- Connect the Techstream to the DLC3.
- Turn the ignition switch to ON.
- Turn Techstream on.
- Warm up the engine and run the engine at an engine speed of 2500 rpm for approximately 90 seconds.
- Enter the following menus: Powertrain / Engine / Active Test / Control the Injection Volume for A/F Sensor / AFS Voltage B1S1 and O2S B1S2.
- Perform the Control the Injection Volume for A/F Sensor operation with the engine in an idling.
- Monitor the output voltages of the A/F and HO2 sensors (AFS Voltage B1S1 and O2S B1S2) displayed on the Techstream.

HINT:

- Change the fuel injection volume within the range of -12.5% to 12.5%.
- The air fuel ratio sensor has an output delay of a few seconds and the heated oxygen sensor has a maximum output delay of approximately 20 seconds.
- If the sensor output voltage does not change (almost no reaction) while performing the Active Test, the sensor may be malfunctioning.

TECHSTREAM DISPLAY (SENSOR)	INJECTION VOLUME	STATUS	VOLTAGE
AFS Voltage B1S1 (A/F)	12.5%	Rich	Less than 2.0 V
	-12.5%	Lean	More than 2.4 V
O2S B1S2 (HO2)	12.5%	Rich	More than 0.55 V
	-12.5%	Lean	Less than 0.4 V

Result:

STATUS AFS VOLTAGE B1S1	STATUS O2S B1S2	A/F CONDITION AND A/F SENSOR CONDITION	SUSPECTED TROUBLE AREA	PROCEED TO
Lean/Rich	Lean/Rich	Normal	-	A
Lean	Lean	Actual air-fuel ratio lean	<ul style="list-style-type: none"> Ventilation valve and hose Ventilation hose connections Injector for port injection Gas leakage from exhaust system Air induction system Fuel pressure Mass Air Flow (MAF) meter Engine Coolant Temperature (ECT) sensor 	A
Rich	Rich	Actual air-fuel ratio rich	<ul style="list-style-type: none"> Gas leakage from exhaust system Ignition system Fuel pressure Mass air flow (MAF) meter Engine coolant temperature (ECT) sensor 	A
Lean	Lean/Rich	A/F sensor malfunction	<ul style="list-style-type: none"> Air fuel ratio sensor 	B
Rich	Lean/Rich	A/F sensor malfunction	<ul style="list-style-type: none"> Air fuel ratio sensor 	B

Lean: During the Control the Injection Volume for A/F Sensor Active Test, the air fuel ratio sensor output voltage (AFS Voltage) is consistently higher than 2.4 V, and the heated oxygen sensor output voltage (O2S) is consistently below 0.4 V.

Rich: During the Control the Injection Volume for A/F Sensor Active Test, the AFS Voltage is consistently below 2.0 V, and the O2S is consistently higher than 0.55 V.

Lean/Rich: During the Control the Injection Volume for A/F Sensor Active Test, the output voltage of the heated oxygen sensor alternates correctly.

HINT:

Refer to "Data List / Active Test" [AFS Voltage B1S1 and O2S B1S2]  .

B  **INSPECT AIR FUEL RATIO SENSOR**

A

3.	CHECK FREEZE FRAME DATA
-----------	--------------------------------

(a) Check freeze frame data, and understand the status of vehicles when abnormalities occur.

HINT:

- The 5 separate sets of freeze frame data can be used to check the engine status before and after storing of the DTC.

- Use freeze frame data to check if the engine was idling or running.

FREEZE FRAME DATA

Engine Speed	Fuel System Status #1	O2S B1S2
Calculate Load	Short FT #1	Evap Purge Flow
Vehicle Speed	Long FT #1	Shift Position Sig from ECT
MAF	AFS Voltage B1S1	Coolant Temp

NEXT

4.	CHECK VEHICLE CONDITION
-----------	--------------------------------

HINT:

When checking trouble during abnormal status, use the following procedure.

(a) Remove the EFI (+B) fuse, wait 60 seconds or more, and connect the fuse.

HINT:

- Clear the ECM feedback learning value.
- After clearing the DTC, initial diagnosis of the electronically controlled throttle is performed. Accordingly, engine start after clearing DTC takes place 10 seconds or more after turning the ignition switch ON.

(b) Connect the Techstream to the DLC3.

(c) Turn the ignition switch to ON.

(d) Turn Techstream on.

(e) Enter the following menus: Powertrain / Engine / Active Test / Control the Injection Volume.

(f) Increase or decrease injection quantities by 1 step.

HINT:

This operation stops feedback compensation and feedback learning, enabling checking of trouble.

(g) Start the engine.

(h) Refer to the running state freeze frame data, reproduce the conditions in which the abnormality occurred, and check the trouble.

Result:

RESULT	PROCEED TO
Trouble can be confirmed.	A
Trouble cannot be confirmed.	B

B **READ VALUE USING TECHSTREAM (SHORT FT #1 AND LONG FT #1)**

(a) Check the diagnostic table and freeze frame data again, and if there is no abnormality, finish operations.

HINT:

- In the event of running out of gas, the fuel compensation quantity will increase by +35% or more, and if this continues for 2 trips, this is a lean abnormality, and P0171 may be stored.
- Repeated short trips (a short time between turning the ignition switch ON and turning it off or short distance driving) result in gasoline vaporizing at subsequent engine warm-up, and P0172 as a result of increased blow-by gas may be stored.

NEXT ▶ END

11.	CHECK EMISSION CONTROL SYSTEM
------------	--------------------------------------

(a) Check emission control system INFO.

NG ▶ REPAIR OR REPLACE EMISSION CONTROL SYSTEM

OK
▼

--	--

13. INSPECT ENGINE COOLANT TEMPERATURE SENSOR

(a) Inspect the engine coolant temperature sensor **INFO** .

NG ▶ **REPLACE ENGINE COOLANT TEMPERATURE SENSOR**

OK
▼

14. READ VALUE USING TECHSTREAM (MAF)

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Start the engine.
- (e) Enter the following menus: Powertrain / Engine / Data List / MAF.
- (f) Read MAF with the engine speed at 3000 rpm.

Standard:

TECHSTREAM DISPLAY	CONDITION	SPECIFIED CONDITION
MAF	Engine speed at 3000 rpm	8 to 13 g/s

NG ▶ **CHECK HARNESS AND CONNECTOR (MASS AIR FLOW METER CONNECTOR CONNECTION)**

OK
▼

15. CHECK IGNITION SYSTEM

(a) Check the ignition system **INFO** .

NG ▶ **REPAIR OR REPLACE IGNITION SYSTEM**

OK
▼

16. CHECK FOR EXHAUST GAS LEAK

(a) Check for exhaust gas leaks.

OK:
No gas leaks.
Result:

RESULT	PROCEED TO
Abnormal	A
Normal	B

B ▶ CHECK HARNESS AND CONNECTOR (MASS AIR FLOW METER CONNECTOR CONNECTION)

A ▶ REPAIR OR REPLACE EXHAUST SYSTEM

17.	INSPECT AIR FUEL RATIO SENSOR
------------	--------------------------------------

(a) Inspect the air fuel ratio sensor  .

NG ▶ REPLACE AIR FUEL RATIO SENSOR

OK
▼

18.	CHECK HARNESS AND CONNECTOR (AIR FUEL RATIO SENSOR - ECM)
------------	--

(a) Disconnect the air fuel ratio sensor connector.

(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A34-19 (A1A+) - C14-3 (A1A+)	Always	Below 1 Ω
A34-18 (A1A-) - C14-4 (A1A-)	Always	Below 1 Ω
A34-5 (HA1A) - C14-1 (HA1A)	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A34-19 (A1A+) or C14-3 (A1A+) - Body ground	Always	10 kΩ or higher
A34-18 (A1A-) or C14-4 (A1A-) - Body ground	Always	10 kΩ or higher
A34-5 (HA1A) or C14-1 (HA1A) - Body ground	Always	10 kΩ or higher

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR

OK
▼

19.	REPLACE AIR FUEL RATIO SENSOR
------------	--------------------------------------

- (a) Replace the air fuel ratio sensor  .

NEXT

20.	READ VALUE USING TECHSTREAM (SHORT FT #1 AND LONG FT #1)
------------	---

- (a) Connect the Techstream to the DLC3.
(b) Turn the ignition switch to ON.
(c) Turn the Techstream on.
(d) Start the engine.
(e) Enter the following menus: Powertrain / Engine / Data List / Short FT #1, Long FT #1.
(f) Read the value displayed on the Techstream.

Standard:

TECHSTREAM DISPLAY	CONDITION	SPECIFIED CONDITION
Short FT #1 + Long FT #1	Idling or racing	-20% to +20%

HINT:

If the trouble occurs during high speed driving, it is possible to take measurements at medium or low speeds by matching the intake air volume to that at the time of the trouble by shifting down.

NG  **CHECK FUEL PRESSURE (LOW PRESSURE SIDE)**

OK  **END**

21.	CHECK FUEL PRESSURE (LOW PRESSURE SIDE)
------------	--

- (a) Check the fuel pressure (low pressure side)  .

B  **CHECK HARNESS AND CONNECTOR (MASS AIR FLOW METER CONNECTOR CONNECTION)**

A  **REPAIR OR REPLACE FUEL SYSTEM (LOW PRESSURE SIDE)**

22.	READ VALUE USING TECHSTREAM (FUEL PRESS)
------------	---

- (a) Connect the Techstream to the DLC3.
(b) Turn the ignition switch to ON.
(c) Turn the Techstream on.
(d) Start the engine.
(e) Enter the following menus: Powertrain / Engine / Data List / Fuel Press.
(f) Read the value displayed on the Techstream.

Standard:

TECHSTREAM DISPLAY	CONDITION	SPECIFIED CONDITION
Fuel Press	Idling	3000 to 5000 kPa (30.6 to 50.9 kgf/cm ² , 436 to 725 psi)

HINT:

- The A/C switch and all accessory switches should be off, and the shift lever should be in the N, P or neutral position, and the engine should be fully warmed up.
- If the result is other than the standard value, there may be a fuel system (high pressure side) abnormality.

NG ► REPAIR OR REPLACE FUEL SYSTEM (HIGH PRESSURE SIDE)

OK

23.	PERFORM ACTIVE TEST USING TECHSTREAM (CONTROL THE INJECTION WAY)
------------	---

- Connect the Techstream to the DLC3.
- Start the engine.
- Turn the Techstream on.
- Enter the following menus: Powertrain / Engine / Active Test / Control the Injection Way / Direct.
- Read the value Fuel Press Target Value, Short FT #1 and Long FT #1.

Standard:

TECHSTREAM DISPLAY		CONDITION	PROCEED TO
FUEL PRESSURE TARGET VALUE	SHORT FT #1 + LONG FT #1		
3 to 5 MPa (30.6 to 50.9 kgf/cm ² , 436 to 725 psi)	-	Idling	A
5 MPa (50.9 kgf/cm ² , 725 psi) or more	+20% or more		B
5 MPa (50.9 kgf/cm ² , 725 psi) or more	-20% or less		C
3 MPa (30.6 kgf/cm ² , 436 psi) or less	+20% or more		C
3 MPa (30.6 kgf/cm ² , 436 psi) or less	-20% or less		D

HINT:

The A/C switch and all accessory switches should be off, and the shift lever should be in the N, P or neutral position, and the engine should be fully warmed up.

B ► READ VALUE USING TECHSTREAM (FUEL PRESS)

C ► REPLACE FUEL PRESSURE SENSOR

D ► REPLACE FUEL INJECTOR ASSEMBLY (FOR DIRECT INJECTION)

A

24.	PERFORM ACTIVE TEST USING TECHSTREAM (CONTROL THE INJECTION WAY)

HINT:

If the trouble occurs during high speed driving, it is possible to take measurements at medium or low speeds by matching the intake air volume to that at the time of the trouble by shifting down.

NG  **REPLACE ECM**

OK  **END**

Last Modified: 3-27-2012	6.4 C	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000XH502XX
Title: FA20 ENGINE CONTROL: SFI SYSTEM: P0191-P0193: Fuel Rail Pressure Sensor Circuit Range / Performance (2013 FR-S)		

DTC	P0191	Fuel Rail Pressure Sensor Circuit Range / Performance
------------	--------------	--

DTC	P0192	Fuel Rail Pressure Sensor Circuit Low Input
------------	--------------	--

DTC	P0193	Fuel Rail Pressure Sensor Circuit High Input
------------	--------------	---

DESCRIPTION

The fuel pressure sensor is installed on the delivery pipe. The sensor changes fuel pressure to an electrical signal and sends the signal to the ECM. Then the ECM controls the pump discharge using this feedback to maintain the fuel's target pressure. If the sensor output stops, the ECM will stop the high pressure side fuel pump and supply fuel using the low pressure side fuel pump.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0191	One of the following conditions is met (2 trip detection logic): <ul style="list-style-type: none"> Fuel pressure is 1.9 MPa or more 5 hours after ignition switch turned off. Fuel pressure is 1.84 MPa or less for 10 seconds or more with engine running when 5 hours or more elapsed after ignition switch turned off. 	<ul style="list-style-type: none"> Open or short in fuel pressure sensor circuit Fuel pressure sensor ECM
P0192	Fuel pressure sensor voltage is too low for 2.5 seconds or more. (1 trip detection logic)	<ul style="list-style-type: none"> Short in fuel pressure sensor circuit Fuel pressure sensor ECM
P0193	Fuel pressure sensor voltage is too high for 2.5 seconds or more. (1 trip detection logic)	<ul style="list-style-type: none"> Open in fuel pressure sensor circuit Fuel pressure sensor ECM

HINT:

After confirming DTC P0192 or P0193, use the Techstream to confirm the fuel pressure in the delivery

pipe by entering the following menus: Powertrain / Engine / Data List / Fuel Press.

FUEL PRESSURE (KPA)	MALFUNCTION
Approximately 0	<ul style="list-style-type: none"> PR, E1 circuit short
Approximately 26000	<ul style="list-style-type: none"> PR, VC circuit short

MONITOR DESCRIPTION

These DTCs are set if the fuel pressure sensor output voltage is out of the standard range. The DTCs stand for an open or short malfunction of the sensor circuit.

If these DTCs are set, the ECM enters fail-safe mode and limits the engine power. Fail-safe mode continues until the ignition switch is turned off.

CONFIRMATION DRIVING PATTERN

P0191

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear DTCs (even if no DTCs are stored, perform the clear DTC operation) INFO.
4. Turn the ignition switch off and wait for at least 30 seconds.
5. Turn the ignition switch to ON.
6. Start the engine and warm it up until the engine coolant temperature reaches 75°C (167°F) or higher.
7. With the vehicle stationary, depress the accelerator pedal and maintain an engine speed of between 2500 and 3000 rpm for 40 seconds or more.
8. Drive the vehicle at 30 km/h (18.75 mph) or more for 1 minute or more [A].

CAUTION:

When performing the confirmation driving pattern, obey all speed limits and traffic laws.

9. Turn the ignition switch off and leave vehicle for 5 hours or more [B].
10. Turn the ignition switch to ON and turn the Techstream on.
11. Enter the following menus: Powertrain / Engine / Trouble Codes.
12. Start the engine and warm it up until the engine coolant temperature reaches 75°C (167°F) or higher.
13. Drive the vehicle at 30 km/h (18.75 mph) or more for 1 minute or more [C].

CAUTION:

When performing the confirmation driving pattern, obey all speed limits and traffic laws.

14. Read pending DTCs.

HINT:

- o If a pending DTC is output, the system is malfunctioning.
 - o If a pending DTC is not output, perform the following procedure.
15. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
 16. Input the DTC: P0191.
 17. Check the DTC judgment result.

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	<ul style="list-style-type: none"> o DTC judgment completed o System normal

ABNORMAL	<ul style="list-style-type: none"> o DTC judgment completed o System abnormal
INCOMPLETE	<ul style="list-style-type: none"> o DTC judgment not completed o Perform driving pattern after confirming DTC enabling conditions
N/A	<ul style="list-style-type: none"> o Unable to perform DTC judgment o Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

- o If the judgment result shows NORMAL, the system is normal.
- o If the judgment result shows ABNORMAL, the system has a malfunction.

18. If the test result is INCOMPLETE or N/A and no DTC is output, perform a universal trip and check for permanent DTCs **INFO** .

HINT:

- o If a permanent DTC is output, the system is malfunctioning.
- o If no permanent DTC is output, the system is normal.

P0192, P0193

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear DTCs (even if no DTCs are stored, perform the clear DTC operation) **INFO** .

4. Turn the ignition switch off and wait for at least 30 seconds.
5. Turn the ignition switch to ON and turn the Techstream on.
6. Start the engine and warm it up until the engine coolant temperature reaches 75°C (167°F) or higher.
7. With the vehicle stationary, depress the accelerator pedal and maintain an engine speed of between 2500 and 3000 rpm for 40 seconds or more [A].
8. Drive the vehicle at 10 km/h (6.25 mph) or more for 1 minute or more [B].

CAUTION:

When performing the confirmation driving pattern, obey all speed limits and traffic laws.

9. Enter the following menus: Powertrain / Engine / Trouble Codes.
10. Read pending DTCs.

HINT:

- o If a pending DTC is output, the system is malfunctioning.
 - o If a pending DTC is not output, perform the following procedure.
11. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
 12. Input the DTC: P0192 or P0193.
 13. Check the DTC judgment result.

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	<ul style="list-style-type: none"> o DTC judgment completed o System normal
ABNORMAL	<ul style="list-style-type: none"> o DTC judgment completed o System abnormal
INCOMPLETE	<ul style="list-style-type: none"> o DTC judgment not completed o Perform driving pattern after confirming DTC enabling conditions

HINT:

- o If a permanent DTC is output, the system is malfunctioning.
- o If no permanent DTC is output, the system is normal.

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air fuel ratio was lean or rich, and other data from the time the malfunction occurred.

PROCEDURE

1.	READ VALUE USING TECHSTREAM (FUEL PRESS)
-----------	---

- (a) Connect the Techstream to the DLC3.
- (b) Start the engine.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Powertrain / Engine / Data List / Fuel Press.
- (e) Read the values.

Result:

FUEL PRESSURE (KPA)	PROCEED TO
26000 or more	A
Approximately 0	
3000 to 5000*	B

HINT:

*: The value must change when the engine is moving or stationary.

B ▶ CHECK FOR INTERMITTENT PROBLEMS

A

2. INSPECT FUEL PRESSURE SENSOR (FUEL PRESSURE SENSOR POWER SOURCE)

(a) Disconnect the fuel pressure sensor connector.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
C10-1 (VC) - Body ground	Ignition switch ON	4.5 to 5.5 V

Text in Illustration

*a	Front view of wire harness connector (to Fuel Pressure Sensor)
----	---

NG ▶ CHECK HARNESS AND CONNECTOR (ECM - FUEL PRESSURE SENSOR)

OK

3. INSPECT ECM (PR VOLTAGE)

(a) Start the engine.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A34-9 (PR) - A36-29 (E1)	Idling with warm engine	1.0 to 1.7 V

Text in Illustration

*a	Component with harness connected (ECM)
----	--

HINT:

The fuel pressure in the delivery pipe is 3 to 5 MPa.

NG ► CHECK HARNESS AND CONNECTOR (ECM - FUEL PRESSURE SENSOR)

OK ► REPLACE ECM

4. CHECK HARNESS AND CONNECTOR (ECM - FUEL PRESSURE SENSOR)

(a) Disconnect the ECM connectors.

(b) Disconnect the fuel pressure sensor connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A34-9 (PR) - C10-3 (PR)	Always	Below 1 Ω
A36-29 (E1) - C10-2 (E2)	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A34-9 (PR) or C10-3 (PR) - body ground	Always	10 kΩ or higher
A34-29 (E1) or C10-2 (E2) - body ground	Always	10 kΩ or higher

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR (ECM - FUEL PRESSURE SENSOR)

OK ▶ REPLACE FUEL PRESSURE SENSOR

5. CHECK HARNESS AND CONNECTOR (ECM - FUEL PRESSURE SENSOR)

- (a) Disconnect the fuel pressure sensor connector.
- (b) Disconnect the ECM connector.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A36-19 (VC) - C10-1 (VC)	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A36-19 (VC) or C10-1 (VC) - Body ground	Always	10 k Ω or higher

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR (ECM - FUEL PRESSURE SENSOR)

OK ▶ REPLACE ECM

Last Modified: 3-27-2012	6.4 C	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000PFB0PRX
Title: FA20 ENGINE CONTROL: SFI SYSTEM: P0196-P0198: Engine Oil Temperature Sensor (Range/Performance) (2013 FR-S)		

DTC	P0196	Engine Oil Temperature Sensor (Range/Performance)
------------	--------------	--

DTC	P0197	Engine Oil Temperature Sensor Low
------------	--------------	--

DTC	P0198	Engine Oil Temperature Sensor High
------------	--------------	---

DESCRIPTION

The resistance of the thermistor within the oil temperature sensor changes in accordance with variations in the oil temperature. The method for connecting the oil temperature sensor and the ECM is the same as for the intake air temperature sensor.

HINT:

If any DTC is stored, the ECM enters fail-safe mode. During operation of fail-safe mode, the ECM sets the engine oil temperature determined value at 70°C (158°F). Operation of fail-safe mode continues until the ECM restores normal operation.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0196	Despite estimated engine oil temperature is higher than 45°C (113°F), engine oil temperature sensor value is lower than 45°C (113°F). (2 trip detection logic)	<ul style="list-style-type: none"> • Engine oil temperature sensor • ECM
P0197	Engine oil temperature sensor voltage is less than 0.203 V for 0.5 seconds or more. (1 trip detection logic)	
P0198	Engine oil temperature sensor voltage is more than 4.698 V for 0.5 seconds or more. (1 trip detection logic)	

MONITOR DESCRIPTION

P0196

When a cold engine start is performed and then the engine is warmed up, if the Engine oil temperature sensor value is less than specified value, it is determined that a malfunction has occurred. If this is detected in 2 consecutive driving cycles, the ECM interprets this as a malfunction in the engine oil temperature sensor and stores a DTC.

P0197, P0198

The ECM monitors the sensor voltage and uses this value to calculate the engine oil temperature. When the sensor output voltage deviates from the normal operating range, the ECM interprets this as a malfunction in the engine oil temperature sensor circuit and stores a DTC.

MONITOR STRATEGY

TYPICAL MALFUNCTION THRESHOLDS

P0196

Actual engine oil temperature	Less than 45°C (113°F)
-------------------------------	------------------------

P0197

Engine oil temperature sensor voltage [Engine oil temperature]	Less than 0.203 V [165.54°C (330°F)]
--	--------------------------------------

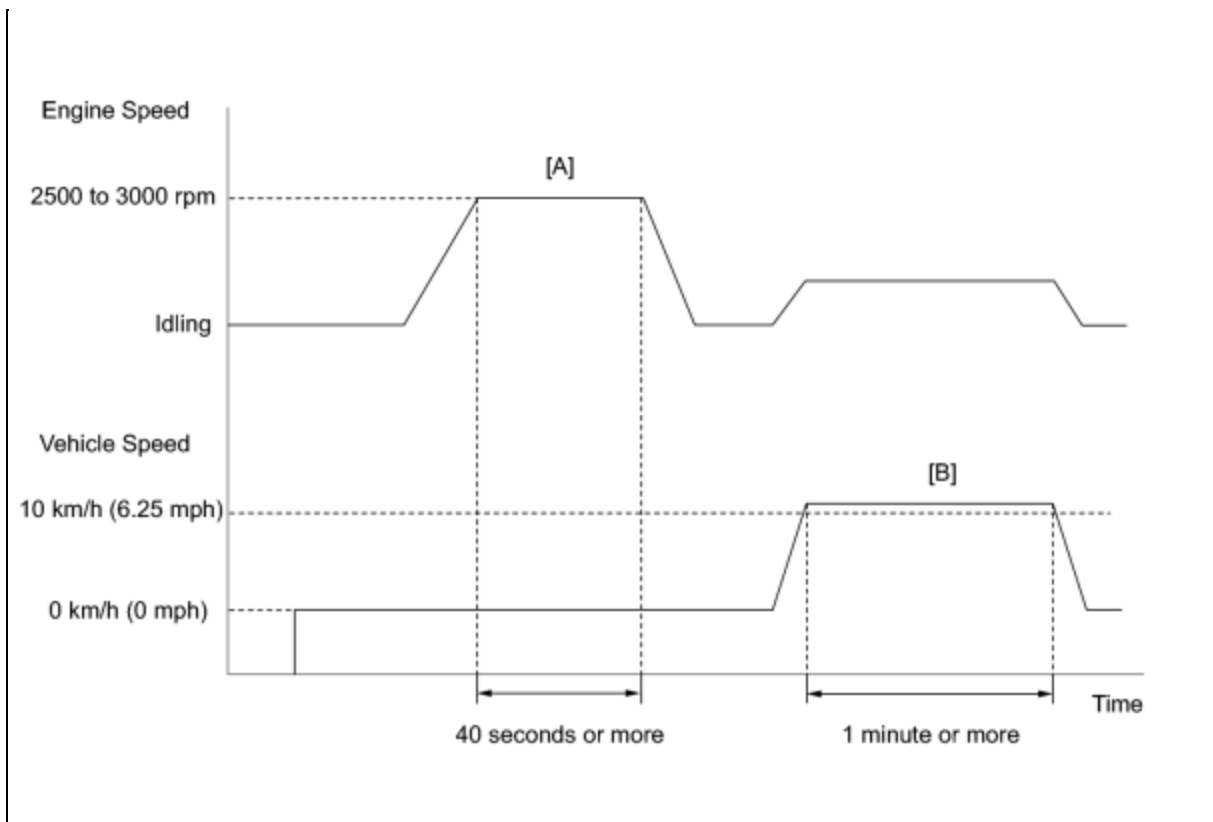

P0198

Engine oil temperature sensor voltage [Engine oil temperature]	More than 4.698 V [-46.24°C (-51.2°F)]
--	--

COMPONENT OPERATING RANGE

Engine oil temperature sensor voltage [Engine oil temperature]	0.210 to 4.688 V [163.70 to -43.85 °C (326.7 to -46.9°F)]
--	---

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear DTCs (even if no DTCs are stored, perform the clear DTC operation) INFO.
4. Turn the ignition switch off and wait for at least 30 seconds.
5. Turn the ignition switch to ON and turn the Techstream on.
6. Start the engine and warm it up until the engine oil temperature reaches 75°C (167°F) or higher.
7. With the vehicle stationary, depress the accelerator pedal and maintain an engine speed of between 2500 and 3000 rpm for 40 seconds or more [A].
8. Drive the vehicle at 10 km/h (6.25 mph) or more for 1 minute or more [B].

CAUTION:

When performing the confirmation driving pattern, obey all speed limits and traffic laws.

9. Enter the following menus: Powertrain / Engine / Trouble Codes.
10. Read pending DTCs.

HINT:

- o If a pending DTC is output, the system is malfunctioning.
 - o If a pending DTC is not output, perform the following procedure.
11. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
 12. Input the DTC: P0196, P0197 or P0198.
 13. Check the DTC judgment result.

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	<ul style="list-style-type: none"> o DTC judgment completed o System normal

ABNORMAL	<ul style="list-style-type: none"> o DTC judgment completed o System abnormal
INCOMPLETE	<ul style="list-style-type: none"> o DTC judgment not completed o Perform driving pattern after confirming DTC enabling conditions
N/A	<ul style="list-style-type: none"> o Unable to perform DTC judgment o Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

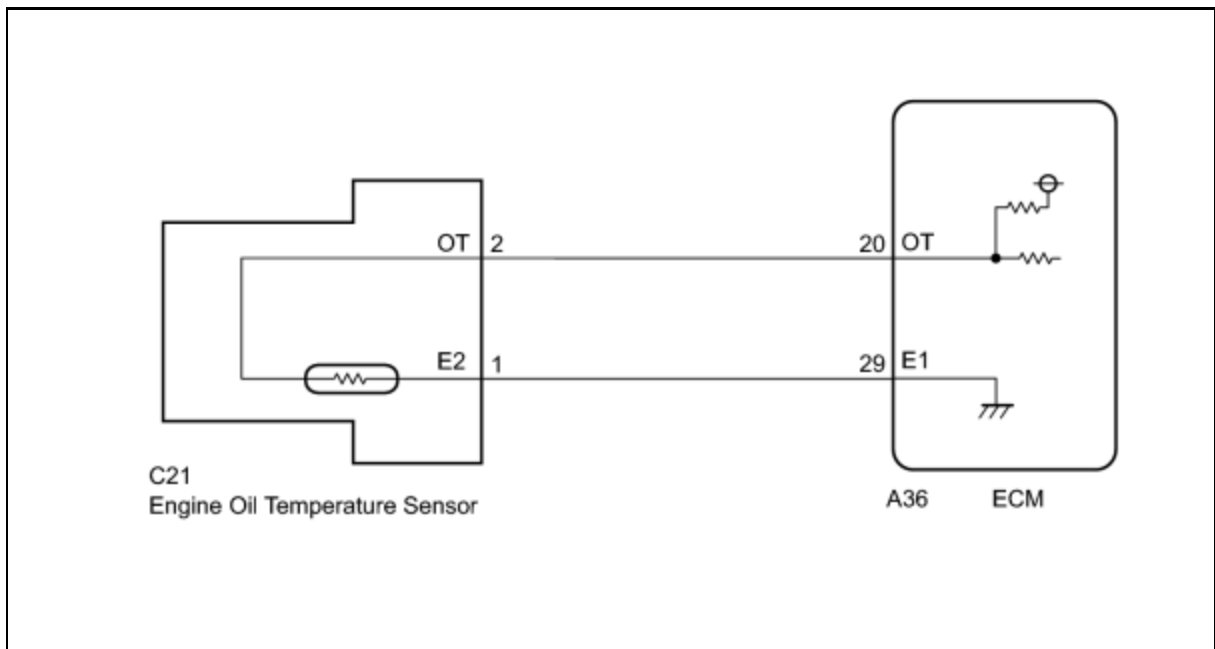

- o If the judgment result shows NORMAL, the system is normal.
- o If the judgment result shows ABNORMAL, the system has a malfunction.

14. If the test result is INCOMPLETE or N/A and no DTC is output, perform a universal trip and check for permanent DTCs INFO.

HINT:

- o If a permanent DTC is output, the system is malfunctioning.
- o If no permanent DTC is output, the system is normal.

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or

- not, if the air fuel ratio was lean or rich, and other data from the time the malfunction occurred.
- When the DTC is output, check the engine oil temperature using the Techstream. Enter the following menus: Powertrain / Engine / Data List / Engine Oil Temperature. If the Engine Oil Temperature value is lower than the actual engine oil temperature, the engine oil temperature sensor circuit may be malfunctioning. In this case, check the wire harnesses and connectors (and those connections) between the ECM and the engine oil temperature sensor first.

PROCEDURE

1.	READ VALUE USING TECHSTREAM (ENGINE OIL TEMPERATURE)
-----------	---

- Connect the Techstream to the DLC3.
- Turn the ignition switch to ON.
- Turn the Techstream on.
- Enter the following menus: Powertrain / Engine / Data List / Engine Oil Temperature.
- Read the value displayed on the Techstream.

Result

RESULT	PROCEED TO
-40°C (-40°F)	A
215°C (419°F)	B
Between 75 and 100°C (167 and 212°F)	C

HINT:

- If there is an open circuit, the Techstream indicates -40°C (-40°F).
- If there is a short circuit, the Techstream indicates higher than 215°C (419°F).

DTC	P0204	Injector Circuit / Open - (Cylinder 4)
------------	--------------	---

DESCRIPTION

The D-4S system has two injection systems. One is the in-cylinder direct injection system that directly injects pressurized fuel into the combustion chamber. The other is the intake port injection system. The ECM determines the percentage of in-cylinder direct injection to the intake port injection systems in accordance with the engine speed and load.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0201	Received diagnostic information (open circuit detected / GND short / +B short or overheating) from the fuel injector IC continuously 10 times or more (No. 1 cylinder). (1 trip detection logic)	<ul style="list-style-type: none"> • Open or short in fuel injector (for port injection) circuit (No. 1 cylinder) • INJ fuse • Fuel injector assembly (for port injection) (No. 1 cylinder) • ECM
P0202	Received diagnostic information (open circuit detected / GND short / +B short or overheating) from the fuel injector IC continuously 10 times or more (No. 2 cylinder). (1 trip detection logic)	<ul style="list-style-type: none"> • Open or short in fuel injector (for port injection) circuit (No. 2 cylinder) • INJ fuse • Fuel injector assembly (for port injection) (No. 2 cylinder) • ECM

P0203	Received diagnostic information (open circuit detected / GND short / +B short or overheating) from the fuel injector IC continuously 10 times or more (No. 3 cylinder). P0204	Received diagnostic information (open circuit detected / GND short / +B short or overheating) from the fuel injector IC continuously 10 times or more (No. 4 cylinder). (1 trip detection logic)	<ul style="list-style-type: none"> • Open or short in fuel injector (for port injection) circuit (No. 4 cylinder) • INJ fuse • Fuel injector assembly (for port injection) (No. 4 cylinder) • ECM

MONITOR DESCRIPTION

The ECM monitors the injection control of the port injector. If a malfunction is detected in the port injector circuit, the ECM cancels the injection control for the corresponding cylinder and turns on the MIL.

MONITOR STRATEGY

Related DTCs	P0201: Fuel injector circuit continuity (Cylinder 1) P0202: Fuel injector circuit continuity (Cylinder 2) P0203: Fuel injector circuit continuity (Cylinder 3) P0204: Fuel injector circuit continuity (Cylinder 4)

Last Modified: 3-27-2012	6.4 C	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000T8X0C9X
Title: FA20 ENGINE CONTROL: SFI SYSTEM: P0230: Fuel Pump Primary Circuit (2013 FR-S)		

DTC	P0230	Fuel Pump Primary Circuit
------------	--------------	----------------------------------

DESCRIPTION

When a malfunction in the fuel pump control circuit (low pressure side) is detected, DTC P0230 is stored.

The fuel pump control circuit (low pressure side) consists of the ECM, fuel pump assembly and fuel pump control ECU (which operates the fuel pump assembly). Based on the engine output, the ECM determines the fuel pump speed. The speed is then converted to a duty signal and sent to the fuel pump control ECU. Based on the signal sent from the ECM, the fuel pump control ECU adjusts the fuel pump assembly operation speed among 3 settings. The fuel pump control ECU also has a self-diagnosis function. Based on the fuel pump control circuit (low pressure side) condition, the fuel pump control ECU outputs a diagnostic signal to the ECM, and the ECM determines if there is a malfunction in the fuel pump control circuit (low pressure side).

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0230	Open or short in fuel pump circuit for 2.5 seconds or more. (1 trip detection logic)	<ul style="list-style-type: none"> • Open or short in fuel pump control circuit (low pressure side) • C/OPEN relay • Fuel pump assembly • Fuel pump control ECU • ECM

MONITOR DESCRIPTION

To monitor the fuel pump control circuit (low pressure side), the ECM checks the fuel pump control signal (FPC) and diagnostic signal (DI). The FPC voltage varies between approximately 0 V and approximately 12 V (duty signal). Based on the condition of the fuel pump control ECU malfunction, the DI voltage varies between approximately 0 V and approximately 12 V. The ECM then compares the variation of the FPC voltage and DI voltage, and determines if the fuel pump control circuit (low pressure side) is malfunctioning. When the ECM determines that the fuel pump control circuit (low pressure side) is malfunctioning, a DTC is stored immediately.

MONITOR STRATEGY

Related DTCs	P0230: Fuel pump control circuit continuity
Required sensors/Components (Main)	Fuel pump control ECU
Required sensors/Components (Related)	-
Frequency of operation	Continuous
Duration	2.5 seconds

WIRING DIAGRAM

Refer to Fuel Pump Control Circuit **INFO** .

INSPECTION PROCEDURE

This troubleshooting procedure is based on the premise that the engine is started. If the engine is not started, proceed to Problem Symptoms Table **INFO** .

NOTICE:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1. INSPECT TERMINAL VOLTAGE (+B OF FUEL PUMP CONTROL ECU)

(a) Disconnect the fuel pump control ECU connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
G12-1 (+B) - Body ground	Ignition switch ON	11 to 14 V

Text in Illustration

*a	Front view of wire harness connector (to Fuel Pump Control ECU)
----	---

NG ▶ **INSPECT RELAY (C/OPEN)**

OK

2. CHECK HARNESS AND CONNECTOR (FUEL PUMP CONTROL ECU - BODY GROUND)

(a) Disconnect the fuel pump control ECU connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
G12-4 (E) - Body ground	Always	Below 1 Ω

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3.	CHECK HARNESS AND CONNECTOR (ECM - FUEL PUMP CONTROL ECU)
-----------	--

- (a) Disconnect the ECM connector.
- (b) Disconnect the fuel pump control ECU connector.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A35-10 (DI) - G12-3 (DI)	Always	Below 1 Ω
A35-19 (FPC) - G12-2 (FPC)	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A35-10 (DI) or G12-3 (DI) - Body ground	Always	10 k Ω or higher
A35-19 (FPC) or G12-2 (FPC) - Body ground	Always	10 k Ω or higher

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4.	INSPECT FUEL PUMP ASSEMBLY
-----------	-----------------------------------

- (a) Inspect the fuel pump assembly .

NG  **CHECK HARNESS AND CONNECTOR (FUEL PUMP CONTROL ECU - FUEL PUMP ASSEMBLY)**

OK

5.	REPLACE FUEL PUMP CONTROL ECU
-----------	--------------------------------------

(a) Replace the fuel pump control ECU  .

NEXT

6.	CONFIRM WHETHER DTC OUTPUT RECURS
-----------	--

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON and turn the Techstream on.
- (c) Clear the DTCs  .
- (d) Crank the engine for 15 seconds.
- (e) Idle the engine for 1 minute.
- (f) Enter the following menus: Powertrain / Engine / DTC.
- (g) Read the DTCs.

Result

RESULT	PROCEED TO
No DTC output	A
DTC P0230 output	B

B  **REPLACE ECM**

A  **END**

7.	CHECK HARNESS AND CONNECTOR (FUEL PUMP CONTROL ECU - FUEL PUMP ASSEMBLY)
-----------	---

- (a) Disconnect the fuel pump control ECU connector.
- (b) Disconnect the fuel pump assembly connectors.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
G12-5 (FP-) - G7-4 (FP-)	Always	Below 1 Ω
G12-6 (FP+) - G7-3 (FP+)	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
G12-5 (FP-) or G7-4 (FP-) - Body ground	Always	10 k Ω or higher
G12-6 (FP+) or G7-3 (FP+) - Body ground	Always	10 k Ω or higher

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK  **REPLACE FUEL PUMP ASSEMBLY**

8.	INSPECT RELAY (C/OPEN)
-----------	-------------------------------

(a) Inspect the C/OPEN relay  .

NG  **REPLACE RELAY (C/OPEN)**

OK

9.	INSPECT RELAY (C/OPEN RELAY OPERATION)
-----------	---

(a) Check the relay operation sound when the ignition switch is turned to ON.

Result:

ITEM	CONDITION	STANDARD
C/OPEN RELAY	Ignition switch OFF → Ignition switch ON	Operation sound is heard.

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK
▼

10.	CHECK HARNESS AND CONNECTOR (C/OPEN RELAY - FUEL PUMP CONTROL ECU)
------------	---

- (a) Remove the C/OPEN relay from the engine room relay block assembly.
- (b) Disconnect the fuel pump control ECU connector.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
C/OPEN relay terminal 3 - G12-1	Always	Below 1 Ω
C/OPEN relay terminal 1 - Body ground	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
C/OPEN relay terminal 3 or G12-1 - Body ground	Always	10 k Ω or higher

NG ► **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ► **GO TO ECM POWER SOURCE CIRCUIT**

Title: FA20 ENGINE CONTROL: SFI SYSTEM: P0300-P0304: Random / Multiple Cylinder Misfire Detected (2013 FR-S)		

DTC	P0300	Random / Multiple Cylinder Misfire Detected
------------	--------------	--

DTC	P0301	Cylinder 1 Misfire Detected
------------	--------------	------------------------------------

DTC	P0302	Cylinder 2 Misfire Detected
------------	--------------	------------------------------------

DTC	P0303	Cylinder 3 Misfire Detected
------------	--------------	------------------------------------

DTC	P0304	Cylinder 4 Misfire Detected
------------	--------------	------------------------------------

DESCRIPTION

When the engine misfires, high concentrations of hydrocarbons (HC) enter the exhaust gas. Extremely high hydrocarbon concentration levels can cause an increase in exhaust emission levels. Extremely high concentrations of hydrocarbons can also cause increases in the three-way catalytic converter temperature, which may cause damage to the three-way catalytic converter. To prevent this increase in emissions and to limit the possibility of thermal damage, the ECM monitors the misfire count. When the temperature of the three-way catalytic converter reaches the point of thermal degradation, the ECM blinks the MIL. To monitor misfires, the ECM uses both the VVT sensor and the crankshaft position sensor. The VVT sensor is used to identify any misfiring cylinders and the crankshaft position sensor is used to measure variations in the crankshaft rotation speed. Misfires are counted when the crankshaft rotation speed variations exceed predetermined thresholds. If the misfire count exceeds the threshold levels, and could cause emission control system performance deterioration, the ECM illuminates the MIL and stores a DTC.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0300	Simultaneous misfiring of several cylinders occurs and one of the following conditions is met (2 trip detection logic): <ul style="list-style-type: none"> • A misfire occurs that may damage the three-way catalytic converter (MIL blinks). • An emission deterioration misfire occurs (MIL illuminates). 	<ul style="list-style-type: none"> • Open or short in engine wire harness • Connector connection • Vacuum hose connections • Ignition system • Fuel injector assembly (for port injection) • Fuel injector assembly (for direct injection) • Fuel pressure (low pressure side) • Fuel pressure (high pressure side) • Mass air flow meter • Engine coolant temperature sensor • Compression pressure • Valve timing • PCV valve and hose • PCV hose connections • Intake system
P0301	Misfiring of the No. 1 cylinder occurs and one of the following conditions is met (2 trip detection logic): <ul style="list-style-type: none"> • A misfire occurs that may damage the three-way catalytic converter (MIL blinks). • An emission deterioration misfire occurs (MIL illuminates). 	
P0302	Misfiring of the No. 2 cylinder occurs and one of the following conditions is met (2 trip detection logic): <ul style="list-style-type: none"> • A misfire occurs that may damage the three-way catalytic converter (MIL blinks). • An emission deterioration misfire occurs (MIL illuminates). 	
P0303	Misfiring of the No. 3 cylinder occurs and one of the following conditions is met (2 trip detection logic): <ul style="list-style-type: none"> • A misfire occurs that may damage the three-way catalytic converter (MIL blinks). • An emission deterioration misfire occurs (MIL illuminates). 	
	Misfiring of the No. 4 cylinder occurs and one of the following conditions is met (2 trip detection logic):	

P0304	<ul style="list-style-type: none"> • A misfire occurs that may damage the three-way catalytic converter (MIL blinks). • An emission deterioration misfire occurs (MIL illuminates). 	<ul style="list-style-type: none"> • ECM
-------	---	---

When DTCs for misfiring cylinders are randomly stored, but DTC P0300 is not stored, it indicates that misfires have been detected in different cylinders at different times. DTC P0300 is only stored when several misfiring cylinders are detected at the same time.

MONITOR DESCRIPTION

The ECM illuminates the MIL and stores a DTC when either one of the following conditions, which could cause emission deterioration, is detected (2 trip detection logic).

- Within the first 1000 crankshaft revolutions after the engine starts, an excessive number of misfires (approximately 20 to 50 misfires per 1000 crankshaft revolutions) occurs once.
- An excessive number of misfires (approximately 20 to 50 misfires per 1000 crankshaft revolutions) occurs a total of 4 times.

The ECM flashes the MIL and stores a DTC when either one of the following conditions, which could cause damage to the three-way catalytic converter, is detected (2 trip detection logic).

- At a high engine speed, a sufficient amount of misfires to damage the catalyst occurring within 200 crankshaft revolutions is detected once.
- At a normal engine speed, a sufficient amount of misfires to damage the catalyst occurring within 200 crankshaft revolutions is detected 3 times.

MONITOR STRATEGY

Related DTCs	P0300: Multiple cylinder misfire P0301: Cylinder 1 misfire (crankshaft speed fluctuation) P0302: Cylinder 2 misfire (crankshaft speed fluctuation) P0303: Cylinder 3 misfire (crankshaft speed fluctuation) P0304: Cylinder 4 misfire (crankshaft speed fluctuation)
Required Sensors/Components (Main)	Crankshaft position sensor VVT sensor
Required Sensors/Components (Related)	Engine coolant temperature sensor Intake air temperature sensor Mass air flow meter
Frequency of Operation	Continuous
Duration	1000 crankshaft revolutions (Emissions-related misfire) 200 crankshaft revolutions (Catalyst-damaging misfire)
MIL Operation	2 driving cycles: Emission-related misfire MIL flashes immediately: Catalyst-damaging misfire
Sequence of Operation	None

<p>Fuel level</p>	<p>15% or more</p>
<p>MAP</p>	<p>21.7 kPa (163 mmHg) or more (A/T) (varies with engine speed) 20.9 kPa (157 mmHg) or more (M/T) (varies with engine speed)</p>

TYPICAL MALFUNCTION THRESHOLDS

Monitor Period of Emission-related Misfire

Misfire percentage in 1000 rev.	1.9% or more
---------------------------------	--------------

Monitor Period of Catalyst-damaging Misfire (MIL Blinks)

Misfire percentage in 200 rev.	5% or more (varies with engine speed)
--------------------------------	---------------------------------------

MONITOR RESULT

Refer to detailed information in Checking Monitor Status [INFO](#) .

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON.
3. Turn the Techstream on.
4. Record the DTC(s) and freeze frame data.
5. Clear DTCs (even if no DTCs are stored, perform the Clear DTC procedure) [INFO](#) .
6. Using the Techstream, switch the ECM from normal mode to check mode [INFO](#) .
7. Read the misfire counts of each cylinder, Cylinder #1 Misfire Count to Cylinder #4 Misfire Count, with the engine idling. If any misfire count is displayed, skip the following confirmation driving pattern.
8. Drive the vehicle so that the vehicle conditions displayed in Engine Speed and Calculate Load of the Data List are the same as the freeze frame data. Perform this step several times.

HINT:

In order to store misfire DTCs, it is necessary to operate the vehicle for the period of time shown in the table below, confirm the Misfire RPM and Misfire Load in the Data List.

ENGINE SPEED	DURATION
Idling	8.0 minutes or more
1000	4.5 minutes or more
2000	2.5 minutes or more
3000	1.5 minutes or more

9. Check whether misfires have occurred by checking DTCs and freeze frame data.

HINT:

Do not turn the ignition switch off until the output DTC(s) and freeze frame data have been recorded. When the ECM returns to normal mode (default), the stored DTC(s), freeze frame data and other data are cleared.

10. Record the DTC(s), freeze frame data and misfire counts.
11. Turn the ignition switch off and wait for at least 30 seconds.
12. Clear DTCs (even if no DTCs are stored, perform the Clear DTC procedure) [INFO](#) .

INSPECTION PROCEDURE

HINT:

- If any DTCs other than misfire DTCs are output, troubleshoot those DTCs first.
- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air fuel ratio was lean or rich, and other data from the time the malfunction occurred.
- If the misfire does not recur when the vehicle is brought to the workshop, reproduce the conditions stored in the ECM as freeze frame data.
- If the misfire still cannot be reproduced even though the conditions stored in the ECM as freeze frame data have been reproduced, one of the following factors is considered to be a possible cause of the problem:
 - a. There was insufficient fuel in the tank.
 - b. Improper fuel was used.
 - c. The spark plugs have been contaminated.
 - d. The problem requires further diagnosis.
- After finishing repairs, check the misfire counts of the cylinders (Cylinder #1 Misfire Count to Cylinder #4 Misfire Count).
- Be sure to confirm that no misfiring cylinder DTCs are stored again by conducting the confirmation driving pattern after finishing repairs.
- When one of Short FT #1 or Long FT #1 in the freeze frame data is outside the range of +/-15%, the air fuel ratio may be rich (-15% or less) or lean (+15% or more).
- When Coolant Temp in the freeze frame data is below 75°C (167°F), the misfires have occurred only while warming up the engine.
- An extremely imbalanced drive wheel which causes body vibration may cause misfire DTCs to be stored.

NOTICE:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1.	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO MISFIRE DTCS)
-----------	--

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Powertrain / Engine / Trouble Codes.
- (e) Read DTCs.

Result

RESULT	PROCEED TO
DTC P0300, P0301, P0302, P0303 and/or P0304 are output	A
DTC P0300, P0301, P0302, P0303 and/or P0304 and other DTCs are output	B

HINT:

If any DTCs other than P0300, P0301, P0302, P0303 and P0304 are output, troubleshoot those DTCs first.

B ► GO TO DTC CHART

A

2.	CHECK PCV HOSE CONNECTIONS
-----------	-----------------------------------

(a) Check the PCV hose connections  .

OK:

PCV valve and hose are correctly connected and are not damaged.

NG ► REPAIR OR REPLACE PCV HOSE

OK

3.	READ VALUE USING TECHSTREAM (PORT INJECTION)
-----------	---

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine / Active Test / Control the Injection Way / Port.

(e) Start the engine and allow the engine to idle.

(f) Read the Cylinder #1 Misfire Count to Cylinder #4 Misfire Count or DTCs displayed on the Techstream.

Result

MISFIRE COUNT	PROCEED TO
Most misfires occur in only 1 or 2 cylinders	A
3 cylinders or more have equal misfire counts	A
There are no misfire counts	B

B ► READ VALUE USING TECHSTREAM (CYLINDER MISFIRE COUNT)

A

4.	READ VALUE USING TECHSTREAM (DIRECT INJECTION)
-----------	---

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Powertrain / Engine / Active Test / Control the Injection Way / Direct.
- (e) Start the engine and allow the engine to idle.
- (f) Read the Cylinder #1 Misfire Count to Cylinder #4 Misfire Count or DTCs displayed on the Techstream.

Result

MISFIRE COUNT		PROCEED TO
PORT	DIRECT	
Most misfires occur in only 1 or 2 cylinders	Most misfires occur in only 1 or 2 cylinders	A
3 cylinders or more have equal misfire counts	3 cylinders or more have equal misfire counts	B
Most misfires occur in only 1 or 2 cylinders	There are no misfire counts	C
3 cylinders or more have equal misfire counts	There are no misfire counts	D

B ▶ CHECK INTAKE SYSTEM

C ▶ REPLACE FUEL INJECTOR ASSEMBLY (FOR PORT INJECTION)

D ▶ CHECK FUEL PRESSURE (LOW PRESSURE SIDE)

A

5.	INSPECT SPARK PLUG
-----------	---------------------------

- (a) Inspect the spark plug of the misfiring cylinder  .

OK

6.	CHECK FOR SPARK (SPARK TEST)
----	------------------------------

(a) Perform a spark test  .

HINT:

If the result of the spark test is normal, proceed to the next step.

NEXT

7.	CHECK CYLINDER COMPRESSION PRESSURE
----	-------------------------------------

(a) Measure the cylinder compression pressure of the misfiring cylinder  .

NG ► CHECK ENGINE TO DETERMINE CAUSE OF LOW COMPRESSION

OK ► REPLACE ECM

8.	CHECK INTAKE SYSTEM
----	---------------------

(a) Check the intake system for vacuum leaks  .

OK:

No leaks from intake system.

NG ► REPAIR OR REPLACE INTAKE SYSTEM

OK

9.	READ VALUE USING TECHSTREAM (COOLANT TEMP)
----	--

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Powertrain / Engine / Data List / Coolant Temp.
- (e) Read the Coolant Temp twice, when the engine is both cold and warmed up.

Standard:

With cold engine

Same as ambient air temperature.

With warm engine

Between 75 and 100°C (167 and 212°F)

NG  **REPLACE ENGINE COOLANT TEMPERATURE SENSOR**

OK

10.	READ VALUE USING TECHSTREAM (MAF)
------------	--

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Start the engine.
- (e) Enter the following menus: Powertrain / Engine / Data List / MAF, Coolant Temp and Engine Speed.
- (f) Allow the engine to idle until Coolant Temp reaches 75°C (167°F) or higher.
- (g) Read MAF with the engine speed at 3000 rpm.

Standard:

Between 13.0 gm/sec and 14.0 gm/sec (shift lever: N, A/C: Off).

NG  **CHECK HARNESS AND CONNECTOR (MASS AIR FLOW METER CONNECTOR CONNECTION)**

OK

11.	CHECK VALVE TIMING
------------	---------------------------

(a) Check the valve timing  .

Result

RESULT	PROCEED TO
ABNORMAL	A
NORMAL	B

B ► CHECK HARNESS AND CONNECTOR (MASS AIR FLOW METER CONNECTOR CONNECTION)

A ► ADJUST VALVE TIMING

12. CHECK FUEL PRESSURE (LOW PRESSURE SIDE)

(a) Check the fuel pressure (low pressure side)  .

NG ► INSPECT FUEL PUMP ASSEMBLY

OK ► REPLACE FUEL INJECTOR ASSEMBLY (FOR PORT INJECTION)

13. INSPECT FUEL PUMP ASSEMBLY

(a) Inspect the fuel pump assembly  .

NG ► REPLACE FUEL PUMP ASSEMBLY

OK ► GO TO FUEL INJECTOR CIRCUIT

14. READ VALUE USING TECHSTREAM (CYLINDER MISFIRE COUNT)

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine / Active Test / Control the Injection Way / Direct.

(e) Start the engine and allow the engine to idle.

(f) Read the Cylinder #1 Misfire Count to Cylinder #4 Misfire Count or DTCs displayed on the

Techstream.

Result

MISFIRE COUNT		PROCEED TO
PORT	DIRECT	
There are no misfire counts	There are misfire counts	A
There are no misfire counts	There are no misfire counts	B

B ▶ READ VALUE USING TECHSTREAM (CYLINDER MISFIRE COUNT)

A ▶ REPLACE FUEL INJECTOR ASSEMBLY (FOR DIRECT INJECTION)

15.	READ VALUE USING TECHSTREAM (CYLINDER MISFIRE COUNT)
------------	---

- (a) Connect the Techstream to the DLC3.
- (b) Start the engine and turn the Techstream on.
- (c) Clear DTCs ().
- (d) Enter the following menus: Powertrain / Engine / Data List / Misfire RPM, Misfire Load, Cylinder #1 to #4 Misfire Count and Injection Way.
- (e) Monitor all of the misfire count values or DTCs and Injection Way displayed on the Techstream.

Result

MISFIRE COUNTS	INJECTION WAY	PROCEED TO
There are no misfire counts	-	A
Most misfires occur in only 1 or 2 cylinders	Either	B
3 cylinders or more have equal misfire counts	Either	C
There are misfire counts	Direct	D

B ▶ INSPECT SPARK PLUG

C ▶ CHECK INTAKE SYSTEM

D ▶ REPLACE FUEL INJECTOR ASSEMBLY (FOR DIRECT INJECTION)

A ▶ CHECK FOR INTERMITTENT PROBLEMS

--	--

16. INSPECT SPARK PLUG

(a) Inspect the spark plug of the misfiring cylinder  .

NG  REPLACE SPARK PLUG

OK

17. CHECK FOR SPARK (SPARK TEST)

(a) Perform a spark test  .

HINT:

If the result of the spark test is normal, proceed to the next step.

NEXT

18. CHECK CYLINDER COMPRESSION PRESSURE

(a) Measure the cylinder compression pressure of the misfiring cylinder  .

NG  CHECK ENGINE TO DETERMINE CAUSE OF
LOW COMPRESSION

OK  REPLACE ECM

19. CHECK INTAKE SYSTEM

(a) Check the intake system for vacuum leaks  .

OK:

No leaks from intake system.

NG  REPAIR OR REPLACE INTAKE SYSTEM

OK

20.	READ VALUE USING TECHSTREAM (COOLANT TEMP)
------------	---

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Powertrain / Engine / Data List / Coolant Temp.
- (e) Read the Coolant Temp twice, when the engine is both cold and warmed up.

Standard:

With cold engine

Same as ambient air temperature.

With warm engine

Between 75 and 100°C (167 and 212°F)

NG ► **REPLACE ENGINE COOLANT TEMPERATURE SENSOR**

OK

21.	READ VALUE USING TECHSTREAM (MAF)
------------	--

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Start the engine.
- (e) Enter the following menus: Powertrain / Engine / Data List / MAF, Coolant Temp and Engine Speed.
- (f) Allow the engine to idle until Coolant Temp reaches 75°C (167°F) or higher.
- (g) Read MAF with the engine speed at 3000 rpm.

Standard:

Between 13.0 gm/sec and 14.0 gm/sec (shift lever: N, A/C: Off).

NG ► **CHECK HARNESS AND CONNECTOR (MASS AIR FLOW METER CONNECTOR CONNECTION)**

OK

22.	CHECK VALVE TIMING
-----	---------------------------

(a) Check the valve timing  .

NG  **ADJUST VALVE TIMING**

OK

23.	CHECK HARNESS AND CONNECTOR (MASS AIR FLOW METER CONNECTOR CONNECTION)
-----	---

(a) Check the connection and terminal contact pressure of connectors and wire harnesses between the mass air flow meter and ECM  .

HINT:

Repair any problems.

NEXT

24.	CHECK WHETHER DTC OUTPUT RECURS
-----	--

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Clear the DTCs  .
- (e) Turn the ignition switch off and wait for at least 30 seconds.
- (f) Turn the ignition switch to ON.
- (g) Turn the Techstream on.
- (h) Start the engine.
- (i) Warm up the engine.
- (j) Drive the vehicle in accordance with the driving pattern described in Confirmation Driving Pattern.

(k) Enter the following menus: Powertrain / Engine / Utility / All Readiness.

(l) Input the DTC: P0300, P0301, P0302, P0303 or P0304.

(m) Check the DTC judgment result.

Result

RESULT	PROCEED TO
ABNORMAL (P0300, P0301, P0302, P0303 or P0304 output)	A
NORMAL (No DTC output)	B

B  **END**

A

25.	CHECK HARNESS AND CONNECTOR (MASS AIR FLOW METER - ECM)
------------	--

(a) Disconnect the mass air flow meter connector.

(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A33-12 (THA) - C16-1 (THA)	Always	Below 1 Ω
A36-29 (E1) - C16-2 (E2)	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A33-12 (THA) or C16-1 (THA) - Body ground	Always	10 k Ω or higher
A36-29 (E1) or C16-2 (E2) - Body ground	Always	10 k Ω or higher

**REPAIR OR REPLACE HARNESS OR
NG  CONNECTOR**

OK

26.	REPLACE MASS AIR FLOW METER
------------	------------------------------------

(a) Replace the mass air flow meter  .

HINT:

If the results of the inspections performed in steps 15 and 20 indicated no problem, proceed to the next step without replacing the mass air flow meter.

NEXT

27.	CHECK WHETHER DTC OUTPUT RECURS
------------	--

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Clear the DTCs  .
- (e) Turn the ignition switch off and wait for at least 30 seconds.
- (f) Turn the ignition switch to ON.
- (g) Turn the Techstream on.
- (h) Start the engine.
- (i) Warm up the engine.
- (j) Drive the vehicle in accordance with the driving pattern described in Confirmation Driving Pattern.
- (k) Enter the following menus: Powertrain / Engine / Utility / All Readiness.
- (l) Input the DTC: P0300, P0301, P0302, P0303 or P0304.
- (m) Check the DTC judgment result.

Result

RESULT	PROCEED TO
NORMAL (No DTC output)	A
ABNORMAL (P0300, P0301, P0302, P0303 or P0304 output)	B

Last Modified: 3-27-2012	6.4 C	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000SVTONQX
Title: FA20 ENGINE CONTROL: SFI SYSTEM: P0327,P0328,P0332,P0333: Knock Sensor 1 Circuit Low Input (Bank 1 or Single Sensor) (2013 FR-S)		

DTC	P0327	Knock Sensor 1 Circuit Low Input (Bank 1 or Single Sensor)
------------	--------------	---

DTC	P0328	Knock Sensor 1 Circuit High Input (Bank 1 or Single Sensor)
------------	--------------	--

DTC	P0332	Knock Sensor 2 Circuit Low Input (Bank 2)
------------	--------------	--

DTC	P0333	Knock Sensor 2 Circuit High Input (Bank 2)
------------	--------------	---

DESCRIPTION

A flat-type knock sensor (non-resonant type) has a structure that can detect vibrations between approximately 5 kHz and 15 kHz.

Knock sensor is fitted onto the engine block to detect engine knocking.

The knock sensor contains a piezoelectric element which generates a voltage when it becomes deformed.

The voltage is generated when the engine block vibrates due to knocking. Any occurrence of engine knocking can be suppressed by delaying the ignition timing.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0327	Knock sensor voltage is less than 0.154 V for 1 second or more (bank 1). (1 trip detection logic)	<ul style="list-style-type: none"> • Open or short in knock sensor circuit (bank 1) • Knock sensor (bank 1) • ECM
P0328	Knock sensor voltage is more than 4.838 V for 1 second or more (bank 1). (1 trip detection logic)	
P0332	Knock sensor voltage is less than 0.154 V for 1 second or more (bank 2). (1 trip detection logic)	<ul style="list-style-type: none"> • Open or short in knock sensor circuit (bank 2) • Knock sensor (bank 2) • ECM
P0333	Knock sensor voltage is more than 4.838 V for 1 second or more (bank 2). (1 trip detection logic)	

HINT:

When DTC P0327, P0328, P332 or P0333 is stored, the ECM enters fail-safe mode. During fail-safe mode, the ignition timing is delayed to its maximum retardation. Fail-safe mode continues until the ignition switch is turned off.

MONITOR DESCRIPTION

If the output voltage transmitted by the knock sensor remains low or high for more than 1 second, the ECM interprets this as a malfunction in the sensor circuit and the ECM illuminates the MIL and sets a DTC.

MONITOR STRATEGY

Related DTCs	P0327: Knock sensor range check (Low voltage) (Bank 1) P0328: Knock sensor range check (High voltage) (Bank 1) P0332: Knock sensor range check (Low voltage) (Bank 2) P0333: Knock sensor range check (High voltage) (Bank 2)
Required Sensors/Components (Main)	Knock sensor
Required Sensors/Components (Related)	-
Frequency of Operation	Continuous
Duration	1 second
MIL Operation	Immediately
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs not stored	None
---	------

TYPICAL MALFUNCTION THRESHOLDS

P0327, P0332

Knock sensor voltage	Less than 0.154 V
----------------------	-------------------

P0328, P0333

Knock sensor voltage	More than 4.838 V
----------------------	-------------------

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear DTCs (even if no DTCs are stored, perform the clear DTC operation) INFO.
4. Turn the ignition switch off and wait for at least 30 seconds.
5. Turn the ignition switch to ON and turn the Techstream on.
6. Start the engine and warm it up until the engine coolant temperature reaches 75°C (167°F) or higher.
7. With the vehicle stationary, depress the accelerator pedal and maintain an engine speed of between 2500 and 3000 rpm for 40 seconds or more [A].
8. Drive the vehicle at 10 km/h (6.25 mph) or more for 1 minute or more [B].

CAUTION:

When performing the confirmation driving pattern, obey all speed limits and traffic laws.

9. Enter the following menus: Powertrain / Engine / Trouble Codes.
10. Read pending DTCs.

HINT:

- o If a pending DTC is output, the system is malfunctioning.
 - o If a pending DTC is not output, perform the following procedure.
11. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
 12. Input the DTC: P0327, P0328, P0332 or P0333.
 13. Check the DTC judgment result.

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	<ul style="list-style-type: none"> o DTC judgment completed o System normal

ABNORMAL	<ul style="list-style-type: none"> o DTC judgment completed o System abnormal
INCOMPLETE	<ul style="list-style-type: none"> o DTC judgment not completed o Perform driving pattern after confirming DTC enabling conditions
N/A	<ul style="list-style-type: none"> o Unable to perform DTC judgment o Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

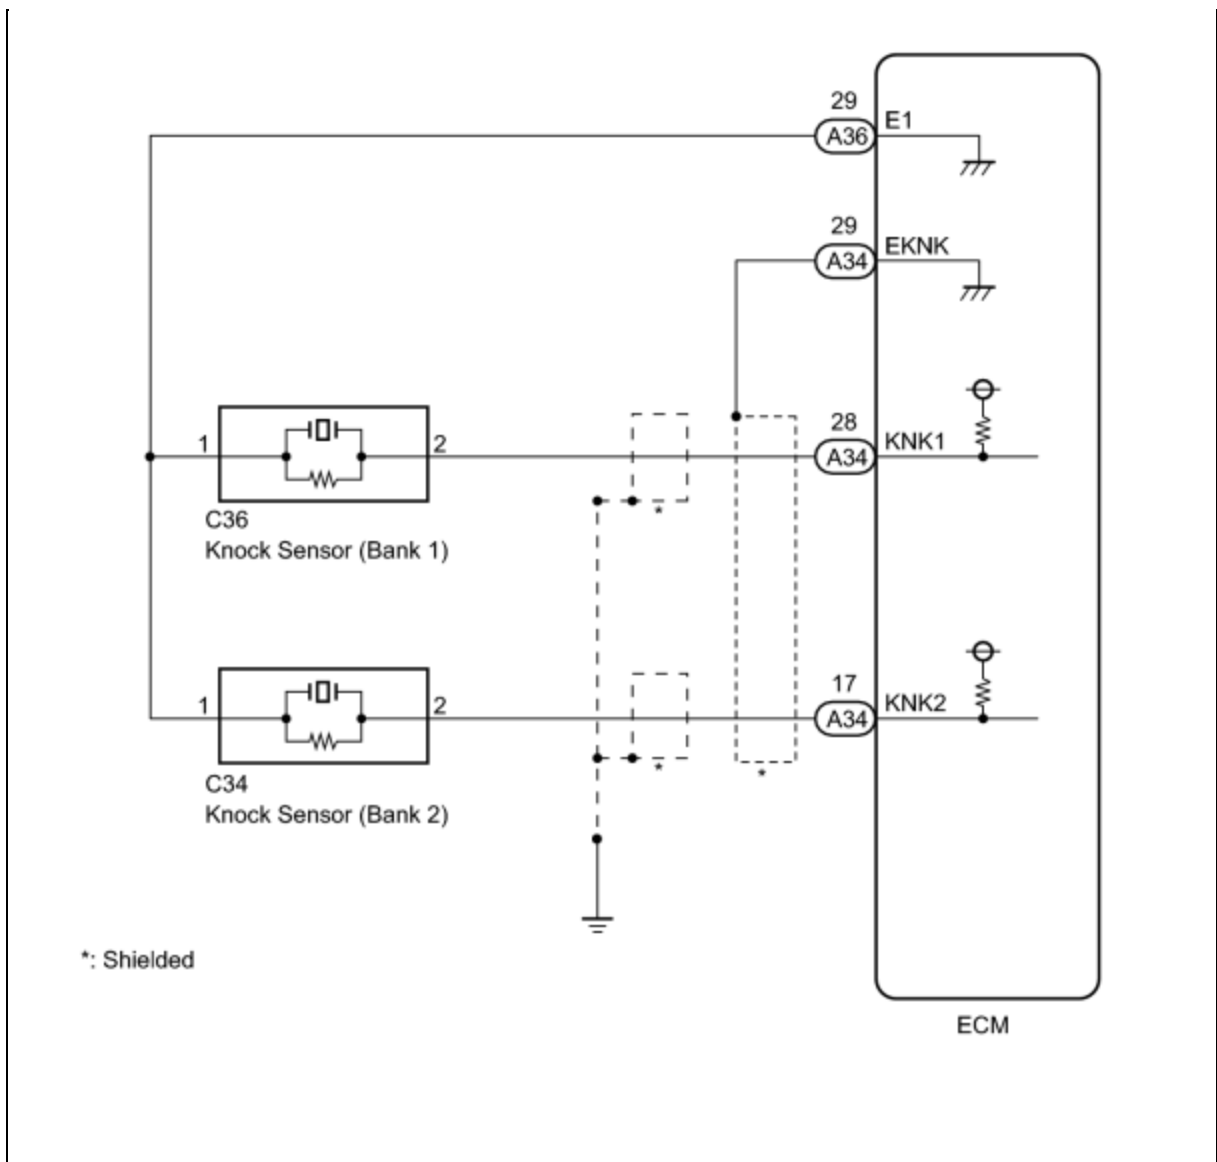

- o If the judgment result shows NORMAL, the system is normal.
- o If the judgment result shows ABNORMAL, the system has a malfunction.

14. If the test result is INCOMPLETE or N/A and no DTC is output, perform a universal trip and check for permanent DTCs  .

HINT:

- o If a permanent DTC is output, the system is malfunctioning.
- o If no permanent DTC is output, the system is normal.

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

- If DTC P0327 or P0332 is displayed, check the knock sensor circuit for the right bank (bank 1).
- If DTC P0328 or P0333 is displayed, check the knock sensor circuit for the left bank (bank 2).
- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air fuel ratio was lean or rich, and other data from the time the malfunction occurred.

PROCEDURE

1.	CHECK TERMINAL VOLTAGE (+B OF KNOCK SENSOR)
----	--

(a) Disconnect the knock sensor connector.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
C36-1 - C36-2	Ignition switch ON	2.4 to 2.6 V
C34-1 - C34-2	Ignition switch ON	2.4 to 2.6 V

Model Year: 2013	Model: FR-S	Doc ID: RM000000TCW0R7X
Title: FA20 ENGINE CONTROL: SFI SYSTEM: P0335,P0336: Crankshaft Position Sensor "A" Circuit (2013 FR-S)		

DTC	P0335	Crankshaft Position Sensor "A" Circuit
------------	--------------	---

DTC	P0336	Crankshaft Position Sensor Range / Performance
------------	--------------	---

DESCRIPTION

The crankshaft position sensor system consists of a No. 1 crankshaft position sensor plate and Magnetoresistive Element (MRE) type sensor. The crankshaft angle sensor plate is installed on the crankshaft. The crankshaft position sensor generates 30 signals per crankshaft revolution. The ECM uses the camshaft position signal to distinguish between the cylinders, and uses the crankshaft position signal to detect the crankshaft position and engine speed.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0335	No crankshaft position sensor signal is sent to the ECM while cranking for 3 seconds or more. (1 trip detection logic)	<ul style="list-style-type: none"> • Open or short in crankshaft position sensor circuit • Crankshaft position sensor • Crankshaft angle sensor plate (crankshaft sub-assembly) • ECM
P0336	Crankshaft position sensor signal is not 30 counts per 1 revolution of crankshaft. (2 trip detection logic)	<ul style="list-style-type: none"> • Crankshaft position sensor • Crankshaft angle sensor plate (crankshaft sub-assembly) • ECM

MONITOR DESCRIPTION

If there is no signal from the crankshaft position sensor despite the crankshaft revolving, the ECM interprets this as a malfunction of the sensor and the ECM illuminates the MIL and sets a DTC.

MONITOR STRATEGY

Related DTCs	P0335: Crankshaft position sensor circuit continuity P0336: Crankshaft position sensor rationality check

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear DTCs (even if no DTCs are stored, perform the clear DTC operation)  .
4. Turn the ignition switch off and wait for at least 30 seconds.
5. Turn the ignition switch to ON and turn the Techstream on.
6. Start the engine.

HINT:

If the engine could not be started, crank engine for 10 seconds.

7. Idle the engine for 20 seconds or more.
8. Enter the following menus: Powertrain / Engine / Trouble Codes.
9. Read pending DTCs.

HINT:

- If a pending DTC is output, the system is malfunctioning.
- If a pending DTC is not output, perform the following procedure.

10. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
11. Input the DTC: P0335 or P0336.
12. Check the DTC judgment result.

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	<ul style="list-style-type: none"> ◦ DTC judgment completed ◦ System normal
ABNORMAL	<ul style="list-style-type: none"> ◦ DTC judgment completed ◦ System abnormal

N/A	<ul style="list-style-type: none"> ◦ Unable to perform DTC judgment ◦ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

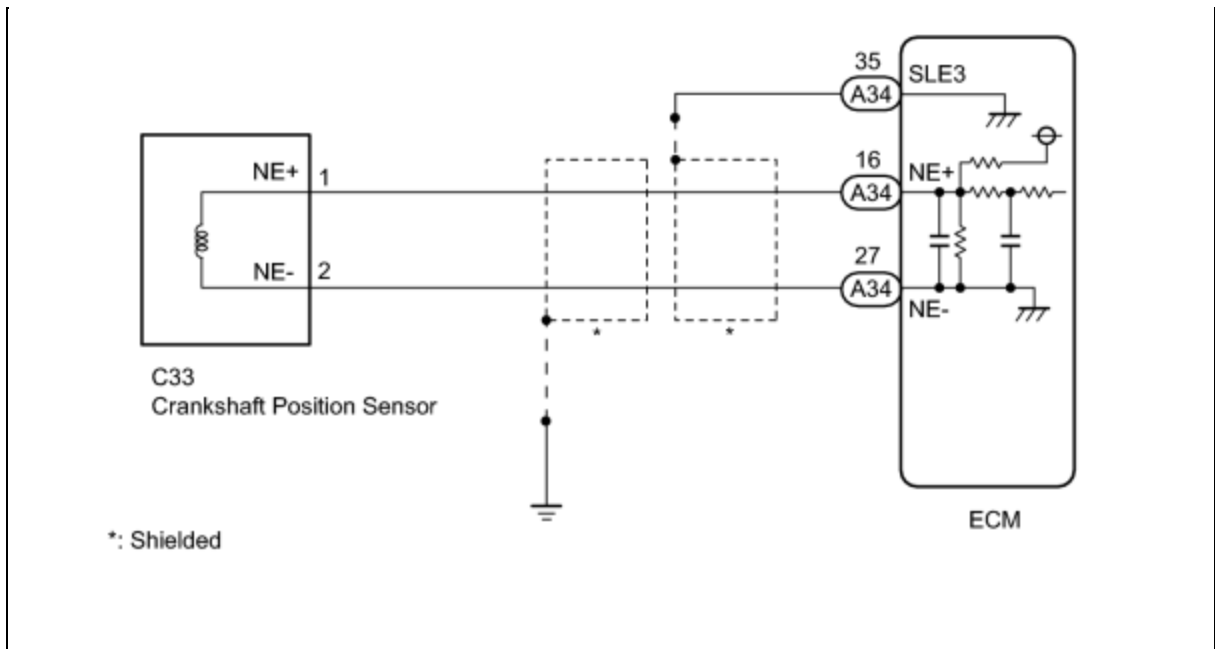

- If the judgment result shows NORMAL, the system is normal.
- If the judgment result shows ABNORMAL, the system has a malfunction.

13. If the test result is INCOMPLETE or N/A and no DTC is output, perform a universal trip and check for permanent DTCs INFO.

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

- If no problem is found by this diagnostic troubleshooting procedure, check for problems by referring to the engine mechanical section.
- The engine speed can be checked by using the Techstream. To perform the check, follow the procedures below:
 - a. Connect the Techstream to the DLC3.
 - b. Start the engine.
 - c. Turn the Techstream on.
 - d. Enter the following menus: Powertrain / Engine / Data List / Engine Speed.

The engine speed may be indicated as zero despite the engine running normally. This is caused by a lack of NE signals from the crankshaft position sensor. Alternatively, the engine speed may be indicated as lower than the actual engine speed if the crankshaft position sensor output voltage is insufficient.

- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air fuel ratio was lean or rich, and other data from the time the malfunction occurred.

PROCEDURE

1.	READ VALUE USING TECHSTREAM (ENGINE SPEED)
-----------	---

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Powertrain / Engine / Data List / Engine Speed.

(e) Start the engine.

(f) Read the values displayed on the Techstream while the engine is running.

OK:

Correct values are displayed.

Result

RESULT	PROCEED TO
NG	A
OK	B

HINT:

- To check the engine speed change, display the graph on the Techstream.
- If the engine does not start, check the engine speed while cranking.
- If the engine speed indicated on the Techstream remains zero (0), there may be an open or short in the Crankshaft Position sensor circuit.

B ► CHECK FOR INTERMITTENT PROBLEMS

A

2.	INSPECT CRANKSHAFT POSITION SENSOR
-----------	---

(a) Inspect the crankshaft position sensor  .

NG ► REPLACE CRANKSHAFT POSITION SENSOR

OK

3.	CHECK HARNESS AND CONNECTOR (CRANKSHAFT POSITION SENSOR - ECM)
-----------	---

(a) Disconnect the ECM connector.

(b) Disconnect the crankshaft position sensor connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
C34-16 (NE+) - C33-1 (NE+)	Always	Below 1 Ω

C34-27 (NE-) - C33-2 (NE-)

Always

Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
C34-16 (NE+) or C33-1 (NE+) - Body ground	Always	10 k Ω or higher
C34-27 (NE-) or C33-2 (NE-) - Body ground	Always	10 k Ω or higher

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

4. CHECK SENSOR INSTALLATION (CRANKSHAFT POSITION SENSOR)

(a) Check the crankshaft position sensor installation.

OK:

Sensor is installed correctly.

NG ► SECURELY REINSTALL SENSOR

OK

5. INSPECT CRANKSHAFT (TEETH OF SENSOR PLATE)

(a) Check the teeth of the No. 1 crankshaft position sensor plate.

OK:

Sensor plate does not have any cracks or deformation.

NG ► REPLACE NO. 1 CRANKSHAFT POSITION SENSOR PLATE

OK

6.	REPLACE CRANKSHAFT POSITION SENSOR
-----------	---

(a) Replace the crankshaft position sensor  .

NEXT

7.	CHECK WHETHER DTC OUTPUT RECURS (DTC P0335 OR P0336)
-----------	---

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Clear the DTCs  .
- (e) Turn the ignition switch off and wait for at least 30 seconds.
- (f) Turn the ignition switch to ON and turn the tester on.
- (g) Start the engine.
- (h) Drive the vehicle in accordance with the driving pattern described in the Confirmation Driving Pattern.
- (i) Enter the following menus: Powertrain / Engine / Trouble Codes.
- (j) Read DTCs.

Result

RESULT	PROCEED TO
No DTC is output	A

DTC	P0346	Camshaft Position Sensor "A" Circuit Range / Performance (Bank 2)
------------	--------------	--

DESCRIPTION

The intake camshaft VVT sensors consist of a magnet and MRE (Magnetic Resistive Element).

The VVT camshaft drive gear has a sensor plate with 3 teeth on its outer circumference. When the gear rotates, changes occur in the air gaps between the sensor plate and MRE, which affects the magnetic field. As a result, the resistance of the MRE material fluctuates. The VVT sensor converts the gear rotation data to pulse signals, uses the pulse signals to determine the camshaft angle, and sends it to the ECM.

The crank angle sensor generates 30 signals for each engine rotation. Based on combination of the VVT sensor signals and crankshaft position sensor signals, the ECM detects the crankshaft angle. Then the ECM uses this data to control fuel injection time and injection timing. Also, based on the crankshaft position sensor signal, the ECM detects the engine speed.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0340	One of the following conditions is met (1 trip detection logic): <ul style="list-style-type: none"> No VVT sensor for intake side signal input during crankshaft 1.5 rotations (bank 1). No VVT sensor for intake side signal is sent to the ECM while cranking for 3 seconds or more (bank 1). 	<ul style="list-style-type: none"> Open or short in VVT sensor circuit (for intake side of bank 1) VVT sensor (for intake side of bank 1) Camshaft timing gear assembly (bank 1) Jumped tooth of timing chain for intake camshaft (bank 1) ECM
P0341	VVT sensor for intake side signal is not 3 during crankshaft 2 rotations (bank 1). (1 trip detection logic)	<ul style="list-style-type: none"> ECM
	One of the following conditions is met (1 trip detection logic): <ul style="list-style-type: none"> No VVT sensor for intake side signal input 	<ul style="list-style-type: none"> Open or short in VVT sensor circuit (for intake side of bank 2)

P0345	<p>during crankshaft 1.5 rotations (bank 2).</p> <ul style="list-style-type: none"> No VVT sensor for intake side signal is sent to the ECM while cranking for 3 seconds or more (bank 2). 	<ul style="list-style-type: none"> VVT sensor (for intake side of bank 2) Camshaft timing gear assembly (bank 2) Jumped tooth of timing chain for intake camshaft (bank 2) ECM
P0346	VVT sensor for intake side signal is not 3 during crankshaft 2 rotations (bank 2). (1 trip detection logic)	

MONITOR DESCRIPTION

If no signal is transmitted by the VVT sensor despite the engine running, or the rotations of the camshaft and the crankshaft are not synchronized, the ECM interprets this as a malfunction of the sensor.

MONITOR STRATEGY

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear DTCs (even if no DTCs are stored, perform the clear DTC operation) INFO.
4. Turn the ignition switch off and wait for at least 30 seconds.
5. Turn the ignition switch to ON and turn the Techstream on.
6. Start the engine and warm it up until the engine coolant temperature reaches 75°C (167°F) or higher.
7. With the vehicle stationary, depress the accelerator pedal and maintain an engine speed of

between 2500 and 3000 rpm for 40 seconds or more [A].

8. Drive the vehicle at 10 km/h (6.25 mph) or more for 1 minute or more [B].

CAUTION:

When performing the confirmation driving pattern, obey all speed limits and traffic laws.

9. Enter the following menus: Powertrain / Engine / Trouble Codes.
10. Read pending DTCs.

HINT:

- If a pending DTC is output, the system is malfunctioning.
 - If a pending DTC is not output, perform the following procedure.
11. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
 12. Input the DTC: P0340, P0341, P0345 or P0346.
 13. Check the DTC judgment result.

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	<ul style="list-style-type: none">◦ DTC judgment completed◦ System normal

DESCRIPTION

A Direct Ignition System (DIS) is used on this vehicle.

The DIS is a 1-cylinder ignition system in which each cylinder is ignited by one ignition coil and one spark plug is connected to the end of each secondary wiring. A powerful voltage, generated in the secondary wiring, is applied directly to each spark plug. The spark current of the spark plugs passes from the ground electrodes to the center electrode.

The ECM determines the ignition timing and transmits the ignition (IGT) signals to each cylinder. Using the IGT signal, the ECM turns the power transistor inside the igniter on and off. The power transistor, in turn, switches on and off the current to the primary coil. When the current to the primary coil is cut off, a powerful voltage is generated in the secondary coil. This voltage is applied to the spark plugs, causing them to spark inside the cylinders.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0351	Received diagnostic information (open circuit detected / GND short / +B short or overheating) from the ignition coil driver IC for No. 1 ignition coil assembly continuously 10 times or more. MONITOR DESCRIPTION

If the ECM receives the malfunction signal from the ignition coil driver IC, it interprets this as a fault in the

igniter and stores a DTC.

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear DTCs (even if no DTCs are stored, perform the clear DTC operation) INFO.
4. Turn the ignition switch off and wait for at least 30 seconds.
5. Turn the ignition switch to ON and turn the Techstream on.
6. Start the engine and warm it up until the engine coolant temperature reaches 75°C (167°F) or higher.
7. With the vehicle stationary, depress the accelerator pedal and maintain an engine speed of between 2500 and 3000 rpm for 40 seconds or more [A].
8. Drive the vehicle at 10 km/h (6.25 mph) or more for 1 minute or more [B].

CAUTION:

When performing the confirmation driving pattern, obey all speed limits and traffic laws.

9. Enter the following menus: Powertrain / Engine / Trouble Codes.
10. Read pending DTCs.

HINT:

- o If a pending DTC is output, the system is malfunctioning.
 - o If a pending DTC is not output, perform the following procedure.
11. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
 12. Input the DTC: P0351, P0352, P0353 or P0354.
 13. Check the DTC judgment result.

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	<ul style="list-style-type: none"> o DTC judgment completed o System normal

- o If a permanent DTC is output, the system is malfunctioning.
- o If no permanent DTC is output, the system is normal.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

HINT:

- These DTCs indicate malfunctions relating to the primary circuit.
- If DTC P0351 is output, check the No. 1 ignition coil (No. 1 cylinder) circuit.
- If DTC P0352 is output, check the No. 2 ignition coil (No. 2 cylinder) circuit.
- If DTC P0353 is output, check the No. 3 ignition coil (No. 3 cylinder) circuit.
- If DTC P0354 is output, check the No. 4 ignition coil (No. 4 cylinder) circuit.
- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air fuel ratio was lean or rich, and other data from the time the malfunction occurred.

PROCEDURE

1.	CHECK WHETHER DTC OUTPUT RECURS
----	---------------------------------

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Clear the DTCs INFO.
- (e) Turn the ignition switch off and wait for at least 30 seconds.
- (f) Shuffle the arrangement of the ignition coils (among No. 1 to No. 4 cylinders).

NOTICE:

Do not change the location of the connectors.

- (g) Drive the vehicle in accordance with the driving pattern described in the Confirmation Driving Pattern.
- (h) Enter the following menus: Powertrain / Engine / Trouble Codes.
- (i) Read DTCs.

Result

RESULT	PROCEED TO
Same DTC output	A
Different ignition coil DTC output	B

B ▶ REPLACE IGNITION COIL

DESCRIPTION

The exhaust camshaft VVT sensors consist of a magnet and MRE (Magnetic Resistive Element).

The exhaust camshaft has a sensor plate with 2 teeth on its outer circumference.

When the exhaust camshaft rotates, changes occur in the air gaps between the 2 teeth and MRE, which affects the magnet. As a result, the resistance of the MRE material fluctuates. The VVT sensor converts the exhaust camshaft rotation data to pulse signals, uses the pulse signals to determine the camshaft angle, and sends it to the ECM.

The crank angle sensor generates 30 signals for each engine rotation. Based on combination of the VVT signals and NE signal, the ECM detects the crankshaft angle. Then the ECM uses this data to control fuel injection time and injection timing. Also, based on the NE signal, the ECM detects the engine speed.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0365	No VVT sensor for exhaust side signal input during crankshaft 7.5 rotations (bank 1). Last Modified: 3-27-2012	6.4 C	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM00000220S035X
Title: FA20 ENGINE CONTROL: SFI SYSTEM: P0420: Catalyst System Efficiency Below Threshold (Bank 1) (2013 FR-S)		

DTC	P0420	Catalyst System Efficiency Below Threshold (Bank 1)
------------	--------------	--

DESCRIPTION

The ECM uses sensors mounted in front of and behind the Three-Way Catalytic Converter (TWC) to monitor its efficiency.

The first sensor, the air fuel ratio sensor, sends pre-catalyst information to the ECM. The second sensor, the heated oxygen sensor, sends post-catalyst information to the ECM.

In order to detect any deterioration in the three-way catalytic converter, the ECM calculates the oxygen storage capacity of the three-way catalytic converter. This calculation is based on the voltage output of the heated oxygen sensor while performing active air fuel ratio control.

The ECM uses the oxygen storage capacity value to determine the state of the three-way catalytic converter. If any deterioration has occurred, the ECM illuminates the MIL and stores the DTC.

This system determines the deterioration of the entire catalyst system (including the front and rear catalysts), by using the oxygen storage capacity value of the front catalyst, that is more sensitive than the rear catalyst, as the representative value. Therefore, be sure to replace the front and rear catalysts together when catalyst replacement is necessary.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0420	Diagnostic value is more than the standard value under active air-fuel ratio control. (2 trip detection logic)	<ul style="list-style-type: none"> • Gas leakage from exhaust system • Air fuel ratio sensor • Heated oxygen sensor • Front exhaust manifold assembly (TWC: Front catalyst) and front exhaust pipe assembly (TWC: Rear catalyst)

CATALYST LOCATION

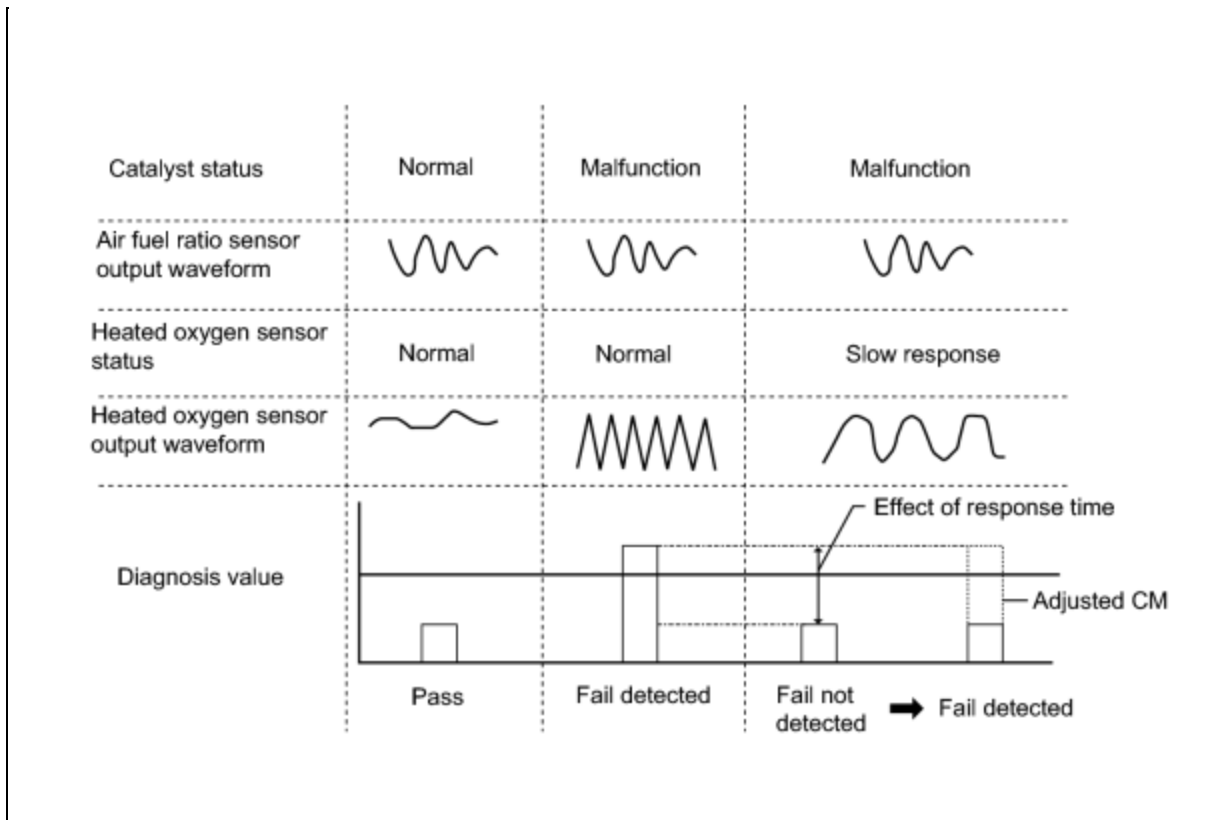

Text in Illustration

*3	Exhaust Manifold	*4	Air Fuel Ratio Sensor
*5	Heated Oxygen Sensor	*6	Front Exhaust Pipe Sub-Assembly
*7	Front Exhaust Pipe Assembly	*8	Center Exhaust Pipe Assembly
*9	Tail Exhaust pipe Assembly	-	-

MONITOR DESCRIPTION

The ECM uses diagnostic values to determine deterioration of the catalyst. If the diagnostic value exceeds a specified value, the catalyst is considered deteriorated, and the DTC is stored.

The diagnostic values are based upon the catalyst monitor value (CM) calculated by changes in the air fuel ratio sensor lambda and changes in the heated oxygen sensor output voltage, and in the response rate calculated from the heated oxygen sensor response time.

*: Diagnostic Value = CM X (1 + Response rate)

Refer to Checking Monitor Status INFO.

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear DTCs (even if no DTCs are stored, perform the clear DTC operation) INFO.
4. Turn the ignition switch off and wait for at least 30 seconds.
5. Turn the ignition switch to ON and turn the Techstream on.

6. Start the engine and warm it up until the engine coolant temperature reaches 75°C (167°F) or higher.

HINT:

Check the engine coolant temperature is 20°C (68°F) or less at engine started.

7. Perform the following the confirmation driving pattern.

CAUTION:

When performing the confirmation driving pattern, obey all speed limits and traffic laws.

- a. Drive the vehicle at 80 km/h (50 mph) or more for 20 minutes or more [A].
 - b. Stop the vehicle.
 - c. Idle the engine for 1 minute or more [B].
8. Enter the following menus: Powertrain / Engine / Trouble Codes.
 9. Read pending DTCs.

HINT:

- o If a pending DTC is output, the system is malfunctioning.
- o If a pending DTC is not output, perform the following procedure.

10. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
11. Input the DTC: P0420.
12. Check the DTC judgment result.

INCOMPLETE	<ul style="list-style-type: none"> o DTC judgment not completed o Perform driving pattern after confirming DTC enabling conditions
N/A	<ul style="list-style-type: none"> o Unable to perform DTC judgment o Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

- o If the judgment result shows NORMAL, the system is normal.
- o If the judgment result shows ABNORMAL, the system has a malfunction.

13. If the test result is INCOMPLETE or N/A and no DTC is output, perform a universal trip and check for permanent DTCs  .

HINT:

- o If a permanent DTC is output, the system is malfunctioning.

If no permanent DTC is output, the system is normal.

CONDITIONING FOR SENSOR TESTING

1. Connect the Techstream to the DLC3 [A].
2. Start the engine and warm it up with all the accessories switched off, until the engine coolant temperature stabilizes [B].
3. Run the engine at an engine speed of between 2500 rpm and 3000 rpm for at least 3 minutes [C].
4. While running the engine at 3000 rpm and 2000 rpm for 2 seconds, check the waveforms of the air fuel ratio and heated oxygen sensors using the Techstream [D].

HINT:

- If either of the voltage outputs of either the air fuel ratio or heated oxygen sensor does not fluctuate, or either of the sensors makes a noise, the sensor may be malfunctioning.
- If the voltage outputs of both the sensors remain lean or rich, the air fuel ratio may be extremely lean or rich. In such cases, enter the following menus: Powertrain / Engine / Active Test / Control the Injection Volume for A/F Sensor.
- If the three-way catalytic converter has deteriorated, the heated oxygen sensor (located behind the three-way catalytic converter) voltage output fluctuates up and down frequently, even under normal driving conditions (active air fuel ratio control is not performed).

INSPECTION PROCEDURE

HINT:

- If a malfunction cannot be found when troubleshooting DTC P0420, a lean or rich abnormality may be the cause. Perform troubleshooting by following the inspection procedure for P0171 (System Too Lean) and P0172 (System Too Rich).
- Bank 1 refers to the bank that includes the No. 1 cylinder*.

*: The No. 1 cylinder is the cylinder which is farthest from transmission.

- Bank 2 refers to the bank that does not include the No. 1 cylinder.
- Sensor 1 refers to the sensor closest to the engine assembly.
- Sensor 2 refers to the sensor farthest away from the engine assembly.
- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air fuel ratio was lean or rich, and other data from the time the malfunction occurred.

PROCEDURE

1.	CHECK ANY OTHER DTCS OUTPUT
-----------	------------------------------------

- Connect the Techstream to the DLC3.
- Turn the ignition switch to ON.
- Turn the Techstream on.
- Enter the following menus: Powertrain / Engine / Trouble Codes.
- Read the DTCs.

Result:

RESULT	PROCEED TO
--------	------------

DTC P0420 is output	A
DTC P0420 and other DTCs are output	B

HINT:

If any DTCs other than P0420 are output, troubleshoot those DTCs first.

B  **GO TO DTC CHART**

A

2.	PERFORM ACTIVE TEST USING TECHSTREAM (Control the Injection Volume)
-----------	--

- (a) Connect the Techstream to the DLC3.
- (b) Start the engine and warm it up.
- (c) Turn the Techstream on.
- (d) Run the engine at an engine speed of 2500 rpm for approximately 90 seconds.
- (e) Enter the following menus: Powertrain / Engine / Active Test / Control the Injection Volume
- (f) Perform the Active Test operation with the engine idling (press the RIGHT or LEFT button to change the fuel injection volume).
- (g) Monitor the voltage outputs of the air fuel ratio sensor and heated oxygen sensor (AFS Voltage B1S1 and O2S B1S2) displayed on the Techstream.

HINT:

- Change the fuel injection volume within the range of - 12.5% to +12.5%.
- Each sensor reacts in accordance with increases and decreases in the fuel injection volume.
- The air fuel ratio sensor has an output delay of a few seconds and the heated oxygen sensor has a maximum output delay of approximately 20 seconds.
- If the sensor output voltage does not change (almost no reaction) while performing the Active Test, the sensor may be malfunctioning.

Standard:

TECHSTREAM DISPLAY (SENSOR)	INJECTION VOLUME	STATUS	VOLTAGE
AFS Voltage B1S1 (Air fuel ratio)	+12.5%	Rich	Below 2.0 V
	-12.5%	Lean	Higher than 2.4 V
O2S B1S2 (Heated oxygen)	+12.5%	Rich	Higher than 0.55 V
	-12.5%	Lean	Below 0.4 V

Result:

STATUS AFS VOLTAGE B1S1	STATUS O2S B1S2	A/F CONDITION AND A/F AND HO2 SENSOR CONDITIONS	MISFIRE	MAIN SUSPECTED TROUBLE AREAS	PROCEED TO
Lean/Rich	Lean/Rich	Normal	-	<ul style="list-style-type: none"> • Three-Way Catalytic Converter (TWC) • Gas leakage from exhaust system 	A
Lean	Lean/Rich	Air fuel ratio sensor malfunction	-	<ul style="list-style-type: none"> • Air fuel ratio sensor 	B
Rich	Lean/Rich	Air fuel ratio sensor malfunction	-	<ul style="list-style-type: none"> • Air fuel ratio sensor 	
Lean/Rich	Lean	Heated oxygen sensor malfunction	-	<ul style="list-style-type: none"> • Heated oxygen sensor • Gas leakage from exhaust system 	C
Lean/Rich	Rich	Heated oxygen sensor malfunction	-	<ul style="list-style-type: none"> • Heated oxygen sensor • Gas leakage from exhaust system 	
Lean	Lean	Actual air-fuel ratio lean	May occur	<ul style="list-style-type: none"> • Extremely rich or lean actual air-fuel ratio • Gas leakage from exhaust system 	D
Rich	Rich	Actual air-fuel ratio lean	-	<ul style="list-style-type: none"> • Extremely rich or lean actual air-fuel ratio • Gas leakage from exhaust system 	

Lean: During Control the Injection Volume for A/F Sensor, the air fuel ratio sensor output voltage (AFS Voltage B1S1) is consistently higher than 2.4 V, and the heated oxygen sensor output voltage (O2S B1S2) is consistently below 0.4 V.

Rich: During Control the Injection Volume for A/F Sensor, the AFS Voltage B1S1 is consistently below 2.0 V, and the O2S B1S2 is consistently higher than 0.55 V.

Lean/Rich: During Control the Injection Volume for A/F Sensor of the Active Test, the output voltage of the air fuel ratio sensor and heated oxygen sensor alternate correctly.

B ► REPLACE AIR FUEL RATIO SENSOR

C ► CHECK FOR EXHAUST GAS LEAK

Title: FA20 ENGINE CONTROL: SFI SYSTEM: P0441: Evaporative Emission Control System Incorrect Purge Flow (2013 FR-S)		

DTC	P0441	Evaporative Emission Control System Incorrect Purge Flow
------------	--------------	---

DTC SUMMARY

DTC NO.	MONITORING ITEM	MALFUNCTION DETECTION CONDITION	TROUBLE AREA	DETECTION TIMING	DETECTION LOGIC
P0441	Purge flow	<p>While engine running, following conditions successively met:</p> <ul style="list-style-type: none"> The pressure difference between non-purge and purge is less than 0.075 kPa (gauge) [1 mmHg (gauge)]. Regardless of forced vent valve on (close) and purge being carried out, the pressure difference between non-purge and purge is less than 0.075 kPa (gauge) [1 mmHg (gauge)]. 	<ul style="list-style-type: none"> Purge valve Purge line Connector/wire harness (Purge valve - ECM) ECM Leak from EVAP system 	While engine running	2 trip

DESCRIPTION

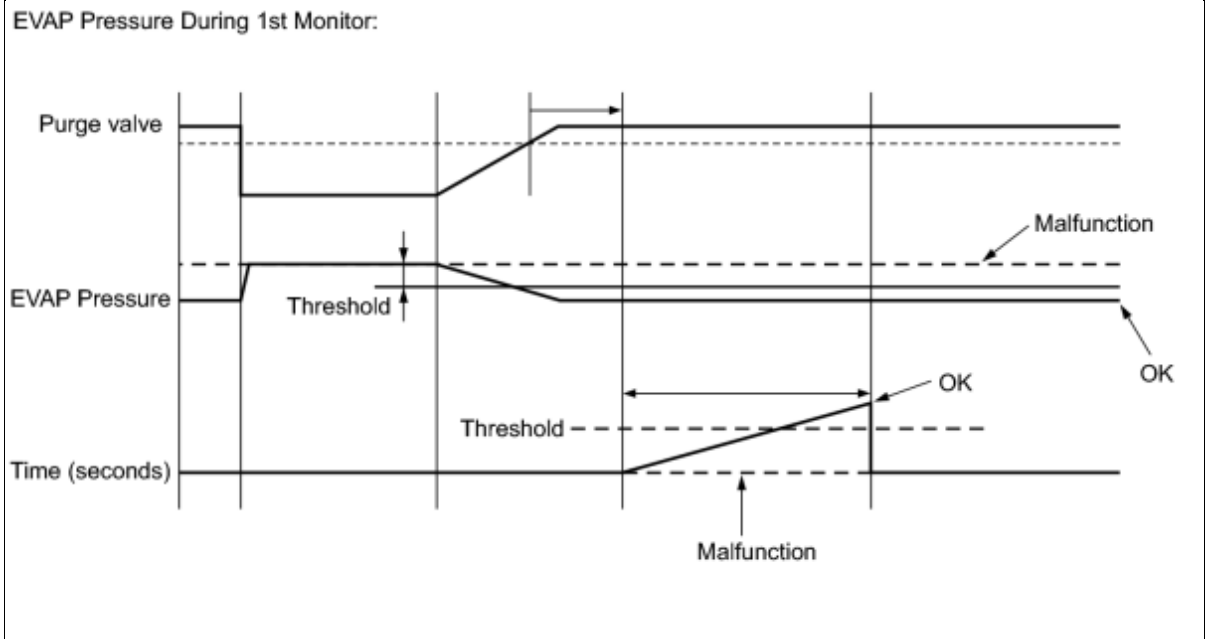

The description can be found in EVAP (Evaporative Emission) System  .

MONITOR DESCRIPTION

The purge flow monitor runs while the engine is running. The purge flow monitor consists of 2 monitors. The 1st monitor is conducted every time and the 2nd monitor is activated if necessary.

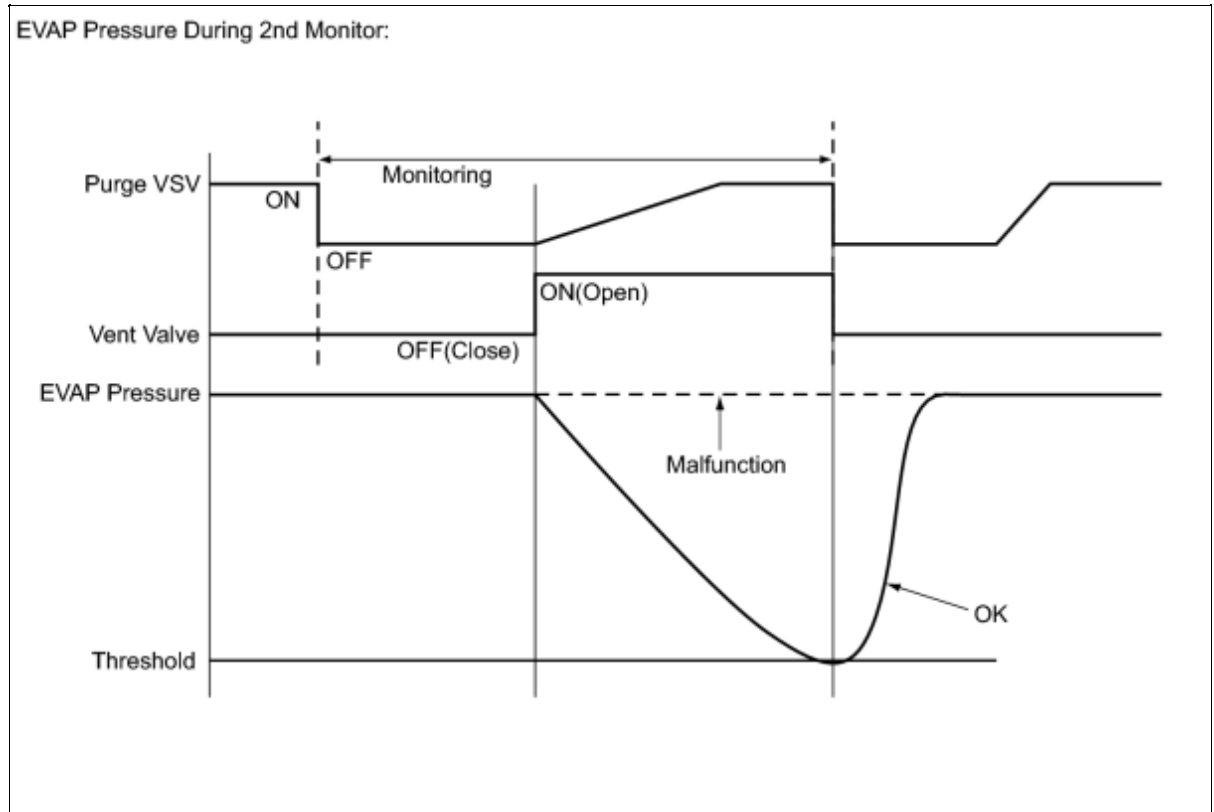

- The 1st monitor

While the engine is running and the purge valve is on (open), the ECM monitors the purge flow by measuring the EVAP pressure change. If the variation in the pressure is more than threshold, the ECM begins the 2nd monitor.

- The 2nd monitor

The vent valve is turned on (closed) and the EVAP pressure is then measured. If the variation in the pressure is more than threshold, the ECM interprets this as the purge valve being stuck closed, and illuminates the MIL and stores DTC P0441 (2 trip detection logic).

MONITOR STRATEGY

Pressure without purge - Pressure with purge	Less than 0.666 kPa(gauge) [5 mmHg(gauge)]
--	--

MONITOR RESULT

Refer to Checking Monitor Status  .

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear DTCs (even if no DTCs are stored, perform the clear DTC procedure)  .
4. Turn the ignition switch off and wait for at least 30 seconds.
5. Turn the ignition switch to ON and turn the Techstream on.
6. Start the engine and wait 15 minutes or more.
7. Enter the following menus: Powertrain / Engine / Trouble Codes.
8. Read pending DTCs.

HINT:

- If a pending DTC is output, the system is malfunctioning.
 - If a pending DTC is not output, perform the following procedure.
9. Enter the following menus: Powertrain / Engine / Utility / All readiness.
 10. Input the DTC: P0441.
 11. Check the DTC judgment result.

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	<ul style="list-style-type: none">◦ DTC judgment completed◦ System normal
ABNORMAL	<ul style="list-style-type: none">◦ DTC judgment completed◦ System abnormal
INCOMPLETE	<ul style="list-style-type: none">◦ DTC judgment not completed◦ You should perform driving pattern after confirming DTC enabling conditions
N/A	<ul style="list-style-type: none">◦ Unable to perform DTC judgment◦ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

- If the judgment result shows NORMAL, the system is normal.
- If the judgment result shows ABNORMAL, the system has a malfunction.
- If the judgment result shows INCOMPLETE or N/A, perform the following procedure.

NOTICE:

- The Evaporative System Check (Automatic Mode) consists of 5 steps performed automatically by the Techstream. It takes a maximum of approximately 24 minutes.
- Do not perform the Evaporative System Check when the fuel tank is more than 90% full because the cut-off valve may be closed, making the fuel tank leak check unavailable.
- Do not run the engine during this operation.
- When the temperature of the fuel is 35°C (95°F) or higher, a large amount of vapor forms

and any check results become inaccurate. When performing the Evaporative System Check, keep the fuel temperature below 35°C (95°F).

12. Clear DTCs (even if no DTCs are stored, perform the clear DTC procedure)  .
13. Turn the ignition switch off and wait for at least 30 seconds.
14. Turn the ignition switch to ON and turn the Techstream on.
15. Enter the following menus: Powertrain / Engine / Utility / Evaporative System Check / Automatic Mode.
16. After the Evaporative System Check is completed, check for All Readiness by entering the following menus: Powertrain / Engine / Utility / All Readiness.
17. Input the DTC: P0441.
18. Check the DTC judgment result.

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	<ul style="list-style-type: none">◦ DTC judgment completed◦ System normal

INCOMPLETE	<ul style="list-style-type: none">◦ DTC judgment not completed◦ Perform driving pattern after confirming DTC enabling conditions
N/A	<ul style="list-style-type: none">◦ Unable to perform DTC judgment◦ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

- If the judgment result shows NORMAL, the system is normal.
- If the judgment result shows ABNORMAL, the system has a malfunction.

19. If the judgment result is INCOMPLETE or N/A and no pending DTC is output, perform a universal trip and check for permanent DTCs  .

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

INSPECTION PROCEDURE

PROCEDURE

1.	PERFORM ACTIVE TEST USING TECHSTREAM (ACTIVATE THE VSV FOR EVAP CONTROL)
----	---

- (a) Connect a Techstream to the DLC3.

(b) Disconnect the vacuum hose (canister side) from the purge valve.

(c) Start the engine.

(d) Turn the Techstream on.

(e) Enter the following menus: Powertrain / Engine / Active Test / Activate the VSV for EVAP Control.

(f) When the purge valve is operated using the Techstream, check whether the port of the purge valve applies suction to your finger.

OK:

TESTER OPERATION	TESTER OPERATION
VSV ON	Purge valve port applies suction to finger
VSV OFF	Purge valve port applies no suction to finger

Text in Illustration

*a	Purge valve ON
*b	Purge valve OFF

NG ► REPLACE PURGE VALVE

OK

2. INSPECT EVAP LEAK PART

(a) Check for leakage from EVAP system (hose, disconnection, cracks, etc.).

OK:

No leakages in the EVAP purge line

NG ► REPAIR OR REPLACE EVAP PURGE LINE

OK

3. REPLACE PURGE VALVE

(a) Replace the purge valve  .

NEXT ► **PERFORM EVAP SYSTEM CHECK (AUTOMATIC MODE)**

4.	REPAIR OR REPLACE EVAP PURGE LINE
-----------	--

NEXT

5.	PERFORM EVAP SYSTEM CHECK (AUTOMATIC MODE)
-----------	---

NOTICE:

- The Evaporative System Check (Automatic Mode) consists of 5 steps performed automatically by the Techstream. It takes a maximum of approximately 24 minutes.
- Do not perform the Evaporative System Check when the fuel tank is more than 90% full because the cut-off valve may be closed, making the fuel tank leak check unavailable.
- Do not run the engine in this step.
- When the temperature of the fuel is 35°C (95°F) or more, a large amount of vapor forms and any check results become inaccurate. When performing an Evaporative System Check, keep the fuel temperature below 35°C (95°F).

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Clear the DTCs  .
- (e) Enter the following menus: Powertrain / Engine / Utility / Evaporative System Check / Automatic Mode.
- (f) After the Evaporative System Check is completed, check for pending DTCs by entering the following menus: Powertrain / Engine / Trouble Codes.

Result

RESULT	PROCEED TO
EVAP system DTCs are output	A

HINT:

The canister pressure sensor is built into the canister pump module.

DESCRIPTION

The description can be found in EVAP (Evaporative Emission) System INFO.

MONITOR DESCRIPTION

1. DTC P0451: Difference between canister pressure sensor output value and manifold absolute pressure sensor output value

If the difference between the atmospheric pressure calculated using the canister pressure sensor and that calculated using the MAP sensor exceeds the specified value, then the ECM determines there is a canister pressure sensor abnormality. The ECM then illuminates the MIL and stores the DTC (2 trip detection logic).

2. DTC P0452: Canister pressure sensor voltage low

If the canister pressure sensor voltage output (pressure) is below 0.973 V: 51.71 kPa(abs) [388 mmHg(abs)], the ECM interprets this as an open or short circuit in the canister pressure sensor or its circuit, and stops the EVAP system monitor. The ECM then illuminates the MIL and stores the DTC (1 trip detection logic).

3. DTC P0453: Canister pressure sensor voltage high

If the canister pressure sensor voltage output (pressure) is 4.095 V: 108.99 kPa(abs) [818 mmHg(abs)] or more, the ECM interprets this as an open or short circuit in the canister pressure sensor or its circuit, and stops the EVAP system monitor. The ECM then illuminates the MIL and stores the DTC (1 trip detection logic).

CONFIRMATION DRIVING PATTERN

NOTICE:

- The Evaporative System Check (Automatic Mode) consists of 5 steps performed automatically by the Techstream. It takes a maximum of approximately 24 minutes.
- Do not perform the Evaporative System Check when the fuel tank is more than 90% full because the cut-off valve may be closed, making the fuel tank leak check unavailable.
- Do not run the engine during this operation.
- When the temperature of the fuel is 35°C (95°F) or higher, a large amount of vapor forms and any check results become inaccurate. When performing the Evaporative System Check, keep the fuel temperature below 35°C (95°F).

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Enter the following menus: Powertrain / Engine / Data List / Intake Air.
4. Check that the intake air temperature is between 4.4 and 35°C (40 and 95°F).
5. Clear DTCs (even if no DTCs are stored, perform the clear DTC procedure)  .
6. Turn the ignition switch off and wait for at least 30 seconds.
7. Turn the ignition switch to ON and turn the Techstream on.
8. Enter the following menus: Powertrain / Engine / Utility / Evaporative System Check / Automatic Mode.
9. After the Evaporative System Check is completed, check for All Readiness by entering the following menus: Powertrain / Engine / Utility / All readiness.
10. Input the DTC: P0451, P0452 or P0453.
11. Check the DTC judgment result.

HINT:

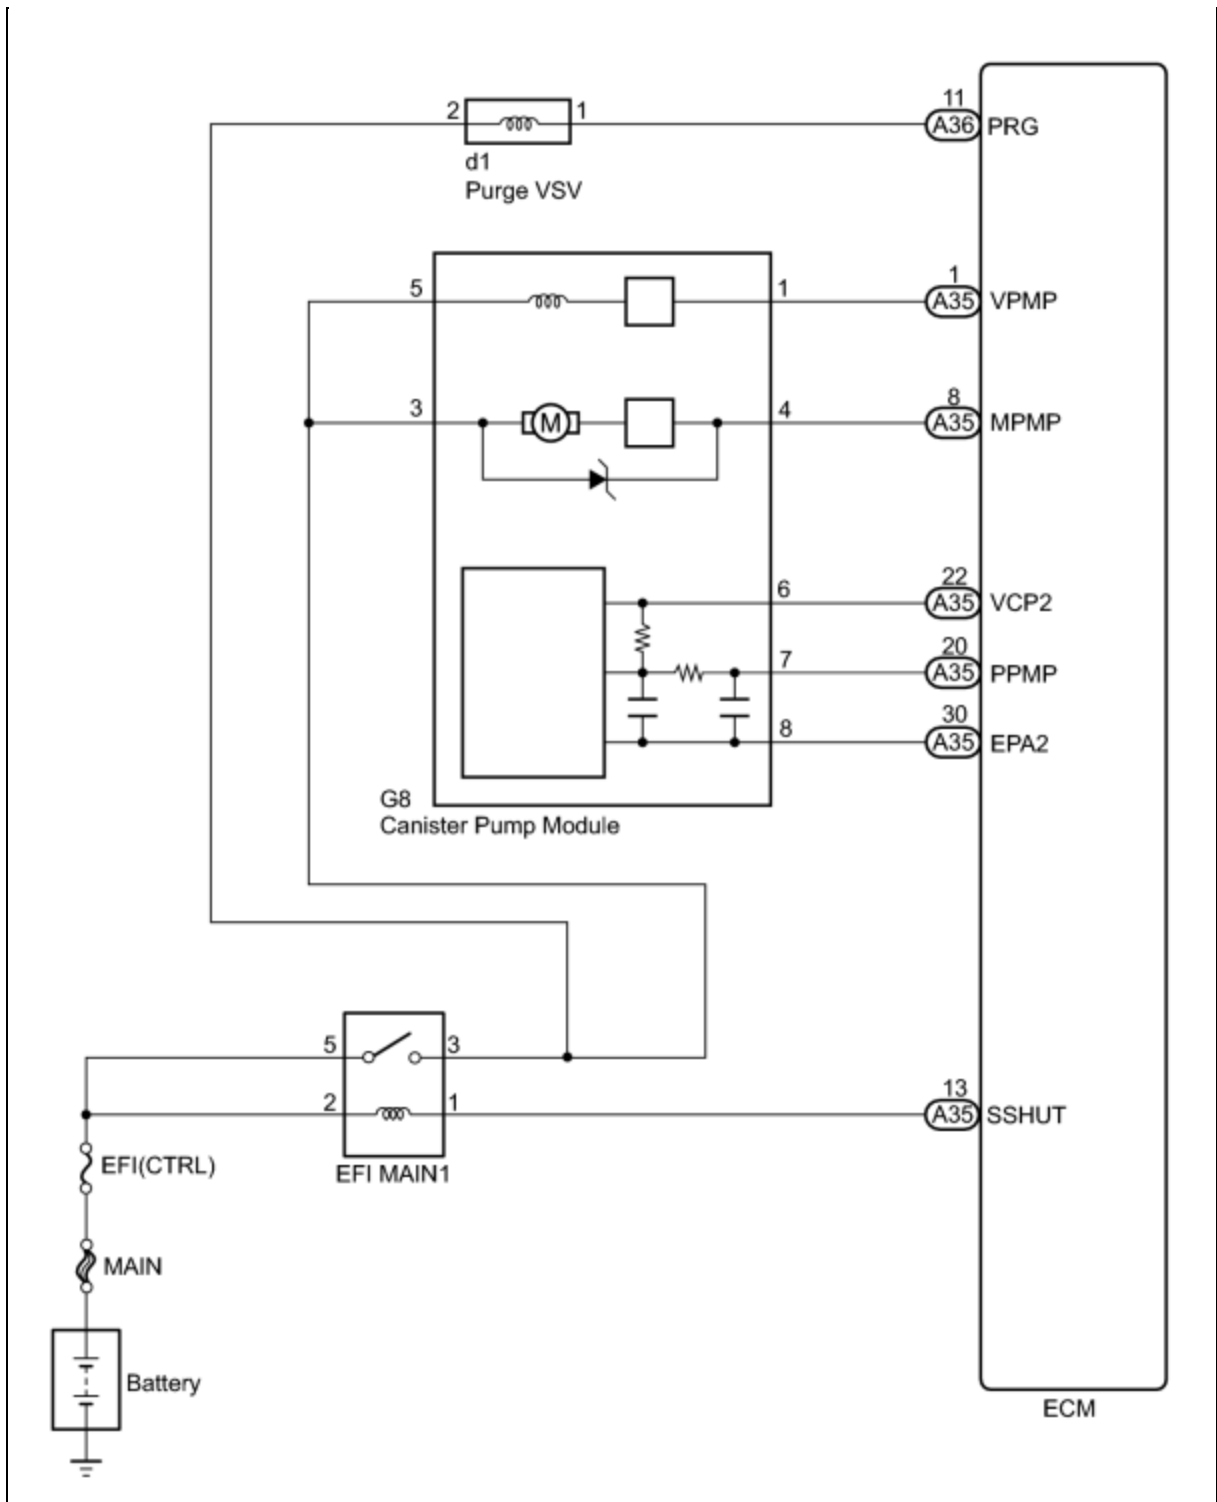

- If the judgment result shows NORMAL, the system is normal.
- If the judgment result shows ABNORMAL, the system has a malfunction.

12. If the judgment result is INCOMPLETE or N/A and no pending DTC is output, perform a universal trip and check for permanent DTCs  .

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- When a vehicle is brought into the workshop, leave it as it is. Do not change the vehicle condition. For example, do not tighten the fuel cap.
- Do not disassemble the canister pump module.
- The Techstream is required to conduct the following diagnostic troubleshooting procedure.
- Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1.	CONFIRM DTC AND EVAP PRESSURE
-----------	--------------------------------------

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON (do not start the engine).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Powertrain / Engine / Trouble Codes.
- (e) Read DTCs.
- (f) Enter the following menus: Powertrain / Engine / Data List / Vapor Pressure Pump.
- (g) Read the EVAP (Evaporative Emission) pressure displayed on the Techstream.

DESCRIPTION

The description can be found in EVAP (Evaporative Emission) System  .

MONITOR DESCRIPTION

5 hours*1 after the ignition switch is turned off, the leak detection pump creates negative pressure (vacuum) in the EVAP (Evaporative Emission) system. The ECM monitors for leaks and actuator malfunctions based on the EVAP pressure.

HINT:

***: If the enable conditions are not satisfied 5 hours after the ignition switch is turned off, the monitor check starts 2 hours later. If the enable conditions are still not satisfied 7 hours after the ignition switch is turned off, the monitor check starts 2.5 hours later.**

SEQUENCE	OPERATION	DURATION
A	Leak detection pump monitor	300 seconds
B	First reference pressure measurement	40 seconds
C	Vent valve monitor	12 seconds
D	Pipe clogging monitor	900 seconds

*: If only a small amount of fuel is in the fuel tank, it takes longer for the EVAP pressure to stabilize.

*a	Operation A: Atmospheric Pressure Measurement	*b	Operation B, E: Reference Pressure Measurement
*c	Operation C: EVAP System Pressure Measurement	*d	Operation D: Purge valve Monitor
*e	Atmospheric Pressure	*f	Negative Pressure

(a) P0455: EVAP (Evaporative Emission) gross leak

In operation C, the leak detection pump creates negative pressure (vacuum) in the EVAP system and the EVAP system pressure is measured. If the stabilized system pressure is higher than [second reference pressure x 0.377] (near atmospheric pressure), the ECM determines that the EVAP system has a large leak, illuminates the MIL and stores the DTC (2 trip detection logic).

(b) P0456: EVAP very small leak

In operation C, the leak detection pump creates negative pressure (vacuum) in the EVAP system and the EVAP system pressure is measured. If the stabilized system pressure is higher than second reference pressure, the ECM determines that the EVAP system has a small leak, illuminates the MIL and stores the DTC (2 trip detection logic).

MONITOR STRATEGY

C. Ending pressure at operation B and E	Less than -3.9717 kPa [-30 mmHg] or higher than -0.9419 kPa [-7 mmHg] (varies with atmospheric pressure)
D. Operation C ending pressure - reference pressure for functional check	Less than 0.224 kPa [2 mmHg]

MONITOR RESULT

Refer to Checking Monitor Status  .

CONFIRMATION DRIVING PATTERN

NOTICE:

- The Evaporative System Check (Automatic Mode) consists of 5 steps performed automatically by the Techstream. It takes a maximum of approximately 24 minutes.
- Do not perform the Evaporative System Check when the fuel tank is more than 90% full because the cut-off valve may be closed, making the fuel tank leak check unavailable.
- Do not run the engine during this operation.
- When the temperature of the fuel is 35°C (95°F) or higher, a large amount of vapor forms and any check results become inaccurate. When performing the Evaporative System Check, keep the fuel temperature below 35°C (95°F).

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear DTCs (even if no DTCs are stored, perform the clear DTC procedure).
4. Turn the ignition switch off and wait for at least 30 seconds.
5. Turn the ignition switch to ON and turn the Techstream on.
6. Enter the following menus: Powertrain / Engine / Utility / Evaporative System Check / Automatic Mode.
7. After the Evaporative System Check is completed, check for All Readiness by entering the following menus: Powertrain / Engine / Utility / All Readiness.
8. Input the DTC: P0455, P0456, P1451 or P2404.
9. Check the DTC judgment result.

Last Modified: 3-27-2012	6.4 C	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000VSO0FWX
Title: FA20 ENGINE CONTROL: SFI SYSTEM: P0458,P0459: Evaporative Emission System Purge Control Valve Circuit Low (2013 FR-S)		

DTC	P0458	Evaporative Emission System Purge Control Valve Circuit Low
------------	--------------	--

DTC	P0459	Evaporative Emission System Purge Control Valve Circuit High
------------	--------------	---

DESCRIPTION

To reduce hydrocarbon emissions, evaporated fuel from the fuel tank is routed through a charcoal canister to the intake manifold for combustion in the cylinders.

The ECM changes the duty signals to the purge valve (Vacuum Switching Valve for Purge Control) so that the intake amount of hydrocarbon emissions is appropriate for the driving conditions (engine load, engine speed, vehicle speed, etc.) after the engine is warmed up.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0458	The voltage of purge valve circuit is low for 2.5 seconds or more. (2 trip detection logic)	<ul style="list-style-type: none"> • Open or short in purge valve circuit • purge valve • ECM
P0459	The voltage of purge valve circuit is high for 2.5 seconds or more. (2 trip detection logic)	

MONITOR DESCRIPTION

The ECM monitors the output terminal voltage when the vacuum switching valve assembly is actuated. By turning the FET in the ECM on and off, the purge valve assembly is subject to duty control. If the ECM control value (drive signal) and the output terminal voltage duty cycle continue to not match, then the ECM interprets this as a malfunction in the vacuum switching valve circuit, illuminates the MIL, and stores the DTC.

MONITOR STRATEGY

Related DTCs	P0458: Solenoid valve for purge control functional check P0459: Solenoid valve for purge control functional check
Required sensors/Components (Main)	Purge valve
Required sensors/Components (Related)	-

Battery voltage	10.9 V or more
After engine starting	1 second or more
Purge valve control duty ratio	More than 25%

TYPICAL MALFUNCTION THRESHOLDS

P0458

Drain voltage of FET for purge valve	Less than battery voltage X 0.38
--------------------------------------	----------------------------------

P0459

Current of FET for purge valve	More than 3.5 A
--------------------------------	-----------------

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear DTCs (even if no DTCs are stored, perform the clear DTC operation) INFO.
4. Turn the ignition switch off and wait for at least 30 seconds.
5. Turn the ignition switch to ON and turn the Techstream on.

6. Start the engine and warm it up until the engine coolant temperature reaches 75°C (167°F) or higher.

HINT:

Check the engine coolant temperature is 20°C (68°F) or less at engine started.

7. Perform the following the confirmation driving pattern.

CAUTION:

When performing the confirmation driving pattern, obey all speed limits and traffic laws.

- a. Drive the vehicle at 80 km/h (50 mph) or more for 20 minutes or more [A].
 - b. Stop the vehicle.
 - c. Idle the engine for 1 minute or more [B].
8. Enter the following menus: Powertrain / Engine / Trouble Codes.
 9. Read pending DTCs.

HINT:

- o If a pending DTC is output, the system is malfunctioning.
- o If a pending DTC is not output, perform the following procedure.

10. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
11. Input the DTC: P0458 or P0459.
12. Check the DTC judgment result.

TECHSTREAM DISPLAY	DESCRIPTION

HINT:

- o If the judgment result shows NORMAL, the system is normal.
- o If the judgment result shows ABNORMAL, the system has a malfunction.

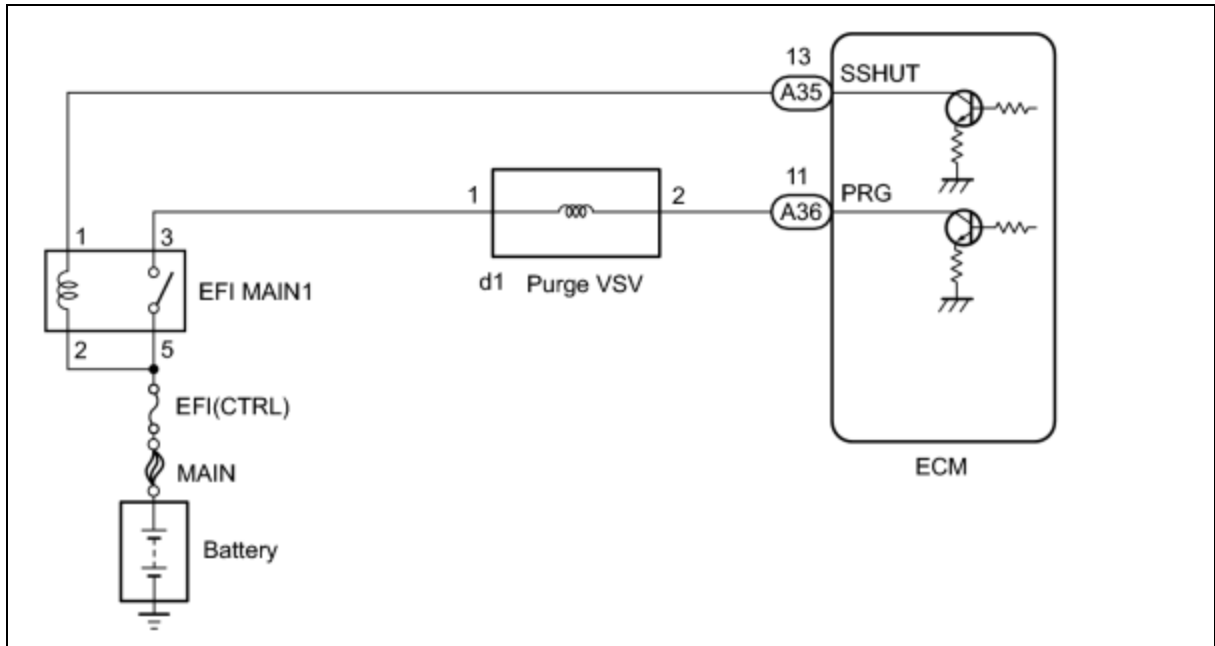

13. If the test result is INCOMPLETE or N/A and no DTC is output, perform a universal trip and check for permanent DTCs  .

HINT:

- o If a permanent DTC is output, the system is malfunctioning.

- o If no permanent DTC is output, the system is normal.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

HINT:

Read freeze frame data using the Techstream. Freeze frame data records the engine condition when malfunctions are detected. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

PROCEDURE

1.	PERFORM ACTIVE TEST USING TECHSTREAM (ACTIVATE THE VSV FOR EVAP CONTROL)
----	---

(a) Connect a Techstream to the DLC3.

- (b) Disconnect the vacuum hose (canister side) from the purge valve.
- (c) Start the engine.
- (d) Turn the Techstream on.
- (e) Enter the following menus: Powertrain / Engine / Active Test / Activate the VSV for EVAP Control.
- (f) When the purge valve is operated using the Techstream, check whether the port of the purge valve applies suction to your finger.

OK:

TESTER OPERATION	SPECIFIED CONDITION
VSV ON	Purge valve port applies suction to finger
VSV OFF	Purge valve port applies no suction to finger

*a	Front view of wire harness connector (to Purge valve)
----	--

NG **INSPECT RELAY (EFI MAIN1)**

OK

4. CHECK HARNESS AND CONNECTOR (PURGE VALVE - ECM)

(a) Disconnect the ECM connector.

(b) Disconnect the purge valve connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A36-11 (PRG) - d1-2	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
-------------------	-----------	---------------------

A36-11 (PRG) or d1-2 - Body ground

Always

10 kΩ or higher

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

5. CHECK WHETHER DTC OUTPUT RECURS

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Clear the DTCs  .
- (e) Turn the ignition switch off and wait for at least 30 seconds.
- (f) Turn the ignition switch to ON and turn the tester on.
- (g) Start the engine.
- (h) Drive the vehicle in accordance with the driving pattern described in the Confirmation Driving Pattern.
- (i) Enter the following menus: Powertrain / Engine / Trouble Codes.
- (j) Read DTCs.

Result

RESULT	PROCEED TO
No DTC is output	A
P0458 or P0459 is output	B

HINT:

If the engine does not start, replace the ECM.

B  **REPLACE ECM**

A  **CHECK FOR INTERMITTENT PROBLEMS**

6. INSPECT RELAY (EFI MAIN1)

(a) Inspect the EFI MAIN1 relay  .

NG  **REPLACE RELAY (EFI MAIN1)**

OK

7.	CHECK HARNESS AND CONNECTOR (PURGE VALVE - EFI MAIN1 RELAY)
-----------	--

- (a) Disconnect the purge valve connector.
- (b) Remove the EFI MAIN1 relay from the engine room relay block assembly.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
d1-1 - EFI MAIN1 relay terminal 3	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
d1-1 or EFI MAIN1 relay terminal 3 - Body ground	Always	10 k Ω or higher

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

DESCRIPTION

The signal output from the sender gauge assembly installed in the fuel tank is converted to a CAN communication signal using the combination meter assembly, and this signal is input into the ECM as a remaining fuel signal.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0461	Compared with the estimated fuel consumption, the actual variation in the fuel sender gauge assembly signal is small. (2 trip detection logic)	<ul style="list-style-type: none"> • Fuel sender gauge assembly • Fuel sender gauge assembly No. 2 • Combination meter assembly • ECM
P0462	Fuel sender gauge assembly voltage is less than 0.35 V for 2.5 seconds or more. (2 trip detection logic)	
P0463	Fuel sender gauge assembly voltage is higher than 7.183 V for 1 second or more. (2 trip detection logic)	

MONITOR DESCRIPTION

The ECM uses the fuel sender gauge to monitor the amount of fuel. There are several checks that the ECM performs to confirm the proper operation of the fuel sender gauge.

P0461

If the fuel sender gauge variation is lower than the estimated fuel consumption calculated from the fuel injection quantity and the engine speed, the ECM interprets this as a malfunction in the fuel sender gauge, and stores the DTC.

P0462, P0463

If an open or short in the fuel sender gauge signal line is detected, the ECM interprets this as a malfunction in the fuel sender gauge, and stores the DTC.

Model Year: 2013	Model: FR-S	Doc ID: RM0000012ME0EVX
Title: FA20 ENGINE CONTROL: SFI SYSTEM: P0500: Vehicle Speed Sensor "A" (2013 FR-S)		

DTC	P0500	Vehicle Speed Sensor "A"
------------	--------------	---------------------------------

DESCRIPTION

Vehicles, which are equipped with ABS (Anti-lock Brake System), detect the vehicle speed using the skid control ECU (brake actuator assembly) and wheel speed sensor. The wheel speed sensor monitors the wheel rotation speed and sends a signal to the skid control ECU. The skid control ECU converts the wheel speed signal into a 4-pulse signal and transmits it to the ECM. The ECM determines the vehicle speed based on the frequency of the pulse signal.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0500	The vehicle speed signal from the driving wheels is 300 km/h or more for 2.5 seconds or more. (1 trip detection logic)	<ul style="list-style-type: none"> • Open or short in wheel speed signal circuit • Skid control ECU (Brake actuator assembly) • Speed sensor

MONITOR DESCRIPTION

If the driving wheel speed signal input from the skid control ECU indicates speed of 300 km/h (186.42 mph) or more, the ECM interprets this as a malfunction in the speed signal circuit. The ECM then illuminates the MIL and stores the DTC.

MONITOR STRATEGY

Related DTCs	P0500: Vehicle speed sensor (VSS) range check
Required Sensors/Components (Main)	Speed sensor Combination meter Skid control ECU
Required Sensors/Components (Related)	-
Frequency of Operation	Continuous
Duration	2.5 seconds
MIL Operation	Immediately
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs not present	U0073, U0122, U0416 (CAN system)
Battery voltage	10.9 V or more

TYPICAL MALFUNCTION THRESHOLDS

Vehicle speed

More than 300 km/h (186.42 mph)

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear DTCs (even if no DTCs are stored, perform the clear DTC operation) INFO.
4. Turn the ignition switch off and wait for at least 30 seconds.
5. Turn the ignition switch to ON and turn the Techstream on.
6. Start the engine and warm it up until the engine coolant temperature reaches 75°C (167°F) or higher.
7. With the vehicle stationary, depress the accelerator pedal and maintain an engine speed of between 2500 and 3000 rpm for 40 seconds or more [A].
8. Drive the vehicle at 10 km/h (6.25 mph) or more for 1 minute or more [B].

CAUTION:

When performing the confirmation driving pattern, obey all speed limits and traffic laws.

9. Enter the following menus: Powertrain / Engine / Trouble Codes.
10. Read pending DTCs.

HINT:

- If a pending DTC is output, the system is malfunctioning.
- If a pending DTC is not output, perform the following procedure.

11. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
12. Input the DTC: P0500.
13. Check the DTC judgment result.

TECHSTREAM DISPLAY	DESCRIPTION

HINT:

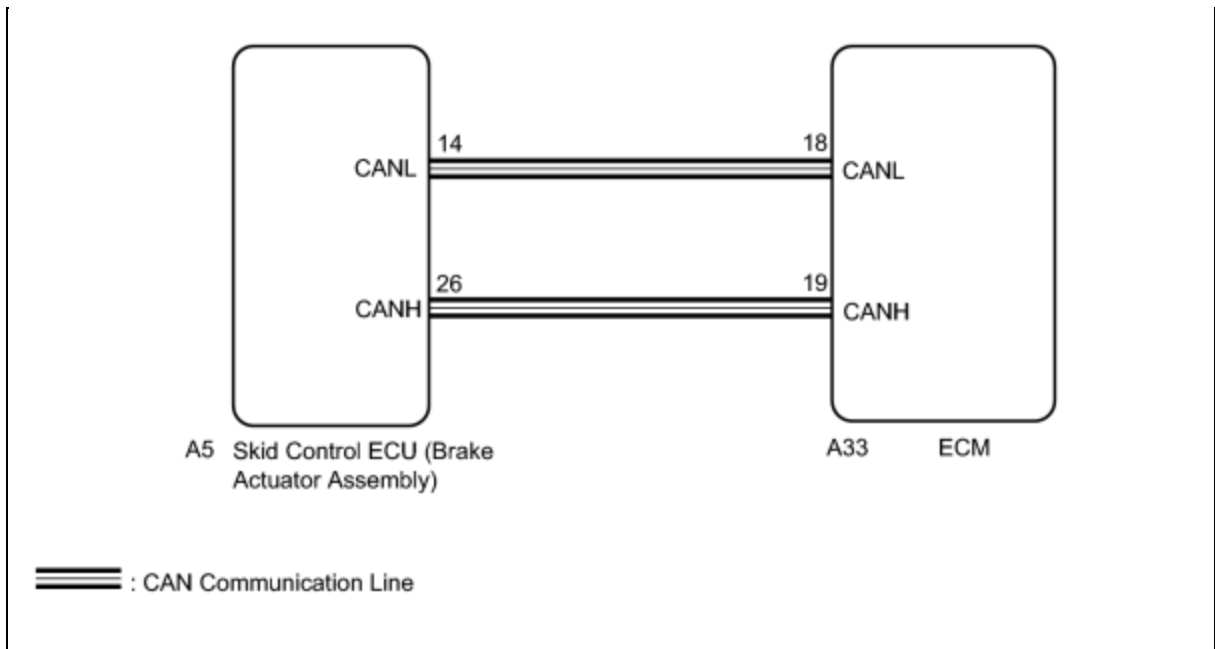

- If the judgment result shows NORMAL, the system is normal.
- If the judgment result shows ABNORMAL, the system has a malfunction.

14. If the test result is INCOMPLETE or N/A and no DTC is output, perform a universal trip and check for permanent DTCs  .

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air fuel ratio was lean or rich, and other data from the time the malfunction occurred.

PROCEDURE

1.	READ VALUE USING TECHSTREAM (VEHICLE SPEED)
-----------	--

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON and turn the Techstream on.
- (c) Enter the following menus: Powertrain / Engine / Data List / Vehicle Speed.
- (d) Drive the vehicle.
- (e) Read the value displayed on the Techstream.

Result

RESULT	PROCEED TO
Values displayed on Techstream and speedometer display not equal	A
Values displayed on Techstream and speedometer display equal	B

B CHECK FOR INTERMITTENT PROBLEMS

Last Modified: 3-27-2012	6.4 C	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000T8MOMVX
Title: FA20 ENGINE CONTROL: SFI SYSTEM: P0506,P0507: Idle Air Control System RPM Lower than Expected (2013 FR-S)		

DTC	P0506	Idle Air Control System RPM Lower than Expected
------------	--------------	--

DTC	P0507	Idle Air Control System RPM Higher than Expected
------------	--------------	---

DESCRIPTION

The idling speed is controlled by the ETCS (Electronic Throttle Control System). The ETCS is comprised of: 1) the one valve type throttle body; 2) the throttle actuator, which operates the throttle valve; 3) the throttle position sensor, which detects the opening angle of the throttle valve; 4) the accelerator pedal position sensor, which detects the accelerator pedal position; and 5) the ECM, which controls the ETCS. Based on the target idling speed, the ECM controls the throttle actuator to provide the proper throttle valve opening angle.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0506	The engine speed is not close to the target engine speed for 30 seconds or more (Actual engine speed - target engine speed) < -100 rpm). (2 trip detection logic)	<ul style="list-style-type: none"> • Electronic throttle control system • Intake system • PCV hose connections • ECM
P0507	The engine speed is not close to the target engine speed for 30 seconds or more (Actual engine speed - target engine speed) >= 200 rpm). (2 trip detection logic)	

MONITOR DESCRIPTION

The ECM monitors the idling speed and idling air flow volume to conduct Idle Speed Control (ISC). The ECM determines that the ISC system is malfunctioning if the difference between the target engine idling speed and actual engine idling speed exceeds the threshold for 30 seconds or more.

MONITOR STRATEGY

Related DTCs	P0506: Idle speed control (ISC) functional check P0507: Idle speed control (ISC) functional check
Required Sensors/Components (Main)	Electronic throttle control system

Fuel level	15% or more
Atmospheric pressure	75.06 kPa [563 mmHg] or more
Battery voltage	10.9 V or more
Engine coolant temperature	60°C (140°F) or higher
Elapsed time after engine start	10.49 seconds or more
Closed control in ISC	Active
Lambda	0.81 to 1.1
Elapsed time after A/C switch OFF ↔ ON	5.1 seconds or more
Elapsed time after changing intake manifold pressure =< 4 kPa (30 mmHg)	5.1 seconds or more
Vehicle speed	0 km/h (0 mph)
Elapsed time after neutral switch OFF ↔ ON	5.1 seconds or more

TYPICAL MALFUNCTION THRESHOLDS

P0506

Actual engine speed - Target engine speed

Less than -100 rpm

P0507

Actual engine speed - Target engine speed

More than 200 rpm

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear DTCs (even if no DTCs are stored, perform the clear DTC operation) INFO.
4. Turn the ignition switch off and wait for at least 30 seconds.
5. Turn the ignition switch to ON and turn the Techstream on.
6. Start the engine and warm it up until the engine coolant temperature reaches 75°C (167°F) or higher.
7. Perform the following the confirmation driving pattern.

CAUTION:

When performing the confirmation driving pattern, obey all speed limits and traffic laws.

- a. Drive the vehicle at 10 km/h (6.25 mph) or more for 1 minute or more [A].
 - b. Stop the vehicle.
 - c. Idle the engine for 10 minutes or more [B].
8. Enter the following menus: Powertrain / Engine / Trouble Codes.
 9. Read pending DTCs.

HINT:

- o If a pending DTC is output, the system is malfunctioning.
 - o If a pending DTC is not output, perform the following procedure.
10. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
 11. Input the DTC: P0506 or P0507.
 12. Check the DTC judgment result.

TECHSTREAM
DISPLAY

DESCRIPTION

NORMAL	<ul style="list-style-type: none"> o DTC judgment completed o System normal
ABNORMAL	<ul style="list-style-type: none"> o DTC judgment completed o System abnormal
INCOMPLETE	<ul style="list-style-type: none"> o DTC judgment not completed o Perform driving pattern after confirming DTC enabling conditions
N/A	<ul style="list-style-type: none"> o Unable to perform DTC judgment o Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

- o If the judgment result shows NORMAL, the system is normal.
- o If the judgment result shows ABNORMAL, the system has a malfunction.

13. If the test result is INCOMPLETE or N/A and no DTC is output, perform a universal trip and check for permanent DTCs **INFO** .

HINT:

- o If a permanent DTC is output, the system is malfunctioning.
- o If no permanent DTC is output, the system is normal.

INSPECTION PROCEDURE

HINT:

- The following conditions may also cause DTC DTC P0506 or P0507 to be stored:
 - a. The floor carpet overlapping slightly onto the accelerator pedal, causing the accelerator pedal to be slightly depressed and therefore the throttle valve position to be slightly open.
 - b. The accelerator pedal being not fully released.
- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air fuel ratio was lean or rich, and other data from the time the malfunction occurred.
- Refer to "Data List / Active Test" [Engine Speed, ISC Feedback Value and ISC Learning Value] **INFO**

PROCEDURE

1.	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0506 AND P0507)
-----------	---

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine / Trouble Codes.

(e) Read DTCs.

Result

RESULT	PROCEED TO
DTC P0506 or P0507 is output	A
DTC P0506 or P0507 and other DTCs are output	B

HINT:

If any DTCs other than P0506 or P0507 are output, troubleshoot those DTCs first.

B ► GO TO DTC CHART

A

2.	CHECK PCV HOSE CONNECTIONS
-----------	-----------------------------------

(a) Check the PCV hose connections  .

OK:

PCV valve and hose are connected correctly and are not damaged.

NG ► REPAIR OR REPLACE PCV HOSE

OK

3.	CHECK INTAKE SYSTEM
-----------	----------------------------

(a) Check the intake system for vacuum leaks  .

OK:

No leaks from the intake system.

NG ► REPAIR OR REPLACE INTAKE SYSTEM

OK

4.	INSPECT THROTTLE WITH MOTOR BODY ASSEMBLY (THROTTLE VALVE)
-----------	---

(a) Check the throttle with motor body assembly condition INFO.

OK:

Throttle valve is not contaminated with foreign objects and moves smoothly.

NG ▶ **REPLACE THROTTLE WITH MOTOR BODY ASSEMBLY**

OK

5.	CONFIRM WHETHER DTC OUTPUT RECURS
-----------	--

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Drive the vehicle in accordance with the driving pattern described in Confirmation Driving Pattern.
- (e) Read DTCs.

Result

RESULT	PROCEED TO
DTC P0506 or P0507 is output	A
No DTC is output	B

Title: FA20 ENGINE CONTROL: SFI SYSTEM: P0560: System Voltage (2013 FR-S)		

DTC	P0560	System Voltage
------------	--------------	-----------------------

MONITOR DESCRIPTION

The battery supplies electricity to the ECM even when the ignition switch is off. This power allows the ECM to store data such as DTC history, freeze frame data and fuel trim values. If the battery voltage falls below a minimum level, the memory is cleared and the ECM determines that there is a malfunction in the power supply circuit. When the engine is next started, the ECM illuminates the MIL and stores the DTC.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0560	Back up power source terminal voltage is 3.5 V or less with the engine running for 2.5 seconds or more. (1 trip detection logic)	<ul style="list-style-type: none"> • Open in back up power source circuit • Battery • Battery terminals • ECM

HINT:

If DTC P0560 is stored, the ECM does not store other DTCs or the data stored in the ECM is partly cleared.

INSPECTION PROCEDURE

NOTICE:

- Inspect the fuses for circuits related to this system before performing the following inspection procedure.
- After turning ignition switch off, waiting time may be required before disconnecting the cable from the negative (-) battery terminal. Therefore, make sure to read the disconnecting the cable from the negative (-) battery terminal notices before proceeding with work .

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air fuel ratio was lean or rich, and other data from the time the malfunction occurred.

PROCEDURE

1.	CHECK HARNESS AND CONNECTOR (ECM - BATTERY)
-----------	--

NOTICE:

After turning ignition switch off, waiting time may be required before disconnecting the cable from the negative (-) battery terminal. Therefore, make sure to read the disconnecting the cable from the negative (-) battery terminal notices before proceeding with work .

- (a) Disconnect the cable from the negative (-) battery terminal .
- (b) Disconnect the cable from the positive (+) battery terminal.
- (c) Disconnect the ECM connector.
- (d) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A33-2 (BATT) - Battery positive (+) terminal	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A33-2 (BATT) or Battery positive (+) terminal - Body ground	Always	10 k Ω or higher

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2.	INSPECT CHARGING SYSTEM
-----------	--------------------------------

(a) Inspect the charging system  .

NG  **REPAIR OR REPLACE MALFUNCTIONING PARTS**

OK

3.	CHECK WHETHER DTC OUTPUT RECURS
-----------	--

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Clear the DTCs  .
- (e) Turn the ignition switch off and wait for at least 30 seconds.
- (f) Turn the ignition switch to ON and turn the Techstream on.
- (g) Drive the vehicle in accordance with the driving pattern described in the Confirmation Driving Pattern.
- (h) Enter the following menus: Powertrain / Engine / Trouble Codes.
- (i) Read DTCs.

------------	--------------	---

DTC	P060B	Internal Control Module A/D Processing Performance
------------	--------------	---

DTC	P062F	Internal Control Module EEPROM Error
------------	--------------	---

DESCRIPTION

P0604

The ECM continuously monitors its internal memory status. This self-check ensures that the ECM functioning properly. It is diagnosed by internal "mirroring" of the main CPU and sub CPU to detect the Random Access Memory (RAM) errors. If outputs from these CPUs are different and deviate from the standard, the ECM stores the DTC.

P0605

The ECM continuously monitors its internal memory status. This self-check ensures that the ECM functioning properly. It is diagnosed by internal "mirroring" of the main CPU and sub CPU to detect the Read Only Memory (ROM) errors. If outputs from these CPUs are different and deviate from the standard, the ECM stores the DTC.

P0606

The ECM continuously monitors its main and sub CPUs. This self-check ensures that the ECM is functioning properly. If outputs from the CPUs are different and deviate from the standard, the ECM stores the DTC.

P060A

The main CPU and sub CPU of the ECM perform data communication between each other. The main CPU monitors the communications and WDC pulses from the sub CPU. If the malfunction is detected, the ECM stores the DTC.

P060B

If a communication error occurs in the ECM, the ECM stores the DTC.

P062F

The ECM monitors its internal operation. If the ECM detects an internal malfunction, the ECM stores the DTC.

Either of the following conditions is met:	A or B
A. A/D voltages for monitoring - 0 at target A/D voltages 0 V	More than 0.01953 V
B. 5 - A/D voltages for monitoring at target A/D voltages 5 V	More than 4.97925 V

P062F (Observation IC Resister Monitoring)

Fail writing to EEPROM	Yes
------------------------	-----

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear DTCs (even if no DTCs are stored, perform the clear DTC operation)  .
4. Turn the Techstream off.
5. Turn the ignition switch off.
6. Disconnect the Techstream.
7. Disconnect the cable from the negative (-) battery terminal and wait for 1 minute.
8. Connect the cable to the negative (-) battery terminal.
9. Connect the Techstream to the DLC3.
10. Turn the ignition switch to ON and turn the Techstream on.
11. Wait 16 seconds or more.
12. Enter the following menus: Powertrain / Engine / Trouble Codes.
13. Read the pending DTCs.

HINT:

- o If a pending DTC is output, the system is malfunctioning.
 - o If a pending DTC is not output, perform the following procedure.
14. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
 15. Input the DTC: P0604, P0605, P0606, P060A, P060B or P062F.
 16. Check the DTC judgment result.

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	<ul style="list-style-type: none"> o DTC judgment completed o System normal
ABNORMAL	<ul style="list-style-type: none"> o DTC judgment completed o System abnormal
INCOMPLETE	<ul style="list-style-type: none"> o DTC judgment not completed o Perform driving pattern after confirming DTC enabling conditions
N/A	<ul style="list-style-type: none"> o Unable to perform DTC judgment o Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

- If the judgment result shows NORMAL, the system is normal.
- If the judgment result shows ABNORMAL, the system has a malfunction.

17. If the judgment result is INCOMPLETE or N/A and no pending DTC is output, perform a universal trip and check for permanent DTCs **INFO** .

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

INSPECTION PROCEDURE

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air fuel ratio was lean or rich, and other data from the time the malfunction occurred.

PROCEDURE

1.	READ DTC OUTPUT (DTC P0604, P0605, P0606, P060A, P060B AND/OR P062F)
-----------	---

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Clear the DTCs **INFO** .
- (e) Turn the ignition switch off.
- (f) Turn the Techstream off.
- (g) Disconnect the Techstream.
- (h) Disconnect the cable from the negative (-) battery terminal and wait for 1 minute.
- (i) Connect the cable to the negative (-) battery terminal.
- (j) Connect the Techstream to the DLC3.
- (k) Turn the ignition switch to ON.
- (l) Turn the Techstream on.
- (m) Wait for 16 seconds or more.
- (n) Enter the following menus: Powertrain / Engine / Trouble Codes.
- (o) Read the DTCs.

Title: FA20 ENGINE CONTROL: SFI SYSTEM: P0616,P0617: Starter Relay Circuit Low (2013 FR-S)		

DTC	P0616	Starter Relay Circuit Low
------------	--------------	----------------------------------

DTC	P0617	Starter Relay Circuit High
------------	--------------	-----------------------------------

MONITOR DESCRIPTION

While the engine is being cranked, battery voltage is applied to terminal STA of the ECM. If the ECM detects the starter control (STA) signal after the engine is started, it determines that there is a malfunction in the STA circuit. The ECM then illuminates the MIL and stores the DTC.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0616	No starter signal is input when engine started. (1 trip detection logic)	<ul style="list-style-type: none"> • Starter system • ST relay circuit • ECM
P0617	Starter signal remains input after engine started. (1 trip detection logic)	<ul style="list-style-type: none"> • Starter system • ST relay circuit • ECM

- o If no permanent DTC is output, the system is normal.

WIRING DIAGRAM

Refer to Starter Signal Circuit **INFO** .

INSPECTION PROCEDURE

NOTICE:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

HINT:

- The following troubleshooting flowchart is based on the premise that the engine can be cranked normally.

If the engine does not crank, proceed to Problem Symptoms Table **INFO** .

- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air fuel ratio was lean or rich, and other data from the time the malfunction occurred.

PROCEDURE

1.	READ VALUE USING TECHSTREAM (STARTER SIGNAL, STARTER SWITCH)
-----------	---

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Powertrain / Engine / Data List / Starter Signal and Starter Switch.

(e) Read the value displayed on the Techstream when the ignition switch is turned to ON and cranking.

OK:

TECHSTREAM DISPLAY	CONDITION	NORMAL CONDITION
Starter Signal	Ignition switch ON	OFF
	Cranking	ON
Starter Switch	Ignition switch ON	OFF
	Cranking	ON

	<p>Automatic Transmission</p> <p>The CAN data received from the TCM is other than "P or N" position signal while the park/neutral position switch assembly is in P or N position. (2 trip detection logic)</p>	<p>Automatic Transmission</p> <ul style="list-style-type: none"> • Open or short in park / neutral position switch signal circuit • Park/neutral position switch assembly • ECM • TCM

MONITOR DESCRIPTION

Manual Transmission

The ECM detects the shift change status from the neutral position switch signal, and detects the current selected gear from the engine speed and vehicle speed. If the neutral position switch signal and the shift change status cannot be coordinated, the ECM interprets this as a malfunction, illuminates the MIL, and stores the DTC.

Automatic Transmission

If the ECM cannot coordinate the N, P or neutral information from the park/neutral position switch signal with the shift information sent from the TCM through CAN communication, then the ECM interprets this as a malfunction, illuminates the MIL, and stores the DTC.

MONITOR STRATEGY

Related DTCs	P0851: Neutral position switch circuit continuity (Low voltage) P0852: Neutral position switch circuit continuity (High voltage)
Required Sensors/Components (Main)	Park/neutral position switch assembly Neutral position switch

MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Manual Transmission

Monitor runs whenever following DTCs not present	P0500 (Vehicle speed sensor (VSS))
ST relay	Off

Starter	Off
Battery voltage	10.9 V or more
Driving condition change from the following condition A to B:	-
A. All of the following conditions are met:	(a) and (b)
(a) Vehicle speed	Less than 0 km/h (0 mph)
(b) Engine speed	550 to 880 rpm
B. All of the following conditions are met:	(a) and (b)
(a) Vehicle speed	64 km/h (39.8 mph) or more
(b) Engine speed	1600 to 2600 rpm

Automatic Transmission

Monitor runs whenever following DTCs not present	U0073, U0101, U0402 (CAN system)
ST relay	Off
Starter	Off
Battery voltage	10.9 V or more
Range switch on automatic transmission (TCM)	ON
Engine speed	500 rpm or more

TYPICAL MALFUNCTION THRESHOLDS

P0851 (Manual Transmission)

Switch signal for manual transmission	Less than battery voltage X 0.19
---------------------------------------	----------------------------------

P0852 (Manual Transmission)

Switch signal for manual transmission	More than battery voltage X 0.6
---------------------------------------	---------------------------------

P0851 (Automatic Transmission)

Park/neutral position switch signal	Less than battery voltage X 0.19
Park/neutral position from TCM	On

P0852 (Automatic Transmission)

Park/neutral position switch signal	More than battery voltage X 0.6
Park/neutral position from TCM	Off

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear DTCs (even if no DTCs are stored, perform the clear DTC operation) INFO.
4. Turn the ignition switch off and wait for at least 30 seconds.
5. Turn the ignition switch to ON and turn the Techstream on.
6. Start the engine and warm it up until the engine coolant temperature reaches 75°C (167°F) or higher.
7. Change gear position 3 times or more during Accelerating vehicle to 64 km/h (40 mph) [A]. (for Manual Transmission)

CAUTION:

When performing the confirmation driving pattern, obey all speed limits and traffic laws.

8. Drive the vehicle at 10 km/h (6.25 mph) or more for 1 minute or more [B]. (for Automatic Transmission)

CAUTION:

When performing the confirmation driving pattern, obey all speed limits and traffic laws.

9. Enter the following menus: Powertrain / Engine / Trouble Codes.
10. Read pending DTCs.

HINT:

- o If a pending DTC is output, the system is malfunctioning.
- o If a pending DTC is not output, perform the following procedure.

11. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
12. Input the DTC: P0851 or P0852.
13. Check the DTC judgment result.

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	<ul style="list-style-type: none"> o DTC judgment completed o System normal

Last Modified: 3-27-2012	6.4 C	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM0000043HM01EX
Title: FA20 ENGINE CONTROL: SFI SYSTEM: P1109,P2109: Throttle Deposit Malfunction (2013 FR-S)		

DTC	P1109	Throttle Deposit Malfunction
------------	--------------	-------------------------------------

DTC	P2109	Throttle / Pedal Position Sensor "A" Minimum Stop Performance
------------	--------------	--

DESCRIPTION

The idling speed is controlled by the Electronic Throttle Control System (ETCS). The ETCS is comprised of a throttle actuator, which operates the throttle valve, and a throttle position sensor, which detects the opening amount of the throttle valve. The ECM controls the throttle actuator to adjust the throttle valve opening amount so that the idling speed is maintained at the target idling speed.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P1109	ISC learning value is 95% or more of the maximum learning ISC learning value, and 50% or more deposit is accumulated for 10 seconds continuously. (5 trip detection logic)	Throttle with motor body assembly
P2109	One of the following conditions is met (1 trip detection logic): <ul style="list-style-type: none"> The throttle position sensor opening angle when learning the fully-closed position is less than 9.975° or more than 20.025°. When the throttle actuator current is off, the difference between the actual throttle position and the fully-closed position is less than 1.162°. 	Throttle with motor body assembly

HINT:

- The ISC learned value is the calculated intake air amount corresponding to the throttle opening amount necessary to maintain the idling speed.
- This malfunction is only detected once per trip. After it has been detected once, the system will not monitor for the malfunction for the rest of the trip.
- The system uses the throttle with motor body assembly and mass air flow meter assembly to detect this malfunction.

MONITOR DESCRIPTION

If there are deposits in the throttle valve, a decrease in the ISC flow rate may cause engine stall or unstable idling. Therefore, the necessary ISC flow rate for idling is maintained using the ISC learned value and feedback. The ECM stores this DTC if the ISC learned value approaches its limit.

MONITOR STRATEGY

Related DTCs	P2109: Throttle position sensor minimum stop rationality check
Required Sensors/Components (Main)	Throttle position sensor

Required Sensors/Components (Related)	-
Frequency of Operation	Continuous

N/A	<ul style="list-style-type: none">o Unable to perform DTC judgmento Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

- o If the judgment result shows NORMAL, the system is normal.
 - o If the judgment result shows ABNORMAL, the system has a malfunction.
14. If the test result is INCOMPLETE or N/A and no DTC is output, perform a universal trip and check for permanent DTCs  .

HINT:

- o If a permanent DTC is output, the system is malfunctioning.
- o If no permanent DTC is output, the system is normal.

INSPECTION PROCEDURE

NOTICE:

Never clean the throttle with motor body assembly.

HINT:

- Read freeze frame data using the Techstream. Freeze frame data records engine conditions when a malfunction occurs. This information can be useful when troubleshooting.
- Since a pending DTC is not stored for this DTC, it takes time to confirm whether the malfunction

has been successfully repaired by checking for this DTC. When confirming whether the malfunction has been successfully repaired, compare "ISC Learning Value" recorded in the freeze frame data with "ISC Learning Value" in the Data List after repairs have been made to save time.

PROCEDURE

1.	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO P2109)
-----------	---

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Powertrain / Engine / Trouble Codes.
- (e) Read DTCs.

Result

RESULT	PROCEED TO
DTC P1109 or P2109 is output	A
DTC P1109 or P2109 and other DTCs are output	B

HINT:

If any DTCs other than P1109 or P2109 are output, troubleshoot those DTCs first.

B ► GO TO DTC CHART

A ► REPLACE THROTTLE WITH MOTOR BODY ASSEMBLY

Last Modified: 3-27-2012	6.4 C	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000PFX0SWX
Title: FA20 ENGINE CONTROL: SFI SYSTEM: P1160,P2119: Throttle Valve Return Spring Malfunction (2013 FR-S)		

DTC	P1160	Throttle Valve Return Spring Malfunction
------------	--------------	---

DTC	P2119	Throttle Actuator Control Throttle Body Range / Performance
------------	--------------	--

DESCRIPTION

The electronic throttle control system is composed of the throttle actuator, throttle position sensor, accelerator pedal position sensor, and ECM. The ECM operates the throttle actuator to regulate the throttle valve in response to driver inputs. The throttle position sensor detects the opening angle of the throttle valve, and provides the ECM with feedback so that the throttle valve can be appropriately controlled by the ECM.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P1160	After setting throttle valve opening angle at 40% in throttle actuator control, the change in opening angle is less than 2° after throttle actuator has been off. (1 trip detection logic)	Throttle with motor body assembly
P2119	The throttle valve opening angle continues to vary greatly from the target opening angle. (1 trip detection logic)	<ul style="list-style-type: none"> • Electronic throttle control system • Wire harness or connector • ECM

MONITOR DESCRIPTION

P1160

When the ECM cuts the power supply to the throttle actuator, the throttle valve returns to the fully-closed position by the spring. If the throttle valve does not return with ETCS relay off, the ECM judges throttle valve is stuck and then the ECM illuminates the MIL and stores the DTC.

P2119

The ECM determines the actual opening angle of the throttle valve from the throttle position sensor signal. The actual opening angle is compared to the target opening angle commanded by the ECM. If the difference between these two values is outside the standard range, the ECM interprets this as a malfunction in the electronic throttle control system. The ECM then illuminates the MIL and stores the

DTC.

MONITOR STRATEGY

Related DTCs	P1160: Throttle return spring functional check P2119: Throttle actuator control functional check
Required Sensors/Components (Main)	Throttle actuator (throttle with motor body assembly)
Required Sensors/Components (Related)	-
Frequency of Operation	Continuous
Duration	Immediately: P1160 5 seconds: P2119 (Case 1 and Case 5) 2 seconds: P2119 (Case 2) More than 248 msec (varies with throttle position): P2119 (Case 3) 1 second: P2119 (Case 4)

ETCS relay	On
Engine speed	500 rpm or higher
Battery voltage	6.2 V or more
Throttle position sensor 1 value	Less than target throttle position

P2119 (Case 5):

ETCS relay	On
Engine speed	Less than 300 rpm
Battery voltage	6.2 V or more

TYPICAL MALFUNCTION THRESHOLDS

P1160

Throttle position sensor 1 at diagnosis start - throttle position sensor 1	Less than 1.6%
--	----------------

P2119 (Case 1 and Case 2)

Throttle motor control duty	More than 95%
-----------------------------	---------------

P2119 (Case 3, Case 4 and Case 5)

Target throttle position - throttle position sensor 1	More than 3.72% (varies with target throttle position)
---	--

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear DTCs (even if no DTCs are stored, perform the clear DTC operation) .
4. Turn the ignition switch off and wait for at least 30 seconds.
5. Turn the ignition switch to ON and turn the Techstream on.
6. Start the engine and warm it up until the engine coolant temperature reaches 75°C (167°F) or higher.
7. Depress the accelerator pedal fully and release the accelerator pedal.
8. Drive the vehicle at 10 km/h (6.25 mph) or more for 1 minute or more.

CAUTION:

When performing the confirmation driving pattern, obey all speed limits and traffic

laws.

9. Enter the following menus: Powertrain / Engine / Trouble Codes.
10. Read pending DTCs.

HINT:

- If a pending DTC is output, the system is malfunctioning.
 - If a pending DTC is not output, perform the following procedure.
11. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
 12. Input the DTC: P1160 or P2119.
 13. Check the DTC judgment result.

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	<ul style="list-style-type: none">◦ DTC judgment completed◦ System normal
ABNORMAL	<ul style="list-style-type: none">◦ DTC judgment completed◦ System abnormal
INCOMPLETE	<ul style="list-style-type: none">◦ DTC judgment not completed◦ Perform driving pattern after confirming DTC enabling conditions
N/A	<ul style="list-style-type: none">◦ Unable to perform DTC judgment◦ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

- If the judgment result shows NORMAL, the system is normal.
 - If the judgment result shows ABNORMAL, the system has a malfunction.
14. If the test result is INCOMPLETE or N/A and no DTC is output, perform a universal trip and check for permanent DTCs  .

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

FAIL-SAFE

When this DTC or other DTCs relating to Electronic Throttle Control System (ETCS) malfunctions are stored, the ECM enters fail-safe mode. During fail-safe mode, the ECM cuts the current to the throttle actuator, and the throttle valve is returned to a fully closed throttle angle by the return spring. The ECM then adjusts the engine output by controlling the fuel injection (intermittent fuel-cut) and ignition timing, in accordance with the accelerator pedal opening angle, to allow the vehicle to continue running at a minimal speed. If the accelerator pedal is depressed firmly and gently, the vehicle can be driven slowly.

Fail-safe mode continues until a pass condition is detected, and the ignition switch is then turned off.

WIRING DIAGRAM

Refer to DTC P2101  .

INSPECTION PROCEDURE

NOTICE:

- Never clean the throttle with motor body assembly.
- Inspect the fuses for circuits related to this system before performing the following inspection procedure.

HINT:

- Refer to "Data List / Active Test" [Throttle Position Commanded, Throttle Position No. 1, Throttle Motor Current, Throttle Motor Duty (Open) and Throttle Motor Duty (Close)]  .
- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air fuel ratio was lean or rich, and other data from the time the malfunction occurred.

PROCEDURE

1.	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P1160 OR P2119)
-----------	--

- Connect the Techstream to the DLC3.
- Turn the ignition switch to ON.
- Turn the Techstream on.
- Enter the following menus: Powertrain / Engine / Trouble Codes.
- Read DTCs.

Result

RESULT	PROCEED TO
DTC P1160 and/or P2119 is output	A
DTC P1160 and/or P2119 and other DTCs are output	B

HINT:

If any DTCs other than P1160 and/or P2119 are output, troubleshoot those DTCs first.

B  **GO TO DTC CHART**

A

2.	READ VALUE USING TECHSTREAM (THROTTLE POSITION)
-----------	--

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Clear the DTCs INFO.
- (e) Turn the ignition switch off and wait for at least 30 seconds.
- (f) Turn the ignition switch to ON.
- (g) Enter the following menus: Powertrain / Engine / Data List / Throttle Position No. 1 and Throttle Position Command.
- (h) Read the values displayed on the Techstream while fully depressing and releasing the accelerator pedal quickly.

Result

RESULT	PROCEED TO
Throttle Position No. 1 does not change	A
Throttle Position No. 1 changes even a little	B

HINT:

When a DTC is output, the system changes to fail-safe mode. Therefore, only use the data up until the time the DTC is stored for confirmation.

B ▶ **INSPECT THROTTLE WITH MOTOR BODY ASSEMBLY (VISUALLY CHECK THROTTLE VALVE)**

A
▼

3.	INSPECT THROTTLE WITH MOTOR BODY ASSEMBLY (RESISTANCE OF THROTTLE ACTUATOR)
-----------	--

- (a) Inspect the throttle with motor body assembly INFO.

NG ▶ **REPLACE THROTTLE WITH MOTOR BODY ASSEMBLY**

OK
▼

4.	INSPECT THROTTLE WITH MOTOR BODY ASSEMBLY (VISUALLY CHECK THROTTLE VALVE)
-----------	--

(a) Check for contamination between the throttle valve and housing. If necessary, clean the throttle with motor body assembly. Also, check that the throttle valve moves smoothly.

OK:

Throttle valve is not contaminated with foreign objects and moves smoothly.

NG ▶ **REPLACE THROTTLE WITH MOTOR BODY ASSEMBLY**

OK

5.	READ VALUE USING TECHSTREAM (THROTTLE POSITION)
-----------	--

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Clear the DTCs INFO.

(e) Turn the ignition switch off and wait for at least 30 seconds.

(f) Turn the ignition switch to ON.

(g) Enter the following menus: Powertrain / Engine / Data List / Throttle Position No. 1, Throttle Position No. 2 and Throttle Position Command.

(h) Read the values displayed on the Techstream while wiggling the ECM wire harness.

(i) Enter the following menus: Powertrain / Engine / Trouble Codes.

(j) Read DTCs.

Result

RESULT	PROCEED TO
Value in Data List changes when wire harness is wiggled, or DTC is output	A
Other than above	B

B ▶ **CHECK WHETHER DTC OUTPUT RECURS**

A

6.	REPAIR OR REPLACE HARNESS OR CONNECTOR (ECM - THROTTLE WITH MOTOR BODY ASSEMBLY)
-----------	---

(a) As the DTC was stored due to a change in the contact resistance of the connector, repair or replace the wire harness or connector.

NEXT  **END**

7.	REPLACE THROTTLE WITH MOTOR BODY ASSEMBLY
-----------	--

(a) Replace the throttle with motor body assembly  .

NEXT

8.	CHECK WHETHER DTC OUTPUT RECURS
-----------	--

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Clear the DTCs  .
- (e) Turn the ignition switch off and wait for at least 30 seconds.
- (f) Turn the ignition switch to ON.
- (g) Turn the Techstream on.
- (h) Drive the vehicle in accordance with the driving pattern described in Confirmation Driving Pattern.
- (i) Enter the following menus: Powertrain / Engine / Trouble Codes.
- (j) Read DTCs.

Result

Title: FA20 ENGINE CONTROL: SFI SYSTEM: P1235: High Pressure Fuel Pump Circuit (2013 FR-S)		

DTC	P1235	High Pressure Fuel Pump Circuit
------------	--------------	--

DESCRIPTION

The fuel pump assembly (for high pressure) is attached to the insulator, which is attached to the cylinder head cover. The pump activates according to the position of the cam on the intake side camshaft (bank 2).

The fuel pump assembly (for high pressure) increases the pressure of the fuel supplied from the fuel pump in the fuel tank to the specified fuel pressure according to the operating condition, and it feeds the fuel to the fuel delivery pipe.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P1235	When fuel pump for high pressure is operating, the diagnostic signal from injector driver (EDU) does not change (open or short in the fuel pump (for high pressure) circuit). (1 trip detection logic)	<ul style="list-style-type: none"> • Open or short in fuel pump (for high pressure) • Fuel pump assembly (for high pressure) • ECM

MONITOR STRATEGY

Related DTCs	P1235: High pressure fuel pump functional check
Required Sensors/Components (Main)	Fuel pump assembly (for high pressure)
Required Sensors/Components (Related)	Injector driver (EDU)
Frequency of Operation	Continuous
Duration	20 counts [More than 0.1 seconds (varies with engine speed)]
MIL Operation	Immediately
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever these DTCs are not present	None
Battery voltage	10.5 V or more
Elapsed time after engine start	5 seconds or more

Starter	Off
Active crank angle of high pressure fuel pump	More than 7°CA (varies with engine speed) and less than 148°CA

TYPICAL MALFUNCTION THRESHOLDS

High pressure fuel pump output signal	No falling edge detected
---------------------------------------	--------------------------

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Record the Freeze Frame Data.
4. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO.
5. Turn the ignition switch off and wait for at least 30 seconds.
6. Turn the ignition switch to ON and turn the Techstream on.
7. Based on engine speed, engine load and other freeze frame data stored in the ECM, reproduce the conditions present when the DTC was stored.
8. Enter the following menus: Powertrain / Engine / Trouble Codes.
9. Read the DTC.

HINT:

- If a DTC is output, the system is malfunctioning.
- If a DTC is not output, perform the following procedure.

10. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
11. Input the DTC: P1235.
12. Check the DTC judgment result.

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	<ul style="list-style-type: none"> ◦ DTC judgment completed ◦ System normal
ABNORMAL	<ul style="list-style-type: none"> ◦ DTC judgment completed ◦ System abnormal
INCOMPLETE	<ul style="list-style-type: none"> ◦ DTC judgment not completed ◦ Perform driving pattern after confirming DTC enabling conditions
N/A	<ul style="list-style-type: none"> ◦ Unable to perform DTC judgment ◦ Number of DTCs which do not fulfill DTC preconditions has reached ECU's memory limit

HINT:

- If the judgment result shown ABNORMAL, the system has a malfunction.
- If the judgment result shows NORMAL, the system is normal.

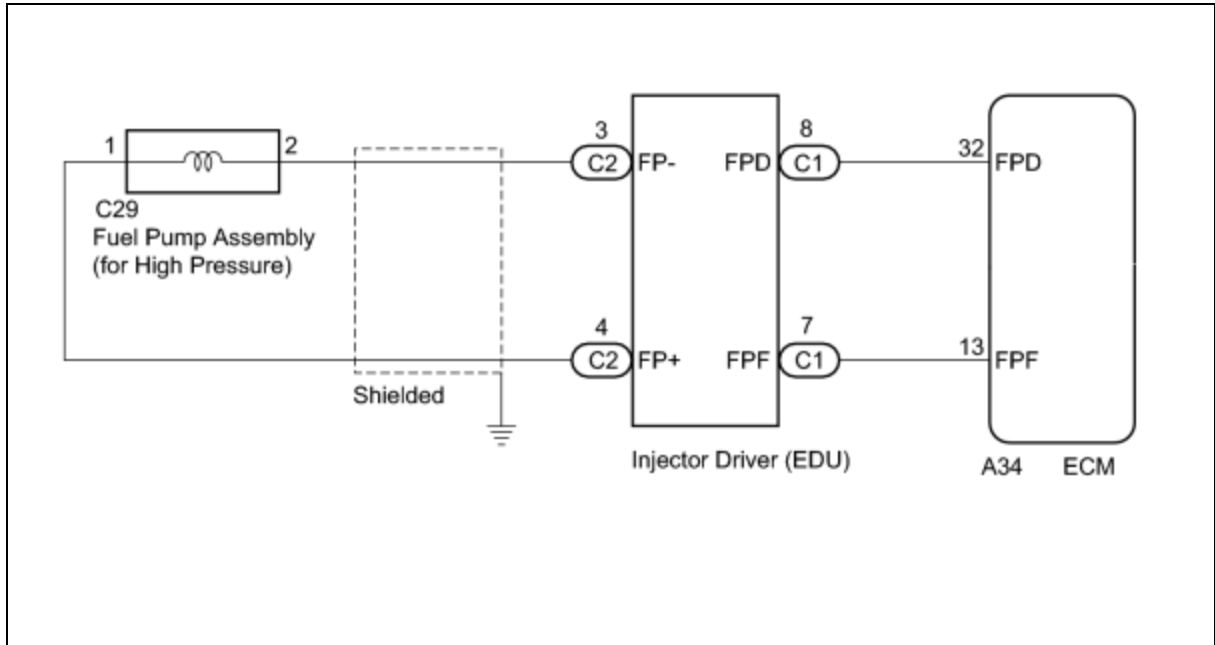

13. If the test result is INCOMPLETE or N/A and no DTC is output, perform a universal trip and

check for permanent DTCs INFO .

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

- If the current from the INJ relay is cut because DTC P062D is stored, DTC P1235 will be stored even if the fuel pump assembly (for high pressure) is normal.
- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air fuel ratio was lean or rich, and other data from the time the malfunction occurred.

PROCEDURE

1.	INSPECT FUEL PUMP ASSEMBLY (FOR HIGH PRESSURE)
-----------	---

(a) Inspect the fuel pump assembly (for high pressure) INFO .

NG ▶ **REPLACE FUEL PUMP ASSEMBLY (FOR HIGH PRESSURE)**

OK
▼

2.	CHECK HARNESS AND CONNECTOR (INJECTOR DRIVER (EDU) - FUEL PUMP ASSEMBLY)
-----------	---

- (a) Disconnect the injector driver (EDU) connector.
- (b) Disconnect the fuel pump assembly (for high pressure) connector.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
C2-3 (FP-) - C29-2	Always	Below 1 Ω
C2-4 (FP+) - C29-1	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
C2-3 (FP-) or C29-2 - Body ground	Always	10 k Ω or higher
C2-4 (FP+) or C29-1 - Body ground	Always	10 k Ω or higher

NG **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3.	CHECK HARNESS AND CONNECTOR (ECM - INJECTOR DRIVER (EDU))
-----------	--

- (a) Disconnect the ECM connector.
- (b) Disconnect the injector driver (EDU) connector.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A34-32 (FPD) - C1-8 (FPD)	Always	Below 1 Ω
A34-13 (FPF) - C1-7 (FPF)	Always	Below 1 Ω

Standard Resistance (Check for short):

--	--	--

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A34-32 (FPD) or C1-8 (FPD) - Body ground	Always	10 kΩ or higher
A34-13 (FPF) or C1-7 (FPF) - Body ground	Always	10 kΩ or higher

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR

OK
▼

4. INSPECT ECM (FPD VOLTAGE)

- (a) Turn the ignition switch to ON.
 (b) Inspect the ECM using an oscilloscope.

(1) While idling the engine, check the waveform the terminals of the ECM connector.

ECM Terminal Name	A34-32 (FPD) - Body ground
Tester Range	2 V/DIV., 20 ms./DIV.
Condition	Idling

Text in Illustration

*a	Component with harness connected (ECM)
*b	FPD Terminal Waveform Normal Waveform

Standard:
 Signal waveform appears as shown in the illustration.

HINT:

The FPD terminal waveform is output only right after the engine starts. If this DTC is stored when the engine is started from ignition switch off, the system enters fail-safe mode and the waveform is not output.

NG ► INSPECT ECM (FPD VOLTAGE)

OK
▼

5. INSPECT ECM (FPF VOLTAGE)

(a) Turn the ignition switch to ON.

(b) Inspect the ECM using an oscilloscope.

(1) While idling the engine, check the waveform the terminals of the ECM connector.

ECM Terminal Name	CH1: A34-32 (FPD) - Body ground CH2: A34-13 (FPF) - Body ground
Tester Range	2 V/DIV., 20 ms./DIV.
Condition	Idling

Text in Illustration

*a	Component with harness connected (ECM)
*b	FPD Terminal and FPF Terminal Waveform Normal Waveform
*c	FPF Terminal Waveform NG Waveform 1
*d	FPF Terminal Waveform NG Waveform 2

HINT:

***: If the FPF terminal waveform is similar to the FPF terminal waveform NG waveform 1, stop the engine and disconnect injector driver (EDU) connector. Then, while cranking the engine, check to see if there is a difference between the FPF terminal waveform and the previous one.**

Result:

FPD TERMINAL WAVEFORM	FPF TERMINAL WAVEFORM		PROCEED TO
OK	OK		A
OK	NG waveform 1*	Does not change from NG waveform 1 (FPF terminal waveform remains at GND even after disconnecting the injector driver (EDU) connector and cranking the engine)	A
		Changes to NG waveform 2 (FPF terminal waveform rises from GND after disconnecting the injector driver (EDU) connector and cranking the engine)	B
OK	NG waveform 2		B

B ► REPLACE INJECTOR DRIVER (EDU)

A ► REPLACE ECM

6. INSPECT ECM (FPD VOLTAGE)

- (a) Turn the ignition switch to ON.
- (b) Disconnect the injector driver (EDU) connector.
- (c) Inspect the ECM using an oscilloscope.

(1) While cranking the engine, check the waveform the terminals of the ECM connector.

ECM Terminal Name	A34-32 (FPD) - Body ground
Tester Range	2 V/DIV., 20 ms./DIV.
Condition	Cranking

Text in Illustration

*a	Component with harness connected (ECM)
*b	FPD Terminal Waveform Normal Waveform

Standard:

Signal waveform appears as shown in the illustration.

NG ► REPLACE ECM

OK ► REPLACE INJECTOR DRIVER (EDU)

Title: FA20 ENGINE CONTROL: SFI SYSTEM: P1449: Evaporative Emission System Lid Open Switch Stuck ON (2013 FR-S)		

DTC	P1449	Evaporative Emission System Lid Open Switch Stuck ON
------------	--------------	---

DTC SUMMARY

DTC NO.	MONITORING ITEM	MALFUNCTION DETECTION CONDITION	TROUBLE AREA	DETECTION TIMING	DETECTION LOGIC
P1449	Canister filter clogged	The canister pressure sensor output value has rapidly changed.	<ul style="list-style-type: none"> • Clogged on EVAP line (drain tube) • Clogged on EVAP line (canister pump module - drain separator) • Clogged on canister pump module (drain separator) 	While ignition switch off	2 trip

DESCRIPTION

The description can be found in EVAP (Evaporative Emission) System [INFO](#) .

MONITOR DESCRIPTION

The ECM monitors for canister filter in the canister pump module. The pressure is checked every 5 seconds and if the pressure difference becomes more than threshold, stops the EVAP system monitor. The ECM then illuminates the MIL and stores the DTC (2 trip detection logic).

MONITOR STRATEGY

Related DTC	P1449: Evaporative Emission System Lid Open Switch Stuck ON
Required Sensors/Components (Main)	Purge valve Canister pump module
Required Sensors/Components (Related)	-
Frequency of Operation	Continuous
Duration	6 seconds
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs not stored	None
Battery voltage	10.9 V or higher
Elapsed time after engine	20 seconds or more
ELCM vacuum pump	Not active
ELCM switching valve	Off (Open)
All of the following condition are met	A and B
A. Pressure difference in 0.064 seconds	Less than 0.66661 kPa [5 mmHg]
B. Period to satisfy above condition	18.12 seconds or more

TYPICAL MALFUNCTION THRESHOLDS

Pressure difference in 5 seconds	1.21 kPa [9 mmHg] or more
----------------------------------	---------------------------

MONITOR RESULT

Refer to Checking Monitor Status  .

CONFIRMATION DRIVING PATTERN

NOTICE:

- The Evaporative System Check (Automatic Mode) consists of 5 steps performed automatically by the Techstream. It takes a maximum of approximately 24 minutes.
- Do not perform the Evaporative System Check when the fuel tank is more than 90% full because the cut-off valve may be closed, making the fuel tank leak check unavailable.
- Do not run the engine during this operation.
- When the temperature of the fuel is 35°C (95°F) or higher, a large amount of vapor forms and any check results become inaccurate. When performing the Evaporative System Check, keep the fuel temperature below 35°C (95°F).

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear DTCs (even if no DTCs are stored, perform the clear DTC procedure).
4. Turn the ignition switch off and wait for at least 30 seconds.
5. Turn the ignition switch to ON and turn the Techstream on.
6. Enter the following menus: Powertrain / Engine / Utility / Evaporative System Check / Automatic Mode.
7. After the Evaporative System Check is completed, check for All Readiness by entering the following menus: Powertrain / Engine / Utility / All Readiness.
8. Input the DTC: P1449.
9. Check the DTC judgment result.

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	<ul style="list-style-type: none"> ◦ DTC judgment completed ◦ System normal
ABNORMAL	<ul style="list-style-type: none"> ◦ DTC judgment completed ◦ System abnormal

INCOMPLETE	<ul style="list-style-type: none"> o DTC judgment not completed o Perform driving pattern after confirming DTC enabling conditions
N/A	<ul style="list-style-type: none"> o Unable to perform DTC judgment o Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

- o If the judgment result shows NORMAL, the system is normal.
- o If the judgment result shows ABNORMAL, the system has a malfunction.

10. If the judgment result is INCOMPLETE or N/A and no pending DTC is output, perform a universal trip and check for permanent DTCs .

HINT:

- o If a permanent DTC is output, the system is malfunctioning.
- o If no permanent DTC is output, the system is normal.

INSPECTION PROCEDURE

PROCEDURE

1.	INSPECT EVAP HOSE (DRAIN TUBE)
-----------	---------------------------------------

(a) Check for filter blockage in the drain tube.

OK:

OK: No blockages in the drain tube.

NG  **REPLACE EVAP HOSE (DRAIN TUBE)**

OK

2.	INSPECT EVAP HOSE (CANISTER PUMP MODULE - DRAIN SEPARATOR)
-----------	---

(a) Check for filter blockage in the EVAP purge line between the canister pump module and drain separator.

OK:

No blockages in the EVAP purge line between the canister pump module and drain separator.

NG  **REPLACE EVAP HOSE (CANISTER PUMP MODULE - DRAIN SEPARATOR)**

OK

3.	INSPECT DRAIN SEPARATOR
-----------	--------------------------------

(a) Check for filter blockage in the drain separator.

OK:

No blockages in the drain separator.

NG ► **REPLACE DRAIN SEPARATOR**

OK

4.	REPLACE CANISTER PUMP MODULE
-----------	-------------------------------------

(a) Replace the canister pump module  .

NEXT ► **PERFORM EVAP SYSTEM**

5.	REPLACE EVAP HOSE (DRAIN TUBE)
-----------	---------------------------------------

NEXT ► **PERFORM EVAP SYSTEM**

6.	REPLACE EVAP HOSE (CANISTER PUMP MODULE - DRAIN SEPARATOR)
-----------	---

NEXT ► **PERFORM EVAP SYSTEM**

7.	REPLACE DRAIN SEPARATOR
-----------	--------------------------------

(a) Replace the drain separator.

NEXT

--	--

8. PERFORM EVAP SYSTEM

NOTICE:

- The Evaporative System Check (Automatic Mode) consists of 5 steps performed automatically by the Techstream. It takes a maximum of approximately 24 minutes.
- Do not perform the Evaporative System Check when the fuel tank is more than 90% full because the cut-off valve may be closed, making the fuel tank leak check unavailable.
- Do not run the engine in this step.
- When the temperature of the fuel is 35°C (95°F) or more, a large amount of vapor forms and any check results become inaccurate. When performing an Evaporative System Check, keep the fuel temperature below 35°C (95°F).

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Clear the DTCs  .
- (e) Enter the following menus: Powertrain / Engine / Utility / Evaporative System Check / Automatic Mode.
- (f) After the Evaporative System Check is completed, check for pending DTCs by entering the following menus: Powertrain / Engine / Trouble Codes.

HINT:

If no pending DTCs are found, the repair has been successfully completed.

NEXT  **END**

Model Year: 2013	Model: FR-S	Doc ID: RM0000021140ENX
Title: FA20 ENGINE CONTROL: SFI SYSTEM: P1603: Engine Stall History (2013 FR-S)		

DTC	P1603	Engine Stall History
------------	--------------	-----------------------------

DESCRIPTION

After starting the engine, this DTC is stored when the engine stops without the ignition switch being operated.

Using the Techstream, the conditions present when the DTC was stored can be confirmed by referring to the freeze frame data. Freeze frame data records engine conditions when a malfunction occurs. This information can be useful when troubleshooting.

It is necessary to check if the vehicle has run out of fuel before performing troubleshooting, as this DTC is also stored when the engine stalls due to running out of fuel.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P1603	After monitoring for startability problems (P1604) finishes and starting the engine, with the engine running, the engine stops (the engine speed drops to 300 rpm or less) without the ignition switch being operated. (1 trip detection logic)	<ul style="list-style-type: none"> • Air leak in intake system • Purge valve • Brake booster • Mass air flow meter • Engine coolant temperature sensor • Thermostat • Power supply circuit (purge valve, air fuel ratio sensor, fuel injector assembly, ignition coil assembly) • Fuel pump assembly) • Fuel pump control circuit (low pressure side) • Fuel line • PCV valve and hose • Camshaft timing oil control valve • Knock sensor • Ignition system • Air conditioning system • Power steering system • Electrical load signal system • Charging system • Automatic

- transmission system
- Park/neutral position switch assembly
- ECM
- Wire harness or connector
- Engine immobiliser system

INSPECTION PROCEDURE

HINT:

- In contrast to normal malfunction diagnosis for components, circuits and systems, DTCs P1603 is used to determine the malfunctioning area from the problem symptoms and freeze frame data when the user mentions problems such as engine stall.

As these DTCs can be stored as a result of certain user actions, even if these DTCs are output, if the customer makes no mention of problems, clear these DTCs without performing any troubleshooting and return the vehicle to the customer.

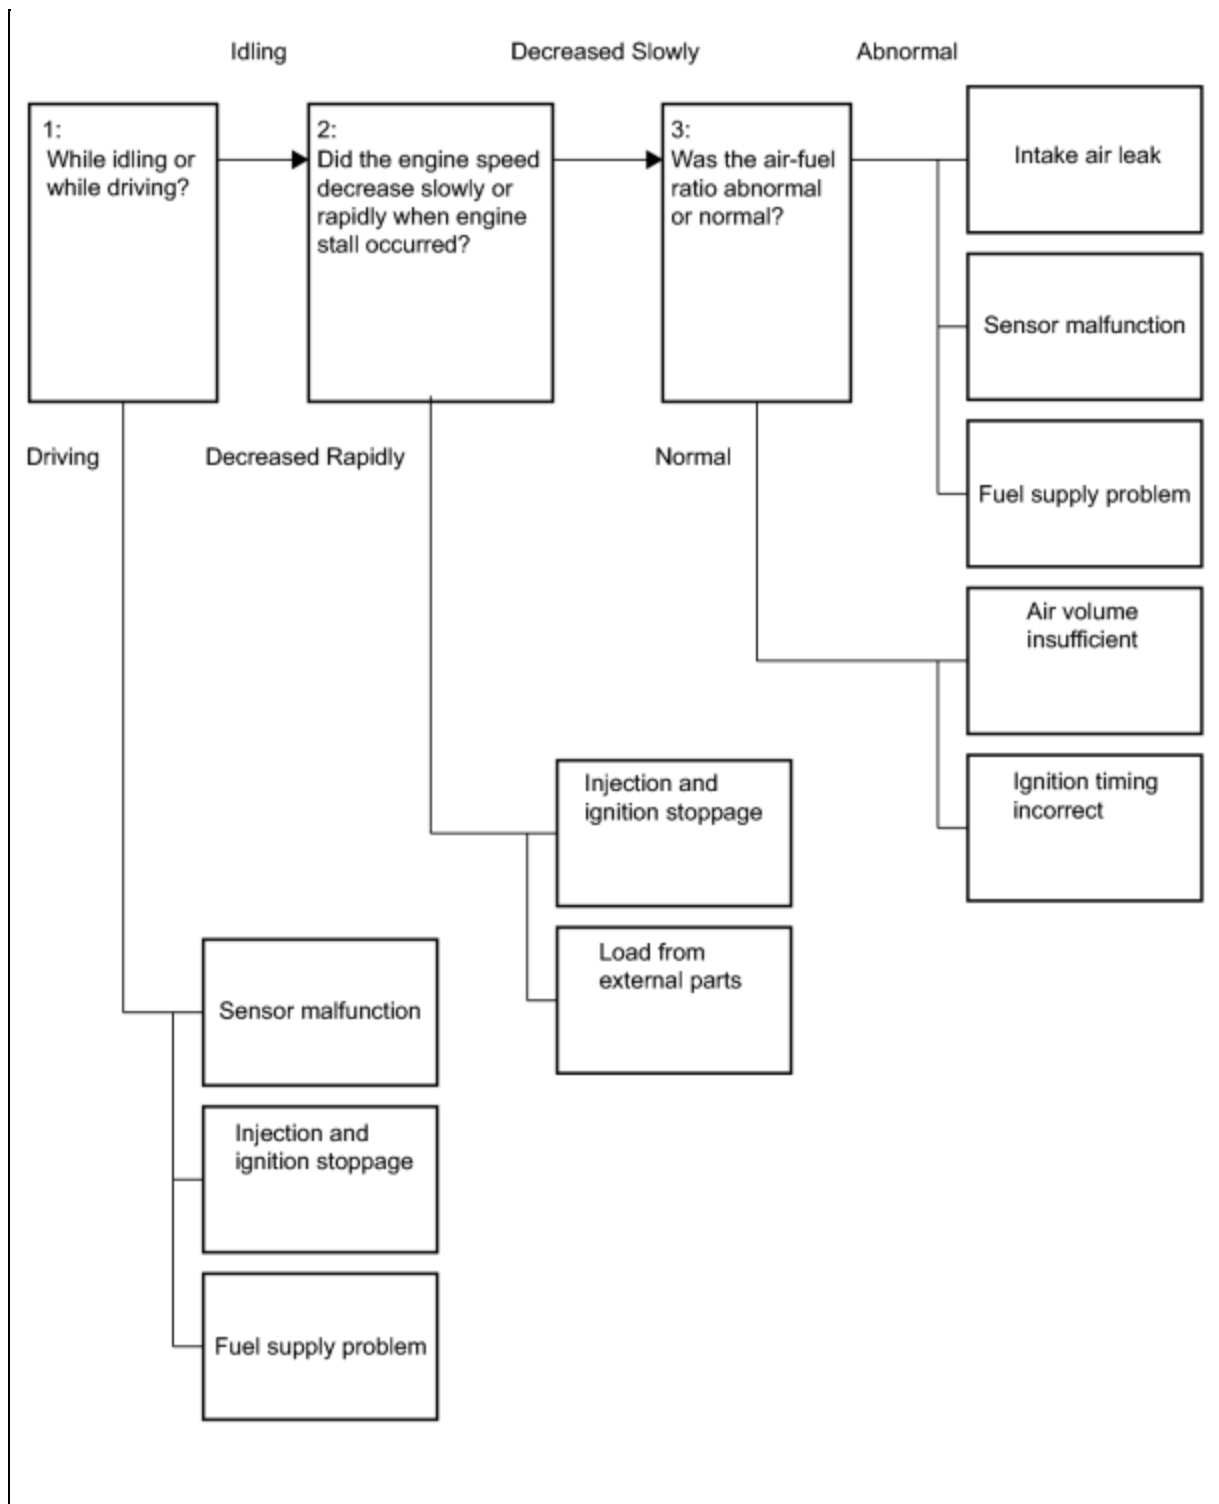

- If any other DTCs are output, perform troubleshooting for those DTCs first.
- Use any information from the customer problem analysis about the condition of the vehicle at the time when the problem occurred (how the engine stopped, conditions when the engine was restarted, etc.) as a reference.

SYMPTOM	SUSPECTED AREA
Engine vibration occurs and engine stops	Air-fuel ratio abnormal
Engine stops with no engine vibration	Ignition system, injection stoppage, high load from external parts
Engine can be started with accelerator pedal depressed	Insufficient air volume
Rough idling after engine started	Air-fuel ratio abnormal, abnormal combustion

- Read freeze frame data using the Techstream. Freeze frame data records engine conditions when a malfunction occurs. This information can be useful when troubleshooting.
- When confirming the freeze frame data, be sure to check all 5 sets of freeze frame data .
- When confirming freeze frame data, if there are multiple items related to the cause of the malfunction, perform troubleshooting for all related items.
- Try to operate the vehicle under the conditions recorded in the freeze frame data which were present when the malfunction occurred. Confirm the data at this time and the data when the engine is idling (engine warmed up, no load, and shift lever in D, N or neutral) and compare these data with the freeze frame data.
- Inspections take into account the fact that the malfunction may not have reoccurred and place emphasis on checking the vehicle conditions present at the time when the malfunction occurred.
- When performing inspections, jiggle the relevant wire harnesses and connectors in an attempt to reproduce malfunctions that do not always occur.

Inspection flow:

Using freeze frame data, narrow down the parts to be inspected according to the vehicle conditions at the time when the malfunction occurred.

1:

- If the engine stalled when the intake air volume was low (during idling or deceleration), there may be a decrease in torque due to an incorrect air-fuel ratio, etc.
- If the engine stalled when the intake air volume was high (during driving or acceleration), there may be a major malfunction such as continuous misfire due to ignition stoppage, fuel injection stoppage, etc. and the torque drops to zero.

2:

- If the engine speed decreased slowly, there may have been a decrease in torque due to an air-fuel ratio that was incorrect (by approximately 20 to 30%), etc.
- If the engine speed decreased rapidly, there may have been a malfunction such as when the engine misfires almost continuously due to ignition stoppage, fuel injection stoppage, etc., or when the external load increases due to an external part malfunctioning.

3:

- If the air-fuel ratio is abnormal, there may have been an intake air leak, sensor malfunction, or fuel supply problem.
- If the vehicle was normal, the air volume may have been insufficient or the ignition timing may have been incorrect.

P1603 inspection flow: Narrow down the parts to be inspected according to the vehicle conditions at the time when the malfunction occurred (freeze frame data).

VEHICLE STATE	ENGINE SPEED	SUSPECTED AREA		PRIMARY PARTS TO INSPECT	PROCEDURE
Idling or decelerating	Slowly decreases and engine stalls	Ignition system abnormal	Igniter abnormal	<ul style="list-style-type: none"> • Power supply circuit • Ignition coil assemblies • Spark plug 	10, 38, 52
		Air-fuel ratio abnormal	Air suction	<ul style="list-style-type: none"> • Intake system connections • Purge valve system • Brake booster 	5 to 9
			Sensor malfunction (value from sensor too lean)	<ul style="list-style-type: none"> • Mass air flow meter • Engine coolant temperature sensor • Air fuel ratio sensor system • Thermostat 	11 to 23
			Sensor malfunction (value from sensor too rich)		39 to 51
			Fuel supply problem	<ul style="list-style-type: none"> • Fuel pump control circuit • Purge valve system • Fuel line • ECM 	24 to 37
		Intake air volume insufficient	Problem with air passage	<ul style="list-style-type: none"> • Intake system connections • Mass air flow meter • Brake booster • PCV valve and hose • Purge valve system 	53 to 55

			Excessive valve overlap	<ul style="list-style-type: none"> • Camshaft timing oil control valve 	56 to 59
		Ignition timing incorrect	Does not operate as expected	<ul style="list-style-type: none"> • Knock sensor • Engine coolant temperature sensor • Mass air flow meter 	60 to 64
	Rapidly decreases and engine stalls*	Ignition and injection stops (electrical system malfunction)	Power temporarily cut	<ul style="list-style-type: none"> • Power supply circuit (fuel injector assembly (for port injection), ignition coil assembly) 	65, 66
		External part malfunctioning	Increase in load	<ul style="list-style-type: none"> • Air conditioning system • Electrical load signal system • Power steering system • Automatic transmission system • Park/neutral position switch assembly 	67 to 69
Accelerating	-	Crankshaft position sensor or VVT sensor malfunction	Power temporarily cut	<ul style="list-style-type: none"> • Check DTCs 	1
		Mass air flow meter	Foreign matter adhesion	<ul style="list-style-type: none"> • Mass air flow meter 	70 to 73
		Ignition and injection stops (electrical system malfunction)	Power temporarily cut	<ul style="list-style-type: none"> • Power supply circuit (fuel injector assembly (for port injection), ignition coil assembly) 	74, 75
		Fuel supply problem	Fuel leak, clog	<ul style="list-style-type: none"> • Fuel pump control circuit • Fuel line 	76 to 80

*: If the engine stalls immediately after the injection method is switched from port injection to direct injection, the injector driver (EDU) may be malfunctioning.

NOTICE:

Inspect the fuses for circuits related to this system before performing the following inspection

procedure.

PROCEDURE

1. CHECK FOR ANY OTHER DTCS OUTPUT

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Read the DTCS .

Result

RESULT	PROCEED TO
Only DTC P1603 is output	A
DTCs other than P1603 are output	B

HINT:

If any DTCs other than P1603 are output, troubleshoot those DTCs first.

B  [GO TO DTC CHART](#)

A

2. CHECK FREEZE FRAME DATA

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Using the Techstream, confirm the vehicle conditions recorded in the freeze frame data which were present when the DTC was stored .

OK:

Immobiliser Fuel Cut is OFF.

Result

RESULT	PROCEED TO
Abnormal	A
Normal	B

B  [READ FREEZE FRAME DATA](#)

A

3.	CHECK ENGINE IMMOBILISER SYSTEM
-----------	--

- (a) Connect the Techstream to the DLC3.
- (b) Start the engine.
- (c) Idle the engine
- (d) Enter the following menus: Powertrain / Engine / Data List / Immobiliser Communication and Immobiliser Fuel Cut.
- (e) Check the Data List indication.

Result

DATA LIST ITEM	RESULT
Immobiliser Communication	ON
Immobiliser Fuel Cut	OFF

NG **CHECK ENGINE IMMOBILISER SYSTEM**

OK

4.	READ FREEZE FRAME DATA
-----------	-------------------------------

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Using the Techstream, confirm the vehicle conditions recorded in the freeze frame data which were present when the DTC was stored INFO.

Result

PROBLEM SYMPTOM	FREEZE FRAME DATA ITEM			SUSPECTED AREA	PROCEED TO
	CLOSED THROTTLE POSITION SW	ENGINE SPEED	TOTAL OF SHORT FT AND LONG FT		
				<ul style="list-style-type: none"> Air suction Sensor 	

When idling or decelerating, engine speed slowly decreases and engine stalls	All 5 sets of freeze frame data are ON	Decreases slowly*1	All 5 sets of freeze frame data are +15% or more*2	malfunction (value from sensor too lean) • Fuel supply problem	A
			At least 1 of the 5 sets of freeze frame data is -15% or less*3	Sensor malfunction (value from sensor too rich)	B
			All 5 sets of freeze frame data are from -15% to +15%	• Intake air volume insufficient • Ignition timing incorrect	C
When idling or decelerating, engine speed rapidly decreases and engine stalls		Decreases rapidly*1	-	• Injection stoppage, ignition stoppage • Load from external parts	D
When accelerating or driving at constant speed, engine stalls	At least one is OFF	-	-	• Sensor malfunction • Injection stoppage, ignition stoppage • Fuel supply problem	E

Rapid Decrease in Engine Speed

HINT:

- *1: A rapid decrease in engine speed may be caused by an electrical fault in the shared wiring of all or a number of cylinders, an increase in load from external parts, etc. The engine speed is considered to have decreased rapidly if either of the following conditions applies.

Otherwise, the engine speed is considered to have decreased slowly.

- a. In the freeze frame data, the decrease in engine speed from #3 to #5 is 400 rpm or more.
 - b. In the freeze frame data, the engine speed at #5 is 120 rpm or less.
- If the vehicle speed is 30 km/h or less and the difference between Engine Speed and SPD (NT) is 100 rpm or less, inspect the automatic transmission. (Depending on the rate of vehicle deceleration, the engine speed may have decreased due to the A/T lock-up release being late.)
 - *2: When a DTC is stored, feedback compensation increases because the air-fuel ratio is determined to be lean.
 - *3: When a DTC is stored, feedback compensation decreases because the air-fuel ratio is determined to be rich.

B ► CHECK IGNITION SYSTEM

C ► CHECK IGNITION SYSTEM

D ► CHECK TERMINAL VOLTAGE (FUEL INJECTOR POWER SOURCE)

E ► CHECK FREEZE FRAME DATA

A

5. CHECK INTAKE SYSTEM

(a) Check for air leakage in the intake system [vacuum hose disconnection, cracks, damaged

gaskets, etc.] **INFO** .

HINT:

- If the accelerator pedal is released after racing the engine, the inspection is easier to perform because the vacuum inside the intake pipes increases and the air suction noise becomes louder.
- If Short FT and Long FT are largely different from the normal values when idling (the intake air volume is small) and almost the same as the normal values when racing the engine (the intake air volume is high), air leakage may be present.

OK:

There is no air leakage.

NG ▶ REPAIR OR REPLACE INTAKE SYSTEM

OK

6.	CHECK PURGE VALVE
-----------	--------------------------

(a) Disconnect the purge hose (on the canister side) of the purge valve.

- (b) Start the engine.
- (c) Idle the engine.
- (d) Disconnect the connector of the purge valve.
- (e) Check if air flows through the purge valve.
 - OK:
Air does not flow.
- (f) Connect the connector of the purge valve.
- (g) Connect the purge hose of the purge valve.

HINT:

When this inspection is performed, the MIL may illuminate. After finishing the inspection, check and clear DTCs **INFO** .

OK
▼

7. READ FREEZE FRAME DATA

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Using the Techstream, confirm the vehicle conditions recorded in the freeze frame data which were present when the DTC was stored **INFO** .

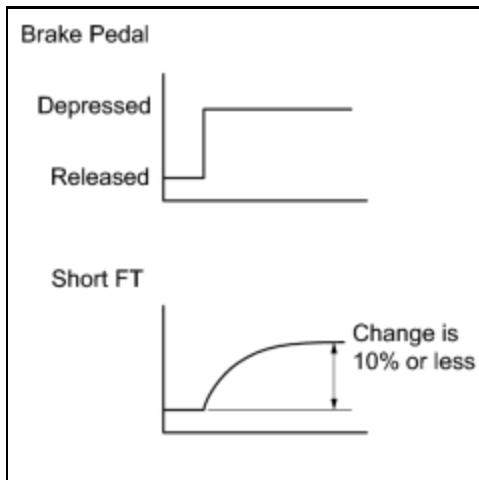

Result

FREEZE FRAME DATA ITEM	RESULT	SUSPECTED AREA	PROCEED TO
Stop Light Switch	At least 1 of the 5 sets of freeze frame data is ON	Air suction from brake booster	A
	All 5 sets of freeze frame data are OFF	-	B

B ▶ CHECK IGNITION SYSTEM

A
▼

8. READ VALUE USING TECHSTREAM (SHORT FT)

- (a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Start the engine and warm it up until the engine coolant temperature stabilizes.

HINT:

The A/C switch and all accessory switches should be off.

(d) Idle the engine.

(e) Using the Techstream, read the value of Short FT #1 in the Data List while depressing the brake pedal.

Standard:

Short FT #1 changes by +10% or less.

HINT:

When air leakage from the brake booster is present, the feedback compensation increases because the air-fuel ratio becomes lean.

NG  **INSPECT BRAKE BOOSTER ASSEMBLY**

OK

9.	PERFORM DRIVE TEST
-----------	---------------------------

(a) Connect the Techstream to the DLC3.

(b) Start the engine and warm it up until the engine coolant temperature stabilizes.

HINT:

The A/C switch and all accessory switches should be off.

(c) Idle the engine.

(d) Using the Techstream, read the value of Short FT #1 in the Data List.

Standard:

DATA LIST	CONDITION	SPECIFIED CONDITION
Short FT #1 + Long FT #1	The conditions of the vehicle are matched to those present when the problem occurs	-15 to +15%

NG  **INSPECT BRAKE BOOSTER ASSEMBLY**

OK

10.	CHECK IGNITION SYSTEM
------------	------------------------------

(a) Perform ignition system On-vehicle Inspection  .

**REPAIR OR REPLACE MALFUNCTIONING
NG  PARTS, COMPONENT AND AREA**

OK

11.	READ FREEZE FRAME DATA
------------	-------------------------------

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Using the Techstream, confirm the vehicle conditions recorded in the freeze frame data which were present when the DTC was stored  .

Result

FREEZE FRAME DATA ITEM	RESULT	SUSPECTED AREA	PROCEED TO
Calculate Load	Below 90% of the current value of the vehicle*1	Mass air flow meter	A
AFS Voltage B1S1	2.2 V or higher*2	<ul style="list-style-type: none"> Air fuel ratio sensor Wire harness or connector 	B

HINT:

- *1: If the mass air flow meter is malfunctioning and incorrectly measures the pressure to be less than the actual intake manifold pressure, the freeze frame data will show a low engine load value.
- *2: If the air fuel ratio sensor is malfunctioning and constantly outputs a value indicating the air-fuel ratio is lean, the actual air-fuel ratio will become rich and the engine may stall.

**B  PERFORM ACTIVE TEST USING TECHSTREAM
(CONTROL THE INJECTION VOLUME FOR A/F SENSOR)**

A

12.	CHECK MASS AIR FLOW METER
------------	----------------------------------

- (a) Remove the mass air flow meter.
- (b) Check for foreign matter in the airflow passage of the mass airflow meter.

Result

RESULT	PROCEED TO
Visible foreign matter is not present	A
Visible foreign matter is present	B

B **REPLACE MASS AIR FLOW METER**

A

13.	CHECK HARNESS AND CONNECTOR (ECM - MASS AIR FLOW METER)
------------	--

- (a) Disconnect the ECM.
- (b) Disconnect the mass air flow meter connector.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A33-22 (VG) - C16-5 (VG)	Always	Below 1 Ω
A33-29 (E2G) - C16-4 (E2G)	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A33-22 (VG) or C16-5 (VG) - Body ground	Always	10 k Ω or higher
A33-29 (E2G) or C16-4 (E2G) - Body ground	Always	10 k Ω or higher

HINT:

- Jiggle the wire harness and connector to increase the likelihood of detecting malfunctions that do not always occur.
- Make sure there is not an excessive amount of force applied to the wire harness.

OK

14.	PERFORM DRIVE TEST
------------	---------------------------

- (a) Connect the Techstream to the DLC3.
- (b) Start the engine and warm it up until the engine coolant temperature stabilizes.

HINT:

The A/C switch and all accessory switches should be off.

- (c) Idle the engine.
- (d) Using the Techstream, read the value of Calculate Load in the Data List.

Standard:

DATA LIST	SPECIFIED CONDITION
Calculate Load	90 to 110% of the current value of the vehicle

Result

RESULT	PROCEED TO
Abnormal	A
Normal	B

B  **READ FREEZE FRAME DATA**

A  **REPLACE MASS AIR FLOW METER**

15.	PERFORM ACTIVE TEST USING TECHSTREAM (CONTROL THE INJECTION VOLUME FOR A/F SENSOR)
------------	---

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Start the engine, turn off all accessory switches and warm up the engine until the engine coolant temperature stabilizes.

(d) Idle the engine.

(e) Enter the following menus: Powertrain / Engine / Active Test / Control the Injection Volume for A/F Sensor.

(f) Read the output voltage from the air fuel ratio sensor when increasing and decreasing the fuel injection volume.

Standard:

TECHSTREAM DISPLAY	SPECIFIED CONDITION
Control the Injection Volume for A/F Sensor (+12.5%)	Air fuel ratio sensor output voltage is below 2.0 V
Control the Injection Volume for A/F Sensor (-12.5%)	Air fuel ratio sensor output voltage is higher than 2.4 V

Result

RESULT	PROCEED TO
Abnormal	A
Normal	B

HINT:

The air fuel ratio sensor has an output delay of a few seconds and the heated oxygen sensor has a maximum output delay of approximately 20 seconds.

B ▶ READ FREEZE FRAME DATA

A
▼

16. CHECK TERMINAL VOLTAGE (AIR FUEL RATIO SENSOR POWER SOURCE)

(a) Disconnect the air fuel ratio sensor connector.

(b) Turn ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
C14-2 (+B) - Body ground	Ignition switch ON	11 to 14 V

Text in Illustration

*a	Front view of wire harness connector (to Air Fuel Ratio Sensor)
----	--

HINT:

- Jiggle the wire harness and connector to increase the likelihood of detecting malfunctions that do not always occur.
- Make sure there is not an excessive amount of force applied to the wire harness.

NG REPAIR AIR FUEL RATIO SENSOR POWER SOURCE CIRCUIT

OK

17. CHECK HARNESS AND CONNECTOR (AIR FUEL RATIO SENSOR - ECM)

(a) Disconnect the ECM.

(b) Disconnect the air fuel ratio sensor connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A34-18 (A1A-) - C14-4 (A1A-)	Always	Below 1 Ω
A34-19 (A1A+) - C14-3 (A1A+)	Always	Below 1 Ω
A34-5 (HA1A) - C14-2 (HA1A)	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A34-18 (A1A-) or C14-4 (A1A-) - Body ground	Always	10 k Ω or higher
A34-19 (A1A+) or C14-3 (A1A+) - Body ground	Always	10 k Ω or higher
A34-5 (HA1A) or C14-2 (HA1A) - Body ground	Always	10 k Ω or higher

HINT:

- Jiggle the wire harness and connector to increase the likelihood of detecting malfunctions that do not always occur.
- Make sure there is not an excessive amount of force applied to the wire harness.

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

18.	READ FREEZE FRAME DATA
------------	-------------------------------

- Connect the Techstream to the DLC3.
- Turn the ignition switch to ON.
- Using the Techstream, confirm the vehicle conditions recorded in the freeze frame data which were present when the DTC was stored  .

Result

FREEZE FRAME DATA ITEM	RESULT	PROCEED TO
Initial Engine Coolant Temp, Ambient Temp for A/C, Initial Intake Air Temp	Difference in temperature between each item is less than 10°C*1	A
	Difference in temperature between each item is 10°C or more*2	B

HINT:

- *1: A long time had elapsed after stopping the engine.
- *2: A long time had not elapsed after stopping the engine.

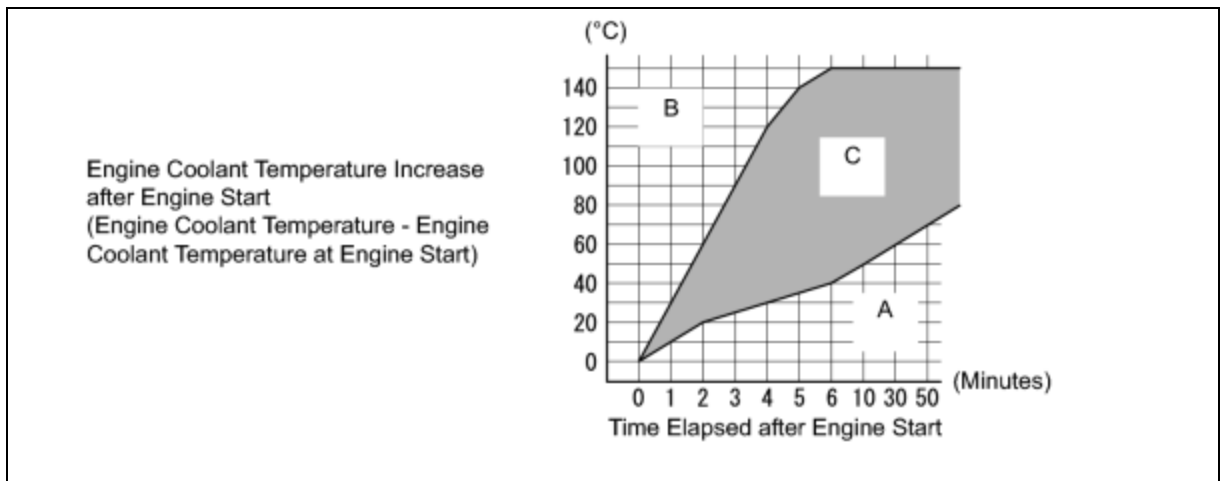

B ▶ READ FREEZE FRAME DATA

A

19. READ FREEZE FRAME DATA

- Connect the Techstream to the DLC3.

B ► CHECK FOR INTERMITTENT PROBLEMS

A

32.	CHECK CONNECTOR CONNECTION CONDITION (ECM)
------------	---

(a) Check the ECM connector connection condition.

HINT:

- Jiggle the wire harness and connector to increase the likelihood of detecting malfunctions that do not always occur.
- Make sure there is not an excessive amount of force applied to the wire harness.

NG ► RECONNECT CONNECTOR CORRECTLY

33.	PERFORM ACTIVE TEST USING TECHSTREAM (CONTROL THE FUEL PUMP DUTY)
------------	--

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Powertrain / Engine / Active Test / Control the Fuel Pump Duty.
- (e) When performing the Active Test, check for an operating sound from the fuel pump.

Standard:

CONTROL THE FUEL PUMP DUTY	SPECIFIED CONDITION
25 or 80%	Operating sound heard
OFF	Operating sound not heard

Result

RESULT	PROCEED TO
Abnormal	A
Normal	B

HINT:

- Jiggle the wire harness and connector to increase the likelihood of detecting malfunctions that do not always occur.
- While performing the Active Test, make sure that there is no fuel leakage from the pipes, no signs that fuel has leaked, and no fuel smell.
- If the fuel pump operating noise is abnormal, proceed to step 34.

A

34.	INSPECT FUEL PUMP ASSEMBLY
------------	-----------------------------------

- (a) Inspect the fuel pump assembly  .

35.	CHECK FUEL SYSTEM
------------	--------------------------

(a) Check the fuel system.

- Check the fuel pump operation.
- Check the fuel leaks.
- Check the fuel pressure (low pressure side).
- Check the fuel pressure (high pressure side).
- Perform the Active Test [D-4S (Fuel Cut)].

HINT:

For the fuel system On-vehicle Inspection, refer to the following procedures .

Result

RESULT	PROCEED TO
Abnormal	A
Normal	B

B  CHECK FOR INTERMITTENT PROBLEMS

A

36.	CHECK FUEL SYSTEM
------------	--------------------------

(a) Check for foreign matter such as iron particles around the fuel pump assembly (fuel pump, fuel pump filter and inside the fuel tank), and for signs that the fuel pump was stuck.

Result

RESULT	PROCEED TO
There is foreign matter or signs that fuel pump was stuck	A
There is no foreign matter and no signs that fuel pump was stuck	B

HINT:

If there is foreign matter such as iron particles on the fuel pump, fuel filter or fuel tank, remove the foreign matter.

B  REPAIR OR REPLACE FUEL SYSTEM

A

37. CHECK FUEL SYSTEM

(a) Check the fuel system.

- Check the fuel pump operation.
- Check the fuel leaks.
- Check the fuel pressure (low pressure side).
- Check the fuel pressure (high pressure side).
- Perform the Active Test [D-4S (Fuel Cut)].

HINT:

For the fuel system On-vehicle Inspection, refer to the following procedures  .

NG  **REPAIR OR REPLACE MALFUNCTIONING PARTS, COMPONENT AND AREA**

OK  **END**

38. CHECK IGNITION SYSTEM

(a) Perform ignition system On-vehicle Inspection  .

NG  **REPAIR OR REPLACE MALFUNCTIONING PARTS, COMPONENT AND AREA**

OK

39. READ FREEZE FRAME DATA

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Using the Techstream, confirm the vehicle conditions recorded in the freeze frame data which were present when the DTC was stored  .

Result

FREEZE FRAME DATA ITEM	RESULT	SUSPECTED AREA	PROCEED TO
Calculate Load	110% or more of the current value of the vehicle*1	Mass air flow meter	A
AFS Voltage B1S1	Below 2.4 V*2	<ul style="list-style-type: none"> Air fuel ratio sensor Harness and connector 	B
Both freeze frame data items listed above	Values are other than above	-	C

HINT:

- *1: If the mass air flow meter is malfunctioning and incorrectly measures the intake air volume to be higher than the actual volume of air flowing through the intake manifold, the freeze frame data will show a high engine load value.
- *2: As the air fuel ratio sensor output is low before the sensor warms up, the value at that time cannot be used for diagnosis. If the air fuel ratio sensor is malfunctioning and constantly outputs a value indicating the air-fuel ratio is rich, the actual air-fuel ratio will become lean and the engine may stall.

B ► PERFORM ACTIVE TEST USING TECHSTREAM (CONTROL THE INJECTION VOLUME FOR A/F SENSOR)

C ► READ FREEZE FRAME DATA

A ▼

40.	CHECK MASS AIR FLOW METER
------------	----------------------------------

- Remove the mass airflow meter.
- Check for foreign matter in the airflow passage of the mass air flow meter.

Result

RESULT	PROCEED TO
Visible foreign matter is not present	A
Visible foreign matter is present	B

B ► REPLACE MASS AIR FLOW METER

A

41.	CHECK HARNESS AND CONNECTOR (ECM - MASS AIR FLOW METER)
------------	--

- (a) Disconnect the mass air flow meter connector.
- (b) Disconnect the ECM connector.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A33-22 (VG) - C16-5 (VG)	Always	Below 1 Ω
A33-29 (E2G) - C16-4 (E2G)	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A33-22 (VG) or C16-5 (VG) - Body ground	Always	10 k Ω or higher
A33-29 (E2G) or C16-4 (E2G) - Body ground	Always	10 k Ω or higher

HINT:

- Jiggle the wire harness and connector to increase the likelihood of detecting malfunctions that do not always occur.
- Make sure there is not an excessive amount of force applied to the wire harness.

**REPAIR OR REPLACE HARNESS OR
NG CONNECTOR**

OK

42.	PERFORM DRIVE TEST
------------	---------------------------

- (a) Connect the Techstream to the DLC3.
- (b) Start the engine and warm it up until the engine coolant temperature stabilizes.

HINT:

The A/C switch and all accessory switches should be off.

(c) Idle the engine.

(d) Using the Techstream, read the value of Calculate Load in the Data List.

Standard:

DATA LIST	SPECIFIED CONDITION
Calculate Load	90 to 110% of the current value of the vehicle

NG  **REPLACE MASS AIR FLOW METER**

OK

43.	PERFORM ACTIVE TEST USING TECHSTREAM (CONTROL THE INJECTION VOLUME FOR A/F SENSOR)
-----	---

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Start the engine, turn off all accessory switches and warm up the engine until the engine coolant temperature stabilizes.

(d) Idle the engine.

(e) Enter the following menus: Powertrain / Engine / Active Test / Control the Injection Volume for A/F Sensor.

(f) Read the output voltage from the air fuel ratio sensor when increasing and decreasing the fuel injection volume.

Standard:

TECHSTREAM DISPLAY	SPECIFIED CONDITION
Control the Injection Volume for A/F Sensor	

(+12.5%)	Air fuel ratio sensor output voltage is below 2.0 V
Control the Injection Volume for A/F Sensor (-12.5%)	Air fuel ratio sensor output voltage is higher than 2.4 V

Result

RESULT	PROCEED TO
Abnormal	A
Normal	B

HINT:

The air fuel ratio sensor has an output delay of a few seconds and the heated oxygen sensor has a maximum output delay of approximately 20 seconds.

B ▶ READ FREEZE FRAME DATA

A

44.	CHECK TERMINAL VOLTAGE (AIR FUEL RATIO SENSOR POWER SOURCE)
------------	--

(a) Disconnect the air fuel ratio sensor connector.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
C14-2 (+B) - Body ground	Ignition switch ON	11 to 14 V

Text in Illustration

*a	Front view of wire harness connector (to Air Fuel Ratio Sensor)
----	--

HINT:

- Jiggle the wire harness and connector to increase the likelihood of detecting malfunctions that do not always occur.
- Make sure there is not an excessive amount of force applied to the wire harness.

NG  **REPAIR AIR FUEL RATIO SENSOR POWER SOURCE CIRCUIT**

OK

45.	CHECK HARNESS AND CONNECTOR (AIR FUEL RATIO SENSOR - ECM)
------------	--

- (a) Disconnect the air fuel ratio sensor connector.
- (b) Disconnect the ECM connector.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A34-18 (A1A-) - C14-4 (A1A-)	Always	Below 1 Ω
A34-19 (A1A+) - C14-3 (A1A+)	Always	Below 1 Ω
A34-5 (HA1A) - C14-2 (HA1A)	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A34-18 (A1A-) or C14-4 (A1A-) - Body ground	Always	10 k Ω or higher
A34-19 (A1A+) or C14-3 (A1A+) - Body ground	Always	10 k Ω or higher
A34-5 (HA1A) or C14-2 (HA1A) - Body ground	Always	10 k Ω or higher

HINT:

- Jiggle the wire harness and connector to increase the likelihood of detecting malfunctions that do not always occur.
- Make sure there is not an excessive amount of force applied to the wire harness.

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

46.	READ FREEZE FRAME DATA
------------	-------------------------------

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Using the Techstream, confirm the vehicle conditions recorded in the freeze frame data which were present when the DTC was stored  .

Result

FREEZE FRAME DATA ITEM	RESULT	PROCEED TO
Initial Engine Coolant Temp, Ambient Temp for A/C, Initial Intake Air Temp	Difference in temperature between each item is less than 10°C*1	A
	Difference in temperature between each item is 10°C or more*2	B

HINT:

- *1: A long time had elapsed after stopping the engine.
- *2: A long time had not elapsed after stopping the engine.

B  **READ FREEZE FRAME DATA**

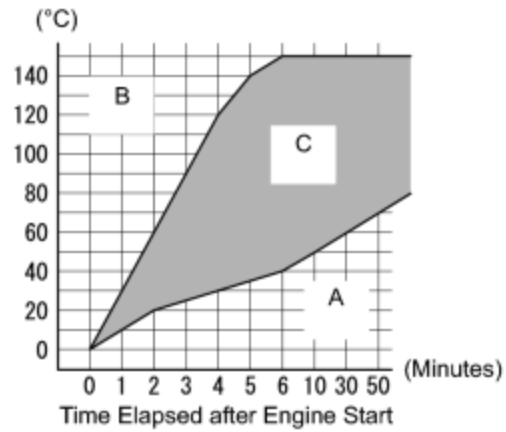

A

47.	READ FREEZE FRAME DATA

RESULT	PROCEED TO
Normal	A
Abnormal	B

B ► REPLACE ENGINE COOLANT TEMPERATURE SENSOR

A

51.	CHECK HARNESS AND CONNECTOR (ECM - ENGINE COOLANT TEMPERATURE SENSOR)
------------	--

- (a) Disconnect the ECM connector.
- (b) Disconnect the engine coolant temperature sensor connector.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A36-30 (THW) - C35-2 (THW)	Always	Below 1 Ω
A36-29 (E1) - C35-1 (E2)	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A36-30 (THW) or C35-2 (THW) - Body ground	Always	10 kΩ or higher
A36-29 (E1) or C35-1 (E2) - Body ground	Always	10 kΩ or higher

HINT:

- Jiggle the wire harness and connector to increase the likelihood of detecting malfunctions that do not always occur.
- Make sure there is not an excessive amount of force applied to the wire harness.

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ► CHECK FOR INTERMITTENT PROBLEMS

52.	CHECK IGNITION SYSTEM
------------	------------------------------

(a) Perform ignition system On-vehicle Inspection  .

NG  **REPAIR OR REPLACE MALFUNCTIONING PARTS, COMPONENT AND AREA**

OK

53.	READ FREEZE FRAME DATA
------------	-------------------------------

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Using the Techstream, confirm the vehicle conditions recorded in the freeze frame data which were present when the DTC was stored  .

Result

FREEZE FRAME DATA ITEM	RESULT	SUSPECTED AREA	PROCEED TO
Total of ISC Learning Value and ISC Feedback Value	Below 80% of the current value of the vehicle	Intake air volume insufficient	A
	80% or more of the current value of the vehicle		B

B  **PERFORM ACTIVE TEST USING TECHSTREAM (CONTROL THE VVT LINEAR)**

A

54.	CHECK INTAKE SYSTEM
------------	----------------------------

(a) Check for air leakage in the intake system [vacuum hose disconnection, cracks, damaged gaskets, etc.]  .

HINT:

- If the accelerator pedal is released after racing the engine, the inspection is easier to perform because the vacuum inside the intake pipes increases and the air suction noise becomes louder.
- If Short FT and Long FT are largely different from the normal values when idling (the intake air volume is small) and almost the same as the normal values when racing the engine (the intake air

volume is high), air leakage may be present.

OK:

There is no air leakage.

NG ► REPAIR OR REPLACE INTAKE SYSTEM

OK

55.	CHECK INTAKE SYSTEM
------------	----------------------------

(a) Check the intake system.

- Inspect the brake booster assembly **INFO** .
- Inspect the mass air flow meter **INFO** .
- Check the PCV hose **INFO** .
- Inspect the PCV valve **INFO** .
- Inspect the purge valve **INFO** .

A ► REPAIR OR REPLACE MALFUNCTIONING PARTS, COMPONENT AND AREA

56.	PERFORM ACTIVE TEST USING TECHSTREAM (CONTROL THE VVT LINEAR)
------------	--

(a) Connect the Techstream to the DLC3.

(b) Turn the Techstream on.

(c) Warm up the engine.

(d) Enter the following menus: Powertrain / Engine / Active Test / Control the VVT Linear (Bank1) or Control the VVT Linear (Bank2).

HINT:

When performing the Active Test, make sure the A/C is on and the shift lever is in P, N or neutral.

(e) Check the engine speed while operating the camshaft timing oil control valve using the Techstream.

OK:

TECHSTREAM OPERATION	SPECIFIED CONDITION
0 deg (CA)	Normal engine speed
36 deg (CA)	Engine idles roughly or stalls

HINT:

- Jiggle the wire harness and connector to increase the likelihood of detecting malfunctions that do not always occur.
- When the results of the inspection using the Active Test are normal but the valve operating noise is abnormal, check the valve for any signs of problems.
- If the camshaft timing oil control valve is stuck on, the valve overlap increases and combustion worsens due to the internal EGR which may cause rough idle or cause the engine to stall.

NG ▶ **REPLACE CAMSHAFT TIMING OIL CONTROL VALVE**

OK

57.	CHECK HARNESS AND CONNECTOR (CAMSHAFT TIMING OIL CONTROL VALVE - ECM)
------------	--

(a) Disconnect the camshaft timing oil control valve connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
C7-1 - Body ground	Ignition switch ON	11 to 14 V
C24-1 - Body ground	Ignition switch ON	11 to 14 V

Text in Illustration

*A	Bank 1
*B	Bank 2
*a	Front view of wire harness connector (to Camshaft Timing Oil Control Valve for Intake Side)

(c) Disconnect the ECM connector.

(d) Measure the voltage according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A36-17 (OC1) - C7-2	Always	Below 1 Ω
A36-16 (OC2) - C24-2	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A36-17 (OC1) or C7-2 - Body ground	Always	10 k Ω or higher
A36-16 (OC2) or C24-2 - Body ground	Always	10 k Ω or higher

HINT:

- Jiggle the wire harness and connector to increase the likelihood of detecting malfunctions that do not always occur.
- Make sure there is not an excessive amount of force applied to the wire harness.

72.	CHECK HARNESS AND CONNECTOR (ECM - MASS AIR FLOW METER)
------------	--

(a) Disconnect the mass air flow meter connector.

(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A33-22 (VG) - C16-5 (VG)	Always	Below 1 Ω
A33-29 (E2G) - C16-4 (E2G)	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A33-22 (VG) or C16-5 (VG) - Body ground	Always	10 k Ω or higher
A33-29 (E2G) or C16-4 (E2G) - Body ground	Always	10 k Ω or higher

HINT:

- Jiggle the wire harness and connector to increase the likelihood of detecting malfunctions that do not always occur.
- Make sure there is not an excessive amount of force applied to the wire harness.

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

73.	PERFORM DRIVE TEST
------------	---------------------------

- (a) Connect the Techstream to the DLC3.
- (b) Start the engine and warm it up until the engine coolant temperature stabilizes.

HINT:

The A/C switch and all accessory switches should be off.

- (c) Idle the engine.
- (d) Using the Techstream, read the value of Calculate Load in the Data List.

Standard:

DATA LIST	SPECIFIED CONDITION
Calculate Load	90 to 110% of the current value of the vehicle

NG **REPLACE MASS AIR FLOW METER**

OK

74.	CHECK TERMINAL VOLTAGE (FUEL INJECTOR POWER SOURCE)
------------	--

(a) Disconnect the fuel injector assembly connectors.

- (b) Turn the ignition switch to ON.
- (c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

CYLINDER	TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
No. 1	C8-1 - Body ground	Ignition switch ON	11 to 14 V

No. 2	C30-1 - Body ground	Ignition switch ON	11 to 14 V
No. 3	C9-1 - Body ground	Ignition switch ON	11 to 14 V
No. 4	C31-1 - Body ground	Ignition switch ON	11 to 14 V

Text in Illustration

*a	Front view of wire harness connector (to Fuel Injector Assembly (for Port Injection))
*b	No. 1 cylinder
*c	No. 2 cylinder
*d	No. 3 cylinder
*e	No. 4 cylinder

HINT:

- Jiggle the wire harness and connector to increase the likelihood of detecting malfunctions that do not always occur.
- Make sure there is not an excessive amount of force applied to the wire harness.
- A rapid decrease in engine speed may have been caused by a malfunction in all or multiple cylinders. (There may be an electrical malfunction in the wiring shared by all the cylinders.)

NG  **REPAIR FUEL INJECTOR POWER SOURCE CIRCUIT**

OK

75.	CHECK IGNITION SYSTEM
------------	------------------------------

(a) Perform ignition system On-vehicle Inspection  .

NG  **REPAIR OR REPLACE MALFUNCTIONING PARTS, COMPONENT AND AREA**

OK

76.	PERFORM ACTIVE TEST USING TECHSTREAM (CONTROL THE FUEL PUMP DUTY)
------------	--

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine / Active Test / Control the Fuel Pump Duty.

(e) When performing the Active Test, check for an operating sound from the fuel pump.

Standard:

CONTROL THE FUEL PUMP DUTY	SPECIFIED CONDITION
25 or 80%	Operating sound heard
OFF	Operating sound not heard

Result

RESULT	PROCEED TO
Abnormal	A
Normal	B

HINT:

- Jiggle the wire harness and connector to increase the likelihood of detecting malfunctions that do not always occur.
- While performing the Active Test, make sure that there is no fuel leakage from the pipes, no signs that fuel has leaked, and no fuel smell.
- If the fuel pump operating noise is abnormal, proceed to step 77.

B ► CHECK FUEL SYSTEM

A

77.	INSPECT FUEL PUMP ASSEMBLY
------------	-----------------------------------

(a) Inspect the fuel pump assembly .

NG ► REPLACE FUEL PUMP ASSEMBLY

OK ► CHECK FUEL PUMP CONTROL CIRCUIT (LOW PRESSURE SIDE)

78.	CHECK FUEL SYSTEM
------------	--------------------------

(a) Check the fuel system.

- Check the fuel pump operation.
- Check the fuel leaks.
- Check the fuel pressure.
- Check the fuel pressure (for high pressure).
- Perform the Active Test [D-4S (Fuel Cut)].

HINT:

For the fuel system On-vehicle Inspection, refer to the following procedures  .

Result

RESULT	PROCEED TO
Abnormal	A
Normal	B

B ▶ CHECK FOR INTERMITTENT PROBLEMS

A

79.	CHECK FUEL SYSTEM
------------	--------------------------

(a) Check for foreign matter such as iron particles around the fuel pump assembly (fuel pump, fuel pump filter and inside the fuel tank), and for signs that the fuel pump was stuck.

Result

RESULT	PROCEED TO
There is foreign matter or signs that fuel pump was stuck	A
There is no foreign matter and no signs that fuel pump was stuck	B

HINT:

If there is foreign matter such as iron particles on the fuel pump, fuel filter or fuel tank, remove the foreign matter.

B ▶ REPAIR OR REPLACE FUEL SYSTEM

A

80.	CHECK FUEL SYSTEM
------------	--------------------------

(a) Check the fuel system.

- Check the fuel pump operation.
- Check the fuel leaks.
- Check the fuel pressure.
- Check the fuel pressure (for high pressure).
- Perform the Active Test [D-4S (Fuel Cut)].

HINT:

For the fuel system On-vehicle Inspection, refer to the following procedures .

NG  **REPAIR OR REPLACE MALFUNCTIONING PARTS, COMPONENT AND AREA**

OK  **END**

81.	CLEAR DTC
------------	------------------

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Clear the DTCs .

NEXT  **END**

Last Modified: 3-27-2012	6.4 C	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM0000021150D5X
Title: FA20 ENGINE CONTROL: SFI SYSTEM: P1604: Startability Malfunction (2013 FR-S)		

DTC	P1604	Startability Malfunction
-----	-------	--------------------------

DESCRIPTION

This DTC is stored when the engine does not start even though the starter signal is input or when the engine takes a long time to start, and when the engine speed is low or the engine stalls just after the engine starts.

Using the Techstream, the conditions present when the DTC was stored can be confirmed by referring to the freeze frame data. Freeze frame data records engine conditions when a malfunction occurs. This information can be useful when troubleshooting.

It is necessary to check if the vehicle ran out of fuel before performing troubleshooting, as this DTC is also stored when there is engine starting trouble due to running out of fuel.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P1604	<p>One of the following conditions is met (1 trip detection logic):</p> <ul style="list-style-type: none"> The engine speed is less than 500 rpm with the starter signal on for a certain amount of time (Depending on the engine coolant temperature and atmospheric pressure). After the engine starts (engine speed is 500 rpm or more), the engine speed drops to 300 rpm or less immediately. 	<ul style="list-style-type: none"> Engine immobiliser system Engine assembly (excess friction, compression loss) Starter assembly Crankshaft position sensor VVT sensor Engine coolant temperature sensor Fuel pump assembly Fuel pump control circuit (low pressure side) Fuel pipes Fuel injector assembly (for port injection) Throttle with motor body assembly Pressure regulator Battery Flywheel (for Manual Transmission) Drive plate (for Automatic

- Transmission)
- Spark plug
- Ignition coil circuit
- Intake system
- Camshaft timing oil control valve
- Mass air flow meter
- Air fuel ratio sensor
- Valve timing
- Fuel
- Purge valve
- Intake valve
- Exhaust valve
- ECM

INSPECTION PROCEDURE

HINT:

- In contrast to normal malfunction diagnosis for components, circuits and systems, DTC P1604 is used to determine the malfunctioning area from the problem symptoms and freeze frame data when the user mentions problems such as starting difficulty.

As these DTCs can be stored as a result of certain user actions, even if these DTCs are output, if the customer makes no mention of problems, clear these DTCs without performing any troubleshooting and return the vehicle to the customer.

- If any other DTCs are output, perform troubleshooting for those DTCs first.
- When the Data List item "Immobiliser Fuel Cut" is ON, the engine cannot be started.
- Read freeze frame data using the Techstream. Freeze frame data records engine conditions when a malfunction occurs. This information can be useful when troubleshooting.
- When confirming the freeze frame data, be sure to check all 5 sets of freeze frame data INFO.
- When confirming freeze frame data, if there are multiple items related to the cause of the malfunction, perform troubleshooting for all related items.
- Try to start the vehicle under the conditions recorded in the freeze frame data which were present when the malfunction occurred. Confirm the data at this time and compare it with the freeze frame data.
- If the malfunction does not reoccur, carefully check the vehicle conditions from when the malfunction occurred using freeze frame data.
- When performing inspections, jiggle the relevant wire harnesses and connectors in an attempt to reproduce malfunctions that do not always occur.
- If the same inspection or replacement procedure appears 2 times when performing an inspection procedure, it is not necessary to repeat the procedure the second time.

1. Malfunction Recurrence and Inspection Areas

(a) Freeze frame data exists, but the malfunction (starting difficulty) has not reoccurred and the malfunction conditions are unknown.

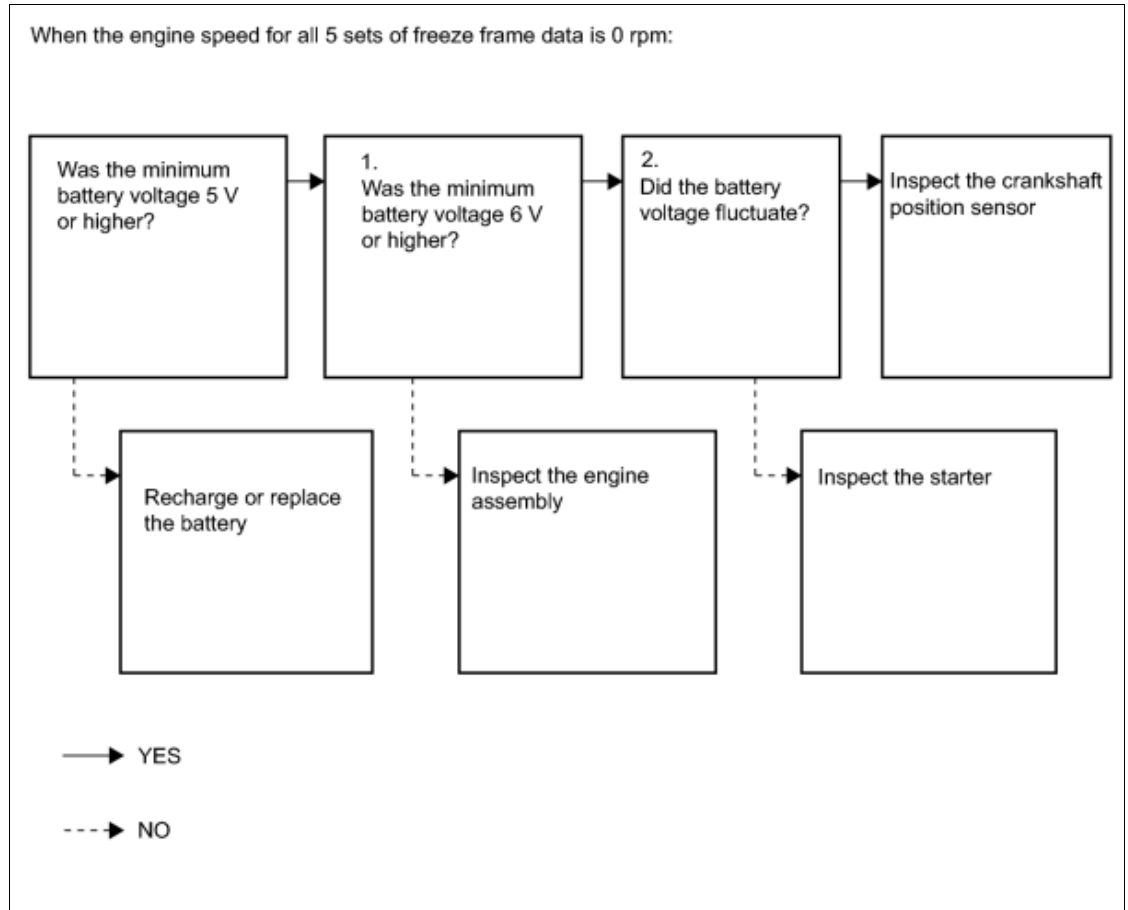

(1) The engine speed recorded in the freeze frame data is 0 rpm (the engine does not crank).

HINT:

One of the following problems may be present: battery depletion, excess engine friction, a starter malfunction or a crankshaft position sensor malfunction.

- If the battery voltage is less than 9 V during cranking, there is a high probability that engine friction is abnormal.
- If the battery voltage drops to 5 V or less when starting the engine, the battery may be malfunctioning.

- If the battery voltage fluctuates while cranking the engine, it can be concluded that cranking is being performed. When the engine speed is 0 rpm, the crankshaft position sensor and/or ECM may be malfunctioning.

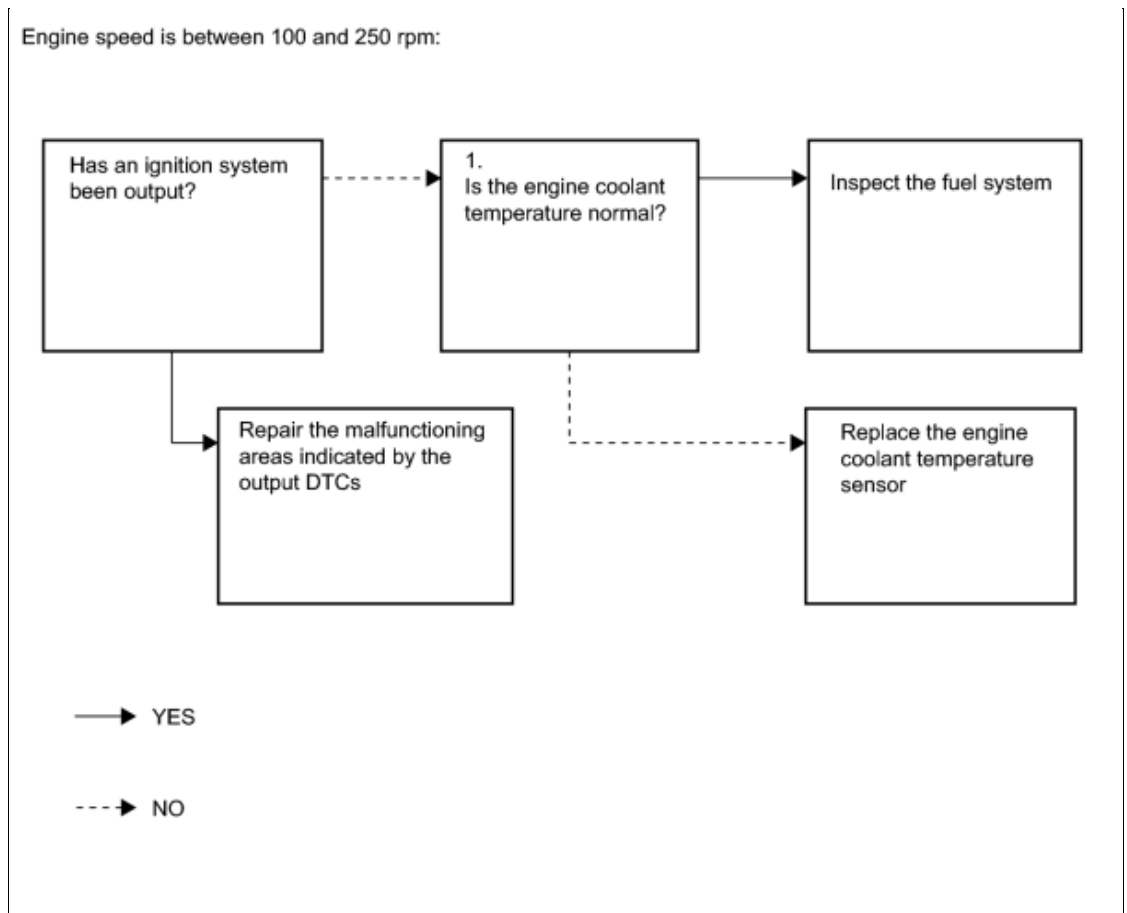

- (2) All engine speeds recorded in the freeze frame data are between 100 and 250 rpm (the engine cranks but there is no combustion).

HINT:

If the engine speed is between 100 and 250 rpm (no initial combustion), there may be a wiring problem or a complete failure of an ignition or fuel system part.

- Due to an engine coolant temperature sensor malfunction, the fuel injection volume is extremely high or low and the engine may not be able to be started.

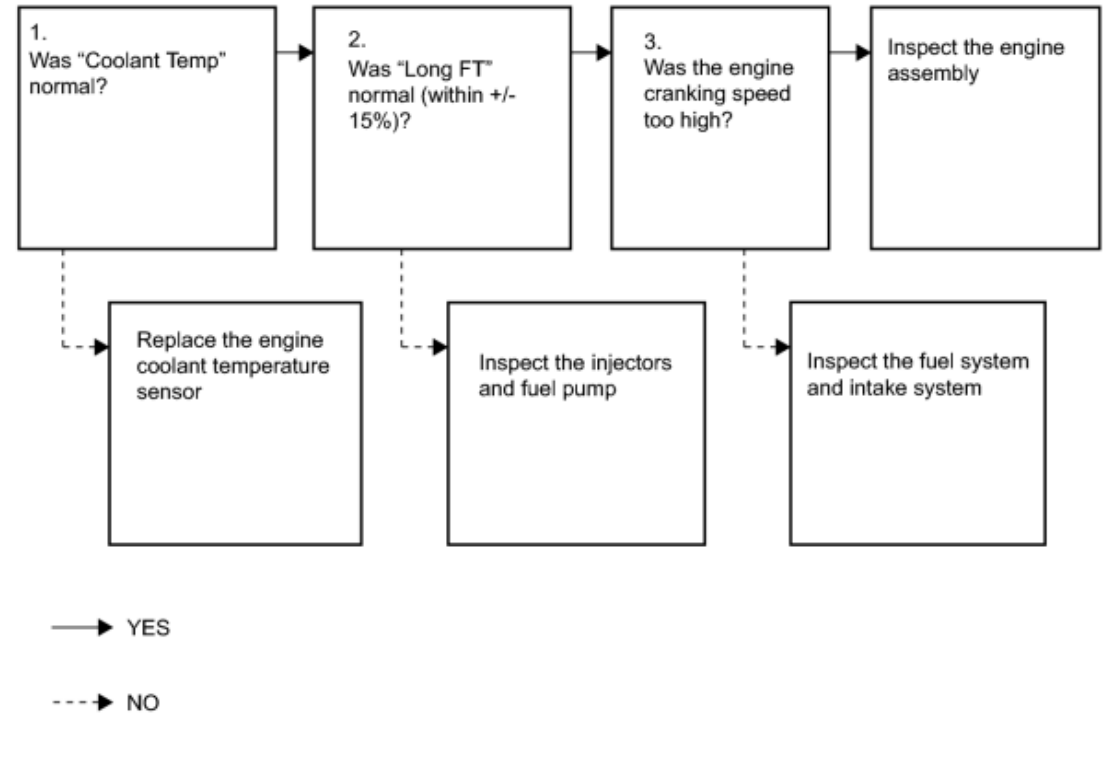

(3) The engine speed recorded in the freeze frame data is 250 rpm or higher (the initial combustion and starter turnoff timing is too late).

HINT:

If the engine speed is 250 rpm or higher (combustion occurs but the initial combustion and starter turnoff timing is too late), the fuel injection volume is often incorrect (too low or too high) and determining the cause of the malfunction is often difficult.

- Due to an engine coolant temperature sensor malfunction, the fuel injection volume is extremely high or low and engine starting trouble may occur.
- If Long FT is incorrect, there may be a fuel supply problem due to the injectors or fuel pump being clogged, etc.
- If the engine cranking speed is too high, compression loss may have occurred due to carbon interfering with the valve operation.

Engine speed is 250 rpm or higher:

(b) When the malfunction (starting difficulty) can be reproduced, or malfunction conditions are known, perform the following inspections ("Problem Symptoms" and "Systems to Inspect").

(1) Problem Symptoms

1. The engine does not crank.

HINT:

The starter is normal if a noise that indicates the starter pinion gear is extending is heard. The battery may be fully depleted or there may be excess engine friction.

2. The engine cranking speed is abnormal.

HINT:

If the engine cranking speed is too high (for example, 300 rpm or higher with no combustion), compression loss may have occurred because carbon interfered with valve operation, etc.

3. There is no initial combustion.

HINT:

If there is no initial combustion, there is probably a wiring problem or an ignition or fuel system part malfunction.

4. The engine stalls after starter turnoff.

HINT:

If the engine stalls after starter turnoff, the air-fuel ratio may be incorrect or the VVT may have a problem returning.

5. The initial combustion and starter turnoff occur late.

HINT:

If the initial combustion and starter turnoff occur late, the fuel injection volume is probably incorrect (too low or too high).

HINT:

Causes of fuel system malfunctions according to conditions present at the time of the malfunction.

- When 2 to 3 minutes have elapsed after stopping the engine: Fuel pressure loss due to the pressure regulator failing to maintain the fuel pressure.
- When 15 to 120 minutes have elapsed after stopping the engine: Problem with injector fuel seal.
- When a long time has elapsed after stopping the engine: Pressure regulator is stuck open.

(2) Systems to Inspect

1. Intake system
2. Ignition system
3. Fuel system

2. INSPECTION FLOW

(a) Freeze frame data exists, but the malfunction (starting difficulty) has not reoccurred and the malfunction conditions are unknown.

FREEZE FRAME DATA ITEM	RESULT	SUSPECTED AREA	PROCEDURE
Engine Speed	0 rpm (no engine cranking at all)	<ul style="list-style-type: none">• Battery fully depleted• Engine assembly (excess friction)• Starter assembly• Engine immobiliser system• Crankshaft position sensor• ECM	4 to 9
	100 to 250 rpm (engine cranks but no initial combustion*1)	<ul style="list-style-type: none">• Fuel pump control circuit (Low pressure side)• Ignition system• Engine coolant temperature sensor• Fuel injection system	10 to 14
	250 rpm or higher (combustion occurs but initial combustion and starter turnoff*2 occur late)	<ul style="list-style-type: none">• Engine assembly (compression loss)• Fuel injection system• Fuel pump control circuit (low pressure side)	15 to 23

HINT:

- *1: First combustion after cranking begins.
- *2: Condition when engine speed increases and starter can be turned off.

(b) When the malfunction (starting difficulty) can be reproduced, or when malfunction conditions are known.

(1) Problem Symptoms

PROCEDURE

--

1. CHECK FOR ANY OTHER DTCS OUTPUT AND RECORD FREEZE FRAME DATA

- Connect the Techstream to the DLC3.
- Turn the ignition switch to ON.
- Enter the following menus: Powertrain / Engine / Trouble Codes.

(d) Read the DTCs and record the freeze frame data.

HINT:

- This freeze frame data shows the actual engine conditions when engine starting trouble occurred.
- When confirming the freeze frame data, be sure to check all 5 data sets of freeze frame data.
- The fourth set of freeze frame data is the data recorded when the DTC is stored.

Result

RESULT	PROCEED TO
Only DTC P1604 is output	A
DTCs other than P1604 are output	B

B ► GO TO DTC CHART

A
▼

2. CHECK ENGINE IMMOBILISER SYSTEM

- Connect the Techstream to the DLC3.
- Turn the ignition switch to ON.
- Turn the Techstream on.
- Enter the following menus: Powertrain / Engine / Data List / Immobiliser Fuel Cut.
- Read the value displayed on the Techstream.

OK:

Immobiliser Fuel Cut is OFF.

HINT:

After reconnecting the battery cable, if the engine is started immediately (without waiting 1.8 seconds after turning the ignition switch to ON), the engine will stop (due to the key verification process). The engine can be started after that.

NG ► REPAIR ENGINE IMMOBILISER SYSTEM

OK

3.	CHECK MALFUNCTION CONDITION
-----------	------------------------------------

(a) Confirm the problem symptoms.

Result

RESULT	PROCEED TO
Freeze frame data exists, but the starting difficulty cannot be reproduced and it is unknown what kind of starting difficulty occurred	A
The problem symptoms can be reproduced, or the malfunction conditions are known	B

B **CONFIRM PROBLEM SYMPTOM**

A

4.	CHECK FREEZE FRAME DATA
-----------	--------------------------------

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Using the Techstream, confirm the vehicle conditions recorded in the freeze frame data which were present when the DTC was stored .

Result

FREEZE FRAME DATA ITEM		SUSPECTED AREA	PROCEED TO
ENGINE SPEED	BATTERY VOLTAGE		
	Minimum voltage is below 5 V	Battery fully depleted	A
	Minimum voltage is 5 V or higher	<ul style="list-style-type: none"> • Starter malfunction • Crankshaft position sensor system • Excess engine friction • Engine immobiliser system • ECM 	B
60 to 250 rpm (engine cranks but no initial combustion)	-	<ul style="list-style-type: none"> • Fuel pump control circuit (low pressure side) • Ignition system • Engine coolant 	C

		<ul style="list-style-type: none"> temperature sensor Engine immobiliser system Fuel injection system 	
250 rpm or higher (combustion occurs but initial combustion and starter turnoff occur late)	-	<ul style="list-style-type: none"> Engine assembly Fuel injection system Fuel pump control circuit (low pressure side) 	D

HINT:

When DTC P1604 is stored, either "Engine Start Hesitation"*1 or "Low Rev for Eng Start"*2 in the freeze frame data will be ON. If "Low Rev for Eng Start" is ON, proceed to E.

*1: This value turns ON when the engine speed does not reach a certain value for a certain period of time when starting the engine.

*2: This value turns ON when the engine stalls immediately after starting the engine. If "Low Rev for Eng Start" is ON, as there is a possibility that the low engine speed or engine stall was caused by the user, confirm the following freeze frame data items.

- Immobiliser Fuel Cut
- Engine Speed (Starter Off)
- Shift SW Status (R, D Range)

B ► CHECK FREEZE FRAME DATA

C ► CHECK FREEZE FRAME DATA

D ► CHECK FREEZE FRAME DATA

A ► CHARGE OR REPLACE BATTERY

5.	CHECK FREEZE FRAME DATA
-----------	--------------------------------

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Using the Techstream, confirm the vehicle conditions recorded in the freeze frame data which were present when the DTC was stored INFO.

Result

FREEZE FRAME DATA ITEM	RESULT	SUSPECTED AREA	PROCEED TO
Battery Voltage	Minimum voltage is 9 V or higher and voltage fluctuates*2, *3	<ul style="list-style-type: none"> Crankshaft position sensor system ECM 	A
	Minimum voltage is 9 V or higher and voltage does not fluctuate*1	Starter system	B

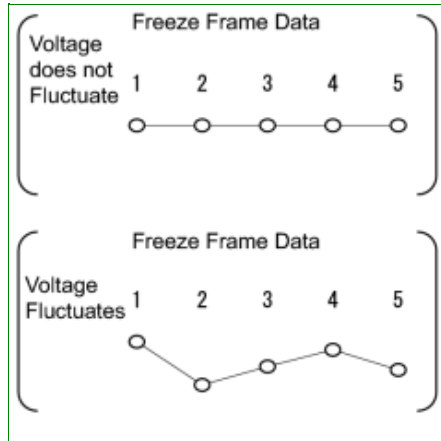

Minimum voltage is 5 to 9 V*4

- Excess engine friction
- Battery fully depleted

C

HINT:

- *1: The 5 sets of freeze frame data show approximately the same battery voltage.

- *2: The 5 sets of freeze frame data show different battery voltages.
- *3: If the voltage fluctuates, it can be determined that cranking is being performed. When the engine speed is 0 rpm, the crankshaft position sensor system and/or the ECM may be malfunctioning.
- *4: There may be excess engine friction. Make sure that the crankshaft rotates smoothly when turning it by hand. Excess engine friction may have occurred temporarily. Remove the cylinder head cover and oil pan, and check for foreign matter such as iron fragments. If there is a malfunction or signs of a malfunction present, perform a detailed inspection by disassembling all the parts.

B ► CHECK STARTER SIGNAL CIRCUIT

C ► CHECK AND REPAIR ENGINE OR BATTERY

A
▼

6. CHECK CRANKSHAFT POSITION SENSOR (SENSOR INSTALLATION)

- (a) Check the tightening and installation condition of the crankshaft position sensor bolt.
- (b) Check the connection of the crankshaft position sensor connector.

Result

RESULT	PROCEED TO
Normal	A
Abnormal	B

B ► SECURELY REINSTALL SENSOR

A

7.	CHECK CRANKSHAFT POSITION SENSOR
-----------	---

(a) Disconnect the crankshaft position sensor connector.

(b) Check for oil on the connector terminals.

OK:

No oil on the terminals.

NG **REPLACE CRANKSHAFT POSITION SENSOR**

OK

8.	CHECK HARNESS AND CONNECTOR (CRANKSHAFT POSITION SENSOR - ECM)
-----------	---

(a) Disconnect the crankshaft position sensor connector.

(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A34-16 (NE+) - C33-1 (NE+)	Always	Below 1 Ω
A34-27 (NE-) - C33-2 (NE-)	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A34-16 (NE+) or C33-1 (NE+) - Body ground	Always	10 k Ω or higher
A34-27 (NE-) or C33-2 (NE-) - Body ground	Always	10 k Ω or higher

HINT:

- Jiggle the wire harness and connector to increase the likelihood of detecting malfunctions that do not always occur.
- Make sure there is not an excessive amount of force applied to the wire harness.

NG **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

9. CHECK CRANKSHAFT POSITION SENSOR

- (a) Replace the crankshaft position sensor **INFO** .
- (b) Check the engine start operation.

OK:

Malfunction has been repaired successfully.

NG ▶ REPLACE ECM

OK ▶ END (CRANKSHAFT POSITION SENSOR IS DEFECTIVE)

10. CHECK FREEZE FRAME DATA

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Using the Techstream, confirm the vehicle conditions recorded in the freeze frame data which were present when the DTC was stored **INFO** .

Result

- *1: A long time had not elapsed after stopping the engine.
- *2: A long time had elapsed after stopping the engine.

B ▶ PERFORM ACTIVE TEST USING TECHSTREAM (CONTROL THE FUEL PUMP / SPEED)

C ▶ CHECK FUEL PUMP CONTROL CIRCUIT (LOW PRESSURE SIDE)

A ▶ REPLACE ENGINE COOLANT TEMPERATURE SENSOR

11. PERFORM ACTIVE TEST USING TECHSTREAM (CONTROL THE FUEL PUMP / SPEED)

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Enter the following menus: Powertrain / Engine / Active Test / Control the Fuel Pump / Speed.
- (d) When performing the Active Test, check for an operating sound from the fuel pump.

OK:

CONTROL THE FUEL PUMP / SPEED	SPECIFIED CONDITION
ON	Operating sound heard
OFF	Operating sound not heard

HINT:

Jiggle the wire harness and connector to increase the likelihood of detecting malfunctions that do not always occur.

NG ▶ REPAIR FUEL PUMP CONTROL CIRCUIT (LOW PRESSURE SIDE)

OK

12. CHECK TERMINAL VOLTAGE (FUEL INJECTOR POWER SOURCE)

(a) Disconnect the fuel injector assembly connectors.

- (b) Turn the ignition switch to ON.
- (c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

CYLINDER	TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
No. 1	C8-1 - Body ground	Ignition switch ON	11 to 14 V
No. 2	C30-1 - Body ground	Ignition switch ON	11 to 14 V

No. 3	C9-1 - Body ground	Ignition switch ON	11 to 14 V
No. 4	C31-1 - Body ground	Ignition switch ON	11 to 14 V

Text in Illustration

*a	Front view of wire harness connector (to Fuel Injector Assembly)
*b	No. 1 cylinder
*c	No. 2 cylinder
*d	No. 3 cylinder
*e	No. 4 cylinder

HINT:

- Jiggle the wire harness and connector to increase the likelihood of detecting malfunctions that do not always occur.
- Make sure there is not an excessive amount of force applied to the wire harness.

NG  **REPAIR FUEL INJECTOR POWER SOURCE CIRCUIT**

OK

13.	PERFORM ACTIVE TEST USING TECHSTREAM (CONTROL THE FUEL PUMP / SPEED)
------------	---

- Connect the Techstream to the DLC3.
- Turn the ignition switch to ON.
- Enter the following menus: Powertrain / Engine / Active Test / Control the Fuel Pump / Speed.
- When performing the Active Test, check for fuel leakage from the fuel pipes.

Result

RESULT	PROCEED TO
Fuel leakage or signs of fuel leakage are present	A
No fuel leakage or signs of fuel leakage	B

HINT:

- Jiggle the wire harness and connector to increase the likelihood of detecting malfunctions that do not always occur.
- When performing the Active Test, if there is no operating noise from the fuel pump, the fuel pump system may be malfunctioning.
- Check if the vehicle ran out of fuel, as engine starting trouble due to running out of fuel is also detected.

B  **CHECK FUEL SYSTEM**

A  **REPAIR OR REPLACE FUEL LINE**

14.	CHECK FUEL SYSTEM
------------	--------------------------

(a) Check for foreign matter such as iron particles around the fuel pump assembly (fuel pump, fuel pump filter, and inside the fuel tank), and for signs that the fuel pump was stuck.

Result

RESULT	PROCEED TO
There is foreign matter or signs that fuel pump was stuck	A
There is no foreign matter and no signs that fuel pump was stuck	B

B ► **PERFORM SIMULATION TEST**

A ► **REPAIR OR REPLACE FUEL SYSTEM**

15.	CHECK FREEZE FRAME DATA
------------	--------------------------------

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Using the Techstream, confirm the vehicle conditions recorded in the freeze frame data which were present when the DTC was stored INFO.

Result

		-15 to +15%	more*1		
			Minimum speed is less than 300 rpm	<ul style="list-style-type: none"> Fuel system Intake air system 	D
Difference between Coolant Temp, Ambient Temp for A/C and Intake Air is less than 10°C	-	-15% or less, or +15% or more	-	<ul style="list-style-type: none"> Fuel pump control circuit (low pressure side) Fuel injector assembly (for port injection) 	B
			Minimum speed is 300 rpm or more*1	Engine assembly	C
		-15 to +15%	Minimum speed is less than 300 rpm	<ul style="list-style-type: none"> Fuel system Intake air system 	D

HINT:

*1: Compression loss may have occurred in the engine assembly.

B ▶ INSPECT FUEL INJECTOR ASSEMBLY (FOR PORT INJECTION)

C ▶ CHECK AND REPAIR ENGINE

D ▶ CHECK FREEZE FRAME DATA

A ▶ REPLACE ENGINE COOLANT TEMPERATURE SENSOR

16.	INSPECT FUEL INJECTOR ASSEMBLY (FOR PORT INJECTION)
------------	--

(a) Check that no carbon is stuck to the fuel injector assembly (for port injection).

OK:

No carbon present.

NG ▶ REPLACE FUEL INJECTOR ASSEMBLY (FOR PORT INJECTION)

OK

17.	CHECK FUEL SYSTEM
------------	--------------------------

(a) Check for foreign matter such as iron particles around the fuel pump assembly (fuel pump, fuel pump filter, and inside the fuel tank), and for signs that the fuel pump was stuck.

Result

RESULT	PROCEED TO
There is foreign matter or signs that fuel pump was stuck	A
There is no foreign matter and no signs that fuel pump was stuck	B

B ► **PERFORM SIMULATION TEST**

A ► **REPAIR OR REPLACE FUEL SYSTEM**

18.	CHECK FREEZE FRAME DATA
------------	--------------------------------

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Using the Techstream, confirm the vehicle conditions recorded in the freeze frame data which were present when the DTC was stored INFO.

Result

FREEZE FRAME DATA ITEM	RESULT	SUSPECTED AREA	PROCEED TO
Coolant Temp	Engine coolant temperature is 40°C or less*1	Pressure regulator	A
	Engine coolant temperature is 40 to 90°C*2	Fuel injector	B
	Engine coolant temperature is 90°C or higher*3	Pressure regulator	A

HINT:

*1: If the engine coolant temperature is 40°C or less (after stopping the engine and the vehicle has not been driven for a long period of time), the pressure regulator may be stuck open. Attach a fuel pressure gauge and check the ability of the system to maintain fuel pressure after stopping the engine.

*2: If the engine coolant temperature is 40 to 90°C (15 to 120 minutes have passed after stopping the engine), there may be fuel leaking from a fuel injector.

*3: If the engine coolant temperature is 90°C or more (2 to 5 minutes have passed after stopping the engine), there may be a problem with the pressure regulator failing to maintain the fuel pressure. Attach a fuel pressure gauge and check the ability of the pressure regulator to maintain fuel pressure after stopping the engine.

B ► **CHECK FUEL INJECTOR ASSEMBLY (FOR PORT INJECTION)**

A

19.	CHECK FUEL PRESSURE (LOW PRESSURE SIDE)
------------	--

HINT:

For the fuel pressure inspection, refer to the following procedures INFO.

(a) Attach a fuel pressure gauge and check the fuel pressure after stopping the engine.

Standard:

147 kPa (1.5 kgf/cm²) or higher (5 minutes after stopping the engine)

HINT:

If the engine cannot be started, read the values after cranking the engine.

Result

RESULT	PROCEED TO
Abnormal	A
Normal	B

B ► **PERFORM SIMULATION TEST**

A ► **REPLACE FUEL PRESSURE REGULATOR ASSEMBLY**

20.	CHECK FUEL INJECTOR ASSEMBLY (FOR PORT INJECTION)
------------	--

(a) Clean the inside of the surge tank with compressed air.

(b) After stopping the engine, measure the HC concentration inside the surge tank for 15 minutes.

Result

RESULT	PROCEED TO
4000 ppm or more	A
Less than 4000 ppm	B

HINT:

If the concentration is 4000 ppm or more, a fuel injector assembly may have a sealing problem.

B ► **CHECK THROTTLE WITH MOTOR BODY ASSEMBLY**

A

21. CHECK FUEL INJECTOR ASSEMBLY (FOR PORT INJECTION)

(a) Inspect the fuel injector assemblies (for port injection)  .

Result

RESULT	PROCEED TO
Abnormal	A
Normal	B

B  **CHECK THROTTLE WITH MOTOR BODY ASSEMBLY**

A  **REPLACE FUEL INJECTOR ASSEMBLY (FOR PORT INJECTION)**

22. CHECK THROTTLE WITH MOTOR BODY ASSEMBLY

(a) Check if carbon is in the airflow passage.

Result

RESULT	PROCEED TO
Carbon in passage	A
No carbon present	B

B  **CHECK INTAKE SYSTEM**

A  **REPLACE THROTTLE WITH MOTOR BODY ASSEMBLY**

23. CHECK INTAKE SYSTEM

(a) Check the intake system for vacuum leaks  .

OK:

No leaks in intake system.

NG  **REPAIR OR REPLACE INTAKE SYSTEM**

OK

**24. PERFORM SIMULATION TEST**

(a) Check if the engine can be started.

Result

RESULT	PROCEED TO
Engine can be started	A
Engine cannot be started	B

B ► CONFIRM PROBLEM SYMPTOM

A ► END

25.	CONFIRM PROBLEM SYMPTOM
------------	--------------------------------

(a) Confirm the problem symptoms.

HINT:

The problem symptoms below can be determined by reading the freeze frame data.

Result

PROBLEM SYMPTOM	SUSPECTED AREA	PROCEED TO
The engine does not crank	<ul style="list-style-type: none"> • Battery fully depleted • Starter assembly (includes pinion gear wear or tooth damage) • Starter system • Engine assembly (excess friction) • Flywheel wear or tooth damage (for Manual Transmission) • Drive plate wear or tooth damage (for Automatic Transmission) 	A
Abnormal cranking speed	<ul style="list-style-type: none"> • Battery fully depleted • Starter assembly • Engine assembly (excess friction, compression loss) 	B
There is no initial combustion (combustion does not occur even once)*1	<ul style="list-style-type: none"> • Pressure regulator fuel pressure maintenance • Fuel injector leak • Fuel leak from fuel line • Fuel pump control circuit (low pressure side) • Fuel pump assembly • Spark plug • Crankshaft position sensor system • Ignition coil system 	C
	<ul style="list-style-type: none"> • Intake system connections 	

The engine stalls after starter turnoff (engine stalls immediately after the first time the engine speed increases)*2	<ul style="list-style-type: none"> • Throttle with motor body assembly • Camshaft timing oil control valve • Mass air flow meter system 	D
The initial combustion and starter turnoff occur late*3	<ul style="list-style-type: none"> • Engine coolant temperature sensor • Mass air flow meter • Air fuel ratio sensor • Heated oxygen sensor • Fuel injector assembly (for port injection) • Spark plug • Pressure regulator • Fuel pump assembly • Fuel pump control circuit (low pressure side) 	E

HINT:

- If there is hesitation (cranking speed is slow and combustion occurs before passing TDC) during the initial cranking period, the battery charge may be insufficient or the starter may be malfunctioning.
- *1: If there is no initial combustion, a wire harness may be malfunctioning, or the ignition or fuel system may be malfunctioning.
- *2: If the engine stalls after starter turnoff, the air-fuel ratio may be incorrect or the camshaft timing oil control valve may have a problem returning.
- *3: If the initial combustion and starter turnoff occur late, the fuel injection volume may be incorrect (too low or too high).

B ► **PERFORM SIMULATION TEST**

C ► **CHECK FUEL INJECTOR ASSEMBLY (FOR PORT INJECTION)**

D ► **INSPECT MASS AIR FLOW METER**

E ► **INSPECT ENGINE COOLANT TEMPERATURE SENSOR**

A
▼

26.	PERFORM SIMULATION TEST
-----	--------------------------------

(a) When cranking the engine, check for a noise indicating that the starter pinion gear is extending, and check that the starter pinion gear is not spinning freely.

Result

PROBLEM SYMPTOM	SUSPECTED AREA	PROCEED TO
A noise indicating that the starter pinion gear is extending is heard and	<ul style="list-style-type: none"> • Battery • Excess engine friction 	A

the starter pinion gear is not spinning freely*1	<ul style="list-style-type: none"> • Starter assembly 	
A noise indicating that the starter pinion gear is extending is heard but the starter pinion gear is spinning freely	<ul style="list-style-type: none"> • Fly wheel (for Manual Transmission) • Drive plate (for Automatic Transmission) • Starter assembly 	B
A noise indicating that the starter pinion gear is extending is not heard	<ul style="list-style-type: none"> • Battery • Starter assembly • Starter system 	C

HINT:

*1: The battery may be fully depleted or there may be excess engine friction.

B ► CHECK STARTER ASSEMBLY

C ► INSPECT BATTERY

A
▼

27. INSPECT BATTERY

(a) Check the electrolyte quantity.

OK:

Electrolyte quantity is within the specified range.

(b) Inspect the specific gravity.

(1) Inspect the specific gravity of each cell.

Standard specific gravity:

1.25 to 1.29 (electrolyte is at 20°C (68°F))

HINT:

- If the result is not as specified, recharge or replace the battery.
- It is not necessary to inspect a maintenance-free battery.

(c) Inspect the battery voltage.

(1) Turn the ignition switch off and turn on the headlights for 20 to 30 seconds. This will remove the surface charge from the battery.

(2) Measure the battery voltage.

Standard voltage:

12.5 to 12.9 V (electrolyte is at 20°C (68°F))

HINT:

If the result is not as specified, recharge or replace the battery.

(3) Measure the battery voltage when cranking the engine.

Standard:

Approximately 6 V or higher (0°C (32°F) or higher)

HINT:

When the battery is depleted, the horn becomes quieter.

NG ► CHARGE OR REPLACE BATTERY

OK

28.	CHECK ENGINE ASSEMBLY
------------	------------------------------

(a) Check that the crankshaft rotates smoothly when rotating it by hand.

OK:

Crankshaft rotates smoothly.

HINT:

Excess engine friction may have occurred temporarily. Remove the cylinder head cover and oil pan, and check for foreign matter such as iron fragments. If there is a malfunction or signs of a malfunction present, perform a detailed inspection by disassembling all the parts.

NG ► REPAIR OR REPLACE ENGINE ASSEMBLY

OK ► INSPECT STARTER ASSEMBLY

29.	CHECK STARTER ASSEMBLY
------------	-------------------------------

(a) Remove the starter assembly  .

(b) Check for starter pinion gear wear and damage.

OK:

There is no wear or damage.

Result

RESULT	PROCEED TO
Abnormal	A
Normal (for Manual Transmission)	B
Normal (for Automatic Transmission)	C

B ▶ REPLACE FLYWHEEL SUB-ASSEMBLY

C ▶ REPLACE DRIVE PLATE AND RING GEAR SUB-ASSEMBLY

A ▶ REPLACE STARTER ASSEMBLY

30. INSPECT BATTERY

(a) Check the electrolyte quantity.

OK:

Electrolyte quantity is within the specified range.

(b) Inspect the specific gravity.

(1) Inspect the specific gravity of each cell.

Standard specific gravity:

1.25 to 1.29 (electrolyte is at 20°C (68°F))

HINT:

- If the result is not as specified, recharge or replace the battery.
- It is not necessary to inspect a maintenance-free battery.

(c) Inspect the battery voltage.

(1) Turn the ignition switch off and turn on the headlights for 20 to 30 seconds. This will remove the surface charge from the battery.

(2) Measure the battery voltage.

Standard voltage:

12.5 to 12.9 V (electrolyte is at 20°C (68°F))

HINT:

If the result is not as specified, recharge or replace the battery.

(3) Measure the battery voltage when cranking the engine.

Standard:

Approximately 6 V or higher (0°C (32°F) or higher)

HINT:

When the battery is depleted, the horn becomes quieter.

NG ► CHARGE OR REPLACE BATTERY

OK

31.	INSPECT STARTER ASSEMBLY
------------	---------------------------------

(a) Inspect the starter assembly  .

NG ► REPLACE STARTER ASSEMBLY

OK ► CHECK STARTER SIGNAL CIRCUIT

32.	PERFORM SIMULATION TEST
------------	--------------------------------

(a) Check the cranking speed.

Result

PROBLEM SYMPTOM	SUSPECTED AREA	PROCEED TO
Cranking speed is slow (100 rpm or less)	<ul style="list-style-type: none">• Battery• Starter assembly• Excess engine friction	A
Cranking speed is fast (300 rpm or more)*1	Engine compression loss	B

HINT:

*1: If the cranking speed is fast, there may be compression loss.

B ► CHECK AND REPAIR ENGINE ASSEMBLY

A

33. INSPECT BATTERY

(a) Check the electrolyte quantity.

OK:

Electrolyte quantity is within the specified range.

(b) Inspect the specific gravity.

(1) Inspect the specific gravity of each cell.

Standard specific gravity:

1.25 to 1.29 (electrolyte is at 20°C (68°F))

HINT:

- If the result is not as specified, recharge or replace the battery.
- It is not necessary to inspect a maintenance-free battery.

(c) Inspect the battery voltage.

(1) Turn the ignition switch off and turn on the headlights for 20 to 30 seconds. This will remove the surface charge from the battery.

(2) Measure the battery voltage.

Standard voltage:

12.5 to 12.9 V (electrolyte is at 20°C (68°F))

HINT:

If the result is not as specified, recharge or replace the battery.

(3) Measure the battery voltage when cranking the engine.

Standard:

Approximately 6 V or higher (0°C (32°F) or higher)

HINT:

When the battery is depleted, the horn becomes quieter.

NG ► CHARGE OR REPLACE BATTERY

OK
▼

34.	CHECK ENGINE ASSEMBLY
-----	-----------------------

(a) Check that the crankshaft rotates smoothly when rotating it by hand.

OK:

Crankshaft rotates smoothly.

HINT:

Excess engine friction may have occurred temporarily. Remove the cylinder head cover and oil pan, and check for foreign matter such as iron fragments. If there is a malfunction or signs of a malfunction present, perform a detailed inspection by disassembling all the parts.

NG ► REPAIR OR REPLACE ENGINE ASSEMBLY

OK ► INSPECT STARTER ASSEMBLY

35.	CHECK FUEL INJECTOR ASSEMBLY (FOR PORT INJECTION)
-----	---

(a) Using a sound scope or screwdriver, check for fuel injector operating noise while cranking the engine.

OK:

Fuel injector operating noise is heard.

NG ► READ VALUE USING TECHSTREAM (ENGINE SPEED)

OK
▼

36.	CHECK FUEL PRESSURE (LOW PRESSURE SIDE)
-----	---

(a) Inspect the fuel pressure INFO.

NG ► PERFORM ACTIVE TEST USING TECHSTREAM (CONTROL THE FUEL PUMP / SPEED)

OK
▼

37. CHECK SPARK PLUG AND SPARK

(a) Check for sparks  .

NG  **CHECK SPARK PLUG**

OK

**38. CONFIRM VEHICLE CONDITION**

(a) Confirm the conditions present when the malfunction occurred based on the customer problem analysis.

Result

PROBLEM SYMPTOM	SUSPECTED AREA	PROCEED TO
When the engine is stopped and a long time has passed, engine starting trouble occurs*1	Pressure regulator is stuck open	A
When the engine is stopped and approximately 15 to 120 minutes have passed, engine starting trouble occurs*2	Fuel injector leak	B
When the engine is stopped and approximately 2 to 3 minutes have passed, engine starting trouble occurs*3	Failure to maintain fuel pressure by pressure regulator	A
Condition other than above, or there is an inconsistency in the conditions present when engine starting trouble occurs	-	C*4

HINT:

*1: The pressure regulator may be stuck open. Attach a fuel pressure gauge and check the ability of the system to maintain fuel pressure after stopping the engine.

*2: Fuel may be leaking from a fuel injector assembly.

*3: The pressure regulator may not be able to maintain the fuel pressure. Attach a fuel pressure gauge and check the ability of the pressure regulator to maintain fuel pressure after stopping the engine.

*4: From step 72, perform fuel system troubleshooting C (steps 73 to 76).

B  **CHECK FUEL INJECTOR ASSEMBLY (FOR PORT INJECTION)**

C  **CHECK MALFUNCTION CONDITION**

A

**39. CHECK FUEL PRESSURE (LOW PRESSURE SIDE)**

HINT:

For the fuel pressure inspection, refer to the following procedures  .

(a) Attach a fuel pressure gauge and check the fuel pressure after stopping the engine.

Result

RESULT	PROCEED TO
Below 147 kPa (1.5 kgf/cm ²) (5 minutes after stopping the engine)	A
147 kPa (1.5 kgf/cm ²) or higher (5 minutes after stopping the engine)	B*1

HINT:

- If the engine cannot be started, check the fuel pressure after cranking the engine.
- *1: From step 72, perform fuel system troubleshooting C (steps 73 to 76).

B  CHECK MALFUNCTION CONDITION

A  REPLACE FUEL PRESSURE REGULATOR ASSEMBLY

40.	CHECK FUEL INJECTOR ASSEMBLY (FOR PORT INJECTION)
------------	--

(a) After stopping the engine, measure the HC concentration inside the surge tank for 15 minutes.

Result

RESULT	PROCEED TO
4000 ppm or more	A
Less than 4000 ppm	B*1

HINT:

- If the concentration is 4000 ppm or more, a fuel injector assembly may have a sealing problem.
- *1: From step 72, perform fuel system troubleshooting C (steps 73 to 76).

B  CHECK MALFUNCTION CONDITION

A  REPLACE FUEL INJECTOR ASSEMBLY (FOR PORT INJECTION)

41.	CHECK SPARK PLUG
------------	-------------------------

(a) Inspect the spark plugs  .

HINT:

Even if the spark plug of only one cylinder is malfunctioning, replace the spark plugs of all cylinders.

NG  REPLACE SPARK PLUG

OK

42. READ VALUE USING TECHSTREAM (ENGINE SPEED)

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Enter the following menus: Powertrain / Engine / Data List / Engine Speed.
- (d) Start the engine.
- (e) While running the engine, read the value of Engine Speed.
 - OK:
 - A value that matches the actual engine speed is constantly output.

HINT:

- Check the engine speed using a line graph.
- If the engine cannot be started, check the engine speed while cranking the engine.
- If the engine speed is 0 rpm, the crankshaft position sensor may have an open or short circuit.

NG ► CHECK CRANKSHAFT POSITION SENSOR CIRCUIT

OK
▼

43. CHECK TERMINAL VOLTAGE (IGNITION COIL POWER SOURCE)

(a) Disconnect the ignition coil assembly connectors.

- (b) Turn the ignition switch to ON.
- (c) Measure the voltage according to the value(s) in the table below.
 - Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
C38-1 - Body ground	Ignition switch ON	11 to 14 V
C28-1 - Body ground	Ignition switch ON	11 to 14 V
C39-1 - Body ground	Ignition switch ON	11 to 14 V
C27-1 - Body ground	Ignition switch ON	11 to 14 V

Text in Illustration

*a	Front view of wire harness connector (to Ignition Coil Assembly)
*b	No. 1 cylinder
*c	No. 2 cylinder
*d	No. 3 cylinder
*e	No. 4 cylinder

HINT:

- Jiggle the wire harness and connector to increase the likelihood of detecting malfunctions that do not always occur.
- Make sure there is not an excessive amount of force applied to the wire harness.

NG  **CHECK IGNITION COIL POWER SOURCE CIRCUIT**

OK

44.	CHECK HARNESS AND CONNECTOR (IGNITION COIL ASSEMBLY - ECM)
------------	---

- (a) Disconnect the ignition coil assembly connector.
- (b) Disconnect the ECM connector.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A36-21 (IGT1) - C38-3	Always	Below 1 Ω
A36-10 (IGT2) - C28-3	Always	Below 1 Ω
A36-31 (IGT3) - C39-3	Always	Below 1 Ω
A36-8 (IGT4) - C27-3	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A36-21 (IGT1) or C38-3 - Body ground	Always	10 k Ω or higher
A36-10 (IGT2) or C28-3 - Body ground	Always	10 k Ω or higher
A36-31 (IGT3) or C39-3 - Body ground	Always	10 k Ω or higher
A36-8 (IGT4) or C27-3 - Body ground	Always	10 k Ω or higher

HINT:

- Jiggle the wire harness and connector to increase the likelihood of detecting malfunctions that do not always occur.
- Make sure there is not an excessive amount of force applied to the wire harness.

OK

45.	CHECK HARNESS AND CONNECTOR (IGNITION COIL ASSEMBLY - BODY GROUND)
------------	---

- (a) Disconnect the ignition coil assembly connector.
- (b) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
C38-2 - Body ground	Always	Below 1 Ω
C28-2 - Body ground	Always	Below 1 Ω
C39-2 - Body ground	Always	Below 1 Ω
C27-2 - Body ground	Always	Below 1 Ω

HINT:

- Jiggle the wire harness and connector to increase the likelihood of detecting malfunctions that do not always occur.
- Make sure there is not an excessive amount of force applied to the wire harness.
- If the wire harness is normal, after replacing the ignition coil assembly, check if engine starting trouble occurs again. If engine starting trouble occurs again, proceed to step 72 and perform troubleshooting for the ignition system (steps 78 to 83).

46.	PERFORM ACTIVE TEST USING TECHSTREAM (CONTROL THE FUEL PUMP / SPEED)
------------	---

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Enter the following menus: Powertrain / Engine / Active Test / Control the Fuel Pump / Speed.
- (d) When performing the Active Test, check for an operating sound from the fuel pump.

OK:

CONTROL THE FUEL PUMP / SPEED	SPECIFIED CONDITION
ON	Operating sound heard
OFF	Operating sound not heard

HINT:

Jiggle the wire harness and connector to increase the likelihood of detecting malfunctions that do not always occur.

NG ▶ CHECK FUEL PUMP CONTROL CIRCUIT (LOW PRESSURE SIDE)

OK
▼

47. PERFORM ACTIVE TEST USING TECHSTREAM (CONTROL THE FUEL PUMP / SPEED)

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Enter the following menus: Powertrain / Engine / Active Test / Control the Fuel Pump / Speed.
- (d) When performing the Active Test, check for fuel leakage from the fuel pipes.

Result

RESULT	PROCEED TO
Fuel leakage or signs of fuel leakage are present	A
No fuel leakage or signs of fuel leakage	B

HINT:

- Jiggle the wire harness and connector to increase the likelihood of detecting malfunctions that do not always occur.
- Check if the vehicle ran out of fuel, as engine starting trouble due to running out of fuel is also detected.
- If there are no fuel leaks, after inspecting the fuel pump control circuit, check if engine starting trouble occurs again. If engine starting trouble occurs again, proceed to step 72 and perform fuel system troubleshooting C (steps 73 to 77).

B ▶ CHECK FUEL PUMP CONTROL CIRCUIT (LOW PRESSURE SIDE)

A ▶ REPAIR OR REPLACE FUEL LINE

48. READ VALUE USING TECHSTREAM (ENGINE SPEED)

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Enter the following menus: Powertrain / Engine / Data List / Engine Speed.
- (d) Start the engine.
- (e) While running the engine, read the value of Engine Speed.

OK:

A value that matches the actual engine speed is constantly output.

HINT:

- Check the engine speed using a line graph.
- If the engine cannot be started, check the engine speed while cranking the engine.
- If the engine speed is 0 rpm, the crankshaft position sensor may have an open or short circuit.

NG ▶ **REPLACE CRANKSHAFT POSITION SENSOR**

OK

49. CHECK TERMINAL VOLTAGE (FUEL INJECTOR POWER SOURCE)

(a) Disconnect the fuel injector assembly connectors.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

CYLINDER	TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
No. 1	C8-1 - Body ground	Ignition switch ON	11 to 14 V
No. 2	C30-1 - Body ground	Ignition switch ON	11 to 14 V
No. 3	C9-1 - Body ground	Ignition switch ON	11 to 14 V
No. 4	C31-1 - Body ground	Ignition switch ON	11 to 14 V

Text in Illustration

*a	Front view of wire harness connector (to Fuel Injector Assembly)
*b	No. 1 cylinder
*c	No. 2 cylinder
*d	No. 3 cylinder
*e	No. 4 cylinder

HINT:

- Jiggle the wire harness and connector to increase the likelihood of detecting malfunctions that do not always occur.
- Make sure there is not an excessive amount of force applied to the wire harness.

OK
▼

50.	INSPECT MASS AIR FLOW METER
-----	------------------------------------

(a) Inspect the mass air flow meter INFO.

NG ► INSPECT ENGINE COOLANT TEMPERATURE SENSOR

OK
▼

51.	CHECK INTAKE SYSTEM
-----	----------------------------

(a) Check for air leakage in the intake system [vacuum hose disconnection, cracks, damaged gaskets, etc.] INFO.

HINT:

- If the accelerator pedal is released after racing the engine, the inspection is easier to perform because the vacuum inside the intake manifold increases and the air suction noise becomes louder.
- If Short FT and Long FT are largely different from the normal values (differ by more than 15%) when idling (intake air volume is small) and almost the same as the normal values when racing the engine (for example, when maintaining a speed of 3000 rpm) (intake air volume is high), air leakage may be present.

OK:

There is no air leakage.

NG ► REPAIR OR REPLACE INTAKE SYSTEM

OK
▼

52.	CHECK THROTTLE WITH MOTOR BODY ASSEMBLY
-----	--

(a) Disconnect the throttle with motor body assembly connector.

HINT:

When the connector is disconnected, the vehicle enters fail-safe mode.

(b) Crank the engine and check that it starts.

Result

RESULT	PROCEED TO
Engine starts	A
Engine does not start	B

(c) Connect the throttle with motor body assembly connector.

HINT:

When this inspection is performed, the MIL may illuminate. After finishing the inspection, check and clear DTCs

B ► **PERFORM ACTIVE TEST USING TECHSTREAM (CONTROL THE VVT LINEAR)**

A
▼

53.	CHECK THROTTLE WITH MOTOR BODY ASSEMBLY
------------	--

(a) Check if carbon is in the airflow passage.

OK:

No carbon present.

NG ► **REPLACE THROTTLE WITH MOTOR BODY ASSEMBLY**

OK
▼

54.	PERFORM ACTIVE TEST USING TECHSTREAM (CONTROL THE VVT LINEAR)
------------	--

(a) Connect the Techstream to the DLC3.

(b) Turn the Techstream on.

(c) Warm up the engine.

(d) Enter the following menus: Powertrain / Engine / Active Test / Control the VVT Linear (Bank1) or Control the VVT Linear (Bank2).

HINT:

When performing the Active Test, make sure the A/C is on and the shift lever is in P, N or neutral position.

(e) Check the engine speed while operating the camshaft timing oil control valve using the Techstream.

OK:

TECHSTREAM OPERATION	SPECIFIED CONDITION
0 deg (CA)	Normal engine speed
36 deg (CA)	Engine idles roughly or stalls

HINT:

- Jiggle the wire harness and connector to increase the likelihood of detecting malfunctions that do not always occur.
- When the results of the inspection using the Active Test are normal but the valve operating noise is abnormal, check the valve for any signs of problems.
- If the camshaft timing oil control valve is stuck on, the valve overlap increases and combustion worsens due to the internal EGR which may cause the engine to stall.

NG ▶ **REPLACE CAMSHAFT TIMING OIL CONTROL VALVE (FOR INTAKE SIDE)**

OK

55.	PERFORM ACTIVE TEST USING TECHSTREAM (CONTROL THE VVT EXHAUST LINEAR)
------------	--

- (a) Connect the Techstream to the DLC3.
- (b) Turn the Techstream on.
- (c) Warm up the engine.
- (d) Enter the following menus: Powertrain / Engine / Active Test / Control the VVT Exhaust Linear (Bank1) or Control the VVT Exhaust Linear (Bank2).

HINT:

When performing the Active Test, make sure the A/C is on and the shift lever is in P, N or neutral position.

- (e) Check the engine speed while operating the camshaft timing oil control valve using the Techstream.

OK*1:

TECHSTREAM OPERATION	SPECIFIED CONDITION
0 deg (CA)	Normal engine speed
51 deg (CA)	Engine idles roughly or stalls

Result

RESULT	PROCEED TO
NG	A
OK	B

HINT:

- *1: From step 72, perform intake system troubleshooting (steps 84 to 86). If engine starting trouble still occurs, perform fuel system troubleshooting A (steps 87 to 94).
- Jiggle the wire harness and connector to increase the likelihood of detecting malfunctions that do not always occur.
- When the results of the inspection using the Active Test are normal but the valve operating noise is abnormal, check the valve for any signs of problems.
- If the camshaft timing oil control valve is stuck on, the valve overlap increases and combustion worsens due to the internal EGR which may cause the engine to stall.

B ▶ CHECK MALFUNCTION CONDITION**A ▶ REPLACE CAMSHAFT TIMING OIL CONTROL VALVE (FOR EXHAUST SIDE)****56. CHECK HARNESS AND CONNECTOR (MASS AIR FLOW METER - ECM)**

- (a) Disconnect the mass air flow meter connector.
- (b) Disconnect the ECM connector.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A33-22 (VG) - C16-5 (VG)	Always	Below 1 Ω
A33-29 (E2G) - C16-4 (E2G)	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A33-22 (VG) or C16-5 (VG) - Body ground	Always	10 kΩ or higher
A33-29 (E2G) or C16-4 (E2G) - Body ground	Always	10 kΩ or higher

HINT:

- Jiggle the wire harness and connector to increase the likelihood of detecting malfunctions that do not always occur.
- Make sure there is not an excessive amount of force applied to the wire harness.
- If the wire harness is normal, after replacing the mass air flow meter, check if engine starting trouble occurs again. If engine starting trouble occurs again, proceed to step 72 and perform intake system troubleshooting (steps 84 to 86). If engine starting trouble still occurs, perform fuel system troubleshooting A (steps 87 to 94).

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR**OK ▶ REPLACE MASS AIR FLOW METER****57. INSPECT ENGINE COOLANT TEMPERATURE SENSOR**

- (a) Inspect the engine coolant temperature sensor .

HINT:

If the engine coolant temperature sensor is malfunctioning, after replacing it, check if engine starting trouble occurs again. If engine starting trouble occurs, replace the ECM. If engine starting trouble still occurs, proceed to step 72 and perform fuel system troubleshooting A (steps 95 to 102), fuel system troubleshooting B (steps 103 to 105), intake system troubleshooting (steps 106 to 108), and ignition system troubleshooting (steps 109 to 114), in that order.

REPLACE ENGINE COOLANT TEMPERATURE SENSOR

OK

58.	CHECK HARNESS AND CONNECTOR (ENGINE COOLANT TEMPERATURE SENSOR - ECM)
------------	--

- (a) Disconnect the engine coolant temperature sensor connector.
- (b) Disconnect the ECM connector.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A36-30 (THW) - C35-2 (THW)	Always	Below 1 Ω
A36-29 (E1) - C35-1 (E2)	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A36-30 (THW) or C35-2 (THW) - Body ground	Always	10 kΩ or higher
A36-29 (E1) or C35-1 (E2) - Body ground	Always	10 kΩ or higher

HINT:

- Jiggle the wire harness and connector to increase the likelihood of detecting malfunctions that do not always occur.
- Make sure there is not an excessive amount of force applied to the wire harness.
- If the wire harness or connector is malfunctioning, after replacing or repairing it, check if engine starting trouble occurs again. If engine starting trouble occurs, replace the ECM. If engine starting trouble still occurs, proceed to step 72 and perform fuel system troubleshooting A (steps 95 to 102), fuel system troubleshooting B (steps 103 to 105), intake system troubleshooting (steps 106 to 108), and ignition system troubleshooting (steps 109 to 115), in that order.

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

59.	INSPECT MASS AIR FLOW METER
------------	------------------------------------

- (a) Inspect the mass air flow meter  .

HINT:

If the mass air flow meter is malfunctioning, after replacing it, check if engine starting trouble occurs again. If

engine starting trouble occurs, replace the ECM. If engine starting trouble still occurs, proceed to step 72 and perform fuel system troubleshooting A (steps 95 to 102), fuel system troubleshooting B (steps 103 to 105), intake system troubleshooting (steps 106 to 108), and ignition system troubleshooting (steps 109 to 115), in that order.

NG  **REPLACE MASS AIR FLOW METER**

OK

60.	CHECK HARNESS AND CONNECTOR (MASS AIR FLOW METER - ECM)
------------	--

- (a) Disconnect the mass air flow meter connector.
- (b) Disconnect the ECM connector.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A33-22 (VG) - C16-5 (VG)	Always	Below 1 Ω
A33-29 (E2G) - C16-4 (E2G)	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A33-22 (VG) or C16-5 (VG) - Body ground	Always	10 k Ω or higher
A33-29 (E2G) or C16-4 (E2G) - Body ground	Always	10 k Ω or higher

HINT:

- Jiggle the wire harness and connector to increase the likelihood of detecting malfunctions that do not always occur.
- Make sure there is not an excessive amount of force applied to the wire harness.
- If the wire harness or connector is malfunctioning, after replacing or repairing it, check if engine starting trouble occurs again. If engine starting trouble occurs, replace the ECM. If engine starting trouble still occurs, proceed to step 72 and perform fuel system troubleshooting A (steps 95 to 102), fuel system troubleshooting B (steps 103 to 105), intake system troubleshooting (steps 106 to 108), and ignition system troubleshooting (steps 109 to 115), in that order.

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

61.	READ VALUE USING TECHSTREAM
------------	------------------------------------

- (a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Enter the following menus: Powertrain / Engine / Data List / Atmospheric Pressure and Long FT.

Result

DATA LIST ITEM	RESULT	SUSPECTED AREA	PROCEED TO
Long FT	+25% or more or less than -25%	<ul style="list-style-type: none"> • Air fuel ratio sensor • Heated oxygen sensor • Mass air flow meter • Fuel injector assembly (for port injection) • ECM 	A
Atmosphere Pressure	80 kPa or less (when elevation is 0 m)		
Both Data List items listed above	Values are other than above	-	B

B ► CHECK FUEL PRESSURE (LOW PRESSURE SIDE)

A
▼

62.	PERFORM SIMULATION TEST
------------	--------------------------------

(a) Remove the EFI MAIN and ETCS fuses from the engine room relay block assembly.

(b) After 60 seconds or more elapse, install the EFI MAIN and ETCS fuses.

(c) Check if the engine can be started.

Result

RESULT	PROCEED TO
Engine can be started	A
Engine cannot be started	B

B ► CHECK FUEL PRESSURE (LOW PRESSURE SIDE)

A
▼

63.	INSPECT AIR FUEL RATIO SENSOR
------------	--------------------------------------

(a) Connect the Techstream to the DLC3.

(b) Start the engine.

- (c) Turn the Techstream on.
- (d) Enter the following menus: Powertrain / Engine / Data List / Fuel System Status #1.
- (e) Confirm that Fuel System Status #1 is CL.
- (f) Enter the following menus: Powertrain / Engine / Data List / AF Lambda B1S1.
- (g) Confirm that AF Lambda B1S1 is both within the range of 0.95 to 1.05 when idling.
- (h) Enter the following menus: Powertrain / Engine / Active Test / Control the Injection Volume for A/F sensor.

- (i) Read the output voltage from the air fuel ratio sensor when increasing and decreasing the fuel injection volume.

Standard:

TECHSTREAM DISPLAY	INJECTION VOLUME	SPECIFIED CONDITION
AFS Voltage B1S1	+12.5%	Air fuel ratio sensor output voltage is below 2.0 V
	-12.5%	Air fuel ratio sensor output voltage is higher than 2.4 V

Result

RESULT	PROCEED TO
Normal	A
Abnormal	B

HINT:

- The air fuel ratio sensor has an output delay of a few seconds and the heated oxygen sensor has a maximum output delay of approximately 20 seconds.
- If the air fuel ratio sensor is malfunctioning, after replacing it, check if engine starting trouble occurs again. If engine starting trouble occurs, replace the ECM. If engine starting trouble still occurs, proceed to step 72 and perform fuel system troubleshooting A (steps 95 to 102), fuel system troubleshooting B (steps 103 to 105), intake system troubleshooting (steps 106 to 108), and ignition system troubleshooting (steps 109 to 115), in that order.

B ▶ REPLACE AIR FUEL RATIO SENSOR

A
▼

64.	PERFORM SIMULATION TEST
-----	-------------------------

(a) Check if the idling speed is stable after starting the engine.

OK:

Speed is stable.

HINT:

After replacing the fuel injector assembly or mass air flow meter, check if engine starting trouble occurs again. If engine starting trouble occurs, replace the ECM. If engine starting trouble still occurs, proceed to step 72 and perform fuel system troubleshooting A (steps 95 to 102), fuel system troubleshooting B (steps 103 to 105), intake system troubleshooting (steps 106 to 108), and ignition system troubleshooting (steps 109 to 115), in that order.

NG ► REPLACE FUEL INJECTOR ASSEMBLY (FOR PORT INJECTION)

OK ► REPLACE MASS AIR FLOW METER

65.	CHECK FUEL PRESSURE (LOW PRESSURE SIDE)
------------	--

(a) Inspect the fuel pressure INFO.

NG ► PERFORM ACTIVE TEST USING TECHSTREAM (CONTROL THE FUEL PUMP / SPEED)

OK

66.	CHECK SPARK PLUG
------------	-------------------------

(a) Inspect the spark plugs INFO.

Result

RESULT	PROCEED TO
All cylinders are normal	A
One cylinder is abnormal*1	B
All cylinders are abnormal*2, *3	C

HINT:

- *1: If one cylinder is abnormal, replace the spark plug of that cylinder and inspect the ignition and fuel system for that cylinder. After performing repairs, check if engine starting trouble occurs again. If engine starting trouble still occurs, proceed to step 72 and perform fuel system troubleshooting A (steps 95 to 102), fuel system troubleshooting B (steps 103 to 105), intake system troubleshooting (steps 106 to 108), and ignition system troubleshooting (steps 109 to 115), in that order.
- *2: If all cylinders are abnormal, replace the spark plugs of all cylinders and check if engine starting trouble occurs again. If engine starting trouble still occurs, proceed to step 72 and perform fuel system troubleshooting A (steps 95 to 102), fuel system troubleshooting B (steps 103 to 105), intake system troubleshooting (steps 106 to 108), and ignition system troubleshooting (steps 109 to 115), in that order.
- *3: Engine starting trouble may occur if the vehicle is driven extremely short distances repeatedly.

B ▶ REPLACE SPARK PLUG (ABNORMAL CYLINDER)

C ▶ REPLACE SPARK PLUG (ALL)

A

67.	CONFIRM VEHICLE CONDITION
------------	----------------------------------

(a) Confirm the conditions present when the malfunction occurred based on the customer problem analysis.

Result

PROBLEM SYMPTOM	SUSPECTED AREA	PROCEED TO
When the engine is stopped and a long time has passed, engine starting trouble occurs*1	Pressure regulator is stuck open	A
When the engine is stopped and approximately 15 to 120 minutes have passed, engine starting trouble occurs*2	Fuel injector leak	B
When the engine is stopped and approximately 2 to 3 minutes have passed, engine starting trouble occurs*3	Failure to maintain fuel pressure by pressure regulator	A
Condition other than above, or there is an inconsistency in the conditions present when engine starting trouble occurs	-	C*4

HINT:

*1: The pressure regulator may be stuck open. Attach a fuel pressure gauge and check the ability of the system to maintain fuel pressure after stopping the engine.

*2: Fuel may be leaking from a fuel injector assembly.

*3: The pressure regulator may not be able to maintain the fuel pressure. Attach a fuel pressure gauge and check the ability of the pressure regulator to maintain fuel pressure after stopping the engine.

*4: From step 72, perform fuel system troubleshooting A (steps 95 to 102), fuel system troubleshooting B (steps 103 to 105), intake system troubleshooting (steps 106 to 108), and ignition system troubleshooting (steps 109 to 114), in that order.

B ▶ CHECK PURGE VALVE

C ▶ CHECK MALFUNCTION CONDITION

A

68.	CHECK FUEL PRESSURE (LOW PRESSURE SIDE)
------------	--

HINT:

For the fuel pressure inspection, refer to the following procedures **INFO** .

(a) Attach a fuel pressure gauge and check the fuel pressure after stopping the engine.

Result

RESULT	PROCEED TO
Below 147 kPa (1.5 kgf/cm ²) (5 minutes after stopping the engine)	A
147 kPa (1.5 kgf/cm ²) or higher (5 minutes after stopping the engine)	B*1

HINT:

- If the engine cannot be started, check the fuel pressure after cranking the engine.
- *1: From step 72, perform fuel system troubleshooting A (steps 95 to 102), fuel system troubleshooting B (steps 103 to 105), intake system troubleshooting (steps 106 to 108), and ignition system troubleshooting (steps 109 to 114), in that order.

B ▶ CHECK MALFUNCTION CONDITION

A ▶ REPLACE FUEL PRESSURE REGULATOR ASSEMBLY

69.	CHECK PURGE VALVE
------------	--------------------------

(a) Disconnect the purge hose (on the canister side) of the purge valve.

- (b) Start the engine.
- (c) Idle the engine.
- (d) Disconnect the connector of the purge valve.
- (e) Check if air flows through the purge valve.
 - OK:
Air does not flow.
- (f) Connect the connector of the purge valve.
- (g) Connect the purge hose of the purge valve.

HINT:

When this inspection is performed, the MIL may illuminate. After finishing the inspection, check and clear DTCs

INFO .

NG ▶ REPLACE ENGINE COOLANT TEMPERATURE SENSOR

OK

70.	CHECK FUEL INJECTOR ASSEMBLY (FOR PORT INJECTION)
------------	--

- (a) Clean the inside of the surge tank with compressed air.
- (b) After stopping the engine, measure the HC concentration inside the surge tank for 15 minutes.

Result

RESULT	PROCEED TO
4000 ppm or more	A
Less than 4000 ppm	B*1

HINT:

- If the concentration is 4000 ppm or more, a fuel injector assembly may have a sealing problem.
- *1: From step 72, perform fuel system troubleshooting A (steps 95 to 102), fuel system troubleshooting B (steps 103 to 105), intake system troubleshooting (steps 106 to 108), and ignition system troubleshooting (steps 109 to 115), in that order.

B ▶ CHECK MALFUNCTION CONDITION

A ▶ REPLACE FUEL INJECTOR ASSEMBLY (FOR PORT INJECTION)

71.	PERFORM ACTIVE TEST USING TECHSTREAM (CONTROL THE FUEL PUMP / SPEED)
------------	---

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Enter the following menus: Powertrain / Engine / Active Test / Control the Fuel Pump / Speed.
- (d) When performing the Active Test, check for fuel leakage from the fuel pipes.

Result

RESULT	PROCEED TO
Fuel leakage or signs of fuel leakage are present	A
No fuel leakage or signs of fuel leakage	B

HINT:

- Jiggle the wire harness and connector to increase the likelihood of detecting malfunctions that do not always occur.
- Check if the vehicle ran out of fuel, as engine starting trouble due to running out of fuel is also detected.
- If there are no fuel leaks, after inspecting the fuel pump control circuit, check if engine starting trouble occurs again. If engine starting trouble still occurs, proceed to step 72 and perform fuel system troubleshooting A (steps 95 to 102), fuel system troubleshooting B (steps 103 to 105), intake system troubleshooting (steps 106 to 108), and ignition system troubleshooting (steps 109 to 114), in that order.

B ▶ CHECK FUEL PUMP CONTROL CIRCUIT (LOW PRESSURE SIDE)

A ▶ REPAIR OR REPLACE FUEL LINE

72.	CHECK MALFUNCTION CONDITION
------------	------------------------------------

(a) If the malfunction could not be identified during the inspections in steps 38, 39, 40 and 47, perform fuel system troubleshooting C (steps 73 to 76).

Result

PERFORMED STEP	TROUBLESHOOTING BY SYSTEM	PROCEDURE	PROCEED TO
Steps 38, 39, 40 and 47	Fuel system troubleshooting C	73 to 76	A

(b) If the malfunction could not be identified during the inspection in step 45, perform ignition system troubleshooting (steps 77 to 83).

Result

PERFORMED STEP	TROUBLESHOOTING BY SYSTEM	PROCEDURE	PROCEED TO
Step 45	Ignition system troubleshooting	77 to 83	B

(c) If the malfunction could not be identified during the inspections in steps 55, 56 and 57, perform intake air system troubleshooting (steps 84 to 86). If engine starting trouble still occurs, perform fuel system troubleshooting A (steps 87 to 94).

Result

PERFORMED STEP	TROUBLESHOOTING BY SYSTEM	PROCEDURE	PROCEED TO
Step 55, 56, 57	Intake air system troubleshooting	84 to 86	C
	Fuel system troubleshooting A	87 to 94	

(d) If the malfunction could not be identified during the inspections in steps 58, 59, 60, 63, 64, 66, 67, 68, 70 and 71, perform fuel system troubleshooting A (steps 95 to 102), fuel system troubleshooting B (steps 103 to 105), intake air system troubleshooting (steps 106 to 108), and ignition system troubleshooting (steps 109 to 115), in that order.

Result

PERFORMED STEP	TROUBLESHOOTING BY SYSTEM	PROCEDURE	PROCEED TO
Steps 57, 58, 59, 60, 63, 64, 66, 67, 68, 70 and 71	Fuel system troubleshooting A	95 to 102	D
	Fuel system troubleshooting B	103 to 105	
	Intake air system troubleshooting	106 to 108	
	Ignition system troubleshooting	109 to 115	

B ▶ CHECK CRANKSHAFT POSITION SENSOR

C ▶ READ VALUE USING TECHSTREAM (ISC LEARNING VALUE)

D ▶ CHECK FUEL PRESSURE (LOW PRESSURE SIDE)

A

73.	INSPECT FUEL INJECTOR ASSEMBLY (FOR PORT INJECTION)
------------	--

(a) Inspect the fuel injector assemblies (for port injection) INFO .

NG ▶ **REPLACE FUEL INJECTOR ASSEMBLY (FOR PORT INJECTION)**

OK

74.	CHECK TERMINAL VOLTAGE (FUEL INJECTOR POWER SOURCE)
------------	--

(a) Disconnect the fuel injector assembly connectors.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

CYLINDER	TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
No. 1	C8-1 - Body ground	Ignition switch ON	11 to 14 V
No. 2	C30-1 - Body ground	Ignition switch ON	11 to 14 V
No. 3	C9-1 - Body ground	Ignition switch ON	11 to 14 V
No. 4	C31-1 - Body ground	Ignition switch ON	11 to 14 V

Text in Illustration

*a	Front view of wire harness connector (to Fuel Injector Assembly)
*b	No. 1 cylinder
*c	No. 2 cylinder
*d	No. 3 cylinder
*e	No. 4 cylinder

HINT:

- Jiggle the wire harness and connector to increase the likelihood of detecting malfunctions that do not always occur.
- Make sure there is not an excessive amount of force applied to the wire harness.

NG ▶ REPAIR FUEL INJECTOR POWER SOURCE CIRCUIT

OK

75. CHECK CRANKSHAFT POSITION SENSOR

(a) Replace the crankshaft position sensor **INFO** .

(b) Check the engine start operation.

OK:

Malfunction has been repaired successfully.

NG ▶ CHECK VVT SENSOR

OK ▶ END (CRANKSHAFT POSITION SENSOR IS DEFECTIVE)

76. CHECK VVT SENSOR

(a) Replace the VVT sensor **INFO** .

(b) Check the engine start operation.

OK:

Malfunction has been repaired successfully.

NG ▶ REPLACE ECM

OK ▶ END (VVT SENSOR IS DEFECTIVE)

77. CHECK CRANKSHAFT POSITION SENSOR

(a) Check the tightening and installation condition of the crankshaft position sensor bolt.

(b) Check the connection of the crankshaft position sensor connector.

OK:

Sensor is installed correctly.

NG ▶ SECURELY REINSTALL SENSOR

OK

78.	CHECK VVT SENSOR
------------	-------------------------

- (a) Check the tightening and installation condition of the VVT sensor bolt.
- (b) Check the connection of the VVT sensor connector.

OK:

Sensor is installed correctly.

NG **SECURELY REINSTALL SENSOR**

OK

79.	CHECK HARNESS AND CONNECTOR (CRANKSHAFT POSITION SENSOR - ECM)
------------	---

- (a) Disconnect the crankshaft position sensor connector.
- (b) Disconnect the ECM connector.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A34-16 (NE+) - C33-1 (NE+)	Always	Below 1 Ω
A34-27 (NE-) - C33-2 (NE-)	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A34-16 (NE+) or C33-1 (NE+) - Body ground	Always	10 k Ω or higher
A34-27 (NE-) or C33-2 (NE-) - Body ground	Always	10 k Ω or higher

HINT:

- Jiggle the wire harness and connector to increase the likelihood of detecting malfunctions that do not always occur.
- Make sure there is not an excessive amount of force applied to the wire harness.

NG **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

80.	CHECK HARNESS AND CONNECTOR (VVT SENSOR (INTAKE SIDE) - ECM)
------------	---

(a) Disconnect the VVT sensor connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
C12-1 (VV1-) - Body ground	Ignition switch ON	11 to 14 V
C26-1 (VV2-) - Body ground	Ignition switch ON	11 to 14 V

Text in Illustration

*A	Bank 1
*B	Bank 2
*a	Front view of wire harness connector (to VVT Sensor (Intake Side))

(c) Disconnect the ECM connector.

(d) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A34-26 (VV1+) - C12-2 (VV1+)	Always	Below 1 Ω
A34-34 (VCV) - C12-3 (VC)	Always	Below 1 Ω
A34-15 (VV2+) - C26-2 (VV2+)	Always	Below 1 Ω
A34-34 (VCV) - C26-3 (VC)	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A34-26 (VV1+) or C12-2 (VV1+) - Body ground	Always	10 k Ω or higher
A34-34 (VCV) or C12-3 (VC) - Body ground	Always	10 k Ω or higher
A34-15 (VV2+) or C26-2 (VV2+) - Body ground	Always	10 k Ω or higher
A34-34 (VCV) or C26-3 (VC) - Body ground	Always	10 k Ω or higher

HINT:

- Jiggle the wire harness and connector to increase the likelihood of detecting malfunctions that do not always

occur.

- Make sure there is not an excessive amount of force applied to the wire harness.

NG REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

81. CHECK HARNESS AND CONNECTOR (VVT SENSOR (EXHAUST SIDE) - ECM)

(a) Disconnect the VVT sensor connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
C6-1 (EV1-) - Body ground	Ignition switch ON	11 to 14 V
C25-1 (EV2-) - Body ground	Ignition switch ON	11 to 14 V

Text in Illustration

*A	Bank 1
*B	Bank 2
*a	Front view of wire harness connector (to VVT Sensor (Exhaust Side))

(c) Disconnect the ECM connector.

(d) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A34-14 (EV1+) - C6-2 (EV1+)	Always	Below 1 Ω
A34-34 (VCV) - C6-3 (VC)	Always	Below 1 Ω
A34-25 (EV2+) - C25-2 (EV2+)	Always	Below 1 Ω
A34-34 (VCV) - C25-3 (VC)	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A34-14 (EV1+) or C6-2 (EV1+) - Body ground	Always	10 kΩ or higher
A34-34 (VCV) or C6-3 (VC) - Body ground	Always	10 kΩ or higher
A34-25 (EV2+) or C25-2 (EV2+) - Body ground	Always	10 kΩ or higher
A34-34 (VCV) or C25-3 (VC) - Body ground	Always	10 kΩ or higher

HINT:

- Jiggle the wire harness and connector to increase the likelihood of detecting malfunctions that do not always occur.
- Make sure there is not an excessive amount of force applied to the wire harness.

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Enter the following menus: Powertrain / Engine / Active Test / Control the Fuel Pump / Speed.

(d) When performing the Active Test, check for fuel leakage from the fuel pipes.

Result

RESULT	PROCEED TO
Fuel leakage or signs of fuel leakage are present	A
No fuel leakage or signs of fuel leakage	B

HINT:

- Jiggle the wire harness and connector to increase the likelihood of detecting malfunctions that do not always occur.
- When performing the Active Test, if there is no operating noise from the fuel pump, the fuel pump system may be malfunctioning.
- Check if the vehicle ran out of fuel, as engine starting trouble due to running out of fuel is also detected.

B ▶ **INSPECT FUEL PUMP ASSEMBLY**

A ▶ **REPAIR OR REPLACE FUEL LINE**

94.	INSPECT FUEL PUMP ASSEMBLY
-----	-----------------------------------

(a) Inspect the fuel pump assembly  .

HINT:

- Make sure there is no foreign matter such as iron particles on the fuel pump assembly and no signs that the fuel pump was stuck.
- Make sure the internal connector is securely connected.
- Make sure the fuel pump filter is not clogged.

NG  **REPLACE FUEL PUMP ASSEMBLY**

OK  **REPLACE FUEL PRESSURE REGULATOR ASSEMBLY**

95.	CHECK FUEL PRESSURE (LOW PRESSURE SIDE)
------------	--

HINT:

For the fuel pressure inspection, refer to the following procedures  .

(a) Attach a fuel pressure gauge and check the fuel pressure after stopping the engine.

Result

RESULT	PROCEED TO
147 kPa (1.5 kgf/cm ²) or higher (5 minutes after stopping the engine)	A
Below 147 kPa (1.5 kgf/cm ²) (5 minutes after stopping the engine)	B

B  **PERFORM ACTIVE TEST USING TECHSTREAM (CONTROL THE FUEL PUMP / SPEED)**

A

96.	READ VALUE USING TECHSTREAM (LONG FT)
------------	--

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Enter the following menus: Powertrain / Engine / Data List / Long FT.

Result

DATA LIST ITEM	RESULT	SUSPECTED AREA	PROCEED TO
Long FT	-15 to +15%	<ul style="list-style-type: none">• Wire harness or connector• Fuel	A
	+15% or more, or less than -15%	Fuel injector assembly	B

REPLACE FUEL INJECTOR ASSEMBLY (FOR PORT

B ▶ INJECTION)

A
▼

97. PERFORM SIMULATION TEST

(a) Check if the idling speed is stable after starting the engine and if an unstable idling speed has ever occurred in the past.

Result

PROBLEM SYMPTOM	SUSPECTED AREA	PROCEED TO
Current unstable idling speed or history of unstable idling speed	Crankshaft position sensor system	A
All current and past idling speeds are stable	Fuel	B

HINT:

Through the customer problem analysis, confirm the fuel being used and the location at which the fuel was added to check if the malfunction is caused by the fuel in the vehicle.

B ▶ REPLACE FUEL

A
▼

98. CHECK CRANKSHAFT POSITION SENSOR

(a) Check the tightening and installation condition of the crankshaft position sensor bolt.

(b) Check the connection of the crankshaft position sensor connector.

OK:

Sensor is installed correctly.

NG ▶ SECURELY REINSTALL SENSOR

OK
▼

99. CHECK HARNESS AND CONNECTOR (CRANKSHAFT POSITION SENSOR - ECM)

(a) Disconnect the crankshaft position sensor connector.

(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A34-16 (NE+) - C33-1 (NE+)	Always	Below 1 Ω
A34-27 (NE-) - C33-2 (NE-)	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A34-16 (NE+) or C33-1 (NE+) - Body ground	Always	10 k Ω or higher
A34-27 (NE-) or C33-2 (NE-) - Body ground	Always	10 k Ω or higher

HINT:

- Jiggle the wire harness and connector to increase the likelihood of detecting malfunctions that do not always occur.
- Make sure there is not an excessive amount of force applied to the wire harness.

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

100.	CHECK CRANKSHAFT POSITION SENSOR
-------------	---

(a) Replace the crankshaft position sensor .

(b) Check the engine start operation.

OK:

Malfunction has been repaired successfully.

NG ► REPLACE ECM

OK ► END (CRANKSHAFT POSITION SENSOR IS DEFECTIVE)

101.	PERFORM ACTIVE TEST USING TECHSTREAM (CONTROL THE FUEL PUMP / SPEED)
-------------	---

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Enter the following menus: Powertrain / Engine / Active Test / Control the Fuel Pump / Speed.

(d) When performing the Active Test, check for fuel leakage from the fuel pipes.

Result

RESULT	PROCEED TO
Fuel leakage or signs of fuel leakage are present	A
No fuel leakage or signs of fuel leakage	B

HINT:

- Jiggle the wire harness and connector to increase the likelihood of detecting malfunctions that do not always occur.
- When performing the Active Test, if there is no operating noise from the fuel pump, the fuel pump system may be malfunctioning.
- Check if the vehicle ran out of fuel, as engine starting trouble due to running out of fuel is also detected.

B ► INSPECT FUEL PUMP ASSEMBLY

A ► REPAIR OR REPLACE FUEL LINE

102.	INSPECT FUEL PUMP ASSEMBLY
-------------	-----------------------------------

(a) Inspect the fuel pump assembly INFO.

HINT:

- Make sure there is no foreign matter such as iron particles on the fuel pump assembly and no signs that the fuel pump was stuck.
- Make sure the internal connector is securely connected.
- Make sure the fuel pump filter is not clogged.

NG ► REPLACE FUEL PUMP ASSEMBLY

OK

103.	CHECK PURGE VALVE
-------------	--------------------------

(a) Disconnect the vacuum hose (on the canister side) of the purge valve.

(b) Start the engine.

(c) Idle the engine.

- (d) Disconnect the connector of the purge valve.
- (e) Check if air flows through the purge valve.
 - OK:
 - Air does not flow
- (f) Connect the connector of the purge valve.
- (g) Connect the vacuum hose of the purge valve.

HINT:

When this inspection is performed, the MIL may illuminate. After finishing the inspection, check and clear DTCs

INFO

NG ▶ INSPECT PURGE VALVE

OK
▼

104.	CHECK FUEL INJECTOR ASSEMBLY (FOR PORT INJECTION)
-------------	--

- (a) Clean the inside of the surge tank with compressed air.
- (b) After stopping the engine, measure the HC concentration inside the surge tank for 15 minutes.

Result

RESULT	PROCEED TO
4000 ppm or more	A
Less than 4000 ppm	B

HINT:

If the concentration is 4000 ppm or more, a fuel injector assembly may have a sealing problem.

B ▶ CHECK INTAKE VALVE

A ▶ REPLACE FUEL INJECTOR ASSEMBLY (FOR PORT INJECTION)

105.	CHECK INTAKE VALVE
-------------	---------------------------

- (a) Check if carbon is on the intake valves.

Result

RESULT	PROCEED TO
Carbon present	A
No carbon present	B

B ▶ READ VALUE USING TECHSTREAM (ISC LEARNING VALUE)

A ▶ CLEAN INTAKE VALVE

106. READ VALUE USING TECHSTREAM (ISC LEARNING VALUE)

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Start the engine, turn off all accessory switches and warm up the engine until the engine coolant temperature stabilizes.
- (d) Enter the following menus: Powertrain / Engine / Data List / ISC Learning Value.

Result

DATA LIST ITEM	RESULT	SUSPECTED AREA	PROCEED TO
ISC Learning Value	(engine displacement (liters) x 0.9) or more	<ul style="list-style-type: none">• Valve timing• Compression	A
	Less than (engine displacement (liters) x 0.9)	-	B

B ▶ INSPECT ENGINE COOLANT TEMPERATURE SENSOR

A ▼

Last Modified: 3-27-2012	6.4 C	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000WC30M5X
Title: FA20 ENGINE CONTROL: SFI SYSTEM: P2096,P2097: Post Catalyst Fuel Trim System Too Lean (Bank 1) (2013 FR-S)		

DTC	P2096	Post Catalyst Fuel Trim System Too Lean (Bank 1)
------------	--------------	---

DTC	P2097	Post Catalyst Fuel Trim System Too Rich (Bank 1)
------------	--------------	---

DESCRIPTION

The sub fuel trim is related to the feedback compensation value, not to the basic injection time. The sub fuel trim consists of both the short-term and the long-term fuel trim between the front catalyst and rear catalyst.

The short-term fuel trim is fuel compensation that is used to constantly maintain the air fuel ratio at stoichiometric levels. The signal from the air fuel ratio sensor indicates whether the air fuel ratio is rich or lean compared to the stoichiometric ratio. This triggers a reduction in the fuel injection volume if the air fuel ratio is rich and an increase in the fuel injection volume if it is lean.

Factors such as individual engine differences, wear over time and changes in operating environment cause short-term fuel trim to vary from the ideal theoretical value. The long-term fuel trim controls overall fuel compensation. The long-term fuel trim compensates for long term deviations of the fuel trim from the ideal theoretical value. These long term deviations result from the corrections made by the short-term fuel trim.

If both the short-term fuel and long-term fuel trim are lean or rich beyond predetermined values, it is interpreted as a malfunction, the ECM illuminates the MIL and sets a DTC.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P2096	With warm engine and stable air fuel ratio feedback, sub fuel trim considerably in error to lean side (2 trip detection logic)	<ul style="list-style-type: none"> • Intake system • Fuel injector assembly (for port injection) • Fuel injector assembly (for direct injection) • Mass air flow meter • Engine coolant temperature sensor • Fuel pressure • Gas leaks from exhaust system • Open or short in air fuel ratio sensor circuit • Air fuel ratio sensor • PCV valve and hose • PCV hose connections • ECM • Wire harness or connector
P2097	With warm engine and stable air fuel ratio feedback, sub fuel trim considerably in error to rich side (2 trip detection logic)	

HINT:

- When DTC P2096 is set, the actual air-fuel ratio is on the lean side. When DTC P2097 is set, the actual air-fuel ratio is on the rich side.
- If the vehicle runs out of fuel, the air-fuel ratio is lean and DTC P2096 may be set. The MIL is then illuminated.

MONITOR DESCRIPTION

Under closed loop fuel control, fuel injection volumes that deviate from those estimated by the ECM cause changes in the long-term fuel trim compensation value. The long-term fuel trim is adjusted when there are persistent deviations in the short-term fuel trim values. Deviations from the ECM's estimated fuel injection volumes also affect the average fuel trim learning value, which is a combination of the average short-term fuel trim (fuel feedback compensation value) and the average long-term fuel trim (learning value of the air fuel ratio). If the average fuel trim learning value exceeds the malfunction threshold, the ECM interprets this as a malfunction in the fuel system and sets a DTC.

MONITOR STRATEGY

Related DTCs	P2096: Post Catalyst Fuel Trim System Too Lean (Bank 1) P2097: Post Catalyst Fuel Trim System Too Rich (Bank 1)
Required Sensors/Components (Main)	Fuel system Heated oxygen sensor

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.

2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear DTCs (even if no DTCs are stored, perform the clear DTC operation) **INFO** .
4. Turn the ignition switch off and wait for at least 30 seconds.
5. Turn the ignition switch to ON and turn the Techstream on.
6. Start the engine and warm it up until the engine coolant temperature reaches 75°C (167°F) or higher.

HINT:

Check the engine coolant temperature is 20°C (68°F) or less at engine started.

7. Perform the following the confirmation driving pattern.

CAUTION:

When performing the confirmation driving pattern, obey all speed limits and traffic laws.

- a. Drive the vehicle at 80 km/h (50 mph) or more for 20 minutes or more [A].
 - b. Stop the vehicle.
 - c. Idle the engine for 1 minute or more [B].
8. Enter the following menus: Powertrain / Engine / Trouble Codes.
 9. Read pending DTCs.

HINT:

- o If a pending DTC is output, the system is malfunctioning.
 - o If a pending DTC is not output, perform the following procedure.
10. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
 11. Input the DTC: P2096 or P2097.
 12. Check the DTC judgment result.

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	<ul style="list-style-type: none"> o DTC judgment completed o System normal
ABNORMAL	<ul style="list-style-type: none"> o DTC judgment completed o System abnormal
INCOMPLETE	<ul style="list-style-type: none"> o DTC judgment not completed o Perform driving pattern after confirming DTC enabling conditions
N/A	<ul style="list-style-type: none"> o Unable to perform DTC judgment o Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

- o If the judgment result shows NORMAL, the system is normal.
 - o If the judgment result shows ABNORMAL, the system has a malfunction.
13. If the test result is INCOMPLETE or N/A and no DTC is output, perform a universal trip and check for permanent DTCs **INFO** .

HINT:

- o If a permanent DTC is output, the system is malfunctioning.
- o If no permanent DTC is output, the system is normal.

WIRING DIAGRAM

Refer to DTC P0030 **INFO** .

INSPECTION PROCEDURE

HINT:

Malfunctioning areas can be identified by performing the Control the Injection Volume for A/F Sensor function provided in the Active Test. The Control the Injection Volume for A/F Sensor function can help to determine whether the air fuel ratio sensor, heated oxygen sensor and other potential trouble areas are malfunctioning.

The following instructions describe how to conduct the Control the Injection Volume for A/F Sensor operation using the Techstream.

1. Connect the Techstream to the DLC3.
2. Start the engine.
3. Turn the Techstream on.
4. Warm up the engine at an engine speed of 2500 rpm for approximately 90 seconds.
5. Enter the following menus: Powertrain / Engine / Active Test / Control the Injection Volume for A/F Sensor / Gas AF Control / AFS Voltage B1S1 and O2S B1S2.
6. Perform the Active Test operation with the engine idling (press the RIGHT or LEFT button to change the fuel injection volume).
7. Monitor the output voltages of the air fuel ratio and heated oxygen sensors (AFS Voltage B1S1 and O2S B1S2) displayed on the Techstream.

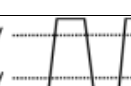

HINT:

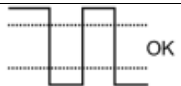

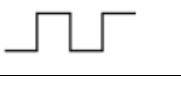

- Change the fuel injection volume within the range of -12.5% to +12.5%.
- Each sensor reacts in accordance with increases and decreases in the fuel injection volume.

TECHSTREAM DISPLAY (SENSOR)	INJECTION VOLUME	STATUS	VOLTAGE
AFS Voltage B1S1 (Air fuel ratio)	+12.5%	Rich	Below 2.0 V
	-12.5%	Lean	Higher than 2.4 V
O2S B1S2 (Heated oxygen)	+12.5%	Rich	Higher than 0.55 V
	-12.5%	Lean	Below 0.4 V

NOTICE:

The air fuel ratio sensor has an output delay of a few seconds and the heated oxygen sensor has a maximum output delay of approximately 20 seconds.

CASE	AIR FUEL RATIO SENSOR (SENSOR 1) OUTPUT VOLTAGE	HEATED OXYGEN SENSOR (SENSOR 2) OUTPUT VOLTAGE	MAIN SUSPECTED TROUBLE AREA
1	<p>Injection Volume +12.5% </p> <p> -12.5%</p> <p>Output Voltage Higher than 2.4 V  OK</p> <p> Below 2.0 V</p>	<p>Injection Volume +12.5% </p> <p> -12.5%</p> <p>Output Voltage Higher than 0.55 V  OK</p> <p> Below 0.4 V</p>	-
2	<p>Injection Volume +12.5% </p> <p> -12.5%</p> <p>Output Voltage Almost no reaction  NG</p>	<p>Injection Volume +12.5% </p> <p> -12.5%</p> <p>Output Voltage Higher than 0.55 V  OK</p> <p> Below 0.4 V</p>	<ul style="list-style-type: none"> • Air fuel ratio sensor • Air fuel ratio sensor heater • Air fuel ratio sensor circuit
	<p>Injection Volume +12.5% </p> <p> -12.5%</p>	<p>Injection Volume +12.5% </p> <p> -12.5%</p>	<ul style="list-style-type: none"> • Heated oxygen sensor • Heated

3	<p>Output Voltage</p> <p>Higher than 2.4 V</p> <p>Below 2.0 V</p> 	<p>Output Voltage</p> <p>Almost no reaction</p> <p>NG</p>	<p>oxygen sensor heater</p> <ul style="list-style-type: none"> • Heated oxygen sensor circuit
4	<p>Injection Volume</p> <p>+12.5%</p> <p>-12.5%</p>  <p>Output Voltage</p> <p>Almost no reaction</p> <p>NG</p>	<p>Injection Volume</p> <p>+12.5%</p> <p>-12.5%</p>  <p>Output Voltage</p> <p>Almost no reaction</p> <p>NG</p>	<ul style="list-style-type: none"> • Fuel injector assembly • Fuel pressure • Gas leak from exhaust system (Air fuel ratio extremely rich or lean)

- Following the Control the Injection Volume for A/F Sensor procedure enables technicians to check and graph the voltage outputs of both the air fuel ratio and heated oxygen sensors.
- To display the graph, enter the following menus: Powertrain / Engine / Active Test / Control the Injection Volume for A/F Sensor / Gas AF Control / AFS Voltage B1S1 and O2S B1S2; and then press the graph button on the Data List view.

HINT:

- Bank 1 refers to the bank that includes the No. 1 cylinder*.
- *: The No. 1 cylinder is the cylinder which is farthest from transmission.
- Bank 2 refers to the bank that does not include the No. 1 cylinder.
- Sensor 1 refers to the sensor closest to the engine assembly.
- Sensor 2 refers to the sensor farthest away from the engine assembly.
- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was moving or stationary, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.
- A low air fuel ratio sensor voltage could be caused by a rich air fuel mixture. Check for conditions that would cause the engine to run rich.
- A high air fuel ratio sensor voltage could be caused by a lean air fuel mixture. Check for conditions that would cause the engine to run lean.

PROCEDURE

1.	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P2096 AND/OR P2097)
----	--

- Connect the Techstream to the DLC3.
- Turn the ignition switch to ON.
- Turn the Techstream on.
- Enter the following menus: Powertrain / Engine / Trouble Codes.
- Read the DTCs.

Result:

RESULT	PROCEED TO
P2096 or P2097	A

HINT:

If any DTCs other than P2096 or P2097 are output, troubleshoot those DTCs first.

B ► **GO TO DTC CHART**

A

2. PERFORM SYSTEM CHECK (CONTROL THE INJECTION WAY)

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Start the engine.
- (e) Enter the following menus: Powertrain / Engine / Active Test / Control the Injection Way / Port.
- (f) Read the value Short #1 and Long FT #1.
- OK:
Short FT #1 + Long FT #1 = Between -19% and +19%
- (g) Enter the following menus: Powertrain / Engine / Active Test / Control the Injection Way / Direct.
- (h) Read the value Short FT #1 and Long FT #1.
- OK:
Short FT #1 + Long FT #1 = Between -19% and +19%
- Result:

ITEM		PROCEED TO

B ► **CHECK FUEL PRESSURE SENSOR**

C ► **CHECK FUEL INJECTOR ASSEMBLY (FOR PORT INJECTION)**

D ► **CHECK PCV HOSE CONNECTIONS**

A

3. CHECK IF VEHICLE HAS RUN OUT OF FUEL IN PAST

- (a) Has the vehicle run out of fuel in the past?

NO ► CHECK FOR INTERMITTENT PROBLEMS

YES ► DTC CAUSED BY RUNNING OUT OF FUEL

4. CHECK PCV HOSE CONNECTIONS

(a) Check the PCV hose connections **INFO** .

OK:

PCV valve and hose are connected correctly and are not damaged.

NG ► REPAIR OR REPLACE PCV HOSE

OK

5. CHECK INTAKE SYSTEM

(a) Check the intake system for vacuum leaks **INFO** .

OK:

No leaks in intake system.

NG ► REPAIR OR REPLACE INTAKE SYSTEM

OK

6. PERFORM ACTIVE TEST USING TECHSTREAM (CONTROL THE INJECTION VOLUME FOR A/F SENSOR)

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn Techstream on.

(d) Warm up the engine and run the engine at an engine speed of 2500 rpm for approximately 90 seconds.

(e) Enter the following menus: Powertrain / Engine / Active Test / Control the Injection Volume for A/F Sensor / AFS Voltage B1S1 and O2S B1S2.

(f) Perform the Control the Injection Volume for A/F Sensor operation with the engine in an idling.

(g) Monitor the output voltages of the A/F and HO2 sensors (AFS Voltage B1S1 and O2S B1S2) displayed on the Techstream.

HINT:

- Change the fuel injection volume within the range of -12.5% to 12.5%.
- The air fuel ratio sensor has an output delay of a few seconds and the heated oxygen sensor has a maximum output delay of approximately 20 seconds.
- If the sensor output voltage does not change (almost no reaction) while performing the Active Test, the sensor may be malfunctioning.

TECHSTREAM DISPLAY (SENSOR)	INJECTION VOLUME	STATUS	VOLTAGE

B  **INSPECT AIR FUEL RATIO SENSOR (HEATER RESISTANCE)**

A

7.	READ VALUE USING TECHSTREAM (COOLANT TEMP)
-----------	---

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.

- (d) Enter the following menus: Powertrain / Engine / Data List / Coolant Temp.
(e) Read the Coolant Temp twice, when the engine is both cold and warmed up.

Standard:

With cold engine

Same as ambient air temperature.

With warm engine

Between 75 and 100°C (167 and 212°F)

NG ► REPLACE ENGINE COOLANT TEMPERATURE SENSOR

OK

8.	READ VALUE USING TECHSTREAM (MAF)
-----------	--

- (a) Connect the Techstream to the DLC3.
(b) Turn the ignition switch to ON.
(c) Turn the Techstream on.
(d) Start the engine.
(e) Enter the following menus: Powertrain / Engine / Data List / MAF, Coolant Temp and Engine Speed.
(f) Allow the engine to idle until Coolant Temp reaches 75°C (167°F) or higher.
(g) Read MAF with the engine speed at 3000 rpm.

Standard:

Between 13.0 gm/sec and 14.0 gm/sec (shift lever: N, A/C: Off).

NG ► CHECK HARNESS AND CONNECTOR (MASS AIR FLOW METER CONNECTOR CONNECTION)

OK

9.	CHECK FOR EXHAUST GAS LEAK
-----------	-----------------------------------

- (a) Check for exhaust gas leaks.

OK:

No gas leaks.

OK ► PERFORM CONFIRMATION DRIVING PATTERN

NG ► REPAIR OR REPLACE EXHAUST SYSTEM

10.	INSPECT AIR FUEL RATIO SENSOR (HEATER RESISTANCE)
------------	--

- (a) Inspect the air fuel ratio sensor  .

NG ► REPLACE AIR FUEL RATIO SENSOR

OK

11.	CHECK HARNESS AND CONNECTOR (AIR FUEL RATIO SENSOR - ECM)
------------	--

- (a) Disconnect the air fuel ratio sensor connector.
- (b) Disconnect the ECM connector.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A34-19 (A1A+) - C14-3 (A1A+)	Always	Below 1 Ω
A34-18 (A1A-) - C14-4 (A1A-)	Always	Below 1 Ω
A34-5 (HA1A) - C14-1 (HA1A)	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A34-19 (A1A+) or C14-3 (A1A+) - Body ground	Always	10 k Ω or higher
A34-18 (A1A-) or C14-4 (A1A-) - Body ground	Always	10 k Ω or higher
A34-5 (HA1A) or C14-1 (HA1A) - Body ground	Always	10 k Ω or higher

NG **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

12.	REPLACE AIR FUEL RATIO SENSOR
------------	--------------------------------------

- (a) Replace the air fuel ratio sensor .

NEXT

13.	PERFORM CONFIRMATION DRIVING PATTERN
------------	---

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON and turn the Techstream on.
- (c) Clear the DTCs .
- (d) Turn the ignition switch off and wait for at least 30 seconds.
- (e) Turn the ignition switch to ON and turn the Techstream on.
- (f) Drive the vehicle in accordance with the driving pattern described in Confirmation Driving Pattern.

NEXT

14.	CHECK WHETHER DTC OUTPUT RECURS (DTC P2096 AND/OR P2097)
------------	---

(a) Enter the following menus: Powertrain / Engine / Trouble Codes.

(b) Read the pending DTCs.

Result:

RESULT	PROCEED TO

OK

17. CHECK FUEL LEAK (LOW PRESSURE SIDE)

(a) Check for fuel leaks (low pressure side).

OK:

No leaks.

NG ▶ REPAIR OR REPLACE FUEL SYSTEM (LOW PRESSURE SIDE)

OK ▶ CHECK AND REPLACE FUEL PUMP, PRESSURE REGULATOR, FUEL LINE AND FILTER

18. CHECK FUEL PRESSURE SENSOR

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Start the engine.

(e) Enter the following menus: Powertrain / Engine / Data List / Fuel Press.

(f) While revving the engine, check that the fuel pressure fluctuates.

Standard:

Idling

3000 to 5000 kPa (30.6 to 50.9 kgf/cm², 436 to 725 psi).

HINT:

The A/C switch and all accessory switches should be off, and the shift lever should be in the N, P or neutral position, and the engine should be fully warmed up.

NG ▶ CHECK MISFIRE COUNT

OK

19. READ VALUE USING TECHSTREAM

(a) Connect the Techstream to the DLC3.

(b) Start the engine.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine / Active Test / Control the Injection Way / Direct.

HINT:

The A/C switch and all accessory switches should be off, and the shift lever should be in the N, P or neutral position, and the engine should be fully warmed up.

(e) Read the value Short FT #1, Long FT #1 and Fuel Pump Duty.

Result:

ITEM

PROCEED TO

FUEL PUMP DUTY	SHORT FT #1 + LONG FT #1	
10% to 40%	-	A
40% or more	-20% or less	B
10% or less	+20% or more	B
40% or more	+20% or more	C
10% or less	-20% or less	D

- (a) Connect the Techstream to the DLC3.
- (b) Start the engine.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Powertrain / Engine / Active Test / Control the Injection Way / Direct.

HINT:

The A/C switch and all accessory switches should be off, and the shift lever should be in the N, P or neutral position, and the engine should be fully warmed up.

- (e) Read the value Short FT #1, Long FT #1 and Fuel Pump Duty.

Result:

ITEM		PROCEED TO
FUEL PUMP DUTY	SHORT FT #1 + LONG FT #1	
10% to 40%	-25% or less	A
10% to 40%	-25% to +25%	B
10% to 40%	+25% or more	A

B ▶ CHECK FOR INTERMITTENT PROBLEMS

A ▶ REPLACE FUEL INJECTOR ASSEMBLY (FOR DIRECT INJECTION)

21.	CHECK MISFIRE COUNT
------------	----------------------------

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Start the engine.

- (e) Enter the following menus: Powertrain / Engine / Active test / Control the Injection Way / Direct.
- (f) Allow the engine to idle.
- (g) Monitor all of the misfire count values that are displayed on the Techstream: Powertrain / Engine / Data List / Cylinder #1 Misfire Count to Cylinder #4 Misfire Count.

If no misfire counts occur for any of the cylinders, perform the following procedure:

- (1) Move the shift lever to D.
- (2) Monitor all of the misfire rate values that are displayed on the Techstream.

Result:

MISFIRE COUNT	PROCEED TO
No misfire counts, or misfire counts occur randomly in all cylinders	A
Misfire counts occur in particular cylinder	B

B ▶ REPLACE FUEL INJECTOR ASSEMBLY (FOR DIRECT INJECTION)

A
▼

22. INSPECT INJECTOR DRIVER (EDU)

- (a) Replace the injector driver (EDU) with known good ones from another vehicle.

NOTICE:

Do not disconnect and reconnect the connectors with the ignition switch to ON, as the injector driver (EDU) may be damaged.

- (b) Connect the Techstream to the DLC3.
- (c) Turn the ignition switch to ON.
- (d) Turn the Techstream on.
- (e) Clear the DTCs **INFO**.
- (f) Turn the ignition switch off and wait for at least 30 seconds.
- (g) Turn the ignition switch to ON and turn the Techstream on.
- (h) Start the engine and warm it up.
- (i) Drive the vehicle in accordance with the driving pattern described in Confirmation Driving Pattern.
- (j) Enter the following menus: Powertrain / Engine / Trouble Codes.
- (k) Read the pending DTCs.

Result:

RESULT	PROCEED TO
P2096 and/or P2097	A
DTC is not output	B

B ▶ END (INJECTOR DRIVER (EDU) IS DEFECTIVE)

A ▶ REPLACE FUEL PUMP ASSEMBLY (FOR HIGH PRESSURE)

23. CHECK FUEL INJECTOR ASSEMBLY (FOR PORT INJECTION)

(a) Check the injection volume (whether fuel volume is high or low, and whether injection pattern is poor).

NG ► REPLACE FUEL INJECTOR ASSEMBLY (FOR PORT INJECTION)

OK ► REPLACE ECM

24. CHECK HARNESS AND CONNECTOR (MASS AIR FLOW METER CONNECTOR CONNECTION)

(a) Check the connection and terminal contact pressure of connectors and wire harness between the mass air flow meter and ECM **INFO** .

HINT:

Repair any problems.

NEXT

25. PERFORM CONFIRMATION DRIVING PATTERN

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON and turn the Techstream on.
- (c) Clear the DTCs **INFO** .
- (d) Turn the ignition switch off and wait for at least 30 seconds.
- (e) Turn the ignition switch to ON and turn the Techstream on.
- (f) Start the engine and warm it up.
- (g) Drive the vehicle in accordance with the driving pattern described in Confirmation Driving Pattern.

NEXT

26. CHECK WHETHER DTC OUTPUT RECURS (DTC P2096 AND/OR P2097)

A ▶ REPLACE ECM

Last Modified: 3-27-2012	6.4 C	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000PFU0P5X
Title: FA20 ENGINE CONTROL: SFI SYSTEM: P2101-P2103: Throttle Actuator Control Motor Circuit Range/Performance (2013 FR-S)		

DTC	P2101	Throttle Actuator Control Motor Circuit Range/Performance
------------	--------------	--

DTC	P2102	Throttle Actuator Control Motor Circuit Low
------------	--------------	--

DTC	P2103	Throttle Actuator Control Motor Circuit High
------------	--------------	---

DESCRIPTION

The throttle actuator is operated by the ECM and opens and closes the throttle valve using gears.

The opening angle of the throttle valve is detected by the throttle position sensor, which is mounted on the throttle with motor body assembly. The throttle position sensor provides feedback to the ECM. This feedback allows the ECM to appropriately control the throttle actuator and monitor the throttle opening angle as the ECM responds to driver inputs.

HINT:

This Electronic Throttle Control System (ETCS) does not use a throttle cable.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P2101	One of the following conditions is met (1 trip detection logic): <ul style="list-style-type: none"> • Throttle actuator current is 8 A or more. • Internal temperature of throttle actuator driving circuit is 175°C (347°F) or higher. 	<ul style="list-style-type: none"> • Throttle with motor body assembly • ECM
P2102	ECM is turning ETCS relay on but throttle actuator power supply voltage is 5 V or less. (1 trip detection logic)	<ul style="list-style-type: none"> • Open in throttle actuator circuit • Throttle with motor body assembly • ETCS relay • ECM
P2103	ECM is turning ETCS relay off but throttle actuator power supply voltage is 5 V or more. (1 trip detection logic)	<ul style="list-style-type: none"> • Short in throttle actuator circuit • Throttle with motor body assembly • ETCS relay • ECM

MONITOR DESCRIPTION

The ECM monitors the electrical current through the electronic actuator, and detects malfunctions and open circuits in the throttle actuator based on this value. If the current is outside the standard range, the ECM determines that there is a malfunction in the throttle actuator. In addition, if the throttle valve does not function properly (for example, stuck on), the ECM determines that there is a malfunction. The ECM then illuminates the MIL and stores a DTC.

MONITOR STRATEGY

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear DTCs (even if no DTCs are stored, perform the clear DTC operation) INFO.
4. Turn the ignition switch off and wait for at least 30 seconds.
5. Turn the ignition switch to ON and turn the Techstream on.
6. Start the engine and warm it up until the engine coolant temperature reaches 75°C (167°F) or higher.
7. Depress the accelerator pedal fully and release the accelerator pedal.
8. Drive the vehicle at 10 km/h (6.25 mph) or more for 1 minute or more [A].

CAUTION:

When performing the confirmation driving pattern, obey all speed limits and traffic laws.

9. Enter the following menus: Powertrain / Engine / Trouble Codes.
10. Read pending DTCs.

HINT:

- If a pending DTC is output, the system is malfunctioning.
 - If a pending DTC is not output, perform the following procedure.
11. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
 12. Input the DTC: P2101, P2102 or P2103.
 13. Check the DTC judgment result.

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	<ul style="list-style-type: none"> ○ DTC judgment completed ○ System normal
ABNORMAL	<ul style="list-style-type: none"> ○ DTC judgment completed ○ System abnormal
INCOMPLETE	<ul style="list-style-type: none"> ○ DTC judgment not completed ○ Perform driving pattern after confirming DTC enabling conditions
N/A	<ul style="list-style-type: none"> ○ Unable to perform DTC judgment ○ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

- If the judgment result shows NORMAL, the system is normal.
- If the judgment result shows ABNORMAL, the system has a malfunction.

14. If the test result is INCOMPLETE or N/A and no DTC is output, perform a universal trip and check for permanent DTCs  .

HINT:

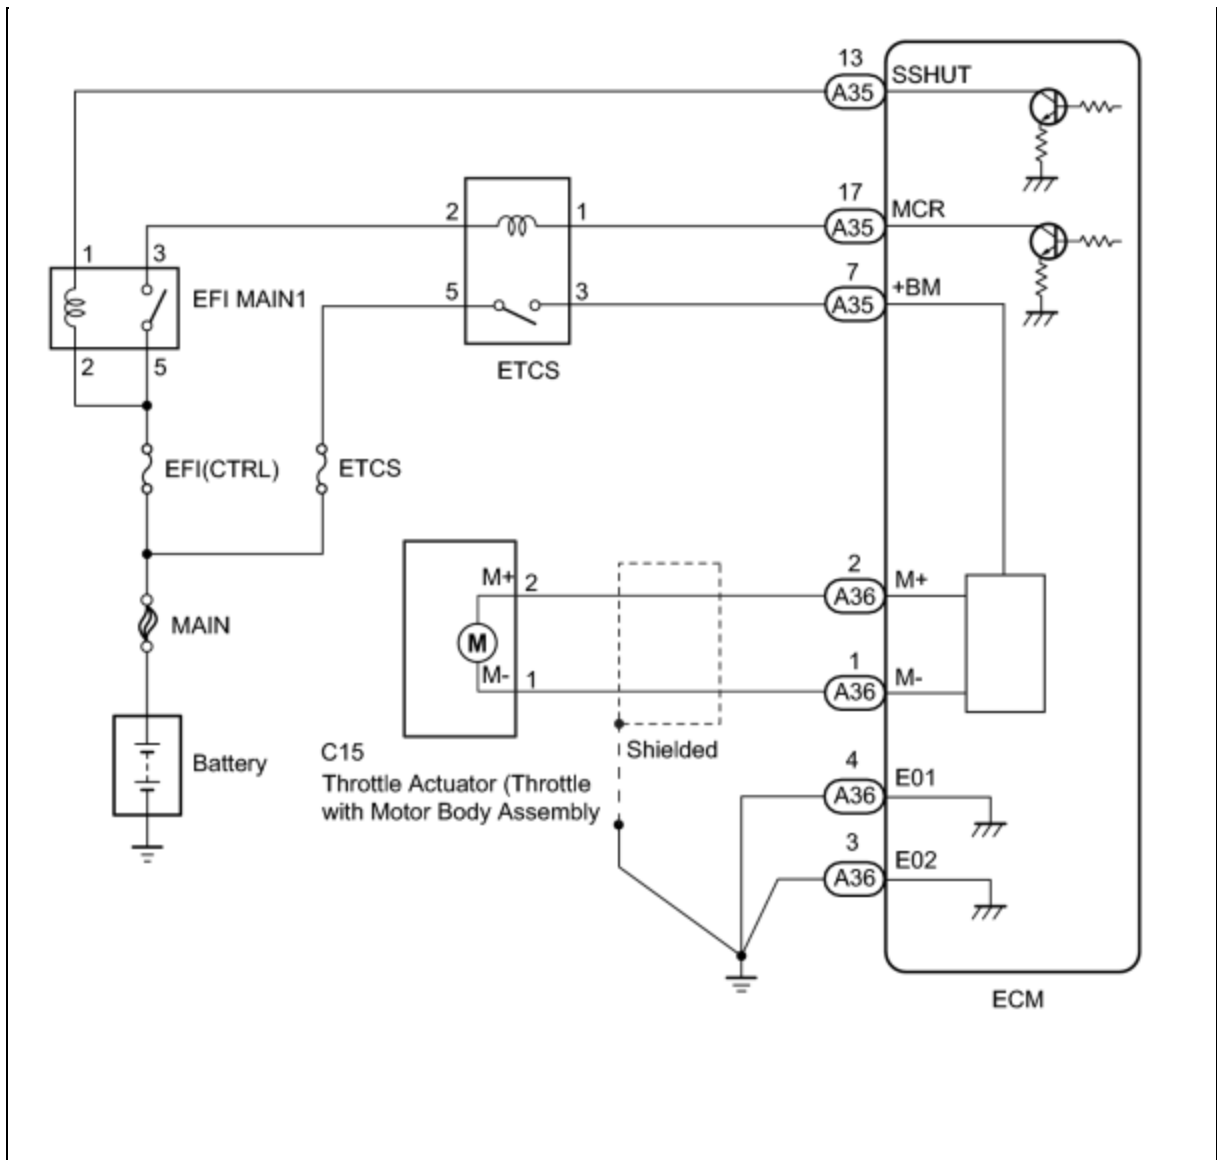

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

FAIL-SAFE

When either of these DTCs or other DTCs relating to ETCS (Electronic Throttle Control System) malfunctions are stored, the ECM enters fail-safe mode. During fail-safe mode, the ECM cuts the current to the throttle actuator, and the throttle valve is returned to a fully closed throttle angle by the return spring. The ECM then adjusts the engine output by controlling the fuel injection (intermittent fuel-cut) and ignition timing, in accordance with the accelerator pedal opening angle, to allow the vehicle to continue running at a minimal speed. If the accelerator pedal is depressed firmly and gently, the vehicle can be driven slowly.

Fail-safe mode continues until a pass condition is detected, and the ignition switch is then turned off.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

HINT:

- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air fuel ratio was lean or rich, and other data from the time the malfunction occurred.
- The throttle actuator current (Throttle Motor Current) and the throttle actuator duty ratio (Throttle Motor Duty (Open) / Throttle Motor Duty (Close)) can be read using the Techstream. However, the ECM shuts off the throttle actuator current when the electronic throttle control system malfunctions.

PROCEDURE

1.	INSPECT TERMINAL VOLTAGE (POWER SOURCE OF THROTTLE WITH MOTOR BODY ASSEMBLY)
----	---

(a) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
C35-7 (+BM) - Body ground	Ignition switch ON	11 to 14 V

OK

3.	CHECK HARNESS AND CONNECTOR (THROTTLE WITH MOTOR BODY ASSEMBLY - ECM)
-----------	--

(a) Disconnect the throttle with motor body assembly connector.

(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
-------------------	-----------	---------------------

A36-2 (M+) - C15-2 (M+)	Always	Below 1 Ω
A36-1 (M-) - C15-1 (M-)	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A36-2 (M+) or C15-2 (M+) - Body ground	Always	10 k Ω or higher
A36-1 (M-) or C15-1 (M-) - Body ground	Always	10 k Ω or higher

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4.	INSPECT THROTTLE WITH MOTOR BODY ASSEMBLY (VISUALLY CHECK THROTTLE VALVE)
-----------	--

(a) Check for foreign objects between the throttle valve and the housing.

OK:

No foreign objects between the throttle valve and housing.

NG  **REMOVE FOREIGN OBJECT**

OK

5.	INSPECT THROTTLE WITH MOTOR BODY ASSEMBLY (THROTTLE VALVE)
-----------	---

(a) Check if the throttle valve opens and closes smoothly.

OK:

Throttle valve opens and closes smoothly.

NG  **REPLACE THROTTLE WITH MOTOR BODY ASSEMBLY**

OK  **REPLACE ECM**

--	--

6. INSPECT RELAY (ETCS)

(a) Inspect the ETCS relay INFO.

NG ▶ REPLACE RELAY (ETCS)

OK

7. CHECK HARNESS AND CONNECTOR (ETCS RELAY - EFI MAIN1 RELAY - BATTERY)

(a) Remove the ETCS relay from the engine room relay block assembly.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
5 (ETCS relay holder) - Body ground	Always	11 to 14 V
2 (ETCS relay holder) - Body ground	Ignition switch ON	11 to 14 V

Result:

RESULT	PROCEED TO
Normal	A
ETCS relay terminal 5 is abnormal.	B

ETCS relay terminal 2 is abnormal.

C

B ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR

C ▶ INSPECT RELAY (EFI MAIN1)

A

8. CHECK HARNESS AND CONNECTOR (ECM - ETCS RELAY)

- Remove the ETCS relay from the engine room relay block assembly.
- Disconnect the ECM connector.
- Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A35-17 (MCR) - ETCS relay terminal 1	Always	Below 1 Ω
A35-7 (+BM) - ETCS relay terminal 3	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A35-17 (MCR) or ETCS relay terminal 1 - Body ground	Always	10 k Ω or higher
A35-7 (+BM) or ETCS relay terminal 3 - Body ground	Always	10 k Ω or higher

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

9. INSPECT RELAY (EFI MAIN1)

(a) Inspect EFI MAIN1 relay  .

NG  **REPLACE RELAY (EFI MAIN1)**

OK

**10. CHECK HARNESS AND CONNECTOR (ETCS RELAY - EFI MAIN1 RELAY)**

- (a) Remove the ETCS relay from the engine room relay block assembly.
- (b) Remove the EFI MAIN1 relay from the engine room relay block assembly.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
EFI MAIN1 relay terminal 3 - ETCS relay terminal 2	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
EFI MAIN1 relay terminal 3 or ETCS relay terminal 2 - Body ground	Always	10 k Ω or higher

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK  **CHECK ECM POWER SOURCE CIRCUIT**

------------	--------------	---

DTC	P2138	Throttle / Pedal Position Sensor / Switch "D" / "E" Voltage Correlation
------------	--------------	--

DESCRIPTION

HINT:

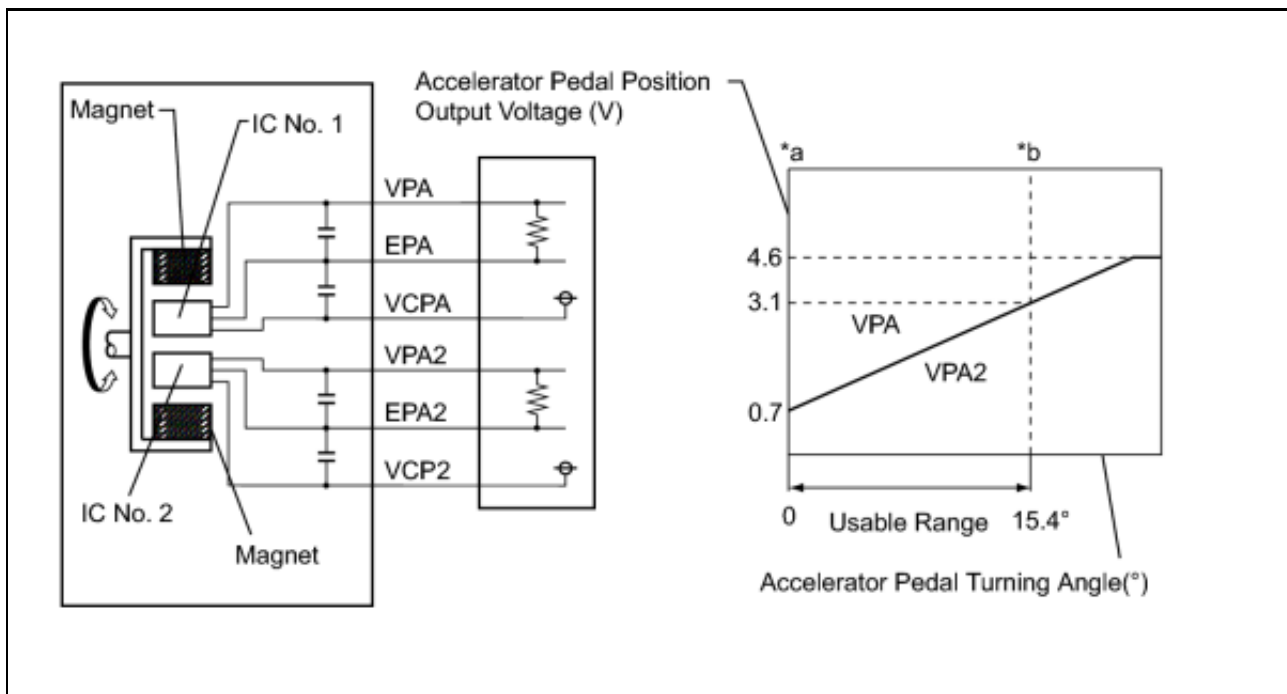

- These DTCs relate to the accelerator pedal sensor assembly.
- This electronic throttle control system does not use a throttle cable.

The accelerator pedal sensor assembly is mounted on the accelerator pedal bracket and has 2 sensor circuits: VPA (main) and VPA2 (sub). This sensor is a non-contact type. It uses Hall-effect elements in order to yield accurate signals, even in extreme conditions. The voltage, which is applied to terminals VPA and VPA2 of the ECM, varies between 0 V and 5 V in proportion to the operating angle of the accelerator pedal (throttle valve).

The ECM monitors the actual accelerator pedal operating angle (throttle valve opening angle) through the signals from VPA and VPA2, and controls the throttle actuator according to these signals.

HINT:

The accelerator pedal position output voltages of VPA and VPA2 are almost the same.

Text in Illustration

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P2122	VPA voltage is less than 0.303 V. (1 trip detection logic)	<ul style="list-style-type: none"> • Open or short in accelerator pedal sensor circuit • Accelerator pedal sensor assembly • ECM
P2123	VPA voltage is 4.737 V or more. (1 trip detection logic)	
P2127	VPA2 voltage is less than 0.303 V. (1 trip detection logic)	
P2128	VPA2 voltage is 4.737 V or more. (1 trip detection logic)	
P2138	Difference in the signals from VPA and VPA2 exceeds the threshold. (1 trip detection logic)	

MONITOR DESCRIPTION

The accelerator pedal position sensor is mounted on the accelerator pedal bracket. The accelerator pedal position sensor has 2 sensor elements and 2 signal outputs: VPA and VPA2. VPA is used to detect the actual accelerator pedal angle (used for engine control) and VPA2 is used to detect malfunctions in VPA. When the difference between the output voltages of VPA and VPA2 deviates from the standard, the ECM determines that the accelerator pedal position sensor is malfunctioning. The ECM turns on the MIL and stores the DTC.

VPA2 voltage (Accelerator pedal position)	0.394 to 4.729 V (2.08 to 24.97%)

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear DTCs (even if no DTCs are stored, perform the clear DTC operation) INFO.
4. Turn the ignition switch off and wait for at least 30 seconds.
5. Turn the ignition switch to ON and turn the Techstream on.
6. Start the engine and warm it up until the engine coolant temperature reaches 75°C (167°F) or higher.
7. Depress the accelerator pedal fully and release the accelerator pedal.
8. Drive the vehicle at 10 km/h (6.25 mph) or more for 1 minute or more [A].

CAUTION:

When performing the confirmation driving pattern, obey all speed limits and traffic laws.

9. Enter the following menus: Powertrain / Engine / Trouble Codes.

10. Read pending DTCs.

HINT:

- If a pending DTC is output, the system is malfunctioning.
- If a pending DTC is not output, perform the following procedure.

11. Enter the following menus: Powertrain / Engine / Utility / All Readiness.

12. Input the DTC: P2122, P2123, P2127, P2128 or P2138.

13. Check the DTC judgment result.

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	<ul style="list-style-type: none"> ◦ DTC judgment completed ◦ System normal
ABNORMAL	<ul style="list-style-type: none"> ◦ DTC judgment completed ◦ System abnormal
INCOMPLETE	<ul style="list-style-type: none"> ◦ DTC judgment not completed ◦ Perform driving pattern after confirming DTC enabling conditions
N/A	<ul style="list-style-type: none"> ◦ Unable to perform DTC judgment ◦ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

- If the judgment result shows NORMAL, the system is normal.
- If the judgment result shows ABNORMAL, the system has a malfunction.

14. If the test result is INCOMPLETE or N/A and no DTC is output, perform a universal trip and check for permanent DTCs .**HINT:**

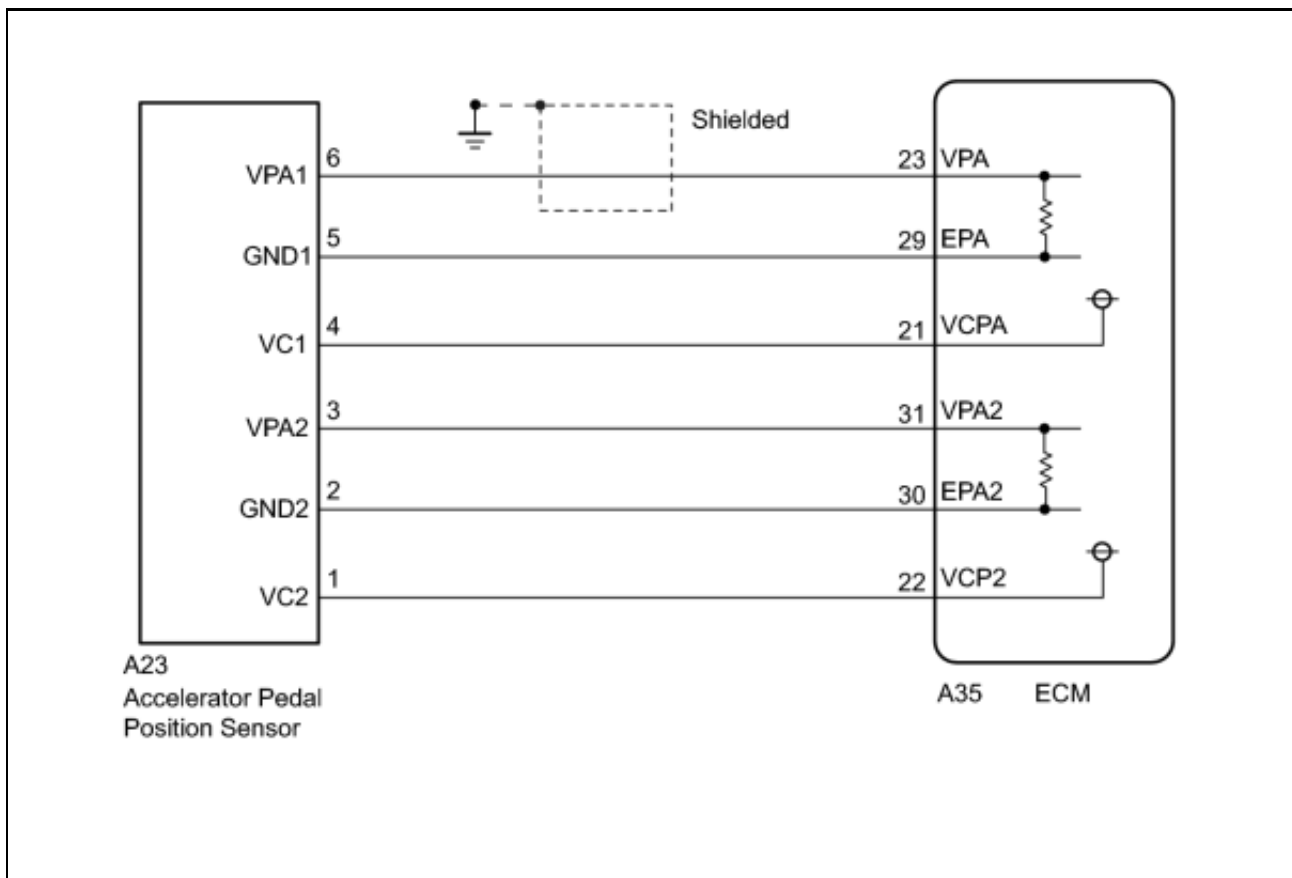

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

FAIL-SAFE

The accelerator pedal position sensor has 2 (main and sub) sensor circuits. If a malfunction occurs in either of the sensor circuits, the ECM detects the abnormal signal voltage difference between the 2 sensor circuits and switches to fail-safe mode. In fail-safe mode, the functioning circuit is used to calculate the accelerator pedal opening angle to allow the vehicle to continue driving. If both circuits malfunction, the ECM regards the opening angle of the accelerator pedal as being fully closed. In this case, the throttle valve remains closed as if the engine is idling.

If a pass condition is detected and then the ignition switch is turned off, the fail-safe operation stops and the system returns to normal.

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

- This DTC relates to the accelerator pedal position sensor.
- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air fuel ratio was lean or rich, and other data from the time the malfunction occurred.

PROCEDURE

1. READ VALUE USING TECHSTREAM (ACCELERATOR PEDAL POSITION SENSOR)

- Connect the Techstream to the DLC3.
- Turn the ignition switch to ON.
- Turn the Techstream on.
- Enter the following menus: Powertrain / Engine / Data List / Accel Sensor Out No. 1 and Accel Sensor Out No. 2.
- Read the values displayed on the Techstream.

Text in Illustration

*a	Depressed
*b	Released

Standard Voltage:

ACCELERATOR PEDAL OPERATION	ACCEL SENSOR OUT NO. 1	ACCEL SENSOR OUT NO. 2	DIFFERENCE BETWEEN ACCEL SENSOR OUT NO. 1 AND ACCEL SENSOR OUT NO. 2
Released	0.5 to 0.8 V	0.5 to 0.8 V	Less than 10%
Depressed	2.4 to 3.5 V	2.4 to 3.5 V	

Result

RESULT	PROCEED TO

B CHECK FOR INTERMITTENT PROBLEMS

A

2. CHECK HARNESS AND CONNECTOR (ECM - ACCELERATOR PEDAL SENSOR)

- (a) Disconnect the ECM connector.
- (b) Disconnect the accelerator pedal sensor connector.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A35-23 (VPA) - A23-6 (VPA1)	Always	Below 1 Ω
A35-29 (EPA) - A23-5 (GND)	Always	Below 1 Ω
A35-21 (VCPA) - A23-4 (VC1)	Always	Below 1 Ω
A35-31 (VPA2) - A23-3 (VPA2)	Always	Below 1 Ω

A35-30 (EPA2) - A23-2 (GND2)	Always	Below 1 Ω
A35-22 (VCP2) - A23-1 (VC2)	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A35-23 (VPA) or A23-6 (VPA1) - Body ground	Always	10 k Ω or higher
A35-29 (EPA) or A23-5 (GND) - Body ground	Always	10 k Ω or higher
A35-21 (VCPA) or A23-4 (VC1) - Body ground	Always	10 k Ω or higher
A35-31 (VPA2) or A23-3 (VPA2) - Body ground	Always	10 k Ω or higher
A35-30 (EPA2) or A23-2 (GND2) - Body ground	Always	10 k Ω or higher
A35-22 (VCP2) or A23-1 (VC2) - Body ground	Always	10 k Ω or higher

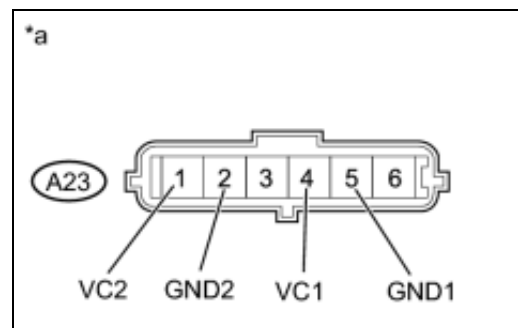

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3. INSPECT ECM (VC VOLTAGE)

(a) Disconnect the accelerator pedal sensor connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A23-4 (VC1) - A23-5 (GND)	Ignition Switch ON	4.5 to 5.5 V
A23-1 (VC2) - A23-2 (GND2)	Ignition Switch ON	4.5 to 5.5 V

Last Modified: 4-14-2014	6.6 C	Doc ID: RM000000WC400FX
Model Year: 2013	Model: FR-S	Prod Date Range: [03/2012 - 05/2013]
Title: FA20 ENGINE CONTROL: SFI SYSTEM: P2195,P2196; Oxygen (A/F) Sensor Signal Stuck Lean (Bank 1 Sensor 1); 2013 MY FR-S [03/2012 - 05/2013]		

DTC	P2195	Oxygen (A/F) Sensor Signal Stuck Lean (Bank 1 Sensor 1)
------------	--------------	--

DTC	P2196	Oxygen (A/F) Sensor Signal Stuck Rich (Bank 1 Sensor 1)
------------	--------------	--

DESCRIPTION

HINT:

- Although the DTC titles say oxygen sensor, these DTCs relate to the air fuel ratio sensor.
- Sensor 1 refers to the sensor mounted in front of the three-way catalytic converter and located near the engine assembly.

The air fuel ratio sensor generates a voltage* that corresponds to the actual air fuel ratio. This sensor voltage is used to provide the ECM with feedback so that it can control the air fuel ratio. The ECM determines the deviation from the stoichiometric air fuel ratio level, and regulates the fuel injection time. If the air fuel ratio sensor malfunctions, the ECM is unable to control the air fuel ratio accurately.

The air fuel ratio sensor is the planar type and is integrated with the heater, which heats the solid electrolyte (zirconia element). This heater is controlled by the ECM. When the intake air volume is low (the exhaust gas temperature is low), a current flows into the heater to heat the sensor, in order to facilitate accurate oxygen concentration detection. In addition, the sensor and heater portions are the narrow type. The heat generated by the heater is conducted to the solid electrolyte through the alumina, and therefore the sensor activation is accelerated.

In order to obtain a high purification rate of the carbon monoxide (CO), hydrocarbon (HC) and nitrogen oxide (NOx) components in the exhaust gas, a three-way catalytic converter is used. For the most efficient use of the three-way catalytic converter, the air fuel ratio must be precisely controlled so that it is always close to the stoichiometric level.

*: Value changes inside the ECM. Since the air fuel ratio sensor is a current output element, the current is converted into a voltage inside the ECM. Any measurements taken at the air fuel ratio sensor or ECM connectors will show a constant voltage.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P2195	Lambda is less than 0.85 for 10 seconds in air fuel ratio feed back control (2 trip detection logic)	<ul style="list-style-type: none"> • Open or short in air fuel ratio sensor circuit • Air fuel ratio sensor • Intake system • Fuel pressure • Fuel injector assembly (for port injection) • Fuel injector assembly (for direct injection) • ECM
P2196	Lambda is more than 1.15 for 10 seconds in air fuel ratio feed back control (2 trip detection logic)	

HINT:

- When any of these DTCs is stored, check the air fuel ratio sensor voltage output by entering the following menus on the Techstream: Powertrain / Engine / Data List / AFS Voltage B1S1.
- Short-term fuel trim values can also be read using the Techstream.
- The ECM regulates the voltages at the A1A+ and A1A- terminals of the ECM to a constant level. Therefore, the air fuel ratio sensor voltage output cannot be confirmed without using the Techstream.
- If an air fuel ratio sensor malfunction is detected, the ECM stores a DTC.

MONITOR DESCRIPTION

ECM calculates lambda based on air fuel ratio sensor output voltage. If lambda is out of the thresholds for 10 seconds or more, ECM judges the air fuel ratio sensor is stuck and stores a DTC.

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.

2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear DTCs (even if no DTCs are stored, perform the clear DTC operation) INFO .
4. Turn the ignition switch off and wait for at least 30 seconds.
5. Turn the ignition switch to ON and turn the Techstream on.
6. Start the engine and warm it up until the engine coolant temperature reaches 75°C (167°F) or higher.

HINT:

Check the engine coolant temperature is 20°C (68°F) or less at engine started.

7. Perform the following the confirmation driving pattern.

CAUTION:

When performing the confirmation driving pattern, obey all speed limits and traffic laws.

- a. Drive the vehicle at 80 km/h (50 mph) or more for 20 minutes or more [A].
 - b. Stop the vehicle.
 - c. Idle the engine for 1 minute or more [B].
8. Enter the following menus: Powertrain / Engine / Trouble Codes.
 9. Read pending DTCs.

HINT:

- If a pending DTC is output, the system is malfunctioning.
- If a pending DTC is not output, perform the following procedure.

10. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
11. Input the DTC: P2195 or P2196.
12. Check the DTC judgment result.

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	<ul style="list-style-type: none"> ◦ DTC judgment completed ◦ System normal
ABNORMAL	<ul style="list-style-type: none"> ◦ DTC judgment completed ◦ System abnormal
INCOMPLETE	<ul style="list-style-type: none"> ◦ DTC judgment not completed ◦ Perform driving pattern after confirming DTC enabling conditions
N/A	<ul style="list-style-type: none"> ◦ Unable to perform DTC judgment ◦ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

- If the judgment result shows NORMAL, the system is normal.
- If the judgment result shows ABNORMAL, the system has a malfunction.

13. If the test result is INCOMPLETE or N/A and no DTC is output, perform a universal trip and check for permanent DTCs INFO .

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

WIRING DIAGRAM

Refer to DTC P0030  .

INSPECTION PROCEDURE

NOTICE:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

HINT:

- Sensor 1 refers to the sensor closest to the engine assembly.
- Sensor 2 refers to the sensor farthest away from the engine assembly.
- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air fuel ratio was lean or rich, and other data from the time the malfunction occurred.
- A low air fuel ratio sensor voltage could be caused by a rich air fuel mixture. Check for conditions that would cause the engine to run rich.
- A high air fuel ratio sensor voltage could be caused by a lean air fuel mixture. Check for conditions that would cause the engine to run lean.

PROCEDURE

1.	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO P2195 OR P2196)
-----------	--

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Powertrain / Engine / Trouble Codes.
- (e) Read DTCs.

Result

RESULT	PROCEED TO
DTC P2195 or P2196 is output	A
DTC P2195 or P2196 and other DTCs are output	B

HINT:

If any DTCs relating to the air fuel ratio sensor (DTCs for the air fuel ratio sensor heater or air fuel ratio sensor admittance) are output, troubleshoot those DTCs first.

B  **GO TO DTC CHART**

A**2. CONFIRM IF VEHICLE HAS RUN OUT OF FUEL IN PAST**

(a) Has the vehicle run out of fuel in the past?

NO **GO TO STEP 4**

YES**3. CHECK WHETHER DTC OUTPUT RECURS (DTC P2195 OR P2196)**

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Clear the DTCs .
- (e) Turn the ignition switch off and wait for at least 30 seconds.
- (f) Turn the ignition switch to ON.
- (g) Turn the Techstream on.
- (h) Start the engine and warm it up.
- (i) Drive the vehicle in accordance with the driving pattern described in Confirmation Driving Pattern.
- (j) Enter the following menus: Powertrain / Engine / Utility / All Readiness.
- (k) Input the DTC: P2195 or P2196.
- (l) Check the DTC judgment.

Result

RESULT	PROCEED TO
ABNORMAL (DTC P2195 or P2196 is output)	A
NORMAL (DTC is not output)	B

B ▶ DTC CAUSED BY RUNNING OUT OF FUEL**A****4. READ VALUE USING TECHSTREAM (TEST VALUE OF AIR FUEL RATIO SENSOR)**

- (a) Connect the Techstream to the DLC3.
 - (b) Turn the ignition switch to ON.
 - (c) Turn the Techstream on.
 - (d) Clear the DTCs  .
 - (e) Drive the vehicle in accordance with the driving pattern described in Confirmation Driving Pattern.
 - (f) Enter the following menus: Powertrain / Engine / Monitor Status / O2S(A/FS) Monitor CMPL.
 - (g) Check that the status of O2S(A/FS) Monitor CMPL is Complete.
- If the status is still Incomplete, drive the vehicle according to the driving pattern again.
- (h) Enter the following menus: Powertrain / Engine / Data List / AFS Current B1S1.
 - (i) Check the test value of the air fuel ratio sensor output current during fuel-cut.

Result

RESULT	PROCEED TO
Within normal range (0.7 mA or higher, and lower than 2.2 mA)	A
Outside normal range (lower than 0.7 mA, or 2.2 mA or higher)	B

B ▶ GO TO STEP 16**A****5. READ VALUE USING TECHSTREAM (OUTPUT VOLTAGE OF AIR FUEL RATIO SENSOR)**

- (a) Connect the Techstream to the DLC3.

- (b) Start the engine.
- (c) Turn the Techstream on.
- (d) Warm up the air fuel ratio sensor at an engine speed of 2500 rpm for 90 seconds.
- (e) Enter the following menus: Powertrain / Engine / Active Test / Control the Injection Volume.
- (f) Perform the Control the Injection Volume operation with the engine idling.
- (g) Monitor the output voltages of the air fuel ratio and heated oxygen sensors (AFS Voltage B1S1 and O2S B1S2) displayed on the Techstream.

HINT:

- Change the fuel injection volume within the range of -12% to +12%. The injection volume can be changed in fine gradations.
- The air fuel ratio sensor has an output delay of a few seconds and the heated oxygen sensor has a maximum output delay of approximately 20 seconds.
- If the sensor output voltage does not change (almost no reaction) while performing the Active Test, the sensor may be malfunctioning.

TECHSTREAM DISPLAY (SENSOR)	INJECTION VOLUME	STATUS	VOLTAGE
AFS Voltage B1S1 (Air fuel ratio)	+12%	Rich	Below 2.0 V
AFS Voltage B1S1 (Air fuel ratio)	-12%	Lean	Higher than 2.4 V
O2S B1S2 (Heated oxygen)	+12%	Rich	Higher than 0.55 V
O2S B1S2 (Heated oxygen)	-12%	Lean	Below 0.4 V

Result

STATUS OF AFS VOLTAGE B1S1	STATUS OF O2S B1S2	AIR FUEL RATIO CONDITION AND AIR FUEL RATIO SENSOR CONDITION	PROCEED TO
Lean	Lean	Actual air fuel ratio lean	A
Rich	Rich	Actual air fuel ratio rich	A
Lean	Lean/Rich	Air fuel ratio sensor malfunction	B
Rich	Lean/Rich	Air fuel ratio sensor malfunction	B
Lean/Rich	Lean/Rich	Normal	B

Lean: During the Control the Injection Volume Active Test, the air fuel ratio sensor output voltage (AFS Voltage) is consistently higher than 2.4 V, and the heated oxygen sensor output voltage (O2S) is consistently below 0.4 V.

Rich: During the Control the Injection Volume Active Test, the AFS Voltage is consistently below 2.0 V, and the O2S is consistently higher than 0.55 V.

Lean/Rich: During the Control the Injection Volume Active Test, the output voltage of the heated oxygen sensor alternates correctly.

HINT:

Refer to "Data List / Active Test" [AFS Voltage B1S1 and O2S B1S2]  .

DTC SUMMARY

DTC NO.	MONITORING ITEM	MALFUNCTION DETECTION CONDITION	TROUBLE AREA	DETECTION TIMING	DETECTION LOGIC
P2401	Leak detection pump stuck OFF	P2401, P2402, P2419 and P2420 stored when one of following conditions met during EVAP monitor: <ul style="list-style-type: none"> Leak detection pump OFF malfunction Leak detection pump ON malfunction Vent valve ON (closed) malfunction Vent valve OFF (opened) malfunction 	<ul style="list-style-type: none"> Canister pump module Connector/wire harness (Canister pump module - ECM) ECM 	While EVAP monitor	1 trip
P2402	Leak detection pump stuck ON				
P2419	Vent valve circuit low				
P2420	Vent valve circuit high				

DESCRIPTION

The description can be found in EVAP (Evaporative Emission) System  .

MONITOR DESCRIPTION

While the ECM monitors the EVAP system, it also monitors the status of the leak detection pump and the vent valve within the canister pump module. If the ECM detects an abnormality in the leak detection pump or vent valve operational statuses, the ECM stores the DTC, and illuminates the MIL.

MONITOR STRATEGY

Related DTC	P2401: Evaporative emission system leak detection pump circuit continuity P2402: Evaporative emission system leak detection pump circuit continuity P2419: Evaporative emission system switching valve circuit continuity P2420: Evaporative emission system switching valve circuit continuity
Required Sensors/Components (Main)	Canister pump module
Required Sensors/Components (Related)	-
Frequency of Operation	Continuous
Duration	2.5 seconds
MIL Operation	Immediately
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs not stored	None
Battery voltage	10.9 V or more
Either of the following conditions is met:	A or B
A. Ignition switch	On
B. Activated by soak timer	Satisfied

TYPICAL MALFUNCTION THRESHOLDS

P2401

Drain voltage of FET for leak detection pump	Battery voltage X 0.38 V or less
Command signal from ECM	Off

P2402

Current of FET for leak detection pump	3.5 A or more
Command signal from ECM	On

P2419

Drain voltage of FET for vent valve	Battery voltage X 0.38 V or less
Command signal from ECM	Off

P2402

Current of FET for vent valve	3.5 A or more
Command signal from ECM	On

CONFIRMATION DRIVING PATTERN**NOTICE:**

- The Evaporative System Check (Automatic Mode) consists of 5 steps performed automatically by the Techstream. It takes a maximum of approximately 24 minutes.
- Do not perform the Evaporative System Check when the fuel tank is more than 90% full because the cut-off valve may be closed, making the fuel tank leak check unavailable.
- Do not run the engine during this operation.
- When the temperature of the fuel is 35°C (95°F) or more, a large amount of vapor forms and any check results become inaccurate. When performing the Evaporative System Check, keep the fuel temperature below 35°C (95°F) and the coolant temperature below 45°C (113°F).

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear DTCs (even if no DTCs are stored, perform the clear DTC procedure)  .
4. Turn the ignition switch off and wait for at least 30 seconds.
5. Turn the ignition switch to ON and turn the Techstream on.
6. Enter the following menus: Powertrain / Engine / Utility / Evaporative System Check / Automatic Mode.
7. After the "Evaporative System Check" is completed, check for All Readiness by entering the following menus: Powertrain / Engine / Utility / All readiness.
8. Input the DTC: P2401, P2402, P2419 or P2420.
9. Check the DTC judgment result.

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	<ul style="list-style-type: none"> ◦ DTC judgment completed ◦ System normal
ABNORMAL	<ul style="list-style-type: none"> ◦ DTC judgment completed ◦ System abnormal
INCOMPLETE	<ul style="list-style-type: none"> ◦ DTC judgment not completed ◦ Perform driving pattern after confirming DTC enabling conditions
N/A	<ul style="list-style-type: none"> ◦ Unable to perform DTC judgment ◦ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

- If the judgment result shows NORMAL, the system is normal.
- If the judgment result shows ABNORMAL, the system has a malfunction.

10. If the judgment result is INCOMPLETE or N/A and no pending DTC is output, perform a universal trip and check for permanent DTCs **INFO** .

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

WIRING DIAGRAM

Refer to DTC P0451 **INFO** .

INSPECTION PROCEDURE

NOTICE:

- Do not disassemble the canister pump module.
- Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1. INSPECT CANISTER PUMP MODULE (POWER SOURCE)

- (a) Turn the ignition switch off.
- (b) Disconnect the canister pump module connector.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
G8-3 - Body ground	Ignition switch ON	11 to 14 V
G8-5 - Body ground	Ignition switch ON	11 to 14 V

**Text in Illustration**

*a	Component without harness connected (Canister Pump Module)
----	---

NG GO TO STEP 4**OK****2. CHECK HARNESS AND CONNECTOR (CANISTER PUMP MODULE - ECM)**

- (a) Turn the ignition switch off.
- (b) Disconnect the canister pump module connector.
- (c) Disconnect the ECM connector.
- (d) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A35-8 (MPMP) - G8-4	Always	Below 1 Ω
A35-1 (VPMP) - G8-1	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A35-8 (MPMP) or G8-4 - Body ground	Always	10 k Ω or higher
A35-1 (VPMP) or G8-1 - Body ground	Always	10 k Ω or higher

NG **REPAIR OR REPLACE HARNESS OR CONNECTOR****OK****3. INSPECT CANISTER PUMP MODULE**

- (a) Inspect the canister pump module .

NG **REPLACE CANISTER PUMP MODULE**

OK ▶ CHECK INTERMITTENT PROBLEMS

4. INSPECT RELAY (EFI MAIN1)

(a) Inspect the EFI MAIN1 relay **INFO** .

NG ▶ REPLACE RELAY (EFI MAIN1)

OK

5. CHECK HARNESS AND CONNECTOR (CANISTER PUMP MODULE - EFI MAIN1 RELAY)

- (a) Turn the ignition switch off.
 (b) Remove EFI MAIN1 relay from the engine room relay block assembly.
 (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
G8-3 - EFI MAIN1 relay terminal 3	Always	Below 1 Ω
G8-5 - EFI MAIN1 relay terminal 3	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
G8-3 or EFI MAIN1 relay terminal 3 - Body ground	Always	10 k Ω or higher
G8-5 or EFI MAIN1 relay terminal 3 - Body ground	Always	10 k Ω or higher

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ▶ GO TO ECM POWER SOURCE CIRCUIT

Last Modified: 4-14-2014	6.6 C	Doc ID: RM000000T6X0B4X
Model Year: 2013	Model: FR-S	Prod Date Range: [03/2012 - 05/2013]
Title: FA20 ENGINE CONTROL: SFI SYSTEM: P2610; ECM / PCM Internal Engine Off Timer Performance; 2013 MY FR-S [03/2012 - 05/2013]		

DTC	P2610	ECM / PCM Internal Engine Off Timer Performance
------------	--------------	--

DTC SUMMARY

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P2610	<p>One of the following conditions is met (2 trip detection logic):</p> <p>Timer diagnosis</p> <ul style="list-style-type: none"> • [(Engine ECU counter - soak timer IC counter) / Engine ECU counter] is 0.24 or more. <p>Full count diagnosis</p> <ul style="list-style-type: none"> • Soak timer IC counter is not 1023. <p>Timer diagnosis</p> <ul style="list-style-type: none"> • The setting time written to the soak timer IC is different to the value read. Full count diagnosis during wake-up. • When the engine ECU counter is 1.636 seconds or less, the soak timer IC counter is 1023. 	ECM

DESCRIPTION

The soak timer operates after the ignition switch is turned off. When a certain amount of time has elapsed after turning the ignition switch off, the soak timer activates the ECM to perform malfunction checks which can only be performed after the engine is stopped. The soak timer is built into the ECM.

MONITOR DESCRIPTION

1. While the engine is running, the ECM monitors the synchronization of the soak timer and the CPU clock. If these two are not synchronized, the ECM interprets this as a malfunction, illuminates the MIL and stores the DTC.
2. If the soak timer activates the ECM even though only a short amount of time has elapsed since the ignition switch was turned off, or if the soak timer does not activate the ECM even though a considerable amount of time has elapsed since the ignition switch was turned off, the ECM determines that the soak timer is malfunctioning, illuminates the MIL and stores a DTC the next time the ignition switch is turned ON.

MONITOR STRATEGY

Related DTCs	
--------------	--

	P2610: ECM engine off timer performance (soak timer IC)
Required Sensors/Components	ECM
Required Sensors/Components	-
Frequency of Operation	Once per driving cycle
Duration	0.128 seconds: Timer Diagnosis, Full Count Diagnosis and Timer Diagnosis (Case 1) Immediately: Timer Diagnosis (Case 2) and Wake-up Diagnosis
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

All

Monitor runs whenever following DTCs are not present	None
--	------

Timer Diagnosis

Ignition switch	Off
Battery voltage	10.9 V or more
Elapsed time after engine start	10 minutes to 17.05 hours

Full Count Diagnosis

Ignition switch	Off
Battery voltage	10.9 V or more
ECM timer	4 seconds or more

Timer Diagnosis (Case 1)

Ignition switch	Off
Battery voltage	10.9 V or more

Timer Diagnosis (Case 2)

Ignition switch	Off
Battery voltage	10.9 V or more

Wake-up Diagnosis

--	--

Ignition switch	On
Soak time	1 hour or more

TYPICAL MALFUNCTION THRESHOLDS

Timer Diagnosis

$[(\text{ECM counter}) - (\text{Soak timer IC counter})] / \text{ECM counter}$	More than 0.24
--	----------------

Full Count Diagnosis

Soak timer IC counter	Not 1023 counts
-----------------------	-----------------

Timer Diagnosis (Case 1)

Value commanded by ECM = Value received by soak timer IC	Yes
--	-----

Timer Diagnosis (Case 2)

Either of the following conditions is met:	A or B
A. Soak timer IC counter when ECM timer is less than 1.636 seconds	1023 counts
B. Soak timer IC counter when ECM timer is more than 2.456 seconds	Not 1023 counts

Wake-up Diagnosis

Number of record wake-up counts is less than Number of record wake-up commands	Yes
--	-----

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear DTCs (even if no DTCs are stored, perform the clear DTC operation) INFO.
4. Turn the ignition switch off and wait for at least 30 seconds.
5. Turn the ignition switch to ON and turn the Techstream on.
6. Start the engine.
7. Idle the engine for 10 minutes or more.
8. Enter the following menus: Powertrain / Engine / Trouble Codes.
9. Read pending DTCs.

HINT:

- If a pending DTC is output, the system is malfunctioning.
 - If a pending DTC is not output, perform the following procedure.
10. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
 11. Input the DTC: P2610.
 12. Check the DTC judgment result.

TECHSTREAM	DESCRIPTION
------------	-------------

DISPLAY	
NORMAL	<ul style="list-style-type: none"> ◦ DTC judgment completed ◦ System normal
ABNORMAL	<ul style="list-style-type: none"> ◦ DTC judgment completed ◦ System abnormal
INCOMPLETE	<ul style="list-style-type: none"> ◦ DTC judgment not completed ◦ Perform driving pattern after confirming DTC enabling conditions
N/A	<ul style="list-style-type: none"> ◦ Unable to perform DTC judgment ◦ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

If the judgment result shows **ABNORMAL**, the system has a malfunction.

13. If the test result is **INCOMPLETE** or **N/A** and no pending DTC is output, perform a universal trip and check for permanent DTCs **INFO** .

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

INSPECTION PROCEDURE

HINT:

- DTC P2610 is stored if an internal ECM problem is detected. Diagnostic procedures are not required. ECM replacement is required.
- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air fuel ratio was lean or rich, and other data from the time the malfunction occurred.

PROCEDURE

1.	REPLACE ECM
-----------	--------------------

- (a) Replace the ECM **INFO** .

NEXT

2.	CHECK WHETHER DTC OUTPUT RECURS (IN ADDITION TO DTC P2610)
-----------	---

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Clear the DTCs  .
- (e) Turn the ignition switch off and wait for at least 30 seconds.
- (f) Turn the ignition switch to ON.
- (g) Turn the Techstream on.
- (h) Start the engine and wait for 10 minutes or more.
- (i) Enter the following menus: Powertrain / Engine / Trouble Codes / Pending.
- (j) If no pending DTC is output, the repair has been successfully completed.

PRECAUTION

1. INITIALIZATION

NOTICE:

- If the ECM is replaced, register the ECU communication ID for Immobiliser System  .
- Perform Registration (VIN registration) when replacing the ECM  .

2. WHEN USING TECHSTREAM

CAUTION:

Observe the following items for safety reasons:

- Before using the Techstream, read the instruction manual.
- Prevent the Techstream cable from being caught on the pedals, shift lever or steering wheel when driving with the Techstream connected to the vehicle.
- When driving the vehicle for testing purposes using the Techstream, 2 persons are required. One is for driving the vehicle, and the other operates the Techstream.

Last Modified: 3-27-2012	6.4 D	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000SXQ07MX
Title: FA20 ENGINE CONTROL: SFI SYSTEM: READINESS MONITOR DRIVE PATTERN (2013 FR-S)		

READINESS MONITOR DRIVE PATTERN

1. PURPOSE OF READINESS TESTS

- The On-Board Diagnostic (OBD II) system is designed to monitor the performance of emission related components, and indicate any detected abnormalities using DTCs (Diagnostic Trouble Codes). Since various components need to be monitored during different driving conditions, the OBD II system is designed to run separate monitoring programs called Readiness Monitors.
- To view the status, enter the following menus: Powertrain / Engine / Monitor / Current Monitor / Current.
- When the status of a Readiness Monitor reads Complete, the necessary conditions have been met for running the performance tests for that Readiness Monitor.
- A generic OBD II scan tool can also be used to view the Readiness Monitor status.

HINT:

Many state Inspection and Maintenance (I/M) programs require the status of vehicle Readiness Monitor to show Complete before beginning emission tests.

The Readiness Monitor is reset to Incomplete if:

- The ECM has lost battery power or blown a fuse.
- DTCs have been cleared.
- The conditions for running the Readiness Monitor have not been met.

If the Readiness Monitor status shows Incomplete, follow the appropriate Readiness Monitor Drive Pattern to change the status to Complete.

CAUTION:

Strictly observe posted speed limits, traffic laws, and road conditions when performing these drive patterns.

NOTICE:

These drive patterns represent the fastest method of satisfying all conditions necessary to achieve complete status for each specific Readiness Monitor.

In the event of a drive pattern being interrupted (possibly due to factors such as traffic conditions), the drive pattern can be resumed. In most cases, the Readiness Monitor will still achieve complete status upon completion of the drive pattern.

To ensure completion of the Readiness Monitors, avoid sudden changes in vehicle load and speed (driving up and down hills and/or sudden acceleration).

2. VVT SYSTEM MONITOR

(a) Refer to Confirmation Driving Pattern [P0011]  .

(b) Refer to Confirmation Driving Pattern [P0014]  .

3. CATALYST MONITOR (ACTIVE AIR FUEL RATIO CONTROL TYPE)

(a) Refer to Confirmation Driving Pattern [P0420]  .

4. EVAP SYSTEM MONITOR (KEY OFF TYPE)

(a) Refer to Confirmation Driving Pattern [EVAP System]  .

5. AIR FUEL RATIO (A/F) AND HEATED OXYGEN (HO2) SENSOR MONITORS (ACTIVE AIR FUEL RATIO CONTROL TYPE)

Title: FA20 ENGINE CONTROL: SFI SYSTEM: REGISTRATION (2013 FR-S)		

REGISTRATION

NOTICE:

The Vehicle Identification Number (VIN) must be input into a replacement ECM.

HINT:

The VIN is a 17-digit alphanumeric vehicle identification number. The Techstream is required to register the VIN.

1. DESCRIPTION (Using the Techstream)

HINT:

This registration section consists of 2 parts: **Read VIN and Write VIN.**

- (a) Read VIN: This process allows the VIN stored in the ECM to be read in order to confirm that the 2 VINs, provided with the vehicle and stored in the vehicle ECM, are the same.
- (b) Write VIN: This process allows the VIN to be input into the ECM. If the ECM is replaced, or the ECM VIN and vehicle VIN do not match, the VIN can be registered, or overwritten in the ECM by following this procedure.

2. READ VIN

- (a) Confirm the vehicle VIN.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the ignition switch to ON.
- (d) Turn the Techstream on.
- (e) Enter the following menus: Powertrain / Engine / Utility / VIN / VIN Read.

3. WRITE VIN

- (a) Confirm the vehicle VIN.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the ignition switch to ON.
- (d) Turn the Techstream on.
- (e) Enter the following menus: Powertrain / Engine / Utility / VIN / VIN Write.

Title: FA20 ENGINE CONTROL: SFI SYSTEM: Starter Signal Circuit; 2013 MY FR-S [03/2012 - 05/2013]		

Starter Signal Circuit

DESCRIPTION

While the engine is being cranked, the current from the ST relay flows to the ECM STSW2 terminal. The starter start signal flowing to the STSW2 terminal is mainly used to increase the fuel injection quantity while the engine is starting.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1. CHECK WHETHER ENGINE CAN BE CRANKED

(a) Check if the engine can be cranked.

Result

RESULT	PROCEED TO
Engine cannot be cranked	A
Engine can be cranked	B

B  **GO TO STEP 16**

A

2. READ VALUE USING TECHSTREAM (STARTER SIGNAL)

(a) Connect the Techstream to DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine / Data List / Starter Signal.

(e) Check the value displayed on the Techstream when the ignition switch is turned to the ON and START positions.

OK

IGNITION SWITCH POSITION	STARTER SIGNAL
ON	Close (OFF)
START	Open (ON)

NG  **GO TO STEP 4**

OK

3. CHECK HARNESS AND CONNECTOR (ECM - ST RELAY - STARTER ASSEMBLY)

- (a) Disconnect the ECM connector.
- (b) Disconnect the starter assembly connector.
- (c) Remove the ST relay from the engine room relay block assembly.
- (d) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B1-1 - A33-17 (STSW2)	Always	Below 1 Ω
B1-1 - ST relay terminal 3	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A33-17 (STSW2), ST relay terminal 3 or B1-1 - Body ground	Always	10 k Ω or higher

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4. INSPECT IGNITION OR STARTER SWITCH ASSEMBLY

- (a) Inspect the ignition or starter switch assembly  .

NG  **REPLACE IGNITION OR STARTER SWITCH ASSEMBLY**

OK

5. CHECK HARNESS AND CONNECTOR (IGNITION OR STARTER SWITCH ASSEMBLY - ST RELAY)

- (a) Disconnect the ignition or starter switch assembly connector.
- (b) Remove the ST relay from the engine room relay block assembly.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D55-8 (ST2) - ST relay terminal 5	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D55-8 (ST2) or ST relay terminal 5 - Body ground	Always	10 k Ω or higher

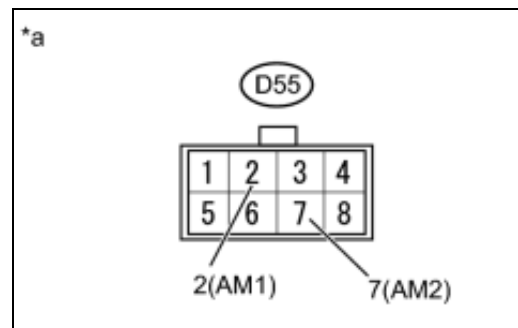

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

6. INSPECT TERMINAL VOLTAGE (+B OF IGNITION OR STARTER SWITCH ASSEMBLY)

- (a) Disconnect the ignition or starter switch assembly connector.

- (b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D55-2 (AM1) - Body ground	Always	11 to 14 V
D55-7 (AM2) - Body ground	Always	11 to 14 V

7. INSPECT PARK/NEUTRAL POSITION SWITCH ASSEMBLY

(a) Inspect the park/neutral position switch assembly  .

NG ► **REPLACE PARK/NEUTRAL POSITION SWITCH ASSEMBLY**

OK

8. CHECK HARNESS AND CONNECTOR (PARK/NEUTRAL POSITION SWITCH ASSEMBLY - INHIBITOR RELAY)

(a) Disconnect the park/neutral position switch assembly connector.

(b) Remove the INHIBITOR relay from the engine room relay block assembly.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L2-4 - INHIBITOR relay terminal 1	Always	Below 1 Ω
L2-5 - Body ground	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L2-4 or INHIBITOR relay terminal 1 - Body ground	Always	10 k Ω or higher

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

9. CHECK HARNESS AND CONNECTOR (IGNITION OR STARTER SWITCH ASSEMBLY - INHIBITOR RELAY)

- (a) Disconnect the ignition or starter switch assembly connector.
- (b) Remove the INHIBITOR relay from the engine room relay block assembly.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D55-1 (ST1) - INHIBITOR relay terminal 5	Always	Below 1 Ω
D55-1 (ST1) - INHIBITOR relay terminal 2	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D55-1 (ST1), INHIBITOR relay terminal 2 or INHIBITOR relay terminal 5 - Body ground	Always	10 k Ω or higher

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

10. CHECK HARNESS AND CONNECTOR (INHIBITOR RELAY - ST RELAY)

- (a) Remove the INHIBITOR relay and ST relay from the engine room relay block assembly.
- (b) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
INHIBITOR relay terminal 3 - ST relay terminal 2	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
INHIBITOR relay terminal 3 or ST relay terminal 2 - Body ground	Always	10 k Ω or higher

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

11. CHECK HARNESS AND CONNECTOR (ECM - ST RELAY)

- (a) Disconnect the ECM connector.
- (b) Remove the ST relay from the engine room relay block assembly.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A35-26 (STA) - ST relay terminal 1	Always	Below 1 Ω
A33-17 (STSW2) - ST relay terminal 3	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A35-26 (STA), A33-17 (STSW2), ST relay terminal 1 or ST relay terminal 3 - Body ground	Always	10 k Ω or higher

NG  **REPAIR OR REPLACE HARNESS OR**

CONNECTOR

OK ▶ **PROCEED TO NEXT SUSPECTED AREA SHOWN
IN PROBLEM SYMPTOMS TABLE**

12. INSPECT CLUTCH START SWITCH ASSEMBLY

(a) Inspect the clutch start switch assembly **INFO** .

NG ▶ **REPLACE CLUTCH START SWITCH ASSEMBLY**

OK

**13. CHECK HARNESS AND CONNECTOR (IGNITION OR STARTER SWITCH ASSEMBLY -
CLUTCH START SWITCH)**

- (a) Disconnect the ignition or starter switch assembly connector.
 (b) Disconnect the clutch start switch assembly connector.
 (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D55-1 (ST1) - A20-1	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D55-1 (ST1) or A20-1 - Body ground	Always	10 k Ω or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR
CONNECTOR**

OK

14. CHECK HARNESS AND CONNECTOR (CLUTCH START SWITCH ASSEMBLY - ST RELAY)

- (a) Disconnect the clutch start switch assembly connector.
- (b) Remove the ST relay from the engine room relay block assembly.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A20-2 - ST relay terminal 2	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A20-2 or ST relay terminal 2 - Body ground	Always	10 k Ω or higher

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

**15. CHECK HARNESS AND CONNECTOR (ECM - ST RELAY)**

- (a) Disconnect the ECM connector.
- (b) Remove the ST relay from the engine room relay block assembly.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A35-26 (STA) - ST relay terminal 1	Always	Below 1 Ω
A33-17 (STSW2) - ST relay terminal 3	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A35-26 (STA), A33-17 (STSW2), ST relay terminal 1 or ST relay terminal	Always	10 k Ω or higher

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ▶ PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE

16. READ VALUE USING TECHSTREAM (ST SIGNAL)

- (a) Connect the Techstream to DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Powertrain / Engine / Data List / Starter Signal.
- (e) Check the value displayed on the Techstream when the ignition switch is turned to the ON and START positions.

OK

IGNITION SWITCH POSITION	STARTER SIGNAL
ON	Close (OFF)
START	Open (ON)

Model Year: 2013	Model: FR-S	Doc ID: RM000000PDHOK9X
Title: FA20 ENGINE CONTROL: SFI SYSTEM: TERMINALS OF ECM (2013 FR-S)		

TERMINALS OF ECM

HINT:

The standard voltage between each pair of the ECM terminals is shown in the table below. The appropriate conditions for checking each pair of the terminals are also indicated. The result of checks should be compared with the standard voltage for that pair of the terminals, and displayed in the "Specified Condition" column. The illustration above can be used as a reference to identify the ECM terminal locations.

TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
A33-1 (+B2) - A36-4 (E01)	V - B-L	Power source of ECM	Ignition switch ON	12 to 14 V
A33-2 (BATT) - A36-4 (E01)	W - B-L	Battery(for measuring battery voltage and for ECM memory)	Always	10 to 13 V
A33-3 (ST1-) - A36-4 (E01)	BR-B - B-L	Stop light switch	Brake pedal depressed	11 to 14 V
			Brake pedal released	0 to 1 V
A33-7 (STP) - A36-4 (E01)*1	R - B-L	Stop light switch	Brake pedal depressed	0 to 1 V
			Brake pedal released	11 to 14 V
A33-8 (ACP) - A36-4 (E01)	G - B-L	Air conditioning pressure sensor	Ignition switch ON with A/C on	0 to 1 V
			Idling with A/C off	12 to 14 V
A33-12 (THA) - A36-29 (E1)	BR-G - Y-B	Intake air temperature sensor (built into mass air flow meter)	Ignition switch ON	0.3 to 4.6 V
A33-14 (STSW2) -	BR - B-		Ignition switch ON	0 to 1 V

A36-4 (E01)*3	L	Starter signal	Cranking	6 to 13 V
A33-15 (CLSW) - A36-4 (E01)*2	R-Y - B-L	Clutch switch	Ignition switch ON with clutch pedal depressed	0 to 1 V
			Ignition switch ON with clutch pedal released	10 to 13 V
A33-16 (NSW) - A36-4 (E01)	W-R - B-L*1 G-B - B-L*2	Neutral switch signal	Ignition switch ON, shift lever in P or N*1 Ignition switch ON, shift lever in Neutral*2	0 to 1 V
			Ignition switch ON, shift lever not in P or N*1 Ignition switch ON, shift lever not in Neutral*2	10 to 13 V
A33-17 (STSW2) - A36-4 (E01)	BR - B-L	Starter signal	Ignition switch ON	0 to 1 V
			Cranking	6 to 13 V
A33-18 (CANL) - A36-4 (E01)	B-P - B-L	CAN communication line	Ignition switch ON	Pulse generation (See waveform 1)
A33-19 (CANH) - A36-4 (E01)	O - B-L	CAN communication line	Ignition switch ON	Pulse generation (See waveform 2)
A33-20 (HB) - A36-4 (E01)	G-Y - B-L	BLOWER relay	Ignition switch ON with blower fan switch on	0 to 1 V
			Ignition switch ON with blower fan switch off	10 to 13 V
A33-22 (VG) - A33-29 (E2G)	Y - B-G	Mass air flow meter	Idling with warm engine	0.9 to 4.5 V
A33-27 (IGSW) - A36-4 (E01)	GR - B-L	IG2 relay	Ignition switch ON	10 to 13 V
A34-5 (HA1A) - A36-4 (E01)	V - B-L	Air fuel ratio sensor heater	Idling with cold engine	Pulse generation (See waveform 3)
A34-6 (+B) - A36-4 (E01)	V - B-L	Power source of ECM	Ignition switch ON	12 to 14 V
A34-9 (PR) - A36-29 (E1)	V-B - Y-B	Fuel pressure sensor	Idling with warm engine	1.0 to 1.7 V
A34-11 (IJF1) - A36-4 (E01)	R-Y - B-L	Injector for direct injection confirmation signal	Idling	Pulse generation (See waveform 4)

A34-13 (FPF) - A36-4 (E01)	R-B - B-L	High pressure side fuel pump (Spill valve)	Idling	Pulse generation (See waveform 5)
A34-14 (EV1+) - A36- 4 (E01)	Y-BR - B-L	Variable valve timing (VVT) sensor (Exhaust side (bank 1))	Idling with warm engine	Pulse generation (See waveform 6)
A34- 15(VV2+) - A36-4 (E01)	Y-V - B-L	Variable valve timing (VVT) sensor (Intake side (bank 2))	Idling with warm engine	Pulse generation (See waveform 7)
A34-16 (NE+) - A34-27 (NE-)	B - W	Crank position sensor	Idling with warm engine	Pulse generation (See waveform 6 or 7)
A34-17 (KNK2) - A36- 29 (E1)	G - Y-B	Knock sensor	Ignition switch ON	Approximately 2.5 V
A34-18 (A1A-) - A36-4 (E01)	O - B-L	Air fuel ratio sensor	Ignition switch ON	2.4 to 2.7 V
A34-19 (A1A+) - A36- 4 (E01)	W - B-L	Air fuel ratio sensor	Ignition switch ON	2.8 to 3.2 V
A34-20 (PIM) - A36-29 (E1)	BR-B - Y-B	Manifold absolute pressure sensor	Idling with warm engine	1.1 to 2.0 V
A34-21 (OX1B) - A36- 4 (E01)	L-W - B-L	Heated oxygen sensor	Idling with warm engine	0 to 0.9 V
A34-25 (EV2+) - A36- 4 (E01)	BR-Y - B-L	Variable valve timing (VVT) sensor (Exhaust side (bank 2))	Idling with warm engine	Pulse generation (See waveform 6)
A34-26 (VV1+) - A36- 4 (E01)	Y-P - B- L	Variable valve timing (VVT) sensor (Intake side (bank 1))	Idling with warm engine	Pulse generation (See waveform 7)
A34-28 (KNK1) - A36- 29 (E1)	G - Y-B	Knock sensor	Ignition switch ON	Approximately 2.5 V
A34-31 (IJF2) - A36-4 (E01)	R-G - B-L	Injector for direct injection confirmation signal	Idling	Pulse generation (See waveform 4)
A34-32 (FPD)	R-W -	High pressure side fuel pump		Pulse generation

- A36-4 (E01)	B-L	(Spill valve)	Idling	(See waveform 5)
A34-34 (VCV) - A36-4 (E01)	G-B - B-L	Power source of camshaft timing oil control valve (OCV)	Ignition switch ON	4.5 to 5.5 V
A35-1 (VPMP) - A36-4 (E01)	D-L - B-L	Vent valve (built into canister pump module)	Ignition switch ON	10 to 13 V
A35-5 (IREL) - A36-4 (E01)	D-W - B-L	INJ relay	Idling	10 to 13 V
			Ignition switch ON	0 to 1 V
A35-7 (+BM) - A36-4 (E01)	R-L - B- L	ETCS relay	Ignition switch ON	10 to 13 V
A35-8 (MPMP) - A36-4 (E01)	O-L - B-L	Leak detection pump (built into canister pump module))	Ignition switch ON	10 to 13 V
			Leak detection pump ON	0 to 1 V
A35-10 (DI) - A36-4 (E01)	W-B - B-L	Fuel pump control (for fuel pump control malfunctioning detection)	Ignition switch ON	10 to 12 V
A35-11 (FAN1) - A36- 4 (E01)	R-W - B-L	FAN NO. 3 relay	Ignition switch ON Cooling fan not operated	10 to 13 V
			Idling with A/C on or High engine coolant temperature Cooling fan operated	0 to 0.5 V
A35-12 (FAN2) - A36- 4 (E01)	B-R - B-L	FAN NO. 2 relay	Ignition switch ON	10 to 13 V
			Idling with A/C on or High engine coolant temperature Cooling fan operated	0 to 0.5 V
A35-13 (SSHUT) - A36-4 (E01)	LG - B- L	EFI MAIN1 relay	Ignition switch ON	0 to 1 V
A35-15 (TACH) - A36- 4 (E01)*3	GR-R - B-L	Engine speed	Engine speed maintained at 1500 rpm	Pulse generation (See waveform 8)
A35-17 (MCR) - A36-4 (E01)	L-R - B- L	ETCS relay	Ignition switch ON	0 to 1 V
A35-19(FPC) - A36-4 (E01)	SB - B- L	Fuel pump control	Ignition switch ON	Pulse generation (See waveform 9)
A35-20 (PPMP) - A36- 4 (E01)	O-B - B-L	Canister pressure sensor (built into canister pump module)	Ignition switch ON	1.5 to 4.0 V
A35-21 (VCPA) - A36- 4 (E01)	L-Y - B- L	Power source of accelerator pedal position sensor	Ignition switch ON	4.5 to 5.5 V
A35-22 (VCP2) - A36-	G-B -	Power source of accelerator	Ignition switch ON	4.5 to 5.5 V

4 (E01)	B-L	pedal position sensor		
A35-23(VPA) - A35-29 (EPA)	W - L	Accelerator pedal position sensor (for engine control)	Ignition switch ON, Accelerator pedal fully released	Approximately 0.7 V
			Ignition switch ON, Accelerator pedal fully depressed	Approximately 3.1 V
A35-26 (STA) - A36-4 (E01)	B-W - B-L	ST relay	Ignition switch ON	10 to 13 V
			Cranking	0 to 1 V
A35-31 (VPA2) - A35- 30 (EPA2)	O - Y-B	Accelerator pedal position sensor (for sensor malfunctioning detection)	Ignition switch ON, Accelerator pedal fully released	Approximately 0.7 V
			Ignition switch ON, Accelerator pedal fully depressed	Approximately 3.1 V
A35-35 (AC) - A36-4 (E01)	L-O - B-L	HEATER relay	Idling with A/C on	0 to 0.5 V
			Idling with A/C off	12 to 14 V
A36-1 (M-) - A36-4 (E01)	SB - B- L	Throttle actuator	Idling with warm engine	Pulse generation (See waveform 10)
A36-2 (M+) - A36-4 (E01)	G-Y - B-L	Throttle actuator	Idling with warm engine	Pulse generation (See waveform 10)
A36-5 (OE2) - A36-4 (E01)	BR-L - B-L	Camshaft timing oil control valve (OCV) (Exhaust side (bank 2))	Ignition switch ON	11 to 14 V
			Idling with warm engine	Pulse generation (See waveform 11)
A36-6 (HT1B) - A36-4 (E01)	R-B - B-L	Heated oxygen sensor heater	Ignition switch ON	11 to 14 V
			Idling with cold engine	Pulse generation (See waveform 12)
A36-7 (OE1) - A36-4 (E01)	R-W - B-L	Camshaft timing oil control valve (OCV) (Exhaust side (bank 1))	Ignition switch ON	11 to 14 V
			Idling with warm engine	Pulse generation (See waveform 11)
A36-8 (IGT4) - A36-4 (E01)	W-L - B-L	Ignition coil (ignition signal)	Idling with warm engine	Pulse generation (See waveform 13)
A36-10 (IGT2) - A36- 4 (E01)	Y-R - B-L	Ignition coil (ignition signal)	Idling with warm engine	Pulse generation (See waveform 13)

A36-11 (PRG) - A36-4 (E01)	R-G - B-L	Purge valve	One of the following conditions is met: <ul style="list-style-type: none">Ignition switch ONIdling with warm engine, under purge control	Pulse generation (See waveform 14)
A36-12 (#10) - A36-4 (E01)	P - B-L	Injector for port injection	Idling with warm engine	Pulse generation (See waveform 15)
A36-13 (#40) - A36-4 (E01)	P-G - B-L	Injector for port injection	Idling with warm engine	Pulse generation (See waveform 15)
A36-14 (#1) - A36-4 (E01)	W - B-L	Injector for direct injection	Idling with warm engine	Pulse generation (See waveform 4)
A36-16 (OC2) - A36-4 (E01)	GR - B- L	Variable valve timing (VVT) sensor (Intake side (bank 2))	Ignition switch ON	11 to 14 V
			Idling with warm engine	Pulse generation (See waveform 11)
A36-17 (OC1) - A36-4 (E01)	G-W - B-L	Variable valve timing (VVT) sensor (Intake side (bank 1))	Ignition switch ON	11 to 14 V
			Idling with warm engine	Pulse generation (See waveform 11)
A36-18 (VTA1) - A36- 29 (E1)	LG - Y- B	Throttle position sensor (for engine control)	Ignition switch ON, Accelerator pedal fully released	Approximately 0.6 V
			Ignition switch ON, Accelerator pedal fully depressed	Approximately 4.2 V
A36-19 (VC) - A36-29 (E1)	R - Y-B	Power source for sensor (specific voltage)	Ignition switch ON	4.5 to 5.5 V
A36-20 (OT) - A36-29 (E1)	BR - Y- B	Oil temperature sensor	Idling	0.5 to 1.4 V
A36-21 (IGT1) - A36- 4 (E01)	W-R - B-L	Ignition coil (ignition signal)	Idling with warm engine	Pulse generation (See waveform 13)
A36-22 (#20) - A36-4 (E01)	P-L - B- L	Injector for port injection	Idling with warm engine	Pulse generation (See waveform 15)
A36-23 (#4) -	LG-R -	Injector for direct injection	Idling with warm engine	Pulse generation

A36-4 (E01)	B-L			(See waveform 4)
A36-24 (#3) - A36-4 (E01)	LG-W - B-L	Injector for direct injection	Idling with warm engine	Pulse generation (See waveform 4)
A36-25 (#2) - A36-4 (E01)	LG-B - B-L	Injector for direct injection	Idling with warm engine	Pulse generation (See waveform 4)
A36-28 (VTA2) - A36-29 (E1)	R-Y - Y-B	Throttle position sensor (for sensor malfunction detection)	Ignition switch ON, Accelerator pedal fully released	Approximately 1.5 V
			Ignition switch ON, Accelerator pedal fully depressed	Approximately 4.3 V
A36-30 (THW) - A36-29 (E1)	BR-W - Y-B	Engine coolant temperature sensor	Idling, Engine coolant temperature 60 to 120°C (176 to 248°F)	0.8 to 1.8 V
A36-31 (IGT3) - A36-4 (E01)	W-G - B-L	Ignition coil (ignition signal)	Idling with warm engine	Pulse generation (See waveform 13)
A36-32 (#30) - A36-4 (E01)	P-B - B-L	Injector for port injection	Idling with warm engine	Pulse generation (See waveform 15)
A33-4 (EC) - Body ground	B-L - Body ground	Ground	Always	Below 1 Ω
A33-28 (SLE2) - Body ground	-	Shield	Always	Below 1 Ω
A34-1 (E03) - Body ground	B-R - Body ground	Ground	Always	Below 1 Ω
A34-2 (E04) - Body ground	B-W - Body ground	Ground	Always	Below 1 Ω
A34-3 (E05) - Body ground	B-W - Body ground	Ground	Always	Below 1 Ω
A34-29 (EKNK) - Body ground	-	Shield	Always	Below 1 Ω
A34-30 (SLE1) - Body ground	-	Shield	Always	Below 1 Ω
A34-35				

(SLE3) - Body ground	-	Shield	Always	Below 1 Ω
A35-29 (EPA) - A36-4 (E01)	L - B-L	Ground	Ignition switch ON	0 to 1 V
A35-30 (EPA2) - A36-4 (E01)	Y-B - B-L	Ground	Ignition switch ON	0 to 1 V
A36-3 (E02) - Body ground	B-Y - Body ground	Ground	Always	Below 1 Ω
A36-4 (E01) - Body ground	B-L - Body ground	Ground	Always	Below 1 Ω
A36-29 (E1) - Body ground	Y-B - Body ground	Ground	Ignition switch ON	0 to 1 V

*1: for Automatic Transmission

*2: for Manual Transmission

1. WAVEFORM 1

CAN Communication Signal

ECM Terminal Name	Between CANL and E01
Tester Range	1 V/DIV., 10 μ s./DIV.
Condition	Ignition switch ON

HINT:

The waveform varies depending on the CAN communication signal.

2. WAVEFORM 2

CAN Communication Signal

ECM Terminal Name	Between CANH and E01
Tester Range	1 V/DIV., 10 μ s./DIV.
Condition	Ignition switch ON

HINT:

The waveform varies depending on the CAN communication signal.

3. WAVEFORM 3

Air Fuel Ratio Sensor Heater

ECM Terminal Name	Between HA1A and E01
Tester Range	5 V/DIV., 50 ms./DIV.
Condition	Idling with cold engine

4. WAVEFORM 4

Injector for Direct Injection No. 1 (to No. 4) Injection Signal

ECM Terminal Name	CH1: Between #1 (to #4) and E01 CH2: Between IJF1or IJF2 and E01
Tester Range	2 V/DIV., 40 μs./DIV.
Condition	Idling with warm engine

HINT:

The wavelength becomes shorter as the engine speed increases.

5. WAVEFORM 5

Fuel Pump for High Pressure (Spill Valve)

ECM Terminal Name	CH1: Between FPD and E01 CH2: Between FPF and E01
Tester Range	2 V/DIV., 20 ms./DIV.
Condition	Idling with warm engine

6. WAVEFORM 6

Crankshaft Position Sensor and VVT Sensor for Exhaust Camshaft

ECM Terminal Name	CH1: Between NE+ and NE- CH2: Between EV1+ and E01 CH3: Between EV2+ and E01
Tester Range	5 V/DIV., 10 ms./DIV.
Condition	Idling with warm engine

HINT:

The wavelength becomes shorter as the engine speed increases.

7. WAVEFORM 7

Crankshaft Position Sensor and VVT Sensor for Intake Camshaft

ECM Terminal Name	CH1: Between NE+ and NE- CH2: Between VV1+ and E01 CH3: Between VV2+ and E01
Tester Range	5 V/DIV., 10 ms./DIV.
Condition	Idling with warm engine

HINT:

The wavelength becomes shorter as the engine speed increases.

8. WAVEFORM 8

Engine Speed Signal

ECM Terminal Name	Between TACH and E01
Tester Range	5 V/DIV., 10 ms./DIV.
Condition	Engine speed maintained at 1500 rpm

HINT:

The wavelength becomes shorter as the vehicle speed increases.

9. WAVEFORM 9

MONITOR DESCRIPTION

The ECM, TCM, skid control ECU (brake actuator assembly) and combination meter assembly communicate with each other via the CAN communication line. If there is a problem in this communication, the ECM stores the DTC.

INSPECTION PROCEDURE

Go to CAN communication system for troubleshooting  .

HINT:

- When DTCs indicating a CAN communication system malfunction are output, repair the CAN communication system before repairing each corresponding sensor.
- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.
- If the CAN communication malfunctions, there is no data output from the ECM. In this case, some of the freeze frame data are not correct and not identical with the ECM data, but the ECM data are correct.

PROCEDURE

1. CHECK ANY OTHER DTCs OUTPUT

- Connect the Techstream to the DLC3.
- Turn the ignition switch to ON.
- Turn the Techstream on.
- Enter the following menus: Powertrain / Engine / Trouble Codes.
- Read the DTCs.

RESULT	PROCEED TO
DTC U0073, U0101, U0122, U0155, U0402, U0416 or U0423 is output	A
DTC U0073, U0101, U0122, U0155, U0402, U0416 or U0423 and other DTCs are output	B

Last Modified: 4-14-2014	6.6 J	Doc ID: RM000001D6V0LTX
Model Year: 2013	Model: FR-S	Prod Date Range: [03/2012 -]
Title: FA20 ENGINE CONTROL: SFI SYSTEM: VC Output Circuit; 2013 MY FR-S [03/2012 -]		

VC Output Circuit

DESCRIPTION

The ECM constantly generates 5 V power from the battery voltages supplied to the +B terminal and +B2 terminal to operate the microprocessor. The ECM also provides this power to the sensors through the VC output circuit.

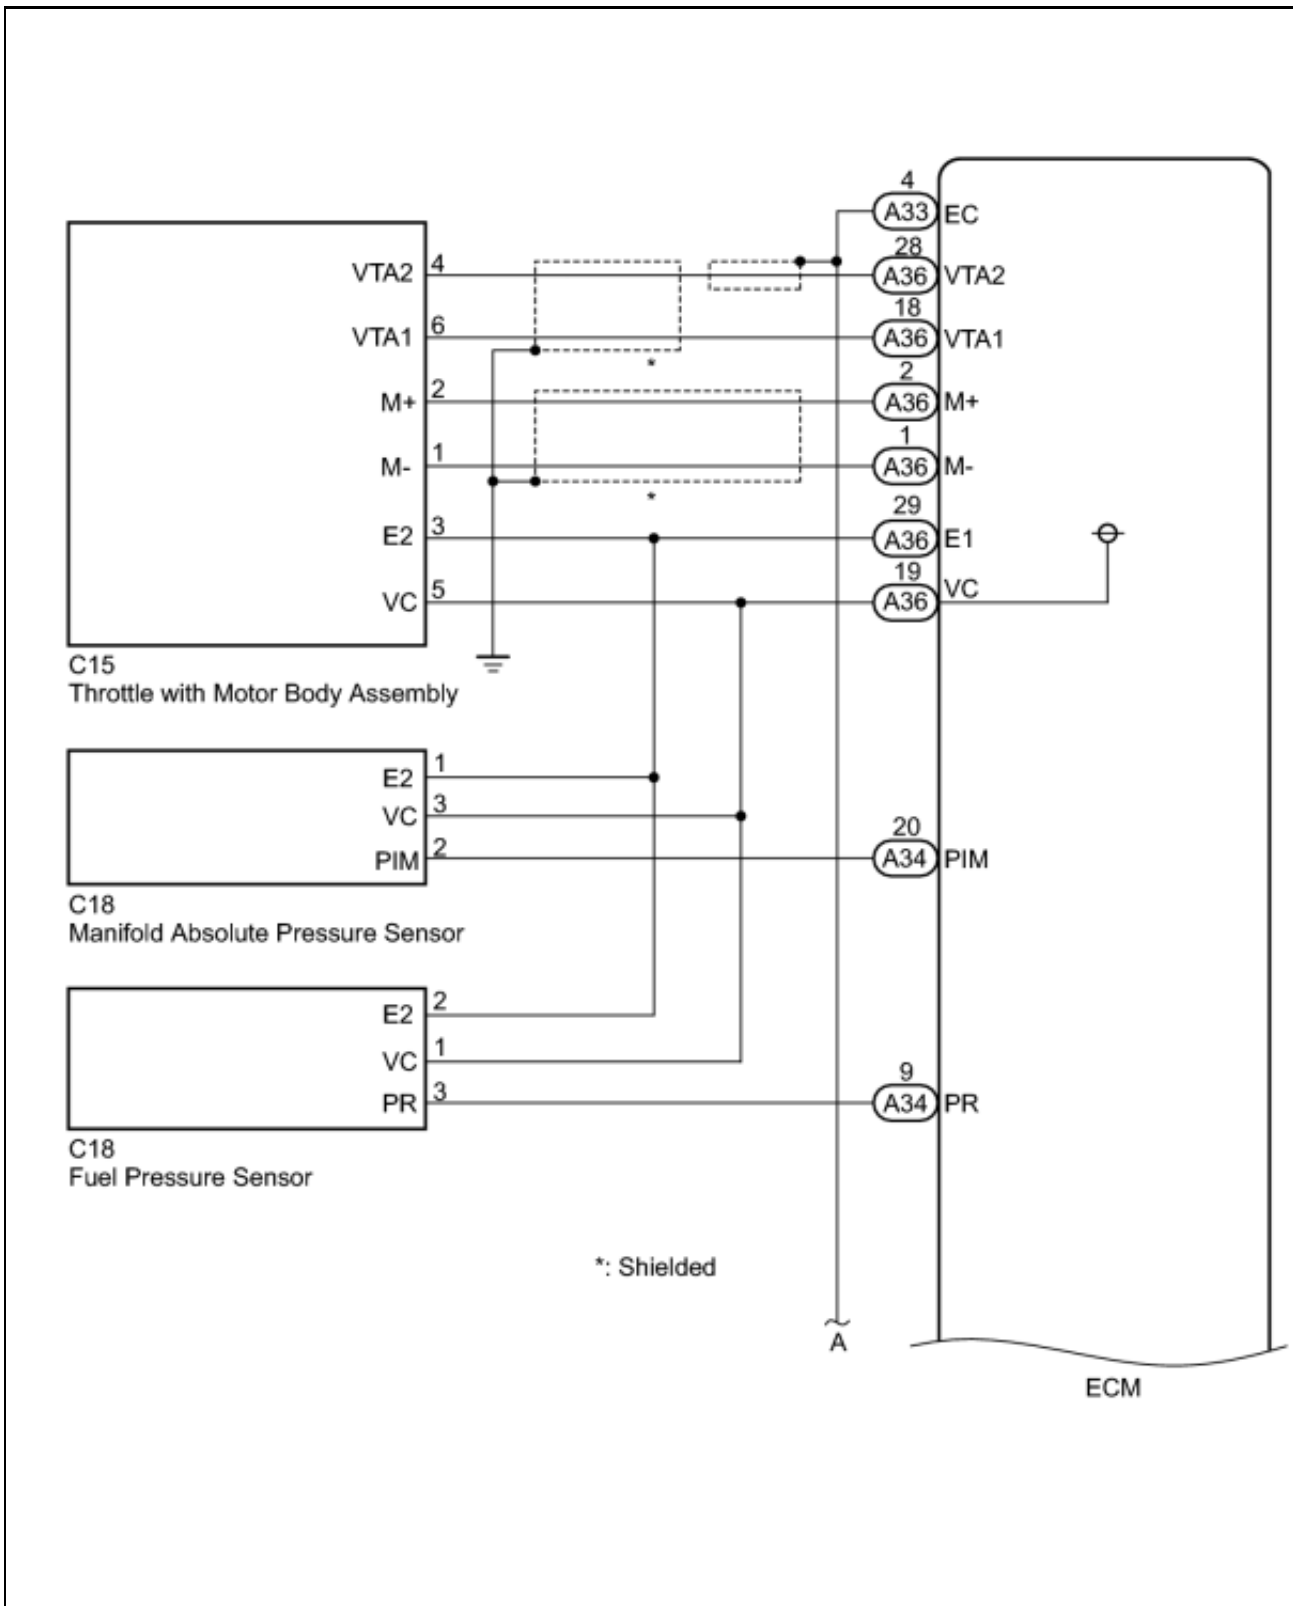

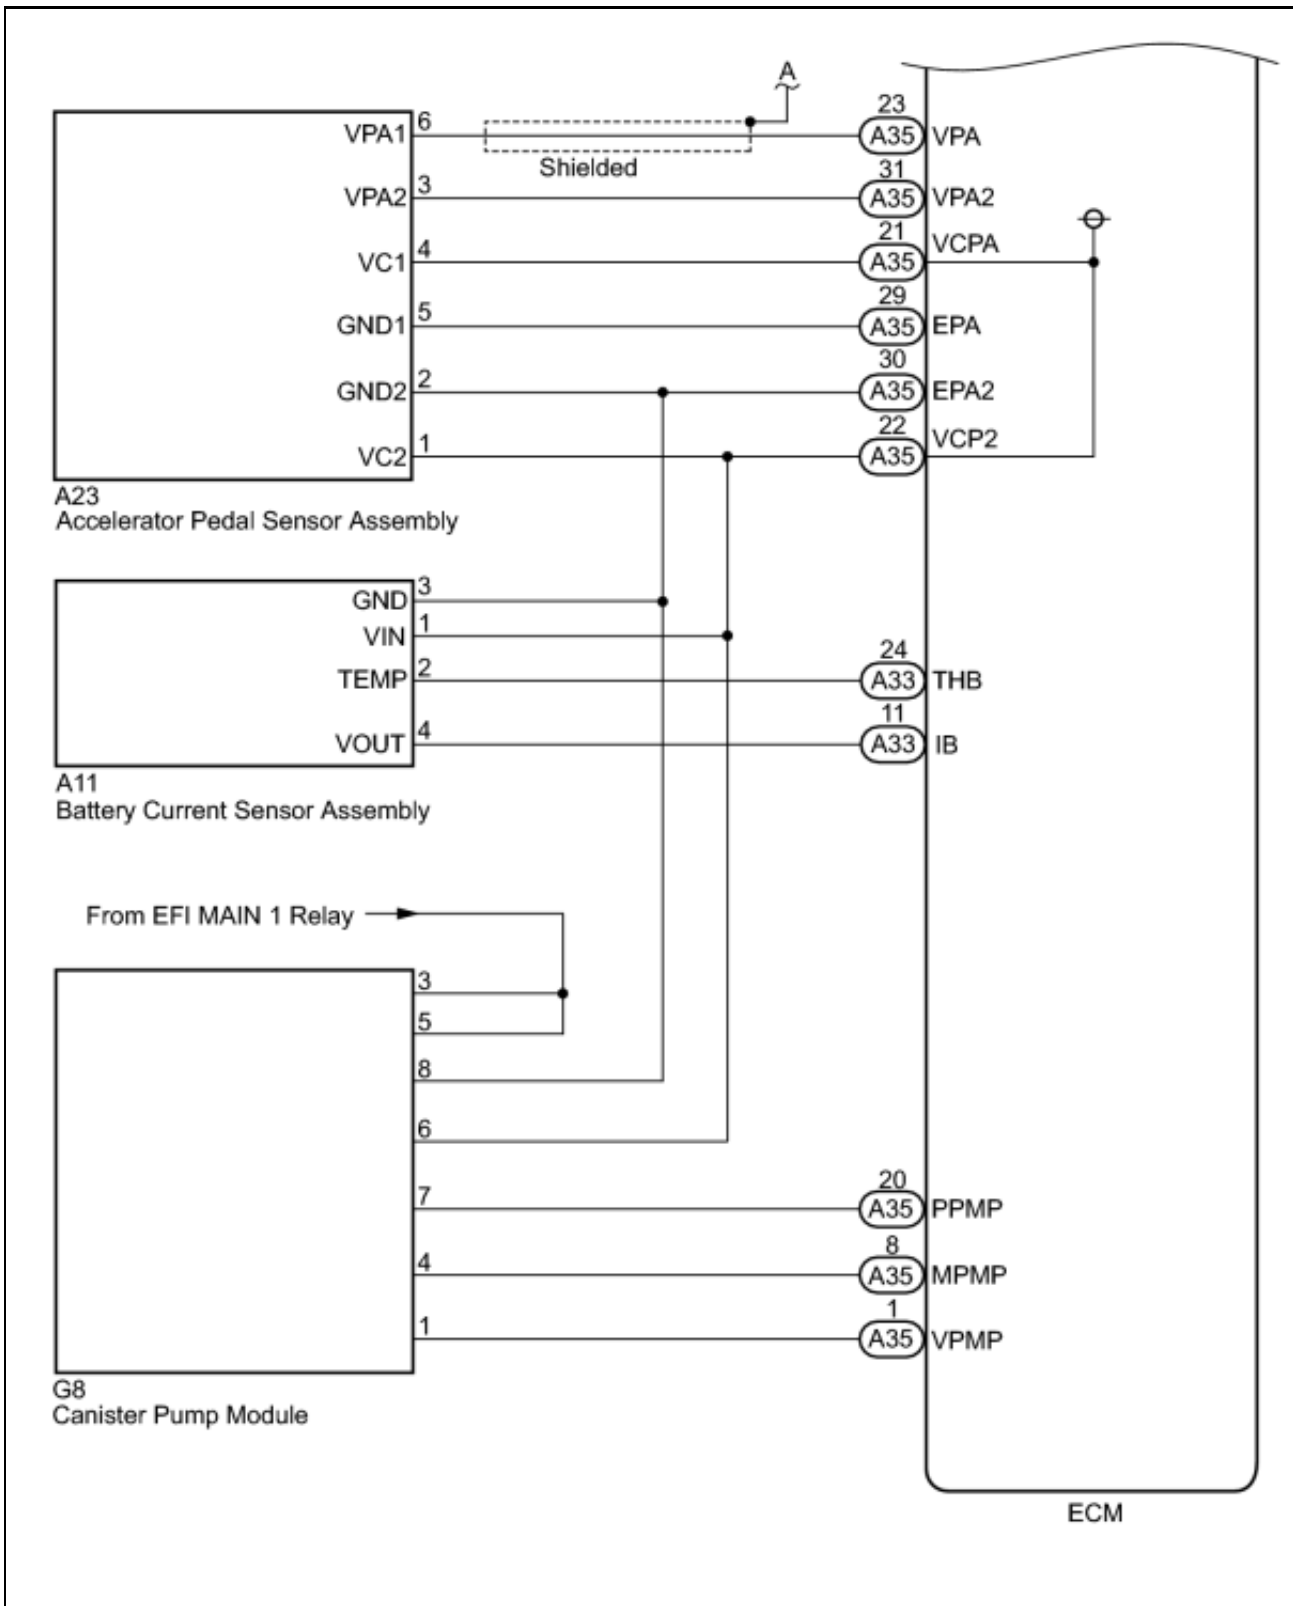

When the VC circuit is short-circuited, the microprocessor in the ECM and sensors that are supplied with power through the VC circuit are deactivated because the power is not supplied from the VC circuit. Under this condition, the system does not start up and the MIL does not illuminate even if the system malfunctions.

HINT:

Under normal conditions, the MIL is illuminated when the ignition switch is turned to ON. The MIL goes off when the engine is started.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

- | | |
|-----------|----------------------------|
| 1. | CHECK MIL CONDITION |
|-----------|----------------------------|

(a) Check that the Malfunction Indicator Lamp (MIL) lights up when turning the ignition switch to ON.

OK:

MIL lights up.

Result

RESULT	PROCEED TO
NG	A
OK	B

B ▶ **PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE**

A

2. CHECK CONNECTION BETWEEN TECHSTREAM AND ECM

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Check for communication between the Techstream and ECM.

Result

RESULT	PROCEED TO
Communication is not possible	A
Communication is possible	B

B ▶ **GO TO MIL CIRCUIT**

A

3. CHECK MIL (THROTTLE POSITION SENSOR)

- (a) Disconnect the throttle with motor body assembly connector.
- (b) Turn the ignition switch to ON.
- (c) Check the MIL.

Result

RESULT	PROCEED TO
MIL does not illuminate	A
MIL illuminates	B

B  **REPLACE THROTTLE WITH MOTOR BODY ASSEMBLY**

A

4. CHECK MIL (MANIFOLD ABSOLUTE PRESSURE SENSOR)

- (a) Disconnect the manifold absolute pressure sensor connector.
- (b) Turn the ignition switch to ON.
- (c) Check the MIL.

Result

RESULT	PROCEED TO
MIL does not illuminate	A
MIL illuminates	B

B  **REPLACE MANIFOLD ABSOLUTE PRESSURE SENSOR**

A

5. CHECK MIL (FUEL PRESSURE SENSOR)

- (a) Disconnect the fuel pressure sensor connector.
- (b) Turn the ignition switch to ON.
- (c) Check the MIL.

Result

RESULT	PROCEED TO
MIL does not illuminate	A
MIL illuminates	B

B  **REPLACE FUEL PRESSURE SENSOR****A****6. CHECK MIL (ACCELERATOR PEDAL SENSOR ASSEMBLY)**

- (a) Disconnect the accelerator pedal sensor assembly connector.
- (b) Turn the ignition switch to ON.
- (c) Check the MIL.

Result

RESULT	PROCEED TO
MIL does not illuminate	A
MIL illuminates	B

B  **REPLACE ACCELERATOR PEDAL SENSOR ASSEMBLY****A****7. CHECK MIL (BATTERY CURRENT SENSOR ASSEMBLY)**

- (a) Disconnect the battery current sensor assembly connector.

(b) Turn the ignition switch to ON.

(c) Check the MIL.

Result

RESULT	PROCEED TO
MIL does not illuminate	A
MIL illuminates	B

B  **REPLACE BATTERY CURRENT SENSOR ASSEMBLY**

A

8. CHECK MIL (CANISTER PUMP MODULE)

(a) Disconnect the canister pump module connector.

(b) Turn the ignition switch to ON.

(c) Check the MIL.

Result

RESULT	PROCEED TO
MIL does not illuminate	A
MIL illuminates	B

B  **REPLACE CANISTER PUMP MODULE**

A

9. CHECK HARNESS AND CONNECTOR (EACH SENSOR - ECM)

(a) Disconnect the throttle with motor body assembly connector.

(b) Disconnect the manifold absolute pressure sensor connector.

(c) Disconnect the fuel pressure sensor connector.

- (d) Disconnect the accelerator pedal sensor assembly connector.
- (e) Disconnect the battery current sensor assembly connector.
- (f) Disconnect the canister pump module connector.
- (g) Disconnect the ECM connectors.
- (h) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A36-19 (VC) - Body ground	Always	10 k Ω or higher
A35-22 (VCP2) - Body ground	Always	10 k Ω or higher
A35-21 (VCPA) - Body ground	Always	10 k Ω or higher

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK  **REPLACE ECM**

Title: FA20 ENGINE CONTROL: THROTTLE BODY: INSPECTION; 2013 MY FR-S [03/2012 -]		

INSPECTION

1. INSPECT THROTTLE WITH MOTOR BODY ASSEMBLY

(a) Measure the resistance according to the value(s) in the table below.

Text in Illustration

*a	Component without harness connected (Throttle with Motor Body Assembly)
----	--

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	20°C (68°F)	0.3 to 10 Ω

If the result is not as specified, replace the throttle with motor body assembly.

Last Modified: 4-14-2014	6.6 A	Doc ID: RM000000MTA00VX
Model Year: 2013	Model: FR-S	Prod Date Range: [03/2012 -]
Title: FA20 ENGINE CONTROL: THROTTLE BODY: INSTALLATION; 2013 MY FR-S [03/2012 -]		

INSTALLATION

1. INSTALL THROTTLE WITH MOTOR BODY ASSEMBLY

- Install a new gasket to the intake manifold.
- Connect the 2 water by-pass hoses to the throttle with motor body assembly with the 2 clamps.
- Install the throttle with motor body assembly to the intake manifold with the 4 bolts.

Torque:

8.0 N·m {82 kgf·cm, 71 in·lbf}

- Connect the throttle with motor body assembly connector.

2. INSTALL AIR CLEANER CAP WITH AIR CLEANER HOSE INFO

3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL INFO

4. ADD ENGINE COOLANT INFO

5. INSPECT FOR COOLANT LEAK INFO

6. INSPECT THROTTLE WITH MOTOR BODY ASSEMBLY

NOTICE:

Perform the following procedure after replacing the ECM, throttle with motor body assembly or any throttle with motor body assembly components.

- Turn the ignition switch to ON without operating the accelerator pedal.

NOTICE:

If the accelerator pedal is operated, perform the above steps again.

- Connect the Techstream to the DLC3 and clear the DTCs INFO.
- Start the engine and check that the MIL is not illuminated. After the engine is warmed up, check that the idle speed is within the specified range when the A/C is switched off.

Standard:

CONDITION	ENGINE IDLE SPEED
A/C switched off	650 to 800 rpm

NOTICE:

- Be sure to perform this step with all accessories off.
- Make sure that the shift lever is in neutral (for manual transmission).
- Make sure that the shift lever is in N or P (for automatic transmission).

- Enter the following menus: Data List / Throttle Sensor Volt%. Fully depress the accelerator pedal and check that the value is 80 to 90%.
- Perform a road test and confirm that there are no abnormalities.

Last Modified: 4-14-2014	6.6 A	Doc ID: RM000000MTD00TX
Model Year: 2013	Model: FR-S	Prod Date Range: [03/2012 -]
Title: FA20 ENGINE CONTROL: THROTTLE BODY: REMOVAL; 2013 MY FR-S [03/2012 -]		

REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL INFO

2. DRAIN ENGINE COOLANT INFO

3. REMOVE AIR CLEANER CAP WITH AIR CLEANER HOSE INFO

4. REMOVE THROTTLE WITH MOTOR BODY ASSEMBLY

(a) Disconnect the throttle with motor body assembly connector.

(b) Disconnect the 2 water by-pass hoses from the throttle with motor body assembly.

(c) Remove the 4 bolts and the throttle with motor body assembly from the intake manifold.

(d) Remove the gasket from the intake manifold.

Title: FA20 ENGINE CONTROL: VACUUM SENSOR: INSTALLATION; 2013 MY FR-S [03/2012 -]		

INSTALLATION

1. INSTALL MANIFOLD ABSOLUTE PRESSURE SENSOR

- Apply a light coat of engine oil to a new O-ring and install it to the manifold absolute pressure sensor.
- Install the manifold absolute pressure sensor with the bolt.

Torque:

4.0 N·m {41 kgf·cm, 35in·lbf}

NOTICE:

- If a component has been dropped or subjected to a strong impact, replace it.
- Make sure that the O-ring is not damaged or does not jump out of position during installation.

- Connect the manifold absolute pressure sensor connector.

2. INSTALL NO. 1 ENGINE COVER SUB-ASSEMBLY INFO

3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL INFO

Last Modified: 4-14-2014	6.6 G	Doc ID: RM000003IHI00BX
Model Year: 2013	Model: FR-S	Prod Date Range: [03/2012 -]
Title: FA20 ENGINE CONTROL: VACUUM SENSOR: ON-VEHICLE INSPECTION; 2013 MY FR-S [03/2012 -]		

ON-VEHICLE INSPECTION

1. INSPECT MANIFOLD ABSOLUTE PRESSURE SENSOR

- (a) Connect the Techstream to the DLC3.
 - (b) Turn the ignition switch to ON with the engine off.
 - (c) Inspect the manifold absolute pressure sensor.
 - (1) Enter the following menus: Powertrain / Engine / Data List / Atmosphere Pressure.
 - (2) Check the atmosphere pressure.
- OK:
Almost the same as ambient pressure

HINT:

- The standard atmospheric pressure is 101 kPa (1.03 kgf/cm², 14.6 psi).
- The atmospheric pressure decreases by 1 kPa (0.01 kgf/cm², 0.1 psi) as the altitude increases by 100 m.
- The atmospheric pressure varies depending on the weather.

Title: FA20 ENGINE MECHANICAL: CAMSHAFT: INSTALLATION; 2013 MY FR-S [03/2012 -]		

INSTALLATION

1. INSTALL CAMSHAFT LH (for Bank 2)

(a) Apply engine oil to the journals of the camshaft housing sub-assembly LH.

(b) Set the intake camshaft LH and the exhaust camshaft LH to the camshaft housing sub-assembly LH.

2. INSTALL CAMSHAFT CAP (for Bank 2)

(a) Apply the seal packing to the contact surface of the front camshaft cap LH, intake rear camshaft cap LH and exhaust rear camshaft cap LH as shown in the illustration.

Seal packing:

Three Bond 1217G, 1217H or equivalent

Text in Illustration

*1	Intake Rear Camshaft Cap LH	*2	Exhaust Rear Camshaft Cap LH
*3	Front Camshaft Cap LH	-	-
*a	Within 1.0 mm (0.0394 in.)	*b	φ3.0 to 4.0 mm (0.1181 to 0.1575 in.)
*c	φ2.5 to 3.5 mm (0.0984 to 0.1378 in.)	*d	φ2.5 to 4.0 mm (0.0984 to 0.1575 in.)
*e	φ1.5 to 2.5 mm (0.0591 to 0.0984 in.)	*f	Chamfer edge

NOTICE:

- Clean and degrease the contact surface.
- Do not apply excessively seal packing as it may cause excess seal packing to flow toward the cam journal, resulting in engine seizure.
- Do not apply seal packing to the intake center camshaft cap LH and exhaust center camshaft cap LH.
- Install the camshaft caps within 5 minutes of applying the seal packing.

(b) Apply engine oil to the journals of the camshaft caps, and place them on the camshaft housing sub-assembly LH.

(c) Tighten the 13 bolts in the order shown in the illustration to install the front camshaft cap LH, intake center camshaft cap LH, intake rear camshaft cap LH, exhaust center camshaft cap LH and exhaust rear camshaft cap LH.

Torque:

18 N·m {184 kgf·cm, 13ft·lbf}

**3. INSTALL CAMSHAFT RH (for Bank 1)**

(a) Apply engine oil to the journals of the camshaft housing sub-assembly RH.

(b) Set the intake camshaft RH and the exhaust camshaft RH to the camshaft housing sub-assembly RH.

**4. INSTALL CAMSHAFT CAP (for Bank 1)**

(a) Apply the seal packing to the contact surface of the front camshaft cap RH, intake rear camshaft cap RH and exhaust rear camshaft cap RH as shown in the illustration.

Seal packing:

Three Bond 1217G, 1217H or equivalent

Text in Illustration

17. INSTALL CAMSHAFT TIMING INTAKE GEAR ASSEMBLY RH

NOTICE:

Before installation, check that there is no foreign matter on the camshaft timing intake gear

assembly RH and intake camshaft RH.

- (a) Install the camshaft timing intake gear assembly RH while aligning the knock hole of the camshaft timing intake gear assembly RH with the knock pin of the intake camshaft RH.

Text in Illustration

*1	Knock Hole
*2	Knock Pin

- (b) Using SST, hold the camshaft timing intake gear assembly RH, and tighten the 3 bolts with a socket "TORX" wrench E16.

Model Year: 2013	Model: FR-S	Prod Date Range: [03/2012 -]
Title: FA20 ENGINE MECHANICAL: CYLINDER BLOCK: DISASSEMBLY; 2013 MY FR-S [03/2012 -]		

DISASSEMBLY

1. REMOVE PISTON SUB-ASSEMBLY WITH CONNECTING ROD

- (a) Mark each connecting rod cap and piston with a cylinder number.
- (b) Turn the crankshaft so that the connecting rod cap can be removed.

- (c) Using a "TORX" socket wrench E14, remove the 2 connecting rod cap bolts and connecting rod cap.

- (d) Turn the crankshaft and separate the crank pin from the connecting rod.

Text in Illustration

*1	Crank pin
*2	Connecting rod

HINT:

Turn the crankshaft clockwise when removing the No. 1 or No. 3 piston with connecting rod, and turn it counterclockwise when removing the No. 2 or No. 4 piston with connecting rod.

- (e) Push the connecting rod in the direction of the arrow, and

remove the piston with connecting rod from the cylinder block.

2. REMOVE CYLINDER BLOCK SUB-ASSEMBLY (for Bank 1)

NOTICE:

Place a cloth to avoid scratching the mating surface of the cylinder block during servicing.

(a) Operate the engine stand so that the bank 1 side faces upward.

(b) Remove the 5 bolts.

(c) Using a 12 mm socket wrench, loosen the 10 bolts in the order as shown in the illustration.

(d) Remove the 10 bolts and cylinder block (for bank 1).

NOTICE:

Lift the cylinder block (for bank 1) slightly, and confirm that the crankshaft is remaining on the cylinder block (for bank 2). If the cylinder block (for bank 1) is lifted carelessly when separating, the crankshaft possibly having stuck to cylinder block (for bank 1) may fall off.

3. REMOVE CRANKSHAFT

(a) Remove the crankshaft from the cylinder block (for bank 2).

4. REMOVE REAR ENGINE OIL SEAL

(a) Remove the rear engine oil seal.

5. REMOVE O-RING

(a) Remove the O-ring from the cylinder block (for bank 2).

6. REMOVE CRANKSHAFT BEARING

(a) Remove the crankshaft bearings from the cylinder block (for bank 1) and cylinder block (for bank 2).

Text in Illustration

*1	No. 1 and No. 3 Crankshaft Bearing
*2	No. 2 and No. 4 Crankshaft Bearing
*3	No. 5 Crankshaft Bearing
*a	for Bank 1
*b	for Bank 2

HINT:

- Arrange the removed parts in the correct order.
- Push the bearing at the opposite end to locking lip to remove the bearing.

7. REMOVE OIL SEPARATOR COVER

- (a) Remove the 7 bolts and oil separator cover from the cylinder block (for bank 1).

8. REMOVE CYLINDER BLOCK SUB-ASSEMBLY (for Bank 2)

- (a) Remove the cylinder block sub-assembly (for bank 2) from the engine stand.

9. REMOVE CYLINDER BLOCK PLATE

- (a) Remove the 5 bolts and cylinder block plate from the cylinder block (for bank 2).

10. REMOVE CRANKSHAFT SENSOR HOLDER ASSEMBLY

- (a) Remove the 2 bolts and crankshaft sensor holder assembly from the cylinder block (for bank 2).

11. REMOVE NO. 1 CYLINDER BLOCK TIGHT PLUG

- (a) Remove the 3 No. 1 cylinder block tight plugs from the cylinder block (for bank 1) and cylinder block (for bank 2).

Text in Illustration

*a	for Bank 1
*b	for Bank 2

12. REMOVE CONNECTING ROD BEARING

- (a) Remove the connecting rod bearings.

HINT:

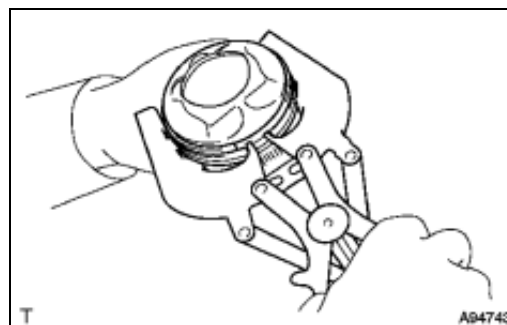

Arrange the removed parts in the correct order.

13. REMOVE PISTON RING SET

HINT:

Arrange the removed parts in the correct order.

- (a) Using a piston ring expander, remove the No. 1 compression ring and No. 2 compression ring in order.

- (b) Remove the upper oil ring side rail, lower oil ring side rail and oil ring expander in order by hand.

14. REMOVE PISTON WITH PIN SUB-ASSEMBLY

- (a) Using a screwdriver with its tip wrapped in protective tape, remove the piston pin hole snap ring on one end from the piston.

Text in Illustration

*1	Protective Tape
----	-----------------

HINT:

Be careful not to damage the piston and piston pin by wrapping the tip of the screwdriver with protective tape.

- (b) Remove the piston pin from the piston.
- (c) Using a screwdriver with its tip wrapped in protective tape, remove the piston pin hole snap ring on other end from the piston.

HINT:

Be careful not to damage the piston and piston pin by wrapping the tip of the screwdriver with protective tape.

Last Modified: 4-14-2014	6.6 G	Doc ID: RM000000XCV08HX
Model Year: 2013	Model: FR-S	Prod Date Range: [03/2012 -]
Title: FA20 ENGINE MECHANICAL: CYLINDER BLOCK: INSPECTION; 2013 MY FR-S [03/2012 -]		

INSPECTION

1. INSPECT CYLINDER BLOCK SUB-ASSEMBLY

- (a) Visually check that there are no cracks, scratches or other damage.
- (b) Using a dye penetrant, check the important sections for fissures.
- (c) Check that there are no signs of gas leak or water leak on gasket attachment surfaces.
- (d) Check the oil passages for clogging.

2. INSPECT CYLINDER BLOCK FOR WARPAGE

- (a) Using a precision straightedge and a feeler gauge, measure the surfaces that contact the cylinder head for warpage.

Text in Illustration

*a	for Bank 1	*b	for Bank 2
----	------------	----	------------

Maximum warpage:
0.025 mm (0.00098 in.)

If the warpage is greater than the maximum, correct the surface by grinding it or replace the cylinder block.

HINT:

Measurement should be performed at a temperature of 20°C (68°F).

Allowable minimum cylinder block height:

204.9 mm (8.067 in.)

Standard cylinder block height:

205.0 mm (8.071 in.)

3. INSPECT CYLINDER BORE

- (a) Using a cylinder gauge, measure the cylinder bore diameter at positions shown in the illustration and check for taper and out-of-round.

**Text in Illustration**

*a	Piston pin direction	*b	Thrust direction
----	----------------------	----	------------------

Standard

Cylinder bore size A	86.005 to 86.015 mm (3.38602 to 3.38641 in.)
Cylinder bore size B	85.995 to 86.005 mm (3.38562 to 3.38602 in.)

Maximum

Taper	0.030 mm (0.00118 in.)
Out-of-runout	0.010 mm (0.00039 in.)

Location

H1	10.0 mm (0.394 in.)
H2	45.0 mm (1.772 in.)
H3	80.0 mm (3.150 in.)
H4	115.0 mm (4.528 in.)

If the result is not as specified, perform boring and honing, or replace the cylinder block and piston as a

set.

HINT:

- Measurement should be performed at a temperature of 20°C (68°F).
- Measure the inside diameter of each cylinder bore in both the thrust and piston pin directions at the height shown in the illustration.
- The cylinder bore size is stamped on the upper face of the cylinder block.

**Text in Illustration**

*a	Main journal size mark
*b	Cylinder block (for bank 1 / for bank 2) combination mark
*c	No. 1 cylinder bore size mark
*d	No. 2 cylinder bore size mark
*e	No. 3 cylinder bore size mark
*f	No. 4 cylinder bore size mark

4. INSPECT PISTON DIAMETER

- (a) Using a micrometer, measure the piston diameter at right angles to the piston pin hole, and at a point 39.4 mm (1.551 in.) from the top of the piston head.

Standard

A grade	85.985 to 85.995 mm (3.38523 to 3.38562 in.)
B grade	85.975 to 85.985 mm (3.38484 to 3.38523 in.)
0.25 mm (0.0098 in.) over size	86.225 to 86.245 mm (3.39468 to 3.39547 in.)
0.50 mm (0.0197 in.) over size	86.475 to 86.495 mm (3.40452 to 3.40531 in.)

If the result is not as specified, replace the piston.

HINT:

- Measurement should be performed at a temperature of 20°C (68°F).
- Measure the outer diameter of each piston in thrust direction at the height shown in the illustration.
- Standard sized pistons are classified into 2 grades, "A" and "B".
These grades should be used as guide lines in selecting a

These grades should be used as guide lines in selecting a standard piston diameter.

- If the piston is replaced, check the piston oil clearance, and select a suitable sized piston diameter.

5. INSPECT PISTON OIL CLEARANCE

- (a) Subtract the piston diameter measurement from the cylinder bore diameter measurement.

Standard oil clearance:

0.010 to 0.030 mm (0.00039 to 0.00118 in.)

HINT:

- Oil clearance = maximum cylinder bore diameter - piston diameter
- If the result is not as specified, perform boring and honing, or replace the cylinder block and piston as a set.

6. REPAIR CYLINDER LINER

- (a) If any of the inside diameter, taper, out-of-round or piston oil clearance is out of standard, or if there is any damage on the cylinder liner, rebore it to replace with an oversized piston.

Allowable maximum cylinder liner diameter:

86.505 mm (3.40570 in.)

If the inside diameter of cylinder liner is more than the maximum after boring and honing, replace the cylinder block and piston as a set.

HINT:

- When any of the cylinder liner needs to be rebored, all other cylinder bores must be rebored at the same time, and replaced with oversized pistons.
- Immediately after reboring, the inside diameter of the cylinder liner may differ from its actual diameter due to high temperature. Thus, when measuring the inside diameter of the cylinder liner, wait until it has cooled to the normal temperature of 20°C (68°F).

7. INSPECT PISTON WITH PIN

- (a) Check the piston and piston pin for wear or cracks.
 (b) Check the piston pin hole snap ring for distortion or wear.
 (c) Check the piston ring groove for damage.

- (d) Check the piston pin hole snap ring groove for burr.

Text in Illustration

*1	Piston Pin Hole Snap Ring Groove
----	----------------------------------

If any burr is found, remove the burr from the groove.

(e) Check if the piston pin can be pushed into the piston pin hole with your thumb.

HINT:

Measurement should be performed at a temperature of 20°C (68°F).

8. INSPECT CONNECTING ROD SMALL END BUSH

(a) Check the bushing at connecting rod small end bush for damage.

9. INSPECT PISTON PIN OIL CLEARANCE

(a) Using a caliper gauge, measure the inside diameter of the piston pin hole.

HINT:

- Measurement should be performed at a temperature of 20°C (68°F).
- Measure the inside diameter of the piston pin hole at the 4 locations shown in the illustration, and take the maximum value.
- Record the measured value.

(b) Using a micrometer, measure the outer diameter of the piston pin.

Text in Illustration

*a	10.0 mm (0.394 in.)
----	---------------------

HINT:

- Measurement should be performed at a temperature of 20°C (68°F).
- Measure the outer diameter of the piston pin at the 4 locations shown in the illustration, and take the minimum value.
- Record the measured value.

(c) Using a caliper gauge, measure the inside diameter of bushing at connecting rod small end.

HINT:

- Measurement should be performed at a temperature of 20°C (68°F).
- Measure the inside diameter of the bushing at the 4 locations shown in the illustration, and take the minimum value.
- Record the measured value.

(d) Calculate the clearance between the piston pin hole and piston pin.

Standard oil clearance:

0.004 to 0.008 mm (0.00016 to 0.00031 in.)

If the clearance between the piston pin and piston pin hole is more than the maximum, replace the piston and piston pin as a set.

HINT:

Oil clearance = piston pin hole inside diameter - piston pin outer diameter

(e) Calculate the clearance between piston pin and bushing at connecting rod small end.

Standard oil clearance:

0.006 to 0.026 mm (0.00024 to 0.00102 in.)

If the clearance between the piston pin and bushing at connecting rod small end is more than the maximum, replace the connecting rod and piston pin as a set.

HINT:

Oil clearance = connecting rod small end inside diameter - piston pin outer diameter

10. INSPECT PISTON RING

(a) Make sure that the piston ring is not broken or damaged.

If the piston ring is broken or damaged, replace it with a new one.

HINT:

Use a piston ring of the same size as the piston to be used.

11. INSPECT PISTON RING END GAP

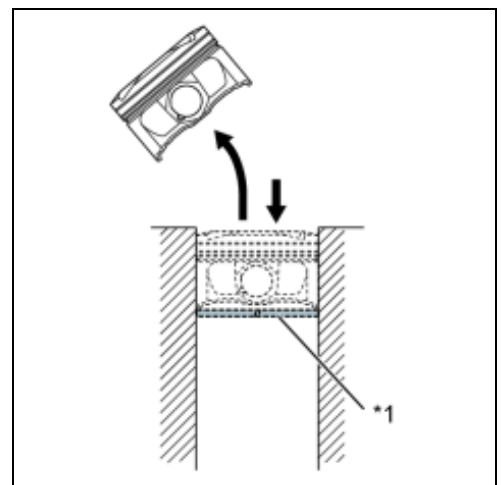

(a) Using a piston, push the piston ring into the cylinder.

HINT:

Push the piston ring into the cylinder until the entire piston is inserted into the cylinder.

Text in Illustration

*1	Piston ring
----	-------------

(b) Using a feeler gauge, measure the end gap.

Maximum end gap

No. 1	0.20 to 0.25 mm (0.00787 to 0.00984 in.)
No. 2	0.60 to 0.70 mm (0.02362 to 0.02756 in.)
Oil ring	0.10 to 0.35 mm (0.00394 to 0.01378 in.)

If the end gap is more than the maximum, replace the piston ring with a new one.

HINT:

- Measurement should be performed at a temperature of 20°C (68°F).
- Use a piston ring of the same size as the piston to be used.

12. INSPECT RING GROOVE CLEARANCE

(a) Using a feeler gauge, measure the clearance between the piston ring and the wall of the ring groove.

Maximum clearance

No. 1	0.030 to 0.080 mm (0.00118 to 0.00315 in.)
No. 2	0.030 to 0.070 mm (0.00118 to 0.00276 in.)

If the clearance is more than the maximum, replace the piston ring with a new one.

HINT:

- Measurement should be performed at a temperature of 20°C (68°F).
- Before measuring the clearance, clean the piston ring groove and piston ring.
- Use a same sized piston ring with the piston when replacing it.

13. INSPECT CONNECTING ROD SUB-ASSEMBLY

(a) Check that the large or small end thrust surface is not damaged.

(b) Check the connecting rod assembly bearing for scar, peeling, seizure, melting or wear, etc.

(c) Using a rod aligner and feeler gauge, check the connecting rod sub-assembly for bend.

Maximum bend:

0.10 mm (0.0039 in.) per 100 mm (3.937 in.) in length

If the bend is more than the maximum, replace the connecting rod sub-assembly with a new one.

HINT:

Measurement should be performed at a temperature of 20°C (68°F).

(d) Using a rod aligner and feeler gauge, check the connecting rod sub-assembly for twist.

Maximum twist:

0.10 mm (0.0039 in.) per 100 mm (3.937 in.) in length

If the twist is more than the maximum, replace the connecting rod sub-assembly with a new one.

HINT:

Measurement should be performed at a temperature of 20°C (68°F).

14. INSPECT CONNECTING ROD THRUST CLEARANCE

(a) Clean the connecting rod bearings and crank pins, and apply engine oil to the crank pins. <*1>

(b) Align the claw and attach the connecting rod bearing to the connecting rod.

Text in Illustration

*a	Claw
----	------

(c) Check the matching symbols and set the connecting rod, connecting rod cap and connecting rod cap bolts.

Text in Illustration

*1	Matching Symbol
----	-----------------

HINT:

- Measurement should be performed at a temperature of 20°C (68°F).
- Each connecting rod has its own mating cap. Make sure that they are assembled correctly by checking their matching symbol.

(e) Apply engine oil to the threads of the connecting rod cap bolts.

(f) Using a "TORX" socket wrench E14, tighten the 2 connecting rod cup bolts in the order shown in the illustration.

Torque:

10 N·m {102 kgf·cm, 7ft·lbf}

NOTICE:

- Securely hold the crankshaft during the operation.
- Be sure not to damage the crankshaft when securing it.

(g) Retighten the 2 connecting rod cup bolts in the same order as above. <*2>

Torque:

25 N·m {255 kgf·cm, 18ft·lbf}

NOTICE:

- Securely hold the crankshaft during the operation.
- Be sure not to damage the crankshaft when securing it.

(h) In the same procedures from <*1> to <*2>, install the No. 2, No. 3 and No. 4 piston with connecting rods.

(i) Using a "TORX" socket wrench E14 and an angle gauge, tighten the connecting rod cup bolts for the No. 1 to No. 4 piston with connecting rods by additional 92.5°.

NOTICE:

- Securely hold the crankshaft during the operation.
- Be sure not to damage the crankshaft when securing it.

(j) Using a feeler gauge, measure the thrust clearance for each connecting rod.

Standard thrust clearance:

0.070 to 0.330 mm (0.00276 to 0.01299 in.)

If the clearance is not within the standard, replace the connecting rod.

HINT:

Measure the thrust clearance for each connecting rod at several points, and replace the connecting rod if there is uneven wear.

**15. INSPECT CONNECTING ROD OIL CLEARANCE**

- (a) Clean the connecting rod bearings and crank pins, and apply engine oil to the crank pins. <*1>
 (b) Attach the connecting rod bearings to the connecting rod and connecting rod cap.

- (c) Lay a strip of Plastigage across the crank pin, and set the connecting rod and the connecting rod cap with the 2 connecting rod cap bolts after checking the matching symbols.

Text in Illustration

*1	Matching Symbol
----	-----------------

HINT:

- Measurement should be performed at a temperature of 20°C (68°F).
- Each connecting rod has its own mating cap. Make sure that they are assembled correctly by checking their matching symbol.

- (d) Apply engine oil to the threads of the connecting rod cap bolts.

- (e) Using a "TORX" socket wrench E14, tighten the 2 connecting rod cup bolts in the order shown in the illustration.

Torque:

10 N·m {102 kgf·cm, 7ft·lbf}

NOTICE:

- Do not turn the crankshaft.
- Securely hold the crankshaft during the operation.
- Be sure not to damage the crankshaft when securing it.

- (f) Retighten the 2 connecting rod cup bolts in the same order as above. <*2>

Torque:

25 N·m {255 kgf·cm, 18ft·lbf}

NOTICE:

- Do not turn the crankshaft.
- Securely hold the crankshaft during the operation.
- Be sure not to damage the crankshaft when securing it.

(g) In the same procedures from <*1> to <*2>, install the No. 2, No. 3 and No. 4 piston with connecting rods.

(h) Using a "TORX" socket wrench E14 and an angle gauge, tighten the connecting rod cup bolts for the No. 1 to No. 4 piston with connecting rods by additional 92.5°.

(i) Remove the connecting rod cup and measure the Plastigage at its widest point.

Standard oil clearance:

0.025 to 0.055 mm (0.00098 to 0.00217 in.)

NOTICE:

Completely remove the Plastigage after the inspection.

If the oil clearance is more than the maximum, replace the bearings.

HINT:

Measure the outer diameter of the crank pin using a micrometer, and select a suitable size connecting rod bearing when replacing the connecting rod bearing.

**Standard**

BEARING	BEARING SIZE (THICKNESS AT CENTER)	OUTER DIAMETER OF CRANK PIN
Standard	1.492 to 1.508 mm (0.05874 to 0.05937 in.)	49.976 to 50.000 mm (1.96756 to 1.96850 in.)
0.03 mm (0.0012 in.) Undersize	1.511 to 1.515 mm (0.05949 to 0.05965 in.)	49.946 to 49.970 mm (1.96637 to 1.96732 in.)
0.05 mm (0.0020 in.) Undersize	1.521 to 1.525 mm (0.05988 to 0.06004 in.)	49.926 to 49.950 mm (1.96559 to 1.96653 in.)
0.25 mm (0.0098 in.) Undersize	1.621 to 1.625 mm (0.06382 to 0.06398 in.)	49.726 to 49.750 mm (1.95771 to 1.95866 in.)

16. INSPECT CRANKSHAFT

(a) Using a dye penetrant, check the important sections for fissures.

(b) Using a dial indicator, measure the circle runout at the center

(b) Using a dial indicator, measure the circle runout at the center journal.

Maximum circle runout:
0.035 mm (0.00138 in.)

If the circle runout is more than the maximum, grind to correct or replace the crankshaft.

HINT:

- Measurement should be performed at a temperature of 20°C (68°F).
- If a suitable V-block is not available, using just the No. 1 and No. 5 crankshaft bearings on the cylinder block, position the crankshaft on the cylinder block. Then, measure the crankshaft runout using a dial indicator.

(c) Using a micrometer, check the outer diameter of the crankshaft journal and crank pin for taper and out-of-round.

Maximum (Pin)

Taper	0.006 mm (0.00024 in.)
Out-of-runout	0.005 mm (0.00020 in.)

Maximum (Journal)

Taper	0.006 mm (0.00024 in.)
Out-of-runout	0.005 mm (0.00020 in.)

Allowable minimum diameter

Pin	47.726 mm (1.87897 in.)
Journal	67.735 mm (2.66673 in.)

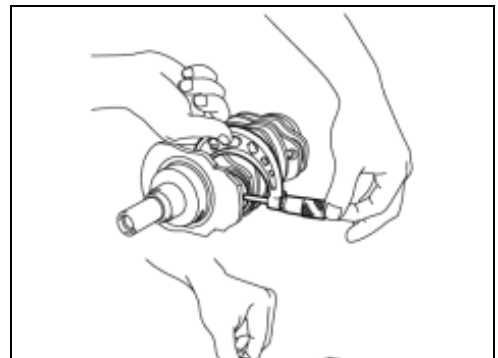

If taper or out-of-round is more than the maximum, replace the connecting rod bearing or crankshaft bearing, and grind to correct or replace the crankshaft as required.

HINT:

- Measurement should be performed at a temperature of 20°C (68°F).
- Select a suitable size connecting rod bearing or crankshaft bearing when replacing the connecting rod bearing or crankshaft bearing.
- When grinding to correct the crank journal or crank pin, finish them to the suitable dimensions as shown in the table below according to the undersize bearing to be used.

Standard

BEARING	CONNECTING ROD BEARING THICKNESS (AT CENTER)	CRANK PIN OUTER DIAMETER	CRANKSHAFT BEARING THICKNESS (AT CENTER)		CRANKSHAFT JOURNAL DIAMETER
			NO. 1 TO	NO. 5	

			NO. 4		
Standard	1.492 to 1.508 mm (0.05874 to 0.05937 in.)	49.976 to 50.000 mm (1.96756 to 1.96850 in.)	2.495 to 2.513 mm (0.09823 to 0.09894 in.)	2.493 to 2.511 mm (0.09815 to 0.09886 in.)	67.985 to 68.009 mm (2.67657 to 2.67751 in.)
0.03 mm (0.0012 in.) Undersize	1.511 to 1.515 mm (0.05949 to 0.05965 in.)	49.946 to 49.970 mm (1.96637 to 1.96734 in.)	2.519 to 2.522 mm (0.09917 to 0.09929 in.)	2.517 to 2.520 mm (0.09909 to 0.09921 in.)	67.955 to 67.979 mm (2.67539 to 2.67633 in.)
0.05 mm (0.0020 in.) Undersize	1.521 to 1.525 mm (0.05988 to 0.06004 in.)	49.926 to 49.950 mm (1.96559 to 1.96653 in.)	2.529 to 2.532 mm (0.09957 to 0.09968 in.)	2.527 to 2.530 mm (0.09949 to 0.09961 in.)	67.935 to 67.959 mm (2.67460 to 2.67555 in.)
0.25 mm (0.0098 in.) Undersize	1.621 to 1.625 mm (0.06382 to 0.06398 in.)	49.726 to 49.750 mm (1.95771 to 1.95866 in.)	2.629 to 2.632 mm (0.10350 to 0.10362 in.)	2.627 to 2.630 mm (0.10342 to 0.10354 in.)	67.735 to 67.759 mm (2.66673 to 2.66767 in.)

17. INSPECT CRANKSHAFT BEARING

- (a) Inspect the crankshaft bearing for scar, peeling, seizure, melting or wear, etc.

18. INSPECT CRANKSHAFT THRUST CLEARANCE

- (a) Using a feeler gauge, check the thrust clearance of the crankshaft at No. 5 crankshaft bearing.

Standard clearance:

0.130 to 0.308 mm (0.00512 to 0.01213 in.)

If the thrust clearance is not within the standard, replace the No. 5 crankshaft bearing.

19. INSPECT CRANKSHAFT OIL CLEARANCE

- (a) Remove the seal packing left on the cylinder block.
- (b) Clean the crankshaft bearings and crankshaft journals.

(c) Attach the crankshaft bearings to the cylinder block.

NOTICE:

- Be careful not to damage the matching surface of the cylinder block.
- The shapes of the No. 1 and No. 3 bearings are different from those of the No. 2 and No. 4 bearings. Be sure to attach them correctly.

Text in Illustration

*1	No. 1 and No. 3 crankshaft bearings (with grooves)
*2	No. 2 and No. 4 crankshaft bearings (without grooves)
*3	No. 5 crankshaft bearings
*a	for Bank 1
*b	for Bank 2

(d) Place the crankshaft on the cylinder block.

(e) Lay a strip of Plastigage across each camshaft journal.

(f) Place the cylinder block (for bank 1) on the cylinder block (for bank 2).

(g) Apply engine oil to the washers and cylinder block bolt threads.

NOTICE:

To prevent engine oil from entering into the water jacket, do not apply a large amount.

(h) Using a 12 mm socket wrench, tighten the 10 bolts in the order shown in the illustration.

Torque:

35 N·m {357 kgf·cm, 26ft·lbf}

NOTICE:

When tightening the bolts, hold the cylinder block (for bank 2) while not holding the cylinder block (for bank 1) to ensure the joint accuracy of the cylinder blocks.

- (i) Using a 12 mm socket wrench, loosen the 10 bolts by 180 ° in the order shown in the illustration.

NOTICE:

When loosening the bolts, hold the cylinder block (for bank 2) while not holding the cylinder block (for bank 1) to ensure the joint accuracy of the cylinder blocks.

- (j) Using a 12 mm socket wrench, tighten the 10 bolts in the order shown in the illustration.

Torque:

35 N·m {357 kgf·cm, 26ft·lbf}

NOTICE:

When tightening the bolts, hold the cylinder block (for bank 2) while not holding the cylinder block (for bank 1) to ensure the joint accuracy of the cylinder blocks.

- (k) Using a 12 mm socket wrench, loosen the 4 bolts by 180 ° in the order shown in the illustration.

NOTICE:

When loosening the bolts, hold the cylinder block (for bank 2) while not holding the cylinder block (for bank 1) to ensure the joint accuracy of the cylinder blocks.

- (l) Using a 12 mm socket wrench, tighten the 4 bolts in the order shown in the illustration.

Torque:

17 N·m {173 kgf·cm, 13ft·lbf}

NOTICE:

When tightening the bolts, hold the cylinder block (for bank 2) while not holding the cylinder block (for bank 1) to ensure the joint accuracy of the cylinder blocks.

- (m) Using a 12 mm socket wrench and an angle gauge, tighten the 4 bolts by additional 60° in the order shown in the illustration.

NOTICE:

When tightening the bolts, hold the cylinder block (for bank 2)

When tightening the bolts, hold the cylinder block (for bank 2) while not holding the cylinder block (for bank 1) to ensure the joint accuracy of the cylinder blocks.

- (n) Using a 12 mm socket wrench, loosen the 6 bolts by 180 ° in the order shown in the illustration.

NOTICE:

When loosening the bolts, hold the cylinder block (for bank 2) while not holding the cylinder block (for bank 1) to ensure the joint accuracy of the cylinder blocks.

- (o) Using a 12 mm socket wrench, tighten the 6 bolts in the order shown in the illustration.

Torque:

17 N·m {173 kgf·cm, 13ft·lbf}

NOTICE:

When tightening the bolts, hold the cylinder block (for bank 2) while not holding the cylinder block (for bank 1) to ensure the joint accuracy of the cylinder blocks.

- (p) Using a 12 mm socket wrench and an angle gauge, tighten the 6 bolts by additional 60° in the order shown in the illustration.

NOTICE:

When tightening the bolts, hold the cylinder block (for bank 2) while not holding the cylinder block (for bank 1) to ensure the joint accuracy of the cylinder blocks.

- (q) Using a 12 mm socket wrench, loosen the 10 bolts in the order shown in the illustration.

(r) Remove the 10 bolts and cylinder block (for bank 1).

NOTICE:

Lift the cylinder block (for bank 1) slightly, and confirm that the crankshaft remains on the cylinder block (for bank 2). If the cylinder block (for bank 1) is lifted carelessly when separating, the crankshaft may fall off as it may have stuck to the cylinder block (for bank 1).

(s) Measure the Plastigage at its widest point.

Standard clearance:

0.013 to 0.031 mm (0.00051 to 0.00122 in.)

If the clearance is not within the standard, replace the crankshaft bearing, and grind to correct or replace the crankshaft as required.

NOTICE:

Completely remove the Plastigage after the inspection.

HINT:

- Select the suitable size connecting rod bearing or crankshaft bearing when replacing the connecting rod bearing or crankshaft bearing.
- When grinding to correct the crank journal or crank pin, finish them to the suitable dimensions as shown in the table below according to the undersize bearing to be used.

Title: FA20 ENGINE MECHANICAL: CYLINDER BLOCK: REASSEMBLY; 2013 MY FR-S [03/2012 -]		

REASSEMBLY

1. INSTALL NO. 1 CYLINDER BLOCK TIGHT PLUG

NOTICE:

- Place wooden blocks wrapped in a cloth under the cylinder block and stabilize the cylinder block during servicing.
- Place a cloth to avoid scratching the mating surface of the cylinder block during servicing.

Text in Illustration

*a	for Bank 1
*b	for Bank 2

- (a) Apply seal packing to the threaded portion of the No. 1 cylinder block tight plugs and install them to the cylinder block (for bank 1) and cylinder block (for bank 2).

Seal packing:

Three Bond 1105 or equivalent

Torque:

37 N·m {377 kgf·cm, 27ft·lbf}

NOTICE:

Before applying seal packing, degrease the No. 1 cylinder block tight plugs and thread holes of the cylinder block (for bank 1) and cylinder block (for bank 2).

2. INSTALL CRANKSHAFT SENSOR HOLDER ASSEMBLY

- (a) Install the crankshaft sensor holder assembly to the cylinder block (for bank 2) with the 2 bolts.

Torque:

6.4 N·m {65 kgf·cm, 57in·lbf}

3. INSTALL CYLINDER BLOCK PLATE

- (a) Install the cylinder block plate to the cylinder block (for bank 2) with the 5 bolts.

Torque:

6.4 N·m {65 kgf·cm, 57in·lbf}

4. INSTALL OIL SEPARATOR COVER

- (a) Apply seal packing in a continuous line as shown in the illustration.

Seal packing:

Three Bond 1217G, 1217H or equivalent

Text in Illustration

*a	φ3.0 to 5.0 mm (0.118 to 0.197 in.)
----	-------------------------------------

NOTICE:

- Clean and degrease the contact surface.
- Install the oil separator cover within 5 minutes of applying seal packing.

- (b) Tight the 7 bolts in the order shown in the illustration to install the oil separator cover to the cylinder block (for bank 1).

Torque:

6.4 N·m {65 kgf·cm, 57in·lbf}

5. INSTALL O-RING

- (a) Attach a new O-ring to the cylinder block (for bank 2).

6. INSTALL CRANKSHAFT BEARING

- (a) Apply engine oil to the crankshaft bearing, and install them to the cylinder block (for bank 1) and cylinder block (for bank 2).

Text in Illustration

*1	No. 1 and No. 3 Bearings (with groove)
*2	No. 2 and No. 4 Bearings (without groove)
*3	No. 5 Bearing
*a	for Bank 1
*b	for Bank 2

NOTICE:

- Place a cloth to avoid scratching the mating surface of the cylinder block during servicing.
- The shapes of the No. 1 and No. 3 bearings are different from those of the No. 2 and No. 4 bearings. Be sure to install them in the right locations.

7. INSTALL CRANKSHAFT

- (a) Apply engine oil to the crankshaft journals and place the crankshaft on the cylinder block (for bank 2).

8. INSTALL CYLINDER BLOCK SUB-ASSEMBLY (for Bank 1)

- (a) Apply seal packing to the mating surface of the cylinder block sub-assembly (for bank 1) as shown in the illustration.

Seal packing:

Three Bond 1217G, 1217H or equivalent

Text in Illustration

*a	φ3.5 to 4.5 mm (0.138 to 0.177 in.)	*b	φ0.5 to 1.5 mm (0.0197 to 0.0591 in.)
*c	Range of A-A	*d	Within 1.0 mm (0.039 in.)
*e	φ2.7 to 3.7 mm (0.106 to 0.146 in.)	*f	φ3.5 to 4.5 mm (0.138 to 0.177 in.)
*g	2.0 mm (0.079 in.)	*h	Chamfer edge
*i	36.0 mm (1.417 in.)	*j	2.5 mm (0.098 in.)

NOTICE:

- Do not let the seal packing overflow to the oil passage or crankshaft bearing because engine seizure may result.
- Clean and degrease the contact surface.
- Install the cylinder block sub-assembly (for bank 1) within 5 minutes of applying seal packing.

(b) Place the cylinder block sub-assembly (for bank 1) to the cylinder block sub-assembly (for bank 2).

(c) Apply engine oil to the washers and cylinder block bolt threads.

NOTICE:

To prevent engine oil from entering into the water jacket, do not apply a large amount.

(d) Using a 12 mm socket wrench, tighten the 10 bolts in the order shown in the illustration.

Torque:

35 N·m {357 kgf·cm, 26ft·lbf}

NOTICE:

When tightening the bolts, hold the cylinder block sub-assembly (for bank 2) while not holding the cylinder block sub-assembly (for bank 1) to ensure the joint accuracy of the cylinder blocks.

(e) Using a 12 mm socket wrench, loosen the 10 bolts by 180

° in the order shown in the illustration.

NOTICE:

When loosening the bolts, hold the cylinder block sub-assembly (for bank 2) while not holding the cylinder block sub-assembly (for bank 1) to ensure the joint accuracy of the cylinder blocks.

(f) Using a 12 mm socket wrench, tighten the 10 bolts in the order shown in the illustration.

Torque:

35 N·m {357 kgf·cm, 26ft·lbf}

NOTICE:

When tightening the bolts, hold the cylinder block sub-assembly (for bank 2) while not holding the cylinder block sub-assembly (for bank 1) to ensure the joint accuracy of the cylinder blocks.

(g) Using a 12 mm socket wrench, loosen the 4 bolts by 180° in the order shown in the illustration.

NOTICE:

When loosening the bolts, hold the cylinder block sub-assembly (for bank 2) while not holding the cylinder block sub-assembly (for bank 1) to ensure the joint accuracy of the cylinder blocks.

(h) Using a 12 mm socket wrench, tighten the 4 bolts in the order shown in the illustration.

Torque:

17 N·m {173 kgf·cm, 13ft·lbf}

NOTICE:

When tightening the bolts, hold the cylinder block sub-assembly (for bank 2) while not holding the cylinder block sub-assembly (for bank 1) to ensure the joint accuracy of the cylinder blocks.

(i) Using a 12 mm socket wrench and an angle gauge, tighten the 4 bolts by additional 60° in the order shown in the illustration.

NOTICE:

When tightening the bolts, hold the cylinder block sub-assembly (for bank 2) while not holding the cylinder block sub-assembly (for bank 1) to ensure the joint accuracy of the cylinder blocks.

- (j) Using a 12 mm socket wrench, loosen the 6 bolts by 180 ° in the order shown in the illustration.

NOTICE:

When loosening the bolts, hold the cylinder block sub-assembly (for bank 2) while not holding the cylinder block sub-assembly (for bank 1) to ensure the joint accuracy of the cylinder blocks.

- (k) Using a 12 mm socket wrench, tighten the 6 bolts in the order shown in the illustration.

Torque:

17 N·m {173 kgf·cm, 13ft·lbf}

NOTICE:

When tightening the bolts, hold the cylinder block sub-assembly (for bank 2) while not holding the cylinder block sub-assembly (for bank 1) to ensure the joint accuracy of the cylinder blocks.

- (l) Using a 12 mm socket wrench and an angle gauge, tighten the 6 bolts by additional 60° in the order shown in the illustration.

NOTICE:

When tightening the bolts, hold the cylinder block sub-assembly (for bank 2) while not holding the cylinder block sub-assembly (for bank 1) to ensure the joint accuracy of the cylinder blocks.

- (m) Tighten the 5 bolts.

Torque:

25 N·m {255 kgf·cm, 18ft·lbf}

HINT:

After tightening, if the seal packing is squeezed out in the seal surface area of the chain cover and oil pan sub-assembly, completely remove it. Seal packing on the chamfer area, however, should not be removed.

(n) Check that the crankshaft turns smoothly.

9. INSTALL REAR ENGINE OIL SEAL

(a) Apply a light coat of engine oil to a new rear engine oil seal inner periphery and outer periphery.

(b) Using SST and a hammer, tap in the rear engine oil seal uniformly to the position shown in the illustration.

SST: 09223-15030

SST: 09950-70010

09951-07150

Oil seal tap-in depth:

0 to 1.0 mm (0 to 0.039 in.) from the cylinder block surface

NOTICE:

- Do not tap in the rear engine oil seal at an angle.
- Remove the engine oil from the crankshaft.
- Do not tap in the rear engine oil seal more than necessary.

**10. INSTALL CYLINDER BLOCK SUB-ASSEMBLY**

(a) Mount the cylinder block sub-assembly onto an engine stand.

11. INSTALL PISTON WITH PIN SUB-ASSEMBLY

(a) Using a screwdriver with its tip wrapped in protective tape, install the piston pin hole snap ring on one end of the piston.

**Text in Illustration**

*1

Protective Tape

HINT:

- Make sure that the piston pin hole snap ring is firmly attached into the piston pin hole snap ring groove.

groove.

- After installing the piston pin hole snap ring, rotate the piston pin hole snap ring so that its end part and the cutout portion of the piston pin hole snap ring groove do not match.

Text in Illustration

*1	Piston Pin Hole Snap Ring
*a	Correct
*b	Incorrect

(b) Make sure the directions of the piston front mark and connecting rod, and then set the piston to the connecting rod.

Text in Illustration

*1	Front Mark
*a	for Bank 1
*b	for Bank 2

(c) Apply engine oil to the piston pin and install it to the piston.

(d) Using a screwdriver with its tip wrapped in protective tape, install the piston pin hole snap ring to the piston.

Text in Illustration

*1	Protective Tape
----	-----------------

HINT:

- Make sure the piston pin hole snap ring is firmly attached into the piston pin hole snap ring groove.

groove.

- After installing the piston pin hole snap ring, rotate the piston pin hole snap ring so that its end part and the cutout portion of the piston pin hole snap ring groove do not match.

Text in Illustration

*1	Piston Pin Hole Snap Ring
*a	Correct
*b	Incorrect

12. INSTALL PISTON RING SET

- Install the oil ring expander, lower oil ring side rail and upper oil ring side rail in order by hand.

HINT:

The oil ring consists of the 2 oil ring side rails and oil ring expander.

- Set the oil ring expander ends at the location B in the illustration.
- Hook the stoppers at the both ends of the lower oil ring side rail into the oil return hole at the coating cutout portion A and the oil ring expander as shown in the illustration.

Text in Illustration

*1	Lower Oil Ring Side Rail
*2	Oil Ring Expander
*3	Oil Return Hole
*4	Coating Cutout
*a	0 to 20°
	Coating part

(d) Align the rail ends of the upper oil ring side rail within the range C and hook the stopper into the oil ring expander.

(e) Using a piston ring expander, install the No. 2 compression ring and No. 1 compression ring in order.

(f) Set the No. 1 compression ring ends at the location A or B in the illustration.

HINT:

The No. 1 compression ring ends can be set either at A or B.

(g) Set the No. 2 compression ring ends at the location A or B, that is 180° opposite of those of the No. 1 compression ring.

(h) Check that the piston rings and oil rings are correctly set.

13. INSTALL PISTON SUB-ASSEMBLY WITH CONNECTING ROD

(a) Operate the engine stand so that the oil pan side faces upward.

(b) Install the connecting rod bearings to the connecting rod and connecting rod cap. <*1>

Text in Illustration

*a	Claw
----	------

(c) Check that the piston rings and oil rings are correctly set.

(d) Apply engine oil to the piston and inside the cylinder bore.

(e) Turn the crankshaft so that the crank pin is positioned at TDC.

Text in Illustration

*1	Crank Pin
----	-----------

(f) Squeeze the piston rings with a piston ring compressor, face the piston front mark toward the engine front side, and insert the piston with connecting rod into the cylinder block by lightly tapping on the piston top with a hammer handle, etc.

NOTICE:

- When inserting the piston with connecting rod, be careful not to scratch the cylinder bore or crank pin by connecting the rod edge.
- Be careful not to apply too much impact when inserting to prevent the connecting rod bearing from falling off.

(g) Apply engine oil to the seating face of the connecting rod cap and threads of the connecting rod cap bolts.

(h) While pushing the piston top, turn the crankshaft to position the crankshaft pin and connecting rod large end as shown in the illustration, and then attach the connecting rod cup with 2 new connecting rod cap bolts.

Text in Illustration

*1	Connecting Rod
*2	Crankshaft Pin

HINT:

- Each connecting rod has its own mating cap. Make sure that they are assembled correctly by

checking their matching symbols.

- Use new connecting rod cap bolts.
- Turn the crankshaft counterclockwise when installing the No. 1 or No. 3 piston with connecting rod, and turn the crankshaft clockwise when installing the No. 2 or No. 4 piston with connecting rod.

Text in Illustration

*1	Matching Symbol
----	-----------------

- (i) Using a "TORX" socket wrench E14, tighten the 2 connecting rod cup bolts in the order shown in the illustration.

Torque:**10 N·m {102 kgf·cm, 7ft·lbf}****Text in Illustration**

*a	No. 1 and No. 4
*b	No. 2 and No. 3

- (j) Retighten the 2 connecting rod cup bolts in the same order as above. <*2>

Torque:**25 N·m {255 kgf·cm, 18ft·lbf}**

- (k) In the same procedures from <*1> to <*2>, install the No. 2, No. 3 and No. 4 piston with connecting rods.

- (l) Using a "TORX" socket wrench E14 and an angle gauge, tighten the connecting rod cup bolts for the No. 1 to No. 4 piston with connecting rods by additional 92.5°.

Text in Illustration

*a	No. 1 and No. 4
*b	No. 2 and No. 3

- (m) Check that the crankshaft can be turned smoothly.

Last Modified: 4-14-2014	6.6 A	Doc ID: RM0000056U7008X
Model Year: 2013	Model: FR-S	Prod Date Range: [03/2012 -]
Title: FA20 ENGINE MECHANICAL: CYLINDER HEAD GASKET: INSTALLATION; 2013 MY FR-S [03/2012 -]		

INSTALLATION

1. INSTALL NO. 2 CYLINDER HEAD GASKET

- (a) Operate the engine stand so that the bank 2 side faces upward.
- (b) Clean the bolt holes in the cylinder block (bank 2).

NOTICE:

To avoid erroneous tightening of the bolts, clean out the bolt holes sufficiently by blowing with compressed air to eliminate engine coolant, etc.

- (c) Apply the seal packing to both sides of the No. 2 cylinder head gasket as shown in the illustration.

Seal packing:

Three Bond 1217G, 1217H or equivalent

Text in Illustration

*a	0 to 1.0 mm (0 to 0.039in.)	*b	φ2,0 to 4.0 mm (0.079 to 0.158 in.)
*c	Edge of the gasket	-	-

NOTICE:

- Clean and degrease the contact surface.
- Install the cylinder head sub-assembly LH within 5 minutes of applying the seal packing.

- (d) Place the No. 2 cylinder head gasket on the cylinder block (bank 2).

2. INSTALL CYLINDER HEAD SUB-ASSEMBLY LH

- (a) Clean the threads of the cylinder head bolts and apply sufficient engine oil to the washers and threads of the bolts.
- (b) Mount the cylinder head sub-assembly LH on the cylinder block (bank 2).

(c) Tighten the 6 cylinder head bolts in the order shown in the illustration.

Torque:

20 N·m {204 kgf·cm, 15ft·lbf}

(d) Tighten the 6 cylinder head bolts further in the same order above.

Torque:

100 N·m {1020 kgf·cm, 74ft·lbf}

NOTICE:

If the bolt makes a stick-slip sound during tightening, repeat the procedure from the cylinder head gasket installation after cleaning and completely drying the bolt holes and contact surfaces.

HINT:

In that case, the No. 2 cylinder head gasket can be reused.

(e) Loosen the 6 cylinder head bolts by 360 ° in the order shown in the illustration.

(f) Tighten the 6 cylinder head bolts in the order shown in the illustration.

Torque:

20 N·m {204 kgf·cm, 15ft·lbf}

(g) Tighten the 6 cylinder head bolts further in the same order above.

Torque:

42 N·m {428 kgf·cm, 31ft·lbf}

(h) Using an angle gauge, tighten the 6 cylinder head bolts another 100 ° in the order shown in the illustration.

HINT:

Temporarily install the appropriate bolt for angle gauge if necessary.

Text in Illustration

*1	Temporary Bolt
----	----------------

- (i) Using an angle gauge, tighten the 2 cylinder head bolts another 100 ° in the order shown in the illustration.

- (j) Using an angle gauge, tighten the 4 cylinder head bolts another 50 ° in the order shown in the illustration.

3. INSTALL CAMSHAFT HOUSING SUB-ASSEMBLY LH

INFO

4. INSTALL CYLINDER HEAD GASKET

- (a) Operate the engine stand so that the bank 1 side faces upward.
 (b) Clean the bolt holes in the cylinder block (bank 1).

NOTICE:

To avoid erroneous tightening of the bolts, clean out the bolt holes sufficiently by blowing with compressed air to eliminate engine coolant, etc.

- (c) Apply the seal packing to both sides of the cylinder head gasket as shown in the illustration.

Seal packing:

Three Bond 1217G, 1217H or equivalent

Text in Illustration

*a	0 to 1.0 mm (0 to 0.039in.)	*b	φ2,0 to 4.0 mm (0.079 to 0.158 in.)
*c	Edge of the gasket	-	-

NOTICE:

- Clean and degrease the contact surface.
- Install the cylinder head sub-assembly RH within 5 minutes of applying the seal packing.

(d) Place the cylinder head gasket on the cylinder block (bank 1).

5. INSTALL CYLINDER HEAD SUB-ASSEMBLY RH

(a) Clean the threads of the cylinder head bolts and apply sufficient engine oil to the washers and threads of the bolts.

(b) Mount the cylinder head sub-assembly RH on the cylinder block (bank 1).

(c) Tighten the 6 cylinder head bolts in the order shown in the illustration.

Torque:

20 N·m {204 kgf·cm, 15ft·lbf}

(d) Tighten the 6 cylinder head bolts further in the same order as above.

Torque:

100 N·m {1020 kgf·cm, 74ft·lbf}

NOTICE:

If the bolt makes a stick-slip sound during tightening, repeat the procedure from the cylinder head gasket installation after cleaning and completely drying the bolt holes and contact surfaces.

HINT:

In that case, the cylinder head gasket can be reused.

- (e) Loosen the 6 cylinder head bolts by 360 ° in the order shown in the illustration.

- (f) Tighten the 6 cylinder head bolts in the order shown in the illustration.

Torque:

20 N·m {204 kgf·cm, 15ft·lbf}

- (g) Tighten the 6 cylinder head bolts further in the same order above.

Torque:

42 N·m {428 kgf·cm, 31ft·lbf}

- (h) Using an angle gauge, tighten the 6 cylinder head bolts another 100 ° in the order shown in the illustration.

HINT:

Temporarily install the appropriate bolt for angle gauge if necessary.

Text in Illustration

*1	Temporary Bolt
----	----------------

- (i) Using an angle gauge, tighten the 2 cylinder head bolts another 100 ° in the order shown in the illustration.

- (j) Using an angle gauge, tighten the 4 cylinder head bolts another 50 ° in the order shown in the illustration.

6. INSTALL CAMSHAFT HOUSING SUB-ASSEMBLY RH

INFO

TOYOTA

Last Modified: 4-14-2014	6.6 A	Doc ID: RM0000056U900AX
Model Year: 2013	Model: FR-S	Prod Date Range: [03/2012 -]
Title: FA20 ENGINE MECHANICAL: CYLINDER HEAD GASKET: REMOVAL; 2013 MY FR-S [03/2012 -]		

REMOVAL

1. REMOVE CAMSHAFT HOUSING SUB-ASSEMBLY RH

INFO

2. REMOVE CYLINDER HEAD SUB-ASSEMBLY RH

(a) Loosen the 6 bolts in the order shown in the illustration.

(b) Lightly tap the cylinder head sub-assembly RH to separate it from the cylinder block (bank 1).

(c) Remove the cylinder head sub-assembly RH.

NOTICE:

Be careful not to scratch the mating surface of the cylinder head and cylinder block.

3. REMOVE CYLINDER HEAD GASKET

(a) Remove the cylinder head gasket.

4. REMOVE CAMSHAFT HOUSING SUB-ASSEMBLY LH

INFO

5. REMOVE CYLINDER HEAD SUB-ASSEMBLY LH

(a) Loosen the 6 bolts in the order shown in the illustration.

(b) Lightly tap the cylinder head sub-assembly LH to separate it from the cylinder block (bank 2).

(c) Remove the cylinder head sub-assembly LH.

NOTICE:

Be careful not to scratch the mating surface of the cylinder head and cylinder block.

6. REMOVE NO. 2 CYLINDER HEAD GASKET

- (a) Remove the No. 2 cylinder head gasket.

Last Modified: 4-14-2014	6.6 K	Doc ID: RM000000T4V07HX

Title: FA20 ENGINE MECHANICAL: CYLINDER HEAD: DISASSEMBLY; 2013 MY FR-S [03/2012 -]		

DISASSEMBLY

1. REMOVE CHAIN COVER MOUNT BOLT

- (a) Remove the chain cover mount bolt.

2. REMOVE STUD BOLT

HINT:

If any of the stud bolts is deformed or the threads are damaged, replace it.

- (a) Remove the 6 stud bolts from the cylinder heads.

Text in Illustration

*a	for Bank 1
*b	for Bank 2

3. REMOVE INTAKE VALVE

NOTICE:

Place a cloth, etc. to avoid scratching the mating surface of the cylinder head during servicing.

HINT:

- Mark each part to prevent confusion.
- Arrange the removed parts in the correct order.

- (a) Using SST, compress the spring and remove the valve spring retainer locks.

SST: 09202-70020

09202-00010

09202-01010

09202-01020

(b) Remove the valve, valve spring retainer, valve spring and valve spring seat.

4. REMOVE EXHAUST VALVE**CAUTION:**

- The exhaust valve is encapsulated with metallic sodium. The metallic sodium is a strong alkaline and prone to cause a serious chemical reaction. Therefore, extra caution is required when handling or disposing the exhaust valve.
- Never disassemble the exhaust valve. The metallic sodium may cause blindness if it gets into your eyes, or cause burn injuries or chemical reactions resulting in fire if it comes into contact with your skin or any heat source.
- If the exhaust valve is damaged, after removing the valve, carry out processing of "Preparation for disposal" and "Disposal".
- Make sure to wear safety glasses and protective gloves when removing a damaged exhaust valve.
- Do not intentionally damage the exhaust valve to remove the metallic sodium.

NOTICE:

When it is determined that disposal procedure is dissolving, this may be performed.

HINT:

- The exhaust valve is encapsulated with metallic sodium. This is safe as long as it does not come into contact with air.
- The exhaust valve in which metallic sodium is encapsulated can be identified with the embossed

mark.

Text in Illustration

*a	Embossed mark (E2H is for FA20 Engine)
----	--

(a) Using SST, compress the spring and remove the valve spring retainer locks.

SST: 09202-70020

09202-00010

09202-01010

09202-01020

(b) Remove the valve, valve spring retainer, valve spring and valve spring seat.

5. REMOVE VALVE STEM OIL SEAL

(a) Remove the 8 valve stem oil seals.

NOTICE:

- Place a cloth, etc. to avoid scratching the mating surface of the cylinder head during servicing.
- Be careful not to damage the valve guide bushes and cylinder head.

6. DISPOSE OF EXHAUST VALVE

CAUTION:

- The exhaust valve is encapsulated with metallic sodium. The metallic sodium is a strong alkaline and prone to cause a serious chemical reaction. Therefore, extra caution is required when handling or disposing the exhaust valve.
- Never disassemble the exhaust valve. The metallic sodium may cause blindness if it gets into your eyes, or cause burn injuries or chemical reactions resulting in fire if it comes into contact with your skin or any heat source.
- If the exhaust valve is damaged, after removing the valve, carry out processing of "Preparation for disposal" and "Disposal".
- Make sure to wear safety glasses and protective gloves when removing a damaged exhaust valve.
- Do not intentionally damage the exhaust valve to remove the metallic sodium.

NOTICE:

When it is determined that disposal procedure is dissolving, this may be performed.

HINT:

- The exhaust valve is encapsulated with metallic sodium. This is safe as long as it does not come into contact with air.
- The metallic sodium within the exhaust valve can be identified using the embossed mark.

Text in Illustration

*a	Embossed mark (E2H is for FA20 Engine)
----	--

(a) Preparation for disposal

CAUTION:

- Ensure a fire extinguisher is at hand.
- Wear safety glasses.
- Wear protective gloves.

(b) Disposal

- (1) Wear protective gloves and then remove the damaged valve from the cylinder head.
- (2) Place a large container (bucket or other container) in a well-ventilated area and fill it with water (at least 10 liters).
- (3) Place the damaged exhaust valve inside the container in an upright position using large pliers or similar tool to submerge it under water.

CAUTION:

- Ensure the damaged exhaust valve is fully submerged in water.
- Keep any fire sparks or fire sources away from this container because hydrogen gas will be emitted from the chemical reaction.
- Because of serious chemical reaction, step back at least 2 to 3 m from the container.

- (4) After the chemical reaction has completed (approximately 4 to 5 hours), using large pliers or similar tool, carefully remove the valve from the container, and then dispose of it according to the same procedures that are provided for other parts.

CAUTION:

- After the chemical reaction, be careful not to let used liquid (sodium hydrate) contact your skin. Should it contact your skin, immediately rinse it with plenty of water.
- After the chemical reaction, dispose of used liquid (sodium hydrate) according to all applicable government and local regulations.

Last Modified: 4-14-2014	6.6 G	Doc ID: RM000000XCV08GX
Model Year: 2013	Model: FR-S	Prod Date Range: [03/2012 -]
Title: FA20 ENGINE MECHANICAL: CYLINDER HEAD: INSPECTION; 2013 MY FR-S [03/2012 -]		

INSPECTION

1. INSPECT CYLINDER HEAD SUB-ASSEMBLY

- Visually check that there are no cracks, scratches or other damage.
- Using a dye penetrant, check the important sections for fissures.
- Check that there are no signs of gas leak or water leak on gasket attachment surfaces.
- Using a precision straightedge and a feeler gauge, measure the surfaces that contact the cylinder block for warpage.

Text in Illustration

*a	for Bank 1	*b	for Bank 2
----	------------	----	------------

Maximum warpage:

0.035 mm (0.00138 in.)

Allowable minimum cylinder head height:

98.4 mm (3.874 in.)

Standard cylinder head height:

98.5 mm (3.878 in.)

If the warpage is more than the maximum, correct the surface by grinding it or replace the cylinder head sub-assembly.

HINT:

- Measurement should be performed at a temperature of 20°C (68°F).
- If the cylinder head sub-assembly bolt tightening torques and tightening angles are uneven, cylinder head sub-assembly warpage may occur. During installation, make sure that tightening torques and tightening angles are correctly obtained.
- If the cylinder head sub-assembly is replaced, hand-lap the valve and valve seat with an abrasive compound.

2. INSPECT INTAKE VALVE

(a) Check the valve flange and valve stem for damage, wear or deformation.

(b) Using a vernier caliper, measure the overall length of the valve.

Standard overall length:

103.3 mm (4.067 in.)

Text in Illustration

*a	Overall Length
----	----------------

(c) Using a vernier caliper, measure the valve head margin thickness.

Standard margin thickness:

0.8 to 1.2 mm (0.0315 to 0.0472 in.)

Text in Illustration

*a	Margin thickness
----	------------------

If the margin thickness is not as specified, replace the valve.

HINT:

- It is possible to differentiate between the intake valve and the exhaust valve by their overall length.
- If the valve is replaced, hand-lap the valve and valve seat with an abrasive compound.

(d) Using a micrometer, measure the diameter of the valve stem.

Standard valve stem diameter:

5.455 to 5.470 mm (0.2148 to 0.2154 in.)

If the valve stem diameter is not as specified, replace the

valve.

HINT:

- Measurement should be performed at a temperature of 20°C (68°F).
- Measure the valve stem diameter at the 6 locations as shown in the illustration, and take the minimum value.
- If the valve is replaced, hand-lap the valve and valve seat with an abrasive compound.

3. INSPECT EXHAUST VALVE

(a) Check the valve flange and valve stem for damage, wear or deformation.

(b) Using a vernier caliper, measure the overall length of the valve.

Standard overall length:
95.1 mm (3.744 in.)

Text in Illustration

*a	Overall Length
----	----------------

(c) Using a vernier caliper, measure the valve head margin thickness.

Standard margin thickness:
1.0 to 1.4 mm (0.039 to 0.055 in.)

Text in Illustration

*a	Margin thickness
----	------------------

If the margin thickness is not as specified, replace the valve.

HINT:

- It is possible to differentiate between the intake valve and the exhaust valve by their overall length.
- If the valve is replaced, hand-lap the valve and valve seat with an abrasive compound.

(d) Using a micrometer, measure the diameter of the valve stem.

Standard valve stem diameter:
5.445 to 5.460 mm (0.21437 to 0.21496 in.)

If the valve stem diameter is not as specified, replace the valve.

HINT:

- Measurement should be performed at a temperature of 20°C (68°F).
- Measure the valve stem diameter at the 6 locations as shown in the illustration, and take the minimum value.
- If the valve is replaced, hand-lap the valve and valve seat with an abrasive compound.

**4. INSPECT VALVE GUIDE BUSH OIL CLEARANCE**

- (a) Using a caliper gauge, measure the inside diameter of the valve guide bush.

Standard valve guide bush inside diameter:
5.500 to 5.512 mm (0.21654 to 0.21701 in.)

If the inside diameter is not as specified, replace the valve guide bush.

HINT:

- Measurement should be performed at a temperature of 20°C (68°F).
- Measure the inside diameter of the valve guide bush at the 6 locations as shown in the illustration, and take the maximum value.

- (b) Calculate the clearance between the valve guide bush and valve stem.

Standard Oil Clearance:

ITEM	SPECIFIED CONDITION
Intake	0.030 to 0.057 mm (0.00118 to 0.00224 in.)
Exhaust	0.040 to 0.067 mm (0.00157 to 0.00264 in.)

If the clearance between valve guide bush and valve stem is more the standard, replace the valve guide bush or valve, whichever shows the greater amount of wear or damage.

HINT:

- Subtract the valve stem diameter measurement from the inside diameter measurement of the valve guide bush.
- If the valve is replaced, hand-lap the valve and valve seat with an abrasive compound.

5. INSPECT VALVE ADJUSTING SHIM CLEARANCE

- (a) Visually check the valve adjusting shim for damage.

- (b) Using a micrometer, measure the valve stem end diameter.

Standard valve stem end diameter:

ITEM	SPECIFIED CONDITION
Intake	5.455 to 5.470 mm (0.21476 to 0.21535 in.)
Exhaust	5.445 to 5.460 mm (0.21437 to 0.21496 in.)

If the valve stem end diameter is not as specified, replace the valve.

HINT:

- Measurement should be performed at a temperature of 20°C (68°F).
- Measure the valve stem end diameter at the 2 locations as shown in the illustration, and take the minimum value.
- If the valve is replaced, hand-lap the valve and valve seat with an abrasive compound.

- (c) Using a caliper gauge, measure the inside diameter of the valve adjusting shim.

Standard valve adjusting shim inside diameter:

5.500 to 5.560 mm (0.21654 to 0.21890 in.)

If the inside diameter is not as specified, replace the valve adjusting shim.

HINT:

- Measurement should be performed at a temperature of 20°C (68°F).
- Measure the inside diameter of the valve adjusting shim at the 2 locations as shown in the illustration, and take the maximum value.
- If the valve adjusting shim needs to be replaced, check the valve clearance and select a suitable one.

- (d) Calculate the clearance between the valve adjusting shim and valve stem end.

Standard Oil Clearance:

0.030 to 0.115 mm (0.00118 to 0.00453 in.)

If the clearance between valve adjusting shim and valve stem end exceeds the standard, replace the valve adjusting shim or valve, whichever shows the greater amount of wear or damage.

HINT:

- Subtract the valve stem end diameter measurement from the inside diameter measurement of the valve adjusting shim.
- If the valve is replaced, hand-lap the valve and valve seat with an abrasive compound.
- If the valve adjusting shim needs to be replaced, check the valve clearance and select a suitable one.

6. INSPECT INTAKE VALVE SEATS

- (a) Visually check the valve seat for damage or deformation.
- (b) Clean the valve and valve seat.
- (c) Apply a light coat of engine oil to the valve stem, and a light coat of Prussian blue uniformly to the valve face.

Text in Illustration

*a	Valve stem
*b	Valve face

- (d) Insert the valve, and without rotating the valve, lightly press the valve face against the valve seat, and then pull it out.
- (e) Using a vernier caliper, measure the width of the contact face shown in the illustration.

Text in Illustration

*a	for Bank 1	*b	for Bank 2
----	------------	----	------------

Standard width (A):

0.8 to 1.6 mm (0.032 to 0.063 in.)

If the width is not as specified, repair the valve seat with a cutter.

HINT:

- Measure the width of the Prussian blue adhering to the valve seat.
- If the Prussian blue is not continually adhered on the valve seat, hand-lap the valve and valve seat with an abrasive compound.
- If the Prussian blue is still not continually adhered on the valve seat after lapping, repair the valve seat with a cutter.

(f) Completely remove the Prussian blue from the valve and valve seat.

(g) Apply a light coat of engine oil to the valve stem, and a light coat of Prussian blue uniformly to the valve seat face.

Text in Illustration

*a	Valve stem
*b	Contact face

(h) Insert the valve, and without rotating the valve, lightly press the valve face against the valve seat, and then pull it out.

(i) Check the location of the contact face shown in the illustration.

Standard contact face location:

Middle of the valve face at all circumference

Text in Illustration

*a	Contact face location
----	-----------------------

If the seat contact is not in the middle of the valve face, repair the valve seat with a cutter.

**HINT:**

Check the location of the Prussian blue adhering to the valve face.

(j) Completely remove the Prussian blue from the valve and valve seat.

7. INSPECT EXHAUST VALVE SEATS

(a) Visually check the valve seat for damage or deformation.

(b) Clean the valve and valve seat.

(c) Apply a light coat of engine oil to the valve stem, and a light coat of Prussian blue uniformly to the valve face.

Text in Illustration

*a	Valve stem
*b	Valve face

(d) Insert the valve, and without rotating the valve, lightly press the valve face against the valve seat, and then pull it out.

(e) Using a vernier caliper, measure the width of the contact face shown in the illustration.

Text in Illustration

*a	for Bank 1	*b	for Bank 2
----	------------	----	------------

Standard width (A):

1.1 to 1.7 mm (0.043 to 0.067 in.)

If the width is not as specified, repair the valve seat with a cutter.

HINT:

- Measure the width of the Prussian blue adhering to the valve seat.
- If the Prussian blue is not continually adhered on the valve seat, hand-lap the valve and valve seat with an abrasive compound.
- If the Prussian blue is still not continually adhered on the valve seat after lapping, repair the valve seat with a cutter.

(f) Completely remove the Prussian blue from the valve and valve seat.

- (g) Apply a light coat of engine oil to the valve stem, and a light coat of Prussian blue uniformly to the valve seat face.

Text in Illustration

*a	Valve stem
*b	Contact face

- (h) Insert the valve, and without rotating the valve, lightly press the valve face against the valve seat, and then pull it out.

- (i) Check the location of the contact face shown in the illustration.

Standard contact face location:

Middle of the valve face at all circumference

Text in Illustration

*a	Contact face location
----	-----------------------

If the seat contact is not in the middle of the valve face, repair the valve seat with a cutter.

HINT:

Check the location of the Prussian blue adhering to the valve face.

- (j) Completely remove the Prussian blue from the valve and valve seat.

8. INSPECT VALVE SPRING

- (a) Visually check the valve spring for damage or deformation.

- (b) Using a vernier caliper, measure the free length of the valve spring.

Standard free length:

41.06 mm (1.617 in.)

If the free length is not as specified, replace the spring.

HINT:

Measurement should be performed at a temperature of 20°C (68°F).

A51437

(c) Using a steel square, measure the deviation of the valve spring.

Maximum deviation:

Less than 1.8 mm (0.0710 in.)

Maximum angle:

2.5°

Text in Illustration

*a	Deviation
----	-----------

If the result is not as specified, replace the valve spring.

HINT:

- Measurement should be performed at a temperature of 20°C (68°F).
- To measure deviation of the valve spring, stand the valve spring on a level surface and measure its deviation at the top of the valve spring using a steel square.

REASSEMBLY

1. INSTALL INTAKE VALVE STEM OIL SEAL

(a) Apply engine oil to new valve stem oil seals.

Text in Illustration

*a	for Intake
*b	for Exhaust
*c	Gray
*d	Light green

NOTICE:

- Pay close attention to the colors when installing the oil seals.
- Installing the intake oil seal into the exhaust side or installing the exhaust oil seal to the intake side may cause installation problems later.

(b) Using SST, push in the oil seals by hand.

SST: 09201-41020

Text in Illustration

*a	Correct
*b	Incorrect

NOTICE:

- Place a cloth, etc. to avoid scratching the mating surface of the cylinder head during servicing.
- Do not tap SST with a plastic hammer to install the oil seals as it may damage the oil seals. Push in the oil seals by hand with SST.
- Do not install the oil seals at an angle.

2. INSTALL EXHAUST VALVE STEM OIL SEAL

- (a) Using SST, push in the oil seals by hand.

SST: 09201-41020

HINT:

Use the same procedure as for the intake oil seals.

3. INSTALL INTAKE VALVE

NOTICE:

Place a cloth to avoid scratching the mating surface of the cylinder head during servicing.

- (a) Set the valve spring seat, valve spring and retainer onto the cylinder head.

HINT:

Install the valve spring to the cylinder head with the narrow pitch end facing the valve spring seat.

- (b) Apply engine oil to the valve stem and insert the valve into the valve guide bush.

NOTICE:

When inserting the valve into the valve guide bush, use special care not to damage the oil seal lip.

- (c) Apply engine oil to the valve spring retainer locks.

- (d) Using SST, compress the valve spring and install the valve spring retainer locks.

SST: 09202-70020

09202-00010

09202-01010

09202-01020

- (e) Using a plastic hammer, lightly tap the valve stem tip to ensure a proper fit.

NOTICE:

Be careful not to tap the retainer.

4. INSTALL EXHAUST VALVE

NOTICE:

Place a cloth to avoid scratching the mating surface of the cylinder head during servicing.

- (a) Set the valve spring seat, valve spring and retainer onto the cylinder head.

HINT:

Install the valve spring to the cylinder head with the narrow pitch end facing the valve spring seat.

(b) Apply engine oil to the valve stem and insert the valve into the valve guide bush.

NOTICE:

When inserting the valve into the valve guide bush, use special care not to damage the oil seal lip.

(c) Apply engine oil to the valve spring retainer locks.

(d) Using SST, compress the valve spring and install the valve spring retainer locks.

SST: 09202-70020

09202-00010

09202-01010

09202-01020

(e) Using a plastic hammer, lightly tap the valve stem tip to ensure a proper fit.

NOTICE:

Be careful not to tap the retainer.

5. INSTALL STUD BOLT

(a) Install the 6 stud bolts to the cylinder heads.

Torque:

18 N·m {184 kgf·cm, 13ft·lbf}

Text in Illustration

*a	for Bank 1
*b	for Bank 2

6. INSTALL CHAIN COVER MOUNT BOLT

- (a) Install the chain cover mount bolt to the cylinder head sub-assembly LH.

Torque:

6.4 N·m {65 kgf·cm, 57in·lbf}

Last Modified: 4-14-2014	6.6 A	Doc ID: RM0000035AU028X
Model Year: 2013	Model: FR-S	Prod Date Range: [03/2012 -]
Title: FA20 ENGINE MECHANICAL: CYLINDER HEAD: REPAIR; 2013 MY FR-S [03/2012 -]		

REPAIR

1. REPAIR INTAKE VALVE SEATS

NOTICE:

- Repair the seat while checking the seating position.
- Releasing the seat cutter pressure gradually helps to make the intake valve seat faces smoother.

- (a) Using a 45° cutter, resurface the valve seat so that the valve seat width is more than the specification.

- (b) Hand-lap the valve and valve seat with an abrasive compound.
(c) Check the valve seating position.

HINT:

This procedure is necessary to select a cutter to be used in the following steps.

- (d) Using 30° or 75° cutters, correct the valve seat so that the contact condition between the valve and valve seat is within the standard.

**NOTICE:**

- Repair the seat while checking the seating position.
- Releasing the seat cutter pressure gradually helps to make the intake valve seat faces smoother.

HINT:

Select an appropriate cutter by referring to the following chart.

CONTACT POSITION	CUTTER TO BE SELECTED
A in the illustration	If the valve face position is high, use a 30° valve seat cutter in order to grind the surface so that the contact surface between the valve and the valve seat is at a standard value.
B in the illustration	If the valve face position is low, use a 75° valve seat cutter in order to grind the surface so that the contact surface between the valve and the valve seat is at a standard value.
C in the illustration	If the valve face position is centered, use a 30° and 75° valve seat cutter in order to grind the surface so that the contact surface between the valve and the valve seat is at a standard value.

(e) Hand-lap the valve and valve seat with an abrasive compound.

2. REPAIR EXHAUST VALVE SEATS**NOTICE:**

- Repair the seat while checking the seating position.
- Releasing the seat cutter pressure gradually helps to make the intake valve seat faces smoother.

- (a) Using a 45° cutter, resurface the valve seat so that the valve seat width is more than the specification.

- (b) Hand-lap the valve and valve seat with an abrasive compound.
 (c) Check the valve seating position.

HINT:

This procedure is necessary to select a cutter to be used in the following steps.

- (d) Using 30° or 60° cutters, correct the valve seat so that the contact condition between the valve and valve seat is within the standard.

NOTICE:

- Repair the seat while checking the seating position.
- Releasing the seat cutter pressure gradually helps to make the intake valve seat faces smoother.

HINT:

Select an appropriate cutter by referring to the following chart.

CONTACT POSITION	CUTTER TO BE SELECTED
A in the illustration	If the valve face position is high, use a 30° valve seat cutter in order to grind the surface so that the contact surface between the valve and the valve seat is at a standard value.
B in the illustration	If the valve face position is low, use a 60° valve seat cutter in order to grind the surface so that the contact surface between the valve and the valve seat is at a standard value.
C in the illustration	If the valve face position is centered, use a 30° and 60° valve seat cutter in order to grind the surface so that the contact surface between the valve and the valve seat is at a standard value.

(e) Hand-lap the valve and valve seat with an abrasive compound.

3. REPAIR VALVE

(a) Apply a light layer of engine oil to the valve stem, and a small amount of an abrasive compound uniformly to the valve face.

Text in Illustration

*a	Valve stem
*b	Valve face

**HINT:**

- Do not apply the abrasive compound more than necessary.
- Do not apply the abrasive compound to the valve stem as the valve stem may be affected.

(b) Slowly insert the valve stem into the valve guide bush and lap the valve and valve seat.

HINT:

- Lift the valve and strike the valve on the valve seat 2 times, and slightly rotate the valve. Repeat this set.
- The contact surface between the valve and the valve seat may become larger than the standard value, therefore, ensure that the valve is not continuously lapped by rotating while seated in the valve seat.
- While lapping, ensure that the valve is not removed from the valve guide bush by lifting too much.

(c) After lapping, completely remove the abrasive compound.

NOTICE:

Be sure to completely remove the abrasive compound as the remained compound could cause engine troubles.

(d) Check the valve seating position and width.

Last Modified: 4-14-2014	6.6 A	Doc ID: RM000000T4Y0BCX
Model Year: 2013	Model: FR-S	Prod Date Range: [03/2012 -]
Title: FA20 ENGINE MECHANICAL: CYLINDER HEAD: REPLACEMENT; 2013 MY FR-S [03/2012 -]		

REPLACEMENT

1. REPLACE NO. 2 INTAKE VALVE GUIDE BUSH

(a) Place the cylinder block on wooden blocks with the combustion chamber side facing upward.

(b) Using SST and a hammer, tap out the No. 2 intake valve guide bush.

SST: 09201-10000

09201-01050

SST: 09950-70010

09951-07100

NOTICE:

- Place wooden blocks wrapped in a cloth under the cylinder head and stabilize the cylinder head during servicing.
- Use special care not to damage the cylinder head.

(c) Before installing the No. 2 intake valve guide bush, make sure that neither scratches nor damages exist on the inner surface of cylinder head valve guide bush holes.

(d) Draw a reference line 7.6 mm (0.299 in.) below from the top face on a new No. 2 intake valve guide bush using a marker.

Text in Illustration

*a	Reference line
----	----------------

HINT:

Reference line is used as a guide when tapping-in the No. 2 intake valve guide bush.

(e) Place the cylinder block on wooden blocks with the combustion chamber side facing downward.

(f) Apply enough engine oil to the No. 2 intake valve guide bush, and set it on the cylinder head.

(g) Using SST and a hammer, tap in the No. 2 intake valve guide bush to the reference line.

SST: 09201-10000

09201-01050

SST: 09950-70010

09951-07100

NOTICE:

- Place wooden blocks wrapped in a cloth under the cylinder head and stabilize the cylinder head during servicing.
- Use special care not to damage the cylinder head.

- (h) While measuring the No. 2 intake valve guide bush protrusion amount using a vernier caliper, tap in the No. 2 intake valve guide bush so that its height is within the standard.

Standard protrusion height:

11.4 to 11.8 mm (0.449 to 0.466 in.)

NOTICE:

- Place wooden blocks wrapped in a cloth under the cylinder head and stabilize the cylinder head during servicing.
- Use special care not to damage the cylinder head.

HINT:

Use multiple small repetitions of tap-in and measurement in order not to excessively tap in the No. 2 intake valve guide bush.

**Text in Illustration**

*a	Protrusion height
----	-------------------

- (i) Place the cylinder block on wooden blocks with the combustion chamber side facing upward.

NOTICE:

- Place wooden blocks wrapped in a cloth under the cylinder head and stabilize the cylinder head during servicing.
- Use special care not to damage the cylinder head.

- (j) Using a reamer, ream the No. 2 intake valve guide bush to obtain the standard clearance between the No. 2 intake valve guide bush and valve stem.

Standard inside diameter:

5.500 to 5.512 mm (0.21654 to 0.21701 in.) at 20°C
(68°F)

NOTICE:

While gradually widening the reamer diameter, ream the No. 2 intake valve guide bush uniformly so that the oil clearance is within the standard.

HINT:

- Apply engine oil to the reamer when reaming.
- If the inner surface of No. 2 intake valve guide bush is damaged, slightly grind the edge of the reamer with 400-grit sandpaper.
- If the inner surface of No. 2 intake valve guide bush becomes lustrous and the reamer does not chip, use a new reamer or correct the reamer.

(k) After reaming, remove chips and clean the No. 2 intake valve guide bush.

(l) Measure the inside diameter of the No. 2 intake valve guide bush and confirm the oil clearance.

(m) Check the contact condition between the valve and valve seat.

2. REPLACE NO. 2 EXHAUST VALVE GUIDE BUSH

(a) Place the cylinder block on wooden blocks with the combustion chamber side facing upward.

(b) Using SST and a hammer, tap out the No. 2 exhaust valve guide bush.

SST: 09201-10000

09201-01050

SST: 09950-70010

09951-07100

NOTICE:

- Place wooden blocks wrapped in a cloth under the cylinder head and stabilize the cylinder head during servicing.
- Use special care not to damage the cylinder head.

(c) Before installing the No. 2 exhaust valve guide bush, make sure that neither scratches nor damages exist on the inner surface of cylinder head valve guide bush holes.

(d) Draw a reference line 7.6 mm (0.299 in.) below from the top face on a new No. 2 exhaust valve guide bush using a marker.

Title: FA20 ENGINE MECHANICAL: DRIVE BELT: INSTALLATION; 2013 MY FR-S [03/2012 -]		

INSTALLATION

1. INSTALL FAN AND GENERATOR V BELT

- (a) Set the fan and generator V belt onto every part.

Text in Illustration

*1	Idler
*2	Generator
*3	Tensioner
*4	Water Pump
*5	Crankshaft
*6	A/C Compressor

- (b) While turning the belt tensioner clockwise, remove the 3 mm (0.118 in.) hexagon wrench.

NOTICE:

Make sure that the fan and generator V belt is properly installed to each pulley.

- (c) Check that the fan and generator V belt fits properly in the ribbed grooves.

HINT:

Make sure to check by hand that the fan and generator V belt have not slipped out of the grooves on the bottom of the pulley.

2. INSTALL BELT GENERATOR COVER

- (a) Install the belt generator cover with the 2 bolts.

Torque:

6.4 N·m {65 kgf·cm, 57in·lbf}

- (b) Engage the 2 wire harness clamps and install the wire harness to the belt generator cover.

3. INSTALL GENERATOR COVER

- (a) Install the generator cover with the 2 bolts.

Torque:

6.4 N·m {65 kgf·cm, 57in·lbf}

4. INSTALL AIR CLEANER CAP WITH AIR CLEANER HOSE

(a) Install the air cleaner cap with air cleaner hose with the 3 bolts.

Torque:

6.0 N·m { 61 kgf·cm, 53in·lbf }

(b) Install the air cleaner cap with air cleaner hose with the 2 hose clamps.

Torque:

2.0 N·m { 20 kgf·cm, 18in·lbf }

(c) Connect the No. 2 ventilation hose.

(d) Connect the mass air flow meter connector.

(e) Engage the wire harness clamp and install the wire harness to the air cleaner cap.

Title: FA20 ENGINE MECHANICAL: DRIVE BELT: ON-VEHICLE INSPECTION; 2013 MY FR-S [03/2012 -]		

ON-VEHICLE INSPECTION

1. INSPECT FAN AND GENERATOR V BELT

(a) Check the belt for wear, cracks or other signs of damage.

Text in Illustration

*a	INCORRECT
----	-----------

If any of the following defects is found, replace the fan and generator V belt.

- The belt is cracked.
- The belt is worn out to the extent that the cords are exposed.
- The belt has chunks missing from the ribs.

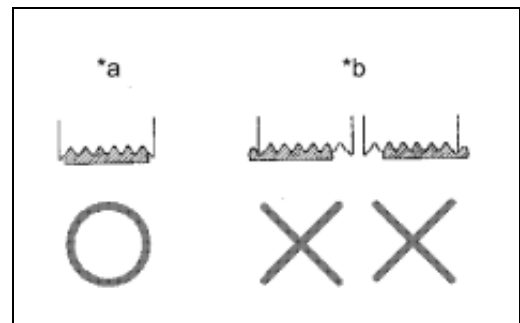

(b) Check that the belt fits properly in the ribbed grooves.

Text in Illustration

*a	CORRECT
*b	INCORRECT

HINT:

Check with your hand to confirm that the belt has not slipped out of the grooves on the bottom of the pulley. If it has slipped out, replace the fan and generator V belt. Install the new fan and generator V belt.

Title: FA20 ENGINE MECHANICAL: DRIVE BELT: REMOVAL; 2013 MY FR-S [03/2012 -]		

REMOVAL

1. REMOVE AIR CLEANER CAP WITH AIR CLEANER HOSE

- (a) Loosen the hose clamp and disconnect the No. 2 ventilation hose.

- (b) Disconnect the mass air flow meter connector.

- (c) Disengage the clamp and separate the wire harness from the air cleaner cap.

- (d) Loosen the 2 hose clamps.

- (e) Remove the 3 bolts and the air cleaner cap with air cleaner hose.

2. REMOVE GENERATOR COVER

- (a) Remove the 2 bolts and generator cover.

3. REMOVE BELT GENERATOR COVER

- (a) Disengage the 2 clamps and separate the wire harness from the belt generator cover.
 (b) Remove the 2 bolts and belt generator cover.

4. REMOVE FAN AND GENERATOR V BELT

- (a) While turning the belt tensioner clockwise, align the holes and insert a 3 mm (0.118 in.) hexagon wrench into the holes to hold the belt tensioner.

Text in Illustration

*1	Hexagon Wrench
----	----------------

HINT:

The pulley bolt for the belt tensioner has a left-hand thread.

- (b) Remove the fan and generator V belt from the belt tensioner.

Title: FA20 ENGINE MECHANICAL: ENGINE ASSEMBLY: INSTALLATION; 2013 MY FR-S [03/2012 -]		

INSTALLATION

1. INSTALL FRONT ENGINE MOUNTING BRACKET

(a) Install the 2 front engine mounting brackets with the 4 bolts.

Torque:

45 N·m {459 kgf·cm, 33ft·lbf}

2. REMOVE ENGINE STAND

(a) Attach an engine sling device and hang the engine with a chain block.

NOTICE:

With the exception of installing the engine assembly to an engine stand or removing the engine assembly from an engine stand, do not perform any work on the engine while it is suspended, as doing so is dangerous.

(b) Remove the engine stand from the engine.

3. INSTALL NO. 1 CRANKSHAFT POSITION SENSOR PLATE INFO

4. INSTALL FLYWHEEL SUB-ASSEMBLY (for Manual Transmission) INFO

5. INSTALL CLUTCH DISC ASSEMBLY (for Manual Transmission) INFO

6. INSTALL CLUTCH COVER ASSEMBLY (for Manual Transmission) INFO

7. INSTALL DRIVE PLATE AND RING GEAR SUB-ASSEMBLY (for Automatic Transmission)

INFO

8. INSTALL ENGINE ASSEMBLY

(a) Confirm that 2 knock pins are on the transmission contact surface of the engine block before transmission installation.

(b) Keeping the engine assembly and the transmission assembly in a horizontal position, align the knock pins with each hole on the transmission assembly and install the bolt.

Torque:

50 N·m {510 kgf·cm, 37ft·lbf}

9. REMOVE ENGINE HANGER INFO

10. CONNECT FUEL HOSE

(a) Connect the fuel tube and No. 2 fuel tube to the fuel pipe INFO.

(b) Connect the No. 2 fuel vapor feed hose to the fuel pipe.

11. INSTALL DRIVE PLATE SETTING HEXAGON BOLT (for Automatic Transmission) INFO**12. INSTALL FLYWHEEL HOUSING UNDER COVER** INFO**13. INSTALL FRONT CROSS MEMBER SUB-ASSEMBLY**

- (a) Install the front suspension crossmember sub-assembly with the 2 nuts.

Torque:

45 N·m {459 kgf·cm, 33ft·lbf}

14. INSTALL MANUAL TRANSMISSION ASSEMBLY (for Manual Transmission)

- (a) Install the 3 bolts and 2nuts.

Torque:

50 N·m {510 kgf·cm, 37ft·lbf}

15. INSTALL AUTOMATIC TRANSMISSION ASSEMBLY (for Automatic Transmission)

- (a) Install the 3 bolts and 2nuts.

Torque:

50 N·m {510 kgf·cm, 37ft·lbf}

16. INSTALL FRONT STABILIZER BAR (for Automatic Transmission)INFO**17. INSTALL EARTH CABLE**

- (a) Install the 2 grounded cables with the 2 bolts.

Torque:

7.5 N·m {77 kgf·cm, 66in·lbf}

18. CONNECT RADIATOR OUTLET HOSE

- (a) Install the clamp and connect the radiator outlet hose.

19. CONNECT NO. 3 TRANSMISSION OIL COOLER HOSE (for Automatic Transmission)

- (a) Connect the No. 3 transmission oil cooler hose.

20. INSTALL STARTER ASSEMBLYINFO**21. CONNECT NO. 1 COOLER REFRIGERANT DISCHARGE HOSE** INFO**22. INSTALL SUCTION HOSE SUB-ASSEMBLY**

- (a) Remove the attached vinyl tape from the hose.
- (b) Apply sufficient compressor oil to a new O-ring and the fitting surface of the compressor assembly with pulley.

Compressor oil:

ND-OIL 8 or equivalent

- (c) Install the O-ring onto the suction hose sub-assembly.
- (d) Install the suction hose sub-assembly onto the compressor assembly with pulley with the bolt.

Torque:**10 N·m {102 kgf·cm, 7ft·lbf}**

- (e) Remove the vinyl tape from the pipe.
- (f) Sufficiently apply compressor oil to a new O-ring and the fitting surface of the suction pipe sub-assembly.

Compressor oil:

ND-OIL 8 or equivalent

- (g) Connect the O-ring to the suction pipe sub-assembly.
- (h) Connect the suction pipe sub-assembly.
- (i) Rotate the hook connector in the direction indicated by the arrow in the illustration.

- (j) Insert the pipe joint into the cooler expansion valve securely and tighten the bolt.

Torque:**7.5 N·m {77 kgf·cm, 66in·lbf}**

- (k) Install the suction pipe sub-assembly with the nut.

Torque:**10 N·m {102 kgf·cm, 7ft·lbf}****23. INSTALL NO. 1 TRANSMISSION OIL COOLER HOSE (for Automatic Transmission)**

- (a) Connect the No. 1 transmission oil cooler hose.

24. CONNECT HEATER WATER HOSE

- (a) Install the 2 hose clamps and connect 2 heater water hoses.

25. INSTALL EXHAUST MANIFOLD**INFO****26. CONNECT VACUUM TUBE CONNECTOR HOSE (for Manual Transmission)**

- (a) Connect the vacuum tube connector hose with the bolt.

Torque:**18 N·m {184 kgf·cm, 13ft·lbf}**

- (b) Connect the vacuum tube connector hose.

27. CONNECT VACUUM TUBE CONNECTOR HOSE (for Automatic Transmission)

- (a) Connect the vacuum tube connector hose with the 2 bolts.

Torque:**18 N·m {184 kgf·cm, 13ft·lbf}**

- (b) Connect the vacuum tube connector hose.

28. INSTALL NO. 1 ENGINE COVER SUB-ASSEMBLY INFO**29. CONNECT ENGINE WIRE**

- (a) Connect the generator connector and connect the clamp.
- (b) Connect the generator wire with the nut.

Torque:**16 N·m {163 kgf·cm, 12ft·lbf}**

- (c) Install the terminal cap.
- (d) Connect the 5 wire harness clamps.
- (e) Install the 2 wire harness clamp brackets with the 2 bolts.

Torque:**11 N·m {112 kgf·cm, 8ft·lbf}**

- (f) Connect the 2 wire harness clamps to the 2 wire harness clamp brackets.
- (g) Connect the wire harness clamp to the No. 2 engine hanger.

- (h) Connect the connector (B).

- (i) Connect the wire harness connector (A) and securely lock the connector.
- (j) Install the wire harness clamp bracket to the No. 2 engine hanger with the bolt.

Torque:**10 N·m {102 kgf·cm, 7ft·lbf}**

- (k) for Automatic Transmission:

- (1) Slide the connector in the direction shown in the diagram, and connect the wire harness.

(2) Connect the 2 wire harness clamps.

(3) Connect the wire harness connector (A) and securely lock the connector.

(4) Connect the connector (B).

30. INSTALL INJECTOR DRIVER INFO

31. INSTALL WATER FILLER SUB-ASSEMBLY

(a) Install the 2 clamps and connect the water filler sub-assembly.

(b) Install the water filler sub-assembly with 2 bolts.

Torque:

7.5 N·m {77 kgf·cm, 66in·lbf}

32. INSTALL RADIATOR RESERVE TANK ASSEMBLY INFO

33. INSTALL AIR CLEANER CAP WITH AIR CLEANER HOSE

(a) Install the stay with bolt to the body.

Torque:

35 N·m {357 kgf·cm, 26ft·lbf}

(b) Install the air cleaner assembly with hose with the 3 bolts.

Torque:

6.0 N·m {61 kgf·cm, 53in·lbf}

(c) Install the hose clamp.

Torque:

2.0 N·m {20 kgf·cm, 18in·lbf}

(d) Connect the clamp and wire harness to the air cleaner cap.

(e) Connect the mass air flow meter connector.

(f) Connect the No. 2 ventilation hose.

(g) Install the 2 bolts and the chamber duct with chamber.

Torque:

6.0 N·m {61 kgf·cm, 53in·lbf}

(h) Connect the hose.

34. INSTALL FRONT SUSPENSION UPPER TO COWL BRACE SUB-ASSEMBLY LH INFO

35. INSTALL FRONT SUSPENSION UPPER TO COWL BRACE SUB-ASSEMBLY RH INFO

36. ADD ENGINE OIL INFO

INSPECT ENGINE OIL LEVEL** INFO**51. SET HOOD SUB-ASSEMBLY**

(a) Change the front hood stay position from B to A, and store the front hood stay.

Last Modified: 4-14-2014	6.6 A	Doc ID: RM000000N82013X
Model Year: 2013	Model: FR-S	Prod Date Range: [03/2012 -]
Title: FA20 ENGINE MECHANICAL: ENGINE ASSEMBLY: REMOVAL; 2013 MY FR-S [03/2012 -]		

REMOVAL

1. SET HOOD SUB-ASSEMBLY

- (a) Change the front hood stay position from A to B, and support the hood sub-assembly at position B.

2. RECOVER REFRIGERANT FROM REFRIGERATION SYSTEM

INFO

3. DISCHARGE FUEL SYSTEM PRESSURE

INFO

4. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL INFO

5. REMOVE FRONT SUSPENSION UPPER TO COWL BRACE SUB-ASSEMBLY LH INFO

6. REMOVE FRONT SUSPENSION UPPER TO COWL BRACE SUB-ASSEMBLY RH INFO

7. REMOVE AIR CLEANER CAP WITH AIR CLEANER HOSE

- (a) Disconnect the hose.

(b) Remove the 2 bolts and disconnect the chamber.

(c) Loosen the hose clamp and disconnect the No. 2 ventilation hose.

(d) Disconnect the mass air flow meter connector.

(e) Disengage the clamp and separate the wire harness from the air cleaner cap.

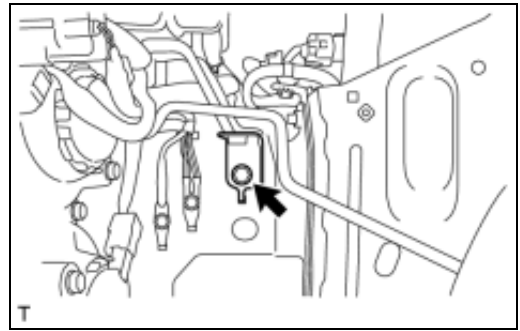

(f) Loosen the hose clamp.

- (g) Remove the 3 bolts and air cleaner cap with air cleaner hose.

- (h) Remove the bolt and stay from the body.

8. DRAIN ENGINE OIL INFO

9. DRAIN ENGINE COOLANT INFO

10. REMOVE RADIATOR RESERVE TANK ASSEMBLY INFO

11. REMOVE WATER FILLER SUB-ASSEMBLY

- (a) Remove the 2 bolts and disconnect the water filler sub-assembly.
- (b) Remove the 2 clamps and water filler sub-assembly.

12. REMOVE INJECTOR DRIVER INFO

13. DISCONNECT ENGINE WIRE

HINT:

Fix the disconnected harness components with tape to keep them out of the way.

- (a) Remove the bolt and wire harness clamp bracket from the No. 2 engine hanger.

- (b) Release the lock of connector (A) and disconnect the connector.
 (c) Disconnect the connector (B).

- (d) Disconnect the connector.

- (e) Disconnect the wire harness clamp and wire harness from the No. 2 engine hanger.

- (f) Disconnect the 3 wire harness clamps.

- (g) for Automatic Transmission:

- (1) Release the lock of connector (A) and disconnect the connector.

- (2) Disconnect the connector (B).

- (3) Slide the connector in the direction shown in the illustration, and disconnect the wire harness.

- (4) Disconnect the 3 wire harness clamps.

- (5) Remove the bolt and wire harness clamp bracket.

- (h) Disconnect the terminal cap.

- (i) Remove the nut and disconnect the wire harness from terminal B.
 (j) Disconnect the generator connector and disengage the clamp.

14. REMOVE NO. 1 ENGINE COVER SUB-ASSEMBLY INFO

15. DISCONNECT VACUUM TUBE CONNECTOR HOSE (for Automatic Transmission)

- (a) Loosen the hose clamp and disconnect the vacuum tube connector hose.

- (b) Remove the 2 bolts and disconnect the vacuum tube connector hose.

- (c) Loosen the hose clamp and remove the vacuum tube connector hose.

16. DISCONNECT VACUUM TUBE CONNECTOR HOSE (for Manual Transmission)

- (a) Loosen the hose clamp and disconnect the vacuum tube connector hose from the intake manifold.

- (b) Remove the bolt and disconnect the vacuum tube connector hose.

17. REMOVE EXHAUST MANIFOLD

INFO

18. FIX FRONT EXHAUST PIPE SUB-ASSEMBLY (for Manual Transmission)

- (a) Tie the front exhaust pipe sub-assembly to the front cross member sub-assembly with rope.

19. DISCONNECT HEATER WATER HOSE

- (a) Loosen the 2 hose clamps and disconnect the 2 heater water hoses.

20. DISCONNECT NO. 1 TRANSMISSION OIL COOLER HOSE (for Automatic Transmission)

- (a) Loosen the clip and disconnect the No. 1 transmission oil cooler hose.

21. REMOVE SUCTION HOSE SUB-ASSEMBLY

- (a) Remove the bolt and disconnect the suction hose sub-assembly from the compressor assembly with pulley.

- (b) Remove the O-ring from the discharge hose sub-assembly.

NOTICE:

Seal the openings of the disconnected parts using vinyl tape to prevent entry of moisture and foreign matter.

- (c) Remove the bolt and slide the hook connector.

- (d) Remove the nut and suction pipe sub-assembly.
- (e) Remove the O-ring from the suction pipe sub-assembly.

NOTICE:

Seal the openings of the disconnected parts using vinyl tape to prevent entry of moisture and foreign matter.

22. DISCONNECT NO. 1 COOLER REFRIGERANT DISCHARGE HOSE INFO**23. REMOVE STARTER ASSEMBLY**INFO**24. DISCONNECT NO. 3 TRANSMISSION OIL COOLER HOSE (for Automatic Transmission)**

- (a) Loosen the clip and disconnect the No. 3 transmission oil cooler hose.

**25. DISCONNECT RADIATOR OUTLET HOSE**

- (a) Loosen the clip and disconnect the radiator outlet hose.

**26. DISCONNECT GROUNDED CABLE**

- (a) Remove the 2 bolts and disconnect the 2 grounded cables.

**27. REMOVE FRONT STABILIZER BAR (for Automatic Transmission)**INFO

28. FIX FRONT EXHAUST PIPE ASSEMBLY (for Automatic Transmission)

- (a) Tie the front exhaust pipe assembly to the front cross member sub-assembly with rope.

29. SEPARATE AUTOMATIC TRANSMISSION ASSEMBLY (for Automatic Transmission)

- (a) Remove the 3 bolts and 2 nuts.

Text in Illustration

	Bolt
	Nut

NOTICE:

In order to prevent dropping, do not remove bolt B.

30. REMOVE MANUAL TRANSMISSION ASSEMBLY (for Manual Transmission)

- (a) Remove the 3 bolts and 2 nuts.

Text in Illustration

	Bolt
--	------

Nut

NOTICE:

In order to prevent dropping, do not remove bolt B.

31. SEPARATE FRONT CROSS MEMBER SUB-ASSEMBLY

- (a) Remove the 2 nuts from the front cross member sub-assembly.

**32. REMOVE FLYWHEEL HOUSING UNDER COVER** INFO**33. REMOVE DRIVE PLATE SETTING HEXAGON BOLT (for Automatic Transmission)** INFO**34. SEPARATE FUEL HOSE**

- (a) Using SST, disconnect the fuel tube and No. 2 fuel tube from the fuel pipe INFO.

SST: SU003-03936

- (b) Remove the clamp and disconnect the No. 2 fuel vapor feed hose from the fuel pipe.

**35. INSTALL ENGINE HANGER**

- (a) Install the engine hanger with the bolt, as shown in the illustration.

Text in Illustration

*1	No. 1 Engine Hanger
*2	No. 2 Engine Hanger

Torque:

43 N·m {439 kgf·cm, 32ft·lbf}

No. 1 Engine Hanger	12281-38030
Bolt	90119-14120

- (b) Use an engine sling device and a mini crane to hold the engine.

36. SUPPORT TRANSMISSION ASSEMBLY

- (a) Support the transmission assembly clutch housing with a jack.

NOTICE:

Support the transmission assembly until the installation of the engine assembly is completed.

37. REMOVE ENGINE ASSEMBLY

- (a) Remove the bolt from the transmission assembly.

Text in Illustration

*A	for Automatic Transmission
*B	for Manual Transmission

(b) Hoist the engine assembly up with an engine sling device and a mini crane.

38. REMOVE DRIVE PLATE AND RING GEAR SUB-ASSEMBLY (for Automatic Transmission)

INFO

39. REMOVE CLUTCH COVER ASSEMBLY (for Manual Transmission)

INFO

40. REMOVE CLUTCH DISC ASSEMBLY (for Manual Transmission)

INFO

41. REMOVE FLYWHEEL SUB-ASSEMBLY (for Manual Transmission)

INFO

42. REMOVE NO. 1 CRANKSHAFT POSITION SENSOR PLATE

INFO

43. INSTALL ENGINE STAND

(a) Set the engine on an engine stand.

NOTICE:

With the exception of installing the engine assembly to an engine stand or removing the engine assembly from an engine stand, do not perform any work on the engine while it is suspended, as doing so is dangerous.

44. REMOVE FRONT ENGINE MOUNTING BRACKET

(a) Remove the 4 bolts and 2 front engine mounting brackets.

Title: FA20 ENGINE MECHANICAL: ENGINE UNIT: DISASSEMBLY; 2013 MY FR-S [03/2012 -]		

DISASSEMBLY

1. REMOVE OIL FILLER CAP ASSEMBLY

(a) Remove the oil filler cap assembly.

2. REMOVE OIL FILTER SUB-ASSEMBLY

(a) Using SST, remove the oil filter sub-assembly.

SST: 09228-22020

3. REMOVE OIL FILTER UNION

(a) Using a 24 mm deep socket wrench, remove the oil filter union.

4. REMOVE E.F.I. ENGINE COOLANT TEMPERATURE SENSOR

(a) Using a 19 mm union nut wrench, remove the E.F.I. engine coolant temperature sensor.

5. REMOVE KNOCK CONTROL SENSOR

(a) Remove the 2 bolts and 2 knock control sensors.

6. REMOVE CRANK POSITION SENSOR

(a) Remove the bolt and crank position sensor.

7. REMOVE VVT SENSOR

(a) Remove the bolt and VVT sensor (for intake side of bank 1).

(b) Remove the O-ring from the VVT sensor.

(c) Remove the bolt and VVT sensor (for exhaust side of bank 1).

(d) Remove the O-ring from the VVT sensor.

- (e) Remove the bolt and VVT sensor (for intake side of bank 2).

- (f) Remove the O-ring from the VVT sensor.

- (g) Remove the bolt and VVT sensor (for exhaust side of bank 2).

- (h) Remove the O-ring from the VVT sensor.

8. REMOVE CAMSHAFT TIMING OIL CONTROL VALVE

- (a) Remove the 2 bolts and camshaft timing oil control valve (for intake side of bank 1).

- (b) Remove the O-ring from the camshaft timing oil control valve.

- (c) Remove the back-up ring from the camshaft timing oil control valve.

Text in Illustration

*1	O-ring
----	--------

*2

Back-up Ring

- (d) Remove the 2 bolts and camshaft timing oil control valve (for exhaust side of bank 1).

- (e) Remove the O-ring from the camshaft timing oil control valve.
 (f) Remove the back-up ring from the camshaft timing oil control valve.

- (g) Remove the 2 bolts and camshaft timing oil control valve (for intake side of bank 2).

- (h) Remove the O-ring from the camshaft timing oil control valve.
 (i) Remove the back-up ring from the camshaft timing oil control valve.

- (j) Remove the 2 bolts and camshaft timing oil control valve (for exhaust side of bank 2).

- (k) Remove the O-ring from the camshaft timing oil control valve.
 (l) Remove the back-up ring from the camshaft timing oil control valve.

9. REMOVE TEMPERATURE SENSOR

- (a) Using a 19 mm deep socket wrench, remove the temperature sensor.

NOTICE:

Use a cloth or the like to prevent engine oil from splashing.

Text in Illustration

*1	19 mm Deep Socket Wrench
----	--------------------------

10. REMOVE ENGINE OIL PRESSURE SWITCH ASSEMBLY

- (a) Using a 24 mm deep socket wrench, remove the engine oil pressure switch assembly.

NOTICE:

Use a cloth or the like to prevent engine oil from splashing.

Text in Illustration

*1	24 mm deep socket wrench
----	--------------------------

11. REMOVE PCV HOSE CONNECTOR

- (a) Remove the 3 bolts and PCV hose connector.

- (b) Loosen the 2 clips and remove the No. 2 water by-pass hose from the PCV hose connector.

12. REMOVE VACUUM PUMP ASSEMBLY (for Automatic Transmission) INFO

13. REMOVE REAR CYLINDER HEAD PLATE (for Manual Transmission)

- (a) Remove the 3 bolts and rear cylinder head plate.

14. REMOVE WATER INLET PIPE

(a) Disconnect the No. 3 water by-pass hose.

(b) Remove the 4 bolts and water inlet pipe.

(c) Remove the 2 O-rings from the cylinder block.

15. REMOVE PCV VALVE SUB-ASSEMBLY

(a) Using a 19 mm deep socket wrench, remove the PCV valve sub-assembly.

16. REMOVE NO. 1 IDLER PULLEY SUB-ASSEMBLY

(a) Remove the bolt, No. 1 idler pulley sub-assembly and idler pulley cover.

17. REMOVE NO. 1 IDLER PULLEY SUB-ASSEMBLY

- (a) Remove the bolt, No. 1 idler pulley sub-assembly and idler pulley cover.

18. REMOVE WATER PUMP PULLEY

- (a) Using SST, hold the water pump pulley.

SST: 09960-10010

09962-01000

09963-00700

- (b) Remove the 3 bolts and water pump pulley.

NOTICE:

Be careful not to let SST slip during the work.

19. REMOVE ENGINE WATER PUMP ASSEMBLY

- (a) Remove the 5 bolts, engine water pump assembly and gasket.

20. REMOVE WATER OUTLET

- (a) Remove the 2 bolts and water outlet.

21. REMOVE THERMOSTAT

- (a) Remove the thermostat.
- (b) Remove the gasket from the thermostat.

NOTICE:

Be careful not to let SST slip during the work.

22. REMOVE CRANKSHAFT PULLEY

- (a) Install SST to the crankshaft pulley.

SST: 09213-80010

90179-10016

09213-08010

09213-08110

HINT:

Position the projections on SST in the direction as shown in the illustration to prevent SST from separating from the crankshaft pulley.

Text in Illustration

*1	Claw
----	------

- (b) Using SST, hold the crankshaft pulley and loosen the crankshaft pulley set bolt.

SST: 09213-80010

90179-10016

09213-08010

09213-08110

Text in Illustration

*a	Hold
*b	Turn

- (c) Remove the crankshaft pulley.

(d) Remove the O-ring and crankshaft pulley spacer.

23. REMOVE TIMING CHAIN OR BELT COVER OIL SEAL

(a) Using a screwdriver with its tip wrapped in protective tape, pry out the timing chain or belt cover oil seal.

Text in Illustration

*1	Protective Tape
----	-----------------

NOTICE:

After the removal, check the crankshaft for damage. If it is damaged, smooth the surface with 400-grit sandpaper.

HINT:

Tape the screwdriver tip before use.

24. REMOVE TIMING CHAIN OR BELT COVER SUB-ASSEMBLY

(a) Remove the 32 bolts.

(b) Using a screwdriver with its tip wrapped in protective tape, remove the timing chain or belt cover sub-assembly by prying between the timing chain or belt cover sub-assembly and cylinder head or cylinder block.

Text in Illustration

*1	Protective Tape	-	-
----	-----------------	---	---

NOTICE:

Be careful not to damage the contact surfaces of the cylinder head, cylinder block or chain cover.

(c) Remove the 4 O-rings.

25. REMOVE CHAIN SUB-ASSEMBLY (for Bank 1)

(a) Temporarily install the crank pulley bolt to the crankshaft.

- (b) Turn the crankshaft and align the alignment marks of the crankshaft timing gear or sprocket, camshaft timing intake gear assembly RH and camshaft timing exhaust gear assembly RH.

HINT:

The crankshaft key faces downward at this time.

Text in Illustration

*1	Alignment Mark
*2	Key

- (c) Push down the chain tensioner slipper and retain the plunger by inserting a 2.5 mm (0.098 in.) diameter hexagonal wrench into the No. 1 chain tensioner assembly through the stopper plate.

- (d) Remove the 2 bolts and No. 1 chain tensioner assembly.

- (e) Remove the chain tensioner slipper.

- (f) Using a 5 mm hexagonal wrench, remove the bolt and No. 1 chain vibration damper.

- (g) Remove the chain sub-assembly (for bank 1).

NOTICE:

- With the chain sub-assembly (for bank 1) removed, the valve heads may contact each other if the camshafts are turned, causing the valve stems to bend.
- To avoid this, do not turn the intake camshaft RH and the exhaust camshaft RH more than zero-lift range (The range where camshafts can be turned lightly by hand).

HINT:

Arrange the removed parts in the correct order.

26. REMOVE CHAIN SUB-ASSEMBLY (for Bank 2)

- (a) Turn the crankshaft and position each alignment mark on the crankshaft timing gear or sprocket, camshaft timing intake gear assembly LH and camshaft timing exhaust gear assembly LH as shown in the illustration.

Text in Illustration

*1	Key
*2	Alignment Mark

- (b) Push the chain tensioner slipper and retain the plunger by inserting an approximately 1 mm (0.039 in.) diameter wire into the No. 2 chain tensioner assembly through the stopper plate .

- (c) Remove the 2 bolts and No. 2 chain tensioner assembly.

- (d) Remove the chain tensioner slipper.

(e) Remove the O-ring from the cylinder block.

(f) Using a 5 mm socket hexagon wrench, remove the bolt and No. 1 chain vibration damper.

(g) Remove the chain sub-assembly (for bank 2).

NOTICE:

- With the chain sub-assembly (for bank 2) removed, the valve heads may contact each other if the camshafts are turned, causing the valve stems to bend. To avoid this, do not turn the exhaust camshaft LH more than zero-lift range (The range where the camshaft can be turned lightly by hand).
- At this time, No. 1 and No. 4 pistons are located near TDC. If the intake camshaft is turned, the valves may come into contact with the piston, causing the valve stems to bend. To avoid this, do not turn the intake camshaft LH.

HINT:

Arrange the removed parts in the correct order.

27. ROTATE CRANK SHAFT AND CAMSHAFT INFO

28. REMOVE CRANKSHAFT TIMING GEAR OR SPROCKET

(a) Remove the crankshaft timing gear or sprocket.

HINT:

Make sure the front-back direction and make a mark for installation if necessary.

29. REMOVE CAMSHAFT TIMING INTAKE GEAR ASSEMBLY RH INFO

30. REMOVE CAMSHAFT TIMING EXHAUST GEAR ASSEMBLY RH INFO

31. REMOVE CAMSHAFT TIMING INTAKE GEAR ASSEMBLY LH INFO

32. REMOVE CAMSHAFT TIMING EXHAUST GEAR ASSEMBLY LH INFO**33. REMOVE SPARK PLUG**

(a) Using a 14 mm spark plug wrench, remove the 4 spark plugs.

34. REMOVE INJECTOR DRIVER BRACKET

(a) Remove the 2 bolts and injector driver bracket.

**35. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY RH**

(a) Operate the engine stand so that the bank 1 side faces upward.

(b) Remove the 8 bolts.

(c) Using a screwdriver with its tip wrapped in protective tape, remove the cylinder head cover sub-assembly RH.

NOTICE:

Do not damage the camshaft housing sub-assembly RH, cam caps and cylinder head cover sub-assembly RH.

(d) Remove the cylinder head cover gasket.

(e) Remove the 2 spark plug tube gaskets.

NOTICE:

When removing the seal packing left on the camshaft housing sub-assembly RH using a scraper, use special care not to damage the camshafts.

**36. REMOVE CAMSHAFT HOUSING SUB-ASSEMBLY RH**

NOTICE:

Do not remove the intake and exhaust camshafts first as it may cause a deformation of the cylinder head sub-assembly.

- (a) Loosen the 9 bolts in the order shown in the illustration and remove them.

- (b) Using a screwdriver with its tip wrapped in protective tape, remove the camshaft housing sub-assembly RH.

NOTICE:

Do not damage the cylinder head sub-assembly RH and camshaft housing sub-assembly RH.

- (c) Remove the 2 O-rings and 8 No. 1 valve rocker arm sub-assemblies from the cylinder head sub-assembly.

HINT:

Arrange the removed parts in the correct order.

- (d) Remove the 8 valve adjusting shims and 8 roller rocker arm pivots from the cylinder head sub-assembly.

HINT:

Arrange the removed parts in the correct order.

**37. REMOVE CYLINDER HEAD SUB-ASSEMBLY RH** INFO**38. REMOVE CYLINDER HEAD GASKET** INFO**39. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY LH**

- (a) Operate the engine stand so that the bank 2 side faces upward.

(b) Remove the 8 bolts.

(c) Using a screwdriver with its tip wrapped in protective tape, remove the cylinder head cover sub-assembly LH.

NOTICE:

Do not damage the camshaft housing sub-assembly LH, cam caps and cylinder head cover sub-assembly LH.

(d) Remove the cylinder head cover gasket.

(e) Remove the 2 spark plug tube gaskets.

NOTICE:

When removing the seal packing left on the camshaft housing sub-assembly LH using a scraper, use special care not to damage the camshafts.

40. REMOVE CAMSHAFT HOUSING SUB-ASSEMBLY LH

NOTICE:

Do not remove the intake and exhaust camshafts first as it may cause a deformation of the camshaft housing sub-assembly LH.

(a) Loosen the 9 bolts in the order shown in the illustration and remove them.

(b) Using a screwdriver with its tip wrapped in protective tape, remove the camshaft housing sub-assembly LH.

NOTICE:

Do not damage the cylinder head sub-assembly LH and camshaft housing sub-assembly LH.

- (c) Remove the 2 O-rings and 8 No. 1 valve rocker arm sub-assemblies from the cylinder head sub-assembly LH.

HINT:

Arrange the removed parts in the correct order.

- (d) Remove the 8 valve adjusting shims and 8 roller rocker arm pivots from the cylinder head sub-assembly LH.

HINT:

Arrange the removed parts in the correct order.

**41. REMOVE CYLINDER HEAD SUB-ASSEMBLY LH** INFO**42. REMOVE NO. 2 CYLINDER HEAD GASKET** INFO**43. REMOVE NO. 2 ENGINE HANGER**

- (a) Remove the 2 bolts and No. 2 engine hanger from the cylinder block (for bank 1).

**44. REMOVE NO. 2 OIL PAN SUB-ASSEMBLY**

- (a) Remove the drain plug and gasket.

- (b) Remove the 11 bolts.

- (c) Using an oil pan seal cutter, remove the No. 2 oil pan sub-assembly.

NOTICE:

Do not damage the contact surface and flange part of the No. 2 oil pan sub-assembly.

- (d) Remove the 2 seal rings from the No. 2 oil pan sub-assembly.

45. REMOVE OIL STRAINER SUB-ASSEMBLY

- (a) Remove the 2 bolts and oil strainer sub-assembly.

- (b) Remove the O-ring.

46. REMOVE OIL PAN SUB-ASSEMBLY

- (a) Remove the 13 bolts.

- (b) Using a screwdriver with its tip wrapped in protective tape, remove the oil pan sub-assembly.

NOTICE:

Do not damage the cylinder block and oil pan sub-assembly.

(c) Remove the 3 O-rings from the cylinder block.

(d) Remove the 4 bolts and baffle plate from the oil pan sub-assembly.

(e) Remove the 2 stud bolts from the oil pan sub-assembly.

47. REMOVE CAMSHAFT BEARING CAP (for Bank 1) INFO

48. REMOVE CAMSHAFT (for Bank 1) INFO

49. REMOVE OIL CONTROL VALVE FILTER (for Bank 1)

(a) Remove the 2 oil control valve filters from the camshaft housing sub-assembly RH.

50. REMOVE OIL SPACER RH

- (a) Remove the 2 bolts and oil spacer RH.

51. REMOVE CAMSHAFT OIL FEED PIPE SUB-ASSEMBLY (for Automatic Transmission)

- (a) Remove the 2 union bolts, the bolt, camshaft oil feed pipe sub-assembly and 2 gaskets from the camshaft housing sub-assembly RH.

52. REMOVE HOLE PLUG (for Manual Transmission)

- (a) Remove the hole plug and gasket from the camshaft housing sub-assembly RH.

53. REMOVE CAMSHAFT BEARING CAP (for Bank 2) INFO

54. REMOVE CAMSHAFT (for Bank 2) INFO

55. REMOVE OIL CONTROL VALVE FILTER (for Bank 2)

- (a) Remove the 2 oil control valve filters from the camshaft housing sub-assembly LH.

56. REMOVE OIL SPACER LH

(a) Remove the 2 bolts and oil spacer LH.

Last Modified: 4-14-2014	6.6 G	Doc ID: RM000000XCV08FX
Model Year: 2013	Model: FR-S	Prod Date Range: [03/2012 -]
Title: FA20 ENGINE MECHANICAL: ENGINE UNIT: INSPECTION; 2013 MY FR-S [03/2012 -]		

INSPECTION

1. INSPECT NO. 1 VALVE ROCKER ARM SUB-ASSEMBLY

- (a) Check that the roller moves smoothly by rotating it by hand.

Replace the No. 1 valve rocker arm sub-assembly if the roller does not rotate smoothly.

2. INSPECT CHAIN SUB-ASSEMBLY

- (a) Check the chain sub-assembly for deformation, cracks or other damages.

If the chain sub-assembly has any defects, replace it.

3. INSPECT CAMSHAFT TIMING GEAR

- (a) Check the camshaft timing gear teeth for abnormal wear and scratches.

If the camshaft timing gear has any defects, replace it.

4. INSPECT CRANKSHAFT TIMING GEAR OR SPROCKET

- (a) Check the crankshaft timing gear or sprocket teeth for abnormal wear and scratches.

If necessary, replace it.

- (b) Check that there is no play between the crankshaft timing gear or sprocket and the key.

If necessary, replace the crankshaft timing gear or sprocket or the key.

5. INSPECT CHAIN TENSIONER SLIPPER

- (a) Check the chain tensioner slipper for deformation, cracks or other damages.

6. INSPECT NO. 1 CHAIN VIBRATION DAMPER

- (a) Check the No. 1 chain vibration damper for deformation, cracks or other damages.

7. INSPECT CHAIN TENSIONER ASSEMBLY

- (a) Check the chain tensioner assembly for deformation, cracks or other damages.

- (b) Check that the plunger moves smoothly when it is unlocked.

If the plunger does not move smoothly, replace the chain tensioner assembly.

- (c) Check that the plunger does not move when it is locked.

8. INSPECT CAMSHAFT HOUSING SUB-ASSEMBLY

- (a) Visually check the oil control valve filters, and if clogging is found, replace them with new ones.
- (b) Check the camshaft housing sub-assembly journals for damage and wear. Replace the camshaft housing sub-assembly if necessary.

9. INSPECT CAMSHAFT

- (a) Check the camshaft journals for damage and wear.

Replace the camshaft if necessary.

- (b) Check the cam face condition.

Replace the camshaft if uneven wear is found.

HINT:

Remove the minor faults by smoothing the surface with 400-grit sandpaper.

- (c) Inspect for runout.

- (1) Place the camshaft on V-blocks.

- (2) Using a dial indicator, measure the circle runout at the center journal.

Maximum circle runout:

0.020 mm (0.00079 in.)

If the circle runout is more than the maximum, replace the camshaft.

HINT:

Measurement should be performed at a temperature of 20°C (68°F).

- (d) Inspect for cam height.

- (1) Using a micrometer, measure the cam lobe height.

Standard height (Intake):

POSITION	STANDARD

A	40.82 to 40.92 mm (1.6083 to 1.6110 in.)
B	34.0 mm (1.3386 in.)

Standard height (Exhaust):

POSITION	STANDARD
A	40.72 to 40.82 mm (1.6031 to 1.6071 in.)
B	34.0 mm (1.3386 in.)

Standard height (For fuel pump):

POSITION	STANDARD
C	40.55 to 40.65

Text in Illustration

*a	For Valve
*b	For Fuel Pump

If the result is not as specified, replace the camshaft.

HINT:

Measurement should be performed at a temperature of 20°C (68°F).

(e) Inspect for camshaft journals.

(1) Using a micrometer, measure the journal diameter.

Standard journal diameter:

25.946 to 25.963 mm (1.02149 to 1.02216 in.)

If the result is not as specified, check the oil clearance.

HINT:

Measurement should be performed at a temperature of 20°C (68°F).

10. INSPECT CAMSHAFT OIL CLEARANCE

(a) Using a dial indicator, measure the thrust clearance while moving the camshaft back and forth.

Standard thrust clearance:

0.0068 to 0.1160 mm (0.00027 to 0.00457 in.)

If the clearance is not as specified or if uneven wear is found, replace each camshaft cap and camshaft housing

as a set. If necessary replace the camshaft.

HINT:

- Measurement should be performed at a temperature of 20°C (68°F).
- Set the dial indicator at the end surface of the camshaft.

11. INSPECT CAMSHAFT OIL CLEARANCE

HINT:

Measurement should be performed at a temperature of 20°C (68°F).

- Remove the seal packing from camshaft housing and front camshaft cap, intake rear camshaft cap and exhaust rear camshaft cap.
- Clean each camshaft cap and camshaft housing journal.
- Set the camshafts on the camshaft housing.
- Place a plastigauge across the camshaft journals and set the camshaft caps.
- Tighten the bolts in the order shown in the illustration to install the front camshaft cap, intake center camshaft cap, intake rear camshaft cap, exhaust center camshaft cap and exhaust rear camshaft cap.

Text in Illustration

*a	for Bank 1	*b	for Bank 2
----	------------	----	------------

Torque:

18 N·m {184 kgf·cm, 13ft·lbf}

- Using several steps, uniformly loosen the bolts in the order shown in the illustration, and remove the front camshaft cap, intake center camshaft cap, intake rear camshaft cap, exhaust center camshaft cap and exhaust rear camshaft cap.

Text in Illustration

*a	for Bank 1	*b	for Bank 2
----	------------	----	------------

(g) Measure the widest point of the plastigauge on each journal.

Standard oil clearance:

0.037 to 0.072 mm (0.00146 to 0.00283 in.)

If the clearance is not as specified, replace each camshaft cap and camshaft housing as a set. If necessary, replace the camshaft.

(h) Completely remove the plastigauge.

Last Modified: 4-14-2014	6.6 A	Doc ID: RM000000N81019X
Model Year: 2013	Model: FR-S	Prod Date Range: [03/2012 -]
Title: FA20 ENGINE MECHANICAL: ENGINE UNIT: INSTALLATION; 2013 MY FR-S [03/2012 -]		

INSTALLATION

1. INSTALL IGNITION COIL ASSEMBLY

(a) Install the 4 ignition coils with the 4 bolts.

Torque:

8.5 N·m {87 kgf·cm, 75in·lbf}

2. INSTALL NO. 1 WATER BY-PASS PIPE (for Manual Transmission)

(a) Install the No. 1 water by-pass pipe with the 2 bolts.

Torque:

6.4 N·m {65 kgf·cm, 57in·lbf}

(b) Connect the water by-pass hose with the hose clamp.

3. INSTALL NO. 1 WATER BY-PASS PIPE (for Automatic Transmission)

(a) Install the No. 1 water by-pass pipe with the 2 bolts.

Torque:

6.4 N·m {65 kgf·cm, 57in·lbf}

(b) Connect the 2 water by-pass hoses with the 2 hose clamps.

4. CONNECT NO. 3 TRANSMISSION OIL COOLER HOSE (for Automatic Transmission)

(a) Connect the No. 3 transmission oil cooler hose with the hose clamp.

5. INSTALL NO. 2 WATER BY-PASS HOSE

(a) Connect the No. 2 water by-pass hose with the clamp.

6. CONNECT NO. 2 VENTILATION HOSE

(a) Connect the No. 2 ventilation hose.

7. INSTALL ENGINE WIRE

(a) Connect the ground wire with the 2 bolts.

Torque:

19 N·m {194 kgf·cm, 14ft·lbf}

(b) Connect each connector and each clamp to fix the engine wire as shown in the illustration, and check that the engine wire is correctly installed.

Text in Illustration

*1	Ground Wire	-	-
*a	Upper side	*b	Front side
*c	Right side	*d	Left side

- (b) Install the intake manifold with the 6 bolts.

Torque:

25 N·m {255 kgf·cm, 18ft·lbf}

- (c) Engage the 2 clamps and connect the 4 connectors.
- (d) Connect the fuel pump connector.
- (e) Connect the No. 1 vacuum switching valve assembly connector.
- (f) Connect the vacuum sensor connector.
- (g) Connect the 2 water by-pass hoses to the throttle body assembly.
- (h) Connect the throttle body assembly connector.

18. CONNECT VENTILATION HOSE INFO**19. INSTALL FUEL DELIVERY PIPE SUB-ASSEMBLY**

- (a) Install the fuel delivery pipe sub-assembly to the fuel pump assembly with a new gasket and the union bolt.

Torque:

31 N·m {316 kgf·cm, 23ft·lbf}

- (b) Connect the No. 2 fuel vapor feed hose.
- (c) Install the bolt and connect the fuel delivery pipe sub-assembly.

Torque:

6.4 N·m {65 kgf·cm, 57in·lbf}

20. INSTALL INJECTOR COVER (for Bank 2)

- (a) Install the injector cover to the intake manifold with the 2 bolts.

Torque:

19 N·m {194 kgf·cm, 14ft·lbf}

21. INSTALL INJECTOR COVER (for Bank 1)

- (a) Install the injector cover to the intake manifold with the 2 bolts.

Torque:

19 N·m {194 kgf·cm, 14ft·lbf}

22. INSTALL COMPRESSOR WITH MAGNET CLUTCH INFO

23. INSTALL V-RIBBED BELT TENSIONER ASSEMBLY INFO

24. INSTALL NO. 2 IDLER PULLEY SUB-ASSEMBLY INFO

25. INSTALL OIL LEVEL DIPSTICK GUIDE INFO

26. INSTALL GENERATOR ASSEMBLY

(a) Install the generator assembly with the 2 bolts.

Torque:

25 N·m {255 kgf·cm, 18ft·lbf}

27. INSTALL FAN AND GENERATOR V BELT INFO

28. INSTALL BELT GENERATOR COVER INFO

29. INSTALL GENERATOR COVER INFO

Last Modified: 4-14-2014	6.6 A	Doc ID: RM000000T4Y0BBX
Model Year: 2013	Model: FR-S	Prod Date Range: [03/2012 -]
Title: FA20 ENGINE MECHANICAL: ENGINE UNIT: REASSEMBLY; 2013 MY FR-S [03/2012 -]		

REASSEMBLY

1. INSTALL OIL SPACER LH

(a) Install the oil spacer LH with the 2 bolts.

Torque:

6.4 N·m {65 kgf·cm, 57in·lbf}

2. INSTALL OIL CONTROL VALVE FILTER (for Bank 2)

(a) Install 2 new oil control valve filters to the camshaft housing sub-assembly LH as shown in the illustration.

Text in Illustration

*a	0 to 0.5 mm (0 to 0.0197 in.) from the face of the camshaft housing sub-assembly LH
----	---

3. INSTALL CAMSHAFT (for Bank 2) INFO

4. INSTALL CAMSHAFT CAP (for Bank 2) INFO

5. INSTALL HOLE PLUG (for Manual Transmission)

(a) Install a new gasket and the hole plug to the camshaft housing sub-assembly RH.

Torque:

25 N·m {255 kgf·cm, 18ft·lbf}

6. INSTALL CAMSHAFT OIL FEED PIPE SUB-ASSEMBLY (for Automatic Transmission)

- (a) Temporarily install 2 new gaskets and the camshaft oil feed pipe sub-assembly with the bolt and 2 union bolts.

- (b) Tighten the 2 union bolts to the specified torque.

Torque:

31 N·m {316 kgf·cm, 23ft·lbf}

- (c) Tighten the bolt to the specified torque.

Torque:

6.4 N·m {65 kgf·cm, 57in·lbf}

7. INSTALL OIL SPACER RH

- (a) Install the oil spacer RH with the 2 bolts.

Torque:

6.4 N·m {65 kgf·cm, 57in·lbf}

8. INSTALL OIL CONTROL VALVE FILTER (for Bank 1)

- (a) Install 2 new oil control valve filters to the camshaft housing sub-assembly RH as shown in the illustration.

Text in Illustration

*a	0 to 0.5 mm (0 to 0.0197 in.) from the face of the camshaft housing sub-assembly RH
----	---

9. INSTALL CAMSHAFT (for Bank 1) INFO

10. INSTALL CAMSHAFT CAP (for Bank 1) INFO**11. INSTALL OIL PAN SUB-ASSEMBLY**

(a) Install the 2 stud bolts to the oil pan sub-assembly.

Torque:

10 N·m {102 kgf·cm, 7ft·lbf}

Standard height (A):

70.0 mm (2.756 in.)

(b) Install the baffle plate to the oil pan sub-assembly with the 4 bolts.

Torque:

6.4 N·m {65 kgf·cm, 57in·lbf}

(c) Apply seal packing in a continuous line as shown in the illustration.

Seal packing:

Three Bond 1217G, 1217H or equivalent

Text in Illustration

*a	Seal Packing
*b	φ4.0 to 6.0 mm (0.158 to 0.236 in.)
*c	1.5 mm (0.059 in.)
*d	Chamfer edge

NOTICE:

- Clean and degrease the contact surface.
- Install the oil pan sub-assembly within 5 minutes of applying seal packing.
- Apply seal packing 1.5 mm (0.0591 in.) away from the outer side of the chamfer edge. However, it is allowed to apply the seal packing on the chamfer around the bolt hole.

(d) Install 3 new O-rings to the cylinder block.

(e) Tighten the 13 bolts in the order shown in the illustration to install the oil pan sub-assembly to the cylinder block.

Text in Illustration

	Bolt A
	Bolt B

Length of bolt A:
 25.0 mm (0.984 in.)
 Length of bolt B:
 75.0 mm (2.953 in.)

HINT:

After tightening the bolts, if the seal packing is squeezed out onto the seal surface of the chain cover, completely remove it.

12. INSTALL OIL STRAINER SUB-ASSEMBLY

- (a) Install a new O-ring.
- (b) Install the oil strainer sub-assembly to the oil pan sub-assembly with the 2 bolts.

Torque:

6.4 N·m { 65 kgf·cm, 57in·lbf }

13. INSTALL NO. 2 OIL PAN SUB-ASSEMBLY

- (a) Install 2 new oil pan seal rings to the No. 2 oil pan sub-assembly.

- (b) Apply seal packing in a continuous line as shown in the illustration.

Seal packing:

Three Bond 1217G, 1217H or equivalent

NOTICE:

- Clean and degrease the contact surface.
- Install the No. 2 oil pan sub-assembly within 5 minutes of applying seal packing.

Text in Illustration

*a	Seal Packing
*b	9.5 mm (0.374 in.)
*c	φ4.0 to 6.0 mm (0.158 to 0.236 in.)

- (c) Tighten the 11 bolts in the order shown in the illustration to install the No. 2 oil pan sub-assembly.

Torque:

6.4 N·m {65 kgf·cm, 57in·lbf}

- (d) Install a new gasket and the drain plug.

Torque:

42 N·m {425 kgf·cm, 31ft·lbf}

14. INSTALL NO. 2 ENGINE HANGER

- (a) Install the No. 2 engine hanger to the cylinder block (for bank 1) with the 2 bolts.

Torque:

21 N·m {214 kgf·cm, 16ft·lbf}

15. INSTALL NO. 2 CYLINDER HEAD GASKET INFO

16. INSTALL CYLINDER HEAD SUB-ASSEMBLY LH INFO

17. INSTALL CAMSHAFT HOUSING SUB-ASSEMBLY LH

- (a) Apply engine oil to the 8 valve adjusting shims and 8 roller rocker arm pivots, and then install them to the cylinder head sub-assembly LH.

- (b) Apply engine oil to 2 new O-rings and the 8 No. 1 valve rocker arm sub-assemblies, and then install them to the cylinder head sub-assembly LH.

- (c) Apply seal packing in a continuous line as shown in the illustration.

Seal packing:

Three Bond 1217G, 1217H or equivalent

Text in Illustration

*a	Chamfer edge	*b	Range of B-B
*c	within 1.0 mm (0.0394 in.)	*d	φ2.5 to 3.5 mm (0.098 to 0.138 in.)
*e	-0.5 to 0.5 mm (-0.0197 to 0.0197 in.)	*f	18.0 mm (0.709 in.)

NOTICE:

- Clean and degrease the contact surface.
- Do not apply excessive seal packing.
- Install the camshaft housing sub-assembly LH within 5 minutes of applying seal packing.
- After tightening the bolts, if the seal packing is squeezed out onto the seal surface of the chain cover, completely remove it.

(d) Tighten the 9 bolts in the order shown in the illustration to install the camshaft housing sub-assembly LH.

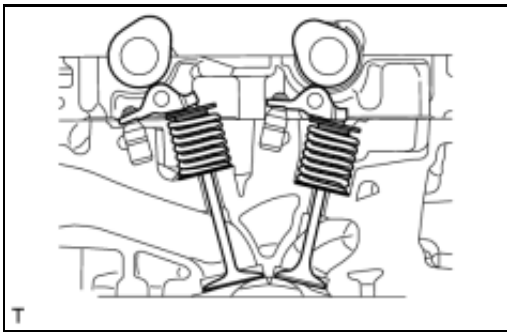

Torque:

18 N·m {184 kgf·cm, 13ft·lbf}

HINT:

Set the intake camshaft LH and the exhaust camshaft LH to the zero-lift position.

(e) Loosen the 3 bolts by 180° in the order shown in the illustration.

(f) Tighten the 3 bolts in the order shown in the illustration.

Torque:

18 N·m {184 kgf·cm, 13ft·lbf}

(g) Loosen the 3 bolts by 180° in the order shown in the illustration.

(h) Tighten the 3 bolts in the order shown in the illustration.

Torque:

18 N·m {184 kgf·cm, 13ft·lbf}

- (i) Loosen the 3 bolts by 180° in the order shown in the illustration.

- (j) Tighten the 3 bolts in the order shown in the illustration.

Torque:

18 N·m {184 kgf·cm, 13ft·lbf}

HINT:

After tightening the bolts, if the seal packing is squeezed out onto the seal surface of the chain cover, completely remove it.

18. INSPECT VALVE CLEARANCE (for Bank 2)

NOTICE:

With the chain sub-assembly (for bank 2) removed, valve heads may contact each other if the camshafts are turned, causing the valve stems to bend. To avoid this, do not turn the intake camshaft LH and exhaust camshaft LH more than the zero-lift range (The range where the camshafts can be turned lightly by hand).

- (a) Using a feeler gauge, check the valve clearance between the cam base circle and the roller surface of the No. 1 valve rocker arm sub-assembly.

Standard valve clearance (cold):

0.10 to 0.16 mm (0.0039 to 0.0063 in.) for intake

0.21 to 0.27 mm (0.0083 to 0.0106 in.) for exhaust

HINT:

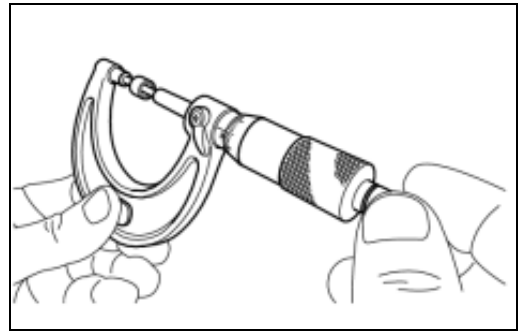

- Set the intake camshaft LH and the exhaust camshaft LH to the zero-lift position.
- If the clearance is not as specified, take notes of the value in order to adjust the valve clearance later on.

19. ADJUST VALVE CLEARANCE (for Bank 2)

- (a) Remove the camshaft housing sub-assembly LH.
- (b) Remove the No. 1 valve rocker arm sub-assemblies.

(c) Remove the valve adjusting shims.

(d) Using a micrometer, measure the thickness of the valve adjusting shims.

(e) Calculate the thickness of the valve adjusting shim so that the valve clearance comes within the specified values.

Intake side:

$$A = B + (C - 0.13 \text{ mm (0.0051 in.)}) \times 1.54$$

Exhaust side:

$$A = B + (C - 0.24 \text{ mm (0.0094 in.)}) \times 1.69$$

A:

Required valve adjusting shim thickness

B:

Removed valve adjusting shim thickness

C:

Measured valve clearance

(f) Apply engine oil to the inner face of the valve adjusting shims and install them to the valves.

NOTICE:

Check if the shims can be rotated smoothly on the valves.

(g) Install the No. 1 valve rocker arm sub-assemblies.

(h) Install the camshaft housing sub-assembly LH.

(i) Check that the No. 1 valve rocker arm sub-assemblies are correctly installed.

20. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY LH

(a) Apply a light layer of engine oil to 2 new spark plug tube gaskets and install them to the spark plug tubes as shown in the illustration.

Text in Illustration

*a	Spark plug tube edge
----	----------------------

(b) Install a new cylinder head cover gasket to the cylinder head cover sub-assembly LH.

(c) Apply seal packing to the mating surface of cylinder head cover sub-assembly LH as shown in the illustration.

Seal packing:
Three Bond 1217G, 1217H or equivalent

AREA	APPLICATION LENGTH
A	10.0 mm (0.394 in.) or more
B	18.8 mm (0.740 in.) or more
C	63.0 mm (2.480 in.) or more

Text in Illustration

*a	Arch starting point
*b	φ2,0 to 4.0 mm (0.079 to 0.158 in.)

(d) Tighten the 8 bolts in the order shown in the illustration and install the cylinder head cover sub-assembly LH.

Torque:

6.4 N·m {65 kgf·cm, 57in·lbf}

21. INSTALL CYLINDER HEAD GASKET INFO

22. INSTALL CYLINDER HEAD SUB-ASSEMBLY RH INFO

23. INSTALL CAMSHAFT HOUSING SUB-ASSEMBLY RH

(a) Apply engine oil to the 8 valve adjusting shims and 8 roller rocker arm pivots, and then install them to the cylinder head sub-assembly.

(b) Apply engine oil to 2 new O-rings and the 8 No. 1 valve rocker arm sub-assemblies, and then install them to the cylinder head sub-assembly.

(c) Apply seal packing in a continuous line as shown in the illustration.

Seal packing:

Three Bond 1217G, 1217H or equivalent

Text in Illustration

*a	Range of B-B	*b	0 to 1.0 mm (0 to 0.0394 in.)
*c	φ2.5 to 3.5 mm (0.098 to 0.138 in.)	*d	-0.5 to 0.5 mm (-0.0197 to 0.0197 in.)
*e	Chamfer edge	*f	18.0 mm (0.709 in.)

NOTICE:

- Clean and degrease the contact surface.
- Do not apply excessive seal packing.
- Install the camshaft housing sub-assembly RH within 5 minutes of applying seal packing.
- After tightening the bolts, if the seal packing is squeezed out onto the seal surface of the chain cover, completely remove it.

(d) Tighten the 9 bolts in the order shown in the illustration to install the camshaft housing sub-assembly RH.

**Torque:**

18 N·m {184 kgf·cm, 13ft·lbf}

HINT:

Set the intake camshaft RH and the exhaust camshaft RH to the zero-lift position.

(e) Loosen the 3 bolts by 180° in the order shown in the illustration.

(f) Tighten the 3 bolts in the order shown in the illustration.

Torque:

18 N·m {184 kgf·cm, 13ft·lbf}

- (g) Loosen the 3 bolts by 180° in the order shown in the illustration.

- (h) Tighten the 3 bolts in the order shown in the illustration.

Torque:

18 N·m {184 kgf·cm, 13ft·lbf}

- (i) Loosen the 3 bolts by 180° in the order shown in the illustration.

- (j) Tighten the 3 bolts in the order shown in the illustration.

Torque:

18 N·m {184 kgf·cm, 13ft·lbf}

HINT:

After tightening the bolts, if the seal packing is squeezed out onto the seal surface of the chain cover, completely remove it.

24. INSPECT VALVE CLEARANCE (for Bank 1)

NOTICE:

With the chain sub-assembly (for bank 1) removed, valve heads may contact each other if the camshafts are turned, causing the valve stems to bend. To avoid this, do not turn the intake camshaft RH and exhaust camshaft RH more than the zero-lift range (The range where the camshafts can be turned lightly by hand).

- (a) Using a feeler gauge, check the valve clearance between the cam base circle and the roller surface of the No. 1 valve rocker arm sub-assembly.

Standard valve clearance (cold):

0.10 to 0.16 mm (0.0039 to 0.0063 in.) for intake

0.21 to 0.27 mm (0.0083 to 0.0106 in.) for exhaust

HINT:

- Set the intake camshaft RH and the exhaust camshaft RH to the zero-lift position.
- If the clearance is not as specified, take notes of the value in order to adjust the valve clearance later on.

25. ADJUST VALVE CLEARANCE (for Bank 1)

- Remove the camshaft housing sub-assembly RH.
- Remove the No. 1 valve rocker arm sub-assemblies.
- Remove the valve adjusting shims.

- Using a micrometer, measure the thickness of the valve adjusting shims.

- Calculate the thickness of the valve adjusting shim so that the valve clearance comes within the specified values.

Intake side:

$$A = B + (C - 0.13 \text{ mm (0.0051 in.)}) \times 1.54$$

Exhaust side:

$$A = B + (C - 0.24 \text{ mm (0.0094 in.)}) \times 1.69$$

A:

Required valve adjusting shim thickness

B:

Removed valve adjusting shim thickness

C:

Measured valve clearance

- Apply engine oil to the inner face of the valve adjusting shims and install them to the valves.

NOTICE:

Check if the shims can be rotated smoothly on the valves.

- (g) Install the No. 1 valve rocker arm sub-assemblies.
- (h) Install the camshaft housing sub-assembly RH.
- (i) Check that the No. 1 valve rocker arm sub-assemblies are correctly installed.

26. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY RH

- (a) Apply a light layer of engine oil to 2 new spark plug tube gaskets and install them to the spark plug tubes as shown in the illustration.

Text in Illustration

*a	Spark plug tube edge
----	----------------------

- (b) Install a new cylinder head cover gasket to the cylinder head cover sub-assembly RH.
- (c) Apply seal packing to the mating surface of cylinder head cover sub-assembly RH as shown in the illustration.

Seal packing:
Three Bond 1217G, 1217H or equivalent

AREA	APPLICATION LENGTH
A	10.0 mm (0.394 in.) or more
B	68.0 mm (2.677 in.) or more
C	70.7 mm (2.784 in.) or more

Text in Illustration

*a	Arch starting point
*b	φ2,0 to 4.0 mm (0.079 to 0.158 in.)

- (d) Tighten the 8 bolts in the order shown in the illustration and install the cylinder head cover sub-assembly RH.

Torque:

6.4 N·m { 65 kgf·cm, 57in·lbf }

27. INSTALL INJECTOR DRIVER BRACKET

(a) Install the injector driver bracket with the 2 bolts.

Torque:

6.4 N·m {65 kgf·cm, 57in·lbf}

28. INSTALL SPARK PLUG

(a) Using a 14 mm spark plug wrench, install the 4 spark plugs.

Torque:

17 N·m {173 kgf·cm, 13ft·lbf}

29. INSTALL CAMSHAFT TIMING EXHAUST GEAR ASSEMBLY LH INFO

30. INSTALL CAMSHAFT TIMING INTAKE GEAR ASSEMBLY LH INFO

31. INSTALL CAMSHAFT TIMING EXHAUST GEAR ASSEMBLY RH INFO

32. INSTALL CAMSHAFT TIMING INTAKE GEAR ASSEMBLY RH INFO

33. INSTALL CRANKSHAFT TIMING GEAR OR SPROCKET

(a) Install the crankshaft timing gear or sprocket.

HINT:

The crankshaft timing gear or sprocket should be installed as it was before.

34. INSTALL CHAIN SUB-ASSEMBLY (for Bank 2)

NOTICE:

Do not allow any foreign matter to adhere or to enter into the component parts during installation.

HINT:

Apply engine oil to all component parts of the chain sub-assembly.

(a) Temporarily install the crank pulley bolt to the crankshaft.

(b) Move the link plate in the direction of the arrow in the illustration to press in the plunger.

Text in Illustration

*1	Link Plate
*2	Plunger

- (c) Insert an approximately 1 mm (0.0394 in.) diameter wire or the like into the chain tensioner assembly through the stopper pin hole, and hold the plunger.

Text in Illustration

*1	First notch of the plunger rack
*2	Stopper Tooth

**HINT:**

If the stopper pin hole on the link plate and the stopper pin hole on the chain tensioner assembly are not aligned, check that the first notch of the plunger rack is engaged with the stopper tooth. If not engaged, retract the plunger a little so that the first notch of the plunger rack is engaged with the stopper tooth.

- (d) Check that the crankshaft timing gear or sprocket is located at the position shown in the illustration. If not, turn the crankshaft to align the crankshaft timing gear or sprocket alignment mark as shown in the illustration.

Text in Illustration

*a	Alignment Mark
----	----------------

**NOTICE:**

Make sure to perform this operation to prevent the valves and pistons from contacting each other.

- (e) Using SST, turn the camshaft timing intake gear assembly LH and align the alignment mark as shown in the illustration.

SST: 09960-10010

09962-01000

09963-00700

Text in Illustration

*a	Alignment Mark
----	----------------

NOTICE:

Do not turn the exhaust camshaft LH. If the exhaust camshaft LH is turned, valve heads may come into contact with each other, causing the valve stems to bend.

(f) Remove the crank pulley bolt from the crankshaft.

(g) Temporarily install the crankshaft pulley spacer and crankshaft pulley to the crankshaft with the crank pulley bolt.

HINT:

Put a mark on the crankshaft pulley to mark the position of the crankshaft timing gear key.

(h) Using SST, turn the crankshaft counterclockwise by 200° and align the crankshaft key as shown in the illustration.

SST: 09960-10010

09962-01000

09963-01000

Text in Illustration

*1	Key
----	-----

NOTICE:

Never turn the crankshaft clockwise because the valves may come into contact with the piston. Turning the crankshaft clockwise is only allowed when adjusting the key position precisely.

(i) Remove the crank pulley bolt, crankshaft pulley and crankshaft pulley spacer.

(j) Align the alignment mark on the camshaft timing exhaust gear assembly LH as shown in the illustration.

Text in Illustration

*a	Alignment Mark
----	----------------

**NOTICE:**

To avoid damaging the valves, do not turn the camshaft timing exhaust gear assembly LH more than the zero-lift range (The range where camshaft timing exhaust gear assembly LH can be turned lightly by hand).

- (k) Align the chain mark plate (blue) with the alignment mark on the crankshaft timing gear or sprocket.

Text in Illustration

*a	Alignment mark
*b	Timing mark
*c	Mark plate (Blue)
*d	Mark plate (Pink)

- (l) Align the chain mark plate (pink) with the timing mark on the camshaft timing intake gear assembly LH.
- (m) Align the chain mark plate (pink) with the timing mark on the camshaft timing exhaust gear assembly LH.
- (n) Using a 5 mm hexagon socket wrench, install the No. 1 chain vibration damper with the bolt.

Torque:

6.4 N·m { 65 kgf·cm, 57in·lbf }

HINT:

Apply engine oil to the bolt before install it.

- (o) Install a new O-ring to the cylinder block (for bank 2).

(p) Install the chain tensioner slipper.

(q) Install the No. 2 chain tensioner assembly with the 2 bolts.

Torque:

6.4 N·m {65 kgf·cm, 57in·lbf}

(r) Check that the chain is correctly installed.

Text in Illustration

*a	Alignment mark
*b	Timing mark
*c	Mark plate (Blue)
*d	Mark plate (Pink)

- (1) Chain mark plate (blue) is aligned with the alignment mark on the crankshaft timing gear or sprocket.
- (2) Chain mark plate (pink) is aligned with the timing mark on the camshaft timing intake gear assembly LH.
- (3) Chain mark plate (pink) is aligned with the timing mark on the camshaft timing exhaust gear assembly LH.

(s) Pull out the wire or the like from the No. 2 chain tensioner assembly.

(t) Temporarily install the crank pulley bolt to the crankshaft.

(u) Turn the crankshaft clockwise, and make sure that there are no abnormal conditions.

NOTICE:

Be sure to perform this confirmation.

35. INSTALL CHAIN SUB-ASSEMBLY (for Bank 1)

NOTICE:

Do not allow any foreign matter to adhere or to enter into the component parts during installation.

HINT:

Apply engine oil to all component parts of the chain sub-assembly.

(a) Move the link plate in the direction of the arrow in the

illustration to press in the plunger.

Text in Illustration

*1	Link Plate
*2	Plunger

- (b) Insert a 2.5 mm (0.098 in.) diameter hexagon wrench into the No. 1 chain tensioner assembly through the stopper pin hole, and hold the plunger.

Text in Illustration

*1	First notch of the plunger rack
*2	Stopper Tooth

HINT:

If the stopper pin hole on the link plate and the stopper pin hole on the chain tensioner assembly are not aligned, check that the first notch of the plunger rack is engaged with the stopper tooth. If not engaged, retract the plunger a little so that the first notch of the plunger rack is engaged with the stopper tooth.

- (c) Turn the crankshaft and align the alignment marks of the crankshaft timing gear or sprocket, camshaft timing intake gear assembly LH and camshaft timing exhaust gear assembly LH as shown in the illustration.

Text in Illustration

*a	Alignment Mark
----	----------------

HINT:

When the marks are aligned as shown in the illustration, crankshaft key faces directly underneath.

- (d) Align the alignment marks of the camshaft timing intake gear assembly RH and camshaft timing exhaust gear assembly RH as shown in the illustration.

Text in Illustration

*a	Alignment Mark
----	----------------

NOTICE:

To avoid damaging the valves, do not turn the camshaft timing intake gear assembly RH and camshaft timing exhaust gear assembly RH more than the zero-lift range (The range where the camshafts can be turned lightly by hand).

- (e) Align the chain mark plate (blue) with the alignment mark on the crankshaft timing gear or sprocket.

Text in Illustration

*a	Alignment mark

- (1) Chain mark plate (blue) is aligned with the alignment mark on the crankshaft timing gear or sprocket.
- (2) Chain mark plate (pink) is aligned with the timing mark on the camshaft timing intake gear assembly RH.
- (3) Chain mark plate (pink) is aligned with the timing mark on the camshaft timing exhaust gear assembly RH.

(l) Pull out the hexagon wrench from the No. 1 chain tensioner assembly.

(m) Turn the crankshaft clockwise, and make sure that there are no abnormal conditions.

NOTICE:

Be sure to perform this confirmation.

(n) Remove the crank pulley bolt.

36. INSTALL TIMING CHAIN OR BELT COVER SUB-ASSEMBLY

- (a) Apply a light layer of engine oil to 4 new O-rings and attach them to the engine.
- (b) Clean and degrease the contact surface.
- (c) If there are gaps at positions shown in the illustration, fill up with seal packing.

Seal packing:

Three Bond 1217G, 1217H or equivalent

(d) Apply seal packing in a continuous line as shown in the illustration.

Seal packing:

Three Bond 1217G, 1217H or equivalent

Text in Illustration

*a	Area A	*b	Boss (5 locations)
*c	Area B	*d	Other than ranges A and B

Bolt Length:

ITEM	LENGTH	ITEM	LENGTH
Bolt A	20 mm (0.787 in.)	Bolt B	50 mm (1.969 in.)
Bolt C	25 mm (0.984 in.)	Bolt D	60 mm (2.362 in.)

37. INSTALL TIMING CHAIN COVER OIL SEAL

(a) Apply engine oil to a new oil seal lip.

NOTICE:

- Keep the lip free from foreign matter.
- Do not apply engine oil to the dust seal section.

(b) Using SST and a hammer, tap in the new oil seal until its surface is flush with the timing chain or belt cover sub-assembly edge.

SST: 09223-22010

NOTICE:

- Do not tap the oil seal at an angle.
- Do not deform the oil seal.

HINT:

Alternatively, the tapping depth of the timing chain cover oil seal can be 0 to -1.0 mm (0 to -0.0394 in.) from the timing chain cover end surface.

38. INSTALL CRANKSHAFT PULLEY

- (a) Install the crankshaft pulley spacer.
- (b) Install a new O-ring to the crankshaft pulley spacer.
- (c) Install the crankshaft pulley while aligning the knock hole of the pulley with the knock pin on the crankshaft pulley spacer.

Text in Illustration

*1	Knock Hole
*2	Knock Pin

(d) Apply engine oil to threads and seat sections of the crankshaft pulley set bolt.

(e) Install SST to the crankshaft pulley.

SST: 09213-80010

90179-10016

09213-08010

09213-08110

HINT:

Position the projections on SST in the direction as shown in the illustration to prevent SST from separating from the crankshaft pulley.

Text in Illustration

39. INSTALL THERMOSTAT

- (a) Attach a new gasket to the thermostat.

40. INSTALL WATER OUTLET

- (a) Install the thermostat and water outlet with the 2 bolts.

Torque:

6.4 N·m {65 kgf·cm, 57in·lbf}

41. INSTALL ENGINE WATER PUMP ASSEMBLY

- (a) Install a new gasket and the water pump assembly with the 5 bolts.

Torque:

6.4 N·m {65 kgf·cm, 57in·lbf}

42. INSTALL WATER PUMP PULLEY

- (a) Temporarily install the water pump pulley with the 3 bolts.

(b) Using SST, hold the water pump pulley.

SST: 09960-10010

09962-01000

09963-00700

(c) Securely tighten the 3 bolts.

NOTICE:

Be careful not to let SST slip during the work.

Torque:

14 N·m {143 kgf·cm, 10ft·lbf}

43. INSTALL NO. 1 IDLER PULLEY SUB-ASSEMBLY

(a) Install the idler pulley cover and No. 1 idler pulley sub-assembly with the bolt.

Torque:

36 N·m {367 kgf·cm, 27ft·lbf}

44. INSTALL NO. 1 IDLER PULLEY SUB-ASSEMBLY

(a) Install the idler pulley cover and No. 1 idler pulley sub-assembly with the bolt.

Torque:

36 N·m {367 kgf·cm, 27ft·lbf}

45. INSTALL PCV VALVE SUB-ASSEMBLY

(a) Apply adhesive to 2 or 3 threads of the PCV valve sub-assembly.

Adhesive:

Three Bond 1141G or equivalent

Text in Illustration

*1	Adhesive 1141G
----	----------------

(b) Using a 19 mm deep socket wrench, install the PCV valve sub-assembly.

Torque:

23 N·m {235 kgf·cm, 17ft·lbf}

46. INSTALL WATER INLET PIPE

(a) Attach 2 new O-rings to the cylinder block.

(b) Install the water inlet pipe with the 4 bolts.

Torque:

6.4 N·m {65 kgf·cm, 57in·lbf}

(c) Connect the No. 3 water by-pass hose with the clamp.

47. INSTALL REAR CYLINDER HEAD PLATE (for Manual Transmission)

(a) Apply seal packing in a continuous line as shown in the illustration.

Seal packing:

Three Bond 1217G, 1217H or equivalent

Text in Illustration

*a	φ2,0 to 4.0 mm (0.079 to 0.158 in.)
*b	Within 1.0 mm (0.0394 in.)
*c	Chamfer edge

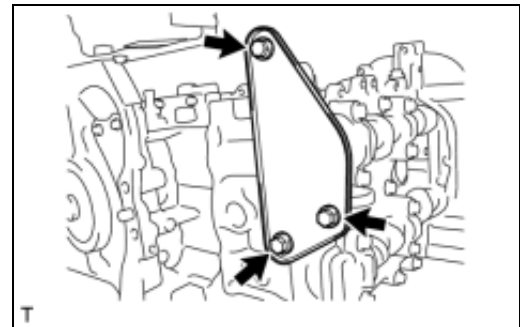

NOTICE:

- Clean and degrease the contact surface.
- Install the rear cylinder head plate within 5 minutes of applying seal packing.

(b) Install the rear cylinder head plate with the 3 bolts.

Torque:

16 N·m {163 kgf·cm, 12ft·lbf}

48. INSTALL VACUUM PUMP ASSEMBLY (for Automatic Transmission) INFO

49. INSTALL PCV HOSE CONNECTOR

(a) Connect the No. 2 water by-pass hose to the PCV hose connector and water inlet pipe with the clips.

(b) Install the PCV hose connector with the 3 bolts.

Torque:

6.4 N·m {65 kgf·cm, 57in·lbf}

50. INSTALL ENGINE OIL PRESSURE SWITCH ASSEMBLY

(a) Clean and degrease the threads of the engine oil pressure switch assembly.

(b) Apply adhesive 1324 to the threads of the engine oil pressure switch assembly.

Adhesive:

Toyota Genuine Adhesive 1324, Three Bond 1324 or equivalent

Text in Illustration

*1	Adhesive 1324
----	---------------

NOTICE:

Keep the oil hole free from adhesive.

- (c) Using a 24 mm deep socket wrench, install the engine oil pressure switch assembly.

Text in Illustration

*1	24 mm Deep Socket Wrench
----	--------------------------

Torque:

18 N·m {184 kgf·cm, 13ft·lbf}

NOTICE:

Do not start the engine for at least 1 hour after installation.

**51. INSTALL TEMPERATURE SENSOR**

- (a) Attach a new gasket to the temperature sensor.
- (b) Using a 19 mm deep socket wrench, install the temperature sensor.

Text in Illustration

*1	19 mm Deep Socket Wrench
----	--------------------------

Torque:

18 N·m {184 kgf·cm, 13ft·lbf}

**52. INSTALL CAMSHAFT TIMING OIL CONTROL VALVE**

- (a) Install the back-up ring to the camshaft timing oil control valve (for exhaust side of bank 2).

Text in Illustration

*1	O-ring
*2	Back-up ring

- (b) Install a new O-ring to the camshaft timing oil control valve (for exhaust side of bank 2).

(c) Apply a light coat of engine oil to the O-ring.

(d) Install the camshaft timing oil control valve (for exhaust side of bank 2) with the 2 bolts.

Torque:

6.4 N·m {65 kgf·cm, 57in·lbf}

(e) Install the back-up ring to the camshaft timing oil control valve (for intake side of bank 2).

(f) Install a new O-ring to the camshaft timing oil control valve (for intake side of bank 2).

(g) Apply a light coat of engine oil to the O-ring.

(h) Install the camshaft timing oil control valve (for intake side of bank 2) with the 2 bolts.

Torque:

6.4 N·m {65 kgf·cm, 57in·lbf}

(i) Install the back-up ring to the camshaft timing oil control valve (for exhaust side of bank 1).

(j) Install a new O-ring to the camshaft timing oil control valve (for exhaust side of bank 1).

(k) Apply a light coat of engine oil to the O-ring.

(l) Install the camshaft timing oil control valve (for exhaust side of bank 1) with the 2 bolts.

Torque:

6.4 N·m {65 kgf·cm, 57in·lbf}

(m) Install the back-up ring to the camshaft timing oil control valve (for intake side of bank 1).

(n) Install a new O-ring to the camshaft timing oil control valve (for intake side of bank 1).

(o) Apply a light coat of engine oil to the O-ring.

- (p) Install the camshaft timing oil control valve (for intake side of bank 1) with the 2 bolts.

Torque:

6.4 N·m {65 kgf·cm, 57in·lbf}

53. INSTALL VVT SENSOR

- (a) Install a new O-ring to the VVT sensor (for exhaust side of bank 2).
 (b) Apply a light coat of engine oil to the O-ring.

- (c) Install the VVT sensor (for exhaust side of bank 2) with the bolt.

Torque:

6.4 N·m {65 kgf·cm, 57in·lbf}

- (d) Install a new O-ring to the VVT sensor (for intake side of bank 2).
 (e) Apply a light coat of engine oil to the O-ring.

- (f) Install the VVT sensor (for intake side of bank 2) with the bolt.

Torque:

6.4 N·m {65 kgf·cm, 57in·lbf}

- (g) Install a new O-ring to the VVT sensor (for exhaust side of bank 1).
 (h) Apply a light coat of engine oil to the O-ring.

- (i) Install the VVT sensor (for exhaust side of bank 1) with the bolt.

Torque:

6.4 N·m {65 kgf·cm, 57in·lbf}

- (j) Install a new O-ring to the VVT sensor (for intake side of bank 1).
- (k) Apply a light coat of engine oil to the O-ring.

- (l) Install the VVT sensor (for intake side of bank 1) with the bolt.

Torque:

6.4 N·m {65 kgf·cm, 57in·lbf}

**54. INSTALL CRANK POSITION SENSOR**

- (a) Install the crank position sensor with the bolt.

Torque:

6.4 N·m {65 kgf·cm, 57in·lbf}

**55. INSTALL KNOCK CONTROL SENSOR**

- (a) Install the 2 knock control sensors onto the cylinder block with the 2 bolts as shown in the illustration.

Torque:

24 N·m {245 kgf·cm, 18ft·lbf}

Text in Illustration**56. INSTALL E.F.I. WATER TEMPERATURE SENSOR**

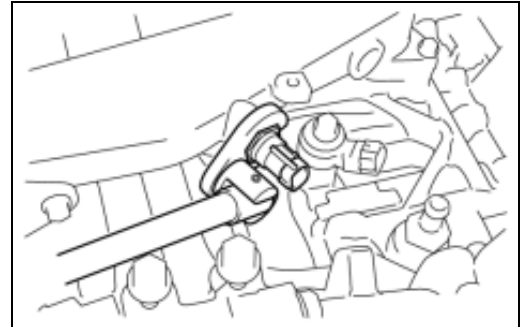

- (a) Using a 19 mm union nut wrench, install a new gasket and the E.F.I. water temperature sensor.

Torque:

18 N·m {184 kgf·cm, 13ft·lbf}

NOTICE:

Use the formula to calculate special torque values for situations where a union nut wrench is combined with a torque wrench  .

**57. INSTALL OIL FILTER UNION**

- (a) Using a 24 mm deep socket wrench, install the oil filter union.

Torque:

45 N·m {459 kgf·cm, 33ft·lbf}

**58. INSTALL OIL FILTER SUB-ASSEMBLY**

- (a) Apply engine oil to the installation surface of the oil filter sub-assembly.

- (b) Using SST, install the oil filter sub-assembly.

SST: 09228-22020

Torque:

14 N·m {143 kgf·cm, 10ft·lbf}

**59. INSTALL OIL FILLER CAP ASSEMBLY**

- (a) Install the oil filler cap assembly.

Last Modified: 4-14-2014	6.6 A	Doc ID: RM000000N82011X
Model Year: 2013	Model: FR-S	Prod Date Range: [03/2012 -]
Title: FA20 ENGINE MECHANICAL: ENGINE UNIT: REMOVAL; 2013 MY FR-S [03/2012 -]		

REMOVAL

CAUTION:

- The exhaust valve is encapsulated with metallic sodium. The metallic sodium is a strong alkaline and prone to cause a serious chemical reaction. Therefore, extra caution is required when handling or disposing the exhaust valve.
- Never disassemble the exhaust valve. The metallic sodium may cause blindness if it gets into your eyes, or cause burn injuries or chemical reactions resulting in fire if it comes into contact with your skin or any heat source.
- If the exhaust valve is damaged, after removing the valve, carry out processing of "Preparation for disposal" and "Disposal".
- Make sure to wear safety glasses and protective gloves when removing a damaged exhaust valve.
- Do not intentionally damage the exhaust valve to remove the metallic sodium.

NOTICE:

When it is determined that disposal procedure is dissolving, this may be performed.

HINT:

- The exhaust valve is encapsulated with metallic sodium. This is safe as long as it does not come into contact with air.
- The exhaust valve in which metallic sodium is encapsulated can be identified with the embossed

mark.

- For removal of the exhaust valve, [INFO](#).
- For disposal of the exhaust valve, [INFO](#).

Model Year: 2013	Model: FR-S	Prod Date Range: [03/2012 -]
Title: FA20 ENGINE MECHANICAL: ENGINE: ON-VEHICLE INSPECTION; 2013 MY FR-S [03/2012 -]		

ON-VEHICLE INSPECTION

1. INSPECT ENGINE COOLANT

INFO

2. INSPECT ENGINE OIL

INFO

3. INSPECT BATTERY

INFO

4. INSPECT AIR CLEANER FILTER ELEMENT SUB-ASSEMBLY

INFO

5. INSPECT SPARK PLUG

INFO

6. INSPECT V-RIBBED BELT TENSIONER ASSEMBLY

- (a) Remove the fan and generator V belt INFO .
- (b) Check that nothing gets caught in the tensioner by turning it clockwise and counterclockwise.
If a any malfunction exists, replace the tensioner.
- (c) Install the fan and generator V belt INFO .

7. INSPECT IGNITION TIMING

- (a) Warm up and stop the engine.
- (b) When using the Techstream:
 - (1) Connect the Techstream to the DLC3.
 - (2) Start the engine and idle it.
 - (3) Turn the Techstream on.
 - (4) Enter the following menus: Powertrain / Engine and ECT / Data List / IGN Advance.

Standard ignition timing:

-5 to 10° BTDC at idle

NOTICE:

- Switch off all the accessories and the A/C before connecting the Techstream.
- When checking the idle speed, the transmission should be in neutral.

HINT:

Refer to the Techstream operator's manual for further details.

(5) Check that the ignition timing advances immediately when the engine speed is increased.

(c) When not using the Techstream:

- (1) Connect the tester probe of a timing light to the wire of the ignition connector for the No. 1 cylinder.

HINT:

Use a timing light that detects the primary current.

- (2) Using the timing light, check the ignition timing.

Standard ignition timing:

-5 to 10° BTDC at idle

NOTICE:

When checking the ignition timing, the transmission should be in neutral.

(3) Check that the ignition timing advances immediately when the engine speed is increased.

(4) Disconnect the timing light from the engine.

8. INSPECT ENGINE IDLE SPEED

(a) Warm up and stop the engine.

(b) When using the Techstream:

- (1) Connect the Techstream to the DLC3.

NOTICE:

Switch off all the accessories and the A/C before connecting the Techstream.

(2) Race the engine at 2500 rpm for approximately 90 seconds.

(3) Turn the Techstream on.

(4) Enter the following menus: Powertrain / Engine and ECT / Data List / Engine Speed.

Standard Idle Speed:

TRANSMISSION	IDLING SPEED
for Automatic Transmission	600 to 800 rpm
for Manual Transmission	550 to 750 rpm

NOTICE:

When checking the idle speed, the transmission should be in neutral.

HINT:

Refer to the Techstream operator's manual for further details.

If the idle speed is not as specified, check the air intake system.

(5) Disconnect the Techstream from the DLC3.

9. INSPECT COMPRESSION

(a) Check for DTCs **INFO**.

(b) Remove the relay block cover.

(c) Remove the F/PMP fuse.

Text in Illustration

*1	Engine Room Relay Block
----	-------------------------

(d) Warm up and stop the engine.

(e) Remove the 4 spark plugs **INFO**.

(f) Insert a compression gauge into the spark plug hole.

(g) Inspect the cylinder compression pressure.

(1) While cranking the engine, measure the compression pressure.

HINT:

Always use a fully charged battery to obtain an engine speed of 250 rpm or more.

NOTICE:

The measurement must be performed as quickly as possible.

Standard compression pressure:

1750 kPa (17.8 kgf/cm², 254 psi) or higher

Minimum pressure:

1150 kPa (11.7 kgf/cm², 167 psi)

Difference between each cylinder:

200 kPa (2.0 kgf/cm² , 29 psi) or less

HINT:

If the cylinder compression is low, pour a small amount of engine oil into the cylinder through the spark plug hole and inspect the compression again. Then perform the 2 steps above for the cylinders with low compression.

- If adding oil increases the compression, the piston rings and/or cylinder bore may be worn or damaged.
- If the pressure stays low, a valve may be stuck or seated improperly, or there may be leakage from the gasket.

(h) Install the 4 spark plugs INFO.

(i) Reinstall the F/PMP fuse.

(j) Install the relay block cover.

(k) Clear the DTC INFO.

10. INSPECT CO/HC

HINT:

This check is for determining whether or not the idle CO/HC complies with regulations.

(a) Start the engine.

(b) Maintain the engine speed at 2500 rpm for approximately 180 seconds.

(c) Insert a CO/HC meter testing probe at least 40 cm (1.31 ft) into the tailpipe during idling.

(d) Immediately check the CO/HC concentration at idle and/or 2500 rpm.

HINT:

- When performing the 2 mode (2500 rpm and idle) test, follow the measurement order prescribed by the applicable local regulations.
- If the CO/HC concentration does not comply with regulations, troubleshoot in the order given below.

(1) Check the A/F sensor INFO and heated oxygen sensor INFO operation.

(2) Refer to the table below for the possible cause, and then inspect and correct the applicable causes if necessary.

CO	HC	SYMPTOM	CAUSES
Normal	High	Rough idle	1. Faulty ignition: <ul style="list-style-type: none"> ◦ Incorrect timing ◦ Plugs are contaminated or shorted, or plug gaps are incorrect 2. Incorrect valve clearance 3. Leaky intake and exhaust valves 4. Leaky cylinders
		Rough idle	1. Vacuum leaks: <ul style="list-style-type: none"> ◦ Ventilation hoses

Low	High	(Fluctuating HC reading)	<ul style="list-style-type: none"> ◦ Intake manifold ◦ Throttle body <p>2. Lean mixture causing misfire</p>
High	High	Rough idle (Black smoke from exhaust)	<p>1. Restricted air filter</p> <p>2. Plugged PCV valve</p> <p>3. Faulty EFI system:</p> <ul style="list-style-type: none"> ◦ Faulty pressure regulator ◦ Defective engine coolant temperature sensor ◦ Faulty mass air flow meter ◦ Faulty ECM ◦ Faulty injectors ◦ Faulty throttle position sensor

Title: FA20 ENGINE MECHANICAL: FRONT CRANKSHAFT OIL SEAL: INSTALLATION; 2013 MY FR-S [03/2012 -]		

INSTALLATION

1. INSTALL TIMING CHAIN OR BELT COVER OIL SEAL

(a) Apply engine oil to the lip of a new timing chain or belt cover oil seal.

NOTICE:

- Keep the lip free of foreign matter.
- Do not apply engine oil to the dust seal section.

(b) Using SST and a hammer, tap in the timing chain or belt cover oil seal until its surface is flush with the timing chain cover edge.

SST: 09223-22010

NOTICE:

- Keep the lip free of foreign matter.
- Do not tap the oil seal at an angle.

HINT:

Alternatively, the tapping depth of the timing chain or belt cover oil seal can be 0 to -1.0 mm (0 to -0.039 in.) from the timing chain cover end surface.

2. INSTALL CRANKSHAFT PULLEY

(a) Install the crankshaft pulley spacer.

(b) Install a new O-ring to the crankshaft pulley spacer.

(c) Install the crankshaft pulley while aligning the knock hole of the pulley with the knock pin on the crankshaft pulley spacer.

Text in Illustration

*1	Knock Hole

Last Modified: 4-14-2014	6.6 A	Doc ID: RM0000041LF007X
Model Year: 2013	Model: FR-S	Prod Date Range: [03/2012 -]
Title: FA20 ENGINE MECHANICAL: REAR CRANKSHAFT OIL SEAL: INSTALLATION; 2013 MY FR-S [03/2012 -]		

INSTALLATION

1. INSTALL REAR ENGINE OIL SEAL

(a) Apply engine oil to the lip of a new rear engine oil seal.

NOTICE:

Keep the lip free of foreign matter.

(b) Using SST and a hammer, tap in the oil seal until its surface is flush with the rear oil seal retainer edge.

SST: 09223-15030

SST: 09950-70010

09951-07150

Oil seal tap in depth:

0 to 1.0 mm (0 to 0.0394 in.)

NOTICE:

- Wipe any extra grease off of the crankshaft.
- Keep the lip free of foreign matter.
- Do not tap on the oil seal at an angle.

2. INSTALL NO. 1 CRANKSHAFT POSITION SENSOR PLATE

(a) Clean the 8 bolts and 8 bolt holes.

(b) Install the No. 1 crankshaft position sensor plate.

Text in Illustration

*1	Pin Hole
*2	Pin

HINT:

Align the pin of the front drive spacer with the pin hole of the crankshaft.

3. INSTALL FLYWHEEL SUB-ASSEMBLY (for Manual Transmission)

(a) Using SST, hold the crankshaft pulley.

SST: 09960-10010

09962-01000

09963-01000

(b) Install the flywheel sub-assembly onto the crankshaft.

(c) In several steps, uniformly install and tighten the 8 bolts in the sequence shown in the illustration.

Torque:

85 N·m {867 kgf·cm, 63ft·lbf}

4. INSTALL CLUTCH DISC ASSEMBLY (for Manual Transmission)

INFO

5. INSTALL CLUTCH COVER ASSEMBLY (for Manual Transmission)

INFO

6. INSTALL DRIVE PLATE AND RING GEAR SUB-ASSEMBLY (for Automatic Transmission)

(a) Using SST, hold the crankshaft pulley.

SST: 09960-10010

09962-01000

09963-01000

(b) Install the drive plate and ring gear sub-assembly and rear drive plate spacer onto the crankshaft.

(c) In several steps, uniformly install and tighten the 8 bolts in the sequence shown in the illustration.

Torque:

95 N·m {969 kgf·cm, 70ft·lbf}

7. REMOVE MANUAL TRANSMISSION ASSEMBLY (for Manual Transmission)

INFO

8. INSTALL AUTOMATIC TRANSMISSION ASSEMBLY (for Automatic Transmission)

INFO

9. INSPECT FOR OIL LEAK

Last Modified: 4-14-2014	6.6 A	Doc ID: RM0000041LG007X
Model Year: 2013	Model: FR-S	Prod Date Range: [03/2012 -]
Title: FA20 ENGINE MECHANICAL: REAR CRANKSHAFT OIL SEAL: REMOVAL; 2013 MY FR-S [03/2012 -]		

REMOVAL

1. REMOVE AUTOMATIC TRANSMISSION ASSEMBLY (for Automatic Transmission)

INFO

2. REMOVE MANUAL TRANSMISSION ASSEMBLY (for Manual Transmission)

INFO

3. REMOVE DRIVE PLATE AND RING GEAR SUB-ASSEMBLY (for Automatic Transmission)

(a) Using SST, hold the crankshaft.

SST: 09960-10010

09962-01000

09963-01000

(b) Remove the 8 bolts, drive plate and ring gear sub-assembly and rear drive plate spacer.

4. REMOVE CLUTCH COVER ASSEMBLY (for Manual Transmission) INFO

5. REMOVE CLUTCH DISC ASSEMBLY (for Manual Transmission) INFO

6. REMOVE FLYWHEEL SUB-ASSEMBLY (for Manual Transmission)

(a) Using SST, hold the crankshaft.

SST: 09960-10010

09962-01000

09963-01000

(b) Remove the 8 bolts and flywheel sub-assembly.

**7. REMOVE NO. 1 CRANKSHAFT POSITION SENSOR PLATE**

(a) Remove the No. 1 crankshaft position sensor plate.

8. REMOVE REAR ENGINE OIL SEAL

(a) Using a knife, cut through the oil seal lip.

Text in Illustration

*1	Protective Tape
*a	Cut position

(b) Using a screwdriver with its tip taped, pry out the rear engine oil seal.

NOTICE:

After removal, check the crankshaft for damage. If it is damaged, smooth the surface with 400-grit sandpaper.

HINT:

Tape the screwdriver tip before use.

Title: FA20 ENGINE MECHANICAL: TIMING CHAIN: INSTALLATION; 2013 MY FR-S [03/2012 -]		

INSTALLATION

1. INSTALL CHAIN SUB-ASSEMBLY (for Bank 2)

NOTICE:

Do not allow any foreign matter to adhere onto or to enter into the component parts during installation.

HINT:

Apply engine oil to all component parts of the chain sub-assembly.

(a) Temporarily install the pulley bolt to the crankshaft.

(b) Move the link plate in the direction of the arrow in the illustration to press in the plunger.

Text in Illustration

*1	Link Plate
*2	Plunger

(c) Insert an approximately 1 mm (0.039 in.) wire or the like into the chain tensioner through the stopper pin hole, and hold the plunger.

HINT:

If the stopper pin hole on the link plate and the stopper pin hole on the chain tensioner are not aligned, check that the first notch of the plunger rack is engaged with the stopper tooth. If not engaged, retract the plunger a little so that the first notch of the plunger rack is engaged with the stopper tooth.

Text in Illustration

*1	First notch of the plunger rack
*2	Stopper Tooth

(d) Align the alignment mark on the camshaft timing intake gear assembly LH and camshaft timing exhaust gear assembly LH with the position shown in the illustration.

NOTICE:

To avoid damaging the valves, do not turn the camshaft timing intake gear assemblies more than the zero-lift range (the range where camshaft timing intake gear assemblies can be turned lightly by hand).

Text in Illustration

*a	Alignment Mark
----	----------------

(e) Align the timing chain mark plate (blue) with the alignment mark of the crankshaft timing gear or sprocket.

Text in Illustration

*a	Alignment Mark
*b	Timing Mark
*c	Mark plate (Blue)
*d	Mark plate (Pink)

- (f) Align the timing chain mark plate (pink) with the timing mark on the camshaft timing intake gear assembly LH.
- (g) Align the timing chain mark plate (pink) with the timing mark on the camshaft timing exhaust gear assembly LH.
- (h) Apply engine oil to the bolt.
- (i) Using a 5 mm hexagon socket wrench, install the No. 1 chain vibration damper with the bolt.

Torque:

6.4 N·m { 65 kgf·cm, 57in·lbf }

(j) Install a new O-ring to the cylinder block (bank 2).

(k) Install the chain tensioner slipper.

(l) Install the No. 2 chain tensioner assembly with the 2 bolts.

Torque:

6.4 N·m {65 kgf·cm, 57in·lbf}

(m) Check that the chain is correctly installed.

Text in Illustration

*a	Alignment Mark
*b	Timing Mark
*c	Mark plate (Blue)
*d	Mark plate (Pink)

- (1) Timing chain mark plate (blue) is aligned with the alignment mark on the crankshaft timing gear or sprocket.
- (2) Timing chain mark plate (pink) is aligned with the timing mark on the camshaft timing intake gear assembly LH.
- (3) Timing chain mark plate (pink) is aligned with the timing mark on the camshaft timing exhaust gear assembly LH.

(n) Pull out the wire or the like from the No. 2 chain tensioner assembly.

(o) Temporarily install the pulley bolt to the crankshaft.

(p) Turn the crankshaft clockwise, and make sure that there are no abnormal conditions.

NOTICE:

Be sure to perform this confirmation.

2. INSTALL CHAIN SUB-ASSEMBLY (for Bank 1)

NOTICE:

Do not allow any foreign matter to adhere onto or to enter into the component parts during installation.

HINT:

Apply engine oil to all component parts of the chain sub-assembly.

- (a) Move the link plate in the direction of the arrow in the illustration to press in the plunger.

Text in Illustration

*1	Link Plate
*2	Plunger

- (b) Insert a 2.5 mm (0.098 in.) hexagon wrench into the No. 1 chain tensioner assembly through the stopper pin hole, and hold the plunger.

Text in Illustration

*1	First notch of the plunger rack
*2	Stopper Tooth

**HINT:**

If the stopper pin hole on the link plate and the stopper pin hole on the chain tensioner are not aligned, check that the first notch of the plunger rack is engaged with the stopper tooth. If not engaged, retract the plunger a little so that the first notch of the plunger rack is engaged with the stopper tooth.

- (c) Turn the crankshaft and align the alignment marks of the crankshaft timing gear or sprocket, camshaft timing intake gear assembly LH and camshaft timing exhaust gear assembly LH shown in the illustration.

Text in Illustration

*a	Alignment Mark
----	----------------

**HINT:**

When the marks are aligned with the positions in the illustration, crankshaft key faces directly underneath.

(d) Align the alignment marks of the camshaft timing intake gear assembly RH and camshaft timing exhaust gear assembly RH as shown in the illustration.

NOTICE:

To avoid damaging the valves, do not turn the camshaft timing intake gear assembly RH and camshaft more than the zero-lift range (the range where the camshaft timing intake gear assemblies can be turned lightly by hand).

Text in Illustration

*a	Alignment Mark
----	----------------

(e) Align the timing chain mark plate (blue) with the alignment mark on the crankshaft timing gear or sprocket.

Text in Illustration

*a	Alignment Mark
*b	Timing Mark
*c	Mark plate (Blue)
*d	Mark plate (Pink)

- (f) Align the timing chain mark plate (pink) with the timing mark on the camshaft timing intake gear assembly RH.
- (g) Align the timing chain mark plate (pink) with the timing mark on the camshaft timing exhaust gear assembly RH.
- (h) Apply engine oil to the bolt.
- (i) Using a 5 mm hexagon socket wrench, install the No. 1 chain vibration damper with the bolt.

Torque:

6.4 N·m { 65 kgf·cm, 57in·lbf }

(j) Install the chain tensioner slipper.

(k) Install the No. 1 chain tensioner assembly with the 2 bolts.

Torque:

6.4 N·m {65 kgf·cm, 57in·lbf}

(l) Check that the chain is correctly installed.

Text in Illustration

*a	Alignment Mark
*b	Timing Mark
*c	Mark plate (Blue)
*d	Mark plate (Pink)

- (1) Timing chain mark plate (blue) is aligned with the alignment mark on the crankshaft timing gear or sprocket.
- (2) Timing chain mark plate (pink) is aligned with the timing mark on the camshaft timing intake gear assembly RH.
- (3) Timing chain mark plate (pink) is aligned with the timing mark on the camshaft timing exhaust gear assembly RH.

(m) Pull out the hexagon wrench from the No. 1 chain tensioner assembly.

(n) Turn the crankshaft clockwise, and make sure that there are no abnormal conditions.

NOTICE:

Be sure to perform this confirmation.

(o) Remove the pulley bolt.

3. INSTALL TIMING CHAIN OR BELT COVER SUB-ASSEMBLY

Last Modified: 4-14-2014	6.6 A	Doc ID: RM0000056U900BX
Model Year: 2013	Model: FR-S	Prod Date Range: [03/2012 -]
Title: FA20 ENGINE MECHANICAL: TIMING CHAIN: REMOVAL; 2013 MY FR-S [03/2012 -]		

REMOVAL

1. REMOVE TIMING CHAIN OR BELT COVER SUB-ASSEMBLY

INFO

2. REMOVE CHAIN SUB-ASSEMBLY (for Bank 1)

(a) Temporarily install the pulley bolt to the crankshaft.

(b) Turn the crankshaft and align the alignment marks of the crankshaft timing gear or sprocket, camshaft timing intake gear assembly RH and camshaft timing exhaust gear assembly RH.

Text in Illustration

*1	Alignment Mark
*2	Key

HINT:

The crankshaft key faces downward at this time.

(c) Push down the chain tensioner slipper and insert a 2.5 mm (0.098 in.) hexagonal wrench through the stopper plate into the No. 1 chain tensioner assembly.

(d) Remove the 2 bolts and No. 1 chain tensioner assembly.

(e) Remove the chain tensioner slipper.

- (f) Using a 5 mm hexagonal wrench, remove the bolt and No. 1 chain vibration damper.

- (g) Remove the chain sub-assembly.

NOTICE:

- With the chain sub-assembly removed, the valve heads may contact each other if the camshafts are turned, causing the valve stems to bend.
- To avoid this, do not turn the intake camshaft RH and the exhaust camshaft RH more than the zero-lift range (the range where camshafts can be turned lightly by hand).

HINT:

Arrange the removed parts in the correct order.

3. REMOVE CHAIN SUB-ASSEMBLY (for Bank 2)

- (a) Turn the crankshaft and position each alignment mark on the crankshaft timing gear or sprocket, camshaft timing intake gear assembly LH and camshaft timing exhaust gear assembly LH as shown in the illustration.

Text in Illustration

*1	Key
*2	Alignment Mark

- (b) Push the chain tensioner slipper and retain the plunger by inserting an approximately 1 mm (0.039 in.) wire through the stopper plate into the No. 2 chain tensioner assembly.

(c) Remove the 2 bolts and No. 2 chain tensioner assembly.

(d) Remove the chain tensioner slipper.

(e) Remove the O-ring from the cylinder block (bank 2).

(f) Using a 5 mm socket hexagon wrench, remove the bolt and No. 1 chain vibration damper.

(g) Remove the chain sub-assembly.

NOTICE:

- With the chain sub-assembly removed, the valve heads may contact each other if the camshafts are turned, causing the valve stems to bend. To avoid this, do not turn the exhaust camshaft LH more than the zero-lift range (the range where the camshaft can be turned lightly by hand).
- At this time, the No. 1 and No. 4 pistons are located near TDC. If the intake camshaft is turned, the valves may come into contact with the piston, causing the valve stems to bend. To avoid this, do not turn the intake camshaft LH.

HINT:

Arrange the removed parts in the correct order.

(h) Remove the pulley bolt.

4. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY RH

INFO

5. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY LH

INFO

6. INSPECT VALVE CLEARANCE

NOTICE:

Inspect the valve clearance when the engine is cold.

(a) Set the No. 1 cylinder to the TDC/compression.

(1) Turn the crankshaft clockwise to align the timing mark on the crankshaft pulley with the indicator of the timing chain cover.

Text in Illustration

*1	Intake Camshaft	*2	Exhaust Camshaft
*3	No. 1 Valve Rocker Arm Sub-assembly	-	-
*a	Timing Mark	-	-

(b) At this time, check that the intake camshaft and exhaust camshaft do not depress the No. 1 cylinder intake side No. 1 valve rocker arm sub-assembly (intake valve) and exhaust side No. 1 valve rocker arm sub-assembly (exhaust valve).

HINT:

If the No. 1 valve rocker arm sub-assembly (valve) is depressed, turn the crank pulley by 360° in order to make the No. 1 cylinder piston at TDC/compression.

(c) Inspect the valve clearance indicated in the illustration.

Text in Illustration

*a	Intake Side	*b	Exhaust Side
----	-------------	----	--------------

(d) Measure the clearance between the surface of the cam base circle and the roller surface of the No. 1 valve rocker arm sub-assembly using a feeler gauge.

Standard Valve Clearance (Cold):

Intake 0.10 to 0.16 mm (0.0039 to 0.0063 in.)

Exhaust 0.21 to 0.27 mm (0.0083 to 0.0106 in.)

(e) Turn the crank pulley by 360°.

(f) Inspect the valve clearance indicated in the illustration.

Text in Illustration

*a	Intake Side	-	-
----	-------------	---	---

(g) Measure the clearance between the surface of the cam base circle and the roller surface of the No. 1 valve rocker arm sub-assembly using a feeler gauge.

Standard Valve Clearance (Cold):

Intake 0.10 to 0.16 mm (0.0039 to 0.0063 in.)

(h) Turn the crank pulley clockwise, set the No. 2 cylinder at TDC/compression, and then align the

timing mark (notch) with 0° position of the timing chain cover.

Text in Illustration

*1	Intake Camshaft	*2	Exhaust Camshaft
*3	No. 1 Valve Rocker Arm Sub-assembly	-	-
*a	Timing Mark	-	-

- (i) At this time, check that the intake camshaft and exhaust camshaft do not depress the No. 2 cylinder intake side No. 1 valve rocker arm sub-assembly (intake valve) and exhaust side No. 1 valve rocker arm sub-assembly (exhaust valve).

HINT:

If the No. 1 valve rocker arm sub-assembly (valve) is depressed, turn the crank pulley by 360° in order to make the No. 2 cylinder piston at TDC/compression.

- (j) Inspect the valve clearance indicated in the illustration.

Text in Illustration

*a	Intake Side	*b	Exhaust Side
----	-------------	----	--------------

- (k) Measure the clearance between the surface of the cam base circle and the roller surface of the No. 1 valve rocker arm sub-assembly using a feeler gauge.

Standard Valve Clearance (Cold):

Intake 0.10 to 0.16 mm (0.0039 to 0.0063 in.)

Exhaust 0.21 to 0.27 mm (0.0083 to 0.0106 in.)

(l) Turn the crank pulley by 360°.

(m) Inspect the valve clearance indicated in the illustration.

Text in Illustration

*a	Intake Side	-	-
----	-------------	---	---

(n) Measure the clearance between the surface of the cam base circle and the roller surface of the No. 1 valve rocker arm sub-assembly using a feeler gauge.

Standard Valve Clearance (Cold):

Intake 0.10 to 0.16 mm (0.0039 to 0.0063 in.)

7. ADJUST VALVE CLEARANCE

(a) Remove the camshaft housing sub-assembly.

INFO

(b) Remove the No. 1 valve rocker arm sub-assemblies.

(c) Remove the valve adjusting shims.

(d) Using a micrometer, measure the thickness of the removed valve adjusting shims.

(e) Calculate the thickness of the valve adjusting shim so that the valve clearance comes within the specified values.

Intake Side:

$$A = B + [C - 0.13 \text{ mm (0.0051 in.)}] \times 1.54$$

Exhaust Side:

$$A = B + [C - 0.24 \text{ mm (0.0094 in.)}] \times 1.69$$

A:

Required valve adjusting shim thickness

B:

Removed valve adjusting shim thickness

C:

Measured valve clearance

(f) Apply engine oil to the inner face of the valve adjusting shim, and install it to the valve.

NOTICE:

Check whether valve adjusting shim can be rotated smoothly on the valve.

(g) Install the No. 1 valve rocker arm sub-assemblies.

(h) Install the camshaft housing sub-assembly.

INFO

8. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY LH INFO

9. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY RH INFO

10. INSTALL INJECTOR DRIVER BRACKET INFO

11. INSTALL INJECTOR COVER (for Bank 1) INFO

12. INSTALL IGNITION COIL ASSEMBLY

Title: FA20 FUEL: FUEL INJECTOR (for Direct Injection): INSPECTION; 2013 MY FR-S [03/2012 -]		

INSPECTION

1. INSPECT FUEL INJECTOR ASSEMBLY

NOTICE:

This inspection aims is to inspect the fuel injectors for opens or shorts, because the fuel injectors of this vehicle are of a high-pressure type and cannot be inspected for fuel injection volume.

- (a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	20°C (68°F)	1.9 Ω

Text in Illustration

*a	Component without harness connected (Fuel Injector Assembly)
----	---

If the result is not as specified, replace the fuel injector assembly.

Last Modified: 4-14-2014	6.6 A	Doc ID: RM000000Q4608BX
Model Year: 2013	Model: FR-S	Prod Date Range: [03/2012 -]
Title: FA20 FUEL: FUEL INJECTOR (for Direct Injection): INSTALLATION; 2013 MY FR-S [03/2012 -]		

INSTALLATION

1. INSTALL FUEL INJECTOR SEAL

- (a) Apply engine conditioner to the injector area shown in the illustration. Using a piece of cloth, remove the carbon deposits from the injector and its grooves.

Text in Illustration

*a	Clean Area
----	------------

NOTICE:

- Do not clean the tip of the injector.
- Do not use a wire brush to clean the injector.
- If an injector is dropped or the tips of the injectors are struck, replace it with a new one.

- (b) Apply engine oil to the injector contact surface of SST (guide). Then attach SST (guide) to the injector with the tapered inner portion facing the tip of the injector, as shown in the illustration.

SST: 09260-39020

09261-03020

Text in Illustration

*1	SST (Guide)
*a	Tapered Inner Portion

- (c) Install a new injector seal to SST (holder).

SST: 09260-39020

09261-03010

Text in Illustration

*1	SST (holder)
*2	Injector Seal

*a	CORRECT
*b	INCORRECT

NOTICE:

Be careful not to install the injector seal to SST (holder) at an angle. Doing so will stretch the seal and correcting this problem is very complicated.

(d) Install SST (holder with injector seal) to the tip of the injector. Slide the seal downward into the injector groove (injector connector side) with your fingers, as shown in the illustration.

SST: 09260-39020

09261-03010

09261-03020

Text in Illustration

*1	SST (Guide)
*2	SST (Holder)

HINT:

Check that the seal covers the circumference of the injector groove as shown in the illustration.

(e) Using SST (holder), gently press downward on the injector seal (injector connector side). Then slowly slide SST (guide) toward the injector tip to settle the seal into the injector groove.

SST: 09260-39020

09261-03010

09261-03020

Text in Illustration

*1	SST (Guide)
*2	SST (Holder)

*3	Injector Seal
*a	Gently Press
*b	Slowly Slide
*c	CORRECT
*d	INCORRECT

NOTICE:

Be careful that the seal is not pinched between SST (guide) and the injector groove. Replace the seal if it becomes damaged.

HINT:

- When using SST (guide) to settle the seal into the groove, SST (guide) only needs to be slid upward to the position labeled A in the illustration.
- After using SST (guide) to settle the seal into the groove, return SST (guide) to its position labeled B in the illustration.

(f) Slowly slide SST (guide) toward the tip of the injector. When the injector contact surface of SST (guide) aligns with the seal (injector connector side) as shown in the illustration, hold the position for 5 seconds or more to fully align the seal into the injector groove.

SST: 09260-39020

09261-03020

Text in Illustration

*1	SST (Guide)
*2	Injector Seal

NOTICE:

Be careful that the seal is not pinched between SST (guide) and the injector groove. Replace the seal if it becomes damaged.

HINT:

- Set SST (guide) so that its bottom surface and seal are flush.
- If there is difficulty in sliding SST upward, slowly wiggle it from side to side while sliding it up the injector little by little.

- (g) After installing the seals, check that they are not scratched, deformed or protruding from the injector groove.

Text in Illustration

*a	CORRECT
*b	INCORRECT
*c	Normal
*d	Protruding
*e	Deformed

NOTICE:

If a seal is scratched, deformed or protruding from the groove, replace it with a new one.

2. INSTALL FUEL INJECTOR ASSEMBLY

NOTICE:

If the tip of the fuel injector assembly is struck or the fuel injector assembly is dropped, replace the fuel injector assembly with a new one.

- (a) Install new fuel injector backup rings (No. 1 and No. 2) and a new fuel injector seal to the fuel injector assembly as shown in the illustration.

Text in Illustration

*1	No. 1 Fuel Injector Backup Ring
*2	Injector Seal
*3	No. 2 Fuel Injector Backup Ring
*a	Alignment Opening
*b	INCORRECT
*c	CORRECT
*d	Overlapped
*e	Normal
*f	Stretched
*g	Grooved Section

NOTICE:

- Check that there is no foreign matter or damaged areas in the injector seal groove.
- Check that the No. 1 fuel injector backup ring is installed in the correct direction.
- Install the No. 2 fuel injector backup ring so that the

grooved section faces the fuel delivery pipe.

- Make sure that the backup rings and injector seal are installed in the correct order.
- Check that the alignment openings of the backup rings are not overlapped or stretched as shown in the illustration.
- After installing the injector seal, check that it is not contaminated with foreign matter and is not damaged.

(b) Install a new fuel injector insulator to the fuel injector.

Text in Illustration

*1	Fuel Injector Insulator
----	-------------------------

NOTICE:

Install a new fuel injector insulator to the fuel injector as shown in the illustration.

(c) Install the No. 1 injector holder.

(d) Apply new engine oil to the surface of the injector insertion hole in the fuel delivery pipe.

Text in Illustration

*a	Protruding section
----	--------------------

*b	Baffle hole
	No gap

**NOTICE:**

- Check that there are no foreign objects or scratches in the inner face of the fuel injector assembly insertion hole in the fuel delivery pipe.
- Ensure that gasoline does not adhere to the fuel injector seal or to inside the attachment hole.
- Insert the fuel injector assembly in a straight line into the fuel delivery pipe without tilting it.
- Ensure that there is no gap between the No. 1 injector holder and the fuel injector pipe on the high-pressure side.
- If using a new fuel injector assembly, use one with the same numbers.

Text in Illustration

*1	Number
*2	Quick Response Code

NOTICE:

- Make sure that there is no gap between the delivery pipe and the No. 1 injector holder.
- Check that there is no foreign matter or damage to the injector insertion hole of the delivery pipe.
- Insert the injector straight into the delivery pipe without tilting it.

(e) Install the No. 1 injector holder while aligning the protrusion on the No. 1 injector holder with the baffle hole on the fuel delivery pipe.

3. INSTALL FUEL DELIVERY PIPE LH

(a) Install the fuel delivery pipe LH with the 2 bolts.

Torque:

19 N·m {194 kgf·cm, 14ft·lbf}

(b) Connect the 2 fuel injector assembly connectors.

4. INSTALL FUEL DELIVERY PIPE RH

(a) Install the fuel delivery pipe RH with the 2 bolts.

Torque:

19 N·m {194 kgf·cm, 14ft·lbf}

- (b) Connect the fuel pressure sensor connector and 2 fuel injector assembly connectors.

5. INSTALL FUEL DELIVERY PIPE

- (a) Temporarily install the new fuel delivery pipe with the 2 union nuts and 3 bolts.
(b) Tighten the 3 bolts.

Torque:

6.4 N·m {65 kgf·cm, 57in·lbf}

- (c) Using a union nut wrench, tighten the 2 union nuts.

Torque:

35 N·m {357 kgf·cm, 26ft·lbf}

6. INSTALL NO. 2 FUEL DELIVERY PIPE

- (a) Temporarily install the new No. 2 fuel pipe with the 2 union nuts.
(b) Using a union nut wrench, tighten the 2 union nuts.

Torque:

35 N·m {357 kgf·cm, 26ft·lbf}

7. INSTALL INTAKE MANIFOLD

INFO

Last Modified: 4-14-2014	6.6 A	Doc ID: RM000000Q4808IX
Model Year: 2013	Model: FR-S	Prod Date Range: [03/2012 -]
Title: FA20 FUEL: FUEL INJECTOR (for Direct Injection): REMOVAL; 2013 MY FR-S [03/2012 -]		

REMOVAL

1. REMOVE INTAKE MANIFOLD

INFO

2. REMOVE NO. 2 FUEL DELIVERY PIPE

- (a) Using a union nut wrench, loosen the 2 union nuts and remove the No. 2 fuel delivery pipe.

NOTICE:

When removing the No. 2 fuel delivery pipe, pull it out in a straight line to avoid damaging seal surface of the fuel delivery pipe LH.

3. REMOVE FUEL DELIVERY PIPE

- (a) Remove the 3 bolts.

- (b) Using a union nut wrench, loosen the 2 union nuts and remove the fuel delivery pipe.

4. REMOVE FUEL DELIVERY PIPE LH

- (a) Disconnect the 2 fuel injector assembly connectors.

(b) Remove the 2 bolts and fuel delivery pipe LH.

5. REMOVE FUEL DELIVERY PIPE RH

(a) Disconnect the fuel pressure sensor connector and 2 fuel injector assembly connectors.

(b) Remove the 2 bolts and fuel delivery pipe RH.

6. REMOVE FUEL INJECTOR ASSEMBLY

(a) Remove the 4 fuel injector assemblies from the fuel delivery pipe.

Text in Illustration

*a	for Bank 2
*b	for Bank 1

NOTICE:

- If the tip of the fuel injector assembly is struck or the fuel injector assembly is dropped, replace the fuel injector assembly with a new one.
- Pull and remove the fuel injector assembly in a straight line to avoid damaging the seal surface of the fuel delivery pipe.
- For re-installation, attach a tag or label to each fuel injector assembly.

NOTICE:

- Pull and remove the injector in a straight line to avoid damaging to the seal surface of the delivery pipe O-rings.
- For reinstallation, attach a tag or label to the injector shaft.

(b) Remove the No. 1 injector holders from the fuel injectors.

(c) Using a screwdriver, remove the fuel injector insulator.

Text in Illustration

*1	Fuel Injector Insulator
----	-------------------------

(d) Using a needle nose plier, remove the No. 2 fuel injector backup ring.

Text in Illustration

*1	No. 2 Fuel Injector Backup Ring
*2	Fuel Injector Seal
*3	No. 1 Fuel Injector Backup Ring

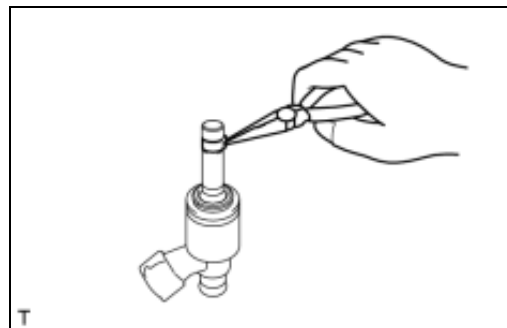

(e) Remove the fuel injector seal and No. 1 fuel injector backup ring.

7. REMOVE FUEL INJECTOR O-RING

(a) Using the tips of a pair of needle nose pliers, pinch and pull one of the fuel injector O-ring at several points to stretch it. Repeat this for the other fuel injector O-ring.

NOTICE:

- Excessively pinching the fuel injector O-ring may damage the groove of the injector.
- If an injector is dropped or the tip of the injector is struck, replace it with a new one.

(b) Remove the injector seal from the injector.

Title: FA20 FUEL: FUEL INJECTOR (for Port Injection): INSPECTION; 2013 MY FR-S [03/2012 -]		

INSPECTION

1. INSPECT FUEL INJECTOR ASSEMBLY

- (a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	20°C (68°F)	12 Ω

Text in Illustration

*a	Component without harness connected (Fuel Injector Assembly)
----	---

If the resistance is not as specified, replace the fuel injector assembly.

- (b) Inspect the injection volume.

CAUTION:

This test involves high-pressure fuel and electricity. Take all precautions regarding safe handling of both the fuel and the electricity. Perform this test in a safe area, and avoid any sparks or flames. Do not smoke.

- (c) Disconnect the fuel tube.

- (d) Connect SST (hose) to the fuel pipe (vehicle side) with SST (hose band).

SST: 09268-31014

09268-41700

95336-08070

Text in Illustration

*1	SST (Hose)
*2	SST (Hose Band)
*3	Fuel Pipe (Vehicle Side)

(e) Install the O-ring to the fuel injector assembly.

(f) Install SST and vinyl tube to the fuel injector assembly.

SST: 09268-31014

09268-41141

09268-41410

*3	SST (Adapter)
*4	O-ring
*5	SST (Clamp)
*6	Vinyl Tube

(g) Tie SST (clamp and adapter) together with SST (tie band) as shown in the illustration.

SST: 09268-31014

09268-41141

09268-41410

09268-41800

Text in Illustration

*1	SST (Tie Band)
*2	SST

	(Adapter)
*3	SST (Clamp)

(h) Put the injector into a graduated cylinder.

SST: 09842-30090

Text in Illustration

*1	SST (Wire)
*a	Connect

CAUTION:

Install a strong rubber tube onto the injector to prevent gasoline from splashing.

(i) Operate the fuel pump (turn the ignition switch to ON).

(j) Connect SST (wire) to the injector and the battery for 15 seconds, and measure the injection volume with the graduated cylinder. Test each injector 2 or 3 times.

Standard injection volume:

84 to 103 cc (5.1 to 6.3 cu.in.) per 15 seconds

Difference between each injector:

19 cc (1.2 cu.in.) or less

NOTICE:

- Make sure that SST (EFI inspection wire I) is securely connected.
- Always turn on and off the voltage on the battery side, not on the fuel pump side.

If the injection volume is not as specified, replace the fuel injector assembly.

(k) Check for leakage.

(1) In the condition above, disconnect the tester probes of SST (wire) from the battery and check for fuel leakage from the fuel injector assembly.

Standard fuel drop:

1 drop or less in 22 minutes

If there is excessive leakage, replace the fuel injector assembly.

Last Modified: 4-14-2014	6.6 A	Doc ID: RM000000Q4608AX
Model Year: 2013	Model: FR-S	Prod Date Range: [03/2012 -]
Title: FA20 FUEL: FUEL INJECTOR (for Port Injection): INSTALLATION; 2013 MY FR-S [03/2012 -]		

INSTALLATION

1. INSTALL FUEL INJECTOR ASSEMBLY

- (a) Apply gasoline to a new fuel injector O-ring and a new fuel injector grommet, and then install them to the injector.

NOTICE:

Check that there is no damage or foreign material in the groove of the injector when installing the fuel injector O-ring and fuel injector grommet.

- (b) Install the 4 fuel injector assemblies to the fuel delivery pipe.

NOTICE:

- Check that there are no foreign objects or scratches in the insertion opening of the fuel delivery pipe.
- Take sufficient care not to twist the O-ring.
- If the injector does not rotate smoothly after installing it to the fuel delivery pipe, remove the injector and reinstall it with a new O-ring.

2. INSTALL FUEL INJECTOR SEAL (for Bank 1)

- (a) Install 2 new fuel injector seals.

3. INSTALL FUEL DELIVERY PIPE (for Bank 1)

- (a) Install the fuel delivery pipe (for bank 1) (with injector) to the intake manifold with the 2 bolts.

Torque:

19 N·m {194 kgf·cm, 14ft·lbf}

- (b) Engage the clamp to connect the wire harness.
(c) Connect the 2 fuel injector assembly connectors.

HINT:

Connect the connector, aligning it with the baffles on the fuel injector assembly on the fuel delivery pipe (for bank 1).

- (d) Connect the No. 2 fuel delivery pipe sub-assembly to the fuel delivery pipe (for bank 1)  .

4. INSTALL FUEL INJECTOR SEAL (for Bank 2)

- (a) Install 2 new fuel injector seals.

5. INSTALL FUEL DELIVERY PIPE (for Bank 2)

- (a) Install the fuel delivery pipe (for bank 2) (with injector) to the intake manifold with the 2 bolts.

Torque:

19 N·m {194 kgf·cm, 14ft·lbf}

- (b) Connect the 2 injector connectors and clamp.

HINT:

Connect the connector, aligning it with the baffles on the fuel injector assembly on the fuel delivery pipe (for bank 2).

(c) Connect the No. 2 fuel delivery pipe sub-assembly to the fuel delivery pipe (for bank 2) **INFO** .

6. INSTALL INJECTOR COVER (for Bank 2)

(a) Install the injector cover to the intake manifold with the 2 bolts.

Torque:

19 N·m {194 kgf·cm, 14ft·lbf}

(b) Install the wire harness clamp bracket to the injector cover with the bolt.

Torque:

11 N·m {112 kgf·cm, 8ft·lbf}

7. CONNECT NO. 2 FUEL HOSE

(a) Connect the No. 2 fuel hose to the fuel delivery pipe sub-assembly with the clamp.

8. CONNECT NO. 3 FUEL HOSE

(a) Align the matchmarks on the the fuel delivery pipe and No. 3 fuel hose.

(b) Connect the No. 3 fuel hose to the fuel delivery pipe sub-assembly **INFO** .

9. CONNECT NO. 1 FUEL HOSE

(a) Align the matchmarks on fuel delivery pipe and the No. 1 fuel hose.

(b) Connect the No. 1 fuel hose to the fuel delivery pipe **INFO** .

10. INSTALL INJECTOR COVER (for Bank 1)

(a) Install the injector cover to the intake manifold with the 2 bolts.

Torque:

19 N·m {194 kgf·cm, 14ft·lbf}

(b) Engage the 4 clamps to install the wire harness to the injector cover.

11. INSTALL INJECTOR DRIVER **INFO**

12. INSTALL CHAMBER ASSEMBLY

INFO

13. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL **INFO**

14. INSPECT FOR FUEL LEAK **INFO**

Last Modified: 4-14-2014	6.6 A	Doc ID: RM000000Q4808HX
Model Year: 2013	Model: FR-S	Prod Date Range: [03/2012 -]

REMOVAL

1. DISCHARGE FUEL SYSTEM PRESSURE

INFO

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

INFO

3. REMOVE CHAMBER ASSEMBLY

INFO

4. REMOVE INJECTOR DRIVER

INFO

5. REMOVE INJECTOR COVER (for Bank 1)

- (a) Disengage the 4 clamps and separate the wire harness from the injector cover (for bank 1).

- (b) Remove the 2 bolts and injector cover (for bank 1).

6. DISCONNECT NO. 1 FUEL HOSE

- (a) Place matchmarks on the fuel delivery pipe and the No. 1 fuel hose.

Text in Illustration

*a

Matchmark

(b) Using SST, disconnect the No. 1 fuel hose from the fuel delivery pipe sub-assembly **INFO** .

SST: SU003-03936

7. DISCONNECT NO. 3 FUEL HOSE

(a) Place matchmarks on the fuel delivery pipe and the No. 3 fuel hose from the fuel pipe.

Text in Illustration

*a

Matchmark

(b) Using SST, disconnect the No. 3 fuel hose from the fuel pipe **INFO** .

SST: SU003-03936

8. DISCONNECT NO. 2 FUEL HOSE

(a) Remove the clamp and disconnect the No. 2 fuel vapor feed hose from the fuel pipe.

9. REMOVE INJECTOR COVER (for Bank 2)

(a) Remove the bolt and disconnect the wire harness clamp

bracket from the injector cover (for bank 2).

(b) Remove the 2 bolts and injector cover (for bank 2).

10. REMOVE FUEL DELIVERY PIPE (for Bank 2)

(a) Disconnect the 2 fuel injector assembly connectors.

(b) Disengage the clamp and separate the wire harness.

(c) Disconnect the fuel pump assembly connector.

- (d) Disconnect the No. 2 fuel delivery pipe sub-assembly from the fuel delivery pipe (for bank 2) **INFO** .

- (e) Remove the 2 bolts and fuel delivery pipe (for bank 2).

NOTICE:

When removing the fuel delivery pipe (for bank 2), hold the pipe by both ends and pull it straight upward.

11. REMOVE FUEL INJECTOR SEAL (for Bank 2)

- (a) Remove the 2 fuel injector seals.

12. REMOVE FUEL DELIVERY PIPE (for Bank 1)

- (a) Disconnect the 2 fuel injector assembly connectors.

- (b) Disengage the clamp and separate the wire harness.

- (c) Disconnect the No. 2 fuel delivery pipe sub-assembly from the fuel delivery pipe (for bank 1) **INFO** .

(d) Remove the 2 bolts and fuel delivery pipe (for bank 1).

NOTICE:

When removing the fuel delivery pipe (for bank 1), hold the pipe by both ends and pull it straight upward.

13. REMOVE FUEL INJECTOR SEAL (for Bank 1)

(a) Remove the 2 fuel injector seals.

14. REMOVE FUEL INJECTOR ASSEMBLY

(a) Remove the 4 fuel injector assemblies from the fuel delivery pipe.

NOTICE:

For reinstallation, attach a tag or label to the injector shaft.

(b) Remove the fuel injector O-ring and fuel injector grommet from the fuel injector assembly.

Title: FA20 FUEL: FUEL PRESSURE SENSOR: INSPECTION; 2013 MY FR-S [03/2012 -]		

INSPECTION

1. INSPECT FUEL PRESSURE SENSOR

(a) Check the fuel pressure sensor output voltage.

(1) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 (GND) - 2 (VOUT)	Apply 5 V between terminals 3 (VCC) and 1 (GND)	Approximately 0.5 V

Text in Illustration

*a	Component without harness connected (Fuel Pressure Sensor)
----	--

NOTICE:

- Be careful when connecting the leads, as the fuel pressure sensor may be damaged if the leads are connected to the wrong terminals.
- Do not apply a voltage of 6 V or more to the terminals 3 (VCC) and 1 (GND).

HINT:

If a stable power supply is not available, use 4 1.2 V nickel-metal hydride batteries, etc.

If the resistance is not as specified, replace the fuel pressure sensor.

Title: FA20 FUEL: FUEL PRESSURE SENSOR: INSTALLATION; 2013 MY FR-S [03/2012 -]		

INSTALLATION

1. INSTALL FUEL INJECTOR ASSEMBLY

NOTICE:

Be sure to use a new fuel delivery pipe and new fuel pressure sensor. INFO

2. INSTALL FUEL DELIVERY PIPE (for Bank 1)

(a) Install the fuel delivery pipe (for Bank 1) with the 2 bolts.

Torque:

19 N·m {194 kgf·cm, 14ft·lbf}

3. INSTALL FUEL PRESSURE SENSOR

(a) Temporarily install the new fuel pressure sensor by hand as much as possible to the fuel delivery pipe (for Bank 1).

(b) Tighten the fuel pressure sensor.

Torque:

58 N·m {591 kgf·cm, 43ft·lbf}

NOTICE:

- Ensure that no oil adheres to the threads of the fuel pressure sensor and No. 1 fuel delivery pipe sub-assembly RH.
- Do not allow any foreign matter to adhere when installing the fuel pressure sensor.
- Once the fuel pressure sensor is tightened to the specified torque, do not retighten or recheck it.

(c) Connect the fuel pressure sensor connector and 2 fuel injector connectors.

4. INSTALL FUEL DELIVERY PIPE INFO

5. INSTALL INTAKE MANIFOLD

INFO

Last Modified: 4-14-2014	6.6 A	Doc ID: RM000000VIM02ZX

Title: FA20 FUEL: FUEL PUMP (for High Pressure): INSPECTION; 2013 MY FR-S [03/2012 -]		

INSPECTION

1. INSPECT FUEL PUMP ASSEMBLY

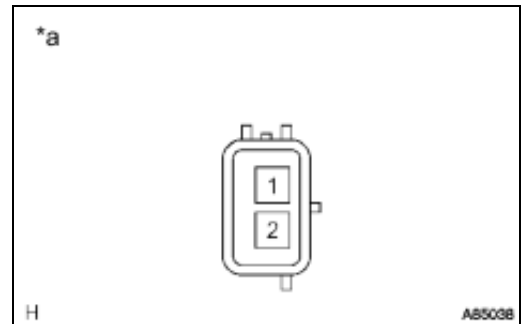

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	20°C (68°F)	0.45 to 0.55 Ω

Text in Illustration

*a	Component without harness connected (Fuel Pump Assembly)
----	---

If the result is not as specified, replace the fuel pump assembly.

Last Modified: 4-14-2014	6.6 A	Doc ID: RM000000VIQ02TX
Model Year: 2013	Model: FR-S	Prod Date Range: [03/2012 -]
Title: FA20 FUEL: FUEL PUMP (for High Pressure): INSTALLATION; 2013 MY FR-S [03/2012 -]		

INSTALLATION

1. INSTALL PUMP DRIVE CASE ASSEMBLY

- (a) Apply seal packing in a continuous line as shown in the illustration.

Seal packing:

Three Bond 1217G, 1217H or equivalent

Standard seal diameter:

Within 1 mm (0.039 in.)

NOTICE:

- Install within 5 minutes of applying seal packing, and tighten the bolts within 15 minutes.
- Do not pour in engine oil for at least 2 hours after installation.
- Do not start the engine for at least 2 hours after installation.
- Do not allow seal packing to enter the engine oil passage.

Text in Illustration

*A	A-A cross-section
*1	Seal Packing
*a	Seal Application Position : Within 1 mm (0.039 in.) from Edge
*b	Seal Diameter : 2 to 4 mm (0.079 to 0.158 in.)

- (b) Using a 6 mm hexagon wrench, install the pump drive case assembly with the 3 bolts.

Torque:

19 N·m {194 kgf·cm, 14ft·lbf}

2. INSTALL VALVE LIFTER

- (a) Turn the crankshaft until the flat of the cam is facing the cylinder head cover's fuel pump attachment hole.

HINT:

When installing the fuel pump by following the procedure described above, it is easier to install the fuel pump and the No. 2 fuel pipe later if the crankshaft pointed side is not used to push up the pump activation surface.

- (b) Apply a coat of engine oil to the pump activation cam and pump lifter part.

- (c) Apply new engine oil to the inside of the pump drive case assembly and the underside of the valve lifter, and install the valve lifter to the pump drive case assembly.

Text in Illustration

*1	Valve Lifter
*2	Pump Drive Case Assembly
*3	Location for applying new engine oil

HINT:

When applying oil to the underside of the valve lifter, drop a few drops of oil on the camshaft and the roller rocker arm from the valve lifter hole.

3. INSTALL FUEL PUMP ASSEMBLY

- (a) Apply a light coat of engine oil to a new O-ring and install it to the fuel pump assembly.
- (b) Using a "TORX" Plus Socket Wrench, install the fuel pump assembly with the 2 bolts.

Torque:

21 N·m {214 kgf·cm, 16ft·lbf}

4. CONNECT FUEL DELIVERY PIPE SUB-ASSEMBLY

- (a) Install the fuel delivery pipe sub-assembly to the fuel pump assembly with a new gasket and the union bolt.

Torque:

31 N·m {316 kgf·cm, 23ft·lbf}

5. INSTALL NO. 2 FUEL DELIVERY PIPE INFO

6. INSTALL INTAKE MANIFOLD

INFO

Last Modified: 4-14-2014	6.6 G	Doc ID: RM000000VIT02IX
Model Year: 2013	Model: FR-S	Prod Date Range: [03/2012 -]
Title: FA20 FUEL: FUEL PUMP (for High Pressure): ON-VEHICLE INSPECTION; 2013 MY FR-S [03/2012 -]		

ON-VEHICLE INSPECTION

1. CHECK FUEL PUMP OPERATION

(a) Check fuel pressure.

- (1) Connect the Techstream to the DLC3.
- (2) Start the engine.
- (3) Turn the Techstream on.
- (4) Enter the following menus: Powertrain / Engine / Active Test / Control the Target Fuel Pressure.
- (5) Check that the fuel pressure fluctuates when the target fuel pressure changes.

HINT:

The target fuel pressure operation lowers the target fuel pressure by -12.5% or increases the target fuel pressure by 24.8%.

Standard:

Fuel pressure fluctuates in accordance with the Techstream operation.

If the result is not as specified, replace the fuel pump or fuel pressure sensor.

(b) Check operating sound.

- (1) Remove the injector cover (for bank 2).
- (2) Start the engine.

(3) Using a sound scope, check the operating sound of the pump.

If no sound can be heard, check the fuel pump, wire harness and ECM.

(4) Stop the engine.

(5) Reinstall the injector cover (for bank 2).

Title: FA20 FUEL: FUEL PUMP: DISASSEMBLY; 2013 MY FR-S [03/2012 -]		

DISASSEMBLY

NOTICE:

- Do not disconnect the hose indicated in the illustration.
- When replacing the fuel filter assembly, replace it together with the fuel suction plate sub-assembly.

1. REMOVE FUEL SENDER GAGE ASSEMBLY INFO

2. REMOVE NO. 1 FUEL SUB-TANK

(a) Disconnect the fuel pump connector.

(b) Hold the fuel suction plate sub-assembly in the direction of the arrow as shown in the illustration.

(c) Using needle nose plier, remove the E-ring.

- (d) Using a screwdriver with the tip taped, disengage the claw and separate the jet pump nozzle.

Text in Illustration

*1	Protective Tape
----	-----------------

- (e) Using a screwdriver with the tip taped, disengage the 3 claws and separate the No. 1 fuel sub-tank.

NOTICE:

Do not damage the No. 1 fuel sub-tank or the fuel filter.

- (f) Using a screwdriver with the tip taped, disengage the claw and separate the jet pump.

- (g) Remove the O-ring from the No. 1 fuel sub-tank.

3. REMOVE FUEL PUMP ASSEMBLY

(a) Using 2 screwdrivers with the tip taped, disengage the 2 claws.

(b) Using a screwdriver with the tip taped, disengage the 3 claws and remove the fuel pump.

NOTICE:

Do not damage the fuel pump or the fuel filter.

(c) Disconnect the connector, and remove the fuel pump wire harness.

(d) Remove the O-ring and fuel pump spacer from the fuel pump assembly.

Text in Illustration

*1	fuel pump wire harness
*2	O-Ring
*3	Fuel Pump Spacer

4. REMOVE FUEL PRESSURE REGULATOR ASSEMBLY

(a) Remove the fuel pressure regulator assembly from the fuel filter.

(b) Remove the 2 O-ring and backup ring from the fuel pressure regulator assembly.

Text in Illustration

*1	O-Ring
*2	Backup Ring

Last Modified: 4-14-2014	6.6 G	Doc ID: RM000000W1H055X
Model Year: 2013	Model: FR-S	Prod Date Range: [03/2012 -]
Title: FA20 FUEL: FUEL PUMP: INSPECTION; 2013 MY FR-S [03/2012 -]		

INSPECTION

1. INSPECT FUEL PUMP ASSEMBLY

(a) Inspect the resistance of the fuel pump assembly.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	20°C (68°F)	0.2 to 3.0 Ω

Text in Illustration

*a	Component without harness connected (Fuel Pump Assembly)
----	---

If the result is not as specified, replace the fuel pump assembly.

(b) Inspect the operation of the fuel pump assembly.

(1) Connect a battery's negative (-) lead to terminal 3 of the connector, and a positive (+) lead to terminal 4. Check that the fuel pump operates.

Text in Illustration

*a	Component without harness connected (Fuel Suction Tube Assembly with Pump and Gauge)
----	---

NOTICE:

- These tests must be performed within 10 seconds to prevent the coil from burning out.
- Keep the fuel pump as far away from the battery as possible.
- Always turn on and off the voltage on the battery side, and not on the fuel pump side.

Last Modified: 4-14-2014	6.6 A	Doc ID: RM000000QDU07TX

Title: FA20 FUEL: FUEL PUMP: INSTALLATION; 2013 MY FR-S [03/2012 -]		

INSTALLATION

1. INSTALL FUEL SUCTION TUBE ASSEMBLY WITH PUMP AND GAUGE

- (a) Set the new gasket to the fuel suction tube assembly with pump and gauge.

Text in Illustration

*1	Gasket
----	--------

- (b) Connect the fuel tank vent hose sub-assembly [INFO](#).

NOTICE:

- When connecting the fuel tube connector, do not forcibly pull the fuel return vent tube sub-assembly.
- Be careful not to bend the arm of the fuel sender gauge assembly.

- (c) Insert the fuel suction tube assembly with pump and gauge inside the fuel tank assembly, and then attach the new gasket which has already been mounted on the fuel suction tube assembly with pump and gauge to the fuel tank assembly.

NOTICE:

Gaps or misplaced attachment of the gasket may cause fuel to leak, so make sure that there are no gaps or misalignments anywhere around the gasket when attaching it to the fuel tank assembly.

(d) Apply a light coat of gasoline to a gasket.

Text in Illustration

*1	Gasket
*a	Application area

NOTICE:

- Apply gasoline in the area indicated in the illustration.
- Ensure that gasoline does not adhere to the threads of the fuel tank assembly.
- Check that there is no fuel or foreign matter in the seal section.

(e) Set the fuel suction tube assembly with pump and gauge within the fuel tank assembly installation position marks.

Text in Illustration

*a	Installation position marks
----	-----------------------------

(f) Attach a new sheet ring and fuel pump gauge retainer, and temporarily tighten the fuel pump gauge retainer.

(g) Temporarily install SST (plate and 4 claws) to the fuel pump gauge retainer.

SST: 09808-14030

09808-01030

09808-01050

SST: 09808-01071**NOTICE:**

Do not apply a claw of SST at the marked part.

**Text in Illustration**

*a	Marked Part
----	-------------

HINT:

- Be sure to use SST (claws) as shown in the illustration.
- Engage SST (claws) securely with the fuel pump gauge retainer ribs to secure SST.

(h) While securely pressing SST (claws) against the fuel pump gauge retainer ribs, tighten the 4 bolts.

HINT:

Install SST while pressing SST (claws) against the fuel pump gauge retainer (towards the center of SST).

(i) Using SST, tighten the fuel pump gauge retainer.

Torque:

85 N·m {867 kgf·cm, 63ft·lbf}

NOTICE:

- Do not use any tools other than those specified in this operation. Damage to the fuel pump gauge retainer or fuel tank may result.
- Do not press down on SST excessively as this may make the fuel pump gauge retainer hard to rotate, and may damage components.
- Make sure to rotate SST horizontally. If SST is rotated at an angle, SST may come off.
- Do not spin SST too fast or use an impact wrench as this may result in damage to components.
- If SST comes off of the fuel pump gauge retainer, loosen SST (bolts) and reinstall SST.
- Check that the fuel suction tube assembly with pump and gauge position marks are within the fuel tank assembly installation position marks, as shown in the illustration.
- After tightening to the specified torque, check that it has been tightened to the correct torque.

HINT:

- Lightly press down on SST to prevent it from separating

from the fuel pump gauge retainer. While pressing SST, rotate the handle slowly to tighten the fuel pump gauge retainer.

- The tips of SST (claws) can be fitted onto the ribs of the fuel pump gauge retainer.

REASSEMBLY

1. INSTALL FUEL PRESSURE REGULATOR ASSEMBLY

- (a) Apply a light coat of gasoline to new 2 O-rings, and install the 2 O-rings and backup ring to the fuel pressure regulator assembly.

Text in Illustration

*1	O-Ring
*2	Backup Ring

- (b) Install the fuel pressure regulator assembly to the fuel filter.

2. INSTALL FUEL PUMP ASSEMBLY

- (a) Install the new O-ring and fuel pump spacer to the fuel pump assembly.

Text in Illustration

*1	Fuel Pump Wire harness
*2	O-Ring
*3	Fuel Pump Spacer

- (b) Connect the new fuel pump wire harness to the fuel pump assembly.

- (c) Apply a light coat of gasoline to a seal, and install it to the fuel pump assembly.

- (d) Attach the 5 claws of the fuel filter to install the fuel pump assembly.

NOTICE:

When installing the seal, make sure that it does not become pinched or cut.

3. INSTALL NO. 1 FUEL SUB-TANK

- (a) Set the fuel suction plate sub-assembly to the No. 1 fuel sub-tank using the spring.

- (b) Apply a light coat of gasoline to a new O-ring and install the O-ring to the jet pump.

Text in Illustration

*1	Jet Pump
----	----------

- (c) Install the jet pump to the No. 1 fuel sub-tank.

NOTICE:

- When installing the O-ring, make sure that it does not become pinched or cut.
- Securely attach the claws.

- (d) Attach the 3 claws to install the fuel filter assembly to the No. 1 fuel sub-tank.

(e) Attach the claw to install the jet pump nozzle to the No. 1 fuel sub-tank.

(f) Install a new E-ring.

(g) Connect the fuel pump connector.

4. INSTALL FUEL SENDER GAGE ASSEMBLY [INFO](#)

Title: FA20 FUEL: FUEL PUMP: REMOVAL; 2013 MY FR-S [03/2012 -]		

REMOVAL

1. DISCHARGE FUEL SYSTEM PRESSURE

INFO

2. DRAIN FUEL

(a) If the fuel gauge reads 2/3 or more, carry out the following procedure to drain fuel.

CAUTION:

After running, the engine will be very hot, so take care to avoid burns.

NOTICE:

- Be sure not to scatter any fuel.
- In some cases, there may be fuel in the fuel filler pipe section. Use a gasoline-capable pump or a gasoline-capable hose with a diameter of 10 mm (0.3937 in.) or less, to drain fuel from the fuel filler pipe section.

(1) Remove the center exhaust pipe assembly.

(2) Remove the tail exhaust pipe assembly.

(3) Loosen the hose clamp bolt and disconnect the fuel tank to filler pipe hose.

NOTICE:

Be sure not to scatter any fuel.

(4) Place a metal container below the vehicle, and use a gasoline-capable hose with a diameter of 10 mm or less to drain fuel from the opening of fuel tank assembly to filler pipe hose.

NOTICE:

- Be sure not to scatter any fuel.
- Static electricity could possibly ignite gasoline, so be sure to use earthed metal containers.

(5) Connect the fuel tank to filler pipe hose to the fuel tank filler pipe sub-assembly with the clamp.

Torque:

2.0 N·m {20 kgf·cm, 18in·lbf}

3. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL INFO

4. REMOVE SEPARATE TYPE REAR SEAT CUSHION ASSEMBLY LH INFO

5. REMOVE NO. 2 REAR FLOOR SERVICE HOLE COVER

(a) Remove the No. 2 rear floor service hole cover.

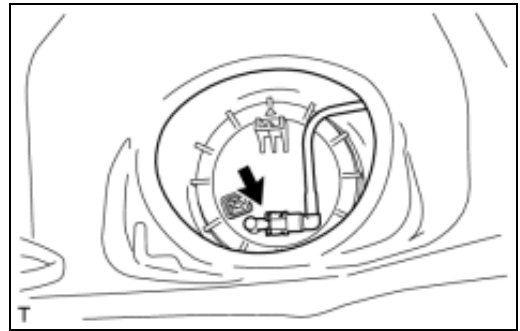

(b) Disconnect the fuel suction tube assembly with pump and gauge connector.

6. REMOVE FUEL SUCTION TUBE ASSEMBLY WITH PUMP AND GAUGE

(a) Disconnect the fuel tank main tube INFO.

(b) Disengage the clamp and separate the fuel tank main tube from the fuel tank assembly.

(c) Remove the fuel pump gauge retainer.

(1) Temporarily install SST to the fuel pump gauge retainer.

**SST: 09808-14030**

HINT:

- Be sure to use SST (claws) as shown in the illustration.
- Engage SST (claws) securely with the fuel pump gauge retainer ribs to secure SST.

(2) While securely pressing SST (claws) against the fuel pump gauge retainer ribs, tighten the 4 bolts.

(3) Install SST (handle).

(4) Lightly press down on SST to prevent it from separating from the fuel pump gauge retainer. While pressing SST, rotate the handle slowly to loosen the fuel pump gauge retainer.

NOTICE:

- Do not use any tools other than those specified in this operation. Damage to the fuel pump gauge retainer or fuel tank may result.
- Do not press down on SST excessively as this may make the fuel pump gauge retainer hard to rotate and may damage components.
- Make sure to rotate SST (handle) horizontally. If SST (handle) is rotated at an angle, SST may come off.
- Do not spin SST too fast or use an impact wrench as this may result in damage to components.
- If SST comes off of the fuel pump gauge retainer, loosen SST (bolts) and reinstall SST.

(5) Disconnect the fuel tank vent hose sub-assembly

INFO

(6) Remove the fuel suction tube assembly with pump and gauge from the fuel tank assembly.

NOTICE:

- Do not pull the fuel return vent tube sub-assembly forcibly when disconnecting the fuel return vent tube sub-assembly.
- Be careful not to bend the arm of the fuel sender gauge assembly.
- Do not rotate the fuel suction tube assembly inside the fuel tank assembly, as doing so may bend the fuel sender gauge arm section.
- Be sure not to spill the fuel remaining in the fuel suction tube assembly on the exterior of the fuel tank assembly or interior of the vehicle.

(7) Remove the gasket from the fuel tank assembly.

Title: FA20 FUEL: FUEL SENDER GAUGE ASSEMBLY: INSPECTION; 2013 MY FR-S [03/2012 -]		

INSPECTION

1. INSPECT FUEL SENDER GAUGE ASSEMBLY

CAUTION:

Take special care of fire.

- (a) Inspect to see if there is any damage to the fuel sender gauge assembly.
- (b) Measure the dimensions between the fuel tank seat face and the float center with the float position at F (upper end) and at E (lower end).

Dimensions

Float position F (upper end) to fuel tank seat face	121 to 129 mm (4.764 to 5.079 in.)
Float position E (lower end) to fuel tank seat face	14.7 to 22.7 mm (0.579 to 0.894 in.)

Text in Illustration

*1	Float position F (upper end)
*2	Float position E (lower end)
*3	Fuel tank seat face

- (c) Check that the float moves smoothly between F (upper) and E (lower).
- (d) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	Float position is F (upper end)	6.5 to 8.5 Ω
	Float position is E (lower end)	168 to 172 Ω

Text in Illustration

*a	Component without harness connected (Fuel Sender Gauge Assembly)
*b	F (upper end)
*c	E (lower end)

If the value is not as specified, replace the fuel sender gauge assembly.

2. INSPECT NO. 2 FUEL SENDER GAUGE ASSEMBLY

CAUTION:

Take special care of fire.

- (a) Inspect to see if there is any damage to the No. 2 fuel sender gauge assembly.
- (b) Measure the dimensions between the fuel tank seat face and the float center with the float position at F (upper end) and at E (lower end).

Dimensions

Float position F (upper end) to fuel tank seat face	150.3 to 158.3 mm (5.917 to 6.232 in.)
Float position E (lower end) to fuel tank seat face	0.7 to 8.7 mm (0.028 to 0.343 in.)

Text in Illustration

*1	Float position F (upper end)
*2	Float position E (lower end)
*3	Fuel tank seat face

- (c) Check that the float moves smoothly between F (upper) and E (lower).
- (d) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	Float position is F (upper end)	5.5 to 9.5 Ω
	Float position is E (lower end)	236 to 244 Ω

Text in Illustration

*a	Component without harness connected (No. 2 Fuel Sender Gauge Assembly)
*b	F (upper end)
*c	E (lower end)

If the value is not as specified, replace the fuel sender gauge assembly.

Title: FA20 FUEL: FUEL SYSTEM: ON-VEHICLE INSPECTION; 2013 MY FR-S [03/2012 -]		

ON-VEHICLE INSPECTION

1. CHECK FUEL PUMP OPERATION AND INSPECT FOR FUEL LEAK

(a) Connect the Techstream to the DLC3.

(1) Turn the ignition switch to ON.

NOTICE:

Do not start the engine.

(2) Turn the Techstream on.

(3) Enter the following menus: Power train / Engine / Active Test / Control the Fuel Pump Speed.

(b) Check the fuel pump operation.

(1) Check for pressure in the fuel inlet tube from the fuel line. Check that sound of fuel flowing in the fuel tank can be heard.

If no sound can be heard, check the EFI MAIN 1 relay, fuel pump, ECM and wiring connector.

(c) Inspect for fuel leaks.

(1) Check that there are no fuel leaks anywhere on the system after performing maintenance.

If there is a fuel leak, repair or replace parts as necessary.

2. CHECK FUEL PRESSURE

(a) Check that the battery positive voltage is above 12 V.

(b) Discharge the fuel system pressure  .

(c) Disconnect the cable from the negative (-) battery terminal.

NOTICE:

The power window system utilizes a mechanism in which the door glass moves down slightly when the door is opened, and in which the glass moves up when the door is closed the door in order to prevent the door molding from being damaged. When the battery negative (-) terminal needs to be disconnected for servicing, fully open the driver and passenger door glasses in advance.

(d) Disconnect the No. 2 fuel tube. (Direct injection side)

(1) Loosen the hose clamp and disconnect the No. 2 fuel tube.

(e) Disconnect the fuel tube. (Port injection side)

(1) Loosen the hose clamp and disconnect the fuel tube.

(f) Install SST (pressure gauge) as shown in the illustration.

SST: 09268-31014

09268-41700

Text in Illustration

*1	SST (Pressure Gauge)
*2	SST (Straight joint)
*3	SST (Hose)
*4	SST (T-joint)
*5	SST (Hose Band)
*6	SST (Clip)

(g) Wipe off any gasoline.

(h) Reconnect the cable to the negative (-) battery terminal.

(i) Operate the fuel pump.

(1) Connect the Techstream to the DLC3.

(2) Turn the ignition switch to ON.

NOTICE:

Do not start the engine.

(3) Turn the Techstream on.

(4) Enter the following menus: Power train / Engine / Active Test / Control the Fuel Pump Speed.

(j) Measure the fuel pressure.

Standard fuel pressure:

350 to 500 kPa (4 to 5 kgf/cm² , 51 to 73 psi)

If the fuel pressure is higher than the specification, replace the fuel pump (built-in fuel tank).

If the pressure is lower than the specification, check the fuel hoses, connections, and fuel pump (built-in fuel tank).

(k) Start the engine.

(l) Measure the fuel pressure when idle.

Standard fuel pressure:

350 to 500 kPa (4 to 5 kgf/cm² , 51 to 73 psi)

If the pressure is not as specified, check the fuel pump and injectors.

(m) Stop the engine.

(n) Check that the fuel pressure remains as specified for 5 minutes after the engine has stopped.

Standard fuel pressure:

147 kPa (1.5 kgf/cm² , 21 psi) or more

If the pressure is not as specified, check the fuel pump or injectors.

(o) After checking the fuel pressure, disconnect the cable from the negative (-) battery terminal and carefully remove SST and the fuel tube connector to prevent fuel from spilling.

(p) Reconnect the No. 2 fuel tube with the clamp. (Direct injection side)

(q) Reconnect the fuel tube with the clamp. (Port injection side)

(r) Inspect for fuel leaks (Step 1).

3. CHECK FUEL PRESSURE (for High Pressure)

(a) Connect the Techstream to the DLC3.

(1) Turn the ignition switch to ON.

(2) Turn the Techstream on.

(b) Start and warm up the engine.

(c) Run the engine at idle.

(d) Enter the following menus: Power train / Engine / Data List / Fuel Press.

(e) Check the high pressure side fuel pressure.

Standard fuel pressure:

3000 to 5000 kPa (30.6 to 51.0 kgf/cm² , 435 to 725 psi)

If the pressure is not as specified, check the fuel pump, high pressure side fuel pump, fuel pressure sensor and wirings.

(f) Stop the engine.

Model Year: 2013	Model: FR-S	Prod Date Range: [03/2012 -]
Title: FA20 FUEL: FUEL SYSTEM: PRECAUTION; 2013 MY FR-S [03/2012 -]		

PRECAUTION

NOTICE:

Before working on the fuel system, disconnect the cable from the negative (-) battery terminal.

CAUTION:

- Do not smoke or be near an open flame when working on the fuel system.
- Keep gasoline away from rubber or leather parts.
- Do not allow fuel to spray when removing the pipe between the high pressure side fuel pump and the fuel injector. The fuel in the pipe is highly pressurized.

1. PRECAUTION

NOTICE:

After turning the ignition switch off, waiting time may be required before disconnecting the cable from the battery terminal. Therefore, make sure to read the disconnecting the cable from the battery terminal notice before proceeding with work INFO.

2. DISCHARGE FUEL SYSTEM PRESSURE

CAUTION:

- Make sure the engine coolant temperature is 60°C (140°F) or less when performing this procedure.
- Do not disconnect any part of the fuel system until you have discharged the fuel system pressure.
- Even after discharging the fuel pressure, place a piece of cloth or equivalent over fittings as you separate them to reduce the risk of fuel spray on yourself or in the engine compartment.

(a) Disconnect the cable from the negative (-) battery terminal.

(b) Remove rear seat cushion assembly LH.

(c) Remove the No. 2 rear floor service hole cover.

- (d) Disconnect the fuel suction tube assembly with pump and gauge connector.

- (e) Connect the cable to the negative (-) battery terminal.
 (f) Start the engine. After the engine has stopped on its own, turn the ignition switch off.

HINT:

Some DTCs may be stored. Clear the DTCs before proceeding to the next step.

- (g) Crank the engine again, then check that the engine does not start.
 (h) Loosen the fuel tank cap, then discharge the pressure in the fuel tank completely.
 (i) Connect the fuel suction tube assembly with pump and gauge connector.
 (j) Install the No. 2 rear floor service hole cover.
 (k) Install rear seat cushion assembly LH.

3. FUEL SYSTEM

- (a) When disconnecting a fuel pressure line, a large amount of gasoline will spill out. Perform the following procedure:
- (1) Discharge fuel system pressure.
 - (2) Put a container under the connection.
 - (3) Disconnect the fuel pump tube.
 - (4) Drain the fuel remaining inside the fuel pump tube into the container.
 - (5) Cover the disconnected pipe and connector with a plastic bag to prevent damage and contamination.
- (b) Observe these precautions when connecting the fuel tube connector (for metallic type).

(1) Attach SST to the fuel pipe.

SST: SU003-03936

(2) Insert SST in the fuel tube connector side, and remove the fuel tube from the fuel pipe.

Text in Illustration

*1	Retainer
*2	O-Ring
*3	Housing
*4	Fuel Pipe
	Insert

(3) Cover the disconnected fuel pipe and fuel tube connector with plastic bags to prevent damage and contamination.

(c) Observe these precautions when connecting the fuel tube connector (for metallic type).

(1) Check for damage or foreign matter on the connected part of the fuel pipe.

(2) Align the fuel tube connector axis with the fuel pipe axis, and push the fuel tube connector in until the retainer makes a clicking sound.

Text in Illustration

	Push
--	------

(3) After connecting the fuel tube connector, pull the fuel tube connector and pipe, and then push them to check that they are connected firmly.

NOTICE:

Be sure to always finish checking the fuel pipe connections by pushing.

Text in Illustration

	Pull
	Push

(4) Inspect for fuel leaks INFO.

(d) Observe these precautions when disconnecting the fuel tube connector (for quick type A).

(1) Check that there is no damage or foreign matter on the part of the pipe that contacts the connector.

(2) Detach the 2 claws of the connector retainer. Push down on the connector and disconnect it from the pipe.

Text in Illustration

*1	Retainer
	Push
	Down

	Pull
---	------

HINT:

If the connector and pipe are stuck, pinch the fuel pipe by hand and push and pull the connector to disconnect it.

Text in Illustration

	Pull
	Push

NOTICE:

- Check for any dirt and foreign matter contamination in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe

and connector.

- Do not use any tools to separate the pipe and connector.
- Do not allow any scratches or foreign matter on the parts when disconnecting them, as the fuel tube joint contains the O-rings that seal the plug.
- Check for any dirt and foreign matter on the pipe seal surface. Clean if necessary.
- Do not forcibly bend, twist or turn the nylon tube.
- Protect the disconnected part by covering it with a plastic bag and tape after disconnecting the main tube.
- If the pipe and connector are stuck together, pinch the tube between your fingers and turn it carefully to free it. Then disconnect the main tube.

Text in Illustration

*1	Pipe
*2	Retainer
*3	Nylon Tube

*4	Connector
*5	O-Ring

(3) Check for foreign matter on the seal surface of the disconnected pipe. Clean it if necessary.

(4) To protect the disconnected pipe and connector from damage and foreign matter, cover them with a plastic bag.

(e) Observe these precautions when connecting the fuel tube connector (for quick type A).

(1) Check for foreign matter on the pipe and around the connector before connecting it. Clean it if necessary.

(2) Align the axis of the connector with the axis of the pipe. Push the pipe into the connector, and then push up on the retainer.

Text in Illustration

*1	Retainer
➔	Up
➔	Push

NOTICE:

- Before connecting the tube connectors to the pipes, check if there is any damage or foreign matter

in the connectors.

- After connecting the pipe and the connector, check that the pipe and connector are securely connected by trying to pull them apart.

Text in Illustration

➔	Pull
---	------

(3) Inspect for fuel leaks **INFO** .

(f) Perform the following procedure when disconnecting a fuel tube connector (Quick Type B).

Text in Illustration

*1	Fuel Tube Connector
*2	Fuel Pipe
*3	Retainer
	Pinch
	Pull Out

(1) Check that there is no dirt or other foreign matter around the fuel tube connector before disconnecting it. Clean the joint if necessary.

(2) Pinch the retainer as illustrated, then pull out the fuel tube connector from the fuel pipe.

NOTICE:

Be sure to disconnect the fuel tube connector by hand.

(3) If the fuel tube connector and fuel pipe are stuck, pinch the fuel pipe, and then push and pull the fuel tube connector to release and disconnect the fuel tube connector.

(4) Check if there is any dirt or other foreign matter on the seal surface of the disconnected fuel pipe and clean it away as necessary.

(5) Cover the disconnected fuel pipe and fuel tube connector with plastic bags to prevent damage and contamination.

(g) Perform the following procedure when connecting a fuel tube connector (Quick Type B).

- (1) Check for damage or foreign matter on the connected part of the fuel pipe.
- (2) Align the fuel tube connector with the fuel pipe, and then push in the fuel tube connector until the retainer makes a "click" sound.

HINT:

If the fuel pipe is difficult to push into the fuel tube connector, apply a light coat of engine oil to the tip of the fuel pipe and reinsert it.

- (3) After finishing the connection, check that the fuel pipe and the fuel tube connector are securely connected by pulling on them.

- (4) Inspect for fuel leaks **INFO** .

4. INSPECT FOR FUEL LEAK

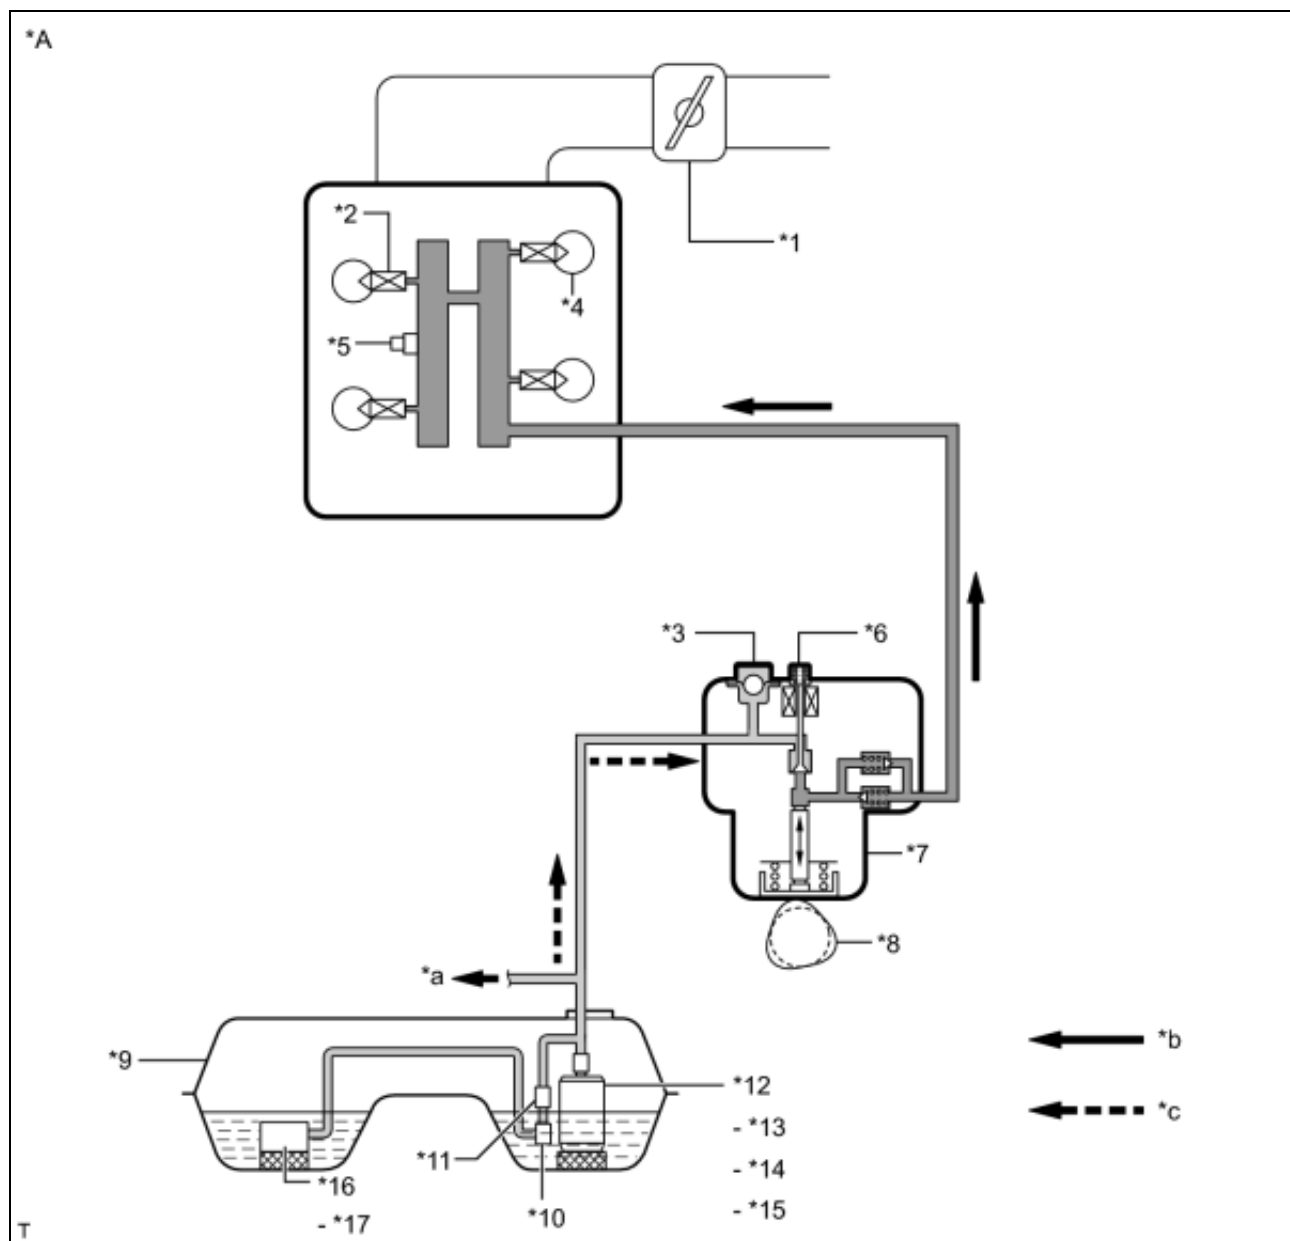

- (a) Check that there are no fuel leaks anywhere on the fuel system after performing maintenance

INFO .

Title: FA20 FUEL: FUEL TANK: INSTALLATION; 2013 MY FR-S [03/2012 -]		

INSTALLATION

1. INSTALL NO. 1 FUEL TANK CUSHION

- (a) Install 10 new No. 1 fuel tank cushions to the fuel tank assembly.

2. INSTALL NO. 2 FUEL TANK MAIN TUBE SUB-ASSEMBLY

- (a) Install the fuel filter to the No. 2 fuel tank main tube sub-assembly.
 (b) Install the No. 2 fuel tank main tube sub-assembly to the fuel tank assembly.

3. INSTALL FUEL TANK TO FILLER PIPE HOSE

- (a) Install the fuel tank to filler pipe hose to the fuel tank assembly with the clamp.
 (b) Tighten the hose clamp bolt.

Torque:

2.0 N·m {20 kgf·cm, 18in·lbf}

4. INSTALL FUEL TANK ASSEMBLY

- (a) Inspect the fuel tank cover.

HINT:

The fuel tank cover is used as a base when attaching the fuel tank assembly, so inspect for any deformation, cracking, or other damage. If any faults are found, replace with a new one.

- (b) Hold the fuel tank assembly with an engine lifter.
 (c) Temporarily install the fuel tank assembly to the body with the 2 No. 1 fuel tank bands and 4 bolts.

- (d) Adjust the position of the fuel tank assembly to achieve the required separation between the front edge of the fuel tank cover and the holes used for fixing the parking brake cable bracket in place.

Standard:

42 to 44 mm (1.6535 to 1.7323 in.)

- (e) Adjust the position of the fuel tank assembly to achieve the required difference in clearance between the left and right sides of the fuel tank assembly and the body.

Standard:

Below 2 mm (0.0787 in.)

- (f) Tighten the 4 bolts in the order shown in the illustration.

Torque:

33 N·m {337 kgf·cm, 24ft·lbf}

5. INSTALL CHARCOAL CANISTER ASSEMBLY

- (a) Connect the quick connector as indicated by the arrows in the order shown in the illustration.

6. CONNECT FUEL TANK VENT HOSE SUB-ASSEMBLY

- (a) Engage the clamp to install the tube.
 (b) Connect the fuel tank vent hose sub-assembly with the clamp.

7. CONNECT FUEL TANK TO FILLER PIPE HOSE

- (a) Connect the fuel tank to filler pipe hose to the fuel tank filler pipe sub-assembly with the clamp.
 (b) Tighten the hose clamp bolt.

Torque:

2.5 N·m {25 kgf·cm, 22in·lbf}

8. REMOVE NO. 3 PARKING BRAKE CABLE ASSEMBLY INFO**9. REMOVE NO. 2 PARKING BRAKE CABLE ASSEMBLY** INFO**10. INSTALL NO. 3 FUEL TANK PROTECTOR**

(a) Install the No. 3 fuel tank protector with a new nut and 2 clips.

Torque:

9.0 N·m {92 kgf·cm, 80in·lbf}

11. INSTALL REAR SUSPENSION MEMBER SUB-ASSEMBLYINFO**12. INSTALL FUEL TANK RETURN TUBE** INFO**13. INSTALL FUEL SUCTION TUBE ASSEMBLY WITH PUMP AND GAUGE** INFO**14. ADD FUEL****15. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL** INFO**16. INSPECT FOR FUEL LEAK** INFO**17. INSTALL NO. 2 REAR FLOOR SERVICE HOLE COVER** INFO**18. INSTALL REAR FLOOR SERVICE HOLE COVER** INFO**19. INSTALL SEPARATE TYPE REAR SEAT CUSHION ASSEMBLY LH** INFO**20. INSTALL SEPARATE TYPE REAR SEAT CUSHION ASSEMBLY RH** INFO

6. REMOVE REAR FLOOR SERVICE HOLE COVER

INFO

7. REMOVE FUEL SUCTION TUBE ASSEMBLY WITH PUMP AND GAUGE

INFO

8. REMOVE FUEL TANK RETURN TUBE

INFO

9. DRAIN FUEL

10. REMOVE REAR SUSPENSION MEMBER SUB-ASSEMBLY

INFO

11. REMOVE NO. 3 FUEL TANK PROTECTOR

(a) Remove the nut, 2 clips and No. 3 fuel tank protector.

12. REMOVE NO. 3 PARKING BRAKE CABLE ASSEMBLY

INFO

13. REMOVE NO. 2 PARKING BRAKE CABLE ASSEMBLY

INFO

14. DISCONNECT FUEL TANK TO FILLER PIPE HOSE

- (a) Loosen the hose clamp bolt and disconnect the fuel tank to filler pipe hose.

15. DISCONNECT FUEL TANK VENT HOSE SUB-ASSEMBLY

- (a) Remove the clamp and disconnect the fuel tank vent hose sub-assembly.

- (b) Disengage the clamp and separate the tube.

16. SEPARATE CHARCOAL CANISTER ASSEMBLY

- (a) Disconnect the quick connector as indicated by the arrows in the order shown in the illustration.

17. REMOVE FUEL TANK ASSEMBLY

(a) Place an engine lifter under the fuel tank assembly.

(b) Remove the 4 bolts, 2 No. 1 fuel tank bands and fuel tank assembly.

18. REMOVE FUEL TANK TO FILLER PIPE HOSE

(a) Loosen the hose clamp bolt and remove the fuel tank to filler pipe hose from the fuel tank.

19. REMOVE NO. 2 FUEL TANK MAIN TUBE SUB-ASSEMBLY

(a) Remove the No. 2 fuel tank main tube sub-assembly from the fuel tank assembly.

(b) Remove the fuel filter from the No. 2 fuel tank main tube sub-assembly.

20. REMOVE NO. 1 FUEL TANK CUSHION

- (a) Remove the 10 No. 1 fuel tank cushions shown in the illustration.

Title: FA20 INTAKE / EXHAUST: CHAMBER: INSTALLATION; 2013 MY FR-S [03/2012 -]		

INSTALLATION

1. INSTALL CHAMBER ASSEMBLY

(a) Install the air cleaner duct to the chamber assembly with a hose clamp.

Torque:

2.0 N·m {20 kgf·cm, 18in·lbf}

2. INSTALL AIR CLEANER DUCT

(a) Install the 2 bolts and the air cleaner duct with the chamber.

Torque:

6.0 N·m {61 kgf·cm, 53in·lbf}

(b) Install the air cleaner duct with a hose clamp.

Torque:

2.0 N·m {20 kgf·cm, 18in·lbf}

3. INSTALL HOSE

(a) Engage the 2 clamps and install the hose.

(b) Insert the hose in until its flange contacts that of the grommet.

Text in Illustration

*1	Grommet
*a	Flange

NOTICE:

- Do not convolute the grommet when insert the hose to the grommet.
- Check the grommet from the vehicle interior side to verify that it is properly installed onto the body.

(c) Connect the hose.

*2	Tail Pipe Baffle
*2	Plate
	Contact area

- (b) Install the 2 bolts and the 2 tail pipe baffles.

Torque: 7.5 N·m (77 kgf·cm, 66in·lbf)

3. INSTALL TAIL EXHAUST PIPE ASSEMBLY

- (a) Install the 4 cushion rubbers and the tail exhaust pipe assembly.

4. INSTALL CENTER EXHAUST PIPE ASSEMBLY

- (a) Install the center exhaust pipe assembly with the cushion rubber.
(b) Install the 2 new gaskets and the center exhaust pipe assembly with the 2 new nuts and the 2

bolts.

Torque: 48 N·m (490 kgf·cm, 35ft·lbf)

NOTICE:

- Do not reuse the gaskets.
- Do not reuse the nuts.

5. INSTALL FRONT EXHAUST PIPE ASSEMBLY

- (a) Temporarily install the front exhaust pipe assembly to the bracket with the bolt.
- (b) Install the new gaskets and the front exhaust pipe assembly to the center exhaust pipe assembly with the 2 nuts.

Torque: 18 N·m (184 kgf·cm, 13ft·lbf)

NOTICE:

- Do not reuse the gaskets.
- Do not reuse the nuts.

- (c) Install the new gaskets and the front exhaust pipe assembly to the front exhaust pipe sub-assembly with the 2 new nuts.

Torque: 43 N·m (439 kgf·cm, 32ft·lbf)

NOTICE:

- Do not reuse the gaskets.
- Do not reuse the nuts.

- (d) Fully tighten the bolt.

Torque: 50 N·m (510 kgf·cm, 37ft·lbf)

6. INSPECT FOR EXHAUST GAS LEAK

- (a) If gas is leaking, tighten the areas necessary to stop the leak. Replace the damaged parts as necessary.

7. INSTALL NO. 2 ENGINE UNDER COVER

- (a) Install the 7 bolts and the No. 2 engine under cover.

Torque: 7.5 N·m (77 kgf·cm, 66in·lbf)

8. INSTALL NO. 1 ENGINE UNDER COVER

- (a) Install the No. 1 engine under cover with the 12 bolts and engage the 7 clips.

Title: FA20 INTAKE / EXHAUST: INTAKE MANIFOLD: DISASSEMBLY (2013 FR-S)		

DISASSEMBLY

1. REMOVE MANIFOLD ABSOLUTE PRESSURE SENSOR

- (a) Remove the bolt and manifold absolute pressure sensor from the intake manifold.

- (b) Remove the O-ring from the manifold absolute pressure sensor.

2. REMOVE PURGE VALVE

- (a) Disconnect the No. 1 fuel vapor feed hose from the intake manifold.

(b) Remove the nut and purge valve.

3. REMOVE CAP (for Automatic Transmission)

(a) Remove the cap from the intake manifold.

4. REMOVE FUEL DELIVERY PIPE (for Bank 2)

(a) Disconnect the No. 2 fuel delivery pipe sub-assembly from the fuel delivery pipe.

NOTICE:

- If the connector and pipe are stuck, pinch the fuel delivery pipe by hand and push and pull the connector to disconnect it
- Do not allow any scratches or foreign matter on the parts when disconnecting them, as the No. 2 fuel delivery pipe sub-assembly joint contains the O-rings that seal the plug.
- Do not use any tools to separate the pipe and connector.
- Do not forcibly bend, twist or turn the nylon tube.
- If the pipe and connector are stuck together, pinch the tube between your fingers and turn it carefully to free it. Then, disconnect the main tube.
- Protect the disconnected part by covering it with a plastic bag and tape after disconnecting the main tube.
- Check that the top hat cannot be pulled out.

Text in Illustration

*1	Retainer	*2	No. 2 Fuel Delivery Pipe Sub-assembly Connector
*3	Nylon Tube	*4	O-ring
*5	fuel delivery pipe	*6	Top Hat

(b) Remove the 2 bolts and the fuel delivery pipe from the intake manifold.

(c) Remove the 2 O-rings.

5. REMOVE FUEL DELIVERY PIPE (for Bank 1)

HINT:

Use the same procedure described for the fuel delivery pipe (for bank 2).

6. REMOVE NO. 2 FUEL DELIVERY PIPE SUB-ASSEMBLY

(a) Disengage the 3 clamps and remove the No. 2 fuel delivery pipe sub-assembly from the intake manifold.

Last Modified: 3-27-2012	6.4 A	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000VFL02UX
Title: FA20 INTAKE / EXHAUST: INTAKE MANIFOLD: INSTALLATION (2013 FR-S)		

INSTALLATION

1. INSTALL INTAKE MANIFOLD

- (a) Install the 2 new gaskets to the intake manifold.
- (b) Install the intake manifold with the 6 bolts.
Torque: 25 N·m (255 kgf·cm, 18ft·lbf)
- (c) Engage the 2 clamps.
- (d) Engage the 4 connectors and connect the wire harness.
- (e) Connect the fuel pump connector.
- (f) Engage the clamp and connect the engine wire harness.
- (g) Engage the 5 clamps and connect the battery cable.
- (h) Connect the purge valve connector.
- (i) Connect the manifold absolute pressure sensor connector.

2. CONNECT VENTILATION HOSE

- (a) Connect the ventilation hose.

3. CONNECT NO. 2 VACUUM HOSE (for Manual Transmission) INFO

4. INSTALL NO. 1 ENGINE COVER SUB-ASSEMBLY

- (a) Engage the 3 claws and install the No. 1 engine cover sub-assembly.

5. CONNECT FUEL DELIVERY PIPE SUB-ASSEMBLY

- (a) Connect the No. 2 fuel vapor feed hose.
- (b) Install the bolt and connect the fuel delivery pipe sub-assembly.

Torque: 6.4 N·m (65 kgf·cm, 57in·lbf)

6. CONNECT NO. 1 FUEL HOSE INFO

7. INSTALL INJECTOR COVER (for Bank 2) INFO

8. INSTALL INJECTOR COVER (for Bank 1) INFO

9. INSTALL INJECTOR DRIVER INFO

10. CONNECT THROTTLE WITH MOTOR BODY ASSEMBLY

- (a) Install a new gasket to the intake manifold.
- (b) Install the 4 bolts and throttle with motor body assembly to intake manifold.

Torque: 8.0 N·m (82 kgf·cm, 71in·lbf)

11. INSTALL AIR CLEANER CAP WITH AIR CLEANER HOSE INFO

12. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

Torque: 6.0 N·m (61 kgf·cm, 53in·lbf)

13. INSPECT FUEL PUMP OPERATION AND INSPECT FOR FUEL LEAK [INFO](#)

14. INSPECT THROTTLE WITH MOTOR BODY ASSEMBLY [INFO](#)

Title: FA20 INTAKE / EXHAUST: INTAKE MANIFOLD: REASSEMBLY (2013 FR-S)		

REASSEMBLY

1. INSTALL NO. 2 FUEL DELIVERY PIPE SUB-ASSEMBLY

- (a) Install the No. 2 fuel delivery pipe sub-assembly to the intake manifold with the 3 clamps.

2. INSTALL FUEL DELIVERY PIPE (for Bank 2)

- (a) Apply a gasoline to the contact surfaces of the new O-ring on each fuel injector assembly.
 (b) Install a new O-ring to each fuel injector assembly.
 (c) Install the fuel injector assembly to the intake manifold with fuel delivery pipe.

NOTICE:

- Do not damage the fuel injector assembly or the O-ring.
- Do not twist the O-ring.

- (d) Install the fuel delivery pipe with the 2 bolts.

Torque: 19 N·m (194 kgf·cm, 14ft·lbf)

- (e) Check that the fuel injectors rotate smoothly.

NOTICE:

If the fuel injectors do not rotate smoothly, the probable cause is incorrect installation of the O-rings. Replace the O-rings.

- (f) Position the fuel injector connector outward.

3. INSTALL FUEL DELIVERY PIPE (for Bank 1)

HINT:

Use the same procedure described for the fuel delivery pipe (for bank 2).

4. INSTALL CAP (for Automatic Transmission)

(a) Install the clamp and cap to the intake manifold.

5. INSTALL PURGE VALVE

(a) Connect the No.1 fuel vapor feed hose to the intake manifold.

(b) Install the nut and purge valve to the intake manifold.

Torque: 6.4 N·m (65 kgf·cm, 57in·lbf)

6. INSTALL MANIFOLD ABSOLUTE PRESSURE SENSOR

(a) Apply engine oil to the contact surfaces of the new O-ring on manifold absolute pressure sensor.

(b) Install a new O-ring to the manifold absolute pressure sensor.

(c) Install the manifold absolute pressure sensor to the intake manifold with the bolt.

Torque: 4.0 N·m (41 kgf·cm, 35in·lbf)

Last Modified: 3-27-2012	6.4 A	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000Q0U02UX
Title: FA20 INTAKE / EXHAUST: INTAKE MANIFOLD: REMOVAL (2013 FR-S)		

REMOVAL

1. CHECK FUEL PUMP OPERATION AND INSPECT FOR FUEL LEAK INFO
2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL INFO
3. REMOVE AIR CLEANER CAP WITH AIR CLEANER HOSE INFO
4. REMOVE THROTTLE WITH MOTOR BODY ASSEMBLY

(a) Remove the 4 bolts and the throttle with motor body assembly.

(b) Remove the gasket.

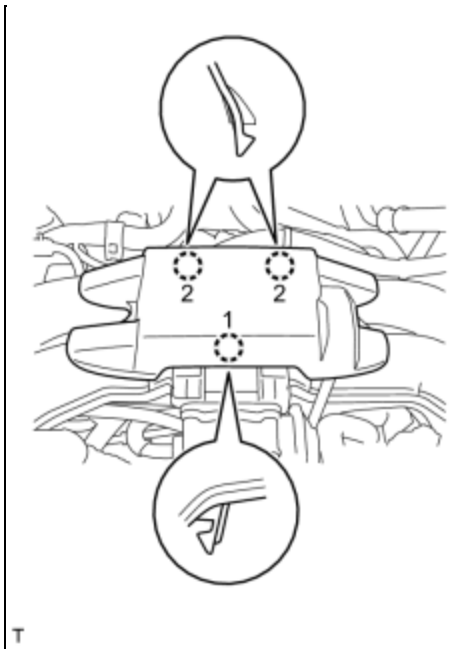

5. REMOVE INJECTOR DRIVER INFO
6. REMOVE INJECTOR COVER (for Bank 2) INFO
7. REMOVE INJECTOR COVER (for Bank 1) INFO
8. DISCONNECT NO. 1 FUEL HOSE INFO

9. DISCONNECT FUEL DELIVERY PIPE SUB-ASSEMBLY

- (a) Remove the bolt and disconnect the fuel delivery pipe sub-assembly.
- (b) Disconnect the No. 2 fuel vapor feed hose and move the fuel delivery pipe toward the front of the vehicle.

10. REMOVE NO. 1 ENGINE COVER SUB-ASSEMBLY

(a) Disengage the 3 craws and remove the No. 1 engine cover sub-assembly.

HINT:

Disengage the 3 craws in the order shown in the illustration.

11. DISCONNECT NO. 2 VACUUM HOSE (for Manual Transmission)

INFO

12. DISCONNECT VENTILATION HOSE

(a) Disconnect the ventilation hose.

13. REMOVE INTAKE MANIFOLD

(a) Disconnect the manifold absolute pressure sensor connector.

(b) Disconnect the purge valve connector.

(c) Disengage the 5 clamps and disconnect the battery cable.

(d) Disengage the clamp and disconnect the engine wire harness.

(e) Disengage the 2 clamps and disconnect the 4 connectors.

Text in Illustration

*a	Bank 2 Side
*b	Bank 1 Side

(f) Disconnect the fuel pump connector.

(g) Remove the 6 bolts, intake manifold and 2 gaskets.

Title: FA20 INTAKE / EXHAUST: INTAKE SYSTEM: ON-VEHICLE INSPECTION (2013 FR-S)		

ON-VEHICLE INSPECTION

1. INSPECT INTAKE SYSTEM

- (a) Check that there is no air suction at the points shown in the illustration.

*B:

Text in Illustration

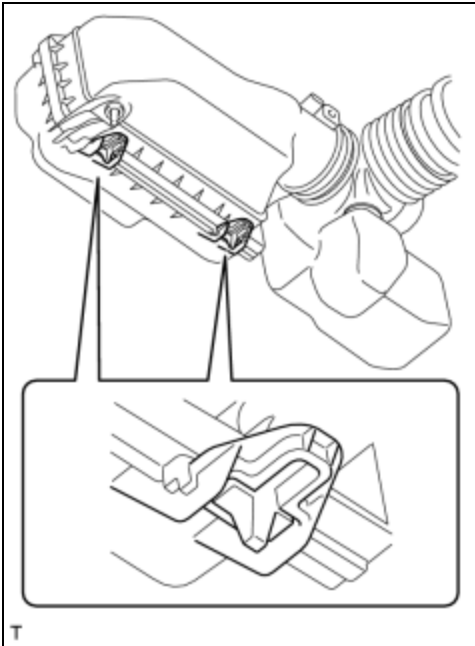

*A	for Manual Transmission	*B	for Automatic Transmission
----	-------------------------	----	----------------------------

NOTICE:

Disengagement, cracks or damage in the intake component may cause an idling defect.

2. INSPECT AIR CLEANER FILTER ELEMENT SUB-ASSEMBLY

(a) Disengage the 2 clips.

(b) Lift the rear air cleaner case, and disengage the 2 claws.

(c) Lift the rear air cleaner case as shown in the illustration, and remove the air cleaner filter element sub-assembly.

(d) Check that the air cleaner element is moderately clean.

Standard air cleaner element condition:

Not too dirty.

NOTICE:

If the element is too dirty, replace the air cleaner filter element.

(e) Use compressed air if the air cleaner filter element needs to be cleaned.

(f) Lift the rear air cleaner case, and install the air cleaner filter element sub-assembly.

(g) Engage the 2 claws.

(h) Engage the 2 clips.

NOTICE:

- Securely engage the lower side claws of the air cleaner case.
- Check if the right and left locating lugs of the air cleaner case do not get into the opposite air cleaner case.

Title: FA20 LUBRICATION: LUBRICATION SYSTEM: ON-VEHICLE INSPECTION (2013 FR-S)		

ON-VEHICLE INSPECTION

1. CHECK ENGINE OIL QUALITY

(a) Check the oil for deterioration, water contamination, discoloring or thinning.

If the quality is visibly poor, replace the oil and oil filter element.

2. CHECK ENGINE OIL LEVEL

(a) Warm up and stop the engine, and then wait for 5 minutes. The oil level should be between the dipstick's low level and full level marks.

If low, check for leakage and add oil up to the full level mark.

NOTICE:

Do not add engine oil above the full level mark.

HINT:

Engine oil is always being consumed when driving the vehicle.

Generally, engine oil consumed at a rate of 1 liter every 3000 km, or 1 US qts. every 2000 miles.

In the following situations, oil consumption may increase and it may be necessary to add oil between maintenances.

- The engine is new.
- The oil quality is poor or the viscosity is inappropriate.
- The engine speed or load is high, the vehicle is towing something or the vehicle is being accelerated and decelerated frequently.
- The engine is idled for a very long time or the vehicle is frequently driven in traffic.

3. CHECK OIL PRESSURE

(a) Remove the oil pressure switch assembly **INFO** .

(b) Install the oil pressure gauge with adapter.

(c) Install the air cleaner assembly **INFO** .

(d) Warm up the engine.

(e) Check the oil pressure under the following conditions.

Specification Oil Pressure:

ITEM	ENGINE OIL TEMPERATURE	OIL PRESSURE
Idle	80°C (176°F)	50 kPa (0.5 kgf/cm ² , 7.3 psi) or more
6000 rpm		500 kPa (5.1 kgf/cm ² , 73 psi) or more

- (f) Remove the air cleaner assembly [INFO](#) .
- (g) Remove the oil pressure gauge with adapter.
- (h) Install the oil pressure switch assembly [INFO](#) .
- (i) Inspect for engine oil leaks.

Title: FA20 LUBRICATION: OIL AND OIL FILTER: REPLACEMENT (2013 FR-S)		

REPLACEMENT

CAUTION:

- Prolonged and repeated contact with engine oil will result in removal of natural oils from the skin, leading to dryness, irritation and dermatitis. In addition, used engine oil contains potentially harmful contaminants which may cause skin cancer.
- Precautions should be taken when replacing engine oil to minimize the risk of your skin making contact with used engine oil. Protective clothing and gloves that cannot be penetrated by oil should be worn. The skin should be washed with soap and water, or use waterless hand cleaner, to remove any used engine oil thoroughly. Do not use gasoline, thinners, or solvents.
- In order to preserve the environment, used oil and used oil filters must be disposed of at designated disposal sites.

1. DRAIN ENGINE OIL

- Remove the oil filler cap.
- Remove the oil pan drain plug and drain the oil into a container.
- Clean and install the oil pan drain plug with a new oil pan drain plug gasket.

Torque: 39 N·m (400 kgf·cm, 29ft·lbf)

2. REMOVE OIL FILTER SUB-ASSEMBLY

- Remove any foreign matter and clean the installation surface of the engine.
- Using SST, remove the oil filter sub-assembly.

SST: 09228-22020

3. REMOVE OIL FILTER UNION

- Remove the oil filter union.

4. INSTALL OIL FILTER UNION

(a) Install the oil filter union.

Torque: 45 N·m (459 kgf·cm, 33ft·lbf)

5. INSTALL OIL FILTER SUB-ASSEMBLY

(a) Remove any foreign matter and clean the inside and installation surface of the engine.

(b) Apply a light layer of engine oil to the seal rubber of a new oil filter sub-assembly.

(c) Tighten the oil filter sub-assembly by hand.

NOTICE:

Do not damage the seal rubber of the oil filter sub-assembly.

(d) Using SST, tighten the oil filter sub-assembly.

SST: 09228-22020

Torque: 14 N·m (143 kgf·cm, 10ft·lbf)

6. ADD ENGINE OIL

(a) Add new engine oil and install the oil filler cap.

Standard Oil Grade:

OIL GRADE	OIL VISCOSITY (SAE)
API grade SL "energy-conserving", SM "energy-conserving", SN "resource-conserving" or ILSAC multigrade engine oil	<ul style="list-style-type: none">• 0W-20• 5W-30
API grade SL, SM or SN multigrade engine oil	<ul style="list-style-type: none">• 5W-20

Standard Capacity:

ITEM	CAPACITY
Drain and refill with oil filter change	5.4 liters (5.7 US qts, 4.8 Imp. qts)
Drain and refill without oil filter change	5.2 liters (5.5 US qts, 4.6 Imp. qts)
Dry fill	6.3 liters (6.7 US qts, 5.5 Imp. qts)

7. INSPECT FOR ENGINE OIL LEAK

(a) Start the engine. Make sure that there are no oil leaks from the connection point of the oil filter sub-assembly.

8. CHECK ENGINE OIL LEVEL INFO

Title: FA20 LUBRICATION: OIL PUMP: INSTALLATION (2013 FR-S)		

INSTALLATION

1. INSTALL TIMING CHAIN OR BELT COVER SUB-ASSEMBLY

- (a) Apply a light coat of engine oil to the 4 O-rings.
- (b) Remove any old packing material remaining on the sealing surfaces before applying seal packing.
- (c) Apply seal packing in a continuous line to the engine unit as shown in the illustration.

Seal packing:

Toyota Genuine Seal Packing Black, Three Bond 1217G or equivalent

- (d) Apply seal packing in a line to the timing chain cover as shown in the following illustration.

Text in Illustration

*a	Range A	*b	Boss (5 locations)
*c	Range B	*d	Other than ranges A and B
*e	φ3.5 to 4.5 mm (0.138 to 0.177 in.)	*f	2 mm (0.079 in.)
*g	φ12 mm (0.472 in.)	*h	2.5 mm (0.098 in.)
*i	0.5 mm (0.020 in.)	-	-

Seal packing:

Toyota Genuine Seal Packing 1217G or equivalent

NOTICE:

- If the contact surfaces are wet, wipe them with an oil-free cloth before applying seal packing.
- Install the chain cover within 3 minutes and tighten the bolts within 10 minutes after applying seal packing.
- Do not add engine oil for at least 2 hours after installing.
- Do not start the engine for at least 2 hours after installing.

(e) Temporarily tighten the timing chain cover with the 32 bolts.

(f) Fully tighten the 32 bolts shown in the illustration.

Text in Illustration

	Bolt A		Bolt B
	Bolt C		Bolt D

for bolt A and B - Torque: 10 N·m (102 kgf·cm, 7ft·lbf)

for bolt C and D - Torque: 25 N·m (255 kgf·cm, 18ft·lbf)

Bolt Length:

ITEM	LENGTH	ITEM	LENGTH
Bolt A	20 mm (0.787 in.)	Bolt B	25 mm (0.984 in.)
Bolt C	60 mm (2.362 in.)	Bolt D	50 mm (1.969 in.)

2. INSTALL TIMING CHAIN OR BELT COVER OIL SEAL INFO

3. INSTALL NO. 1 IDLER PULLEY SUB-ASSEMBLY

(a) Install the washer plate to the No. 1 idler pulley sub-assembly as shown in the illustration.

Text in Illustration

*a	Protrusion
----	------------

(b) Install the washer plate and No. 1 idler pulley sub-assembly with the bolt.

Torque: 36 N·m (367 kgf·cm, 27ft·lbf)

(c) Install the washer plate to the No. 1 idler pulley sub-assembly as shown in the illustration.

Text in Illustration

*a

Protrusion

(d) Install the washer plate and No. 1 idler pulley sub-assembly with the bolt.

Torque: 36 N·m (367 kgf·cm, 27ft·lbf)

4. INSTALL V-RIBBED BELT TENSIONER ASSEMBLY

(a) Temporarily install the V-ribbed belt tensioner with the 5 bolts.

(b) Tighten the 4 bolts in the order shown in the illustration.

Torque: 36 N·m (367 kgf·cm, 27ft·lbf)

5. INSTALL NO. 2 IDLER PULLEY SUB-ASSEMBLY

(a) Install the washer plate to the No. 2 idler pulley sub-assembly as shown in the illustration.

Text in Illustration

*a

Protrusion

(b) Install the washer plate and No. 2 idler pulley sub-assembly with the bolt.

Torque: 36 N·m (367 kgf·cm, 27ft·lbf)

6. INSTALL OIL LEVEL DIPSTICK GUIDE

(a) Install a new O-ring to the oil level dipstick guide.

(b) Apply a light coat of engine oil to the O-ring.

(c) Install the oil level dipstick guide with the bolt.

Torque: 6.4 N·m (65 kgf·cm, 57in·lbf)

(d) Install the oil level dipstick sub-assembly.

7. CONNECT ENGINE WIRE

- (a) Connect the camshaft position sensor connector and camshaft timing oil control valve connector.
- (b) Engage the wire harness clamp.
- (c) Connect the engine oil pressure switch connector and engine oil temperature sensor connector.
- (d) Connect the camshaft position sensor connector and camshaft timing oil control valve connector.
- (e) Connect the 2 camshaft position sensor connectors and camshaft timing oil control valve connector.
- (f) Connect the camshaft position sensor connector.
- (g) Install the wire harness bracket with the bolt.

Torque: 6.4 N·m (65 kgf·cm, 57in·lbf)

- (h) Engage the wire harness clamp.
- (i) Install the 2 wire harness brackets with the 2 bolts.

Torque: 6.4 N·m (65 kgf·cm, 57in·lbf)

8. INSTALL INJECTOR COVER (for Bank 1) INFO

*2	Back-up Ring

(b) Apply a light coat of engine oil to a new O-ring and install it to the camshaft timing oil control valve.

(c) Install the camshaft timing oil control valve with the 2 bolts.

Torque: 6.4 N·m (65 kgf·cm, 57in·lbf)

NOTICE:

- If a component has been dropped or subjected to a strong impact, replace it.
- Make sure that the O-ring is not damaged or does not jump out of position during installation.

2. INSTALL CAMSHAFT TIMING OIL CONTROL VALVE (for Intake Side of Bank 2)

(a) Install the back-up ring to the camshaft timing oil control valve.

Text in Illustration

*1	O-ring
*2	Back-up Ring

(b) Apply a light coat of engine oil to a new O-ring and install it to the camshaft timing oil control valve.

(c) Install the camshaft timing oil control valve with the 2 bolts.

Torque: 6.4 N·m (65 kgf·cm, 57in·lbf)

NOTICE:

- If a component has been dropped or subjected to a strong impact, replace it.
- Make sure that the O-ring is not damaged or does not jump out of position during installation.

3. INSTALL CAMSHAFT TIMING OIL CONTROL VALVE (for Exhaust Side of Bank 1)

(a) Install the back-up ring to the camshaft timing oil control valve.

Text in Illustration

*1	O-ring
*2	Back-up Ring

(b) Apply a light coat of engine oil to a new O-ring and install it to the camshaft timing oil control valve.

(c) Install the camshaft timing oil control valve with the 2 bolts.

Torque: 6.4 N·m (65 kgf·cm, 57in·lbf)

NOTICE:

- If a component has been dropped or subjected to a strong impact, replace it.
- Make sure that the O-ring is not damaged or does not jump out of position during installation.

4. INSTALL CAMSHAFT TIMING OIL CONTROL VALVE (for Intake Side of Bank 1)

(a) Install the back-up ring to the camshaft timing oil control valve.

Text in Illustration

*1	O-ring
*2	Back-up Ring

(b) Apply a light coat of engine oil to a new O-ring and install it to the camshaft timing oil control valve.

(c) Install the camshaft timing oil control valve with the 2 bolts.

Torque: 6.4 N·m (65 kgf·cm, 57in·lbf)

NOTICE:

- If a component has been dropped or subjected to a strong impact, replace it.
- Make sure that the O-ring is not damaged or does not jump out of position during installation.

5. INSTALL VVT SENSOR (for Exhaust Side of Bank 2)

(a) Apply a light coat of engine oil to the new O-ring of the VVT sensor.

(b) Install the VVT sensor with the bolt.

Torque: 6.4 N·m (65 kgf·cm, 57in·lbf)

6. INSTALL VVT SENSOR (for Intake Side of Bank 2)

(a) Apply a light coat of engine oil to the new O-ring of the VVT sensor.

(b) Install the VVT sensor with the bolt.

Torque: 6.4 N·m (65 kgf·cm, 57in·lbf)

7. INSTALL VVT SENSOR (for Exhaust Side of Bank 1)

(a) Apply a light coat of engine oil to the new O-ring of the VVT sensor.

(b) Install the VVT sensor with the bolt.

Torque: 6.4 N·m (65 kgf·cm, 57in·lbf)

8. INSTALL VVT SENSOR (for Intake Side of Bank 1)

(a) Apply a light coat of engine oil to the new O-ring of the VVT sensor.

(b) Install the VVT sensor with the bolt.

Torque: 6.4 N·m (65 kgf·cm, 57in·lbf)

9. INSTALL ENGINE OIL TEMPERATURE SENSOR

- (a) Install a new gasket to the engine oil temperature sensor.

- (b) Using a 19 mm deep socket wrench, install the engine oil temperature sensor to the cylinder head sub-assembly.

Text in Illustration

*1	19 mm Deep Socket Wrench
----	--------------------------

Torque: 18 N·m (184 kgf·cm, 13ft·lbf)

10. INSTALL ENGINE OIL PRESSURE SWITCH ASSEMBLY

- (a) Apply adhesive to 2 or 3 threads of the engine oil pressure switch assembly.

Text in Illustration

*1	Adhesive
----	----------

Adhesive:

Toyota Genuine Adhesive 1324, Three Bond 1324 or equivalent

- (b) Using a 24 mm deep socket wrench, install the engine oil pressure switch assembly.

Text in Illustration

*1	24 mm Deep Socket Wrench
----	--------------------------

Torque: 18 N·m (184 kgf·cm, 13ft·lbf)

NOTICE:

Do not start the engine for at least 1 hour after installation.

11. INSTALL OIL FILTER UNION INFO

12. INSTALL OIL FILTER SUB-ASSEMBLY INFO

9. DRAIN ENGINE OIL INFO

10. REMOVE WATER PUMP PULLEY INFO

11. REMOVE CRANKSHAFT PULLEY INFO

12. REMOVE INJECTOR COVER (for Bank 1) INFO

13. DISCONNECT ENGINE WIRE

(a) Remove the 2 bolts and disconnect the 2 wire harness clamp brackets from the engine assembly.

(b) Remove the bolts and disconnect the wire harness clamp bracket from the engine assembly.

(c) Disconnect the camshaft position sensor connector.

(d) Disconnect the camshaft position sensor connector and 2 camshaft timing oil control valve connectors.

(e) Disconnect the camshaft position sensor connector and camshaft timing oil control valve connector.

(f) Disconnect the engine oil pressure switch connector and engine oil temperature connector.

(g) Disengage the clamp.

(h) Disconnect the camshaft position sensor connector and camshaft timing oil control valve connector.

14. REMOVE OIL LEVEL DIPSTICK GUIDE

- (a) Remove the oil level dipstick sub-assembly.
- (b) Remove the bolt and oil level dipstick guide.
- (c) Remove the O-ring from the oil level dipstick guide.

15. REMOVE NO. 2 IDLER PULLEY SUB-ASSEMBLY

- (a) Remove the bolt, washer plate and No. 2 idler pulley sub-assembly.

16. REMOVE V-RIBBED BELT TENSIONER ASSEMBLY

- (a) Remove the 4 bolts and V-ribbed belt tensioner assembly.

17. REMOVE NO. 1 IDLER PULLEY SUB-ASSEMBLY

- (a) Remove the bolt, washer plate and No. 1 idler pulley sub-assembly.

- (b) Remove the bolt, washer plate and No. 1 idler pulley sub-assembly.

18. REMOVE TIMING CHAIN OR BELT COVER OIL SEAL

INFO

19. REMOVE TIMING CHAIN OR BELT COVER SUB-ASSEMBLY

(a) Remove the 32 bolts.

(b) Using a screwdriver with its tip wrapped with protective tape, remove the timing chain or belt cover sub-assembly by prying between the timing chain or belt cover sub-assembly and cylinder head or cylinder block.

Text in Illustration

*1	Protective Tape	-	-
----	-----------------	---	---

NOTICE:

Be careful not to damage the contact surfaces of the cylinder head, cylinder block or chain cover.

(c) Remove the 4 O-rings.

Title: FA20 STARTING: KEY INTER LOCK SYSTEM: Key Cannot be Removed or Inserted (2013 FR-S)		

[Key Cannot be Removed or Inserted](#)

DESCRIPTION

When an ACC signal and a P signal is input, the control unit relay assembly outputs a signal to the key inter lock solenoid.

WIRING DIAGRAM

Refer to System Diagram [INFO](#) .

INSPECTION PROCEDURE

NOTICE:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1.	CHECK WIRE HARNESS AND CONNECTOR (ACC VOLTAGE)
-----------	---

(a) Disconnect the D42 control unit relay assembly connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
D42-6 (ACC) - Body ground	Ignition switch ON	11 to 14 V

Text in Illustration

*a	Front view of wire harness connector (to control unit relay assembly)
----	--

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR

OK
▼

2. CHECK WIRE HARNESS AND CONNECTOR (CONTROL UNIT RELAY ASSEMBLY - BODY GROUND)

- (a) Disconnect the D42 control unit relay assembly connector.
- (b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D42-1 (E) - Body ground	Always	Below 1 Ω

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR

OK
▼

3. INSPECT P SWITCH (FLOOR SHIFT SHIFT LEVER HOUSING)

- (a) Inspect the P switch (floor shift shift lever housing) INFO.

NG ► REPLACE P SWITCH (FLOOR SHIFT SHIFT LEVER HOUSING)

OK
▼

4. CHECK WIRE HARNESS AND CONNECTOR (CONTROL UNIT RELAY ASSEMBLY - P SWITCH (FLOOR SHIFT SHIFT LEVER HOUSING))

- (a) Disconnect the D42 control unit relay assembly connector.

(b) Disconnect the D28 P switch (floor shift shift lever housing) connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D42-4 (P) - D28-1 (P)	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D42-4 (P) or D28-1 (P) - Body ground	Always	10 k Ω or higher

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

5.	CHECK WIRE HARNESS AND CONNECTOR (P SWITCH (FLOOR SHIFT SHIFT LEVER HOUSING) - BODY GROUND)
-----------	--

(a) Disconnect the D28 P switch (floor shift shift lever housing) connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D28-3 (E) - Body ground	Always	Below 1 Ω

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

6.	CHECK KEY INTER LOCK SOLENOID
-----------	--------------------------------------

(a) Disconnect the D60 key inter lock solenoid connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	20°C (68°F)	13.05 to 15.95 Ω

Text in Illustration

*a	Component without harness connected (Key Inter Lock Solenoid)
----	--

NG **REPLACE KEY INTER LOCK SOLENOID**

OK

7.	CHECK WIRE HARNESS AND CONNECTOR (CONTROL UNIT RELAY ASSEMBLY - KEY INTER LOCK SOLENOID)
-----------	---

(a) Disconnect the D42 control unit relay assembly connector.

(b) Disconnect the D60 key inter lock solenoid connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D42-5 (KLS+) - D60-2	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D42-5 (KLS+) or D60-2 - Body ground	Always	10 kΩ or higher

REPAIR OR REPLACE HARNESS OR

OK

8.	CHECK WIRE HARNESS AND CONNECTOR (KEY INTER LOCK SOLENOID - BODY GROUND)
----	---

- (a) Disconnect the D60 key inter lock solenoid connector.
- (b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D60-1 - Body ground	Always	Below 1 Ω

NG  REPAIR OR REPLACE HARNESS OR CONNECTOR

OK  REPLACE CONTROL UNIT RELAY ASSEMBLY

Title: FA20 STARTING: KEY INTER LOCK SYSTEM: ON-VEHICLE INSPECTION (2013 FR-S)		

ON-VEHICLE INSPECTION

1. CHECK KEY INTER LOCK OPERATION

- (a) Turn the ignition switch to ON.
- (b) Depress the brake pedal and move the shift lever to any position other than P.
- (c) Check that the ignition key cannot be turned to LOCK.
- (d) Move the shift lever to P, turn the ignition key to LOCK and check that the ignition key can be removed. If the operation cannot be done as specified, inspect the key inter lock circuit.

Title: FA20 STARTING: RELAY: ON-VEHICLE INSPECTION (2013 FR-S)		

ON-VEHICLE INSPECTION

1. INSPECT ST RELAY

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	Battery voltage not applied to terminals 1 and 2 Measurement temperature : 20 °C	93.8 to 136.4 kΩ
3 - 5	Battery voltage not applied to terminals 1 and 2	10 kΩ or higher
3 - 5	Battery voltage applied to terminals 1 and 2	Below 1 Ω

If the result is not as specified, replace the starter relay.

2. REMOVE INHIBITOR RELAY

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	Battery voltage not applied to terminals 1 and 2 Measurement temperature : 20 °C	93.8 to 136.4 kΩ
3 - 5	Battery voltage not applied to terminals 1 and 2	10 kΩ or higher
3 - 5	Battery voltage applied to terminals 1 and 2	Below 1 Ω

If the result is not as specified, replace the starter relay.

Title: FA20 STARTING: STARTER: DISASSEMBLY (2013 FR-S)		

DISASSEMBLY

1. REMOVE MAGNET STARTER SWITCH ASSEMBLY (for Manual Transmission)

- (a) Remove the nut and disconnect the lead wire from terminal C.

- (b) Remove the 2 screws and the magnet starter switch assembly from the starter drive housing assembly.

2. REMOVE MAGNET STARTER SWITCH ASSEMBLY (for Automatic Transmission)

- (a) Remove the nut and disconnect the lead wire from terminal C.

- (b) Remove the 2 nuts and the magnet starter switch assembly from the starter drive housing assembly.

3. REMOVE STARTER YOKE ASSEMBLY (for Automatic Transmission)

- (a) Using a "TORX" socket wrench T25, remove the 2 through bolts.

- (b) Remove the starter yoke assembly and starter cover from the starter drive housing assembly.

4. REMOVE STARTER COVER (for Manual Transmission)

- (a) Remove the 2 through bolts and 2 screws, and remove the starter cover.

5. REMOVE STARTER COVER (for Automatic Transmission)

(a) Remove the 2 screws.

(b) Remove the starter cover from the starter yoke assembly.

Text in Illustration

*1	Starter Yoke Assembly
*2	Starter Cover

NOTICE:

Hold the lead wire and remove the starter cover.

(c) Remove the dust starter protect from the starter yoke assembly.

6. REMOVE STARTER BRUSH HOLDER ASSEMBLY (for Manual Transmission)

(a) Remove the starter brush holder assembly.

HINT:

Hold the brush with your fingers so that the brush spring does not come flying out.

7. REMOVE STARTER BRUSH HOLDER ASSEMBLY (for Automatic Transmission)

(a) Using a screwdriver, disengage the spring from the brush.

- (b) Disconnect the 4 brush from the starter brush holder assembly.
- (c) Remove the starter brush holder assembly.

8. REMOVE STARTER YOKE ASSEMBLY (for Manual Transmission)

- (a) Remove the starter yoke assembly and starter armature assembly together from the starter drive housing assembly.

9. REMOVE STARTER ARMATURE ASSEMBLY (for Manual Transmission)

- (a) Pull out the starter armature assembly from the starter yoke assembly.

10. REMOVE STARTER ARMATURE ASSEMBLY (for Automatic Transmission)

- (a) Pull out the starter armature assembly from the starter yoke assembly.

Text in Illustration

*1	Starter Yoke Assembly
*2	Starter Armature Assembly

11. REMOVE STARTER ARMATURE PLATE (for Automatic Transmission)

- (a) Remove the starter armature plate from the starter yoke assembly and starter drive housing assembly.

Text in Illustration

*1	Starter Drive Housing Assembly
----	--------------------------------

*2	Starter Yoke Assembly
*3	Starter Armature Plate

12. REMOVE STARTER HOUSING RUBBER (for Manual Transmission)

(a) Remove the starter housing rubber, seal rubber and plate from the starter drive housing assembly.

Text in Illustration

*1	Starter Housing Rubber
*2	Plate
*3	Seal Rubber

13. REMOVE RUBBER SEAL (for Automatic Transmission)

(a) Remove the rubber seal from the starter drive housing assembly.

Text in Illustration

*1	Rubber Seal
----	-------------

14. REMOVE STARTER PLANETARY GEAR

(a) Remove the 3 starter planetary gears from the starter clutch sub-assembly.

15. REMOVE STARTER CLUTCH SUB-ASSEMBLY (for Manual Transmission)

- (a) Remove the starter clutch sub-assembly together with the drive lever set pin from the starter drive housing assembly.

- (b) Using a 14 mm deep socket wrench, remove the stopper from snap ring.

Text in Illustration

*1	14 mm Deep Socket Wrench
*2	Stopper
*3	Snap Ring

- (c) Using snap ring pliers, remove the snap ring and stopper.

- (d) Pull out the over running clutch from the shaft.

(e) Remove the internal gear assembly from the shaft.

Text in Illustration

*1	Internal Gear Assembly
*2	Shaft

Last Modified: 3-27-2012	6.4 G	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM00000162401EX
Title: FA20 STARTING: STARTER: INSPECTION (2013 FR-S)		

INSPECTION

1. INSPECT STARTER ASSEMBLY

CAUTION:

As a large electric current passes through the cable during this inspection, a thick cable must be used. If not, the cable may become hot and cause injury.

NOTICE:

The following tests must each be performed within 3 to 5 seconds to prevent the coil from burning out.

- (a) Mount the starter in a vise between aluminum plates.
- (b) Perform a pull-in test.
 - (1) Remove the nut, and then disconnect the lead wire from terminal C.

- (2) Connect the battery to the starter as shown in the illustration. Check that the clutch pinion gear extends.

Text in Illustration

*1	Body
*2	Terminal 50
*3	Terminal C

If the clutch pinion gear does not move, inspect the magnet starter switch assembly. If the magnet starter switch assembly is not as specified, replace it.

- (c) Perform a holding test.

- (1) Disconnect the negative (-) terminal lead from terminal C while the conditions specified in the pull-in test above are maintained. Check that the pinion gear remains out.

Text in Illustration

*1	Body
*2	Terminal 50
*3	Terminal C

If the clutch pinion gear returns inward, inspect the magnet starter switch assembly. If the magnet starter switch assembly is not as specified, replace it.

(d) Inspect the clutch pinion gear return.

(1) Disconnect the negative (-) terminal lead from the starter body. Check that the clutch pinion gear returns inward.

Text in Illustration

*1	Body
*2	Terminal 50
*3	Terminal C

If the clutch pinion gear does not return inward, inspect the magnet starter switch assembly. If the magnet starter switch assembly is not as specified, replace it.

(e) Perform an operation test without load.

(1) Connect the lead wire to terminal C with the nut.

Torque: 10 N·m (102 kgf·cm, 7ft·lbf)

(2) Connect the battery and an ammeter to the starter as shown in the illustration.

Text in Illustration

*1	Terminal 50
*2	Terminal 30
*3	Ammeter

(3) Check that the starter rotates smoothly and steadily while the clutch pinion gear is extended. Then measure the current.

Standard Current:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Battery positive terminal - Terminal 30 - Terminal 50	11.5 V	Below 90 A

If the result is not as specified, inspect the starter assembly.

HINT:

Inspect the starter armature assembly, starter commutator end frame assembly and magnet starter switch assembly. If there is a malfunction, replace the part and perform again this test.

2. INSPECT STARTER ARMATURE ASSEMBLY (for Manual Transmission)

(a) Check the commutator for signs of seizure or stepped wear caused by roughness of the surface. If there is light wear, use sandpaper to repair.

(b) Check for runout on the commutator. If excessive, replace the armature.

Standard runout:
0.05 mm (0.002 in.)
Maximum runout:
0.10 mm (0.004 in.)

Text in Illustration

*1	Dial Gauge
*2	V-block

(c) Check the depth of the segment mold. If it is not within the standard, replace the armature.

Standard depth:
0.50 mm (0.020 in.)

Text in Illustration

*1	Mold
*2	Segment
*3	Depth of Mold

(d) Place the armature on the growler tester to check for short circuits. While slowly turning the armature, support the steel sheet for the armature core. If the circuit of the armature is shorted, the steel sheet will vibrate, causing it to move towards the core. When the steel sheet has moved or vibrated, replace the armature.

Text in Illustration

*1	Steel Sheet
*2	Growler Tester

(e) Touch the probe of one side to the commutator segment, and the other probe to the shaft. If there is continuity, replace the armature.

3. INSPECT STARTER ARMATURE ASSEMBLY (for Automatic Transmission)

(a) Check the commutator for dirt and/or burns on the surface.

If the surface is dirty or burnt, correct it with sandpaper (No. 400) or a lathe. If necessary, replace the starter armature assembly.

(b) Inspect the commutator for an open circuit.

(1) Measure the resistance according to the value(s) in the table below.

Text in Illustration

*1	Segment
----	---------

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Segment - Segment	Always	Below 1 Ω

If the result is not as specified, replace the starter armature assembly.

(c) Inspect the commutator for short circuits.

(1) Measure the resistance according to the value(s) in the table below.

Text in Illustration

*1	Segment
*2	Coil Core

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Segment - Coil core	Always	10 k Ω or higher

If the result is not as specified, replace the starter armature assembly.

(d) Check the commutator for signs of seizure or stepped wear caused by roughness of the surface. If there is light wear, use sandpaper to repair.

(e) Check for runout on the commutator. If excessive, replace the armature.

Standard runout:
0.02 mm (0.0008 in.)
Maximum runout:
0.05 mm (0.002 in.)

Text in Illustration

*1	Dial Gauge
----	------------

*2	V-block

If the result is not as specified, replace the starter armature assembly.

(f) Using vernier caliper, measure the commutator diameter.

Text in Illustration

*a	Diameter
----	----------

Standard diameter:
29 mm (1.1417 in.)
Minimum diameter:
28 mm (1.1024 in.)

If the diameter is less than the minimum, replace the starter armature assembly.

(g) Using vernier caliper, measure the under cut depth of the segment. If it is not within the standard, replace the starter armature assembly.

Standard depth:
0.7 mm (0.0276 in.)
Minimum depth:
0.2 mm (0.0079 in.)

4. INSPECT STARTER YOKE ASSEMBLY (for Manual Transmission)

(a) Make sure that the pole is set at the predetermined position.

5. INSPECT STARTER BRUSH HOLDER ASSEMBLY (for Manual Transmission)

(a) Visually check the brush. If there is any abnormal wear or cracks, replace the brush.

(b) Measure the length of the brush. If it exceeds the service limits, replace the brush.

Standard length:
12.3 mm (0.484 in.)
Minimum length:
7.0 mm (0.276 in.)

Text in Illustration

*1	Service Limit Line
*2	Brush

(c) Check that the brush moves smoothly in the brush holder.

(d) Measure the brush spring force with a spring scale. Replace the brush holder if below the service limit.

Standard brush spring force:

15.9 to 19.5 N (1.6 to 2.0 kgf, 3.6 to 4.4 lbf)

Minimum brush spring force:

2.5 N (0.3 kgf, 0.6 lbf)

6. INSPECT STARTER BRUSH HOLDER ASSEMBLY (for Automatic Transmission)

(a) Using a vernier caliper, measure the brush length.

Text in Illustration

*a	Length
----	--------

Standard length:

14.4 mm (0.5669 in.)

Minimum length:

9.0 mm (0.3543 in.)

If the length is less than the minimum, replace the starter brush holder assembly.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A - B A - C B - D C - D	Always	10 k Ω or higher
A - D B - C	Always	Below 1 Ω

If the result is not as specified, replace the starter brush holder assembly.

7. INSPECT STARTER CLUTCH SUB-ASSEMBLY (for Manual Transmission)

- (a) Check the gear teeth on the planetary gear, internal gear and starter clutch for wear or damage.
If any of the gears is damaged, replace the starter center bearing clutch sub-assembly.
- (b) Check the starter clutch pinion gear.

- (1) Hold the starter clutch, rotate the pinion gear clockwise and check that it turns freely. Try to rotate the pinion gear counterclockwise and check that it locks.

Text in Illustration

*a	Free
*b	Lock

If necessary, replace the starter clutch sub-assembly.

8. INSPECT MAGNET STARTER SWITCH ASSEMBLY (for Manual Transmission)

- (a) Check that there is continuity between terminals 50 and C, and between terminal 50 and ground. Also, check to be sure there is no continuity between terminal C and 30.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Terminal C - Terminal 50	Always	Below 1 Ω
Terminal 50 - Switch body	Always	Below 1 Ω
Terminal C - Terminal 30	Always	1 M Ω or higher

Text in Illustration

*1	Terminal 50
*2	Terminal C
*3	Terminal 30

- (b) Using a lead wire, connect the switch assembly terminal 50 to the positive terminal of the battery, and the starter body to the ground terminal of the battery. The pinion should be forced to be pushed out on the shaft.

HINT:

With the pinion forced to be pushed out on the shaft, the starter motor can sometimes rotate because the current flows, through pull-in coil, to motor. This is not a problem.

- (c) Disconnect the connector from terminal C. Then, using a lead wire, connect the positive terminal of the battery and

terminal C, and ground terminal to starter body. In this test set up, the pinion should return to its original position even when it is pulled out with a screwdriver.

Text in Illustration

*1	Terminal 50
*2	Terminal C

9. INSPECT MAGNET STARTER SWITCH ASSEMBLY (for Automatic Transmission)

(a) Check the plunger.

(1) Push in the plunger and check that it returns quickly to its original position.

If necessary, replace the magnet starter switch assembly.

(b) Inspect the pull-in coil.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Terminal C - Terminal 50	Always	Below 1 Ω

Text in Illustration

*1	Terminal C
*2	Terminal 50

If the result is not as specified, replace the magnet starter switch assembly.

(c) Inspect the holding coil.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED
-------------------	-----------	-----------

		CONDITION
Terminal 50 - Switch body	Always	Below 2 Ω

Text in Illustration

*1	Terminal 50
*2	Switch Body

If the result is not as specified, replace the magnet starter switch assembly.

Model Year: 2013	Model: FR-S	Doc ID: RM000000V3F029X
Title: FA20 STARTING: STARTER: INSTALLATION (2013 FR-S)		

INSTALLATION

1. INSTALL STARTER ASSEMBLY

(a) Temporarily install the upper side bolts.

(b) Install the lower side bolt.

Torque: 50 N·m (510 kgf·cm, 37ft·lbf)

(c) Install the upper side bolt and starter assembly.

SST: 09249-37010

without SST - Torque: 50 N·m (510 kgf·cm, 37ft·lbf)

with SST - Torque: 36 N·m (367 kgf·cm, 27ft·lbf)

HINT:

- Use a torque wrench with a fulcrum length of 260 mm (10.2 in.). When using a torque wrench with a fulcrum length that is not 260 mm (10.24 in.), calculate the torque specification for the torque wrench and SST based on the "without SST" torque specification [INFO](#).
- Make sure SST and the wrench are connected in a straight line.

(d) Engage the wire clamp.

(e) Connect the starter connector.

(f) Connect the starter wire with the nut.

Torque: 10 N·m (102 kgf·cm, 7ft·lbf)

2. INSTALL FRONT EXHAUST PIPE ASSEMBLY [INFO](#)

3. INSTALL NO. 2 ENGINE UNDER COVER [INFO](#)

4. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL [INFO](#)

Title: FA20 STARTING: STARTER: REASSEMBLY (2013 FR-S)		

REASSEMBLY

1. INSTALL STARTER CLUTCH SUB-ASSEMBLY (for Manual Transmission)

- (a) Apply high-temperature grease to the shaft as shown in the illustration.

Text in Illustration

	High-temperature Grease
--	-------------------------

- (b) Install the internal gear to the shaft.

- (c) Apply high-temperature grease to the shaft as shown in the illustration.

Text in Illustration

	<p>High-temperature Grease</p>
--	--------------------------------

(d) Install the over running clutch to the shaft.

(e) Install the stopper to the shaft.
Using snap ring pliers, install the snap ring.

(f) Using a press, press the snap ring into the stopper.

Text in Illustration

*1	Snap Ring
*2	Stopper

(g) Install the starter clutch sub-assembly together with the drive lever set pin to the starter drive housing assembly.

2. INSTALL STARTER PLANETARY GEAR (for Manual Transmission)

- (a) Apply high-temperature grease to the planetary gears and pins of the planetary shaft.
- (b) Install the 3 starter planetary gears.

Text in Illustration

	High-temperature Grease
---	-------------------------

3. INSTALL STARTER PLANETARY GEAR (for Automatic Transmission)

- (a) Apply high-temperature grease to the planetary gears and pins of the planetary shaft.
- (b) Install the 3 starter planetary gears.

Text in Illustration

	High-temperature Grease
---	-------------------------

4. INSTALL STARTER HOUSING RUBBER (for Manual Transmission)

(a) Install the starter housing rubber, seal rubber and plate to the starter drive housing assembly.

Text in Illustration

*1	Starter Housing Rubber
*2	Plate
*3	Seal Rubber

5. INSTALL RUBBER SEAL (for Automatic Transmission)

(a) Install the rubber seal to the starter drive housing assembly.

Text in Illustration

*1	Rubber Seal
----	-------------

6. INSTALL STARTER ARMATURE ASSEMBLY (for Automatic Transmission)

(a) Install the starter armature assembly to the starter yoke assembly.

Text in Illustration

*1	Starter Yoke Assembly
*2	Starter Armature Assembly

7. INSTALL STARTER BRUSH HOLDER ASSEMBLY (for Automatic Transmission)

(a) Install the 4 brushes and 4 brush springs.

(b) Install the starter brush holder assembly to the starter armature assembly. Push the 4 brushes.

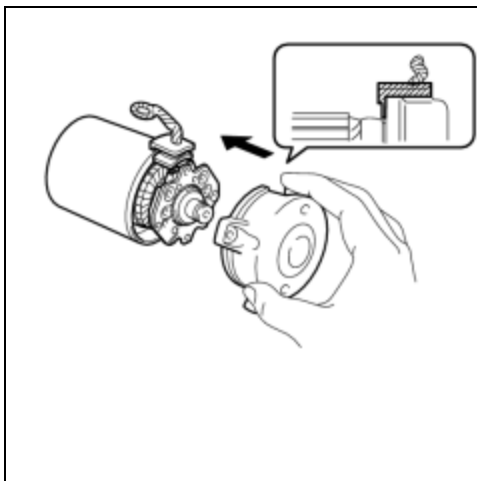

(c) Insert the grommet between the positive (+) motor read wire and the negative (-) brush holder plate.

Text in Illustration

*1	Grommet
*2	Negative (-) Brush Holder Plate
*3	Positive (+) Motor Read Wire

8. INSTALL STARTER COVER (for Automatic Transmission)

(a) Install the dust starter protector to the starter yoke assembly.

(b) Align the starter brush holder assembly read wire rubber with the groove of the starter cover.

(c) Install the starter cover to the starter brush holder assembly with 2 screws.

- Torque: 1.5 N·m (15 kgf·cm, 13in·lbf)

9. INSTALL STARTER ARMATURE PLATE (for Automatic Transmission)

- (a) Align the claw of the starter yoke assembly with the groove the starter armature plate.
- (b) Install the starter armature plate to the starter yoke assembly.

Text in illustration

*1	Claw	*2	Groove
----	------	----	--------

10. INSTALL STARTER ARMATURE ASSEMBLY (for Manual Transmission)

- (a) Install the starter armature assembly to the starter yoke assembly.

11. INSTALL STARTER YOKE ASSEMBLY (for Manual Transmission)

- (a) Align the claw of the starter yoke assembly with the groove inside the starter drive housing assembly.

Text in Illustration

*1	Claw
----	------

*2	Groove

- (b) Install the starter yoke assembly together with the starter armature assembly to the starter drive housing assembly.

12. INSTALL STARTER YOKE ASSEMBLY (for Automatic Transmission)

- (a) Align the claw of the starter yoke assembly with the groove inside the starter drive housing assembly.

Install the starter yoke assembly together with the starter armature assembly to the starter drive housing assembly.

Text in Illustration

*1	Claw
*2	Groove

- (b) Using a "TORX" socket wrench T25, install the 2 through bolts.

Torque: 6.0 N·m (61 kgf·cm, 53in·lbf)

13. INSTALL STARTER BRUSH HOLDER ASSEMBLY (for Manual Transmission)

- (a) Install a 24 mm socket to the starter brush holder assembly.

- (b) Install the starter brush holder assembly to the starter armature assembly.

14. INSTALL STARTER COVER (for Manual Transmission)

- (a) Install the starter cover with 2 screws and 2 bolts.

Bolt - Torque: 6.0 N·m (61 kgf·cm, 53in·lbf)

Screw - Torque: 1.4 N·m (14 kgf·cm, 12in·lbf)

15. INSTALL MAGNET STARTER SWITCH ASSEMBLY (for Manual Transmission)

- (a) Install the magnet starter switch assembly with the 2 screws.

Torque: 7.5 N·m (77 kgf·cm, 66in·lbf)

- (b) Connect the lead wire to terminal C with the nut.

Torque: 10 N·m (102 kgf·cm, 7ft·lbf)

16. INSTALL MAGNET STARTER SWITCH ASSEMBLY (for Automatic Transmission)

- (a) Apply high-temperature grease to the plunger and hook as shown in the illustration.

Text in Illustration

	High-temperature grease
---	-------------------------

(b) Hook the plunger and hook of the magnet starter switch assembly to the lever of the starter drive housing assembly.

Text in Illustration

*1	Plunger and Hook
*2	Lever

(c) Install the magnet starter switch assembly with the 2 screws.

Torque: 7.5 N·m (77 kgf·cm, 66in·lbf)

(d) Connect the lead wire to terminal C with the nut.

Torque: 10 N·m (102 kgf·cm, 7ft·lbf)

Title: FA20 BATTERY / CHARGING: CHARGING SYSTEM: DATA LIST / ACTIVE TEST (2013 FR-S)		

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under Normal Condition are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

- (a) Warm up the engine.
- (b) Turn the ignition switch off.
- (c) Connect the Techstream to the DLC3.
- (d) Turn the ignition switch to ON.
- (e) Turn the Techstream on.
- (f) Enter the following menus: Powertrain / Engine / Data List.
- (g) Check the values by referring to the table below.

ECM

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Battery Voltage	Battery voltage: Min.: 0 V, Max.: 65.535 V	11 to 14 V: Idling	When the battery voltage is below 11 V, other systems may be affected. Reference figures: <ul style="list-style-type: none"> • IG ON: 12.5 V • When cranking: 9.834 V • When idling (after warming up): 13.359 V
Battery Current	Battery current: Min.: -125 A, Max.: 125 A	Changes in response to the amount of electricity generated by the alternator: while running after warming up.	When a malfunction occurs, there may be a problem with the IB voltage system or the sensor power source.
Battery Temperature	Battery temperature: Min.: -40°C (-40°F), Max.: 6513.5°C (11756.3°F)	Changes in response to the actual temperature: while running after warming up.	When a malfunction occurs, there may be a problem with the THB voltage system or the sensor power source.
	Displays the voltage		

Alt Vol - Non Active Test	required when the regulator is not being forcefully driven: Min.: 0 V, Max.: 80 V	Changes in response to the battery fluid temperature and running state (12.4 to 14.6 V): after starting the engine.	When a malfunction occurs, there may be problems with charging control systems.
Alt Vol - Active Test	Displays the voltage required when the regulator is being forcefully driven: Min.: 0 V, Max.: 80 V	Specified voltage required when performing the "generation required voltage" active test: after starting the engine.	<ul style="list-style-type: none"> • Displays the voltage generated when performing the active test. • When a malfunction occurs, there may be problems with the charging control systems.
Alternator Duty	Displays the charging control signal: Min.: 0%, Max.: 255 %	Changes in response to the amount of electricity generated by the alternator: while charging control.	When a malfunction occurs, there may be problems with the charging control systems.
Request Voltage to Alternator	Displays the alternator generation control mode: Min.: 0%, Max.: 255 %	Changes in response to the amount of electricity generated by the alternator: while charging control.	When a malfunction occurs, there may be problems with the charging control systems.
# Codes (Include History)	Number of DTCs: Min.: 0, Max.: 255	0	-

2. ACTIVE TEST

HINT:

Using the Techstream to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

- Connect the Techstream to the DLC3.
- Turn the ignition switch to ON.
- Turn the Techstream on.
- Enter the following menus: Powertrain / Engine / Active Test.
- Perform the Active Test by referring to the table below.

ECM

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Control the Voltage of Alternator	Fluctuations in the required alternator generated voltage.	Between 12.8 and 14.3 V	While engine running.

NEXT

2.	CUSTOMER PROBLEM ANALYSIS
-----------	----------------------------------

HINT:

- In troubleshooting, confirm that the problem symptoms have been accurately identified. Preconceptions should be discarded in order to make an accurate judgment. To clearly understand what the problem symptoms are, it is extremely important to ask the customer about the problem and the conditions at the time the malfunction occurred.
- Gather as much information as possible for reference. Past problems that seem unrelated may also help in some cases.
 - The following 5 items are important points in the problem analysis:

What	Vehicle model, system name
When	Date, time, occurrence frequency
Where	Road conditions
Under what conditions?	Running conditions, driving conditions, weather conditions
How did it happen?	Problem symptoms

NEXT

3.	INSPECT BATTERY VOLTAGE

Title: FA20 BATTERY / CHARGING: CHARGING SYSTEM: ON-VEHICLE INSPECTION (2013 FR-S)		

ON-VEHICLE INSPECTION

1. CHECK BATTERY CONDITION

NOTICE:

If the battery is weak or if the engine is difficult to start, perform the following procedures.

(a) Check the battery for damage and deformation. If severe damage, deformation or leakage is found, replace the battery.

(b) Check the volume of electrolyte quantity in each cell.

- If the electrolyte volume is below the lower line, add distilled water to each cell. Then, recharge the battery and check the electrolyte specific gravity.

Standard specific gravity:

1.25 to 1.29 at 20°C (68°F)

If the electrolyte volume is above the lower line, check the battery voltage when cranking the engine. If the battery voltage is less than 9.6 V, recharge or replace the battery.

HINT:

Before checking the battery voltage, turn off all the electrical systems (headlights, blower motor, rear defogger, etc.).

2. INSPECT BATTERY TERMINAL AND FUSE

(a) Check that the battery terminals are not loose or corroded.

If the terminal is corroded, clean the terminal.

(b) Measure the resistance of the H-fuses and fuses.

Standard resistance:

Below 1 Ω

If the result is not as specified, replace the fuse.

3. INSPECT FAN AND GENERATOR V BELT INFO

4. INSPECT GENERATOR WIRING

(a) Visually check the generator wiring.

(1) Check that the wiring is in good condition.

5. CHECK FOR ABNORMAL NOISES

(a) Listen for abnormal noises from the generator.

(1) Check that no abnormal noises are heard from the generator while the engine is running.

6. INSPECT CHARGE WARNING LIGHT CIRCUIT

(a) Turn the ignition switch to ON. Check that the charge warning light comes on.

(b) Start the engine and check that the light goes off.

If the light does not operate as specified, troubleshoot the charge warning light circuit.

7. INSPECT CHARGING CIRCUIT WITHOUT LOAD

(a) Connect a voltmeter and ammeter to the charging circuit as follows.

(1) Disconnect the wire from terminal B of the generator, and then connect it to the negative (-) lead of an ammeter.

Text in Illustration

*1	Battery
*2	Terminal B
*3	Generator Assembly

(2) Connect the positive (+) lead of the ammeter to terminal B of the generator.

(3) Connect the positive (+) lead of a voltmeter to terminal B of the generator.

(4) Ground the negative (-) lead of the voltmeter.

(b) Check the charging circuit.

(1) Maintain the engine speed at 2000 rpm and check the reading on the ammeter and voltmeter.

Standard current:

10 A or less

Standard voltage:

11.3 to 15.6 V

If the result is not as specified, replace the generator assembly.

HINT:

If the battery is not fully charged, the ammeter reading will sometimes be higher than the standard current.

8. INSPECT CHARGING CIRCUIT WITH LOAD

(a) With the engine running at 2000 rpm, turn the high beam headlights on and turn the heater blower switch to the HI position.

(b) Check the reading on the ammeter.

Standard current:

30 A or higher

If the ammeter reading is below the standard current, repair the generator.

HINT:

If the battery is fully charged, the indication will sometimes be below the standard current. If this is the case, add more electrical load (operate the wipers, rear window defogger, etc.) and check the reading on the ammeter again.

Last Modified: 3-27-2012	6.4 C	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM0000010BK0E1X
Title: FA20 BATTERY / CHARGING: CHARGING SYSTEM: P0516,P0517: Battery Temperature Sensor Circuit Low (2013 FR-S)		

DTC	P0516	Battery Temperature Sensor Circuit Low
------------	--------------	---

DTC	P0517	Battery Temperature Sensor Circuit High
------------	--------------	--

DESCRIPTION

The battery temperature sensor installed on the battery current sensor assembly detects the battery temperature.

A thermistor is integrated into the battery temperature sensor, and the resistance in the battery temperature sensor changes according to the battery temperature.

The resistance of the thermistor in the battery temperature sensor decreases as the battery temperature increases. The resistance increases as the temperature decreases.

The battery temperature sensor is connected to the ECM. The ECM supplies 5 V from the THB terminal to the battery temperature sensor through resistor R.

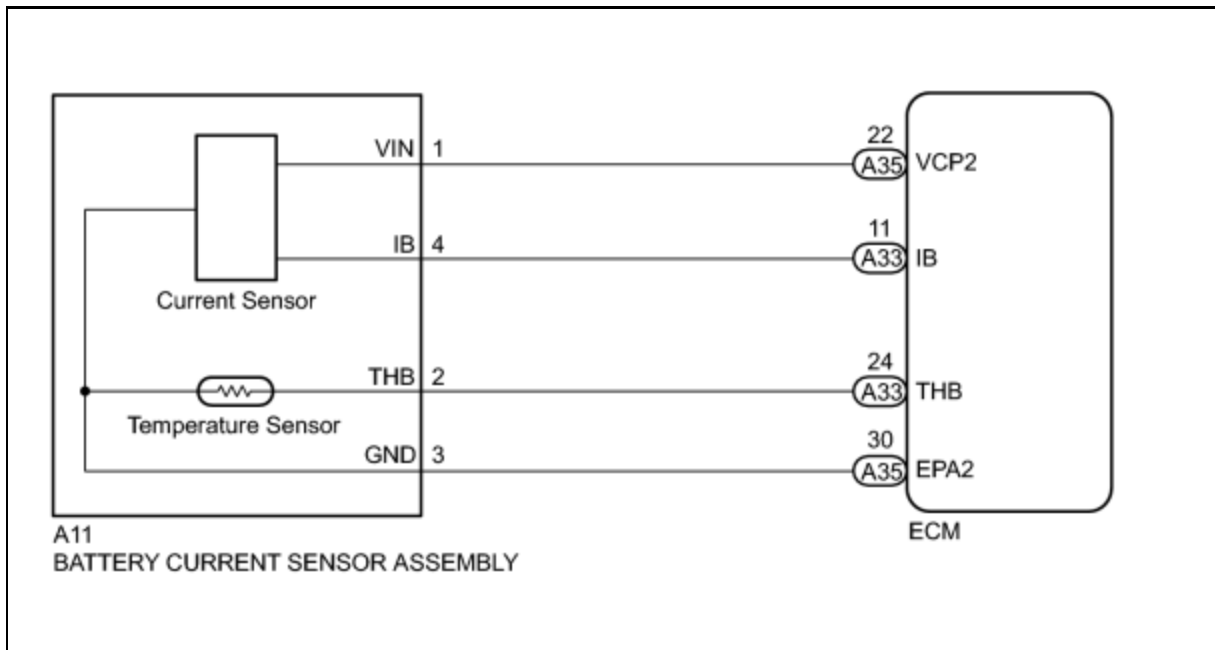

The battery temperature sensor and resistor R are connected in series. This results in fluctuations in the voltage supplied from the THB terminal when the resistance changes according to the battery temperature.

The ECM determines the battery temperature according to fluctuations in voltage. When the battery temperature is high, the ECM determines to reduce the amount of current supplied from the generator in order to protect the battery.

INSPECTION PROCEDURE

PROCEDURE

1.	INSPECT BATTERY CURRENT SENSOR ASSEMBLY
----	--

(a) Disconnect the cable from the negative (-) battery terminal.

(b) Disconnect the A11 battery current sensor assembly connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2 (THB) - 3 (GND)	20 to 30°C (68 to 86°F)	1.5 to 2.6 kΩ

Text in Illustration

*a	Component without harness connected (Battery Current Sensor Assembly)
----	--

(d) Reconnect the cable to the negative (-) battery terminal.

NG ▶ **REPLACE BATTERY CURRENT SENSOR ASSEMBLY**

OK

2.	CHECK HARNESS AND CONNECTOR (BATTERY CURRENT SENSOR ASSEMBLY - ECM)
-----------	--

(a) Disconnect the A33 and A35 ECM connectors.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A33-24 (THB) - A11-2 (THB)	Always	Below 1 Ω
A35-30 (EPA2) - A11-3 (GND)	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A33-24 (THB) or A11-2 (THB) - Body ground	Always	10 kΩ or higher

A35-30 (EPA2) or A11-3 (GND) - Body ground	Always	10 kΩ or higher
--	--------	-----------------

NG ► **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ► **REPLACE ECM**

Title: FA20 BATTERY / CHARGING: CHARGING SYSTEM: P1530-P1532: Short in Battery Current Sensor Circuit (2013 FR-S)		

DTC	P1530	Short in Battery Current Sensor Circuit
------------	--------------	--

DTC	P1531	Open in Battery Current Sensor Circuit
------------	--------------	---

DTC	P1532	Battery Current Sensor Circuit
------------	--------------	---------------------------------------

DESCRIPTION

The battery current sensor assembly installed on the negative (-) battery terminal detects the amount of current supplied from the generator.

The battery current sensor assembly changes current to voltage (at the negative (-) battery terminal) and sends it to the ECM. The ECM controls the voltage of the generator based on the signals from the battery current sensor assembly.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P1530	<ul style="list-style-type: none"> Engine speed is 500 r/min or more, battery voltage is 10.9 V or more, and 1 second or more have elapsed after starting. Battery current sensor output is less than 0.347 V, and duration of the malfunction is 0.5 seconds or more (1-trip detection logic). 	<ul style="list-style-type: none"> Battery current sensor assembly Open or short to GND in battery current

		<ul style="list-style-type: none"> sensor circuit • ECM
P1531	<ul style="list-style-type: none"> • Engine speed is 500 r/min or more, battery voltage is 10.9 V or more, and 1 second or more have elapsed after starting. • Battery current sensor output is more than 4.653 V, and duration of the malfunction is 0.5 seconds or more (1-trip detection logic). 	<ul style="list-style-type: none"> • Battery current sensor assembly • Short to +B or VC in battery current sensor circuit • ECM

INSPECTION PROCEDURE

PROCEDURE

1.	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO P1530, P1531, P1532)
-----------	---

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine / DTC.

(e) Read the DTC.

Result

RESULT	PROCEED TO
DTC P1530, P1531 and P1532 are output	A
DTC P1530, P1531, P1532 and other DTCs are output	B

HINT:

If any DTCs other than P1530, P1531 and P1532 are output, troubleshoot those DTCs first.

B ► [GO TO DTC CHART](#)

A

2.	READ VALUE USING TECHSTREAM (BATTERY CURRENT)
-----------	--

(a) Turn all of the electrical systems (headlights, blower motor, rear defogger, etc.) off.

(b) Connect the Techstream to the DLC3.

(c) Turn the ignition switch to ON.

(d) Turn the Techstream on.

(e) Enter the following menus: Powertrain / Engine / Data List / Battery Current.

Result

RESULT	PROCEED TO
Battery current is fixed at 0 A, or fluctuates by +/- 1 A or less between -100 and 100 A	A
Battery current fluctuates between -20 and 0 A	B

B ► [USE SIMULATION METHOD TO CHECK](#)

A

3.	INSPECT BATTERY CURRENT SENSOR ASSEMBLY
-----------	--

(a) Disconnect the cable from the negative (-) battery terminal.

(b) Disconnect the A11 battery current sensor assembly connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 (VIN) - 3 (GND)	Always	3 to 10 kΩ
1 (VIN) - 4 (IB)	Always	Below 0.5 kΩ
3 (GND) - 4 (IB)	Always	3 to 10 kΩ

Text in Illustration

*a	Component without harness connected (Battery Current Sensor Assembly)
----	--

(d) Reconnect the cable to the negative (-) battery terminal.

NG ▶ REPLACE BATTERY CURRENT SENSOR ASSEMBLY

OK

4.	CHECK HARNESS AND CONNECTOR (BATTERY CURRENT SENSOR ASSEMBLY - ECM)
-----------	--

(a) Disconnect the A33 and A35 ECM connectors.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A33-11 (IB) - A11-4 (IB)	Always	Below 1 Ω
A35-22 (VCP2) - A11-1 (VIN)	Always	Below 1 Ω

A35-30 (EPA2) - A11-3 (GND)

Always

Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A33-11 (IB) or A11-4 (IB) - Body ground	Always	10 k Ω or higher
A35-22 (VCP2) or A11-1 (VIN) - Body ground	Always	10 k Ω or higher
A35-30 (EPA2) or A11-3 (GND) - Body ground	Always	10 k Ω or higher

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK  **REPLACE ECM**

Title: FA20 BATTERY / CHARGING: CHARGING SYSTEM: TERMINALS OF ECU (2013 FR-S)		

TERMINALS OF ECU

1. CHECK ECM

(a) Measure the resistance, voltage and waveform according to the value(s) in the table below.

TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
A33-2 (BATT) - A34-1 (E03)	W - B-R	Battery power	Always	11 to 14 V
A33-11 (IB) - A35-30 (EPA2)	R-B - Y-B	Battery current sensor	Ignition switch ON	0.5 to 4.5 V
A33-24 (THB) - A35-30 (EPA2)	R-W - Y- B	Battery temperature sensor	Ignition switch ON 20 to 50°C (68 to 122°F)	1.1 to 2.4 V
A34-1 (E03) - Body ground	B-R - Body ground	Body ground	Always	Below 1 Ω
A35-18 (ALT) - A34-1 (E03)	V - B-R	Generator	Idling with warm engine	Pulse generation (See waveform 1)
A35-22 (VCP2) - A35-30 (EPA2)	G-B - Y-B	Power source of battery current sensor assembly	Ignition switch ON	4.5 to 5.5 V

If the result is not as specified, the ECU may have a malfunction.

(b) WAVEFORM 1

Generator

TESTER CONNECTION	TOOL SETTING	VEHICLE CONDITION	SPECIFIED CONDITION

A35-18 (ALT) - A34-1 (E03)	2 V/DIV., 2 msec./DIV.	Idling with warm engine	Correct waveform as shown in illustration

HINT:

- The oscilloscope waveform shown in the illustration is an example for reference only. Noise, chattering, etc. are not shown.
- A constant value is not output, as the duty ratio varies depending on the electrical load and battery condition.

Title: FA20 BATTERY / CHARGING: GENERATOR: DISASSEMBLY (2013 FR-S)		

DISASSEMBLY

1. REMOVE GENERATOR REAR END COVER

(a) Remove the 4 through bolts.

(b) Using the heat gun, heat the generator rear end cover.

Heating Temperature:

ITEM	TEMPERATURE
Generator Rear End Cover	50 to 60°C (122 to 140°F)

Text in Illustration

*1	Heat gun
----	----------

(c) Insert the 2 screw drivers, remove the generator rear end cover as shown in the illustration.

2. REMOVE GENERATOR PULLEY

(a) Mount the generator in a vise between aluminum plates.

Text in Illustration

*1	Aluminium plate
----	-----------------

(b) Remove the nut and generator pulley.

3. REMOVE GENERATOR DRIVE END FRAME ASSEMBLY

(a) Remove the generator drive end frame assembly from the generator rotor assembly.

4. REMOVE GENERATOR DRIVE END FRAME BEARING

(a) Mount the generator drive end frame assembly in a vise between aluminum plates.

(b) Remove the 4 bolts and bearing retainer.

Text in Illustration

*1	Aluminium plate
----	-----------------

(c) Using SST and a hammer, tap out the bearing.

SST: 09950-60010

09951-00250

SST: 09950-70010

09951-07100

5. REMOVE GENERATOR ROTOR BEARING

(a) Set the SST to the generator rotor assembly between wooden blocks.

SST: 09387-00041

Text in Illustration

*1	Wooden block
----	--------------

(b) Hold the SST nut, and turn the SST bolt to remove the generator rotor bearing.

Text in Illustration

*1	SST Nut
*2	SST Bolt
*a	Hold
*b	Turn

6. REMOVE GENERATOR COIL ASSEMBLY

(a) Remove the 6 bolts and generator coil assembly.

7. REMOVE GENERATOR BRUSH HOLDER ASSEMBLY

(a) Remove the 4 bolts and generator brush holder assembly.

8. REMOVE BRUSH

(a) Remove the cover A from the brush holder assembly.

(b) Remove the cover B from the brush holder assembly.

(c) Using a soldering iron, separate the 2 brushes from the brush holder assembly.

Text in Illustration

*1	Soldering iron
----	----------------

9. REMOVE GENERATOR HOLDER WITH RECTIFIER

(a) Remove the terminal cover.

(b) Remove the nut and the terminal.

(c) Remove the 3 bolts and the generator holder with rectifier.

Model Year: 2013	Model: FR-S	Doc ID: RM0000017VH02NX
Title: FA20 BATTERY / CHARGING: GENERATOR: INSPECTION (2013 FR-S)		

INSPECTION

1. INSPECT BRUSH

(a) Using a vernier caliper, measure the brush length.

Standard length:
22.5 mm (0.885 in)
Minimum length:
5.0 mm (0.196 in)

Text in Illustration

*a	Minimum length
*b	Standard length
*c	Mark of minimum length
	Brush

If the brush length is less than the minimum, replace the brush.

2. INSPECT GENERATOR COIL ASSEMBLY

(a) Check the resistance.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	Always	Below 1 Ω
1 - 3		
2 - 3		
4 - 5		

	4 - 6	
	5 - 6	

Text in Illustration

*a	Lead wire
----	-----------

If the result is not as specified, replace the generator coil assembly.

(b) Check the resistance.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Stator core - Lead wire	Always	10 k Ω or higher

Text in Illustration

*1	Stator core
*a	Lead wire

If the result is not as specified, replace the generator coil assembly.

3. INSPECT GENERATOR ROTOR ASSEMBLY

(a) Check the generator rotor assembly for an open circuit.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Slip ring - Slip ring	20°C (68°F)	2.0 to 2.4 Ω

Text in Illustration

*1	Slip Ring
----	-----------

If the result is not as specified, replace the generator rotor assembly.

(b) Check if the generator rotor assembly is grounded.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Slip ring - Rotor core	Always	10 kΩ or higher

Text in Illustration

*1	Slip Ring
*2	Rotor Core

If the result is not as specified, replace the generator rotor assembly.

(c) Check the slip ring diameter.

(1) Using a vernier caliper, measure the diameter of each slip ring.

Standard diameter:

22.7 mm (0.893 in.)

Minimum diameter:

22.1 mm (0.870 in.)

If the diameter is less than the minimum, replace the generator rotor assembly.

Text in Illustration

*a	Diameter of Slip Ring
----	-----------------------

4. INSPECT GENERATOR HOLDER WITH RECTIFIER

(a) Check the resistance.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
P1, P2, P3, P4, P5, P6 - B	P1, P2, P3, P4, P5, P6 (Tester positive) B (Tester negative)	Below 1 Ω
	P1, P2, P3, P4, P5, P6 (Tester negative) B (Tester positive)	10 kΩ or higher

P1, P2, P3, P4, P5, P6 - E	P1, P2, P3, P4, P5, P6 (Tester positive) E (Tester negative)	10 kΩ or higher
	P1, P2, P3, P4, P5, P6 (Tester negative) E (Tester positive)	Below 1 Ω

If the result is not as specified, replace the generator holder with rectifier.

Title: NETWORKING: CAN COMMUNICATION SYSTEM: Bus Buffer ECU Communication Stop Mode (2013 FR-S)		

Bus Buffer ECU Communication Stop Mode

DESCRIPTION

DETECTION ITEM	SYMPTOM	TROUBLE AREA
Bus Buffer ECU Communication Stop Mode	Communication system DTCs (DTCs that start with U) that are output correspond to "Bus Buffer ECU Communication Stop Mode" in "DTC Combination Table" INFO	PSP (option connector) branch line or connector

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- Before measuring the resistance of the CAN bus, turn the ignition switch off and leave the vehicle for 1 minute or more without operating the key, switches or opening or closing the doors. After that, disconnect the cable from the negative (-) battery terminal and leave the vehicle for 1 minute or more before measuring the resistance.
- After turning the ignition switch off, waiting time may be required before disconnecting the cable from the negative (-) battery terminal. Therefore, make sure to read the disconnecting the cable from the negative (-) battery terminal notices before proceeding with work **INFO**.
- Because the order of diagnosis is important to allow correct diagnosis, make sure to begin troubleshooting using How to Proceed with Troubleshooting when CAN communication system related DTCs are output **INFO**.
- After performing repairs, perform the DTC check procedure and confirm that the DTCs are not output again.
- DTC check procedure: Turn the ignition switch to ON and wait at least 10 seconds.
- After the repair, perform CAN Bus Check and check that all the ECUs and sensors connected to the CAN communication system are displayed **INFO**.

HINT:

- Operating the ignition switch, any other switches or a door triggers related ECU and sensor communication on the CAN. This communication will cause the resistance value to change.
- Even after DTCs are cleared, if a DTC is stored again after driving the vehicle for a while, the malfunction may be occurring due to vibration of the vehicle. In such a case, wiggling the ECUs or wire harness while performing the inspection below may help determine the cause of the malfunction.

PROCEDURE

1.	CHECK FOR OPEN IN CAN BUS LINES (PSP (OPTION CONNECTOR) BRANCH LINE)
-----------	---

(a) Disconnect the cable from the negative (-) battery terminal.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D29-4 (CANH) - D29-5 (CANL)	Cable disconnected from negative (-) battery terminal	57 to 63 Ω

- Because the order of diagnosis is important to allow correct diagnosis, make sure to begin troubleshooting using How to Proceed with Troubleshooting when CAN communication system related DTCs are output **INFO**.
- After performing repairs, perform the DTC check procedure and confirm that the DTCs are not output again.
- DTC check procedure: Turn the ignition switch to ON and wait at least 60 seconds.
- After the repair, perform CAN Bus Check and check that all the ECUs and sensors connected to the CAN communication system are displayed **INFO**.

HINT:

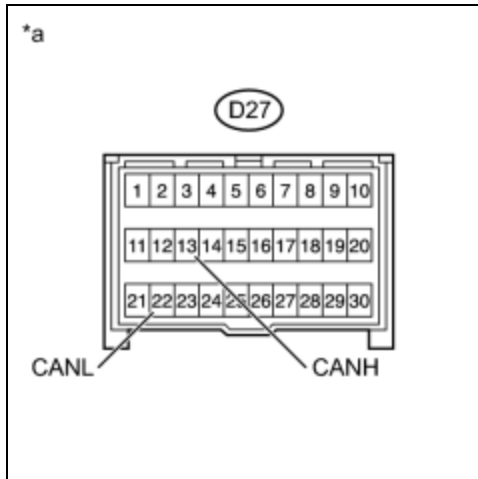

- Operating the ignition switch, any other switches or a door triggers related ECU and sensor communication on the CAN. This communication will cause the resistance value to change.
- Even after DTCs are cleared, if a DTC is stored again after driving the vehicle for a while, the malfunction may be occurring due to vibration of the vehicle. In such a case, wiggling the ECUs or

wire harness while performing the inspection below may help determine the cause of the malfunction.

PROCEDURE

1.	CHECK FOR OPEN IN CAN BUS LINES (AIR BAG ECU ASSEMBLY BRANCH LINE)
-----------	---

(a) Disconnect the cable from the negative (-) battery terminal.

(b) Disconnect the D27 air bag ECU assembly connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D27-13 (CANH) - D27-22 (CANL)	Cable disconnected from negative (-) battery terminal	57 to 63 Ω

Text in Illustration

*a	Front view of wire harness connector (to Air Bag ECU Assembly)
----	--

NG ► REPAIR OR REPLACE CAN BRANCH LINE OR CONNECTOR (AIR BAG ECU ASSEMBLY)

OK
▼

2.	CHECK HARNESS AND CONNECTOR (POWER SOURCE CIRCUIT)
-----------	---

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D27-25 (GND) - Body ground	Cable disconnected from negative (-) battery terminal	Below 1 Ω
D27-26 (GND) - Body ground	Cable disconnected from negative (-) battery terminal	Below 1 Ω

Text in Illustration

*a	Front view of wire harness connector (to Air Bag ECU Assembly)
----	--

(b) Connect the cable to the negative (-) battery terminal.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D27-21 (IG) - Body ground	Ignition switch ON	11 to 14 V

Text in Illustration

*a	Front view of wire harness connector (to Air Bag ECU Assembly)
----	--

OK ► REPLACE AIR BAG ECU ASSEMBLY

Title: NETWORKING: CAN COMMUNICATION SYSTEM: Check CAN Bus Line for Short to +B (2013 FR-S)		

Check CAN Bus Line for Short to +B

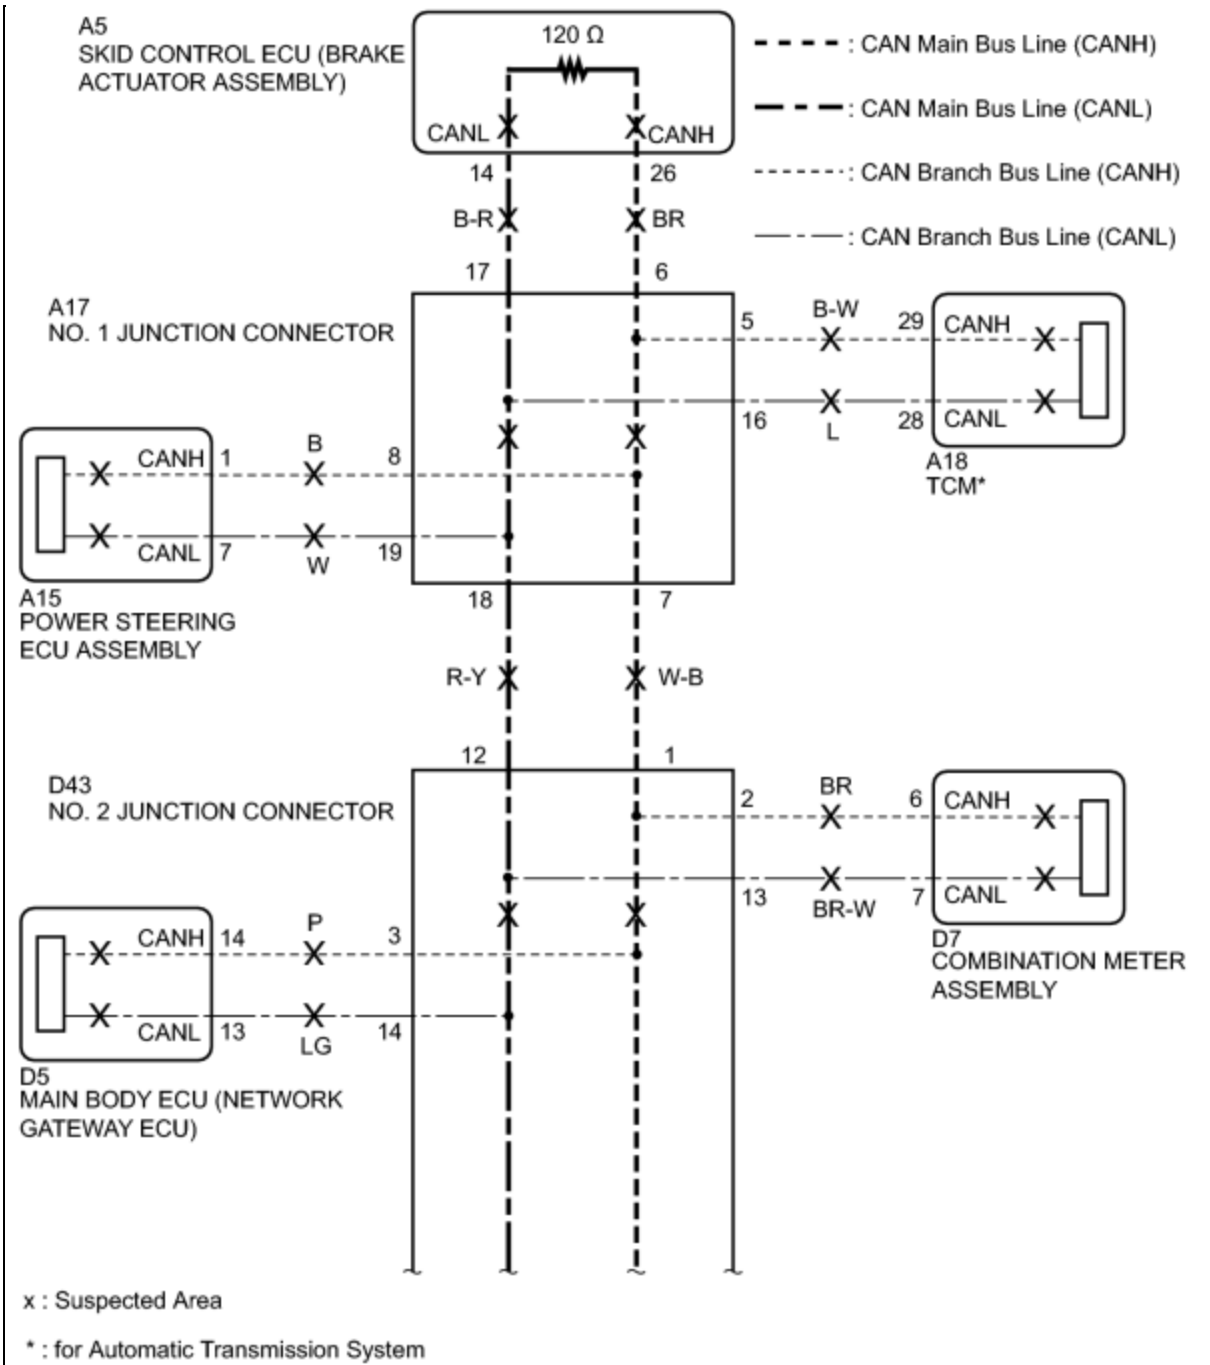

DESCRIPTION

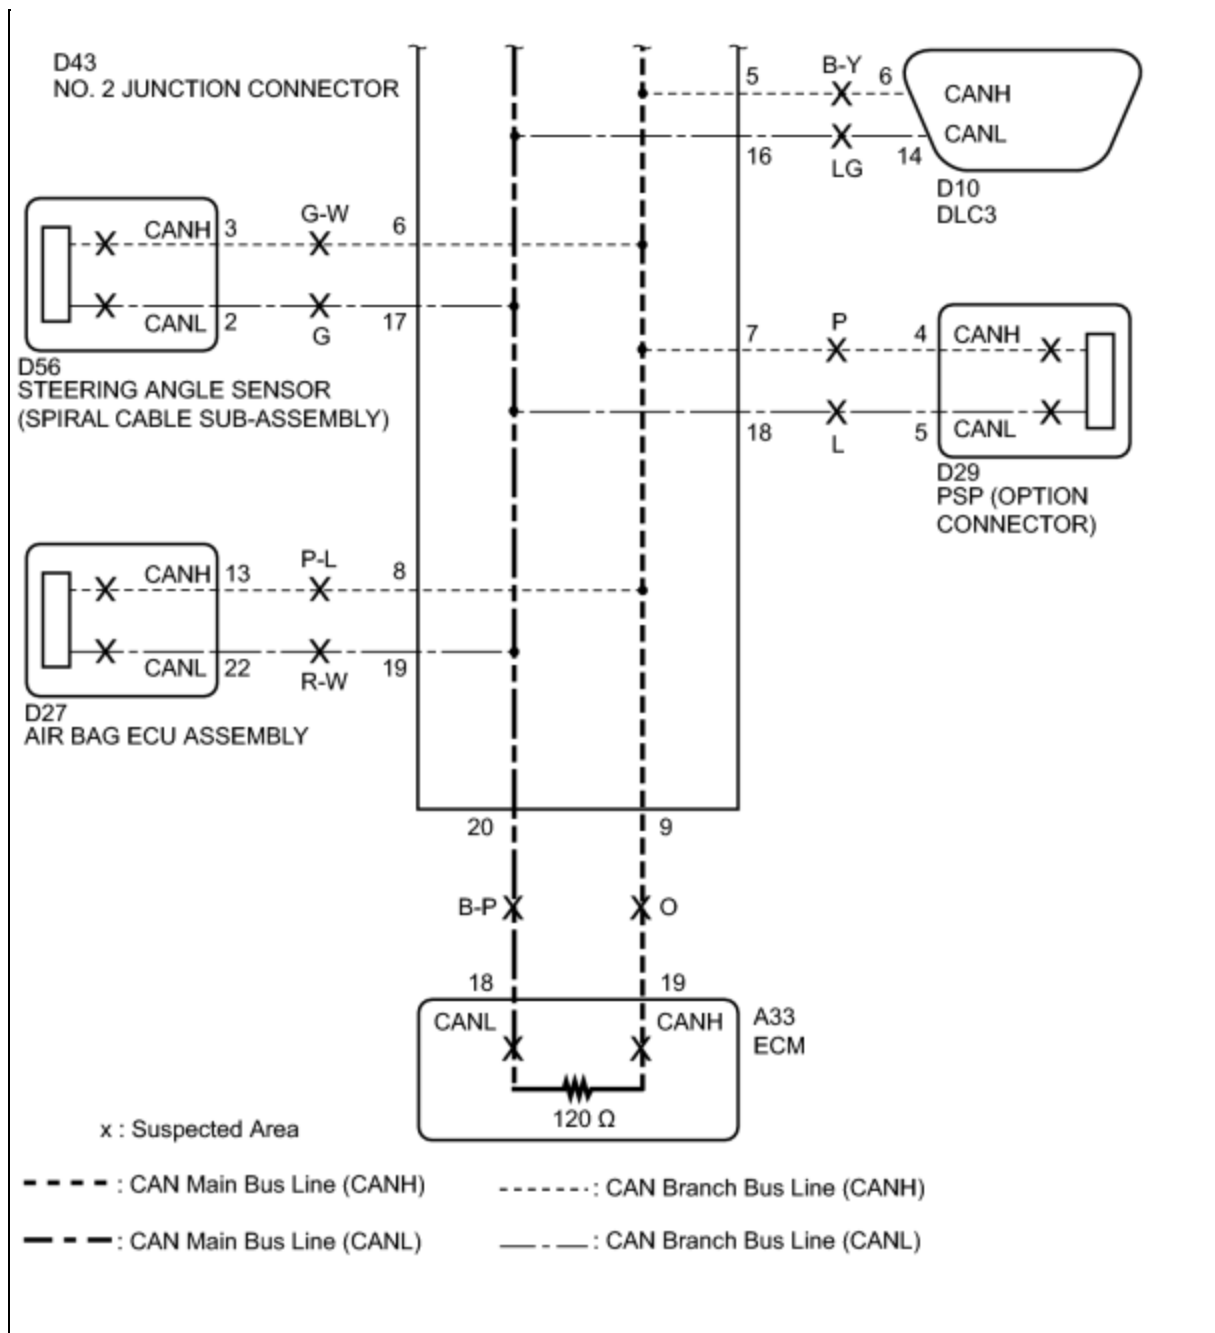

There may be a short circuit between one of the CAN bus lines and +B when no resistance exists between terminals 6 (CANH) and 16 (BAT) or 14 (CANL) and 16 (BAT) of the DLC3.

SYMPTOM	TROUBLE AREA
<p>No resistance exists between terminals 6 (CANH) and 16 (BAT) or 14 (CANL) and 16 (BAT) of DLC3.</p>	<ul style="list-style-type: none"> Short to +B in CAN main bus line Short to +B in CAN branch line Main body ECU (network gateway ECU) Combination meter assembly ECM TCM* Skid control ECU (brake actuator assembly) Steering angle sensor (spiral cable sub-assembly) Power steering ECU assembly Air bag ECU assembly CAN No. 1 junction connector CAN No. 2 junction connector

*: for Automatic Transmission System

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- Before measuring the resistance of the CAN bus, turn the ignition switch off and leave the vehicle for 1 minute or more without operating the key, switches or opening or closing the doors. After that, disconnect the cable from the negative (-) battery terminal and leave the vehicle for 1 minute or more before measuring the resistance.
- After turning the ignition switch off, waiting time may be required before disconnecting the cable from the negative (-) battery terminal. Therefore, make sure to read the disconnecting the cable from the negative (-) battery terminal notices before proceeding with work **INFO**.
- Because the order of diagnosis is important to allow correct diagnosis, make sure to begin troubleshooting using How to Proceed with Troubleshooting when CAN communication system related DTCs are output **INFO**.
- After performing repairs, perform the DTC check procedure and confirm that the DTCs are not output again.

- DTC check procedure: Turn the ignition switch to ON, wait at least 60 seconds,
- After the repair, perform CAN Bus Check and check that all the ECUs and sensors connected to the CAN communication system are displayed INFO.

HINT:

- Operating the ignition switch, any other switches or a door triggers related ECU and sensor communication on the CAN. This communication will cause the resistance value to change.
- Even after DTCs are cleared, if a DTC is stored again after driving the vehicle for a while, the malfunction may be occurring due to vibration of the vehicle. In such a case, wiggling the ECUs or wire harness while performing the inspection below may help determine the cause of the malfunction.

PROCEDURE

1. CHECK FOR SHORT TO +B IN CAN BUS LINE (CAN NO. 2 J/C)

(a) Disconnect the wire harness connector from the D43 CAN No. 2 junction connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION	CONNECTED TO
D43-1 - D10-16 (BAT)	Cable disconnected from negative (-) battery terminal	6 kΩ or higher	CAN No. 1 junction connector
D43-12 - D10-16 (BAT)			
D43-2 - D10-16 (BAT)	Cable disconnected from negative (-) battery terminal	6 kΩ or higher	Combination meter assembly
D43-13 - D10-			

16 (BAT)			
D43-3 - D10-16 (BAT)	Cable disconnected from negative (-) battery terminal	6 kΩ or higher	Main body ECU (network gateway ECU)
D43-14 - D10-16 (BAT)			
D43-5 - D10-16 (BAT)	Cable disconnected from negative (-) battery terminal	6 kΩ or higher	DLC3
D43-16 - D10-16 (BAT)			
D43-6 - D10-16 (BAT)	Cable disconnected from negative (-) battery terminal	6 kΩ or higher	Steering angle sensor (spiral cable sub-assembly)
D43-17 - D10-16 (BAT)			
D43-7 - D10-16 (BAT)	Cable disconnected from negative (-) battery terminal	6 kΩ or higher	PSP (option connector)
D43-18 - D10-16 (BAT)			
D43-8 - D10-16 (BAT)	Cable disconnected from negative (-) battery terminal	6 kΩ or higher	Air bag ECU assembly
D43-19 - D10-16 (BAT)			
D43-9 - D10-16 (BAT)	Cable disconnected from negative (-) battery terminal	6 kΩ or higher	ECM
D43-20 - D10-16 (BAT)

Model Year: 2013	Model: FR-S	Doc ID: RM000001FAD05PX
Title: NETWORKING: CAN COMMUNICATION SYSTEM: Check CAN Bus Line for Short to GND (2013 FR-S)		

[Check CAN Bus Line for Short to GND](#)

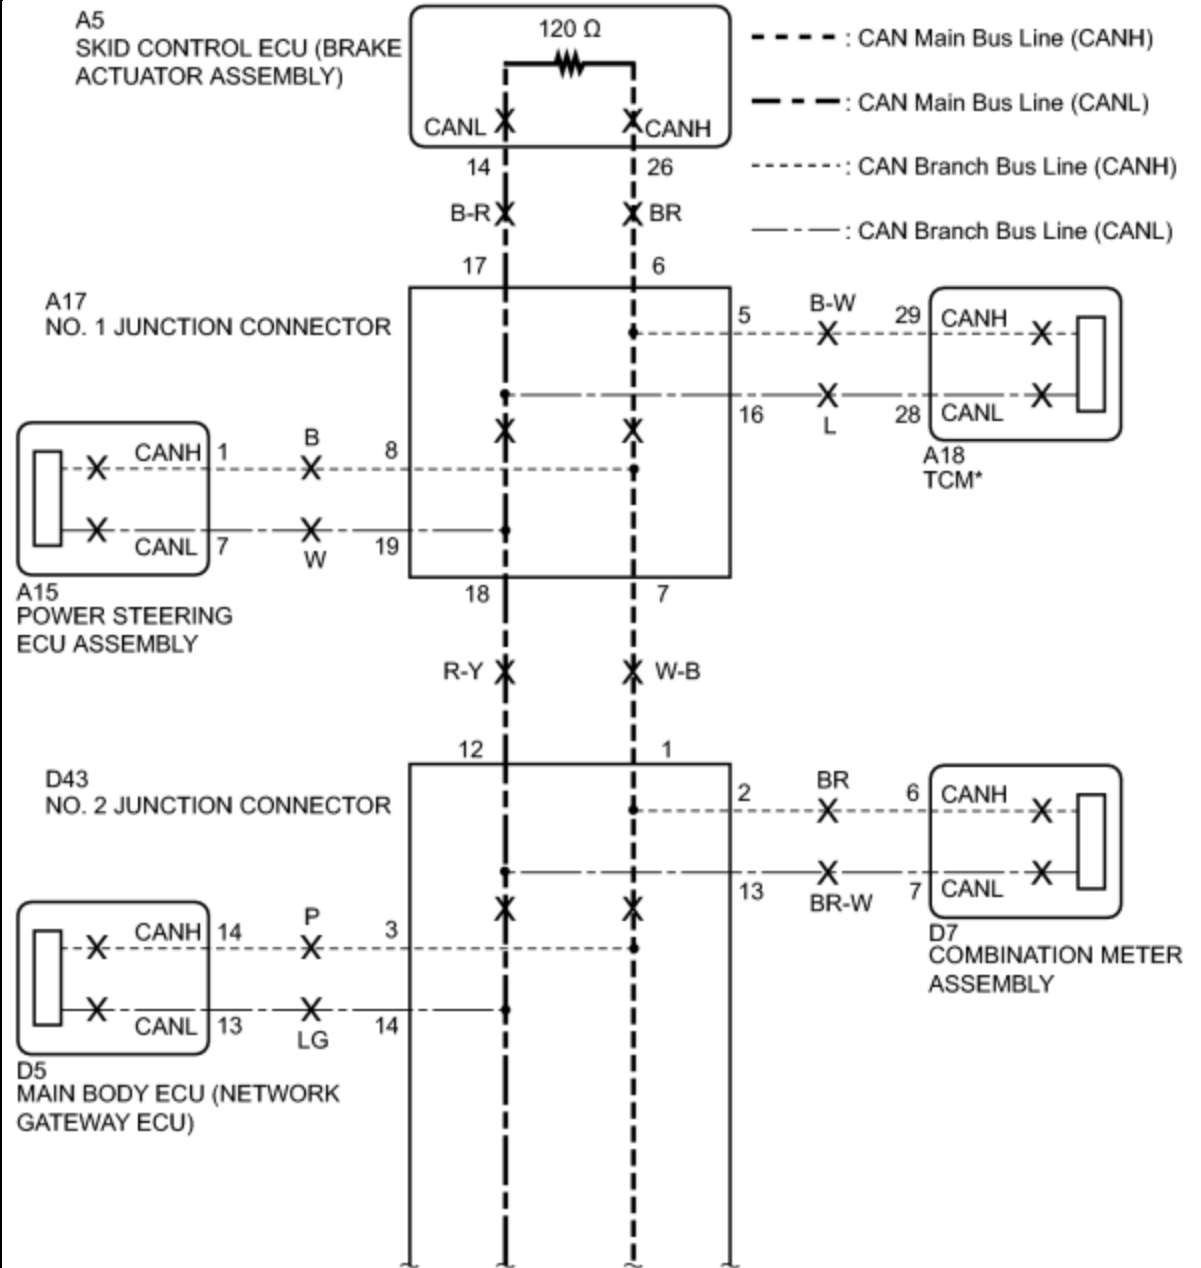

DESCRIPTION

There may be a short circuit between one of the CAN bus lines and GND when there is no resistance between terminals 6 (CANH) and 4 (CG) or 14 (CANL) and 4 (CG) of the DLC3.

SYMPTOM	TROUBLE AREA
No resistance exists between terminals 6 (CANH) and 4 (CG) or 14 (CANL) and 4 (CG) of DLC3.	<ul style="list-style-type: none"> • Short to ground in CAN main bus line • Short to ground in CAN branch line • Main body ECU (network gateway ECU) • Combination meter assembly • ECM • TCM* • Skid control ECU (brake actuator assembly) • Steering angle sensor (spiral cable sub-assembly) • Power steering ECU assembly • Air bag ECU assembly • CAN No. 1 junction connector • CAN No. 2 junction connector

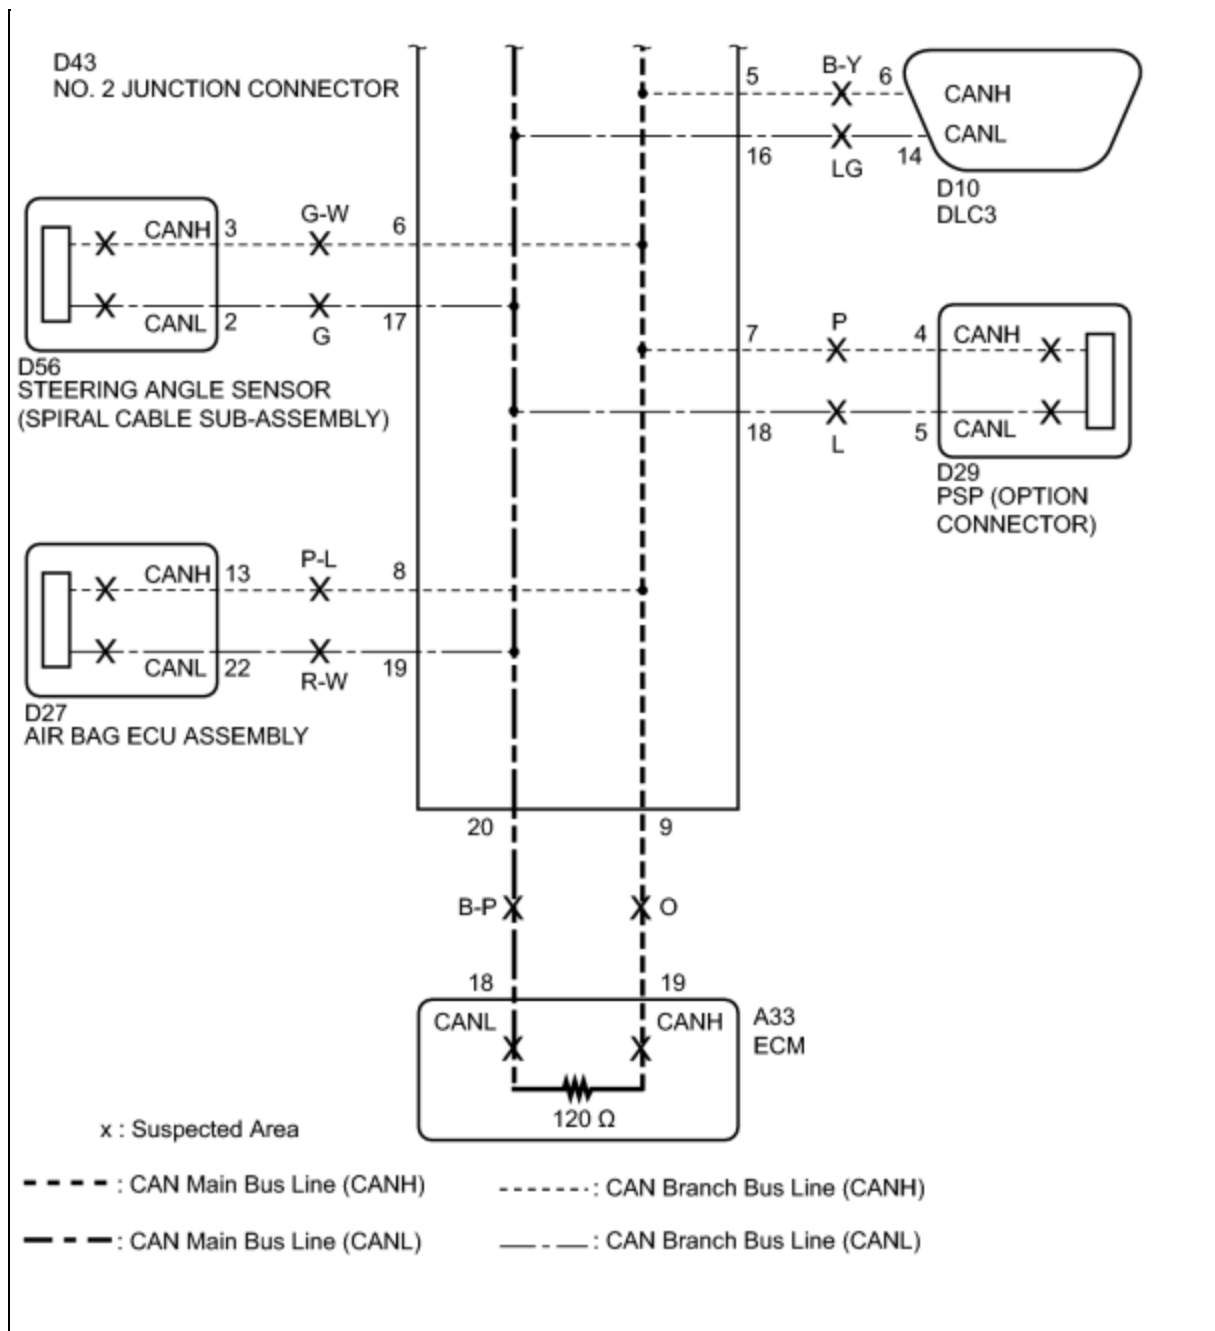

*: for Automatic Transmission System

WIRING DIAGRAM

x : Suspected Area

* : for Automatic Transmission System

INSPECTION PROCEDURE

NOTICE:

- Before measuring the resistance of the CAN bus, turn the ignition switch off and leave the vehicle for 1 minute or more without operating the key, switches or opening or closing the doors. After that, disconnect the cable from the negative (-) battery terminal and leave the vehicle for 1 minute or more before measuring the resistance.
- After turning the ignition switch off, waiting time may be required before disconnecting the cable from the negative (-) battery terminal. Therefore, make sure to read the disconnecting the cable from the negative (-) battery terminal notices before proceeding with work **INFO**.
- Because the order of diagnosis is important to allow correct diagnosis, make sure to begin troubleshooting using How to Proceed with Troubleshooting when CAN communication system related DTCs are output **INFO**.
- After performing repairs, perform the DTC check procedure and confirm that the DTCs are not output again.

- DTC check procedure: Turn the ignition switch to ON, wait at least 60 seconds,
- After the repair, perform CAN Bus Check and check that all the ECUs and sensors connected to the CAN communication system are displayed INFO.

HINT:

- Operating the ignition switch, any other switches or a door triggers related ECU and sensor communication on the CAN. This communication will cause the resistance value to change.
- Even after DTCs are cleared, if a DTC is stored again after driving the vehicle for a while, the malfunction may be occurring due to vibration of the vehicle. In such a case, wiggling the ECUs or wire harness while performing the inspection below may help determine the cause of the malfunction.

PROCEDURE

1. CHECK FOR SHORT TO GND IN CAN BUS LINE (CAN NO. 2 J/C)

(a) Disconnect the wire harness connector from the D43 CAN No. 2 junction connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION	CONNECTED TO
D43-1 - D10-4 (CG)	Cable disconnected from negative (-) battery terminal	200 Ω or higher	CAN No. 1 junction connector
D43-12 - D10-4 (CG)			
D43-2 - D10-4 (CG)	Cable disconnected from negative (-) battery terminal	200 Ω or higher	Combination meter assembly
D43-13 -			

D10-4 (CG)			
D43-3 - D10-4 (CG)	Cable disconnected from negative (-) battery terminal	200 Ω or higher	Main body ECU (network gateway ECU)

INSPECTION PROCEDURE

NOTICE:

- Before measuring the resistance of the CAN bus, turn the ignition switch off and leave the vehicle for 1 minute or more without operating the key, switches or opening or closing the doors. After that, disconnect the cable from the negative (-) battery terminal and leave the vehicle for 1 minute or more before measuring the resistance.
- After turning the ignition switch off, waiting time may be required before disconnecting the cable from the negative (-) battery terminal. Therefore, make sure to read the disconnecting the cable from the negative (-) battery terminal notices before proceeding with work **INFO**.
- Because the order of diagnosis is important to allow correct diagnosis, make sure to begin troubleshooting using How to Proceed with Troubleshooting when CAN communication system related DTCs are output **INFO**.
- After performing repairs, perform the DTC check procedure and confirm that the DTCs are not output again.
- DTC check procedure: Turn the ignition switch to ON and wait at least 10 seconds.
- After the repair, perform CAN Bus Check and check that all the ECUs and sensors connected to the CAN communication system are displayed **INFO**.

HINT:

- Operating the ignition switch, any other switches or a door triggers related ECU and sensor communication on the CAN. This communication will cause the resistance value to change.
- Even after DTCs are cleared, if a DTC is stored again after driving the vehicle for a while, the malfunction may be occurring due to vibration of the vehicle. In such a case, wiggling the ECUs or

wire harness while performing the inspection below may help determine the cause of the malfunction.

PROCEDURE

1.	CHECK FOR OPEN IN CAN BUS LINES (COMBINATION METER ASSEMBLY BRANCH LINE)
-----------	---

(a) Disconnect the cable from the negative (-) battery terminal.

(b) Disconnect the D7 combination meter assembly connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D7-6 (CANH) - D7-7 (CANL)	Cable disconnected from negative (-) battery terminal	57 to 63 Ω

Text in Illustration

*a	Front view of wire harness connector (to Combination Meter Assembly)
----	--

NG ► **REPAIR OR REPLACE CAN BRANCH LINE OR CONNECTOR (COMBINATION METER ASSEMBLY)**

OK

2.	CHECK HARNESS AND CONNECTOR (POWER SOURCE CIRCUIT)
-----------	---

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D7-20 (ES1) - Body ground	Cable disconnected from negative (-) battery terminal	Below 1 Ω
D7-40 (ES2) - Body ground	Cable disconnected from negative (-) battery terminal	Below 1 Ω

Text in Illustration

*a	Front view of wire harness connector (to Combination Meter Assembly)
----	--

(b) Connect the cable to the negative (-) battery terminal.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D7-1 (B) - Body ground	Ignition switch off	11 to 14 V
D7-2 (IG+) - Body ground	Ignition switch ON	11 to 14 V

Text in Illustration

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR (POWER SOURCE CIRCUIT)

OK ► REPLACE COMBINATION METER ASSEMBLY

Last Modified: 3-27-2012	6.4 D	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000004UCE002X
Title: NETWORKING: CAN COMMUNICATION SYSTEM: DIAGNOSIS SYSTEM (2013 FR-S)		

DIAGNOSIS SYSTEM

1. ECUS OR SENSORS WHICH COMMUNICATE THROUGH CAN COMMUNICATION SYSTEM

(a) V Bus

- (1) Main body ECU (network gateway ECU)
- (2) Combination meter assembly
- (3) ECM
- (4) TCM*
- (5) Skid control ECU (brake actuator assembly)
- (6) Steering angle sensor (spiral cable sub-assembly)
- (7) Power steering ECU assembly
- (8) Air bag ECU assembly
- (9) PSP (option connector)

*: for Automatic Transmission System

2. CHECK FOR INSTALLED SYSTEMS (ECUS AND SENSORS) THAT ADOPT CAN COMMUNICATION

(a) The systems (ECUs and sensors) that adopt CAN communication vary depending on the vehicle and optional equipment. Check which systems (ECUs and sensors) are installed on the vehicle.

HINT:

The names of ECUs and sensors shown on the Techstream display may differ from those shown in the DTC Table by ECU section that follows.

ECU/SENSOR NAME	TECHSTREAM DISPLAY	APPLICABILITY
Main body ECU (network gateway ECU)	Main Body	Installed on all vehicles
Combination meter assembly	Combination Meter	Installed on all vehicles
ECM	ECM (Engine)	Installed on all vehicles
TCM	TCM	for Automatic Transmission System
Skid control ECU (brake actuator assembly)	Skid Control (ABS/VSC/TRAC)	Installed on all vehicles
Steering angle sensor (spiral cable sub-assembly)	Spiral cable (Steering Angle Sensor)	Installed on all vehicles
Power steering ECU assembly	Power Steering (EPS)	Installed on all vehicles
Air bag ECU assembly	Airbag	Installed on all vehicles
PSP (option connector)	-	Installed on all vehicles

3. CAN BUS CHECK

HINT:

The ECUs and sensors that are properly connected to the CAN communication system can be displayed using the Techstream.

(a) Using the Techstream, select "CAN Bus Check" from "System Select".

NOTICE:

- It may be possible to select buses that do not have ECUs or sensors from the bus selection pull-down menu. This is not a malfunction. (This occurs when optional devices are not on a sub bus that is monitored by a gateway function equipped ECU.)
- In the bus selection pull down menu, all buses applicable to the model are displayed (e.g. LIN communication buses are also displayed). Therefore, refer to the wiring diagrams to check the names of the sub buses for CAN communication  .

HINT:

Different connection statuses are indicated by the background color of the ECUs and sensors that are displayed.

Explanation of CAN Bus Check (Communication Bus Check) screen

BUS TYPE	BACKGROUND COLOR	CONNECTION STATUS
V Bus	White	Communication has been normal since the start of the CAN bus check.
	Yellow	Communication stop occurred at least once since the start of the CAN bus check, but communication is currently occurring (unstable communication).
	Red	Communication was established at least once since the start of the CAN bus check, but communication is currently not occurring (unstable communication).
	Not displayed	Communication stop has continued since the start of the CAN bus check.* 1
Sub bus (gateway function equipped ECU that does not have history of connected ECUs)*2	White	Communication has been normal since the start of the CAN bus check.
	Yellow	Communication stop occurred at least once since the start of the CAN bus check, but communication is currently occurring (unstable communication).
	Red	Communication was established at least once since the start of the CAN bus check, but communication is currently not occurring (unstable communication).
	Not displayed	Communication stop has continued since the start of the CAN bus check.* 1
Sub bus (gateway function equipped ECU that has history of connected ECUs)*3	White	Communication has been normal since the start of the CAN bus check.
	Yellow	Communication stop occurred at least once since the start of the CAN bus check, but communication is currently occurring (unstable communication).
	Red	Currently not communicating (either of the following): <ul style="list-style-type: none"> • Communication stop has continued since the start of the CAN bus check • Communication was established at least once since the start of the CAN bus check, but communication is currently not occurring
	Not displayed	Either of the following: <ul style="list-style-type: none"> • If a gateway function equipped ECU cannot communicate, the sub bus and ECUs connected to the sub bus will not be displayed. • If no ECUs are connected to the sub bus, "There is no system found on the Communication Bus" will be

displayed.

HINT:

- Gateway function equipped ECUs relay signals between the ECUs connected to the different buses.
 - *1: ECUs that are present in the vehicle but are not displayed on the CAN Bus Check.
 - *2: Gateway function equipped ECU that does not memorize the sub bus ECUs that are connected to it.
 - *3: Gateway function equipped ECU that memorizes the sub bus ECUs that are connected to it.
 - If none of the connected ECUs are displayed, or there is no response from the vehicle to the Techstream, check the DLC3 branch and the V bus main bus lines for a malfunction.
- (b) Observe the connection response screen for approximately 2 minutes to check for a change in connection status of the connected ECUs and sensors.

HINT:

- If an open occurs in one of the lines of a CAN branch (except DLC3), output from the other branch line (the line that is not open) will be unstable and it may interfere the response (display) of other ECUs and sensors.
- If the connection status changes during the inspection, repair the open in the branch line of the ECU or sensor that does not respond (is not detected) and then perform the CAN bus check again.

4. HOW TO INTERPRET CAN BUS CHECK (COMMUNICATION BUS CHECK) SCREEN

- (a) When a communication stop is currently occurring, the probable malfunctioning part can be determined from the CAN bus check and by using the following methods.

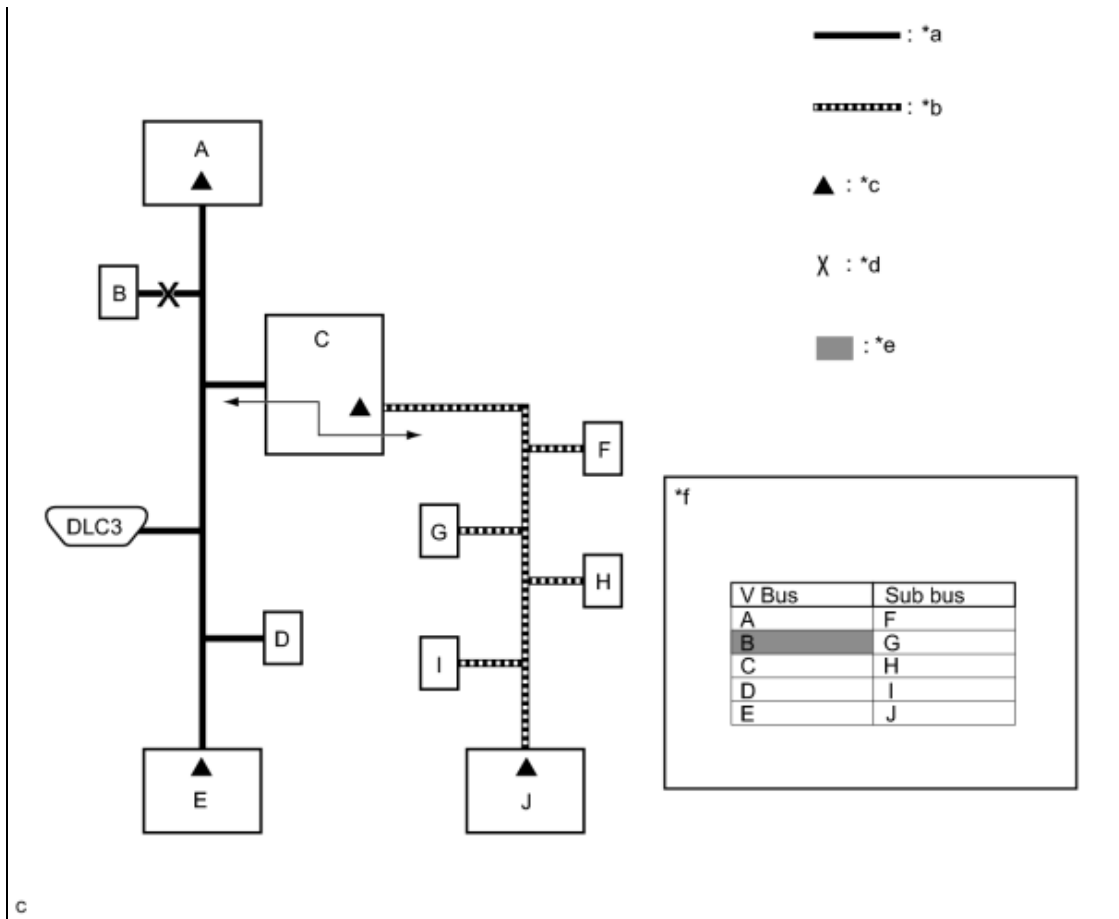

NOTICE:

The following CAN bus wiring diagram is provided only as an example. This wiring diagram is different from the actual wiring diagram for this vehicle.

HINT:

- When a communication stop is currently occurring, it is easier to determine the probable malfunctioning part from the CAN bus check rather than from communication DTCs.
 - Wait for approximately 2 minutes after turning the Ignition switch ON (or simulate the driving conditions that enable the malfunction to be reproduced) and select the CAN bus check. Then observe the communication status of each ECU on the screen.
- (b) If a communication error of only 1 ECU or sensor is indicated on the CAN Bus Check screen, a communication stop of the ECU or sensor is suspected.

Example: Open in both CAN branch lines of ECU B on the V bus

Text in Illustration

*a	V Bus	*b	Sub bus
*c	Terminating Resistor	*d	Location of malfunction
*e	Not displayed or background color changes to red or yellow	*f	CAN Bus Check screen

HINT:

When there are communication stops, ECUs are present in the vehicle even though they are not displayed on the CAN Bus Check screen.

- (c) If communication errors for multiple ECUs or sensors are indicated on the CAN Bus Check screen, then a communication stop of the ECU or sensor that shows a more serious communication stop (an ECU or a sensor which is not displayed) is suspected.

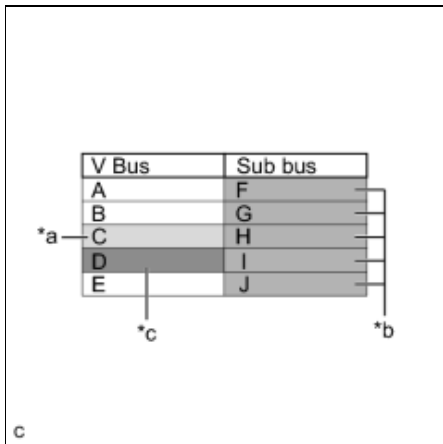

Example: Open in a CAN branch line for ECU D on the V bus

Text in Illustration

*a	Background color periodically changes to yellow or red
*b	Not displayed or background color is yellow or red
*c	Not displayed

Explanation of CAN Bus Check (Communication Bus Check) screen

BUS TYPE	BACKGROUND COLOR	CONNECTION STATUS
		Communication has been normal

V Bus	White	since the start of the CAN bus check.
	Yellow	Communication stop occurred at least once since the start of the CAN bus check, but communication is currently occurring (unstable communication).
	Red	Communication was established at least once since the start of the CAN bus check, but communication is currently not occurring (unstable communication).
	Not displayed	Communication stop has continued since the start of the CAN bus check. *1
Sub bus (gateway function equipped ECU that does not have history of connected ECUs)*2	White	Communication has been normal since the start of the CAN bus check.
	Yellow	Communication stop occurred at least once since the start of the CAN bus check, but communication is currently occurring (unstable communication).
	Red	Communication was established at least once since the start of the CAN bus check, but communication is currently not occurring (unstable communication).
	Not displayed	Communication stop has continued since the start of the CAN bus check. *1
Sub bus (gateway function equipped ECU that has history of connected ECUs)*3	White	Communication has been normal since the start of the CAN bus check.
	Yellow	Communication stop occurred at least once since the start of the CAN bus check, but communication is currently occurring (unstable communication).
	Red	Currently not communicating (either of the following): <ul style="list-style-type: none"> • Communication stop has continued since the start of the CAN bus check • Communication was established at least once since the start of the CAN bus check, but communication is currently not occurring
		Either of the following: <ul style="list-style-type: none"> • If a gateway function

	Not displayed	<p>equipped ECU cannot communicate, the sub bus and ECUs connected to the sub bus will not be displayed.</p> <ul style="list-style-type: none"> If no ECUs are connected to the sub bus, "There is no system found on the Communication Bus" will be displayed.
--	---------------	--

HINT:

- Gateway function equipped ECUs relay signals between the ECUs connected to the different buses.
- *1: ECUs that are present in the vehicle but are not displayed on the CAN Bus Check screen.
- *2: Gateway function equipped ECU that does not memorize the sub bus ECUs that are connected to it.
- *3: Gateway function equipped ECU that memorizes the sub bus ECUs that are connected to it.
- The example of the CAN Bus Check screen in the illustration shows the result of electrical noise on the CAN bus which is caused by an open in a CAN branch line of ECU D (output from the other branch line is unstable) and the communication of ECU C is also unstable. In addition, in this example, ECU C is equipped with a gateway function. Therefore, communication is also unstable between the sub bus ECUs of ECU C and the V bus.
- The example in the illustration shows that ECU D is not displayed on the CAN Bus Check screen. This indicates a more significant communication stop. In this case, a communication stop of ECU D is suspected.

(d) If a communication error is indicated on both the V bus and sub bus on the CAN Bus Check screen, suspect any communication stop displayed for the V bus first.

Example: Open in both CAN branch lines of ECU C on the V bus

Text in Illustration

*a	Not displayed or background color changes to red
----	--

HINT:

- In the CAN bus check, it is possible to confirm the communication status of ECUs connected to the V bus after connecting the Techstream to the DLC3. As for the sub buses, it is possible to confirm which sub bus connected ECUs can communicate with a gateway function equipped ECU on the V bus.
- If a gateway function equipped ECU has a communication error, ECUs connected to the gateway function equipped ECU are also affected, and communication stops will be indicated.
- The CAN Bus Check screen in the illustration shows that ECU C has a gateway function and a communication stop in ECU C is suspected.

(e) If the CAN Bus Check screen indicates a communication stop only in

the sub bus, a communication stop in the sub bus is suspected.

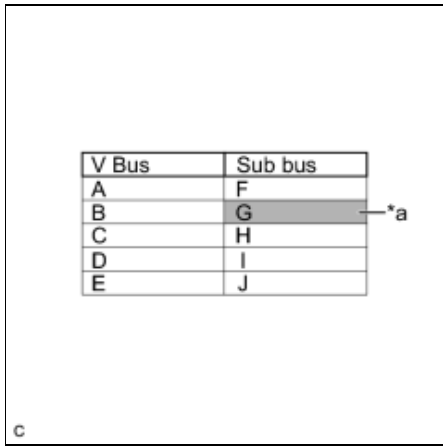

Example: Open in both CAN branch lines of ECU G on the sub bus

Text in Illustration

*a	Background color changes to red
----	---------------------------------

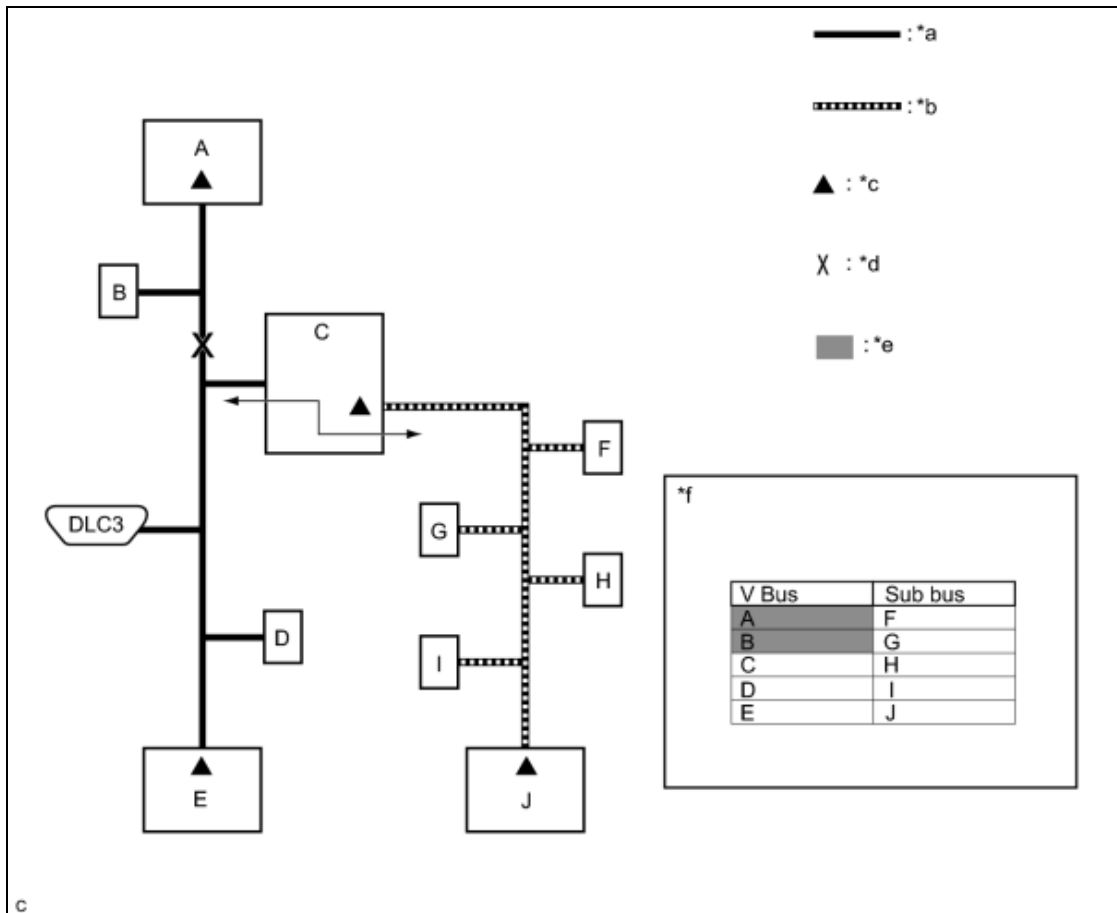

HINT:

- A communication error in a sub bus does not affect the V bus or other buses.
- When a gateway function equipped ECU has memorized the ECUs that are connected to the sub bus, if any of the ECUs connected to the gateway function equipped ECU has a communication error, the background color changes to yellow or red. (The displayed name will not disappear.)

(f) If both of the V bus main bus lines are open, ECUs or sensors that are located farther away from the DLC3 than the open part will be displayed as a communication stop on the CAN Bus Check screen.

(In this case, ECU A and B are not displayed or their background color changes to red.)

Text in Illustration

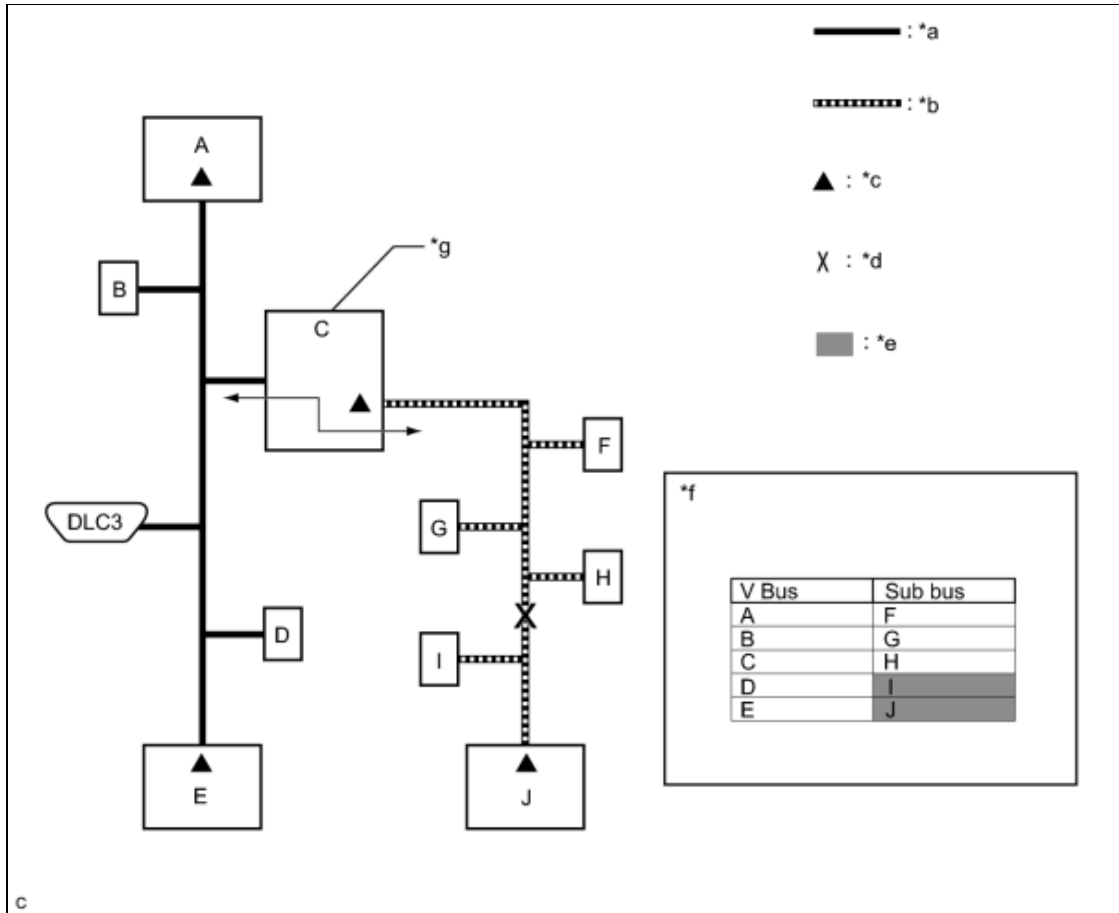

*a	V Bus	*b	Sub Bus
*c	Terminating Resistor	*d	Location of malfunction
*e	Not displayed or background color is red	*f	CAN Bus Check screen

HINT:

If a communication error occurs in an ECU, it is not displayed on the CAN Bus Check screen even though the ECU is present.

(g) If both of the sub bus main bus lines are open, the ECUs that are located farther away from the gateway function equipped ECU than the open part will be displayed as a communication stop on the CAN Bus Check screen.

(In this case, ECU I and J are not displayed or their background color changes to red.)

Text in Illustration

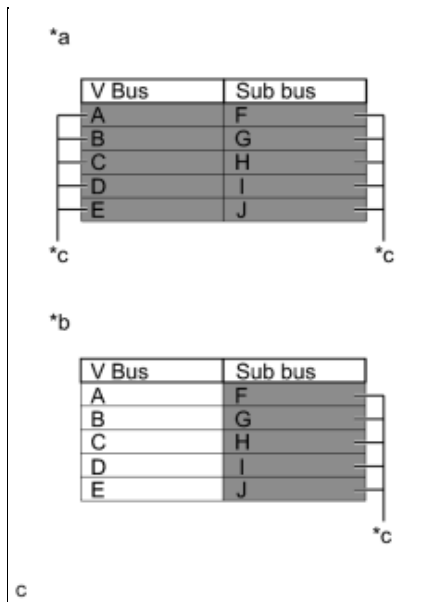

*a	V Bus	*b	Sub Bus
*c	Terminating Resistor	*d	Location of malfunction
*e	Not displayed or background color is red	*f	CAN Bus Check screen
*g	Gateway function equipped ECU	-	-

(h) When any of the following malfunctions occurs, CAN communication cannot be established and almost all ECUs and sensors on the bus show a communication error on the CAN Bus Check screen.

Text in Illustration

*a	When any of the following malfunctions occurs on the V bus
*b	When any of the following malfunctions occurs on a sub bus
*c	Not displayed

Details of Malfunction

Short between CAN lines (CANH and CANL)	
Short between a CAN line (CANH or CANL) and +B	
Short between a CAN line (CANH or CANL) and ground	
Open in a CAN main bus line	

HINT:

- When a malfunction occurs on the V bus, almost all ECUs and sensors on the V bus and sub bus indicate a communication error (almost all ECUs are not displayed). As communication with the gateway function equipped ECU that is connected to the V bus stops, communication from the ECUs connected to the sub bus that is monitored by the gateway function equipped ECU also stops (these ECUs are not displayed).
- When a malfunction occurs in a sub bus, almost all ECUs connected to the sub bus indicate a communication error.
- A communication error in a sub bus does not affect the V bus or other buses.
- The malfunctioning part can be determined by checking for a short circuit between CAN bus lines or between a CAN bus line and ground or +B short using an electrical tester.

5. HOW TO INTERPRET COMMUNICATION DTCS (DTCS THAT START WITH U)

(a) If a CAN communication error cannot be reproduced, determine the suspected malfunctioning part using the DTCS stored in ECUs that are connected to the CAN buses by following the procedure below.

HINT:

Communication DTCS (DTCS that start with U) indicate a communication error between the ECU that stores the DTC and the ECU that is indicated by the DTC.

(1) If multiple ECUs store a communication DTC for a particular ECU, a communication stop of the ECU is suspected.

Output from	Output DTC	Tester display
Hybrid Control	U0140	Lost Communication with Body Control Module
	C1657	Hybrid Powertrain Control Module
Advanced Parking Guidance System	C1659	Brake System Malfunction
	U0140	Lost Communication with Main Body ECU
ABS/VSC/TRAC	U0073	Control Module Communication Bus OFF
	U0100	Lost Communication with ECM/ PCM "A"
	U0101	Lost Communication with TCM
	U0151	Lost Communication with Restraints Control Module
	U0155	Lost Communication with Instrument Panel Cluster (IPC) Control Module
	U0164	Lost Communication with HVAC Control Module
	U0293	Lost Communication with Hybrid Powertrain Control Module
	U0327	Software Incompatibility with Vehicle Security
	U1133	Lost Communication with PMN Module
Smart Key	U0142	Lost Communication with Body Control Module "B"
Pre-Collision	B2060	ABS Malfunction
	B2090	Driving Support System Malfunction
Pre-Collision 2	C1A40	ENG / EHV Device
Transmission Control	U0146	Lost Communication with Body ECU

Text in Illustration

*a	Items to be checked	-	-
----	---------------------	---	---

NOTICE:

- This DTC table is from another model, and is only used here to show an example of DTCs that are output when there is an open in a CAN branch line for the main body ECU. This table does not show DTCs applicable to this vehicle.
- Even though a DTC title may indicate a communication error with a specific ECU, the ECU name used in the DTC name on the Techstream may differ depending on the ECU that stores the DTC. (Regarding output DTCs, refer to step 6 and the DTC chart for each ECU.)

HINT:

As multiple ECUs indicate a communication stop with the main body ECU, the possibility of a communication stop of the main body ECU is high.

- (2) If almost all of the communication DTCs of an ECU are stored, a communication stop of the ECU is suspected.

Output from	Output DTC	Tester display
Hybrid Control	U0140	Lost Communication with Body Control Module
Advanced Parking Guidance System	C1657	Hybrid Powertrain Control Module
	C1659	Brake System Malfunction
ABS/VSC/TRAC	U0140	Lost Communication with Main Body ECU
	U0073	Control Module Communication Bus OFF
Main Body	U0100	Lost Communication with ECM/PCM "A"
	U0101	Lost Communication with TCM
	U0151	Lost Communication with Restraints Control Module
	U0155	Lost Communication with Instrument Panel Cluster (IPC) Control Module
	U0164	Lost Communication with HVAC Control Module
	U0293	Lost Communication with Hybrid Powertrain Control Module
	U0327	Software Incompatibility with Vehicle Security
	U1133	Lost Communication with PMN Module
Smart Key	U0142	Lost Communication with Body Control Module "B"
Pre-Collision	B2060	ABS Malfunction
	B2090	Driving Support System Malfunction
Pre-Collision 2	C1A40	ENG / EHV Device
Transmission Control	U0146	Lost Communication with Body ECU

Text in Illustration

*a	Items to be checked	-	-
----	---------------------	---	---

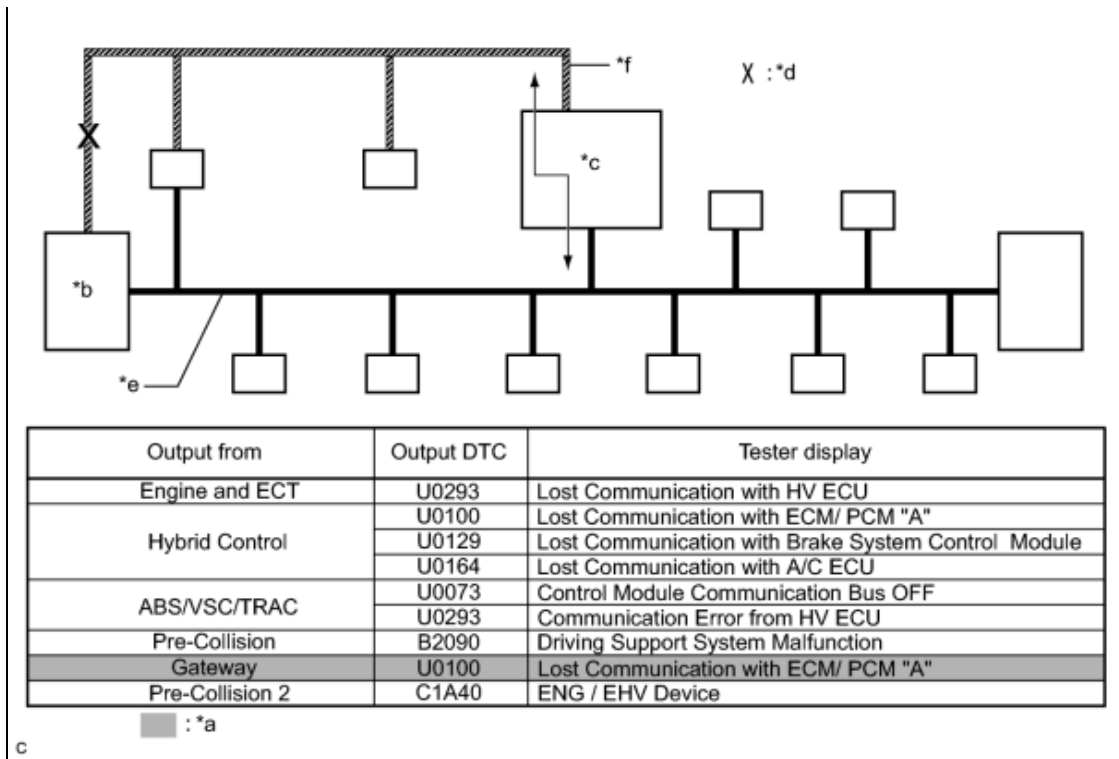

NOTICE:

This DTC table is from another model, and is only used here to show an example of DTCs that are output when there is an open in a CAN branch line for the main body ECU. This table does not show DTCs applicable to this vehicle.

HINT:

If almost all of the DTCs of the main body ECU are stored, the possibility of a communication stop of the main body ECU is high.

- (3) When a CAN communication error occurs, many DTCs are output. DTCs other than communication error DTCs (such as DTCs that start with C or B) and communication DTCs for the ABS system are important DTCs, however it may be easier to determine the malfunctioning part by examining the overall situation without considering these DTCs.
- (b) To help determine the part of the sub bus that has a communication error, prioritize the communication stop DTCs stored in the gateway function equipped ECU.

Text in Illustration

*a	Items to be checked	*b	ECM
*c	Gateway function equipped ECU	*d	Location of malfunction
*e	V Bus	*f	Sub Bus

NOTICE:

This DTC table is from another model, and is only used here to show the ECUs connected to both a V bus and a sub bus. It shows DTCs output when there is an open in the main bus lines for the ECM on the sub bus. This table does not show DTCs applicable to this vehicle.

HINT:

- As gateway function equipped ECUs (sub bus monitor ECU) monitor signals from all ECUs that are connected to sub buses, gateway function equipped ECUs can detect ECUs with a communication stop more accurately.
 - When there is a communication stop for the gateway function equipped ECU (gateway), communication with ECUs connected to other buses such as the V bus stops. Therefore, communication DTCs for ECUs connected to other buses are also stored.
- (c) When any of the following malfunctions occurs, many DTCs are likely to be output from many ECUs. Because of this, it may be difficult to determine the probable malfunctioning part.
- Short between CAN lines (CANH and CANL)
 - Short between a CAN line (CANH or CANL) and ground
 - Short between a CAN line (CANH or CANL) and +B
 - Open in a CAN branch line (CANH or CANL) of an ECU or sensor
 - Open in a CAN main bus line (CANH or CANL) between 2 ECUs that have a terminating resistor

6. DTC TABLE BY ECU

HINT:

- In the CAN communication system, the CAN communication DTCs of each ECU can be displayed using the Techstream.
- If CAN communication system DTCs are output, trouble cannot be determined only by the DTCs. Perform troubleshooting according to How to Proceed with Troubleshooting **INFO**.
- If system function temporarily returns to normal, DTCs may not be output again even though the following DTC

check procedures are used.

(a) Main Body ECU (Network Gateway ECU) / Techstream Display "Main Body"

DTC	DETECTION ITEM	DTC DETECTION CONDITION	DTC DETECTION PRE-CONDITION	DTC CHECK PROCEDURE	WARNING INDICATION IN METER	DTC STORAGE METHOD
U0073	Control Module Communication Bus "A" Off	Main body ECU (network gateway computer) communications stopped because of an error with high-speed CAN.	Both conditions are met: <ul style="list-style-type: none"> The ignition switch is turned to ON and 1 second elapses. The power source voltage of the main body ECU (network gateway ECU) is 10 V or more. 	Turn the ignition switch to ON and wait for at least 15 seconds.	-	DTC is stored until it is cleared using the Techstream.
U0100	Lost Communication With ECM/PCM "A"	The main body ECU (network gateway ECU) does not receive data from the ECM.	Both conditions are met: <ul style="list-style-type: none"> The ignition switch is turned to ON and 1 second elapses. (i) PSP (Option Connector) / Techstream Display "-"

HINT:

The PSP (option connector) is connected to the CAN communication system, but CAN communication DTCs are not output.

7. DTC COMBINATION TABLE (OPEN IN CAN BRANCH OF V BUS, PAST COMMUNICATION ERROR)

(a) Regarding the past communication error of ECUs and sensors connected to the V bus (in this case, normal was displayed when performing the CAN bus check, but communication DTCs are output), the probable CAN branch that had a malfunction can be determined based on the following DTC combination table.

HINT:

- Based on the table below and DTCs output from ECUs connected via CAN communication, the probable part for which communication stop occurred can be determined.
- Regarding an open in a CAN branch and a communication stop that is currently occurring, the malfunctioning part can be confirmed easily by performing the CAN bus check using the Techstream because the ECU or sensor connected to the CAN branch does not respond (the ECU or sensor name will not be displayed on the screen).
- If an open in a CAN main bus line, a short between the CAN bus lines (CANH and CANL) or a +B or ground short in the CAN bus occurs, DTCs of almost all ECUs (or sensors) on the CAN bus may be output, or a message indicating a communication error may be displayed on the Techstream screen. In this case, check the resistance of the CAN bus (steps 7 to 9) first.
- If an open occurs in just one of the lines of a CAN branch, DTCs which are not related to malfunctioning parts may be output (DTCs may be displayed randomly), or a message indicating a communication error may be displayed.

HINT:

- o: Set
- X: Not set or may be set according to the malfunctioning part when one line of a CAN branch is open.
- -: DTC is not output.
- *:1 DTC is not output during communication error, but will be output as a history DTC (past DTC) when communication returns to normal.
- *:2 DTC may not be stored depending on conditions.

8. CAN BUS WAVEFORMS

HINT:

- This waveform is measured between terminals CANH and GND, and terminals CANL and GND of the DLC3. (Use this as a reference for diagnosis of CAN communication lines.)
- When malfunctions in multiple ECUs are suspected based on CAN Bus Check and DTCs checked using the Techstream, check the resistance of the CAN bus using an ohmmeter first INFO. If no problems are found, check the following waveforms.
- If a waveform is not similar to one of the following 3 patterns (Group 1), then an open in a CAN main bus line, an open in a CAN branch line, or a short between a CAN line (CANH or CANL) and ground is suspected (Group 2).
- Wiggle the connector and wire harness to check if the waveform changes.

(a) CAN bus waveforms (Group 1)

(1) Normal waveform

(2) Open in both of the lines (CANH and CANL) of a CAN branch

HINT:

- Waveforms (waveforms shown using dotted lines) are not present from an ECU or sensor connected to a CAN branch with an open circuit in both lines. (Waveforms from other ECUs or sensors are normal.)
- Because this waveform is similar to a normal waveform, instead of using the waveform, the malfunctioning part can be narrowed down by performing a CAN bus check.

(3) Short between the CAN bus lines (CANH and CANL)

HINT:

- Waveforms disappear.
- If the malfunction is in an ECU, disconnecting the ECU will change the waveform. If the waveform does not change, a malfunction in the wire harness is suspected.

(b) CAN bus waveforms (reference) (Group 2)

NOTICE:

The following CAN bus waveforms can be used only as reference. The actual measured waveform may differ significantly depending on the location of the open or short circuit.

(1) Open in a CAN branch line (CANH)

HINT:

- An abnormal waveform is output from an ECU with an open in one of its CAN branch lines. Because this abnormal output interferes with the signals from other ECUs, the output of other ECUs will also appear abnormal.
- Narrow down the malfunctioning part by checking DTCs or performing a CAN bus check, or by checking waveform changes when ECUs or sensors are disconnected. The waveform will change to one for an open in both sides of a CAN branch when the ECU or sensor with an open CAN branch line is disconnected.

(2) Open in a CAN branch line (CANL)

HINT:

- An abnormal waveform is output from an ECU with an open in one of its CAN branch lines. Because this abnormal output interferes with the signals from other ECUs, the output of other ECUs will also appear abnormal.
- Narrow down the malfunctioning part by checking DTCs or performing a CAN bus check, or by checking waveform changes when ECUs or sensors are disconnected. The waveform will change to one for an open in both sides of a CAN branch when the ECU or sensor with an open CAN branch line is disconnected.

(3) Open in a CAN main bus line (CANH)

HINT:

- Waveforms of ECUs or sensors that are nearer to the DLC3 than the open part are almost normal.
- Waveforms of ECUs or sensors that are on the opposite side of the DLC3 from the open part are abnormal.
- An open in a CAN main bus line can be confirmed by measuring the resistance between the CANH and CANL terminals of any CAN branch.

(4) Short between a CAN bus line (CANH) and ground

HINT:

- Narrow down the shorted part by checking for waveform changes when disconnecting connectors from the CAN junction connector or when disconnecting ECUs or sensors.
- A short to ground in the CANH line can be confirmed by measuring the resistance between CANH and ground using an ohmmeter.

(5) Short between a CAN bus line (CANL) and ground

HINT:

- Narrow down the shorted part by checking for waveform changes when disconnecting connectors from the CAN junction connector or when disconnecting ECUs or sensors.
- A short to ground in the CANL line can be confirmed by measuring the resistance between CANL and ground using an ohmmeter.

Model Year: 2013	Model: FR-S	Doc ID: RM000000WIP0B6X
Title: NETWORKING: CAN COMMUNICATION SYSTEM: ECM Communication Stop Mode (2013 FR-S)		

[ECM Communication Stop Mode](#)

DESCRIPTION

DETECTION ITEM	SYMPTOM	TROUBLE AREA
ECM Communication Stop Mode	<p>Either condition is met:</p> <ul style="list-style-type: none"> • "ECM (Engine)" is not displayed on the "CAN Bus Check" screen of the Techstream INFO • Communication system DTCs (DTCs that start with U) that are output correspond to "ECM Communication Stop Mode" in "DTC Combination Table" INFO 	<ul style="list-style-type: none"> • Power source circuit of ECM • ECM main line or connector • ECM ground circuit • ECM

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- Before measuring the resistance of the CAN bus, turn the ignition switch off and leave the vehicle for 1 minute or more without operating the key, switches or opening or closing the doors. After that, disconnect the cable from the negative (-) battery terminal and leave the vehicle for 1 minute or more before measuring the resistance.
- After turning the ignition switch off, waiting time may be required before disconnecting the cable from the negative (-) battery terminal. Therefore, make sure to read the disconnecting the cable from the negative (-) battery terminal notices before proceeding with work **INFO**.
- Because the order of diagnosis is important to allow correct diagnosis, make sure to begin troubleshooting using How to Proceed with Troubleshooting when CAN communication system related DTCs are output **INFO**.
- After performing repairs, perform the DTC check procedure and confirm that the DTCs are not output again.
- DTC check procedure: Turn the ignition switch to ON and wait at least 10 seconds.
- After the repair, perform CAN Bus Check and check that all the ECUs and sensors connected to the CAN communication system are displayed **INFO**.

HINT:

- Operating the ignition switch, any other switches or a door triggers related ECU and sensor communication on the CAN. This communication will cause the resistance value to change.
- Even after DTCs are cleared, if a DTC is stored again after driving the vehicle for a while, the malfunction may be occurring due to vibration of the vehicle. In such a case, wiggling the ECUs or

wire harness while performing the inspection below may help determine the cause of the malfunction.

PROCEDURE

1. CHECK FOR OPEN IN CAN BUS LINES (ECM MAIN LINE)

(a) Disconnect the cable from the negative (-) battery terminal.

(b) Disconnect the A33 ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A33-19 (CANH) - A33-18 (CANL)	Cable disconnected from negative (-) battery terminal	114 to 126 Ω

Last Modified: 3-27-2012	6.4 D	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000WI60A6X
Title: NETWORKING: CAN COMMUNICATION SYSTEM: HOW TO PROCEED WITH TROUBLESHOOTING (2013 FR-S)		

HOW TO PROCEED WITH TROUBLESHOOTING

1. PRECAUTIONS WHEN TROUBLESHOOTING

NOTICE:

- Because the order of diagnosis is important to allow correct diagnosis, make sure to begin troubleshooting using How to Proceed with Troubleshooting when CAN communication system related DTCs are output.
 - If the CAN communication system is malfunctioning, check the contact pressure of the terminals in connectors, as insufficient terminal contact pressure may be the cause INFO.
 - Refer to Diagnosis System for the DTCs for the CAN communication system.
 - Refer to troubleshooting of each system if DTCs regarding the CAN communication system are not output.
 - Before measuring the resistance of the CAN bus, turn the ignition switch off and leave the vehicle for 1 minute or more without operating the key, switches or opening or closing the doors. After that, disconnect the cable from the negative (-) battery terminal and leave the vehicle for 1 minute or more before measuring the resistance.
 - After turning the ignition switch off, waiting time may be required before disconnecting the cable from the negative (-) battery terminal. Therefore, make sure to read the disconnecting the cable from the negative (-) battery terminal notices before proceeding with work INFO.
- (a) CAN communication DTCs are output for CAN main bus and CAN branch malfunctions as well as for internal malfunctions or power source malfunctions of ECUs or sensors for systems using CAN communication. Therefore, when DTCs for internal malfunctions or power source malfunctions of corresponding systems are output at the same time as CAN communication DTCs, troubleshoot according to the internal malfunction and power source malfunction DTCs.
- (b) The DLC3 branch and V bus main bus circuits can be checked for malfunctions by inspecting at the DLC3 terminals using an electrical tester.

NOTICE:

- When inspecting at the DLC3 connector, do not connect the tester directly to the terminals. Instead, connect using service wires.
 - Inspections for an open in an ECU or sensor branch, or inspections for buses other than the V bus cannot be performed from the DLC3.
- (c) An open in a branch for ECUs or sensors that are connected to the CAN main bus can be checked by performing a CAN bus check using the Techstream. (This inspection is possible when the DLC3 branch and V bus main bus lines are normal.)
- (d) If the V bus had a communication error, the probable ECU or sensor for which communication stopped can be determined using the combination of communication DTCs (DTCs that start with U) that are output.
- (e) When an open circuit is detected, before disconnecting the related connectors for inspection, push in on the connector body to check that the connector is not loose or disconnected.
- (f) When a connector is disconnected, check that the terminals and the connector body are not cracked, deformed or corroded.

1. VEHICLE BROUGHT TO WORKSHOP

HINT:

- If the ignition switch can be turned to ON when the vehicle is brought in for repair, check for DTCs and check the illumination condition of the indicators in the combination meter assembly and the basic operation of the vehicle (such as steering operation) promptly.
- Do not turn the ignition switch off until the inspection of the vehicle is finished, as some fail-safe functions are canceled when the ignition switch is turned off.
- If the ignition switch cannot be turned to ON when the vehicle is brought in, measure the voltage of the battery. If the voltage is below 11 V, recharge or replace the battery before performing troubleshooting.

NEXT

2. CUSTOMER PROBLEM ANALYSIS

HINT:

- When troubleshooting, confirm that the problem symptoms have been accurately identified. Preconceptions should be discarded in order to make an accurate judgment. To clearly understand what the problem symptoms are, it is extremely important to ask the customer about the problem and the conditions at the time the malfunction occurred.
- Ask the customer if the vehicle is/was equipped with additional devices such as a theft deterrent device or monitor. (If equipped, explain the customer that the additional devices will be removed before performing troubleshooting as the malfunction cannot be checked properly.)

(a) It is useful to confirm the symptoms and the conditions in which the vehicle was operating at the time when a malfunction occurred. This helps to narrow down the malfunctioning part.

HINT:

- What was affected (system, part or meter warning indicators)
- What happened (details of the malfunction)
- When (occurrence date and time, frequency and if it recurs or not)
- Under what kind of situation did the problem occur (driving and operating condition at the occurrence and weather)
- Road type or condition (city, suburb, paved road, unpaved road, highway, etc.)
- Return conditions (what made the vehicle return to normal. Example: ignition switch was turned off)

Points to be Confirmed

Symptom	<ul style="list-style-type: none">• Electric power steering<ul style="list-style-type: none">- Normal- A little heavier than usual- There was no assist• Multi-information display<ul style="list-style-type: none">- Whether each display has stopped updating• Others
---------	---

Meter warning lights	<ul style="list-style-type: none"> • Illumination of warning lights and the order in which they illuminated <ul style="list-style-type: none"> - Slip indicator light - ABS warning light - Check Engine warning light - Brake warning light - SRS warning light - Others • Meter display <ul style="list-style-type: none"> - Shift indicator - Speedometer - Tachometer (if it is fixed at 0 rpm) - Engine coolant temperature gauge (if it is fixed at COLD)
----------------------	---

NEXT

3.	CHECK TECHSTREAM OPERATION
-----------	-----------------------------------

HINT:

Read the Techstream operators manual before use INFO.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Check that the Techstream and ECUs can communicate with the ignition switch ON.

HINT:

- If communication is impossible, the Techstream screen will indicate an error.
- If communication between the Techstream and ECUs is impossible, either the Techstream or vehicle has a malfunction.
- When communication between the Techstream and the vehicle is impossible, but communication is possible when the Techstream is connected to another vehicle, the vehicle has the malfunction. Inspect the CANH and CANL branch lines of the DLC3 and the ECU power source circuits (in this case perform steps 7 to 9 first). In addition, check that the BAT terminal of the DLC3 receives battery voltage (11 V or more).
- If communication between the Techstream and ECUs is still impossible even when the Techstream is connected to another vehicle, the Techstream has a malfunction. Perform the self tests described in the Techstream operators manual. (The Techstream may be malfunctioning or its battery may be discharged.)

RESULT	PROCEED TO
OK (Communication between the Techstream and the vehicle is possible.)	A
OK (Communication between the Techstream and the vehicle is impossible but communication	B

is possible when connected to another vehicle.)	
NG (Communication is not possible between the Techstream and the vehicle, nor between the Techstream and another vehicle.)	C

B ▶ Go to step 7

C ▶ Refer to Techstream operator's manual

A

4.	CHECK DTC
-----------	------------------

(a) Using the Techstream, perform Health Check to read current and history DTCs and record them.

NOTICE:

- CAN communication DTCs are output when there is an open or short in any of the communication lines. Any problems with the power source of a corresponding ECU or sensor, or problems in the ECU, the sensor itself also cause these DTCs to be output.
- If a CAN communication line connector is disconnected with the ignition switch ON, the ECUs of the corresponding system and related systems store a DTC.

HINT:

- If an open in a CAN main bus line, a short between the CAN bus lines (CANH and CANL) or a +B or ground short in a CAN bus occurs, DTCs of almost all ECUs and sensors on the CAN bus may be output (or a message indicating a communication error may be displayed on the Techstream screen). In this case, check the resistance of the CAN bus (steps 7 to 9) first.
- If an open occurs in just one of the lines of a CAN branch, DTCs which are not related to malfunctioning parts may be output (DTCs may be displayed randomly), or a message indicating a communication error may be displayed on the Techstream.

(b) Read the freeze frame data using the Techstream and record it.

NEXT

5.	CHECK COMMUNICATION MALFUNCTION CHECK (CONNECTION STATUS CHECK USING TECHSTREAM)
-----------	---

(a) Select "CAN Bus Check" from the screen on the Techstream.

(b) Record all the DTCs stored for ECUs and sensors.

NEXT

6. CHECK CAN BUS CHECK (CONNECTION STATUS CHECK USING TECHSTREAM)

- (a) Based on the vehicle equipment and specifications, confirm the systems that use CAN communication INFO.
- (b) Select "CAN Bus Check" from the screen on the Techstream.
- (c) Observe the screen for approximately 2 minutes to check the ECUs and sensors displayed on the screen.

NEXT

7. CHECK DLC3 BRANCH LINE AND V BUS MAIN LINE (CANH - CANL)

NOTICE:

Before measuring the resistance of the CAN bus, turn the ignition switch off and leave the vehicle for 1 minute or more without operating the key, switches or opening or closing the doors. After that, disconnect the cable from the negative (-) battery terminal and leave the vehicle for 1 minute or more before measuring the resistance.

HINT:

Operating the ignition switch, any other switches or a door triggers the related ECU and sensor communication on the CAN. This communication will cause the resistance value to change.

- (a) Disconnect the cable from the negative (-) battery terminal.

- (b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D10-6 (CANH) - D10-14 (CANL)	Cable disconnected from negative (-) battery terminal	57 to 63 Ω

Text in Illustration

*1	DLC3
----	------

Result:

RESULT	PROCEED TO
OK	A
NG (64 Ω or higher)	B
NG (Below 57 Ω)	C

B ► GO TO OPEN IN CAN MAIN BUS LINE

C ► GO TO SHORT IN CAN BUS LINES

A

8.	CHECK FOR SHORT TO GND IN V BUS (CANH, CANL - CG)
----	--

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D10-6 (CANH) - D10-4 (CG)	Cable disconnected from negative (-) battery terminal	200 Ω or higher
D10-14 (CANL) - D10-4 (CG)	Cable disconnected from negative (-) battery terminal	200 Ω or higher

Text in Illustration

*1	DLC3
----	------

NG ► GO TO SHORT TO GND IN CAN BUS LINE

OK

--	--

9. CHECK FOR SHORT TO +B IN V BUS (CANH, CANL - BAT)

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D10-6 (CANH) - D10-16 (BAT)	Cable disconnected from negative (-) battery terminal	6 kΩ or higher
D10-14 (CANL) - D10-16 (BAT)	Cable disconnected from negative (-) battery terminal	6 kΩ or higher

Text in Illustration

*1	DLC3
----	------

NG ► GO TO SHORT TO +B IN CAN BUS LINE

OK

10. CHECK RESULT OF CAN BUS CHECK (CONNECTION STATUS CHECK USING TECHSTREAM)

(a) Inspect or repair the probable malfunctioning part based on the check result of step 6 (the step in which CAN Bus Check was performed).

Result of CAN Bus Check (Connection Status Check Using Techstream):

RESULT	PROCEED TO
All ECUs and sensors connected to the CAN communication system are displayed on the screen. (CAN bus circuit is currently normal.)	A
One of the ECUs and sensors connected to the V Bus is not displayed on the screen. (Open in ECU or sensor branch lines, or communication interrupted.)	B
In addition to the ECUs and sensors which are connected to the CAN communication system but are not displayed on the screen, there are ECUs or sensors for which the detection status changes (changes between detected and not detected) during the inspection. (Open in one side of ECU or sensor branch lines.)	C

NOTICE:

Non-installed ECUs or sensors will not be displayed. Do not mistake them for being in communication stop mode.

- It may be possible to select buses that do not have ECUs or sensors from the bus selection pull-down menu on the Techstream. This is not a malfunction.

HINT:

- Regarding CAN Bus Check, refer to How to Interpret CAN Bus Diagnosis (CAN Bus Check) Screen  .
- If the detection status of ECUs changes during the inspection, one of the branch lines of a connected ECU or sensor may be open. (Signals from the ECU or sensor that has an open in one of its branch lines create electrical noise, affecting response to the Techstream and the ECUs and whether or not sensors displayed.)

B  **GO TO COMMUNICATION STOP MODE TABLE**

C  **GO TO OPEN IN ONE SIDE OF CAN BRANCH LINE**

A

11.	CHECK RESULT OF COMMUNICATION MALFUNCTION CHECK (SELECT THE MALFUNCTIONING BUS)
------------	--

- (a) Inspect or repair the probable malfunctioning part based on the check result of step 5 (the step in which checking for communication malfunction DTCs was performed).

HINT:

- When checking for communication DTCs, refer to How to Interpret Communication DTCs (DTCs that start with U)  .
- If communication DTCs are stored, and all ECUs and sensors connected to the CAN communication system are displayed on the Communication Bus Check (CAN bus check) screen of the Techstream, a past malfunction that is currently not occurring is suspected.
- When a CAN branch of the V bus is malfunctioning, because the ECUs and sensors related to it detect the malfunction, the problem area can be determined using the combination of DTCs that are output.

NEXT

12.	DTC COMBINATION TABLE
------------	------------------------------

- (a) Confirm the problem according to the combination of output DTCs regarding the CAN communication system  .

RESULT	PROCEED TO
Combination of DTCs is not in DTC Combination Table	A
Combination of DTCs is in DTC Combination Table	B

HINT:

CAN communication system history DTCs may indicate the problem if CAN communication system DTCs are output and all ECUs and sensors connected to the CAN communication system are displayed on "CAN Bus Check" of the Techstream.

B  **GO TO COMMUNICATION STOP MODE TABLE**

A

13.	IDENTIFICATION OF PROBLEM (PAST MALFUNCTION IN MAIN BUS OF V BUS)
------------	--

- (a) Connect the cable to the negative (-) battery terminal.
- (b) Clear the DTCs using the Techstream.
- (c) Perform the tests in Symptom Simulation to check the wire harnesses and connectors including those for V bus main bus lines  .
- (d) Based on the results of the check, inspect the parts that output DTCs to determine the malfunctioning part.

HINT:

If DTCs are output, do not turn the ignition switch off.

NEXT

14.	REPAIR OR REPLACEMENT
------------	------------------------------

NEXT

15.	CONFIRMATION TEST*

Main Body ECU Communication Stop Mode	<p>Either condition is met:</p> <ul style="list-style-type: none"> • "Main Body" is not displayed on the "CAN Bus Check" screen of the Techstream INFO • Communication system DTCs (DTCs that start with U) that are output correspond to "Main Body ECU Communication Stop Mode" in "DTC Combination Table" INFO 	<ul style="list-style-type: none"> • Main body ECU (network gateway ECU) branch line or connector • Power source circuit of main body ECU (network gateway ECU) • Main body ECU (network gateway ECU) ground circuit • Main body ECU (network gateway ECU)

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- Before measuring the resistance of the CAN bus, turn the ignition switch off and leave the vehicle for 1 minute or more without operating the key, switches or opening or closing the doors. After that, disconnect the cable from the negative (-) battery terminal and leave the vehicle for 1 minute or more before measuring the resistance.
- After turning the ignition switch off, waiting time may be required before disconnecting the cable from the negative (-) battery terminal. Therefore, make sure to read the disconnecting the cable from the negative (-) battery terminal notices before proceeding with work **INFO**.
- Because the order of diagnosis is important to allow correct diagnosis, make sure to begin troubleshooting using How to Proceed with Troubleshooting when CAN communication system related DTCs are output **INFO**.
- After performing repairs, perform the DTC check procedure and confirm that the DTCs are not output again.

- DTC check procedure: Turn the ignition switch to ON and wait at least 15 seconds.
- After the repair, perform CAN Bus Check and check that all the ECUs and sensors connected to the CAN communication system are displayed **INFO** .

HINT:

- Operating the ignition switch, any other switches or a door triggers related ECU and sensor communication on the CAN. This communication will cause the resistance value to change.
- Even after DTCs are cleared, if a DTC is stored again after driving the vehicle for a while, the malfunction may be occurring due to vibration of the vehicle. In such a case, wiggling the ECUs or wire harness while performing the inspection below may help determine the cause of the malfunction.

PROCEDURE

1.	CHECK FOR OPEN IN CAN BUS LINES (MAIN BODY ECU (NETWORK GATEWAY ECU) BRANCH LINE)
-----------	--

(a) Disconnect the cable from the negative (-) battery terminal.

(b) Disconnect the D5 main body ECU (network gateway ECU) connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D5-14 (CANH) - D5-13 (CANL)	Cable disconnected from negative (-) battery terminal	57 to 63 Ω

Title: NETWORKING: CAN COMMUNICATION SYSTEM: Open in CAN Main Bus Line (2013 FR-S)		

[Open in CAN Main Bus Line](#)

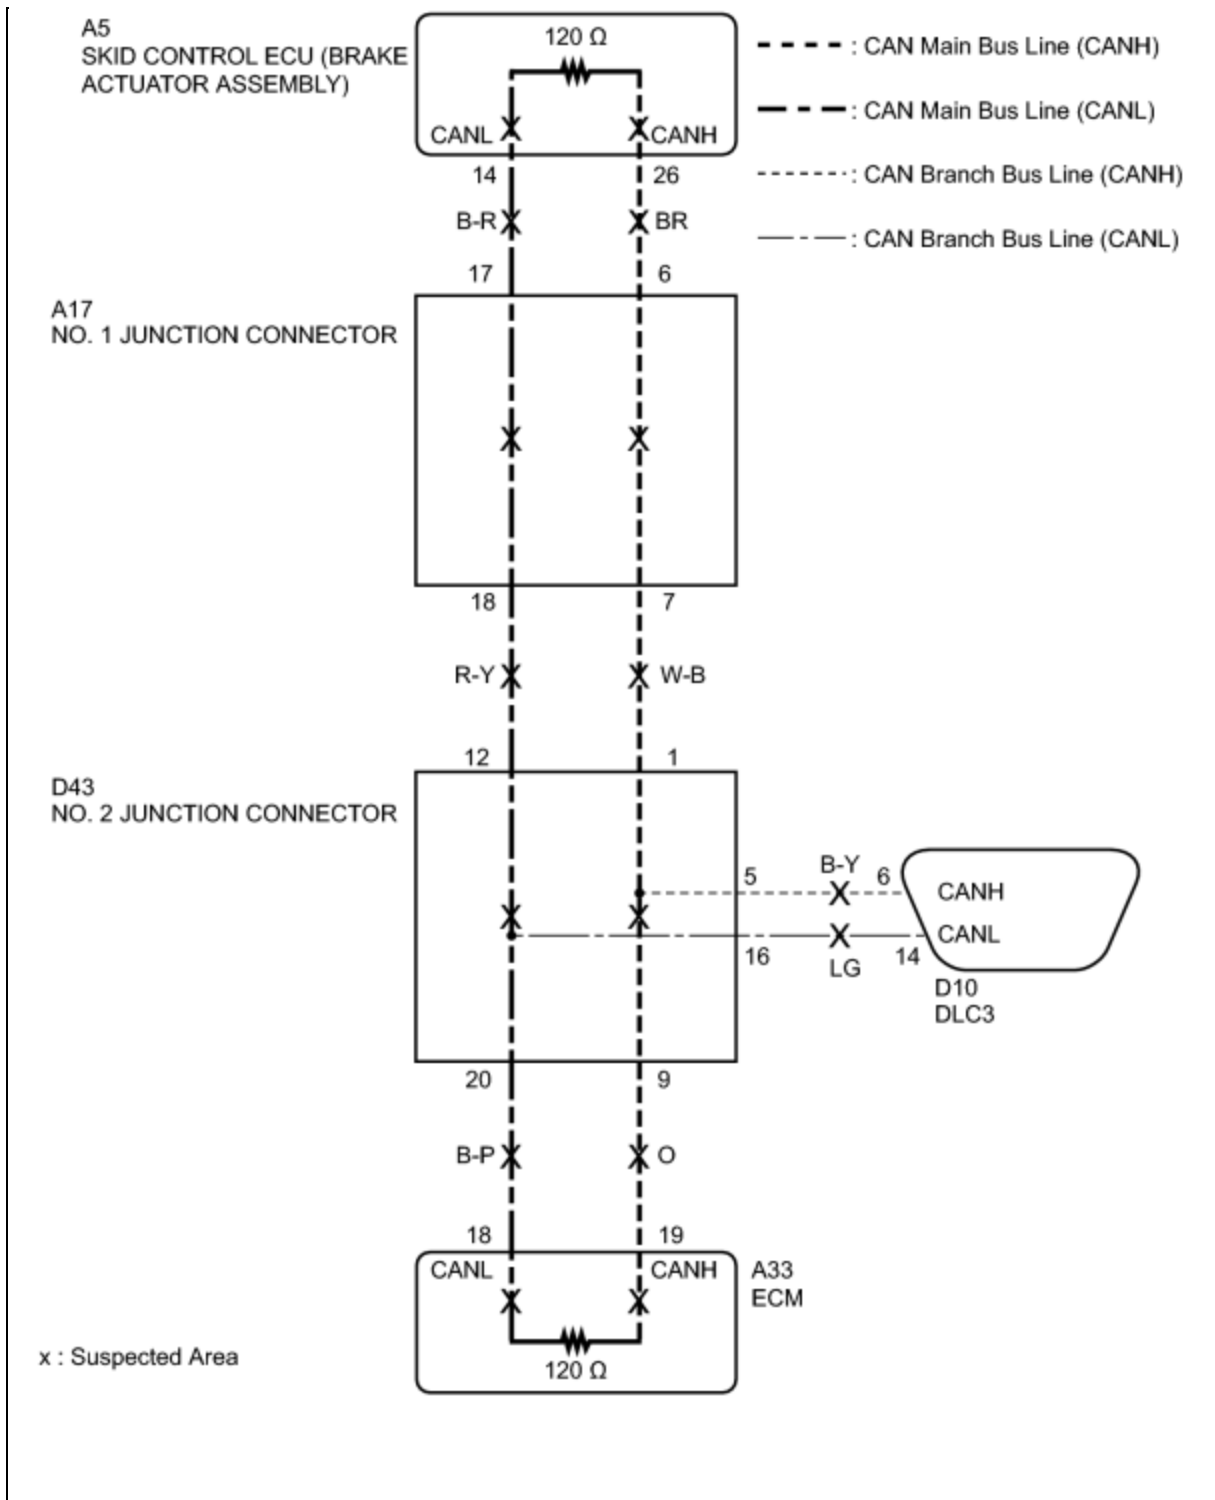

DESCRIPTION

There may be an open circuit one of the V bus main lines and/or a DLC3 branch line when the resistance between terminals 6 (CANH) and 14 (CANL) of the DLC3 is 64 Ω or higher.

SYMPTOM	TROUBLE AREA
Resistance between terminals 6 (CANH) and 14 (CANL) of DLC3 is 64 Ω or higher.	<ul style="list-style-type: none"> • DLC3 branch line or connector • CAN main bus line or connector • ECM • Skid control ECU (brake actuator assembly) • CAN No. 1 junction connector • CAN No. 2 junction connector

This malfunction is not related to the lines of a CAN main bus branch or to ECUs or sensor connected a CAN main bus branch.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- Before measuring the resistance of the CAN bus, turn the ignition switch off and leave the vehicle for 1 minute or more without operating the key, switches or opening or closing the doors. After that, disconnect the cable from the negative (-) battery terminal and leave the vehicle for 1 minute or more before measuring the resistance.
- After turning the ignition switch off, waiting time may be required before disconnecting the cable from the negative (-) battery terminal. Therefore, make sure to read the disconnecting the cable from the negative (-) battery terminal notices before proceeding with work INFO.

Because the order of diagnosis is important to allow correct diagnosis, make sure to begin troubleshooting using How to Proceed with Troubleshooting when CAN communication system related DTCs are output **INFO** .

- After performing repairs, perform the DTC check procedure and confirm that the DTCs are not output again.
- DTC check procedure: Turn the ignition switch to ON, wait at least 60 seconds,
- After the repair, perform CAN Bus Check and check that all the ECUs and sensors connected to the CAN communication system are displayed **INFO** .

HINT:

- Operating the ignition switch, any other switches or a door triggers related ECU and sensor communication on the CAN. This communication will cause the resistance value to change.
- Even after DTCs are cleared, if a DTC is stored again after driving the vehicle for a while, the malfunction may be occurring due to vibration of the vehicle. In such a case, wiggling the ECUs or wire harness while performing the inspection below may help determine the cause of the malfunction.

PROCEDURE

1. CHECK FOR OPEN IN CAN BUS LINES (DLC3 BRANCH LINE)

(a) Disconnect the cable from the negative (-) battery terminal.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D10-6 (CANH) - D10-14 (CANL)	Cable disconnected from negative (-) battery terminal	114 to 126 Ω

Text in Illustration

*1	DLC3
----	------

NOTICE:

When the measured value is 127 Ω or higher and a CAN communication system DTC is output, there may be a fault besides disconnection of the DLC3 branch line. For that reason, troubleshooting should be performed again from How to Proceed with Troubleshooting after repairing the trouble area **INFO .**

REPAIR OR REPLACE CAN BRANCH LINE
NG ► **CONNECTED TO DLC3**

Last Modified: 3-27-2012	6.4 J	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000001ZUR06GX
Title: NETWORKING: CAN COMMUNICATION SYSTEM: Open in One Side of CAN Branch Line (2013 FR-S)		

[Open in One Side of CAN Branch Line](#)

DESCRIPTION

If an ECU or sensor is not displayed on the CAN Bus Check screen of the Techstream and some ECUs and sensors repeatedly appear and disappear from the screen when the CAN main bus lines are normal (there is no open, short, short to +B or short to GND in the main bus lines), there may be an open circuit in either of one pair of CAN branch lines.

HINT:

If some ECUs and sensors repeatedly appear and disappear from the CAN Bus Check screen, communication between the normal ECUs (sensors) and the Techstream may be affected by the incomplete signals that are output from the ECU that has an open circuit in either of its CAN branch lines. In this case, the CAN branch lines for the ECUs and sensors that repeatedly appear and disappear from the screen are normal and the ECU that is not displayed on the screen may be the main cause of the problem (this ECU may have an open circuit in either of its CAN branch lines).

SYMPTOM	TROUBLE AREA
<p>2 or more ECUs and/or sensors do not appear on the Techstream "CAN Bus Check" screen.</p>	<p>One side of CAN branch line is open, or output signals are incomplete.</p> <ul style="list-style-type: none"> • Short in CAN main bus line • Short in CAN branch line • Main body ECU (network gateway ECU) • Combination meter assembly • ECM • TCM* • Skid control ECU (brake actuator assembly) • Steering angle sensor (spiral cable sub-assembly) • Power steering ECU assembly • Air bag ECU assembly

INSPECTION PROCEDURE

NOTICE:

- Because the order of diagnosis is important to allow correct diagnosis, make sure to begin troubleshooting using [How to Proceed with Troubleshooting when CAN communication system related DTCs are output](#) INFO.
- After performing repairs, perform the DTC check procedure and confirm that the DTCs are not output again.

- DTC check procedure: Turn the ignition switch to ON, wait at least 60 seconds,
- After the repair, perform CAN Bus Check and check that all the ECUs and sensors connected to the CAN communication system are displayed  .

HINT:

Even after DTCs are cleared, if a DTC is stored again after driving the vehicle for a while, the malfunction may be occurring due to vibration of the vehicle. In such a case, wiggling the ECUs or wire harness while performing the inspection below may help determine the cause of the malfunction.

PROCEDURE

1.	CHECK FOR OPEN IN ONE SIDE OF V BUS BRANCH LINE
-----------	--

- (a) Based on the vehicle equipment and specifications, confirm the systems that use CAN communication  .
- (b) Using the Techstream, select and perform the CAN bus check  .
- (c) Observe the screen for approximately 2 minutes to check the ECUs and sensors that are not displayed on the screen and also those that repeatedly appear and disappear from the screen.
- (d) Check the applicable communication stop mode for the ECU or sensor that is not displayed on the screen.

Title: NETWORKING: CAN COMMUNICATION SYSTEM: PRECAUTION (2013 FR-S)		

PRECAUTION

1. CAN COMMUNICATION SYSTEM TROUBLESHOOTING

- (a) Because the order of diagnosis is important to allow a correct diagnosis, make sure to begin troubleshooting using How to Proceed with Troubleshooting when CAN communication system related DTCs are output **INFO** .

2. PRECAUTIONS FOR STEERING SYSTEM HANDLING

- (a) Be careful when replacing parts. Incorrect replacement could affect the performance of the steering system and result in hazardous driving.

3. PRECAUTIONS FOR SRS AIRBAG SYSTEM HANDLING

- (a) This vehicle is equipped with a Supplemental Restraint System (SRS) which includes parts such as airbags for the driver and the front passenger. Failure to carry out service operations in the correct sequence could cause unexpected SRS deployment during servicing and may cause a serious accident. Before servicing (including removal or installation of parts, inspection or replacement), be sure to read Precaution for SRS **INFO** .

4. BUS LINE REPAIR

- (a) After repairing a bus line with solder, wrap the repaired part with electrical tape.

NOTICE:

- The CANL bus line and CANH bus line must be installed together at all times.
- When installing, make sure that these lines are twisted, because CAN bus lines are likely to be influenced by electrical noise if the bus lines are not twisted.
- Leave approximately 80 mm (3.150 in.) loose in the twisted wires around the connector.
- When repairing the CAN bus lines, do not change the length of the lines. (Make sure that the length of the CANH bus line and CANL bus line are the same.)

- (b) Do not use bypass wiring between connectors.

Text in Illustration

*a	Bypass Wire
----	-------------

NOTICE:

- The ability of the twisted bus lines to resist interference will be lost if bypass wiring is used.
- Do not use a twisted pair of wires for bypass wiring.

5. CONNECTOR HANDLING

- (a) When checking resistance with a tester, insert the tester probes from the backside (harness side) of the connector.

Text in Illustration

*a	Tester Probe
----	--------------

- (b) Use service wires to check the connector if it is impossible to check continuity from the rear of the connector.

Text in Illustration

*a	Service Wire
----	--------------

6. PRECAUTIONS FOR INSPECTING OR REPLACING CAN JUNCTION CONNECTOR

- (a) If the CAN junction connector is removed from the vehicle for inspection or replacement, make sure to install the CAN junction connector and all wire harnesses to their original locations with tape and the clamps.

Title: NETWORKING: CAN COMMUNICATION SYSTEM: PROBLEM SYMPTOMS TABLE (2013 FR-S)		

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.
- Because the order of diagnosis is important to allow a correct diagnosis, make sure to begin troubleshooting using How to Proceed with Troubleshooting when CAN communication system related DTCs are output [INFO](#) .

Result List of How to Proceed with Troubleshooting

<p>Skid Control ECU Communication Stop Mode</p>	<p>Either condition is met:</p> <ul style="list-style-type: none"> • "Skid Control (ABS/VSC/TRAC)" is not displayed on the "CAN Bus Check" screen of the Techstream INFO • Communication system DTCs (DTCs that start with U) that are output correspond to "Skid Control ECU Communication Stop Mode" in "DTC Combination Table" INFO 	<ul style="list-style-type: none"> • Skid control ECU (brake actuator assembly) main line or connector • Power source circuit of skid control ECU (brake actuator assembly) • Skid control ECU (brake actuator assembly) ground circuit • Skid control ECU (brake actuator assembly)

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- Before measuring the resistance of the CAN bus, turn the ignition switch off and leave the vehicle for 1 minute or more without operating the key, switches or opening or closing the doors. After that, disconnect the cable from the negative (-) battery terminal and leave the vehicle for 1 minute or more before measuring the resistance.
- After turning the ignition switch off, waiting time may be required before disconnecting the cable from the negative (-) battery terminal. Therefore, make sure to read the disconnecting the cable from the negative (-) battery terminal notices before proceeding with work **INFO**.
- Because the order of diagnosis is important to allow correct diagnosis, make sure to begin troubleshooting using How to Proceed with Troubleshooting when CAN communication system related DTCs are output **INFO**.
- After performing repairs, perform the DTC check procedure and confirm that the DTCs are not output again.
- DTC check procedure: Turn the ignition switch to ON, wait at least 60 seconds,.
- After the repair, perform CAN Bus Check and check that all the ECUs and sensors connected to the CAN communication system are displayed **INFO**.

HINT:

- Operating the ignition switch, any other switches or a door triggers related ECU and sensor communication on the CAN. This communication will cause the resistance value to change.
- Even after DTCs are cleared, if a DTC is stored again after driving the vehicle for a while, the malfunction may be occurring due to vibration of the vehicle. In such a case, wiggling the ECUs or

wire harness while performing the inspection below may help determine the cause of the malfunction.

PROCEDURE

1.	CHECK FOR OPEN IN CAN BUS LINES (SKID CONTROL ECU (BRAKE ACTUATOR ASSEMBLY) MAIN LINE)
-----------	---

(a) Disconnect the cable from the negative (-) battery terminal.

(b) Disconnect the A5 skid control ECU (brake actuator assembly) connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A5-26 (CANH) - A5-14 (CANL)	Cable disconnected from negative (-) battery terminal	114 to 126 Ω

Text in Illustration

OK ► REPLACE STEERING ANGLE SENSOR (SPIRAL CABLE SUB-ASSEMBLY)

Last Modified: 3-27-2012	6.4 D	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000YDW0B4X
Title: NETWORKING: CAN COMMUNICATION SYSTEM: SYSTEM DESCRIPTION (2013 FR-S)		

SYSTEM DESCRIPTION

1. BRIEF DESCRIPTION

- (a) The Controller Area Network (CAN) is a serial data communication system for real time application. It is a vehicle multiplex communication system which has a high communication speed and the ability to detect malfunctions.

- (b) Using the CANH and CANL bus lines as a pair, CAN communication is performed using a voltage differential. (A base voltage is applied to the pair of lines and a voltage differential is created when communicating.)
- (c) Many ECUs or sensors installed on the vehicle operate by sharing information and communicating with each other.
- (d) The CAN has two resistors of 120 Ω which are necessary to enable communication.
- (e) Control system CAN is composed of 1 bus.

2. DEFINITION OF TERMS

- (a) Main bus
- (1) The main bus is a wire harness between the two terminating resistors on the bus. This is the main bus in the CAN communication system.
- (b) Branch
- (1) The branch is a wire harness which diverges from the main bus to an ECU or sensor.
- (c) Terminating resistors

- (1) Two resistors of 120 Ω are installed in parallel across the ends of the CAN main bus lines. They are called terminating resistors. These resistors allow the changes of the voltage differential between the CAN bus lines to be accurately judged. To allow proper function of CAN communication, it is necessary to have both terminating resistors installed. Since the two resistors are installed in parallel, this results in a measurement of approximately 60 Ω .

3. ECUS OR SENSORS WHICH COMMUNICATE THROUGH CAN COMMUNICATION SYSTEM

(a) V Bus

- (1) Main body ECU (network gateway ECU)
- (2) Combination meter assembly
- (3) ECM
- (4) TCM*
- (5) Skid control ECU (brake actuator assembly)
- (6) Steering angle sensor (spiral cable sub-assembly)
- (7) Power steering ECU assembly
- (8) Air bag ECU assembly

* : for Automatic Transmission System

4. CIRCUIT DESCRIPTION

- (a) The V bus has termination circuits with two resistors of 120 Ω .

5. TROUBLESHOOTING REMARKS

- (a) DTCs for the CAN communication system can be checked using the Techstream. The DLC3 is connected to the CAN communication system, but no DTCs exist regarding problems in the DLC3 or the DLC3 branch lines. If there is any trouble in the DLC3 or the DLC3 branch lines, ECUs on the CAN cannot output DTCs to the Techstream.
- (b) Troubles in the CAN V bus (communication lines) can be checked by measuring the resistance between the terminals of the DLC3. However, an open circuit in a branch line other than the DLC3 branch lines cannot be checked from the DLC3 (except branch line of the DLC3).

NOTICE:

Do not insert the tester probes directly into the DLC3. Be sure to use service wires.

6. DIAGNOSTIC TROUBLE CODES FOR CAN COMMUNICATION SYSTEM

HINT:

See **Diagnosis System**  .

7. HOW TO DISTINGUISH CONNECTOR OF CAN JUNCTION CONNECTOR

- (a) In the CAN communication system, the shape of the connectors connected to the CAN junction connector which has an earth terminal is the same. The connectors connected to the CAN junction connector can be distinguished by the colors of the bus lines and the connecting side of the junction connector.

HINT:

See **Terminals of ECU for bus line color or the shape of connecting surface**  .

Title: NETWORKING: CAN COMMUNICATION SYSTEM: TERMINALS OF ECU (2013 FR-S)		

TERMINALS OF ECU

NOTICE:

- After turning the ignition switch off, waiting time may be required before disconnecting the cable from the negative (-) battery terminal. Therefore, make sure to read the disconnecting the cable from the negative (-) battery terminal notices before proceeding with work INFO.
- Turn the ignition switch off before measuring the resistances between CAN main bus lines and between CAN branch lines.
- Turn the ignition switch off before inspecting CAN bus lines for a ground short.
- Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors. If any doors need to be opened in order to check connectors, open the doors and leave them open.
- This section describes the standard values for all CAN related components.

HINT:

- Operating the ignition switch, any other switches or a door triggers the related ECU and sensor communication on the CAN. This communication will cause the resistance value to change.
- Even after DTCs are cleared, if a DTC is stored again after driving the vehicle for a while, the malfunction may be occurring due to vibration of the vehicle. In such a case, wiggling the ECUs or wire harness while performing the inspection below may help determine the cause of the malfunction.

* : for Automatic Transmission System

* : for Automatic Transmission System

1. CAN NO. 1 JUNCTION CONNECTOR

(a) Check the CAN No. 1 junction connector.

HINT:

The following tables contain information about the items and buses connected via junction connectors. The junction connector may be used for multiple separate buses. In this case, the name of the bus will be shown below the name of the item that terminals are connected to. The bus name will be shown in brackets (example: (for V bus)).

----	---	----	--

(a) Disconnect the D5 main body ECU (network gateway ECU) connector.

Text in Illustration

*1	DLC3
*a	Front view of wire harness connector (to Main Body ECU (Network Gateway ECU))

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
D5-14 (CANH) - D5-13 (CANL)	P - LG	HIGH-level CAN bus line - LOW-level CAN bus line	Cable disconnected from negative (-) battery terminal	57 to 63 Ω
D5-14 (CANH) - D10-4 (CG)	P - B-Y	HIGH-level CAN bus line - Ground	Cable disconnected from negative (-) battery terminal	200 Ω or higher
D5-13 (CANL) - D10-4 (CG)	LG - B-Y	LOW-level CAN bus line - Ground	Cable disconnected from negative (-) battery terminal	200 Ω or higher
D5-14 (CANH) - D10-16 (BAT)	P - W-B	HIGH-level CAN bus line - Battery positive (+)	Cable disconnected from negative (-) battery terminal	6 kΩ or higher
D5-13 (CANL) - D10-16 (BAT)	LG - W-B	LOW-level CAN bus line - Battery positive (+)	Cable disconnected from negative (-) battery terminal	6 kΩ or higher

9. STEERING ANGLE SENSOR (SPIRAL CABLE SUB-ASSEMBLY)

Text in Illustration

	Component without harness connected		
--	-------------------------------------	--	--

(a) Disconnect the D56 steering angle sensor (spiral cable sub-assembly) connector.

Text in Illustration

*1	DLC3
*a	Front view of wire harness connector (to Steering Angle Sensor (Spiral Cable Sub-assembly))

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
D56-3 (CANH) - D56-2 (CANL)	G-W - G	HIGH-level CAN bus line - LOW-level CAN bus line	Cable disconnected from negative (-) battery terminal	57 to 63 Ω
D56-3 (CANH) - D10-4 (CG)	G-W - B-Y	HIGH-level CAN bus line - Ground	Cable disconnected from negative (-) battery terminal	200 Ω or higher
D56-2 (CANL) - D10-4 (CG)	G - B-Y	LOW-level CAN bus line - Ground	Cable disconnected from negative (-) battery terminal	200 Ω or higher
D56-3 (CANH) - D10-16 (BAT)	G-W - W-B	HIGH-level CAN bus line - Battery positive (+)	Cable disconnected from negative (-) battery terminal	6 kΩ or higher
D56-2 (CANL) - D10-16 (BAT)	G - W-B	LOW-level CAN bus line - Battery positive (+)	Cable disconnected from negative (-) battery terminal	6 kΩ or higher

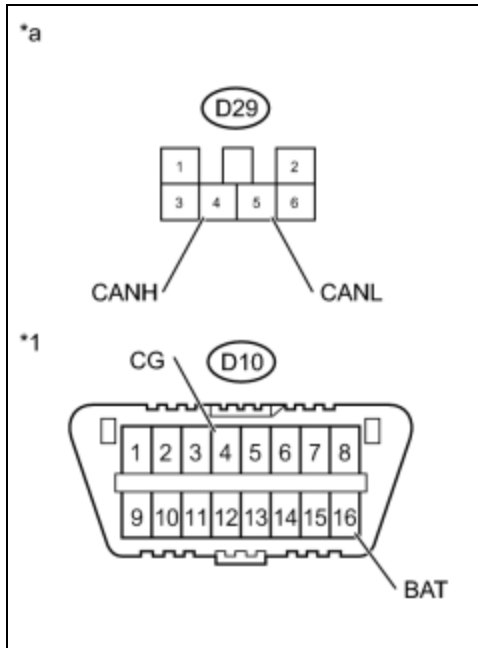

10. PSP (OPTION CONNECTOR)

Text in Illustration

*1	DLC3
*a	Front view of wire harness connector (to PSP (Option Connector))

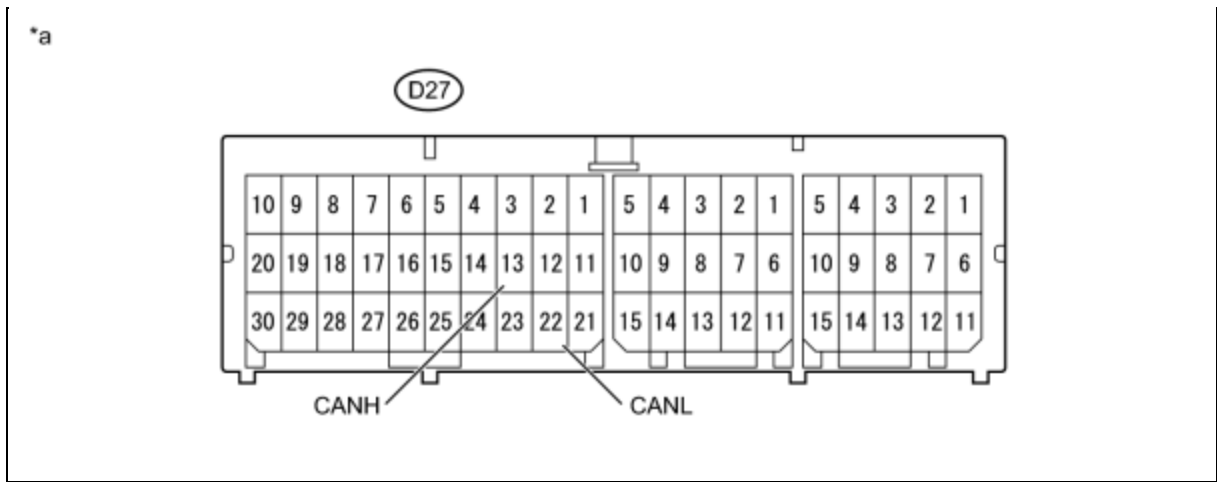

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

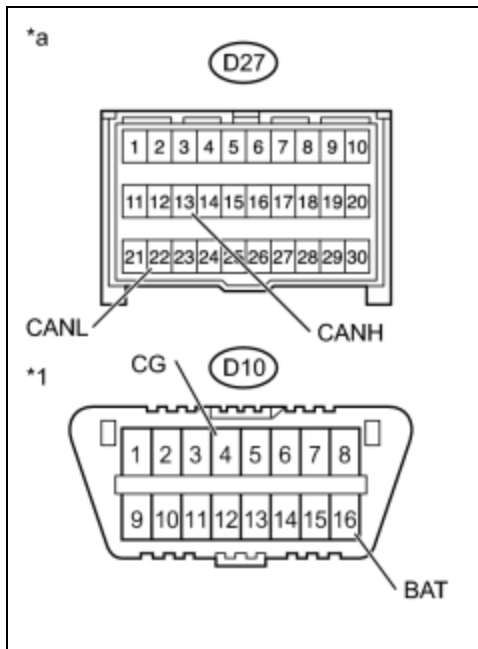

TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
D29-4 (CANH) - D29-5 (CANL)	P - L	HIGH-level CAN bus line - LOW-level CAN bus line	Cable disconnected from negative (-) battery terminal	57 to 63 Ω
D29-4 (CANH) - D10-4 (CG)	P - B-Y	HIGH-level CAN bus line - Ground	Cable disconnected from negative (-) battery terminal	200 Ω or higher
D29-5 (CANL) - D10-4 (CG)	L - B-Y	LOW-level CAN bus line - Ground	Cable disconnected from negative (-) battery terminal	200 Ω or higher
D29-4 (CANH) - D10-16 (BAT)	P - W-B	HIGH-level CAN bus line - Battery positive (+)	Cable disconnected from negative (-) battery terminal	6 k Ω or higher
D29-5 (CANL) - D10-16 (BAT)	L - W-B	LOW-level CAN bus line - Battery positive (+)	Cable disconnected from negative (-) battery terminal	6 k Ω or higher

11. AIR BAG ECU ASSEMBLY

Transmission Control ECU Communication Stop Mode	<p>Either condition is met:</p> <ul style="list-style-type: none"> • "TCM" is not displayed on the "CAN Bus Check" screen of the Techstream INFO • Communication system DTCs (DTCs that start with U) that are output correspond to "Transmission Control ECU Communication Stop Mode" in "DTC Combination Table" INFO 	<ul style="list-style-type: none"> • TCM branch line or connector • Power source circuit of TCM • Transmission control ECU assembly ground circuit • TCM

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- Before measuring the resistance of the CAN bus, turn the ignition switch off and leave the vehicle for 1 minute or more without operating the key, switches or opening or closing the doors. After that, disconnect the cable from the negative (-) battery terminal and leave the vehicle for 1 minute or more before measuring the resistance.
- After turning the ignition switch off, waiting time may be required before disconnecting the cable from the negative (-) battery terminal. Therefore, make sure to read the disconnecting the cable from the negative (-) battery terminal notices before proceeding with work **INFO**.
- Because the order of diagnosis is important to allow correct diagnosis, make sure to begin troubleshooting using How to Proceed with Troubleshooting when CAN communication system related DTCs are output **INFO**.
- After performing repairs, perform the DTC check procedure and confirm that the DTCs are not output again.
- DTC check procedure: Turn the ignition switch to ON and wait at least 10 seconds.
- After the repair, perform CAN Bus Check and check that all the ECUs and sensors connected to the CAN communication system are displayed **INFO**.

HINT:

- Operating the ignition switch, any other switches or a door triggers related ECU and sensor communication on the CAN. This communication will cause the resistance value to change.
- Even after DTCs are cleared, if a DTC is stored again after driving the vehicle for a while, the malfunction may be occurring due to vibration of the vehicle. In such a case, wiggling the ECUs or

wire harness while performing the inspection below may help determine the cause of the malfunction.

PROCEDURE

1. CHECK FOR OPEN IN CAN BUS LINES (TCM BRANCH LINE)

(a) Disconnect the cable from the negative (-) battery terminal.

(b) Disconnect the A18 TCM connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A18-29 (CANH) - A18-28 (CANL)	Cable disconnected from negative (-) battery terminal	57 to 63 Ω

Text in Illustration

*a	Front view of wire harness connector (to TCM)
----	---

NG REPAIR OR REPLACE CAN BRANCH LINE OR CONNECTOR (TCM)

OK
▼

2. CHECK HARNESS AND CONNECTOR (POWER SOURCE CIRCUIT)

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A18-3 (E02) - Body ground	Cable disconnected from negative (-) battery terminal	Below 1 Ω
A18-33 (E01) - Body ground	Cable disconnected from negative (-) battery terminal	Below 1 Ω

Text in Illustration

*a	Front view of wire harness connector (to TCM)
----	---

(b) Connect the cable to the negative (-) battery terminal.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A18-26 (BM) - Body ground	Ignition switch off	11 to 14 V
A18-34 (IG1) - Body ground	Ignition switch ON	11 to 14 V
A18-35 (IG2) - Body ground	Ignition switch ON	11 to 14 V

NG ▶ REPAIR OR REPLACE HARNESS OR
CONNECTOR (POWER SOURCE CIRCUIT)

OK ▶ REPLACE TCM

Last Modified: 3-27-2012	6.4 C	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000002S8B02AX
Title: NETWORKING: LIN COMMUNICATION SYSTEM: B2321,B2325: Lost Communication with Driver Door Power Window ECU (2013 FR-S)		

DTC	B2321	Lost Communication with Driver Door Power Window ECU
------------	--------------	---

DTC	B2325	LIN Communication Bus Malfunction
------------	--------------	--

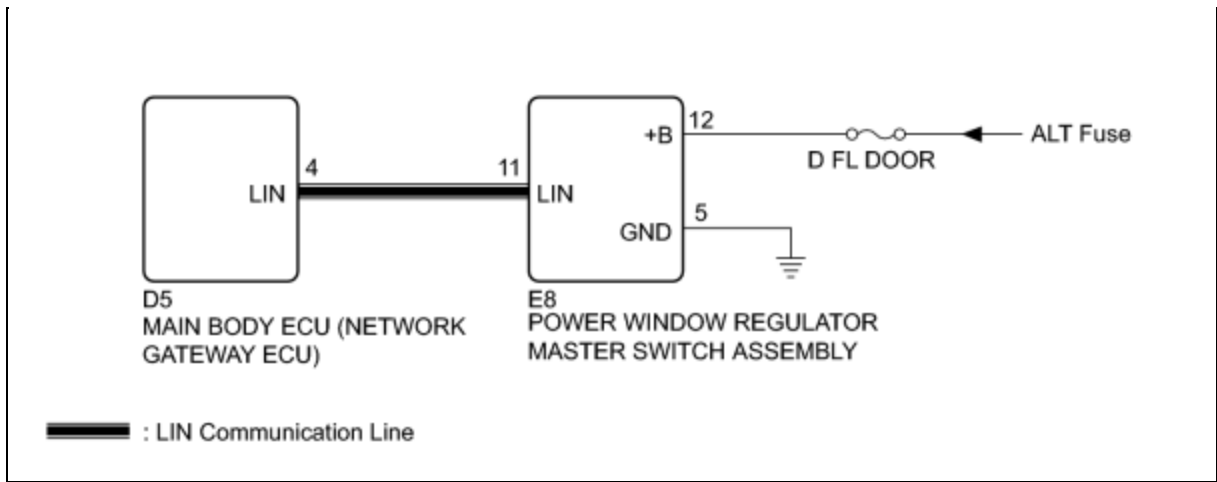

DESCRIPTION

B2321 is stored when the communication between the power window regulator master switch assembly and the main body ECU (network gateway computer) stops for 10 seconds or more.

The main body ECU (network gateway computer) monitors communication between all the ECUs connected to the door LIN bus. When the main body ECU (network gateway computer) detects errors in communication with all the ECUs connected to the door LIN bus at 2.6-second intervals and 3 times in a row, DTC B2325 will be stored.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B2321	Lost communication between the multiplex network master switch assembly and the main body ECU (network gateway computer).	<ul style="list-style-type: none"> • Power window regulator master switch assembly • Main body ECU (network gateway ECU) • Harness or connector
B2325	The main body ECU (network gateway computer) detects errors in door LIN bus communication lines at 2.6-second intervals and 3 times in a row.	<ul style="list-style-type: none"> • Power window regulator master switch assembly • Main body ECU (network gateway ECU) • Harness or connector

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- When using the Techstream with the ignition switch off to troubleshoot:

Connect the Techstream to the vehicle and turn a courtesy light switch on and off at 1.5 second intervals until communication between the Techstream and vehicle begins.

- Inspect the fuses for circuits related to this system before performing the following inspection procedure.

HINT:

When communication between the power window regulator master switch assembly and the main body ECU (network gateway ECU) stops, DTC B2325 is also stored.

PROCEDURE

1.	CLEAR DTC
-----------	------------------

(a) Clear the DTCs INFO.

NEXT

2.	CHECK FOR DTC
-----------	----------------------

(a) Check for DTCs INFO.

Result

RESULT	PROCEED TO
DTC B2321 or B2325 is output	A
DTC B2321 or B235 is not output	B

A

3.	CHECK HARNESS AND CONNECTOR (MAIN BODY ECU (NETWORK GATEWAY ECU) - POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY)
-----------	--

- (a) Disconnect the D5 main body ECU (network gateway ECU) connector.
- (b) Disconnect the E8 power window regulator master switch assembly connector.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D5-4 (LIN) - E8-11 (LIN)	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D5-4 (LIN) or E8-11 (LIN) - Body ground	Always	10 k Ω or higher

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

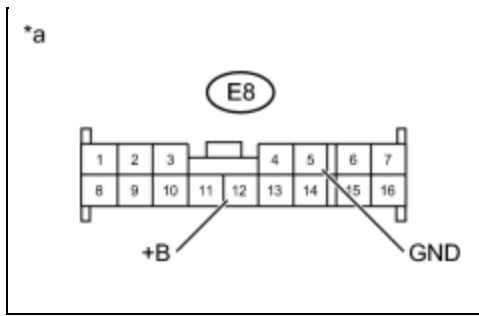

OK

4.	CHECK HARNESS AND CONNECTOR (POWER SOURCE CIRCUIT)
-----------	---

- (a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E8-5 (GND) - Body ground	Always	Below 1 Ω

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E8-12 (+B) - Body ground	Always	11 to 14 V

Text in Illustration

*a	Front view of wire harness connector (to Power Window Regulator Master Switch Assembly)
----	--

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (POWER SOURCE CIRCUIT)**

OK

5. REPLACE POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY

(a) Temporarily replace the power window regulator master switch assembly with a new or normally functioning one **INFO** .

NEXT

6. CLEAR DTC

(a) Clear the DTCs **INFO** .

NEXT

7. CHECK FOR DTC

(a) Check for DTCs **INFO** .

OK:

DTC B2321 or B2325 is not output.

NG ▶ **REPLACE MAIN BODY ECU (NETWORK GATEWAY ECU)**

OK ▶ **END (POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY WAS DEFECTIVE)**

Title: NETWORKING: LIN COMMUNICATION SYSTEM: HOW TO PROCEED WITH TROUBLESHOOTING (2013 FR-S)		

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedure to troubleshoot the LIN communication system.
- *: Use the Techstream.

1.	VEHICLE BROUGHT TO WORKSHOP
-----------	------------------------------------

NEXT

2.	CUSTOMER PROBLEM ANALYSIS
-----------	----------------------------------

- When troubleshooting, confirm that the problem symptoms have been accurately identified. Preconceptions should be discarded in order to make an accurate judgment. To clearly understand what the problem symptoms are, it is extremely important to ask the customer about the problem and the conditions at the time when the malfunction occurred.
- Gather as much information as possible for reference. Past problems that seem unrelated may also help in some cases.
- The following 5 items are important points in problem analysis:

What	Vehicle model, system name
When	Date, time, occurrence frequency
Where	Road conditions
Under what conditions?	Driving conditions, weather conditions
How did it happen?	Problem symptoms

NEXT

3.	INSPECT BATTERY VOLTAGE
-----------	--------------------------------

(a) Measure the battery voltage with the ignition switch off.

Standard Voltage:

11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

NEXT

4.	CHECK COMMUNICATION FUNCTION OF LIN COMMUNICATION SYSTEM*
----	---

(a) Using the Techstream, inspect the LIN communication function to ensure there are no malfunctions in the communication system  .

Result:

RESULT	PROCEED TO
DTC is not output	A
DTC is output	B

B  **GO TO DIAGNOSTIC TROUBLE CODE CHART**

Title: NETWORKING: LIN COMMUNICATION SYSTEM: SYSTEM DESCRIPTION (2013 FR-S)		

SYSTEM DESCRIPTION

1. LIN COMMUNICATION SYSTEM DESCRIPTION

The LIN communication system is used for the communication between the components in the tables below. If the communication cannot be performed through the LIN communication because of an open in the communication lines or other reasons, the master control ECU of the relevant system will store a DTC. Refer to the table below about the communication bus lines and connected components.

HINT:

- Each component has a fail-safe function which activates to maintain the minimum performance of the system and protect the system.
- In the following table, "o" indicates that the function applies, and "-" indicates that it does not.

Door Bus Lines

COMPONENT	MASTER CONTROL	LIN COMMUNICATION DTC OUTPUT FUNCTION
Main Body ECU (Network Gateway ECU)	o	o

Title: NETWORKING: LIN COMMUNICATION SYSTEM: TERMINALS OF ECU (2013 FR-S)		

TERMINALS OF ECU

1. CHECK INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY AND MAIN BODY ECU (NETWORK GATEWAY ECU)

*1	Instrument Panel Junction Block Assembly	*2	Main Body ECU (Network Gateway ECU)
----	--	----	-------------------------------------

- (a) Remove the main body ECU (network gateway ECU) from the instrument panel junction block assembly  .
- (b) Measure the voltage and resistance according to the value(s) in the table below.

TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	SWITCH CONDITION	SPECIFIED CONDITION
MB-1 (BECU) - Body ground	None - Body ground	Battery power supply	Always	11 to 14 V
MB-8 (IG) - Body ground	None - Body ground	Battery power supply	Ignition switch ON	11 to 14 V
MB-11 (GND) - Body ground	None - Body ground	Ground	Always	Below 1 Ω
MB-32 (+B) - Body ground	None - Body ground	Battery power supply	Always	11 to 14 V

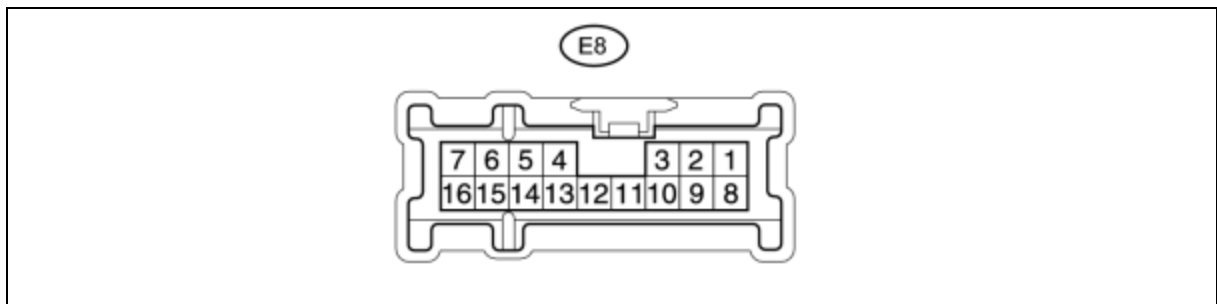

If the result is not as specified, there may be a malfunction in the wire harness.

- (c) Install the main body ECU (network gateway ECU) onto the instrument panel junction block assembly.
- (d) Measure the pulses according to the value(s) in the table below.

TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	SWITCH CONDITION	SPECIFIED CONDITION
D5-4 (LIN) - D6-1 (GND)	LG - B	LIN Communication line	Ignition switch ON	Pulse generation

If the result is not as specified, the main body ECU (network gateway ECU) or instrument panel junction block assembly may have a malfunction.

2. CHECK POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY

- (a) Disconnect the E8 power window regulator master switch assembly connector.
- (b) Measure the voltage and resistance according to the value(s) in the table below.

TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E8-5 (GND) - Body				

ground	B - Body ground	Ground	Always	Below 1 Ω
E8-12 (+B) - Body ground	SB - Body ground	Battery power supply	Always	11 to 14 V

If the result is not as specified, there may be a malfunction in the wire harness.

INSPECTION PROCEDURE

NOTICE:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1.	CLEAR DTC
-----------	------------------

(a) Clear the DTCs INFO.

NEXT

2.	CHECK FOR DTC
-----------	----------------------

(a) Check for DTCs INFO.

Result

RESULT	PROCEED TO
DTC B1012 is output	A
DTC is not output	B

A
▼

3. CHECK HARNESS AND CONNECTOR (BECU VOLTAGE)

(a) Disconnect the 3A instrument panel junction block assembly connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3A-27 - Body ground	Always	11 to 14 V

Text in Illustration

*a Front view of wire harness connector (to Instrument Panel Junction Block Assembly)

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR

OK
▼

4. CHECK HARNESS AND CONNECTOR (ECU GROUND) INFO

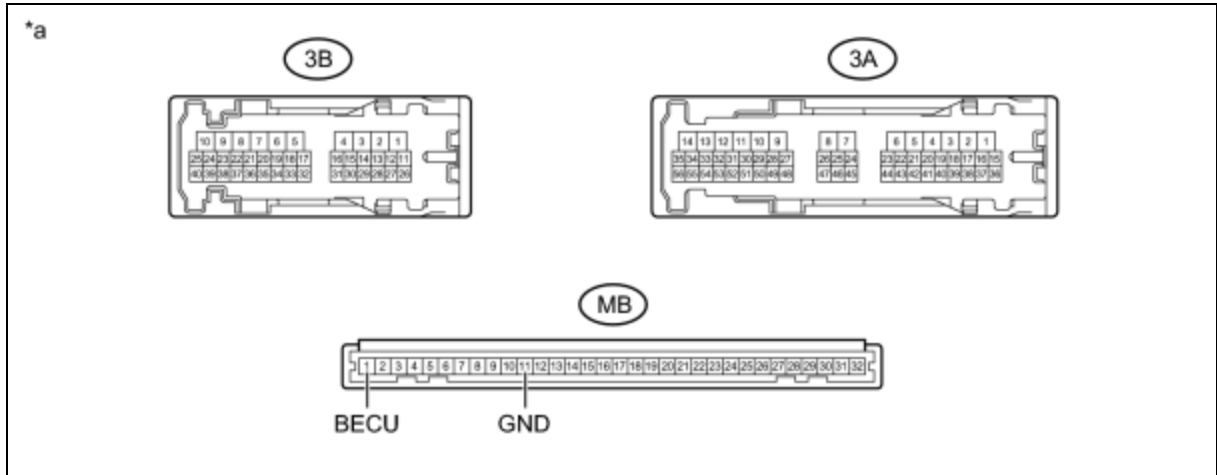

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR

OK
▼

5. INSPECT INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY

- (a) Remove the instrument panel junction block assembly **INFO**.
- (b) Remove the main body ECU (network gateway ECU) from the instrument panel junction block assembly.

Text in Illustration

*a	Component without harness connected (Instrument Panel Junction Block Assembly)	-	-
----	---	---	---

- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3A-27 - MB-1 (BECU)	Always	Below 1 Ω
3B-18 - MB-11 (GND)	Always	Below 1 Ω

NG ▶ REPLACE INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY

OK ▶ REPLACE MAIN BODY ECU (NETWORK GATEWAY ECU)

Title: POWER DISTRIBUTION: ELECTRIC POWER CONTROL SYSTEM: DATA LIST / ACTIVE TEST (2013 FR-S)		

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Main Body / Data List.
- (e) Read the Data List according to the display on the Techstream.

Main Body (Main Body ECU (Network Gateway ECU))

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE

Title: POWER DISTRIBUTION: BATTERY CURRENT SENSOR: INSPECTION (2013 FR-S)		

INSPECTION

1. INSPECT BATTERY CURRENT SENSOR ASSEMBLY

(a) Check the resistance of the battery current sensor assembly.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 (VIN) - 3 (GND)	Always	3 to 10 k Ω
1 (VIN) - 4 (IB)	Always	Below 0.5 k Ω
3 (GND) - 4 (IB)	Always	3 to 10 k Ω

If the result is not as specified, replace the battery current sensor assembly.

Text in illustration

*a	Component without harness connected (Battery Current Sensor Assembly)
----	--

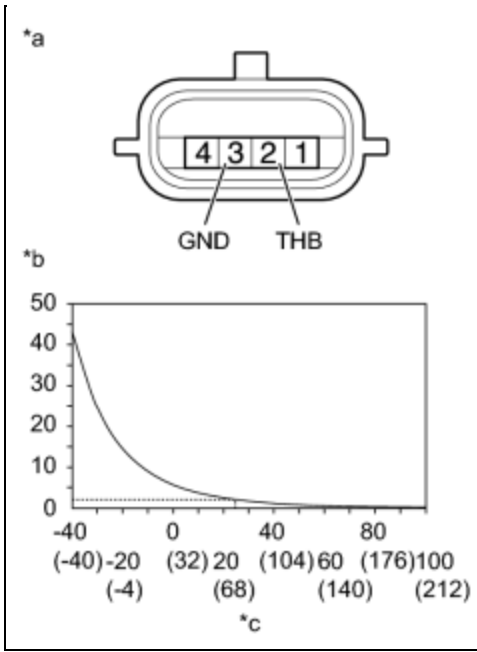

(b) Check the resistance of the battery current sensor assembly.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2 (THB) - 3 (GND)	20°C (68°F) to 30°C (86°F)	1.5 to 2.6 k Ω

If the result is not as specified, replace the battery current sensor assembly.

Text in illustration

*a	Component without harness connected (Battery Current Sensor Assembly)
*b	[kΩ]
*c	[°C (°F)]

HINT:

The "Condition" indicates the temperature in the vicinity of the sensor, not of the actual sensor itself.

Title: POWER DISTRIBUTION: MAIN BODY ECU: INSTALLATION (2013 FR-S)		

INSTALLATION

1. INSTALL NETWORK GATEWAY ECU

NOTICE:

- Prevent foreign matter from being mixed into the engagement, connector or terminal.
- Do not touch the network gateway ECU connector terminals.

(a) Make the network gateway ECU guide to contact the housing side wall.

HINT:

The angle between the junction block and the network gateway ECU guide should be 20° or more.

Text in illustration

*a	Housing Side Wall
*b	Guide
*c	20° or more

(b) While aligning the guide with the housing side wall, slide the network gateway ECU toward the fuse area of the instrument panel junction block assembly and engage the 2 guides.

Text in illustration

*a	Hosing Side Wall
*b	Fuse Area

(c) Slide the network gateway ECU until it contacts the A surface.

(d) Rotate the network gateway ECU while holding it against the instrument panel junction block assembly surface (axis of rotation).

NOTICE:

- Slide the network gateway ECU gently.
- Do not apply strong impact to the side of the network gateway ECU.

Text in illustration

*a	A surface
----	-----------

(e) Rotate the network gateway ECU until it engages with the lock to install it.

NOTICE:

- When pressing the network gateway ECU, press the push area as shown in the illustration.
- A lock sound will be heard when the network gateway ECU is engaged.
- Do not hit or weight the network gateway ECU when it engages with the instrument panel junction block assembly.

HINT:

If a lock sound is not heard, visually check the lock engagement. Check that the height of the network gateway ECU and instrument panel junction block assembly match.

Text in illustration

REMOVAL

1. REMOVE INSTRUMENT SIDE PANEL LH INFO

2. REMOVE NO. 1 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY INFO

3. REMOVE INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY

(a) Disengage the clamp.

(b) Disconnect the connector from the power steering ECU assembly.

(1) As shown in the illustration, pull out the lock of the lock lever and turn the lock lever to disconnect the connector.

Text in illustration

*a	Pull out the lock
*b	Turn the lock lever

(c) Disconnect the 3 connectors from the power steering ECU.

(d) Disconnect the 6 front side connectors from the instrument panel junction block assembly indicated as shown in the illustration.

(e) Remove the bolt, nut and the instrument panel junction block assembly.

(f) Disconnect the connector indicated as shown in the illustration.

(g) Disengage the claw and slide the lever to the upward.

Text in illustration

*1	Lever
----	-------

(h) Disconnect the connector indicated as shown in the illustration.

(i) Remove the instrument panel junction block assembly.

4. REMOVE NETWORK GATEWAY ECU

- (a) Press the claw of the instrument panel junction block assembly side as shown in the illustration to release the lock.
- (b) With the instrument panel junction block assembly side, insert the screwdriver with its tip wrapped in protective tape between the network gateway ECU and the instrument panel junction block assembly.

NOTICE:

Use a blade screwdriver with a diameter of 5.0 to 6.3 mm (0.197 to 0.248 in.), and with a length of 90mm (3.543 in.) or more.

Text in illustration

*1	Protective Tape
----	-----------------

- (c) Using the screwdriver with its tip wrapped with protective tape, carefully raise the network gateway ECU until the connector becomes disengaged.

Text in illustration

*1	Protective Tape
----	-----------------

NOTICE:

- Do not twist the screwdriver to raise the network gateway ECU.
- If any terminals of the connectors, locking parts or cases are deformed or damaged, replace the instrument panel junction block assembly or the network gateway ECU.

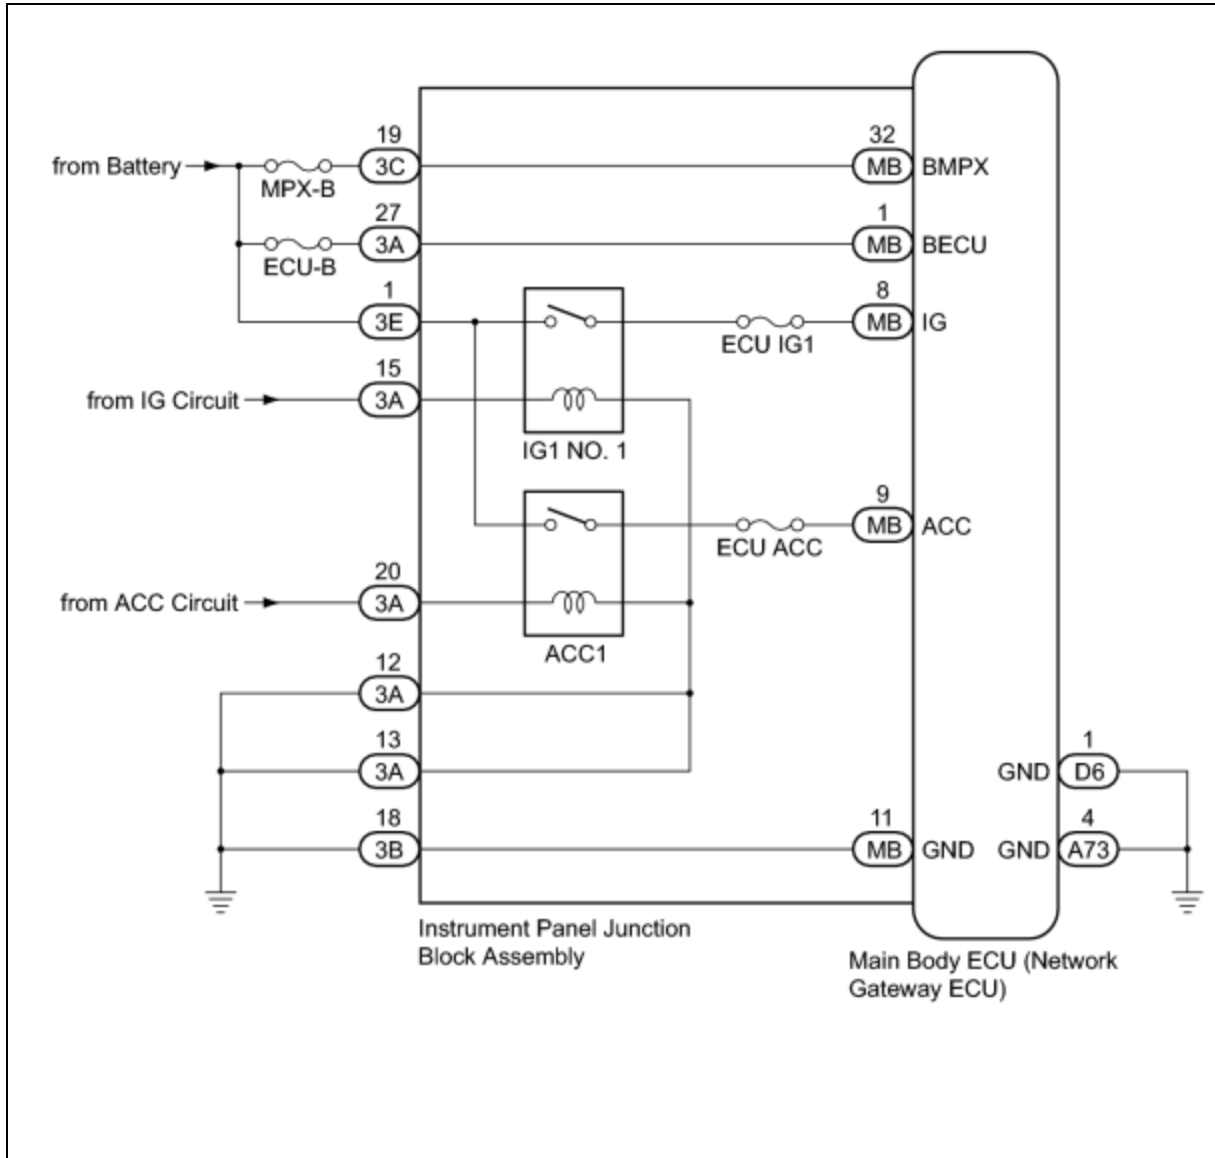

(d) Raise the network gateway ECU as shown by arrow 1, and then pull it out as shown by arrow 2 in the illustration.

NOTICE:

Do not touch the network gateway ECU connector terminals.

------------	--------------	--

DTC	C1517	Torque Hold Abnormal
------------	--------------	-----------------------------

DESCRIPTION

The torque sensor converts the rotation torque input to the steering wheel into an electrical signal and sends it to the power steering ECU assembly. Based on this signal, the ECU detects steering effort.

DTC CODE	DTC DETECTION CONDITION	TROUBLE AREA
C1511	A torque sensor (TRQ1) signal error or stop	<ul style="list-style-type: none"> Steering column assembly (torque sensor) Power steering ECU assembly
C1512	A torque sensor (TRQ2) signal error or stop	
C1513	The deviation between torque sensor TRQ1 and TRQ2 exceeds a specified value.	
C1514	A torque sensor power supply voltage error	
C1517	Temporary control due to a malfunction related to the torque sensor continues for long time.	

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

If the power steering ECU assembly or steering column assembly is replaced, perform rotation angle sensor initialization and torque sensor zero point calibration  .

PROCEDURE

- | | |
|----|---|
| 1. | CHECK CONNECTOR CONNECTION CONDITION (TORQUE SENSOR - POWER STEERING ECU ASSEMBLY) |
|----|---|

(a) Check the connection condition of the z2 torque sensor connector.

OK:

Torque sensor connector is securely connected to the power steering ECU assembly.

Text in Illustration

*a	Component with harness connected (Power Steering ECU Assembly)
----	--

OK

2. CHECK POWER STEERING ECU ASSEMBLY (TRQV VOLTAGE)

(a) Turn the ignition switch off.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
z2-9 (TRQV) - z2-11 (TRQG)	Ignition switch ON	4.5 to 5.5 V

HINT:

When the value is within the specified range, record the value.

Text in Illustration

*a	Component with harness connected (Power Steering ECU Assembly)
----	--

NG ▶ REPLACE POWER STEERING ECU ASSEMBLY

OK

3. CHECK POWER STEERING ECU ASSEMBLY (TRQ1, TRQ2 VOLTAGE)

(a) Start the engine.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
z2-8 (TRQ1) - z2-11 (TRQG)	Engine running, steering wheel not turned (without load)	2.3 to 2.7 V
	Engine running, steering wheel turned to right with vehicle stopped	2.3 to 3.8 V
	Engine running, steering wheel turned to left with vehicle stopped	1.2 to 2.7 V
z2-10 (TRQ2) - z2-11 (TRQG)	Engine running, steering wheel not turned (without load)	2.3 to 2.7 V
	Engine running, steering wheel turned to right with vehicle stopped	1.2 to 2.7 V
	Engine running, steering wheel turned to left with vehicle stopped	2.3 to 3.8 V

(c) Calculate the difference between the value recorded when measuring the voltage at terminal TRQV in the previous step, and the sum of the output of torque sensor 1 and torque sensor 2.

OK:

0.3 V or less (Absolute value)

Title: POWER ASSIST SYSTEMS: POWER STEERING SYSTEM: C1515,C1525: Torque Sensor Zero Point Adjustment Undone (2013 FR-S)		

DTC	C1515	Torque Sensor Zero Point Adjustment Undone
------------	--------------	---

DTC	C1525	Rotation Angle Sensor Initialization Undone
------------	--------------	--

DESCRIPTION

These DTCs do not indicate a malfunction. The power steering ECU assembly stores these DTCs when it determines that the rotation angle sensor value initialization and torque sensor zero point calibration have not been performed.

DTC CODE	DTC DETECTION CONDITION	TROUBLE AREA
C1515	Torque sensor zero point calibration has not been performed.	There is no malfunction if this DTC is not output again after performing torque sensor zero point calibration.
C1525	Rotation angle sensor value initialization has not been performed.	There is no malfunction if this DTC is not output again after performing rotation angle sensor value initialization.

INSPECTION PROCEDURE

NOTICE:

If the power steering ECU assembly or steering column assembly is replaced, perform rotation angle sensor initialization and torque sensor zero point calibration  .

PROCEDURE

1.	INITIALIZE ROTATION ANGLE SENSOR AND CALIBRATE TORQUE SENSOR ZERO POINT
-----------	--

(a) Initialize the rotation angle sensor and calibrate the torque sensor zero point  .

NEXT

2.	CHECK FOR DTC
-----------	----------------------

(a) Check for DTCs  .

NOTICE:

If DTC C1515 or C1525 is output even though the rotation angle sensor value initialization and torque sensor zero point calibration have been performed, check the procedure again, and perform calibration and initialization 3 times.

Result

CONDITION	PROCEED TO
DTC C1515 or C1525 is still output after performing rotation angle sensor initialization and torque sensor zero point calibration 3 times.	A
DTC C1515 or C1525 is not output.	B

B  **END**

A

3.	REPLACE POWER STEERING ECU ASSEMBLY
-----------	--

(a) Replace the power steering ECU assembly  .

NEXT

4.	INITIALIZE ROTATION ANGLE SENSOR AND CALIBRATE TORQUE SENSOR ZERO POINT
-----------	--

(a) Initialize the rotation angle sensor and calibrate the torque sensor zero point  .

NEXT

5.	CHECK FOR DTC

Title: POWER ASSIST SYSTEMS: POWER STEERING SYSTEM: CALIBRATION (2013 FR-S)		

CALIBRATION

1. ROTATION ANGLE SENSOR INITIALIZATION AND TORQUE SENSOR ZERO POINT CALIBRATION

NOTICE:

Initialize the rotation angle sensor and calibrate the torque sensor zero point if any of the following conditions occur:

- The power steering ECU is replaced.
- The steering column assembly is replaced.
- Steering effort differs between turning left and right.

HINT:

When rotation angle sensor initialization and torque sensor zero point calibration are performed, the assist map writing, the rotation angle sensor value initialization and the torque sensor zero point calibration are performed at the same time.

- (a) Inspection before calibration
- (1) Turn the ignition switch off.
 - (2) Connect the Techstream to the DLC3.
 - (3) Turn the ignition switch to ON.
 - (4) Turn the Techstream on.
 - (5) Enter the following menus: Chassis / EMPS / Data List.
 - (6) Check the values by referring to the table below.

EMPS

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
IG Power Supply	ECU power source voltage/ Min.: 0 V Max.: 20.1531 V	9 to 16 V	The ignition switch is ON.

Standard voltage:
10 V or more

NOTICE:

If the IG power supply voltage is 9 V or less, calibration cannot be performed. In this case, charge or replace the battery, and then perform calibration.

- (b) Rotation angle sensor initialization and torque sensor zero point calibration

NOTICE:

- If DTC C1516 (Torque Sensor Zero Point Adjustment Incomplete) is stored, the torque sensor zero point cannot be calibrated. Clear the DTC before starting calibration.
- If DTC C1526 (Rotation Angle Sensor Initialization Incomplete) is stored, the rotation angle sensor cannot be initialized. Clear the DTC before starting initialization.

- (1) Turn the ignition switch off.

- (2) Connect the Techstream to the DLC3.
- (3) Turn the ignition switch to ON.
- (4) Turn the Techstream on.
- (5) Enter the following menus: Chassis / EMPS / Utility / Torque Sensor Adjustment.
- (6) According to the display on the Techstream, perform calibration.

NOTICE:

- Set the steering wheel to the center point and align the front tires straight ahead.
- Do not turn the steering wheel sharply.
- Do not touch the steering wheel during the rotation angle sensor initialization and torque sensor zero point calibration (for 3 seconds).

Title: POWER ASSIST SYSTEMS: POWER STEERING SYSTEM: DATA LIST / ACTIVE TEST (2013 FR-S)		

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

- (a) Turn the ignition switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the ignition switch to ON.
- (d) Turn the Techstream on.
- (e) Enter the following menus: Chassis / EMPS / Data List.
- (f) According to the display on the Techstream, read the Data List.

EMPS

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Meter Vehicle Velocity	Vehicle speed from skid control ECU/ Min.: 0.0 km/h (0.0 mph) Max.: 300.0 km/h (186.4 mph)	0 km/h (0 mph)	The vehicle is stopped.

Title: POWER ASSIST SYSTEMS: POWER STEERING SYSTEM: DIAGNOSIS SYSTEM (2013 FR-S)		

DIAGNOSIS SYSTEM

1. CHECK DLC3

- (a) Check the DLC3 INFO.

2. FUNCTION OF EPS WARNING LIGHT

- (a) When a malfunction is detected in the power steering system, the EPS warning light in the combination meter comes on to inform the driver of the malfunction.

HINT:

When power assist is stopped or reduced, the EPS warning light comes on.

Power assist is stopped:

- When a malfunction occurs in the power steering system (including lost CAN communication, etc.)
- When the engine stalls (not a malfunction)
- During the period after the ignition switch is turned to ON until the engine is started (not a malfunction)

Power assist is reduced:

- When a malfunction occurs in the power steering system (including lost CAN communication, etc.)
- When the battery voltage decreases (not a malfunction)

Title: POWER ASSIST SYSTEMS: POWER STEERING SYSTEM: DTC CHECK / CLEAR (2013 FR-S)		

DTC CHECK / CLEAR

1. CHECK DTC

- (a) Turn the ignition switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the ignition switch to ON.
- (d) Turn the Techstream on.
- (e) Enter the following menus: Chassis / EMPS / Trouble Codes.
- (f) Read the DTCs following the display on the Techstream.
- (g) Refer to Diagnostic Trouble Code Chart for DTC information  .

2. CLEAR DTC

- (a) Turn the ignition switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the ignition switch to ON.
- (d) Turn the Techstream on.
- (e) Enter the following menus: Chassis / EMPS / Trouble Codes.
- (f) Clear the DTCs by following the display on the Techstream.
- (g) Turn the ignition switch off.
- (h) Disconnect the Techstream from the DLC3.

Title: POWER ASSIST SYSTEMS: POWER STEERING SYSTEM: EPS Warning Light Circuit (2013 FR-S)		

EPS Warning Light Circuit

DESCRIPTION

If the power steering ECU assembly detects a malfunction, the EPS warning light comes on. At this time, the power steering ECU assembly stores a DTC in its memory.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- If the power steering ECU assembly is replaced with a new one, perform rotation angle sensor initialization and torque sensor zero point calibration [INFO](#) .
- Inspect the fuses for circuits related to this system before performing the following inspection procedure.

HINT:

When the power supply voltage to the power steering ECU assembly (terminals IG and PIG) drops, required steering effort increases and the EPS warning light turns on.

PROCEDURE

1. CHECK HARNESS AND CONNECTOR

- (a) Turn the ignition switch to ON.
- (b) Check the indication condition of the EPS warning light by wiggling the power steering ECU assembly connector and wire harness up and down, and right and left.

OK:

EPS warning light indication condition does not change.

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

2. CHECK FOR DTC (CAN COMMUNICATION SYSTEM)

- (a) Check for DTCs INFO.

OK:

DTC is not output.

NG ▶ GO TO CAN COMMUNICATION SYSTEM (HOW TO PROCEED WITH TROUBLESHOOTING)

OK

3. READ VALUE USING TECHSTREAM (IG POWER SUPPLY)

- (a) Turn the ignition switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the ignition switch to ON.
- (d) Turn the Techstream on.
- (e) Enter the following menus: Chassis / EMPS / Data List.

EMPS

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
----------------	------------------------	------------------	-----------------

IG Power Supply	ECU power source voltage/ Min.: 0.0000 V Max.: 20.1531 V	9 to 16 V	The ignition switch is ON.
-----------------	--	-----------	----------------------------

OK:

The normal condition value is displayed the Techstream.

NG ► **CHECK HARNESS AND CONNECTOR (POWER STEERING ECU ASSEMBLY - BATTERY/BODY GROUND)**

OK

4.	READ VALUE USING TECHSTREAM (PIG POWER SUPPLY)
-----------	---

- (a) Turn the ignition switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Start the engine.
- (d) Turn the Techstream on.
- (e) Enter the following menus: Chassis / EMPS / Data List.

EMPS

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
PIG Power Supply	Power source voltage to active motor/ Min.: 0.0000 V Max.: 20.1531 V	9 to 16 V	The engine is running and power steering is operating.

OK:

The normal condition value is displayed the Techstream.

NG ► **CHECK HARNESS AND CONNECTOR (POWER STEERING ECU ASSEMBLY - BATTERY/BODY GROUND)**

OK

5.	PERFORM ACTIVE TEST USING TECHSTREAM (METER / GAUGE SYSTEM)
-----------	--

(a) Perform the Active Test of the combination meter using the Techstream INFO.

Combination Meter

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Indicat. EPS	EPS warning light	OFF/ON	Vehicle is stopped and engine is idling

(b) Check that the EPS warning light operates in accordance with the Active Test.

HINT:

Reconnect the connectors and restore the vehicle to its previous condition before checking the combination meter.

NG ▶ REPLACE COMBINATION METER ASSEMBLY

OK ▶ REPLACE POWER STEERING ECU ASSEMBLY

6.	CHECK HARNESS AND CONNECTOR (POWER STEERING ECU ASSEMBLY - BATTERY/BODY GROUND)
-----------	--

(a) Disconnect the A14 and A15 power steering ECU assembly connectors.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
A15-6 (IG) - Body ground	Ignition switch ON	9 to 16 V

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A14-2 (PGND) - Body ground	Always	Below 1 Ω

Text in Illustration

*a	Front view of wire harness connector (to Power Steering ECU Assembly)
----	--

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ▶ REPLACE POWER STEERING ECU ASSEMBLY

7.	CHECK HARNESS AND CONNECTOR (POWER STEERING ECU ASSEMBLY - BATTERY/BODY GROUND)
-----------	--

(a) Disconnect the A14 power steering ECU assembly connector .

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A14-1 (PIG) - Body ground	Always	9 to 16 V

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A14-2 (PGND) - Body ground	Always	Below 1 Ω

Text in Illustration

*a	Front view of wire harness connector
----	--------------------------------------

(to Power Steering ECU Assembly)

NG ▶ REPAIR OR REPLACE HARNESS OR
CONNECTOR

OK ▶ REPLACE POWER STEERING ECU ASSEMBLY

Title: POWER ASSIST SYSTEMS: POWER STEERING SYSTEM: FAIL-SAFE CHART (2013 FR-S)		

FAIL-SAFE CHART

If a problem occurs in the power steering system, the EPS warning light comes on in the combination meter and the power steering assist is stopped, locked at a particular point, or decreased simultaneously to protect the system.

Power Steering System

DTC CODE	DETECTION CONDITION	FAIL-SAFE OPERATION
C1511	Torque sensor malfunction	Power assist stops.
C1512		
C1513		
C1514		
C1515		
C1516		
C1517		
C1521	Motor circuit malfunction	
C1522		
C1523		
C1524		
C1525	Motor rotation angle sensor malfunction	
C1526		
C1528		
C1531	ECU malfunction	Assist force is restricted.
C1532		
C1533		
C1534		
C1541	Skid control malfunction	The amount of power assist is locked at the 100 km/h (62 mph) level of power assist.
C1551	IG power supply voltage error	Power assist stops.
C1552	PIG power supply voltage error	
C1554	Power supply relay malfunction	
C1555	Motor relay malfunction	
C1581	Assist map not written in power steering ECU	Control is performed using the default settings.
C1582	Assist map mismatch in power	Control is performed using the current assist map.

	steering ECU	
U0100	ECM communication error	Power assist continues as normal*1.
		Power assist stops*2.
U0122	Skid control ECU communication error	The amount of power assist is locked at the 100 km/h (62 mph) level of power assist.
U0416		

HINT:

- *1: When the DTC is stored while the engine is running.
- *2: When the DTC is stored before the engine is started.
- The amount of power assist may be decreased to prevent the motor and ECUs from overheating if the steering wheel is continuously turned when the vehicle is either stopped or driven at a low speed, or if the steering wheel is kept at either full lock position for a long time. In such cases, the amount of power assist returns to normal if the steering wheel is not turned for approximately 10 minutes with the engine idling.
- If the battery is not sufficiently charged or the voltage decreases temporarily, the amount of power assist is reduced and the EPS warning light comes on. In such cases, the amount of power assist returns normal when the battery voltage recovers.

Title: POWER ASSIST SYSTEMS: POWER STEERING SYSTEM: ON-VEHICLE INSPECTION (2013 FR-S)		

ON-VEHICLE INSPECTION

1. CHECK STEERING EFFORT (TORQUE)

NOTICE:

Some of these service operations may affect the SRS airbags. Read the precautionary notices concerning the SRS airbag system before servicing.

- (a) Stop the vehicle on a level, paved surface and align the wheels straight ahead.
- (b) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

- (c) Remove the steering pad  .
- (d) Connect the cable to the negative (-) battery terminal.
- (e) Using a torque wrench, check that the steering wheel set nut is properly tightened.

Torque: 39 N·m (398 kgf·cm, 29ft·lbf)

- (f) Turn the ignition switch to ON so that the power steering is ready to operate.
- (g) Turn the steering wheel 90 degrees to the right and check the steering effort (torque) while continuing to turn it further in the same direction.

Standard steering effort (Reference):

6.0 N*m (61 kgf*cm, 53 in.*lbf) or less

- (h) Align the front wheels facing straight ahead.
- (i) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

- (j) Install the steering pad  .
- (k) Connect the cable to the negative (-) battery terminal.

Title: POWER ASSIST SYSTEMS: POWER STEERING SYSTEM: PRECAUTION (2013 FR-S)		

PRECAUTION

1. HANDLING PRECAUTIONS FOR SRS AIRBAG SYSTEM

- (a) The vehicle is equipped with a Supplemental Restraint System (SRS). Failure to carry out service operations in the correct sequence could cause the SRS to unexpectedly deploy during servicing. This may cause a serious accident.

Before servicing (including inspection, replacement, removal and installation of parts), be sure to read the precautionary notices for Supplemental Restraint System .

2. PRECAUTIONS FOR REMOVAL, INSTALLATION AND REPLACEMENT OF ELECTRONIC MOTOR POWER STEERING COMPONENTS

- (a) Be sure to align the front wheels straight ahead when removing and installing the power steering link assembly.
- (b) If disconnecting the steering intermediate shaft and pinion shaft of the power steering link assembly, be sure to place matchmarks before starting the operation.
- (c) If replacing the power steering ECU assembly, always replace it with a new one (if the power steering ECU assembly is not replaced with a new one, DTCs may be stored).

NOTICE:

Do not use the power steering ECU assembly from another vehicle (display model, etc.).

- (d) After replacing the steering column assembly or power steering ECU assembly, write the assist map, initialize the rotation angle sensor and calibrate the torque sensor zero point .

3. HANDLING PRECAUTION

- (a) When handling electronic parts:
- Avoid any impact to electronic parts such as ECUs and relays. Replace electronic parts with new ones if dropped or subjected to a severe blow.
 - Do not expose any electronic parts to high temperatures or humidity.
 - Do not touch the connector terminals in order to prevent deformation or malfunctions due to static electricity.
- (b) When handling the steering column assembly:
- Avoid any impact to the steering column assembly, especially to the motor and torque sensor. Replace them with new ones if dropped or subjected to a severe blow.
 - Do not pull the wire harness when moving the steering column assembly.
- (c) When disconnecting the connectors related to the power steering system, turn the ignition switch to ON, center the steering wheel, turn the ignition switch off, disconnect the negative (-) battery terminal, and then disconnect the connectors.

4. PRECAUTIONS FOR CAN COMMUNICATION

- (a) Perform troubleshooting for the communication line problems when DTCs of the CAN communication system are output. Be sure to start troubleshooting the power steering system after confirming that the CAN communication system is normal.
- (b) Since the CAN communication line has a specific length and route, it cannot be repaired temporarily with a bypass wire, etc.
-

Title: POWER ASSIST SYSTEMS: POWER STEERING SYSTEM: SYSTEM DESCRIPTION (2013 FR-S)		

SYSTEM DESCRIPTION

1. DESCRIPTION

- The power steering system generates torque through the operation of the motor and reduction gear installed on the column shaft in order to assist steering effort.
- The power steering ECU determines directions and the amount of assisting power in accordance with vehicle speed signals and signals from the torque sensor built into the steering column assembly. As a result, the power steering ECU adjusts the steering effort so that it is lighter during low speed driving and heavier during high speed driving.
- When there is a power supply voltage drop that may result in an increase in required steering effort, the power steering system has a function that warns the driver by illuminating the EPS warning light.

(a) Power steering ECU:

The power steering ECU calculates assisting power based on steering torque signals from the torque sensor and vehicle speed signals from the skid control ECU.

(b) Torque sensor:

The torque sensor detects the steering effort generated when the steering wheel is turned and converts it to an electrical signal.

(c) Power steering motor:

The power steering motor is activated by the current from the power steering ECU and generates torque to assist the steering effort.

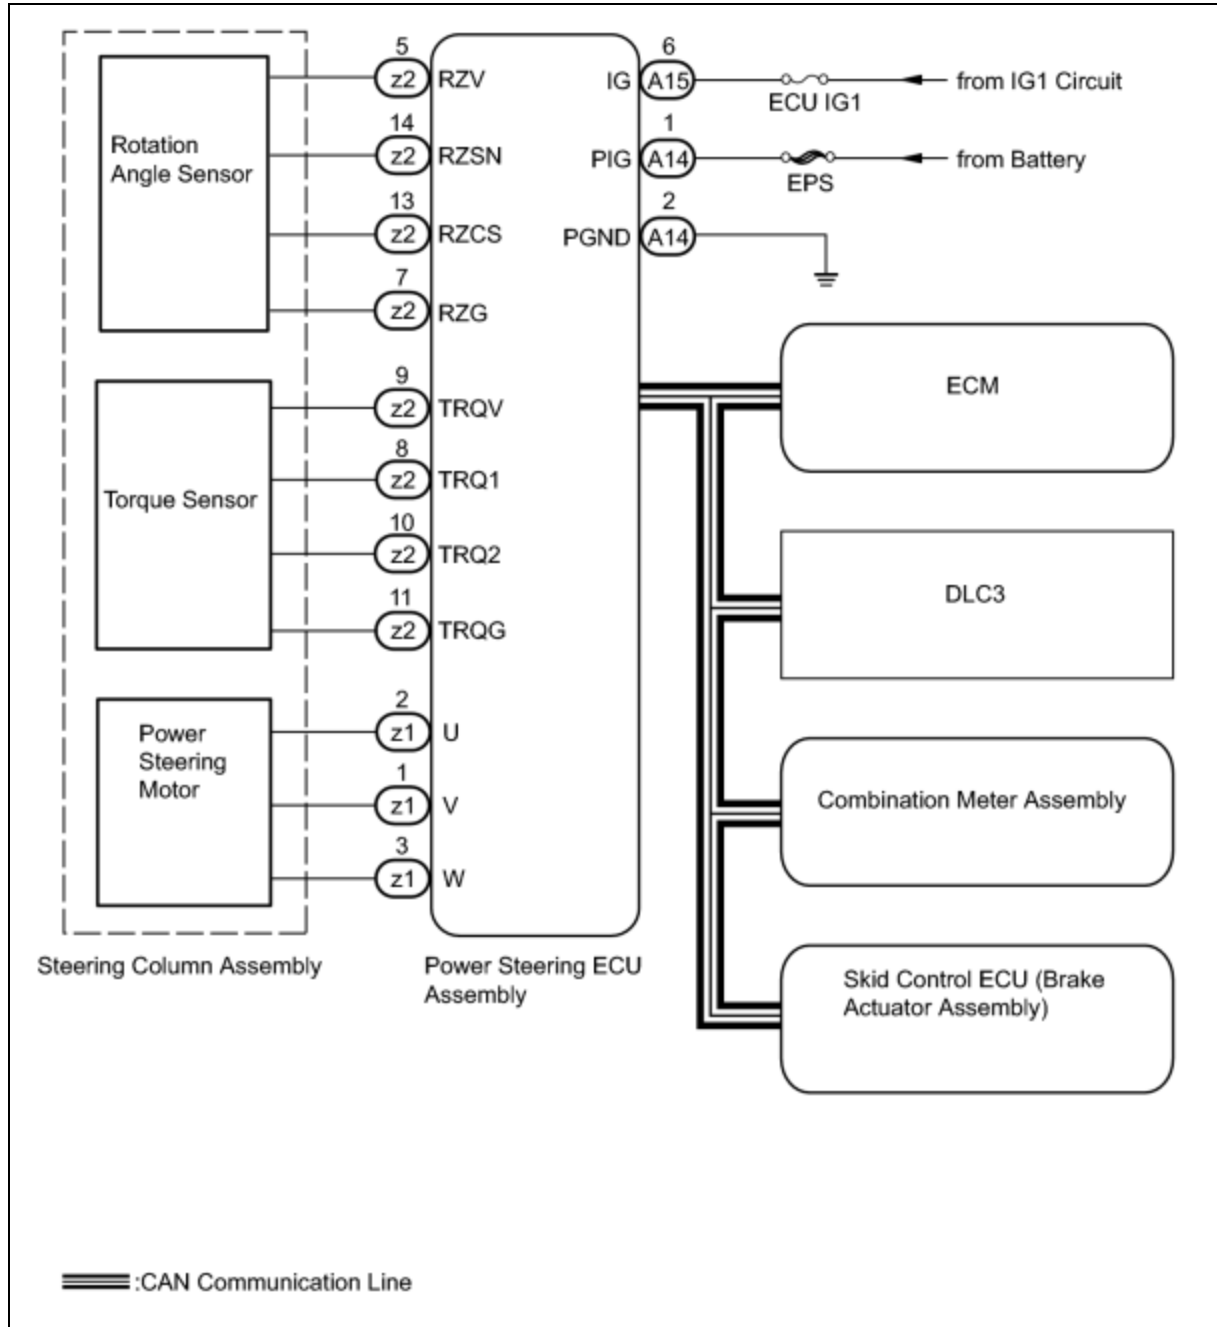

(d) Motor rotation angle sensor:

The motor rotation angle sensor consists of the resolver sensor, which excels in reliability and durability. The rotation angle sensor detects the rotation angle of the motor and outputs it to the power steering ECU. As a result, it ensures efficient EPS control.

TERMINALS OF ECU

1. CHECK POWER STEERING ECU

Text in Illustration

*a	Component without harness connected (Power Steering ECU Assembly)	-	-
----	--	---	---

HINT:

As connector z1 uses a lock lever, each terminal cannot be checked while the connector is still connected to the power steering ECU.

TERMINAL NO. (SYMBOL)	TERMINAL DESCRIPTION
z1-1 (V)	V phase motor output
z1-2 (U)	U phase motor output
z1-3 (W)	W phase motor output

(a) Measure the voltage and resistance according to the value(s) in the table below.

TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
A14-1 (PIG) - A14-2 (PGND)	W - B	Motor power supply	Always	9 to 16 V
A14-2 (PGND) - Body ground	B - Body ground	Power ground	Always	Below 1 Ω
A15-1 (CANH) - A15-7 (CANL)	B - W	CAN communication line	Ignition switch off	57 to 63 Ω

A15-6 (IG) - A14-2 (PGND)	G-W - B	IG power supply	Ignition switch ON	9 to 16 V
z2-5 (RZV) - A14-2 (PGND)	R - B	Rotation angle sensor excitation output signal	Engine running, steering wheel being turned	0.68 to 4.42 V
z2-7 (RZG) - A14-2 (PGND)	B - B	Rotation angle sensor excitation circuit ground	Always	Below 1 Ω
z2-13 (RZCS) - A14-2 (PGND)	L - B	Rotation angle sensor COS aspect input signal	Engine running, steering wheel being turned	0.68 to 4.42 V
z2-14 (RZSN) - A14-2 (PGND)	Y - B	Rotation angle sensor SIN aspect input signal	Engine running, steering wheel being turned	0.68 to 4.42 V
z2-8 (TRQ1) - z2-11 (TRQG)	W - B	Torque sensor signal 1	Engine running, steering wheel not turned (without load)	2.3 to 2.7 V
			Engine running, steering wheel turned to right with vehicle stopped	2.3 to 3.8 V
			Engine running, steering wheel turned to left with vehicle stopped	1.2 to 2.7 V
z2-9 (TRQV) - z2-11 (TRQG)	R - B	Torque sensor power supply	Ignition switch ON	4.5 to 5.5 V
z2-10 (TRQ2) - z2-11 (TRQG)	Y - B	Torque sensor signal 2	Engine running, steering wheel not turned (without load)	2.3 to 2.7 V
			Engine running, steering wheel turned to right with vehicle stopped	1.2 to 2.7 V
			Engine running, steering wheel turned to left with vehicle stopped	2.3 to 3.8 V
z2-11 (TRQG) - Body ground	B - Body ground	Torque sensor ground	Always	Below 1 Ω

If the result is not as specified, the ECU may have a malfunction.

Title: STEERING COLUMN: STEERING COLUMN ASSEMBLY: DISASSEMBLY (2013 FR-S)		

DISASSEMBLY

NOTICE:

- When using a vise, do not overtighten it.
- Do not drop the steering column assembly, strike it with tools or subject it to impacts.
- If the steering column assembly is subjected to an impact, replace it with a new one.
- Do not pull the wire harness of the steering column assembly.
- Do not allow any moisture to come into contact with the steering column assembly.
- Do not loosen any bolts not mentioned in the procedure.

1. REMOVE STEERING COLUMN UPPER WITH SWITCH BRACKET ASSEMBLY

- Using a center punch, mark the center of the 2 tapered-head bolts.
- Using a 3 to 4 mm (0.118 to 0.157 in.) diameter drill bit, drill a hole in each tapered-head bolt.

- Using a screw extractor, remove each tapered-head bolt, and then remove the steering column upper with switch bracket assembly from the steering column assembly.

2. REMOVE TRANSPONDER KEY AMPLIFIER

- Slide the transponder key amplifier, disengage the 2 claws and then remove the transponder key amplifier as shown in the illustration.

3. REMOVE UN-LOCK WARNING SWITCH ASSEMBLY

(a) Insert the key.

(b) Disengage the 2 claws and slide the unlock warning switch assembly to remove it as shown in the illustration.

4. REMOVE KEY INTERLOCK SOLENOID (for Automatic Transmission)

(a) Remove the 2 screws and the key interlock solenoid from the steering column upper bracket assembly.

(b) Disengage the clamp.

5. REMOVE IGNITION SWITCH LOCK CYLINDER ASSEMBLY

(a) Turn the ignition switch lock cylinder assembly to the ACC position.

Text in Illustration

*a	LOCK
*b	ACC

(b) Insert a screwdriver into the hole of the steering column upper bracket assembly as shown in the illustration. Pull the ignition switch lock cylinder assembly until its claw contacts the stopper of the steering column upper bracket assembly.

Text in Illustration

*1	Claw
*2	Stopper
	Push
	Pull

NOTICE:

Make sure to pull the ignition switch lock cylinder assembly until its claw contacts the stopper of the steering column upper bracket assembly. Failure to do so will affect later work operations.

(c) Insert a screwdriver into the hole of the steering column upper bracket assembly. Tilt the screwdriver as shown in the illustration to disengage the claw of the ignition switch lock cylinder assembly, and pull out the ignition switch lock cylinder assembly from the steering column upper bracket assembly.

Text in Illustration

*1	Claw
*2	Stopper
*a	Claw disengaged
*b	Driver Insertion Hole
	Tilt
	Pull out

6. REMOVE IGNITION OR STARTER SWITCH ASSEMBLY

- (a) Remove the 2 screws and the ignition or starter switch assembly from the steering column upper bracket assembly.

Last Modified: 3-27-2012	6.4 G	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000001NM101CX
Title: STEERING COLUMN: STEERING COLUMN ASSEMBLY: INSPECTION (2013 FR-S)		

INSPECTION

NOTICE:

When using a vise, do not overtighten it.

1. INSPECT PRELOAD

- (a) Secure the steering column assembly in a vise using aluminum plates and wooden block as shown in the illustration.

Text in Illustration

*1	Wooden Block
----	--------------

NOTICE:

- Do not overtighten the vise, as the steering column assembly may become deformed.
- Support the steering column assembly with a wooden block or similar item to ensure that it does not fall.

- (b) Install the 2 service nuts to the steering main shaft.

Text in Illustration

*1	Service Nut
----	-------------

Recommended service nut:

Thread diameter

12.0 mm (0.472 in.)

Thread pitch

1.25 mm (0.0492 in.)

- (c) Tighten the 2 service nuts each other to lock them.

NOTICE:

Do not apply excess torque to the service nuts by using a tool such as an impact wrench.

HINT:

These nuts are installed to turn the steering main shaft. They should be removed after inspecting the steering main shaft rotating torque.

- (d) Using a torque wrench, turn the main shaft and measure the preload.

Preload:

1.6 to 2.1 N*m (16.3 to 21.4 kgf*cm, 14.2 to 18.6 in.*lbf)

If the preload is not as specified, replace the steering column assembly with a new one.

2. INSPECT STEERING LOCK OPERATION

(a) Check that the steering lock mechanism is activated when the key is removed.

(b) Check that the steering lock mechanism is deactivated when the key is inserted and turned to the ACC position.

Text in Illustration

*a	LOCK
*b	ACC

HINT:

If there is any abnormality, replace the ignition switch lock cylinder assembly or steering column upper bracket assembly.

3. INSPECT STEERING COLUMN ASSEMBLY

(a) Check that the 2 capsules are securely installed to the steering column assembly as shown in the illustration.

OK:

5.0 mm (0.1969 in.) or more

Text in Illustration

*1	Capsule
----	---------

If the capsules are not positioned as specified, replace the steering column assembly with a new one.

(b) Check the 2 capsules for deformation and damage.

If either of the capsules is deformed, loose, missing or damaged, replace the steering column assembly with a new one.

4. INSPECT STEERING INTERMEDIATE SHAFT ASSEMBLY

(a) Check for play

(1) Check that there is no play at the universal joint.

OK:

No play

HINT:

If the result is not as specified, replace the steering intermediate shaft assembly with a new one.

(b) Turning torque

(1) Hold the steering intermediate shaft assembly in a vise with the yoke on the rack and pinion power steering gear assembly side facing upward.

(2) Using a push and pull gauge, measure the turning torque in the both directions.

Torque:

6.6 N*m (66 kgf*cm, 58 in.*lbf) or less

HINT:

If the result is not as specified, replace the steering intermediate shaft assembly with a new one.

(3) Hold the steering intermediate shaft assembly in a vise with the yoke on the steering column assembly side facing upward.

(4) Using a push and pull gauge, measure the turning torque in the both directions.

Torque:

6.0 N*m (61 kgf*cm, 53 in.*lbf) or less

HINT:

If the result is not as specified, replace the steering intermediate shaft assembly with a new one.

Last Modified: 3-27-2012	6.4 A	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000WAB094X
Title: STEERING COLUMN: STEERING COLUMN ASSEMBLY: INSTALLATION (2013 FR-S)		

INSTALLATION

1. INSPECT STEERING COLUMN ASSEMBLY INFO

2. INSTALL STEERING COLUMN ASSEMBLY

- (a) Install the steering column assembly with the 2 nuts and new bolt.

Torque: 40 N·m (408 kgf·cm, 30ft·lbf)

NOTICE:

When installing the steering column assembly, be careful that the wire harness does not interfere with or is not pinched between other parts.

- (b) Engage the clamp.

- (c) Connect the 2 connectors to the power steering ECU.

(1) As shown in the illustration, return the lock lever to its original position to connect the connector and securely push in the lock of the lock lever.

- (d) Connect the each connector and engage the wire harness clamps to the steering column assembly.

Text in Illustration

*a	Return the lock lever
*b	Push in the lock

3. INSTALL STEERING INTERMEDIATE SHAFT ASSEMBLY

- (a) Pass the steering intermediate shaft assembly through the hole in the body from the inside of the cabin.

- (b) Connect the steering intermediate shaft assembly to the rack and pinion power steering gear assembly.

Text in Illustration

*1	Matchmark
----	-----------

NOTICE:

Align the matchmarks on the steering intermediate shaft assembly and the rack and pinion power steering gear assembly.

- (c) Install the new bolt.

Torque: 35 N·m (357 kgf·cm, 26ft·lbf)

- (d) Install the steering intermediate shaft assembly to the steering column assembly.

Text in Illustration

*1	Matchmark
----	-----------

NOTICE:

Align the matchmarks on the steering intermediate shaft assembly and the steering column assembly.

- (e) Install the new bolt.

Torque: 35 N·m (357 kgf·cm, 26ft·lbf)

- (f) Engage the 4 claws and install the dust seal.

4. INSTALL TURN SIGNAL SWITCH ASSEMBLY WITH SPIRAL CABLE SUB-ASSEMBLY

NOTICE:

- Do not replace the spiral cable with the battery connected and turn the ignition switch to ON.
- Do not rotate the spiral cable without the steering wheel with the battery connected and turn the ignition switch to ON.
- Ensure that the steering wheel is installed and aligned straight when inspecting the steering sensor.

- (a) With the clamp loosened, install the turn signal switch assembly with spiral cable sub-assembly to the steering column assembly.
- (b) Engage the claw on the turn signal switch assembly with spiral cable sub-assembly to the steering column assembly and tighten the clamp.
- (c) Connect the each connector to the turn signal switch assembly with spiral cable sub-assembly.

5. INSTALL UPPER STEERING COLUMN COVER

- (a) Engage the 2 claws to install the upper steering column cover.

6. INSTALL LOWER STEERING COLUMN COVER

- (a) Engage the 6 claws to install the lower steering column cover.
- (b) Install the 2 screws.

7. INSTALL UPPER INSTRUMENT PANEL METER ORNAMENT **INFO**

Title: STEERING COLUMN: STEERING COLUMN ASSEMBLY: REASSEMBLY (2013 FR-S)		

REASSEMBLY

NOTICE:

- When using a vise, do not overtighten it.
- Do not drop the steering column assembly, strike it with tools or subject it to impacts.
- If the steering column assembly is subjected to an impact, replace it with a new one.
- Do not pull the wire harness of the steering column assembly.
- Do not allow any moisture to come into contact with the steering column sub-assembly.
- Do not loosen any bolts not mentioned in the procedure.

1. INSTALL IGNITION OR STARTER SWITCH ASSEMBLY

- (a) Install the ignition or starter switch assembly with the 2 screws to the steering column upper bracket assembly.

2. INSTALL IGNITION SWITCH LOCK CYLINDER ASSEMBLY

- (a) Make sure that the ignition switch lock cylinder assembly is in the ACC position.

Text in Illustration

*a	LOCK
*b	ACC

- (b) Install the ignition switch lock cylinder assembly to the steering column upper bracket assembly.
(c) Make sure that the ignition switch lock cylinder assembly is securely installed.

3. INSTALL KEY INTERLOCK SOLENOID (for Automatic Transmission)

(a) Engage the clamp.

(b) Install the 2 screws and the key interlock solenoid to the steering column upper bracket assembly.

4. INSTALL UN-LOCK WARNING SWITCH ASSEMBLY

(a) Slide the unlock warning switch assembly and engage the 2 claws to install the unlock warning switch assembly to the steering column upper bracket assembly as shown in the illustration.

5. INSTALL TRANSPONDER KEY AMPLIFIER

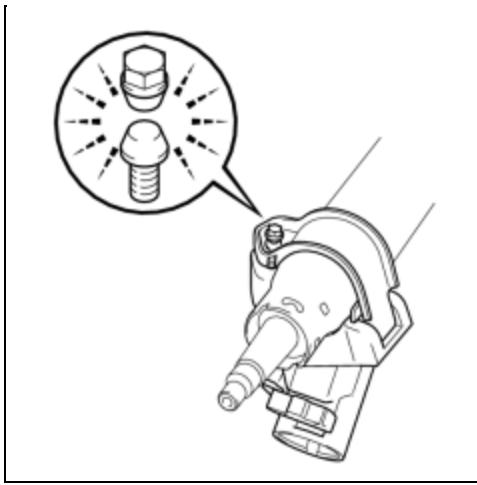

(a) Align the transponder key amplifier with the steering column upper bracket assembly. Tilt the transponder key amplifier slightly and slide it into position.

(b) Push the transponder key amplifier, and engage the 2 claws to install the transponder key amplifier to the steering column upper bracket assembly.

6. INSPECT STEERING LOCK OPERATION INFO

7. INSTALL STEERING COLUMN UPPER WITH SWITCH BRACKET ASSEMBLY

(a) Secure the steering column assembly in a vise.

(b) Temporarily install the steering column upper with switch bracket assembly to the steering column assembly with new tapered-head bolt.

(c) Tighten the tapered-head bolt until the bolt head break off.

3. REMOVE NO. 1 ENGINE UNDER COVER [INFO](#)

4. REMOVE NO. 2 ENGINE UNDER COVER [INFO](#)

5. REMOVE STEERING WHEEL ASSEMBLY

[INFO](#)

6. REMOVE INSTRUMENT SIDE PANEL

(a) Using a moulding remover, disengage the claw and 4 clips and remove the instrument side panel.

Text in Illustration

*1	Moulding Remover
----	------------------

7. REMOVE NO. 1 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY [INFO](#)

8. REMOVE LOWER INSTRUMENT PANEL REINFORCEMENT SUB-ASSEMBLY [INFO](#)

9. REMOVE CENTER INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY [INFO](#)

10. REMOVE METER HOOD SUB-ASSEMBLY [INFO](#)

11. REMOVE UPPER INSTRUMENT PANEL METER ORNAMENT [INFO](#)

12. REMOVE LOWER STEERING COLUMN COVER

(a) Remove the 2 screws.

(b) Disengage the 6 claws and remove the lower steering column cover.

13. REMOVE UPPER STEERING COLUMN COVER

(a) Disengage the 2 claws to remove the upper steering column cover.

14. REMOVE TURN SIGNAL SWITCH ASSEMBLY WITH SPIRAL CABLE SUB-ASSEMBLY

(a) Disconnect the each connector from the turn signal switch assembly with spiral cable sub-assembly.

(b) Using pliers, loosen the clamp.

(c) With the clamp loosened, use a screwdriver to disengage the claw, and remove the turn signal switch assembly with spiral cable sub-assembly from the steering column assembly.

Text in Illustration

*1	Clamp
----	-------

*2	Claw

NOTICE:

- Do not replace the spiral cable with the battery connected and turn the ignition switch to ON.
- Do not rotate the spiral cable with the battery connected and turn the ignition switch to ON.
- Ensure that the steering wheel is installed and aligned straight when inspecting the steering sensor.

15. REMOVE STEERING INTERMEDIATE SHAFT ASSEMBLY

- (a) Put matchmarks on the steering intermediate shaft assembly and the steering column assembly.

Text in Illustration

*1	Matchmark
----	-----------

- (b) Remove the bolt and separate the steering intermediate shaft assembly from the steering column assembly.

- (c) Put matchmarks on the steering intermediate shaft assembly and the rack and pinion power steering gear assembly.

Text in Illustration

*1	Matchmark
----	-----------

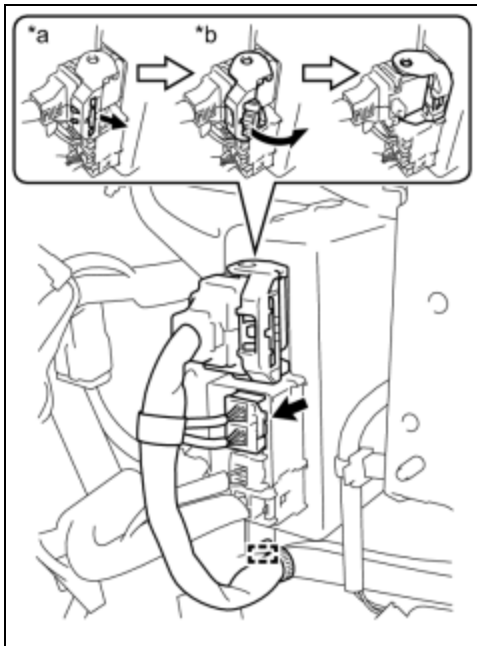

- (d) Remove the bolt and separate the steering intermediate shaft assembly from the rack and pinion power steering gear assembly.

- (e) Disengage the 4 claws from the exterior of the vehicle

cabin, and remove the steering intermediate shaft assembly.

16. REMOVE STEERING COLUMN ASSEMBLY

(a) Disconnect the 2 connectors from the power steering ECU.

(1) As shown illustration, pull out the lock of the lock lever and turn the lock lever to disconnect the connector.

Text in Illustration

*a	Pull out the lock
*b	Turn the lock lever

(b) Disengage the clamp.

(c) Disconnect the each connector and disengage the wire harness clamps from the steering column assembly.

(d) Remove the bolt and 2 nuts to remove the steering column assembly.

HINT:

When pulling the bolts out, lifting the motor section of the steering column assembly and tilting the steering column assembly will make it easier to remove the bolts.

Model Year: 2013	Model: FR-S	Doc ID: RM000001R4405BX
Title: STEERING COLUMN: STEERING SYSTEM: ADJUSTMENT (2013 FR-S)		

ADJUSTMENT

1. STEERING WHEEL OFF CENTER ADJUSTMENT PROCEDURE

- (a) Inspect steering wheel off center.
- (1) Turn the steering wheel to the center position.

- (2) Apply masking tape to the top center of the steering wheel and upper steering column cover.

Text in Illustration

*1	Steering Wheel
*2	Upper Steering Column Cover
*a	Masking Tape

- (3) Drive the vehicle in a straight line for 100 m (328 ft.) at a constant speed of 56 km/h (35 mph), while holding the steering wheel to maintain the course.

- (4) Draw a line on the masking tape as shown in the illustration.

Text in Illustration

*1	Upper Steering Column Cover
*2	Steering Wheel
*a	Marked Line

- (5) Turn the steering wheel to the center position.

HINT:

Look at the upper surface of the steering wheel, steering spoke and SRS airbag line to find the center position.

(6) Draw a new line on the masking tape on the steering wheel as shown in the illustration.

Text in Illustration

*1	Upper Steering Column Cover
*2	Steering Wheel
*a	Marked Line

(7) Measure the distance between the 2 lines on the masking tape on the steering wheel.

(8) Convert the measured distance to steering angle.

HINT:

- Measured distance 1 mm (0.0394 in.) = Steering angle of approximately 1 degree.
- Make a note of the steering angle.

(b) Adjust the steering angle.

(1) Put matchmarks on both sides of the tie rod assembly and steering rack end sub-assembly respectively.

Text in Illustration

*1	Matchmark
----	-----------

(2) Using a paper gauge, measure the distance from the RH and LH tie rod ends to the rack end screws.

HINT:

- Measure both RH and LH sides.
- Make a note of the measured values.

(3) Remove the steering rack boot clips from both sides of

the rack boots.

(4) Loosen the RH and LH lock nuts.

(5) Turn the RH and LH rack ends by the same amount (but in different directions) according to the steering angle.

HINT:

One 360 degree turn of rack end (1.5 mm (0.0591 in.) horizontal movement) equals to 12 degrees of steering angle.

(6) Tighten the RH and LH lock nuts to the specified torque.

Torque: 85 N·m (869 kgf·cm, 63ft·lbf)

NOTICE:

Make sure that the difference in length between the RH and LH tie rod ends and rack end screws is within 1.5 mm (0.0591 in.).

(7) Install the RH and LH boot clips.

Title: STEERING COLUMN: STEERING SYSTEM: ON-VEHICLE INSPECTION (2013 FR-S)		

ON-VEHICLE INSPECTION

1. INSPECT STEERING WHEEL FREE PLAY

- (a) Stop the vehicle and position the front wheels straight ahead.
- (b) Gently turn the steering wheel right and left, and check steering wheel free play.

Maximum free play:

30 mm (1.18 in.)

HINT:

If the free play exceeds the maximum, check the steering system [INFO](#) .

Last Modified: 3-27-2012	6.4 L	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000WB506OX
Title: STEERING COLUMN: STEERING SYSTEM: PRECAUTION (2013 FR-S)		

PRECAUTION

1. HANDLING PRECAUTIONS FOR STEERING SYSTEM

- (a) Care must be taken when replacing parts. Incorrect replacement may affect the performance of the steering system and result in a driving hazard.

2. HANDLING PRECAUTIONS FOR SRS AIRBAG SYSTEM

- (a) This vehicle is equipped with a Supplemental Restraint System (SRS). Failure to carry out service operations in the correct sequence could cause the SRS to unexpectedly deploy during servicing. This may cause a serious accident. Before servicing (including inspection, replacement, removal, and installation of parts), be sure to read the precautionary notices for Supplemental Restraint System **INFO** .

3. HANDLING PRECAUTIONS FOR STEERING COLUMN (When handling the steering column assembly)

- (a) Avoid any impact to the steering column assembly, especially to the torque sensor. Replace the steering column assembly with a new one if it is dropped or subjected to any severe impacts.
- (b) Do not pull the wire harness when moving the steering column assembly.
- (c) When the steering column assembly has been replaced, perform the rotation angle sensor initialization and torque sensor zero point calibration **INFO** .
- (d) When the steering column assembly has been replaced, perform the VSC sensor neutral memorization **INFO** .
- (e) Do not release the tilt lever when the steering column assembly is not installed on the vehicle.

4. HANDLING PRECAUTIONS FOR STEERING COLUMN (When disconnecting or reconnecting the connectors)

- (a) Before disconnecting the connectors related to the power steering system, turn the ignition switch to ON, center the steering wheel, turn the ignition switch off, and then disconnect the connectors.
- (b) Before reconnecting the connectors related to the power steering system, ensure that the ignition switch is off. Then center the steering wheel and turn the ignition switch to ON.

NOTICE:

Do not turn the ignition switch to ON when the steering wheel is not centered.

- (c) If the above operations are not carried out properly, the steering center point (zero point) will deviate, which may lead to a difference in steering effort between turning right and left. If there is a difference in steering effort between turning right and left, perform the rotation angle sensor initialization and torque sensor zero point calibration **INFO** .

5. HANDLING PRECAUTION FOR SPIRAL CABLE

- (a) Do not replace the spiral cable with the battery connected and turn the ignition switch to ON.
- (b) Do not rotate the spiral cable without the steering wheel with the battery connected and turn the ignition switch to ON.
- (c) Ensure that the steering wheel is installed and aligned straight when inspecting the steering sensor.
- (d) Be sure that the spiral cable with sensor sub-assembly is in the center position during installation and when removing and installing the steering wheel **INFO** .

CAUTION:

If the steering wheel is turned without the spiral cable installed in the neutral position, the cable may break.

Title: STEERING COLUMN: STEERING WHEEL: REMOVAL (2013 FR-S)		

REMOVAL

NOTICE:

- Do not replace the spiral cable with the battery connected and the ignition switch ON.
- Do not rotate the spiral cable without the steering wheel with the battery connected and the ignition switch ON.
- Ensure that the steering wheel is installed and aligned straight when inspecting the steering sensor.

1. PRECAUTION

CAUTION:

Be sure to read Precaution thoroughly before servicing INFO.

NOTICE:

After turning the ignition switch off, waiting time may be required before disconnecting the cable from the negative (-) battery terminal. Therefore, make sure to read the disconnecting the cable from the negative (-) battery terminal notices before proceeding with work INFO.

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

The power window system utilizes a mechanism that the door glass moves down slightly when the door is opened, and that the glass moves up when closing the door in order to prevent the door molding from being damaged. When the battery negative (-) terminal needs to be disconnected for servicing, fully open the driver and passenger door glasses in advance.

3. ALIGN FRONT WHEELS FACING STRAIGHT AHEAD

4. REMOVE HORN BUTTON ASSEMBLY INFO

5. REMOVE STEERING WHEEL ASSEMBLY

(a) Remove the steering wheel assembly set nut.

Text in Illustration

*1	Matchmark
----	-----------

- (b) Put matchmarks on the steering wheel assembly and steering main shaft.
- (c) Disconnect the connectors from the spiral cable sub-assembly and steering wheel assembly.

(d) Using SST, remove the steering wheel assembly.

Text in Illustration

*a	Turn
*b	Hold

SST: 09950-50013

Title: STEERING GEAR / LINKAGE: STEERING GEAR: DISASSEMBLY (2013 FR-S)		

DISASSEMBLY

1. SECURE RACK AND PINION POWER STEERING GEAR ASSEMBLY

- (a) Using SST, secure the rack and pinion power steering gear assembly in a vise.

SST: 09612-00012

Text in Illustration

*1	Protective Tape
----	-----------------

HINT:

Tape SST before use.

2. REMOVE TIE ROD END SUB-ASSEMBLY LH

- (a) Put matchmarks on the tie rod end sub-assembly LH and the steering rack end sub-assembly.

Text in Illustration

*1	Matchmark
----	-----------

- (b) Remove the tie rod end sub-assembly LH and lock nut.

3. REMOVE TIE ROD END SUB-ASSEMBLY RH

HINT:

Use the same procedure as for the LH side.

4. REMOVE STEERING RACK BOOT CLIP

HINT:

Use the same procedure for both the LH side and RH side.

- (a) Using pliers, remove the steering rack boot clip.

5. REMOVE NO. 1 STEERING RACK BOOT CLAMP

HINT:

Use the same procedure for both the LH side and RH side.

(a) Using a screwdriver, remove the No. 1 steering rack boot clamp.

NOTICE:

Be careful not to damage the No. 1 steering rack boot.

6. REMOVE NO. 1 STEERING RACK BOOT

NOTICE:

If the No. 1 steering rack boot is fissured, damaged or deteriorated, replace it with a new one.

HINT:

Use the same procedure for both the LH side and RH side.

7. REMOVE STEERING RACK END SUB-ASSEMBLY

(a) Using SST, remove the steering rack end sub-assembly.

SST: 09922-10010

Text in Illustration

*a	LH Side	*b	RH Side
*c	Turn	*d	Hold

NOTICE:

Turn SST in the direction as shown in the illustration.

NOTICE:

Turn SST in the direction as shown in the illustration.

8. REMOVE STEERING RACK GUIDE

(a) Using SST, remove the lock nut.

SST: 09922-10010

NOTICE:

Turn SST in the direction as shown in the illustration.

(b) Using SST, remove the steering rack guide spring cap.

SST: 09631-10021

(c) Remove the steering rack guide and the steering rack guide spring.

Last Modified: 3-27-2012	6.4 G	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000001S2N02GX
Title: STEERING GEAR / LINKAGE: STEERING GEAR: INSPECTION (2013 FR-S)		

INSPECTION

1. INSPECT TIE ROD END SUB-ASSEMBLY

- (a) Secure the tie rod assembly in a vise.

NOTICE:

Do not overtighten the vise.

- (b) Turn the ball joint back and forth.

OK:

There is no unusual resistance or play while turning.

HINT:

- If the result is not as specified, remove the tie rod end sub-assembly with a new one.
- If the dust seal is fissured, damaged or deteriorated, replace it with a new one.

2. INSPECT TOTAL PRELOAD

NOTICE:

Inspect the total preload in a no-load condition by removing the tie rod assembly RH and LH, and steering rack boots.

- (a) Install SST to the pinion shaft and turn it left and right 5 times or more.

SST: 09616-00011

- (b) Set a torque wrench to SST and turn the pinion shaft continuously at a rate of 4 to 6 seconds per turn to inspect the total preload of the steering gear assembly.

Standard Preload:

0.9 to 1.6 N*m (9.2 to 16.3 kgf*cm, 8.0 to 14.2 in.*lbf)

NOTICE:

Inspect the total preload around the steering rack center position.

HINT:

If the total preload is not within the specified range, adjust the total preload.

3. ADJUST TOTAL PRELOAD

- (a) Temporarily install the rack ends sub-assembly RH and LH.

- (b) Install the steering rack guide and steering rack guide spring to the steering rack housing.
- (c) Apply the three bond to the screw part of steering rack guide spring cap and steering rack housing.
- (d) Temporarily install the steering rack guide spring cap.

- (e) Using SST, tighten the steering rack guide spring cap so that the rotational torque of the pinion shaft reaches the standard value.

SST: 09631-10021

SST: 09616-00011

Torque: Preload (turning):

0.9 to 1.6 N*m (9.2 to 16.3 kgf*cm, 8.0 to 14.2 in.*lbf)

- (f) Apply the three bond to the screw part of lock nut.

- (g) Using SST, hold the steering rack guide spring cap and tighten the lock nut.

SST: 09631-10021

SST: 09922-10010

Torque: 60 N·m (612 kgf·cm, 44ft·lbf)

NOTICE:

- Use the formula to calculate special torque values for situations where SST is combined with a torque wrench
- Turn SST in the direction as shown in the illustration.

- (h) Set a torque wrench to SST and turn the pinion shaft continuously at a rate of 4 to 6 seconds per turn to inspect the total preload of the steering gear assembly.

SST: 09616-00011

Standard Preload:

0.9 to 1.6 N*m (9.2 to 16.3 kgf*cm, 8.0to 14.2 in.*lbf)

NOTICE:

Inspect the total preload around the steering rack center position.

Last Modified: 3-27-2012	6.4 A	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000001S2M03AX
Title: STEERING GEAR / LINKAGE: STEERING GEAR: INSTALLATION (2013 FR-S)		

INSTALLATION

1. INSTALL RACK AND PINION POWER STEERING GEAR ASSEMBLY

- (a) Install the rack and pinion power steering gear assembly with the 2 bolts.

Torque: 120 N·m (1220 kgf·cm, 89ft·lbf)

HINT:

Confirm that the rack is positioned in neutral.

2. CONNECT STEERING INTERMEDIATE SHAFT ASSEMBLY

- (a) Align the matchmarks and install the steering intermediate shaft to the rack and pinion power steering gear assembly.

Text in Illustration

* 1	Matchmark
-----	-----------

- (b) Install the new bolt.

Torque: 35 N·m (357 kgf·cm, 26ft·lbf)

3. CONNECT TIE ROD END SUB-ASSEMBLY LH

- (a) Connect the tie rod end sub-assembly LH to the steering knuckle with the nut.

Torque: 27 N·m (275 kgf·cm, 20ft·lbf)

- (b) Install a new cotter pin.

NOTICE:

Further tighten the nut up to 60° if the holes for the cotter pin are not aligned.

4. CONNECT TIE ROD END SUB-ASSEMBLY RH

HINT:

Use the same procedure as for the LH side.

5. INSTALL FRONT STABILIZER BAR

- (a) Install the front stabilizer bar together with the rear body mounting cushion sub-assembly LH and RH to the front suspension cross member with the new 8 bolts.

Torque: 60 N·m (612 kgf·cm, 44ft·lbf)

6. CONNECT FRONT STABILIZER LINK ASSEMBLY LH

- (a) Connect the front stabilizer link assembly LH to the front stabilizer bar with the nut.

Torque: 46 N·m (469 kgf·cm, 34ft·lbf)

If the ball joint turns together with the nut, use a hexagon wrench to hold the stud bolt.

7. CONNECT FRONT STABILIZER LINK ASSEMBLY RH

HINT:

Use the same procedure as for the LH side.

8. INSTALL NO. 2 ENGINE UNDER COVER INFO

9. INSTALL NO. 1 ENGINE UNDER COVER INFO

10. INSTALL FRONT WHEELS

Torque: 120 N·m (1220 kgf·cm, 89ft·lbf)

11. INSPECT AND ADJUST FRONT WHEEL ALIGNMENT

INFO

12. INSPECT STEERING WHEEL CENTER POINT

13. PERFORM MEMORIZATION

HINT:

Perform VSC sensor neutral memorization INFO .

Title: STEERING GEAR / LINKAGE: STEERING GEAR: REASSEMBLY (2013 FR-S)		

REASSEMBLY

1. INSTALL STEERING RACK GUIDE

- Apply grease to the steering rack guide spring and the contact surface of the rack guide.
- Install the rack guide and the steering rack guide spring.
- Apply three bond to 2 or 3 threads of the steering rack guide spring cap.
- Temporarily install the steering rack guide spring cap.

2. ADJUST TOTAL PRELOAD INFO

3. INSTALL STEERING RACK END SUB-ASSEMBLY

- Using SST, install the steering rack end sub-assembly.

SST: 09922-10010

Text in Illustration

*a	LH Side	*b	RH Side
*c	Turn	*d	Hold

HINT:

Using SST, hold the steering rack and install the steering rack end sub-assembly.

Torque: 103 N·m (1050 kgf·cm, 76ft·lbf)

NOTICE:

- Use the formula to calculate special torque values for situations where SST is combined with a torque wrench INFO.
- Turn SST in the direction as shown in the illustration.
- Fix the steering rack firmly in place.

4. INSTALL NO. 1 STEERING RACK BOOT

HINT:

Use the same procedure for both the LH side and RH side.

- (a) Wipe the old grease off of the No. 1 steering rack boot and rack end mating groove.

- (b) Apply silicone grease to the inside of the small opening of a new No. 1 steering rack boot.

- (c) Install the No. 1 steering rack boot to the groove on the rack housing.

NOTICE:

- Be careful not to damage or twist the boot.
- Make sure that the boot is free of rust and foreign matter.

5. INSTALL NO. 1 STEERING RACK BOOT CLAMP

HINT:

Use the same procedure for both the LH side and RH side.

- (a) Install the new No. 1 steering rack boot clamp to the No. 1 steering rack boot in such a way that the staked part of the clamp is positioned within the range, as shown in the illustration.

Text in Illustration

*a	150°
----	------

- (b) Using SST, tighten a new No. 1 steering rack boot clamp as shown in the illustration.

SST: 09521-24010

Clearance:

2.0 mm (0.079 in.) or less

NOTICE:

- Be careful not to damage the No. 1 steering rack boot.
- If the No. 1 steering rack boot is fissured, damaged or deteriorated, replace it with a new one.

6. INSTALL STEERING RACK BOOT CLIP

HINT:

Use the same procedure for both the LH side and RH side.

- (a) Using pliers, install the steering rack boot clip.

7. INSPECT RACK AND PINION POWER STEERING GEAR ASSEMBLY

- (a) Using SST, rotate the pinion shaft to see if both the left and the right steering rack boots expand and contract smoothly.

SST: 09616-00011

NOTICE:

Set the pinion shaft at the neutral position after the inspection.

HINT:

If the operation cannot be done as specified, use a new steering rack boot clamp and reinstall the steering rack boots.

8. INSTALL TIE ROD END SUB-ASSEMBLY LH

- (a) Temporarily tighten the lock nut and tie rod end sub-assembly LH to the steering rack end sub-assembly until the matchmarks are aligned.

Text in Illustration

*1	Matchmark
----	-----------

HINT:

After adjusting the front wheel alignment, securely tighten the lock nut.

Temporarily tighten - Torque: 5.0 N·m (51 kgf·cm, 44in·lbf)

Securely tighten - Torque: 85 N·m (869 kgf·cm, 63ft·lbf)

9. INSTALL TIE ROD END SUB-ASSEMBLY RH

HINT:

Use the procedure as for the LH side.

Last Modified: 3-27-2012	6.4 A	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000001S2P03AX
Title: STEERING GEAR / LINKAGE: STEERING GEAR: REMOVAL (2013 FR-S)		

REMOVAL

NOTICE:

- Be sure to align the front wheels straight ahead when removing and installing the steering gear assembly.
- When disconnecting the steering intermediate shaft assembly and the pinion shaft of the steering gear assembly, be sure to place matchmarks before servicing.

1. PLACE FRONT WHEELS FACING STRAIGHT AHEAD

2. REMOVE FRONT WHEELS

3. SECURE STEERING WHEEL ASSEMBLY

- (a) Secure the steering wheel assembly with the seat belt in order to prevent rotation.

HINT:

This operation is useful to prevent damage to the spiral cable.

4. REMOVE NO. 1 ENGINE UNDER COVER INFO

5. REMOVE NO. 2 ENGINE UNDER COVER INFO

6. DISCONNECT FRONT STABILIZER LINK ASSEMBLY LH

- (a) Remove the nut and front stabilizer link assembly LH from the front stabilizer bar.

If the ball joint turns together with the nut, use a hexagon wrench to hold the stud bolt.

7. DISCONNECT FRONT STABILIZER LINK ASSEMBLY RH

HINT:

Use the same procedure as for the LH side.

8. REMOVE FRONT STABILIZER BAR

- (a) Remove the 8 bolts, and remove the front stabilizer bar together with the rear body mounting cushion sub-assembly LH and RH from the front suspension cross member.

9. SEPARATE STEERING INTERMEDIATE SHAFT ASSEMBLY

- (a) Put matchmarks on the steering intermediate shaft assembly and rack and pinion power steering gear assembly.

Text in Illustration

*1	Matchmark
----	-----------

- (b) Remove the bolt.

- (c) Disconnect the steering intermediate shaft assembly from the rack and pinion power steering gear assembly.

10. DISCONNECT TIE ROD END SUB-ASSEMBLY LH

- (a) Remove the cotter pin and nut.

- (b) Install SST to the tie rod end sub-assembly LH.

SST: 09960-20010

09961-02060

NOTICE:

Make sure that the lower ends of the tie rod end sub-assembly LH and SST are aligned.

(c) Secure SST using a string.

NOTICE:

Be sure to tighten the string firmly to secure SST to the steering knuckle to prevent SST from falling off.

(d) Using SST, separate the tie rod end sub-assembly LH from the steering knuckle.

Text in Illustration

*1	Center Nut	-	-
*a	String	*b	Grease Application Area
	Place the wrench here.	-	-

SST: 09960-20010

09961-02010

CAUTION:

Apply grease to the bolt threads and the tip of SST.

NOTICE:

- Install SST with the center nut so that A and B shown in the illustration are parallel. Otherwise, the dust cover may be damaged.
- Be sure to place the wrench on the part indicated in the illustration.
- Do not damage the front disc brake dust cover.

- Do not damage the ball joint dust cover.
- Do not damage the steering knuckle.

11. DISCONNECT TIE ROD END SUB-ASSEMBLY RH

HINT:

Use the same procedure as for the LH side.

12. REMOVE RACK AND PINION POWER STEERING GEAR ASSEMBLY

- (a) Remove the 2 bolts and rack and pinion power steering gear assembly.

Last Modified: 3-27-2012	6.4 N	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000001BCN021X
Title: ALIGNMENT / HANDLING DIAGNOSIS: FRONT WHEEL ALIGNMENT: ADJUSTMENT (2013 FR-S)		

ADJUSTMENT

NOTICE:

If the wheel alignment has been adjusted, and if suspension or underbody components have been removed/installed or replaced, be sure to perform the following initialization procedure in order for the system to function normally:

Perform zero point calibration of the yaw rate and acceleration sensor and test mode inspection

INFO

1. INSPECT TIRES **INFO**

2. MEASURE VEHICLE HEIGHT

- (a) Bounce the vehicle up and down at the corners to stabilize the suspension before inspecting the vehicle height.

Vehicle Height (Unloaded Vehicle)

TIRE SIZE	FRONT B - A	REAR C	FRONT D	REAR E
215/45 R17	146 mm (5.75 in.)	225 mm (8.86 in.)	375 mm (14.76 in.)	372 mm (14.65 in.)
P215/45 R17	146 mm (5.75 in.)	225 mm (8.86 in.)	375 mm (14.76 in.)	372 mm (14.65 in.)

NOTICE:

- Perform the inspection while the vehicle is empty (with a spare tire, jack and tools on board, but with the fuel tank filled with fuel).
- The standard value shown here is a value that is used for adjusting the wheel alignment and does not indicate the height of an actual vehicle.

Measuring points:

A

Ground clearance of front lower suspension arm set front bolt center

B

Ground clearance of front wheel center

C

Ground clearance of lower control arm set bolt center

D

Front wheel arch height of front wheel center

E

Rear wheel arch height of rear wheel center

3. INSPECT CAMBER, CASTER AND STEERING AXIS INCLINATION

NOTICE:

Perform the inspection while the vehicle is empty (without a spare tire, jack or tools on board, but with the fuel tank filled with fuel).

- (a) Put the front wheel on the center of the alignment tester.

Text in Illustration

*1	Alignment tester
*2	Camber-Caster-Steering Axis Inclination Gauge

- (b) Remove the wheel cap.
- (c) Set the camber-caster-steering axis inclination gauge at the center of the axle hub or drive shaft.
- (d) Inspect the camber, caster and steering axis inclination.

Standard Dimension (Unloaded Vehicle):

CAMBER	CASTER (REFERENCE)	STEERING AXIS INCLINATION (REFERENCE)
0 +/- 45' (0 +/- 0.75°)	5°54' (5.90°)	15°31' (15.52°)

NOTICE:

- Perform the inspection while the vehicle is empty (with a spare tire, jack and tools on board, but with the fuel tank filled with fuel).
 - The tolerance for the difference between the left and right wheels is 45' (0.75°) or less for both the camber.
- (e) Remove the camber-caster-steering axis inclination gauge and attachment.
 - (f) Install the wheel cap.

If the caster and steering axis inclination are not within the specified values after the camber has been correctly adjusted, recheck the suspension parts for damage and wear.

4. ADJUST CAMBER

NOTICE:

Inspect toe-in after the camber has been adjusted.

- (a) Remove the front wheel.

- (b) Loosen the lower mounting bolt and nut of the front

shock absorber assembly and steering knuckle.

- (c) Replace the upper mounting bolt of the front shock absorber assembly and steering knuckle with a service bolt. (Part No.: SU003-02818)

NOTICE:

Insert the bolt from the rear side of the vehicle.

- (d) Pivot the lower mounting bolt to move the front shock absorber assembly and steering knuckle, and use the play between the bolt and bolt holds of the steering knuckle and front shock absorber assembly to adjust the camber.

NOTICE:

Left-right tolerance for camber is to be $0^{\circ}45'$ (0.75°) or less.

HINT:

The range that can be adjusted by replacing bolts is $0^{\circ} \pm 45'$ ($0^{\circ} \pm 0.75^{\circ}$).

- (e) Tighten the 2 bolts and 2 new nuts.

Torque: 155 N·m (1581 kgf·cm, 114ft·lbf)

- (f) Install the front wheel.

Torque: 120 N·m (1224 kgf·cm, 89ft·lbf)

- (g) Lower the vehicle and bounce it up and down several times to stabilize the front suspension.

- (h) Check the camber.

- (i) Check the toe-in.

5. INSPECT TOE-IN

- (a) Bounce the vehicle up and down at the corners to stabilize the suspension.
- (b) Release the parking brake and move the shift lever to the neutral position (for manual transmission).
- (c) Release the parking brake and move the shift lever to N (for Automatic transmission).
- (d) Push the vehicle straight ahead approximately 5 m (16.4 ft.). (Step A)
- (e) Put tread center marks on the rearmost points of the front wheels and measure the distance between the marks (dimension B).

Text in Illustration

*a	Tread Center Mark
*b	Dimension B
	Front of the Vehicle

- (f) Slowly push the vehicle straight ahead to cause the front wheels to rotate 180°. Use the front tire valve as a reference point.

HINT:

Do not allow the wheels to rotate more than 180°. If the wheels rotate more than 180°, perform the procedure from Step A again.

- (g) Measure the distance between the tread center marks on the front side of the wheels (dimension A).

Text in Illustration

*a	Dimension A
----	-------------

Front of the Vehicle

Standard Dimension (Unloaded Vehicle):

SPECIFIED CONDITION
C + D: 0°00' +/- 0°11' (0.00° +/- 0.19°)
B - A: 0 +/- 3.0 mm (0 +/- 0.1181 in.)

HINT:

Measure "B - A" only when "C + D" cannot be measured.

If the toe-in is not within the specified value, adjust it at the rack ends.

6. ADJUST TOE-IN

- (a) Measure the thread lengths of the right and left rack ends.

Standard:

Difference in thread length of 2.0 mm (0.0787 in.) or less

- (b) Remove the rack boot set clips.
- (c) Loosen the tie rod end lock nuts.
- (d) Adjust the rack ends if the difference in thread length between the right and left rack ends is not within the specified range.
- (1) If the toe-in measurement is greater than the specified range (too much toe-out), extend the shorter rack end so that the length difference is within the specified range.
- (2) If the toe-in measurement is less than the specified range (too much toe-in), shorten the longer rack end so that the length difference is within the specified range.
- (3) Measure the toe-in.
- (e) Turn the right and left rack ends by an equal amount to adjust the toe-in.
- (f) Make sure that the thread lengths of the right and left rack ends are the same.
- (g) Tighten the tie rod end lock nuts.
- Torque: 85 N·m (867 kgf·cm, 63ft·lbf)**
- (h) Place the steering rack boots on the seats and install the steering rack boot clips.

HINT:

Make sure that the steering rack boots are not twisted.

7. INSPECT WHEEL ANGLE

(a) Put tread center marks on the rearmost points of a turning radius gauge.

Text in Illustration

*a	Inside
*b	Outside
	Front of the Vehicle

(b) Turn the steering wheel fully to the left and right and measure the turning angle.

HINT:

Inspect while the vehicle is unloaded.

Wheel Turning Angle (Unloaded Vehicle):

INSIDE WHEEL (REFERENCE)	OUTSIDE WHEEL (REFERENCE)
36°54' (43.90°)	31°12' (31.20°)

8. PLACE FRONT WHEELS FACING STRAIGHT AHEAD

9. VSC SENSOR NEUTRAL MEMORIZATION

NFC

Title: ALIGNMENT / HANDLING DIAGNOSIS: REAR WHEEL ALIGNMENT: ADJUSTMENT (2013 FR-S)		

ADJUSTMENT

NOTICE:

If the wheel alignment has been adjusted, and if suspension or underbody components have been removed/installed or replaced, be sure to perform the following initialization procedure in order for the system to function normally:

Perform zero point calibration of the yaw rate and acceleration sensor and test mode inspection

INFO

1. INSPECT TIRES **INFO**

2. MEASURE VEHICLE HEIGHT **INFO**

3. INSPECT TOE-IN

NOTICE:

Inspect while the vehicle is unloaded.

- Bounce the vehicle up and down at the corners to stabilize the suspension.
- Release the parking brake and move the shift lever to N.
- Push the vehicle straight ahead approximately 5 m (16.4 ft.). (Step B)
- Put tread center marks on the rearmost points of the rear wheels and measure the distance between the marks (dimension B).

Text in Illustration

*a	Tread Center Mark
*b	Dimension B
	Front of the Vehicle

- Slowly push the vehicle straight ahead to cause the rear wheels to rotate 180°. Use the rear tire valve as a reference point.

HINT:

Do not allow the wheels to rotate more than 180°. If the wheels rotate more than 180°, perform the

procedure from Step B again.

- (f) Measure the distance between the tread center marks on the front of the rear wheels (dimension A).

Text in Illustration

*a	Dimension A
	Front of the Vehicle

Toe-in (Unloaded Vehicle):

SPECIFIED CONDITION
$C + D: 0^{\circ}10' \pm 0^{\circ}15' (0.16^{\circ} \pm 0.24^{\circ})$
$B - A: 2.0 \pm 3.0 \text{ mm} (0.0787 \pm 0.1181 \text{ in.})$

HINT:

Measure "B - A" only when "C + D" cannot be measured.

If the toe-in is not within the specified range, adjust it at the toe control link sub-assembly.

4. ADJUST TOE-IN

- (a) Loosen the toe adjust cam nut.

- (b) Turn the adjust cams by an equal amount to adjust the toe-in.

Toe-in (Unloaded Vehicle):

SPECIFIED CONDITION
$C + D: 0^{\circ}10' \pm 0^{\circ}15' (0.16^{\circ} \pm 0.24^{\circ})$

HINT:

- Try to adjust the toe-in to the center value.
- The toe-in will change by approximately 1.3 mm (0.051 in.) for each gradation of the cam.

(c) Tighten the toe adjust cam nut.

Torque: 100 N·m (1020 kgf·cm, 74ft·lbf)

5. INSPECT CAMBER

(a) Remove the center wheel ornament.

(b) Install a camber-caster-kingpin gauge at the center of the axle hub or drive shaft.

Text in Illustration

*1	Camber-caster-kingpin Gauge
----	-----------------------------

(c) Inspect the camber.

Camber (Unloaded Vehicle):

CAMBER INCLINATION	RIGHT-LEFT DIFFERENCE
-1°12' +/- 45' (-1.20° +/- 0.75°)	45' (0.75°) or less

If the measured value is not within the specified range, inspect the suspension parts for damage and wear. Replace parts as necessary because camber cannot be properly adjusted with any damaged or worn parts.

(d) Remove the camber-caster-kingpin gauge.

(e) Install the center wheel ornament.

6. INSPECT REAR SUSPENSION

(a) Inspect the rear suspension member.

- (1) Measure the distance between the centers of the 2 installation bolts of the rear No. 2 suspension arm assembly LH and RH

Standard distance:

442.8 to 448.8 mm (17.43 to 17.67 in.)

If the distance is not within the specified range, replace the rear suspension member.

(b) Inspect the rear No. 2 suspension arm assembly.

- (1) Measure the distance between the centers of the 2 installation bolts of the rear No. 2 suspension arm assembly.

Standard distance:

447.9 to 451.9 mm (17.63 to 17.79 in.)

If the distance is not within the specified range, replace the rear No. 2 suspension arm assembly.

(c) Inspect and adjust the toe-in and camber.

- (1) Inspect the toe-in and camber.

Inspect the toe-in and camber. If the values are not within the specified ranges, adjust the installation bolt holding the rear suspension member to the vehicle body, or the bolt holding the upper control arm and rear suspension arm so that the values fall within the specified ranges.

7. PLACE FRONT WHEELS FACING STRAIGHT AHEAD

8. VSC SENSOR NEUTRAL MEMORIZATION

Title: FRONT SUSPENSION: FRONT LOWER SUSPENSION ARM: INSPECTION (2013 FR-S)		

INSPECTION

1. INSPECT FRONT LOWER SUSPENSION ARM ASSEMBLY LH

- (a) Inspect the state of rotation of the ball joint.

- (1) With the brake pedal depressed, attempt to move the top and bottom of the front tire in the axial direction, and confirm that there is no play.
- (2) If there is any play, replace the front lower suspension arm assembly LH.
- (3) With the brake pedal released, attempt to move the top and bottom of the front tire in the axial direction, and confirm that there is no play.
- (4) If there is any play, replace the front axle hub.
- (5) Install the nut to the front lower suspension arm assembly LH stud.

- (6) Turn the stud back and forth.

Standard:

There is no unusual resistance or play.

- (7) If there is any unusual resistance or play, replace the front lower suspension arm assembly LH with a new one.
- (b) Inspect the dust cover.
- (1) Check that the dust cover is not cracked and that there is no grease on it.
 - (2) If the dust cover is cracked or there is grease on it, replace the front lower suspension arm assembly LH with a new one.

Title: FRONT SUSPENSION: FRONT LOWER SUSPENSION ARM: INSTALLATION (2013 FR-S)		

INSTALLATION

HINT:

- The procedure listed below is for the LH side.
- Use the same procedure for the RH side and LH side.

1. INSTALL FRONT LOWER SUSPENSION ARM BOLT

- (a) Using SST, install the new front lower suspension arm bolt.

SST: 09726-18010

Torque: 110 N·m (1122 kgf·cm, 81ft·lbf)

2. TEMPORARILY TIGHTEN FRONT LOWER SUSPENSION ARM ASSEMBLY LH

- (a) Temporarily tighten the front lower suspension arm assembly LH with the bolt and new nut.

NOTICE:

Insert the bolt from the front of the vehicle.

3. INSTALL STEERING KNUCKLE LH

- (a) Install the front lower arm suspension arm assembly LH with the nut to the steering knuckle LH.

Torque: 51 N·m (520 kgf·cm, 38ft·lbf)

- (b) Install new clip.

4. INSTALL TIE ROD END SUB-ASSEMBLY LH INFO

5. INSTALL LOWER ARM SUPPORT PLATE

- (a) Install the lower arm support plate with the new bolt and new nut.

Torque: 110 N·m (1122 kgf·cm, 81ft·lbf)

6. INSTALL FRONT WHEEL

Torque: 120 N·m (1224 kgf·cm, 89ft·lbf)

7. STABILIZE SUSPENSION INFO

8. FULLY TIGHTEN FRONT LOWER SUSPENSION ARM ASSEMBLY LH

- (a) Fully tighten the nut on the rear of front lower suspension arm assembly LH.

Torque: 85 N·m (867 kgf·cm, 63ft·lbf)

9. INSTALL REAR ENGINE UNDER COVER LH

- (a) Install the rear engine under cover LH with the 3 clips.

10. INSPECT STEERING WHEEL CENTER POINT

11. INSPECT AND ADJUST FRONT WHEEL ALIGNMENT

Title: FRONT SUSPENSION: FRONT SHOCK ABSORBER: DISASSEMBLY (2013 FR-S)		

DISASSEMBLY

HINT:

- The procedure listed below is for the LH side.
- Use the same procedure for the RH side and LH side.

1. REMOVE FRONT SUPPORT TO FRONT SHOCK ABSORBER NUT LH

(a) Secure the SST in a vise.

SST: 09727-30021

09727-00010

09727-00021

09727-00031

(b) Attach the arm of SST to the diameter of the front coil spring LH.

CAUTION:

- Make sure that the front coil spring LH is installed so that the distance between the upper and lower hooks of SST is at the maximum.
- Make sure that the claws on the hooks are securely engaged.

(c) Using SST, compress the front coil spring LH.

CAUTION:

- If the front coil spring LH bends during the compression, immediately stop the compression and reinstall SST.
- Do not compress the spring until the front coil spring LH contact each other.

- Do not use an impact wrench.

(d) Using a long socket hexagon wrench 6mm, fix the shock absorber rod.

(e) Confirm that the front coil spring LH becomes free and remove the lock nut.

SST: 09729-97202

CAUTION:

Do not remove the lock nut when the front coil spring LH is not free.

NOTICE:

- Be careful not to damage or deform the threaded section.
- Fully insert a long socket hexagon wrench 6mm.

2. REMOVE FRONT SUSPENSION SUPPORT SUB-ASSEMBLY LH

(a) Remove the front suspension support sub-assembly LH.

3. REMOVE FRONT SPRING SEAT

(a) Remove the front spring seat.

4. REMOVE FRONT SPRING BUMPER LH

(a) Remove the front spring bumper.

5. REMOVE FRONT COIL SPRING INSULATOR UPPER LH

(a) Remove the front coil spring upper insulator LH.

6. REMOVE FRONT SPRING BUMPER LH

(a) Remove the front spring bumper LH.

7. REMOVE FRONT COIL SPRING LH

(a) Release the SST and remove the front coil spring LH.

Title: FRONT SUSPENSION: FRONT SHOCK ABSORBER: DISPOSAL (2013 FR-S)		

DISPOSAL

1. DISPOSE OF FRONT SHOCK ABSORBER ASSEMBLY LH

- (a) Affix the front shock absorber assembly LH perpendicularly.
- (b) Push the piston rod down approximately 70 mm (2.756 in.) by hand.
- (c) Using a metal saw or the like, slowly cut a hole in the location shown in the illustration and let the gas out.

Text in Illustration

	Area to cut a hole
---	--------------------

NOTICE:

- Wear protective glasses.
- Since the discharging gas may cause chips to scatter, cover the metal saw with a piece of cloth when making the hole.

HINT:

The gas is colorless, odorless and non-poisonous.

Model Year: 2013	Model: FR-S	Doc ID: RM0000011DD02JX
Title: FRONT SUSPENSION: FRONT SHOCK ABSORBER: INSPECTION (2013 FR-S)		

INSPECTION

1. INSPECT FRONT SHOCK ABSORBER ASSEMBLY LH

- (a) Compress and extend the shock absorber rod 4 or more times.

Standard:

There is no abnormal resistance or sound and operation resistance is normal.

If there is any abnormality, replace the front shock absorber assembly with a new one.

Title: FRONT SUSPENSION: FRONT SHOCK ABSORBER: INSTALLATION (2013 FR-S)		

INSTALLATION

HINT:

- The procedure listed below is for the LH side.
- Use the same procedure for the RH side and LH side.

1. INSTALL FRONT SHOCK ABSORBER WITH COIL SPRING

- (a) Install the front shock absorber with coil spring (upper side) with the 3 new nuts.

Torque: 23 N·m (235 kgf·cm, 17ft·lbf)

- (b) Install the front shock absorber with coil spring (lower side) to the steering knuckle and insert the 2 bolts and 2 new nuts.

NOTICE:

Insert the bolt from the rear of the vehicle.

Torque: 155 N·m (1581 kgf·cm, 114ft·lbf)

NOTICE:

While keeping the bolts from rotating, tighten the nuts.

2. INSTALL FRONT STABILIZER LINK ASSEMBLY LH

- (a) Install the front stabilizer link assembly to the front shock absorber assembly with a new nut.

- (b) Using a socket hexagon wrench 6 mm, fix the stud bolt and install the front stabilizer link assembly LH with a new nut.

Torque: 46 N·m (469 kgf·cm, 34ft·lbf)

3. INSTALL FRONT FLEXIBLE HOSE

- (a) Install the front flexible hose to the front shock absorber assembly with the bolt.

Torque: 33 N·m (337 kgf·cm, 24ft·lbf)

4. INSTALL FRONT SUSPENSION SUPPORT DUST COVER LH

- (a) Install the front suspension support dust cover LH to the front shock absorber with coil spring.

5. INSTALL FRONT SPEED SENSOR LH

- (a) Install the front speed sensor LH to the front shock absorber assembly with the 2 clamps.

NOTICE:

Do not twist the front speed sensor when installing it.

6. INSTALL FRONT WHEEL

Torque: 120 N·m (1224 kgf·cm, 89ft·lbf)

7. STABILIZE SUSPENSION

- (a) Lower the vehicle and bounce it up and down several times to stabilize the front suspension.

8. INSPECT STEERING WHEEL CENTER POINT

9. INSPECT AND ADJUST FRONT WHEEL ALIGNMENT

INFO

10. VSC SENSOR NEUTRAL MEMORIZATION

INFO

Title: FRONT SUSPENSION: FRONT SHOCK ABSORBER: REASSEMBLY (2013 FR-S)		

REASSEMBLY

HINT:

- The procedure listed below is for the LH side.
- Use the same procedure for the RH side and LH side.

1. INSTALL FRONT SPRING BUMPER LH

- (a) Install the front spring bumper LH to the front shock absorber assembly LH.

2. INSTALL FRONT COIL SPRING INSULATOR UPPER LH

- (a) Install the front coil spring insulator upper LH to the front shock absorber assembly LH.

3. INSTALL FRONT COIL SPRING LH

- (a) Secure the SST in a vise.

SST: 09727-30021

09727-00010

09727-00021

09727-00031

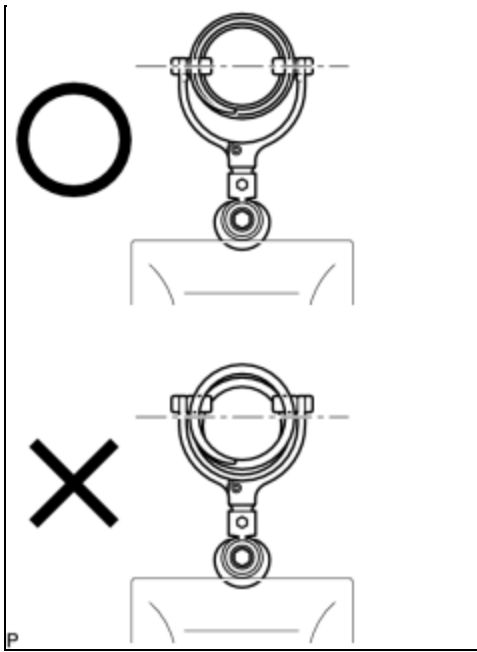

- (b) Install SST to the front coil spring LH with the hooks spread as far apart as possible from each other.

- (c) Attach the arm of SST to the diameter of the coil spring.

CAUTION:

- Make sure that the front coil spring LH is installed so that the distance between the upper and lower hooks of SST is at the maximum.
- Make sure that the claws on the hooks are securely engaged.

(d) Using SST, compress the front coil spring LH.

CAUTION:

- If the front coil spring LH bends during the compression, immediately stop the compression and reinstall SST.
- Do not compress the spring until the coil springs contact each other.
- Do not use an impact wrench.

(e) Install the front coil spring LH so that the lower end of the spring and lower side spring seat stopper are aligned.

Text in Illustration

*1	Front Coil Spring LH
*a	0 to 10 mm (0 to 0.397 in.)
*b	Spring seat stopper

4. INSTALL FRONT SPRING BUMPER LH

(a) Install the front spring bumper LH to the front shock absorber assembly LH.

5. INSTALL FRONT SPRING SEAT

(a) Install the front spring seat to the front shock absorber assembly LH.

6. INSTALL FRONT SUSPENSION SUPPORT SUB-ASSEMBLY LH

(a) Install the front suspension support sub-assembly LH to the front shock absorber assembly LH.

7. INSTALL FRONT SUPPORT TO FRONT SHOCK ABSORBER NUT LH

(a) Long socket hexagon wrench 6, fix the shock absorber rod.

(b) Using SST, install a new front support to front shock absorber nut LH to the front shock absorber assembly LH.

SST: 09729-97202

Text in Illustration

*a	Fulcrum Length
*b	40 mm (1.575 in.)

without SST - Torque: 55 N·m (561 kgf·cm, 41ft·lbf)

with SST - Torque: 49 N·m (495 kgf·cm, 36ft·lbf)

NOTICE:

- Use a torque wrench with a fulcrum length of 300 mm (11.81 in.)
- Be careful not to damage or deform the threaded section.
- Securely set the long socket hexagon wrench 6.

Model Year: 2013	Model: FR-S	Doc ID: RM0000011DF02NX
Title: FRONT SUSPENSION: FRONT SHOCK ABSORBER: REMOVAL (2013 FR-S)		

REMOVAL

HINT:

- The procedure listed below is for the LH side.
- Use the same procedure for the RH side and LH side.

1. REMOVE FRONT WHEEL

2. SEPARATE FRONT SPEED SENSOR LH

- (a) Remove the 2 clamps and separate the front speed sensor LH from the front shock absorber with coil spring.

3. SEPARATE FRONT FLEXIBLE HOSE

- (a) Remove the bolt and separate the front flexible hose from the front shock absorber with coil spring.

4. SEPARATE FRONT STABILIZER LINK ASSEMBLY LH

- (a) Remove the nut and separate the front stabilizer link assembly LH from the front shock absorber with coil spring.

If the ball joint turns together with the nut, use a hexagon wrench to hold the stud bolt.

5. REMOVE FRONT SUSPENSION SUPPORT DUST COVER LH

HINT:

If it is necessary to disassemble the front shock absorber with coil spring, remove the front suspension support dust cover LH.

(a) Remove the front suspension support dust cover LH.

6. REMOVE FRONT SHOCK ABSORBER WITH COIL SPRING

(a) Support the front axle using a jack and wooden block.

Text in Illustration

*1	Wooden Block
----	--------------

(b) Remove the 2 bolts and 2 nuts, and separate the front shock absorber with coil spring (lower side) from the steering knuckle.

(c) Remove the 3 nuts from the front upper coil spring insulator LH.

(d) Remove the front shock absorber with coil spring.

Title: FRONT SUSPENSION: FRONT STABILIZER BAR: INSPECTION (2013 FR-S)		

INSPECTION

1. INSPECT FRONT STABILIZER LINK ASSEMBLY

(a) Inspect the ball joint.

- (1) Secure the front stabilizer link assembly in a vise using aluminum plates.
- (2) Install the nut to the front stabilizer link assembly stud.
- (3) Turn the stud back and forth.

Standard:

There is no unusual resistance or play.

- (4) If there is any unusual resistance or play, replace the front stabilizer link assembly with a new one.

(b) Inspect the dust cover.

- (1) Check that the dust cover is not cracked and that there is no grease on it.
- (2) If the dust cover is cracked or there is grease on it, replace the front stabilizer link assembly with a new one.

Title: FRONT SUSPENSION: FRONT STABILIZER BAR: INSTALLATION (2013 FR-S)		

INSTALLATION

1. INSTALL FRONT NO. 1 STABILIZER BAR BUSHING (for LH Side)

- (a) Install the front No. 1 stabilizer bar bushing so that it is positioned closer to the outside of the vehicle than the front stabilizer bar stopper ring.

NOTICE:

Install the front No. 1 stabilizer bar bushing so that the arrow mark is facing towards the front of the vehicle.

Text in Illustration

*a	Front of the Vehicle
*b	Outside of the Vehicle
*c	Stopper Ring
*d	Arrow
*1	Front No. 1 Stabilizer Bar Bushing

2. INSTALL FRONT NO. 1 STABILIZER BAR BUSHING (for RH Side)

HINT:

Perform the same procedure as the LH side.

3. INSTALL FRONT NO. 2 STABILIZER BRACKET LH

- (a) Install the front No. 2 stabilizer bracket LH to the rear body mounting cushion sub-assembly with the bolt and nut.

Bolt - Torque: 75 N·m (765 kgf·cm, 55ft·lbf)

Nut - Torque: 25 N·m (255 kgf·cm, 18ft·lbf)

4. INSTALL FRONT NO. 2 STABILIZER BRACKET RH

HINT:

Perform the same procedure as the LH side.

5. INSTALL REAR BODY MOUNTING CUSHION SUB-ASSEMBLY LH

- (a) Install the rear body mounting cushion sub-assembly LH and front stabilizer bar with the 4 new bolts.

Torque: 60 N·m (612 kgf·cm, 44ft·lbf)

6. INSTALL REAR BODY MOUNTING CUSHION SUB-ASSEMBLY RH

HINT:

Perform the same procedure as the LH side.

7. INSTALL FRONT STABILIZER LINK ASSEMBLY LH

- (a) Using a hexagon wrench 6 mm, fix the stud bolt, and install the front stabilizer link assembly LH to the front stabilizer bar with a new nut.

Torque: 46 N·m (469 kgf·cm, 34ft·lbf)

- (b) Using a hexagon wrench 6 mm, fix the stud bolt, and install the front stabilizer link assembly LH to the front shock absorber with coil spring with a new nut.

Torque: 46 N·m (469 kgf·cm, 34ft·lbf)

8. INSTALL FRONT STABILIZER LINK ASSEMBLY RH

HINT:

Perform the same procedure as the LH side.

9. INSTALL REAR ENGINE UNDER COVER LH INFO

10. INSTALL REAR ENGINE UNDER COVER RH

HINT:

Perform the same procedure as the LH side.

11. INSTALL NO. 2 ENGINE UNDER COVER INFO

12. INSTALL NO. 1 ENGINE UNDER COVER INFO

Title: REAR SUSPENSION: REAR SHOCK ABSORBER: DISASSEMBLY (2013 FR-S)		

DISASSEMBLY

HINT:

- Use the same procedure for the RH and LH sides.
- The procedure listed below is for the LH side.

1. REMOVE REAR SUPPORT TO REAR SHOCK ABSORBER NUT LH

(a) Secure the SST in a vise.

SST: 09727-30021

09727-00010

09727-00021

09727-00031

(b) Set the arm hooks of SST on the middle line on the spring outer circumference.

CAUTION:

- Install SST to the rear coil spring LH so that the distance between the upper and lower hooks is as wide as possible within the installation area.
- Check that the claws of the hooks are attached securely.

(c) Using SST, compress the rear coil spring LH.

CAUTION:

- During the work, if the rear coil spring LH is arched, immediately stop the work and reset SST.
- Do not compress the spring until each coil contacts each other.
- Do not use an impact wrench.

- (d) After the rear coil spring LH becomes free of load, install SST to the rear support to rear shock absorber nut LH. And then, using a long socket hexagon 5 mm, hold the piston rod of the rear shock absorber assembly and remove the rear support to rear shock absorber nut LH.

SST: 09729-18010

CAUTION:

When the rear coil spring LH is still applied with load, do not remove the rear support to rear shock absorber nut LH.

NOTICE:

- Be careful not to damage or deform the threads.
- Securely set the long socket hexagon 5 mm.

2. REMOVE REAR SUSPENSION SUPPORT ASSEMBLY LH

- (a) Remove the rear suspension support assembly LH from rear shock absorber assembly LH.

3. REMOVE REAR UPPER SPRING SEAT LH

- (a) Remove the rear upper spring seat LH from the rear suspension support assembly LH.

4. REMOVE REAR COIL SPRING LH

- (a) Remove the rear coil spring from the rear shock absorber assembly LH. Release the SST and remove the rear coil spring.

CAUTION:

Do not use an impact wrench. It will damage.

5. REMOVE REAR NO. 1 SHOCK ABSORBER DUST COVER LH

- (a) Remove the rear No. 1 shock absorber dust cover LH from the rear shock absorber assembly LH.

6. REMOVE REAR NO. 1 SPRING BUMPER LH

- (a) Remove the rear No. 1 spring bumper LH from the rear shock absorber assembly LH.

Title: REAR SUSPENSION: REAR SHOCK ABSORBER: DISPOSAL (2013 FR-S)		

DISPOSAL

1. DISPOSE OF REAR SHOCK ABSORBER ASSEMBLY LH

- (a) Hold the rear shock absorber assembly LH perpendicularly.
- (b) Push down the piston rod about 60 mm (2.362 in.) by hand.
- (c) Using a metal saw or the like, slowly cut a hole in the location shown in the illustration and let the gas out.

Text in Illustration

	Area to cut a hole
---	--------------------

NOTICE:

- Wear protective glasses.
- Since the discharging gas may cause chips to scatter, cover the metal saw with a piece of cloth when making the hole.

HINT:

The gas is colorless, odorless and harmless.

Model Year: 2013	Model: FR-S	Doc ID: RM0000058XB000X
Title: REAR SUSPENSION: REAR SHOCK ABSORBER: INSPECTION (2013 FR-S)		

INSPECTION

1. INSPECT REAR SHOCK ABSORBER ASSEMBLY LH

(a) Check of the rear shock absorber assembly LH

- (1) Compress and extend the shock absorber rod and check the conditions.

Standard:

Compress and extend the shock absorber rod at a constant speed, and check that the operating load is even at all strokes and that there is no abnormal resistance or abnormal sound during the operation.

Last Modified: 3-27-2012	6.4 A	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000003IG400DX
Title: REAR SUSPENSION: REAR SHOCK ABSORBER: INSTALLATION (2013 FR-S)		

INSTALLATION

HINT:

- The procedure listed below is for the LH side.
- Use the same procedure for the RH and LH sides.

1. INSTALL REAR SHOCK ABSORBER WITH COIL SPRING

- Mount the rear shock absorber with coil spring on the vehicle.
- Install rear shock absorber with coil spring with the 2 new nuts.

Torque: 30 N·m (306 kgf·cm, 22ft·lbf)

2. TEMPORARILY INSTALL REAR NO. 2 SUSPENSION ARM ASSEMBLY LH

- Replace the mounting nuts of the rear No. 2 suspension arm assembly LH and rear suspension member sub-assembly with new nut and then temporarily tighten them.
- Temporarily install the rear No. 2 suspension arm assembly LH to the rear axle carrier sub-assembly LH with the bolt and new nut.

NOTICE:

Insert the bolt from the front of the vehicle.

- Temporarily install the rear shock absorber with coil spring with the bolt and new nut.

HINT:

The bolt may be inserted from either direction.

3. TEMPORARILY INSTALL STABILIZER LINK SUB-ASSEMBLY (for LH Side)

- Temporarily install the rear stabilizer link sub-assembly to the rear No. 2 suspension arm assembly LH with the bolt and new nut.

4. STABILIZE SUSPENSION

- Jack up the axle carrier, with a wooden block placed between the jack and axle carrier, to apply load to the suspension so that the rear drive shaft assembly becomes level.

Text in Illustration

*a	Wooden Block
----	--------------

5. FULLY TIGHTEN REAR NO. 2 SUSPENSION ARM ASSEMBLY LH

- Fully tighten the nut on the rear axle carrier sub-assembly LH side.

Torque: 80 N·m (816 kgf·cm, 59ft·lbf)

- (b) Fully tighten the nut holding the rear shock absorber.

Torque: 80 N·m (816 kgf·cm, 59ft·lbf)

- (c) Fully tighten the nut on the rear suspension member sub-assembly side.

Torque: 80 N·m (816 kgf·cm, 59ft·lbf)

6. FULLY TIGHTEN STABILIZER LINK SUB-ASSEMBLY

- (a) Fully tighten the nut rear stabilizer link sub-assembly side.

Torque: 38 N·m (388 kgf·cm, 28ft·lbf)

7. INSTALL REAR WHEEL

Torque: 120 N·m (1224 kgf·cm, 89ft·lbf)

8. INSTALL LUGGAGE COMPARTMENT TRIM COVER LH INFO

9. INSTALL REAR FLOOR FINISH PLATE INFO

10. INSTALL LUGGAGE COMPARTMENT FLOOR MAT

11. INSPECT AND ADJUST REAR WHEEL ALIGNMENT

INFO

12. VSC SENSOR NEUTRAL MEMORIZATION

INFO

Model Year: 2013	Model: FR-S	Doc ID: RM0000058XD000X
Title: REAR SUSPENSION: REAR SHOCK ABSORBER: REASSEMBLY (2013 FR-S)		

REASSEMBLY

HINT:

- The procedure listed below is for the LH side.
- Use the same procedure for the RH and LH sides.

1. INSTALL REAR NO. 1 SPRING BUMPER LH

- (a) Install the rear No. 1 spring bumper LH to the rear shock absorber assembly LH.

2. INSTALL REAR NO. 1 SHOCK ABSORBER DUST COVER LH

- (a) Install the rear No. 1 shock absorber dust cover LH to the rear shock absorber assembly LH.

3. INSTALL REAR COIL SPRING LH

- (a) Secure the SST in a vise.

SST: 09727-30021

09727-00010

09727-00021

09727-00031

- (b) Set the arm hooks of SST on the middle line on the spring outer circumference.

CAUTION:

- Install SST to the rear coil spring LH so that the distance between the upper and lower hooks is as wide as possible within the installation area.
- Check that the claws of the hooks are attached securely.

(c) Using SST, compress the rear coil spring LH.

CAUTION:

- During the work, if the rear coil spring LH is arched, immediately stop the work and reset SST.
- Do not compress the spring until each coil contacts each other.
- Do not use an impact wrench.

(d) Install the rear coil spring LH with the lower end of the coil spring and the stopper of the spring seat fit.

HINT:

Fit the lower end of the rear coil spring LH into the gap of the absorber lower seat.

Text in Illustration

*1	Rear Coil Spring LH
*a	0 to 10 mm (0 to 0.394 in.)
*b	Stopper of spring seat

4. INSTALL REAR UPPER SPRING SEAT LH

(a) Install the rear upper spring seat LH to the rear coil spring LH.

5. INSTALL REAR SUSPENSION SUPPORT ASSEMBLY LH

(a) Install the rear suspension support assembly LH to the rear shock absorber assembly LH.

6. INSTALL REAR SUPPORT TO REAR SHOCK ABSORBER NUT LH

(a) Temporarily tighten a new rear support to rear shock absorber nut LH to the rear shock absorber assembly LH.

Text in Illustration

*a	for LH side
*b	for RH side
*c	75 to 85°
*d	Lower End
	Outside of the Vehicle
	Front of the Vehicle

(b) Adjust the rear suspension support assembly LH to the installation position of the shock absorber so that the studs are positioned as shown in the illustration.

NOTICE:

Make sure that the left coil spring end faces toward the front of the vehicle and the right spring end faces toward the rear.

(c) Release SST and remove it from the rear coil spring LH.

CAUTION:

Do not use an impact wrench

NOTICE:

Remove SST after confirming the position of the suspension support assembly.

(d) Install SST to the rear support to rear shock absorber nut LH. And then, using a long socket hexagon 5 mm, hold the piston rod of the rear shock absorber assembly LH, and tighten the rear support to rear shock absorber nut LH using a union nut wrench 14 mm.

Text in Illustration

*1	Union nut wrench 14 mm
*a	Fulcrum length
*b	25 mm (0.984 in.)

SST: 09729-18010

without SST - Torque: 25 N·m (255 kgf·cm, 18ft·lbf)

with SST - Torque: 23 N·m (235 kgf·cm, 17ft·lbf)

NOTICE:

- Use a torque wrench with a fulcrum length of 300 mm (11.81 in.)
- Be careful not to damage or deform the threads.
- Securely set the long socket hexagon 5 mm.

Last Modified: 3-27-2012	6.4 A	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000003IG600DX
Title: REAR SUSPENSION: REAR SHOCK ABSORBER: REMOVAL (2013 FR-S)		

REMOVAL

HINT:

- The procedure listed below is for the LH side.
- Use the same procedure for the RH and LH sides.

1. REMOVE LUGGAGE COMPARTMENT FLOOR MAT
2. REMOVE REAR FLOOR FINISH PLATE [INFO](#)
3. REMOVE LUGGAGE COMPARTMENT TRIM COVER INNER LH [INFO](#)
4. REMOVE REAR WHEEL
5. SEPARATE STABILIZER LINK SUB-ASSEMBLY (for LH Side)

- (a) Remove the bolt, nut and separate the rear stabilizer link sub-assembly from the rear No. 2 suspension arm assembly LH.

6. SEPARATE REAR NO. 2 SUSPENSION ARM ASSEMBLY LH

- (a) Loosen the nut on the rear suspension member side.

NOTICE:

Do not remove the nut.

- (b) Remove the bolt, nut and separate the rear shock absorber with coil spring from the rear No. 2 suspension

arm assembly LH.

- (c) Remove the bolt, nut and separate the rear axle carrier sub-assembly LH from the rear No. 2 suspension arm assembly LH.

7. REMOVE REAR SHOCK ABSORBER WITH COIL SPRING

- (a) Remove the 2 nuts and rear shock absorber with coil spring.

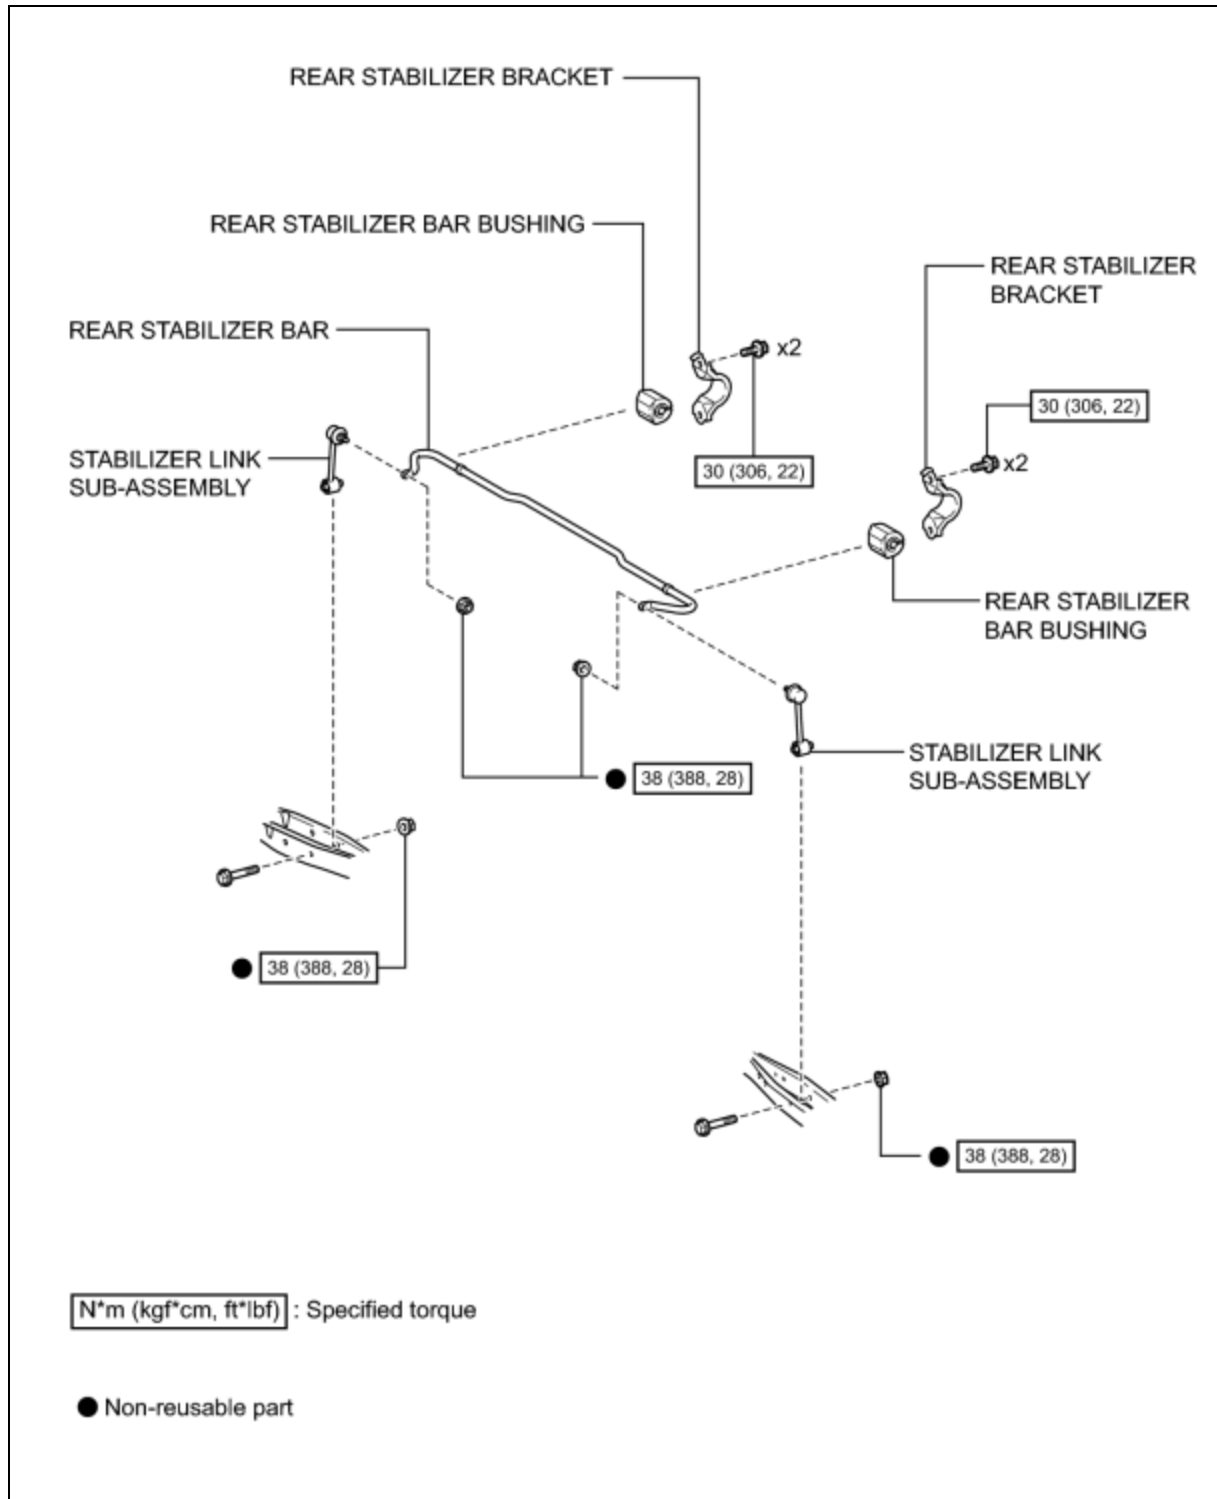

NOTICE:

Hold the rear shock absorber with coil spring to prevent it from falling accidentally.

Title: REAR SUSPENSION: REAR STABILIZER BAR: INSPECTION (2013 FR-S)		

INSPECTION

1. INSPECT STABILIZER LINK SUB-ASSEMBLY

(a) Inspect the state of rotation of the ball joint.

(1) Temporarily install the attaching nut to the stud of the rear stabilizer link assembly.

(2) Turn the stud back and forth.

Standard:

There is no unusual resistance or play.

(3) If there is unusual resistance or play, replace the rear stabilizer link assembly with a new one.

(b) Inspect the dust cover.

(1) Check that the dust cover is not cracked and that there is no grease on it.

(2) If the dust cover is fissured or grease is leaked, replace the rear stabilizer link assembly with a new one.

Title: REAR SUSPENSION: REAR STABILIZER BAR: INSTALLATION (2013 FR-S)		

INSTALLATION

1. INSTALL REAR STABILIZER BAR BUSHING (for LH Side)

- (a) Install the rear stabilizer bar bushing to the outside of the stopper ring on the rear stabilizer bar as shown in the illustration.

Text in Illustration

*1	Rear Stabilizer Bar Bushing
*a	Stopper Ring

2. INSTALL REAR STABILIZER BAR BUSHING (for RH Side)

HINT:

Use the same procedure described for the LH side.

3. INSTALL REAR STABILIZER BAR

- (a) Install the rear stabilizer bar to the rear suspension member.

4. INSTALL REAR STABILIZER BRACKET (for LH Side)

- (a) Install the rear stabilizer bracket with the 2 bolts.

Text in Illustration

*a	Crow
----	------

Torque: 30 N·m (306 kgf·cm, 22ft·lbf)

NOTICE:

Install the rear stabilizer bracket with its claw facing upper.

5. INSTALL REAR STABILIZER BRACKET (for RH Side)

HINT:

Use the same procedure described for the LH side.

6. INSTALL STABILIZER LINK SUB-ASSEMBLY (for LH Side)

- (a) Install the rear stabilizer link sub-assembly to the rear stabilizer bar
 (b) Using a socket hexagon 5 mm, hold the stud bolt and tighten the nut.

Torque: 38 N·m (388 kgf·cm, 28ft·lbf)

- (c) Temporarily install the rear stabilizer link sub-assembly to the rear No. 2 suspension arm assembly LH with the bolt and a new nut.

7. INSTALL STABILIZER LINK SUB-ASSEMBLY (for RH Side)

HINT:

Use the same procedure described for the LH side.

8. INSTALL REAR WHEELS

Torque: 120 N·m (1224 kgf·cm, 89ft·lbf)

9. STABILIZE SUSPENSION

10. FULLY TIGHTEN STABILIZER LINK SUB-ASSEMBLY (for LH Side)

- (a) Install the rear stabilizer link sub-assembly to the rear No. 2 suspension arm assembly LH with the bolt and nut.

Torque: 38 N·m (388 kgf·cm, 28ft·lbf)

11. FULLY TIGHTEN STABILIZER LINK SUB-ASSEMBLY (for RH Side)

[INFO](#)

2. INSTALL REAR NO. 2 DIFFERENTIAL MOUNT CUSHION

[INFO](#)

3. TEMPORARILY INSTALL REAR UPPER CONTROL ARM ASSEMBLY LH

[INFO](#)

4. TEMPORARILY INSTALL REAR UPPER CONTROL ARM ASSEMBLY RH

HINT:

Use the same procedure described for the LH side.

5. INSTALL REAR SUSPENSION MEMBER SUB-ASSEMBLY

- (a) Support the rear suspension member sub-assembly with an engine lifter using 4 attachments or equivalent tools.

NOTICE:

- Make sure to secure the rear suspension member sub-assembly to prevent it from dropping.
- Use the attachments to keep the rear suspension member sub-assembly level.

- (b) Raise the rear suspension member sub-assembly until there is no clearance between the rear suspension member sub-assembly and the vehicle body.

NOTICE:

When raising the rear suspension member sub-assembly, be careful not to damage the vehicle body or other components installed on the vehicle.

- (c) While supporting the rear suspension member sub-assembly with a high transmission jack, using the 4 bolts B and 4 new bolts A, install the suspension member sub-assembly, front support rear LH, front support rear RH, rear support upper and rear support lower all together.

NOTICE:

After temporarily tightening the bolts A in the order shown in the illustration, tighten them securely.

Text in Illustration

*a	Bolt A (New bolt)	*b	Bolt B
----	-------------------	----	--------

Torque: 145 N·m (1479 kgf·cm, 107ft·lbf) (Bolt A)

Torque: 70 N·m (714 kgf·cm, 52ft·lbf) (Bolt B)

6. TEMPORARILY INSTALL TOE CONTROL LINK SUB-ASSEMBLY LH

- (a) Install the toe control link sub-assembly LH and insert the toe adjust cam from the front of the vehicle. Then, install the No. 2 toe adjust plate and temporarily install a new nut.

NOTICE:

Align the matchmarks on the rear suspension member and rear No. 2 suspension toe adjust plate.

7. TEMPORARILY INSTALL TOE CONTROL LINK SUB-ASSEMBLY RH

HINT:

Use the same procedure described for the LH side.

8. TEMPORARILY INSTALL REAR NO. 2 SUSPENSION ARM ASSEMBLY LH

- (a) Temporarily install the rear No. 2 suspension arm assembly LH to the rear suspension member with the bolt and a new nut.

NOTICE:

Insert the bolt from inside the vehicle.

9. TEMPORARILY INSTALL REAR NO. 2 SUSPENSION ARM ASSEMBLY RH

HINT:

Use the same procedure described for the LH side.

10. TEMPORARILY INSTALL REAR SHOCK ABSORBER WITH COIL SPRING LH

- (a) Temporarily install the rear shock absorber assembly to the rear No. 2 suspension arm with the bolt and a new nut.

HINT:

The bolt may be inserted from either direction.

11. TEMPORARILY INSTALL REAR SHOCK ABSORBER WITH COIL SPRING RH

HINT:

Use the same procedure described for the LH side.

12. TEMPORARILY INSTALL REAR NO. 1 SUSPENSION ARM ASSEMBLY LH

- (a) Temporarily install the rear No. 1 suspension arm assembly LH to the rear suspension member with the new bolt and new nut.

NOTICE:

Insert the bolt from outside the vehicle.

13. TEMPORARILY INSTALL REAR NO. 1 SUSPENSION ARM ASSEMBLY RH

HINT:

Use the same procedure described for the LH side.

14. INSTALL REAR STABILIZER BAR

Title: REAR SUSPENSION: REAR UPPER ARM: INSTALLATION (2013 FR-S)		

INSTALLATION

1. TEMPORARILY INSTALL REAR UPPER CONTROL ARM ASSEMBLY LH

- (a) Temporarily install the rear upper control arm assembly LH to the rear suspension member sub-assembly with the 2 bolts and 2 new nuts.

NOTICE:

- Insert the bolt from the rear side of the vehicle for the front side of the installation position.
- Insert the bolt from the front side of the vehicle for the rear side of the installation position.

- (b) Temporarily install the rear upper control arm assembly LH to the axle carrier with the new bolt and a new nut.

NOTICE:

Insert the bolt from the front side of the vehicle.

2. TEMPORARILY INSTALL REAR UPPER CONTROL ARM ASSEMBLY RH

HINT:

Use the same procedure described for the LH side.

3. INSTALL REAR SUSPENSION MEMBER SUB-ASSEMBLY

INFO

4. STABILIZE SUSPENSION

INFO

5. FULLY TIGHTEN REAR UPPER CONTROL ARM ASSEMBLY LH

- (a) Fully tighten the nut on the axle carrier side of the upper control arm assembly LH.

Torque: 80 N·m (816 kgf·cm, 59ft·lbf)

- (b) Fully tighten the 2 nuts on the suspension member side of the upper control arm assembly LH.

Torque: 90 N·m (918 kgf·cm, 66ft·lbf)

6. FULLY TIGHTEN REAR UPPER CONTROL ARM ASSEMBLY RH

HINT:

Use the same procedure described for the LH side.

7. INSPECT AND ADJUST REAR WHEEL ALIGNMENT

INFO

8. VSC SENSOR NEUTRAL MEMORIZATION

Title: REAR SUSPENSION: REAR UPPER ARM: REMOVAL (2013 FR-S)		

REMOVAL

1. REMOVE REAR SUSPENSION MEMBER SUB-ASSEMBLY

INFO

2. REMOVE REAR UPPER CONTROL ARM ASSEMBLY LH

- (a) Remove the 3 bolts, 3 nuts, and then remove the rear upper control arm assembly LH from the rear suspension member sub-assembly.

3. REMOVE REAR UPPER CONTROL ARM ASSEMBLY RH

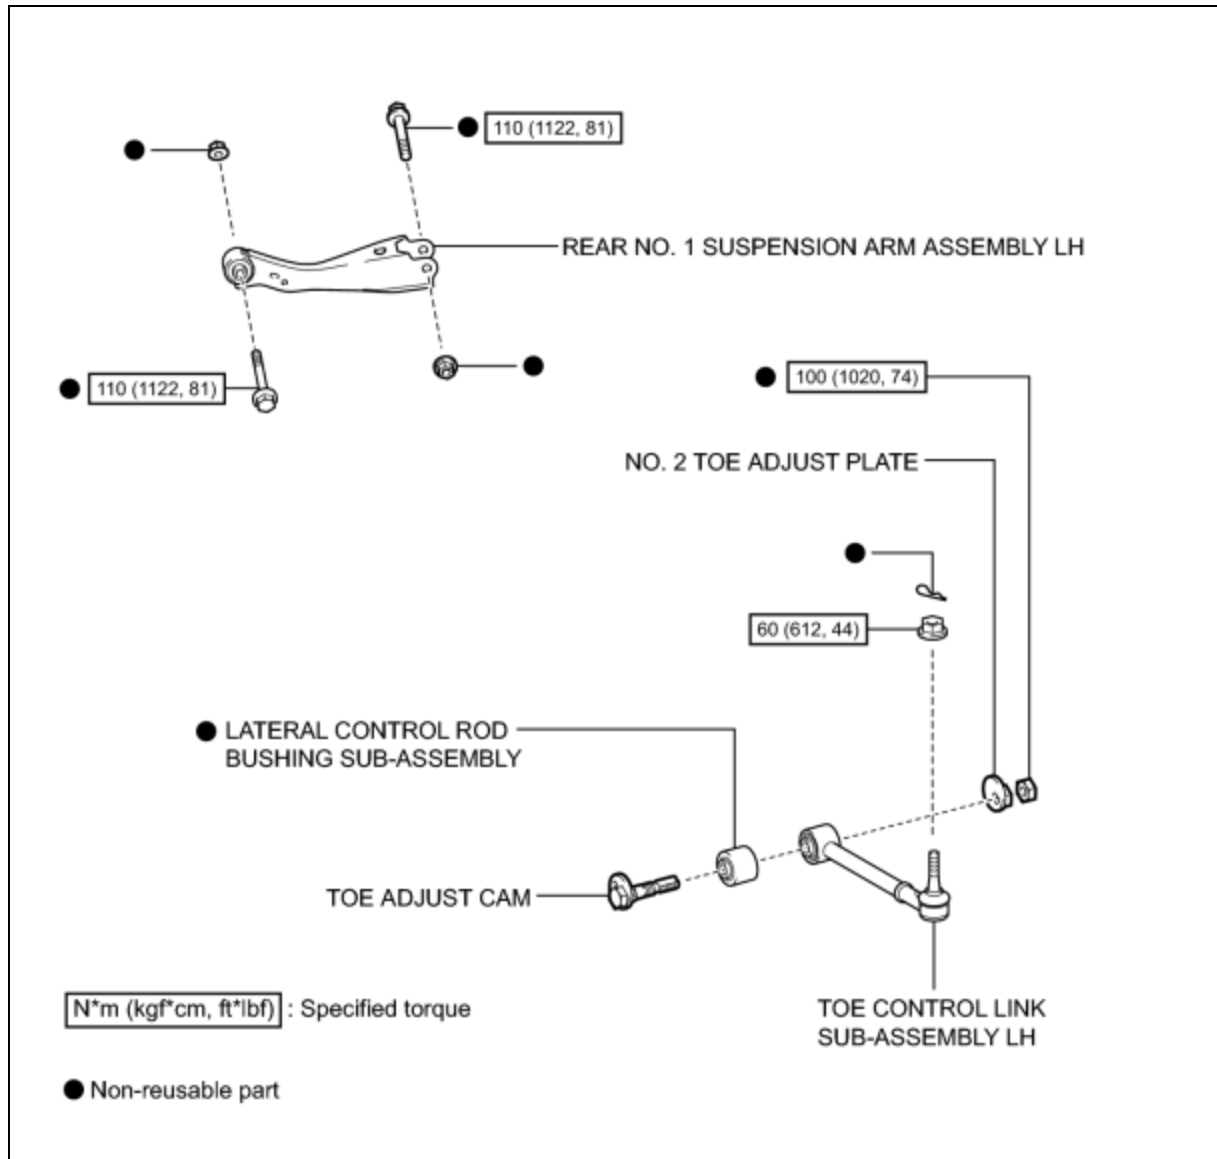

HINT:

Perform the same procedure as for the LH side.

Title: REAR SUSPENSION: TOE CONTROL LINK: INSPECTION (2013 FR-S)		

INSPECTION

1. INSPECT TOE CONTROL LINK SUB-ASSEMBLY LH

(a) Inspect the ball joint.

(1) Temporarily install the attaching nut to the stud of the toe control link sub-assembly LH.

(2) Turn the stud back and forth.

Standard:

There is no unusual resistance or play.

(3) If there is unusual resistance or play, replace the toe control link sub-assembly LH with a new one.

(b) Inspect the dust cover.

(1) Check that the dust cover is not cracked and that there is no grease on it.

(2) If the dust cover is fissured or grease is leaked, replace the toe control link sub-assembly LH with a new one.

Title: REAR SUSPENSION: TOE CONTROL LINK: INSTALLATION (2013 FR-S)		

INSTALLATION

HINT:

- The procedure listed below is for the LH side.
- Use the same procedure for the RH and LH sides.

1. TEMPORARILY INSTALL TOE CONTROL LINK SUB-ASSEMBLY LH

- (a) Install the toe control link sub-assembly LH and insert the toe adjust cam from the front of the vehicle. Then, install the rear No. 2 suspension toe adjust plate and temporarily install the new nut.

NOTICE:

Align the matchmarks on the rear suspension member and the rear No. 2 suspension toe adjust plate.

- (b) Install the rear suspension toe control link sub-assembly LH to the rear axle carrier side with a nut.

Torque: 60 N·m (612 kgf·cm, 44ft·lbf)

- (c) Install the new snap pin.

2. TEMPORARILY INSTALL REAR NO. 1 SUSPENSION ARM ASSEMBLY LH INFO

3. STABILIZE SUSPENSION INFO

4. FULLY TIGHTEN TOE CONTROL LINK SUB-ASSEMBLY LH

- (a) Fully tighten the nut on the rear suspension member side.

Torque: 100 N·m (1020 kgf·cm, 74ft·lbf)

NOTICE:

Check that the matchmarks on the rear suspension member and the rear No. 2 suspension toe adjust plate are aligned.

5. FULLY TIGHTEN REAR NO. 1 SUSPENSION ARM ASSEMBLY LH INFO

6. INSTALL REAR WHEEL

Torque: 120 N·m (1224 kgf·cm, 89ft·lbf)

7. INSPECT AND ADJUST REAR WHEEL ALIGNMENT

INFO

8. VSC SENSOR NEUTRAL MEMORIZATION

Title: TIRE / WHEEL: TIRE AND WHEEL SYSTEM: INSPECTION (2013 FR-S)		

INSPECTION

1. INSPECT TIRES

(a) Check the tires for wear and proper inflation pressure.

Cold Tire Inflation Pressure:

TIRE SIZE	FRONT KPA (KGF/CM ² , PSI)	REAR KPA (KGF/CM ² , PSI)
215/45R17 87W	240 (2.4, 35)	240 (2.4, 35)
P215/45R17 87V	240 (2.4, 35)	240 (2.4, 35)
T135/80D 16 101M	420 (4.2, 60)	420 (4.2, 60)

(b) Using a dial indicator, check the runout of the wheel.

Maximum wheel runout

Steel wheel	2.0 mm (0.0787 in.) (Vertical and lateral)
Aluminum wheel	1.0 mm (0.0394 in.) (Vertical and lateral)

2. ROTATE TIRES

(a) Rotate the tires as shown in the illustration.

Text in Illustration

	Front of the Vehicle
---	----------------------

Torque: 120 N·m (1224 kgf·cm, 89ft·lbf)

3. INSPECT WHEEL BALANCE

- (a) Check and perform off-car balancing.
- (b) If required, perform on-car balancing.

Imbalance after adjustment:
10.0 g (0.0220 lb) or less

Title: TIRE / WHEEL: TIRE REPAIR SEAL: DISPOSAL (2013 FR-S)		

DISPOSAL

1. DISPOSE OF TIRE REPAIR SEAL

HINT:

Confirm the expiration date on the side of the repair seal bottle.

(a) Dispose of the retrieved seal by consigning disposal to a waste the disposal firm.

NOTICE:

- The valve and valve core cannot be reused.
- Do not reuse items such as cloths that were used to wipe off seal or gloves soiled with the seal.
Dispose of such items as burnable waste.

(b) Dispose of the bottle used for retrieving the seal as plastic waste.

Title: TIRE / WHEEL: TIRE REPAIR SEAL: RECOVERY (2013 FR-S)		

RECOVERY

1. RECOVERY OF TIRE REPAIR SEAL

NOTICE:

- Try not to spill the tire repair seal in the tire during servicing.
- Wipe off any spilt seal with a cloth or the equivalent.

(a) Using a tire changer, remove the tire from the wheel by following the same procedures as for a regular tire change.

NOTICE:

Do not raise the tire rapidly as the seal may spill out.

(b) Retrieve the tire repair seal from the removed tire.

HINT:

Using a cloth or the equivalent, wipe off any seal spilt on the tire, the wheel, the tire changer and the floor.

Title: TIRE PRESSURE MONITORING: TIRE PRESSURE WARNING SYSTEM: B1247: Tire Pressure Monitor Receiver Communication Stop (2013 FR-S)		

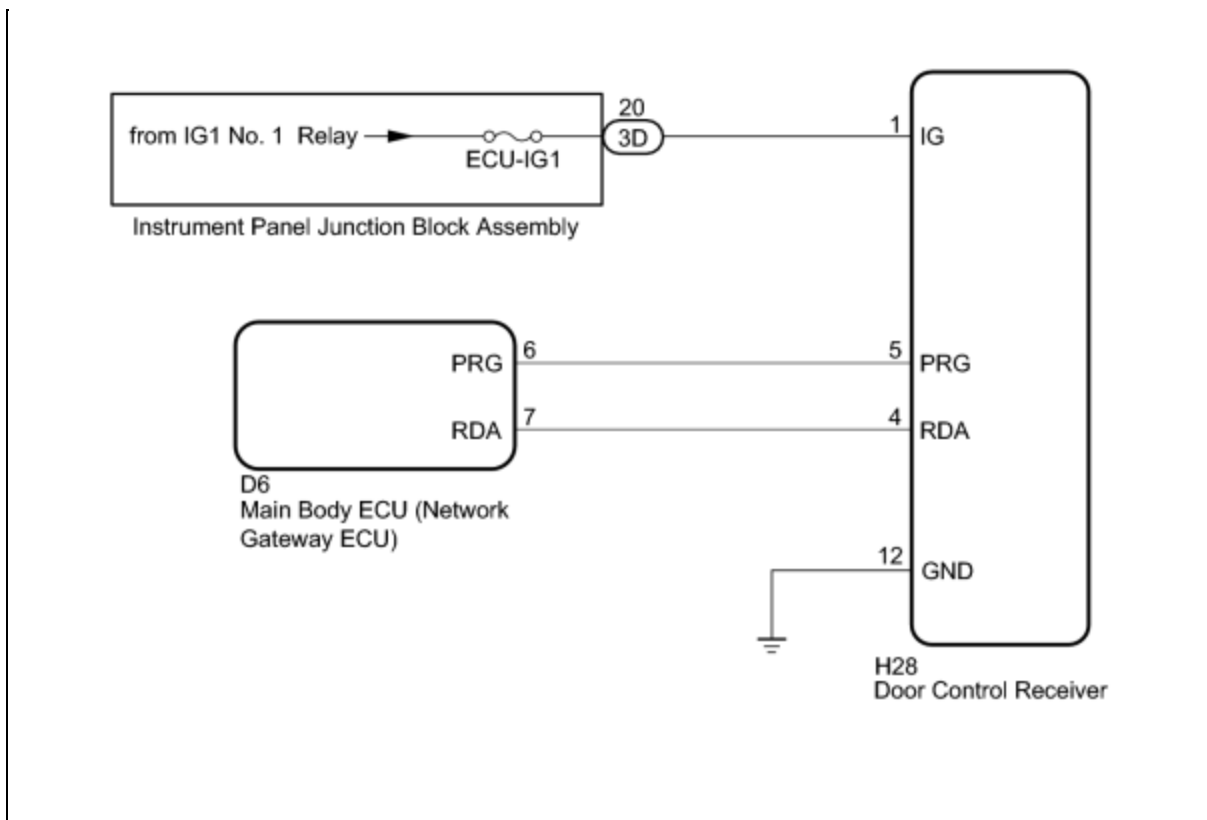

DTC	B1247	Tire Pressure Monitor Receiver Communication Stop
------------	--------------	--

DESCRIPTION

The main body ECU (network gateway ECU) and door control receiver are connected using 2 direct lines that they use to communicate with each other.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B1247	In diagnostic mode, an applicable RDA signal cannot be received within 10 seconds after a PRG signal is sent from the main body ECU (network gateway ECU).	<ul style="list-style-type: none"> • Door control receiver • Wire harness or connector • Main body ECU (network gateway ECU)

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- When replacing the door control receiver, read the IDs stored in the old ECU using the Techstream and write them down before removal.
- It is necessary to perform registration **INFO** of the transmitter IDs into the tire pressure warning ECU after the ECU has been replaced.
- When replacing the door control receiver on vehicles, be sure to perform Registration of Recognition Code to register the transmitter IDs after ECU replacement **INFO**.

HINT:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1.	CHECK HARNESS AND CONNECTOR (MAIN BODY ECU (NETWORK GATEWAY ECU) - DOOR CONTROL RECEIVER)
----	--

(a) Disconnect the H28 door control receiver connector and the D6 main body ECU (network gateway ECU) connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION

H28-4 (RDA) - D6-7	Always	Below 1 Ω
H28-5 (PRG) - D6-6	Always	Below 1 Ω
D6-7 (RDA) - Body ground	Always	10 k Ω or higher
D6-6 (PRG) - Body ground	Always	10 k Ω or higher

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2.	CHECK HARNESS AND CONNECTOR (POWER SOURCE OF DOOR CONTROL RECEIVER)
-----------	--

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
H28-12 (GND) - Body ground	Always	Below 1 Ω

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
H28-1 (IG) - Body ground	Ignition switch ON	11 to 14 V

Text in Illustration

*a	Front view of wire harness connector (to Door Control Receiver)
----	---

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3. REPLACE DOOR CONTROL RECEIVER

(a) Replace the door control receiver  .

NEXT

4. CHECK DTC OUTPUT (B1247)

(a) Clear the DTCs  .

(b) Turn the ignition switch off.

(c) Turn the ignition switch to ON.

(d) Check for DTCs  .

OK:

DTC B1247 is not output.

NG  **REPLACE MAIN BODY ECU (NETWORK GATEWAY ECU)**

OK  **END**

Last Modified: 3-27-2012	6.4 C	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000002DZD073X
Title: TIRE PRESSURE MONITORING: TIRE PRESSURE WARNING SYSTEM: C2111-C2114: Transmitter ID1 Operation Stop (2013 FR-S)		

DTC	C2111	Transmitter ID1 Operation Stop
------------	--------------	---------------------------------------

DTC	C2112	Transmitter ID2 Operation Stop
------------	--------------	---------------------------------------

DTC	C2113	Transmitter ID3 Operation Stop
------------	--------------	---------------------------------------

DTC	C2114	Transmitter ID4 Operation Stop
------------	--------------	---------------------------------------

DESCRIPTION

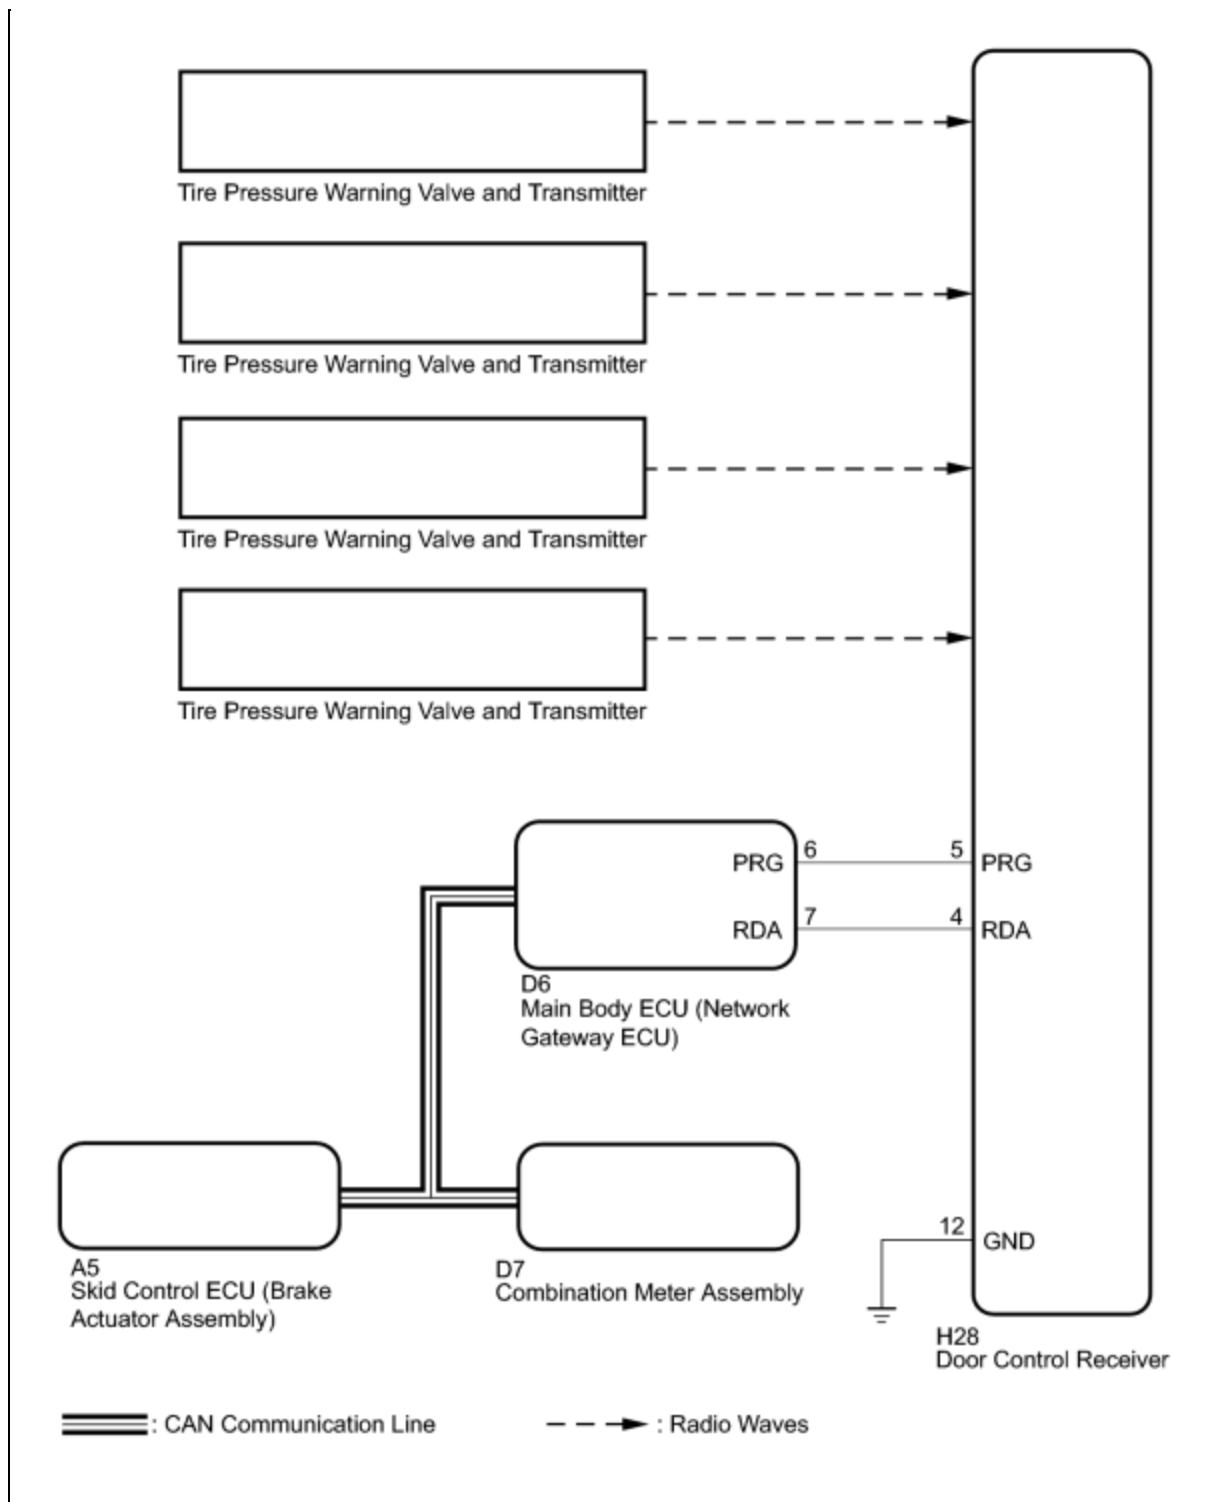

The tire pressure warning valve and transmitters that are installed in the tire and wheel assemblies measure the tire pressures. The measured values are transmitted to the door control receiver in the vehicle as radio waves. The ECU compares the measured air pressure values with the air pressure threshold. When the measured air pressure value is less than this threshold, the warning light in the combination meter assembly illuminates. The door control receiver stores a DTC when the tire pressure warning valve and transmitter stops transmitting signals. The signals can be forcibly transmitted by releasing the tire pressure rapidly. The stored DTC is cleared when signal transmission resumes.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
C2111 C2112 C2113 C2114	Tire pressure warning valve and transmitters stop transmitting signals	<ul style="list-style-type: none"> • Tire pressure warning valve and transmitter • Door control receiver

HINT:

It is necessary to perform the following procedure to identify the tire pressure warning valve and transmitter that is malfunctioning because it cannot be identified by the output DTC.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1. PERFORM FORCED TRANSMISSION OF TRANSMITTER ID OF ALL WHEELS

- (a) Set the tire pressure to the specified value INFO.
- (b) Turn the ignition switch off.

- (c) Connect the Techstream to the DLC3.
- (d) Turn the ignition switch to ON.
- (e) Turn the Techstream on.
- (f) Enter the following menus: Chassis / Tire Pressure Monitor / Data List.
- (g) Check the values by referring to the table below.

Tire Pressure Monitor

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
ID1 Tire Inflation Pressure	ID1 tire inflation pressure / min.: Absolute pressure / 50 kPa (0.5 kgf/cm ² , 7 psi), Relative pressure / -50 kPa (-0.5 kgf/cm ² , -7 psi) max.: Absolute pressure / 480 kPa (4.9 kgf/cm ² , 70 psi), Relative pressure / 380 kPa (3.9 kgf/cm ² , 55 psi)	Actual tire inflation pressure	If 50 kPa (0.5 kgf/cm ² , 7 psi) is displayed for absolute pressure or -50 kPa (-0.5 kgf/cm ² , -7 psi) is displayed for relative pressure, data has not been received.*
ID2 Tire Inflation Pressure	ID2 tire inflation pressure / min.: Absolute pressure / 50 kPa (0.5 kgf/cm ² , 7 psi), Relative pressure / -50 kPa (-0.5 kgf/cm ² , -7 psi) max.: Absolute pressure / 480 kPa (4.9 kgf/cm ² , 70 psi), Relative pressure / 380 kPa (3.9 kgf/cm ² , 55 psi)	Actual tire inflation pressure	If 50 kPa (0.5 kgf/cm ² , 7 psi) is displayed for absolute pressure or -50 kPa (-0.5 kgf/cm ² , -7 psi) is displayed for relative pressure, data has not been received.*
ID3 Tire Inflation Pressure	ID3 tire inflation pressure / min.: Absolute pressure / 50 kPa (0.5 kgf/cm ² , 7 psi), Relative pressure / -50 kPa (-0.5 kgf/cm ² , -7 psi) max.: Absolute pressure / 480 kPa (4.9 kgf/cm ² , 70 psi), Relative pressure / 380 kPa (3.9 kgf/cm ² , 55 psi)	Actual tire inflation pressure	If 50 kPa (0.5 kgf/cm ² , 7 psi) is displayed for absolute pressure or -50 kPa (-0.5 kgf/cm ² , -7 psi) is displayed for relative pressure, data has not been received.*
ID4 Tire Inflation Pressure	ID4 tire inflation pressure / min.: Absolute pressure / 50 kPa (0.5 kgf/cm ² , 7 psi), Relative pressure / -50 kPa (-0.5 kgf/cm ² , -7 psi) max.: Absolute pressure / 480 kPa (4.9 kgf/cm ² , 70 psi),	Actual tire inflation pressure	If 50 kPa (0.5 kgf/cm ² , 7 psi) is displayed for absolute pressure or -50 kPa (-0.5 kgf/cm ² , -7 psi) is displayed for relative pressure, data has not been received.*

Relative pressure / 380 kPa (3.9 kgf/cm ² , 55 psi)		
---	--	--

HINT:

*: It may take a few minutes until the values are displayed. If the values are not displayed after a few minutes, perform troubleshooting according to the inspection procedure for DTCs C2121 to C2124

INFO .

(h) Rapidly reduce the tire pressure for each wheel at least 40 kPa (0.4 kgf/cm² , 5.8 psi) within 30 seconds.

(1) Check that each tire pressure data displayed on the Techstream has changed.

OK:

Each tire pressure data displayed on the Techstream will change to the value of the tire pressure.

NOTICE:

- It may take a few minutes to display the updated tire pressure data.
- When the "ID Tire Inflation Pressure" data has not changed, reset the tire pressure to the appropriate specified value and rotate the tire 90 to 270 degrees. Then rapidly release the tire pressure and recheck the data.

(2) After confirming that all of the tire pressure data displayed on the Techstream has changed, set the tire pressure to the appropriate specified values.

HINT:

If the tire pressure data displayed on the Techstream has not changed after rechecking, inspect for another problem INFO .

DESCRIPTION

The tire pressure warning valve and transmitters that are installed in the tire and wheel assemblies measure the tire pressures. The measured values are transmitted to the door control receiver in the vehicle as radio waves. The ECU compares the measured air pressure values with the air pressure threshold. When the measured air pressure value is less than this threshold, the warning light in the combination meter assembly illuminates.

The tire pressure warning valve and transmitters constantly send radio waves to the door control receiver.

Under the conditions below, the door control receiver is unable to receive the signals from the tire pressure warning valve and transmitters, and a DTC is stored.

- Facilities or devices that use similar radio frequencies are located in the vicinity of the vehicle.
- Devices using similar radio frequencies are used in the vehicle.
- The ID of a tire pressure warning valve and transmitter is mistyped during registration.
- A tire, wheel and/or transmitter from a different vehicle is installed.

HINT:

When no transmitter ID is received from a tire pressure warning valve and transmitter for a total of 20 minutes while the vehicle speed is more than 37 km/h (23 mph), or no transmitter ID is received from all the tire pressure warning valve and transmitters for a total of 20 minutes, these DTCs are set.

DTCs from C2121 to C2124 can only be cleared by using the Techstream. DTCs from C2181 to C2184 can be cleared when the tire pressure warning valve and transmitter sends a forced transmission signal or test mode ends. DTCs from C2181 to C2184 are output only in test mode.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
C2121 C2122 C2123 C2124	Following condition (a) or (b) is met: (a) When all conditions below are met: <ul style="list-style-type: none"> • Tire pressure warning valve and transmitter is not in stop mode. • Any transmitter ID is not received from tire pressure warning valve and transmitters. • For 20 minutes or more, vehicle speed is more than 37 km/h (23 mph) or no vehicle speed signal is received. (b) When both conditions below are met: <ul style="list-style-type: none"> • Tire pressure warning valve and transmitter is not in stop mode. • No transmitter ID is received from tire pressure warning valve and transmitters for 20 minutes or more. 	<ul style="list-style-type: none"> • Tire pressure warning valve and transmitter • Door control receiver
C2181 C2182 C2183 C2184	Test mode procedure is performed.	<ul style="list-style-type: none"> • Tire pressure warning valve and transmitter • Door control receiver

NOTICE:

When DTCs C2121 to C2124 are set, DTC C2179 may be set simultaneously. In such cases, troubleshoot DTCs C2121 to C2124 first, then troubleshoot DTC C2179.

HINT:

It is necessary to perform the following procedure to identify the tire pressure warning valve and transmitter that is malfunctioning because it cannot be identified by the output DTC.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- When replacing the door control receiver, read the IDs stored in the old ECU using the Techstream and write them down before removal.
- It is necessary to perform registration **INFO** of the transmitter IDs into the tire pressure warning ECU after the ECU has been replaced.
- When replacing the door control receiver on vehicles, be sure to perform Registration of Recognition Code to register the transmitter IDs after ECU replacement **INFO** .

PROCEDURE

1. CHECK FREQUENCY RECEIVING CONDITION

(a) Check that the vehicle is not located in an area such as described below:

- (1) Facilities or devices that use similar radio frequencies are located in the vicinity of the vehicle.

HINT:

If the vehicle is located in an area such as the one described above, the tire pressure warning light may come on only in a particular area.

- (2) Devices using similar radio frequencies are used in the vehicle.

OK:

Facilities, or devices that use similar radio frequencies are not located in the vicinity of the vehicle.

HINT:

Radio transmissions may be interrupted due to the surroundings or devices installed by the user.

NG  **CHECK IF ANY DEVICE IS INSTALLED BY USER**

OK

2. IDENTIFY TRANSMITTER CORRESPONDING TO DTC

- (a) Set the tire pressure to the specified values  .
- (b) Turn the ignition switch off.
- (c) Connect the Techstream to the DLC3.
- (d) Turn the ignition switch to ON.
- (e) Turn the Techstream on.
- (f) Enter the following menus: Chassis / Tire Pressure Monitor / Data List.
- (g) Check the values by referring to the table below.

Tire Pressure Monitor

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
	ID1 tire inflation pressure/		

ID1 Tire Inflation Pressure	min.: Absolute pressure / 50 kPa (0.5 kgf/cm ² , 7 psi), Relative pressure / -50 kPa (-0.5 kgf/cm ² , -7 psi) max.: Absolute pressure / 480 kPa (4.9 kgf/cm ² , 70 psi), Relative pressure / 380 kPa (3.9 kgf/cm ² , 55 psi)	Actual tire inflation pressure	If 50 kPa (0.5 kgf/cm ² , 7 psi) is displayed for absolute pressure or -50 kPa (-0.5 kgf/cm ² , -7 psi) is displayed for relative pressure, data has not been received.*
ID2 Tire Inflation Pressure	ID2 tire inflation pressure / min.: Absolute pressure / 50 kPa (0.5 kgf/cm ² , 7 psi), Relative pressure / -50 kPa (-0.5 kgf/cm ² , -7 psi) max.: Absolute pressure / 480 kPa (4.9 kgf/cm ² , 70 psi), Relative pressure / 380 kPa (3.9 kgf/cm ² , 55 psi)	Actual tire inflation pressure	If 50 kPa (0.5 kgf/cm ² , 7 psi) is displayed for absolute pressure or -50 kPa (-0.5 kgf/cm ² , -7 psi) is displayed for relative pressure, data has not been received.*
ID3 Tire Inflation Pressure	ID3 tire inflation pressure / min.: Absolute pressure / 50 kPa (0.5 kgf/cm ² , 7 psi), Relative pressure / -50 kPa (-0.5 kgf/cm ² , -7 psi) max.: Absolute pressure / 480 kPa (4.9 kgf/cm ² , 70 psi), Relative pressure / 380 kPa (3.9 kgf/cm ² , 55 psi)	Actual tire inflation pressure	If 50 kPa (0.5 kgf/cm ² , 7 psi) is displayed for absolute pressure or -50 kPa (-0.5 kgf/cm ² , -7 psi) is displayed for relative pressure, data has not been received.*
ID4 Tire Inflation Pressure	ID4 tire inflation pressure / min.: Absolute pressure / 50 kPa (0.5 kgf/cm ² , 7 psi), Relative pressure / -50 kPa (-0.5 kgf/cm ² , -7 psi) max.: Absolute pressure / 480 kPa (4.9 kgf/cm ² , 70 psi), Relative pressure / 380 kPa (3.9 kgf/cm ² , 55 psi)	Actual tire inflation pressure	If 50 kPa (0.5 kgf/cm ² , 7 psi) is displayed for absolute pressure or -50 kPa (-0.5 kgf/cm ² , -7 psi) is displayed for relative pressure, data has not been received.*

HINT:

*: It may take a few minutes until the values are displayed.

(h) Rapidly reduce the tire pressure for each wheel at least 40 kPa (0.4 kg/cm² , 5.8 psi) within 30 seconds.

(i) Check the Data List.

NOTICE:

- It may take a few minutes to display the updated tire pressure data.
- When the "ID Tire Inflation Pressure" data has not changed, reset the tire pressure to the

appropriate specified value and rotate the tire 90 to 270 degrees. Then rapidly release the tire pressure and recheck the data.

- Record the transmitter ID of which "ID Tire Inflation Pressure" data corresponds to each tire.

(j) After confirming that the "ID Tire Inflation Pressure" data for one tire (ID1 to ID4) has changed, repeat this procedure one by one. Identify the transmitter that corresponds to the DTC.

A ► REPLACE DOOR CONTROL RECEIVER

Last Modified: 3-27-2012	6.4 C	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000003407071X
Title: TIRE PRESSURE MONITORING: TIRE PRESSURE WARNING SYSTEM: C2126: Transmitter ID not Received in Main Mode (2013 FR-S)		

DTC	C2126	Transmitter ID not Received in Main Mode
------------	--------------	---

DESCRIPTION

After all IDs are registered, DTC C2126 is set in the door control receiver and the tire pressure warning light blinks for 1 minute and then illuminates.

When the door control receiver successfully receives radio waves from all the transmitters whose IDs are stored in the ECU, DTC C2126 is cleared and the tire pressure warning light goes off.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
C2126	After ID registration is completed, ECU does not receive radio waves from transmitters whose IDs are stored in ECU.	<ul style="list-style-type: none"> • ID registration failure • Tire pressure warning valve and transmitter • Door control receiver

HINT:

The purpose of this DTC is to help prevent delivering a vehicle that has incorrectly registered IDs. After all IDs are registered, DTC C2126 is detected and the tire pressure warning light blinks for 1 minute and then illuminates. If the tire pressure warning light does not turn off after a little while, IDs may be incorrectly registered.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- When replacing the door control receiver, read the IDs stored in the old ECU using the Techstream and write them down before removal.

A ▶ REPLACE DOOR CONTROL RECEIVER

Last Modified: 3-27-2012	6.4 C	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000XN408JX
Title: TIRE PRESSURE MONITORING: TIRE PRESSURE WARNING SYSTEM: C2141-C2144: Transmitter ID1 Error (2013 FR-S)		

DTC	C2141	Transmitter ID1 Error
------------	--------------	------------------------------

DTC	C2142	Transmitter ID2 Error
------------	--------------	------------------------------

DTC	C2143	Transmitter ID3 Error
------------	--------------	------------------------------

DTC	C2144	Transmitter ID4 Error
------------	--------------	------------------------------

DESCRIPTION

The tire pressure warning valve and transmitters that are installed in the tire and wheel assemblies measure the tire pressures. The measured values are transmitted to the door control receiver in the vehicle as radio waves. The ECU compares the measured air pressure values with the air pressure threshold. When the measured air pressure value is less than this threshold, the warning light in the combination meter assembly illuminates.

When the internal circuit of a tire pressure warning valve and transmitter is malfunctioning, one of these DTCs is output.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
C2141	If an "ERROR" signal is received 3 times consecutively, the tire pressure warning valve and transmitter will be judged as defective and a DTC will be output.	<ul style="list-style-type: none"> • Tire pressure warning valve and transmitter • Door control receiver
C2142	This will happen in situations where the inflation pressure is outside the	
C2143	range -50 to 380 kPa (-0.5 to 3.9 kgf/cm ² , -7 to 55 psi), the	
C2144	temperature inside the tire is outside the specified range -40 to 120°C (-40 to 248°F), or an error occurs in the tire pressure warning valve and transmitter or the surrounding area.	

HINT:

It is necessary to perform the following procedure to identify the tire pressure warning valve and transmitter that is malfunctioning because it cannot be identified by the output DTC.

INSPECTION PROCEDURE

NOTICE:

- When replacing the door control receiver, read the IDs stored in the old ECU using the Techstream and write them down before removal.

- It is necessary to perform registration **INFO** of the transmitter IDs into the tire pressure warning ECU after the ECU has been replaced.
- When replacing the door control receiver on vehicles, be sure to perform Registration of Recognition Code to register the transmitter IDs after ECU replacement **INFO** .

PROCEDURE

1.	IDENTIFY TRANSMITTER CORRESPONDING TO DTC
-----------	--

- (a) Set the tire pressure to the specified value **INFO** .
- (b) Turn the ignition switch off.
- (c) Connect the Techstream to the DLC3.
- (d) Turn the ignition switch to ON.
- (e) Turn the Techstream on.
- (f) Enter the following menus: Chassis / Tire Pressure Monitor / Data List.
- (g) Display the "ID Tire Inflation Pressure" data for each wheel using the Techstream.
- (h) Rapidly reduce the tire pressure for each wheel at least 40 kPa (0.4 kg/cm² , 5.8 psi) within 30 seconds. If "ID Tire Inflation Pressure" displayed on the Techstream (ID1 to ID4) does not change, the tire pressure warning valve and transmitter corresponding to the unchanged "ID Tire Inflation Pressure" data was the cause of the output DTC.

HINT:

- Identify the malfunctioning tire pressure warning valve and transmitter by repeatedly decreasing the tire pressure for each tire.
- Record which "ID Tire Inflation Pressure" data (ID1 to ID4) corresponds to each tire.

Tire Pressure Monitor

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
ID1 Tire Inflation Pressure	ID1 tire inflation pressure/ min.: Absolute pressure / 50 kPa (0.5 kgf/cm ² , 7 psi), Relative pressure / -50 kPa (-0.5 kgf/cm ² , -7 psi) max.: Absolute pressure / 480 kPa (4.9 kgf/cm ² , 70 psi), Relative pressure / 380 kPa (3.9 kgf/cm ² , 55 psi)	Actual tire inflation pressure	If 50 kPa (0.5 kgf/cm ² , 7 psi) is displayed for absolute pressure or -50 kPa (-0.5 kgf/cm ² , -7 psi) is displayed for relative pressure, data has not been received.*
ID2 Tire Inflation	ID2 tire inflation pressure / min.: Absolute pressure / 50 kPa (0.5 kgf/cm ² , 7 psi), Relative pressure / -50 kPa (-0.5 kgf/cm ² , -7 psi)	Actual tire inflation	If 50 kPa (0.5 kgf/cm ² , 7 psi) is displayed for absolute pressure or -50 kPa (-0.5 kgf/cm ² , -7 psi) is displayed for relative pressure, data has not been received.*

Pressure	max.: Absolute pressure / 480 kPa (4.9 kgf/cm ² , 70 psi), Relative pressure / 380 kPa (3.9 kgf/cm ² , 55 psi)	pressure	² , -7 psi) is displayed for relative pressure, data has not been received.*
ID3 Tire Inflation Pressure	ID3 tire inflation pressure / min.: Absolute pressure / 50 kPa (0.5 kgf/cm ² , 7 psi), Relative pressure / -50 kPa (-0.5 kgf/cm ² , -7 psi) max.: Absolute pressure / 480 kPa (4.9 kgf/cm ² , 70 psi), Relative pressure / 380 kPa (3.9 kgf/cm ² , 55 psi)	Actual tire inflation pressure	If 50 kPa (0.5 kgf/cm ² , 7 psi) is displayed for absolute pressure or -50 kPa (-0.5 kgf/cm ² , -7 psi) is displayed for relative pressure, data has not been received.*
ID4 Tire Inflation Pressure	ID4 tire inflation pressure / min.: Absolute pressure / 50 kPa (0.5 kgf/cm ² , 7 psi), Relative pressure / -50 kPa (-0.5 kgf/cm ² , -7 psi) max.: Absolute pressure / 480 kPa (4.9 kgf/cm ² , 70 psi), Relative pressure / 380 kPa (3.9 kgf/cm ² , 55 psi)	Actual tire inflation pressure	If 50 kPa (0.5 kgf/cm ² , 7 psi) is displayed for absolute pressure or -50 kPa (-0.5 kgf/cm ² , -7 psi) is displayed for relative pressure, data has not been received.*

HINT:

*: It may take a few minutes until the values are displayed. If the values are not displayed after a few minutes, perform troubleshooting according to the inspection procedure for DTCs C2121 to C2124

(i) Check the Data List.

Result:

RESULT	DETECTION CONDITION
One of "ID Tire Inflation Pressure" data (ID1 to ID4) changed.	Normal
"ID Tire Inflation Pressure" data did not change.	Transmitter corresponding to DTC

NOTICE:

- It may take a few minutes to display the updated tire pressure data.
- When the "ID Tire Inflation Pressure" data has not changed, reset the tire pressure to the appropriate specified value and rotate the tire 90 to 270 degrees. Then rapidly release the tire pressure and recheck the data.
- Record the transmitter IDs and positions of transmitters that are normal.

(j) When the "ID Tire inflation Pressure" data (ID1 to ID4) has changed, repeat this procedure to identify the tire pressure warning valve and transmitter that corresponds to the DTC.

(k) When all of the "ID Tire Inflation Pressure" data (ID1 to ID4) has changed, identify the malfunctioning tire pressure warning valve and transmitter using the recorded ID numbers and output DTCs.

NEXT

2.	REPLACE TIRE PRESSURE WARNING VALVE AND TRANSMITTER
-----------	--

(a) Replace the identified tire pressure warning valve and transmitter with a new one INFO .

HINT:

- Before installing a new tire pressure warning valve and transmitter, read and write down its transmitter ID.
- The IDs for the tire pressure warning valve and transmitters which are not replaced should be checked using the Techstream and recorded.

NEXT

3.	REGISTRATION OF TRANSMITTER ID
-----------	---------------------------------------

(a) Register the transmitter ID for all wheels INFO .

NEXT

4.	CONFIRM TIRE INFLATION PRESSURE (DATA LIST)
-----------	--

- Turn the ignition switch off.
- Connect the Techstream to the DLC3.
- Turn the ignition switch to ON.
- Turn the Techstream on.
- Enter the following menus: Chassis / Tire Pressure Monitor / Data List.
- Check the values by referring to the table below.

Tire Pressure Monitor

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
	ID1 tire inflation pressure/ min.: Absolute pressure / 50 kPa		

ID1 Tire Inflation Pressure	(0.5 kgf/cm ² , 7 psi), Relative pressure / -50 kPa (-0.5 kgf/cm ² , -7 psi) max.: Absolute pressure / 480 kPa (4.9 kgf/cm ² , 70 psi), Relative pressure / 380 kPa (3.9 kgf/cm ² , 55 psi)	Actual tire inflation pressure	If 50 kPa (0.5 kgf/cm ² , 7 psi) is displayed for absolute pressure or -50 kPa (-0.5 kgf/cm ² , -7 psi) is displayed for relative pressure, data has not been received.*
ID2 Tire Inflation Pressure	ID2 tire inflation pressure / min.: Absolute pressure / 50 kPa (0.5 kgf/cm ² , 7 psi), Relative pressure / -50 kPa (-0.5 kgf/cm ² , -7 psi) max.: Absolute pressure / 480 kPa (4.9 kgf/cm ² , 70 psi), Relative pressure / 380 kPa (3.9 kgf/cm ² , 55 psi)	Actual tire inflation pressure	If 50 kPa (0.5 kgf/cm ² , 7 psi) is displayed for absolute pressure or -50 kPa (-0.5 kgf/cm ² , -7 psi) is displayed for relative pressure, data has not been received.*
ID3 Tire Inflation Pressure	ID3 tire inflation pressure / min.: Absolute pressure / 50 kPa (0.5 kgf/cm ² , 7 psi), Relative pressure / -50 kPa (-0.5 kgf/cm ² , -7 psi) max.: Absolute pressure / 480 kPa (4.9 kgf/cm ² , 70 psi), Relative pressure / 380 kPa (3.9 kgf/cm ² , 55 psi)	Actual tire inflation pressure	If 50 kPa (0.5 kgf/cm ² , 7 psi) is displayed for absolute pressure or -50 kPa (-0.5 kgf/cm ² , -7 psi) is displayed for relative pressure, data has not been received.*
ID4 Tire Inflation Pressure	ID4 tire inflation pressure / min.: Absolute pressure / 50 kPa (0.5 kgf/cm ² , 7 psi), Relative pressure / -50 kPa (-0.5 kgf/cm ² , -7 psi) max.: Absolute pressure / 480 kPa (4.9 kgf/cm ² , 70 psi), Relative pressure / 380 kPa (3.9 kgf/cm ² , 55 psi)	Actual tire inflation pressure	If 50 kPa (0.5 kgf/cm ² , 7 psi) is displayed for absolute pressure or -50 kPa (-0.5 kgf/cm ² , -7 psi) is displayed for relative pressure, data has not been received.*

HINT:

- *: It may take a few minutes until the values are displayed.
- When no "ID Tire Inflation Pressure" data has changed, reset the tire pressure to the appropriate specified value and rotate the tire 90 to 270 degrees. Then rapidly release the tire pressure and recheck the data.

Result:

RESULT	PROCEED TO
Tire pressure values are not displayed.	A

A ▶ REPLACE DOOR CONTROL RECEIVER

Last Modified: 3-27-2012	6.4 C	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000002DZY05VX
Title: TIRE PRESSURE MONITORING: TIRE PRESSURE WARNING SYSTEM: C2171: Transmitter ID not Registered (2013 FR-S)		

DTC	C2171	Transmitter ID not Registered
------------	--------------	--------------------------------------

DESCRIPTION

The IDs of each tire pressure warning valve and transmitter are registered to the door control receiver.

When the ECU detects that a transmitter ID code is not registered in the ECU, a DTC is stored.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
C2171	Transmitter ID code is not registered. (When an ID code is unregistered for 3 minutes or more)	Door control receiver

INSPECTION PROCEDURE

NOTICE:

- When replacing the door control receiver, read the IDs stored in the old ECU using the Techstream and write them down before removal.
- It is necessary to perform registration **INFO** of the transmitter IDs into the tire pressure warning ECU after the ECU has been replaced.
- When replacing the door control receiver on vehicles, be sure to perform Registration of Recognition Code to register the transmitter IDs after ECU replacement **INFO** .

PROCEDURE

1.	CONFIRM REGISTRATION CONDITION (REGISTERED ID CODES)
-----------	---

- Turn the ignition switch off.
- Connect the Techstream to the DLC3.
- Turn the ignition switch to ON.
- Turn the Techstream on.
- Enter the following menus: Chassis / Tire Pressure Monitor / Data List.
- Check the values by referring to the table below.

Tire Pressure Monitor

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Registered ID1	Registered ID1 code/	ID No. registered for transmitter ID1	

code	min.: 0 max.: FFFFFFFF*	displayed	-
Registered ID2 code	Registered ID2 code/ min.: 0 max.: FFFFFFFF*	ID No. registered for transmitter ID2 displayed	-
Registered ID3 code	Registered ID3 code/ min.: 0 max.: FFFFFFFF*	ID No. registered for transmitter ID3 displayed	-
Registered ID4 code	Registered ID4 code/ min.: 0 max.: FFFFFFFF*	ID No. registered for transmitter ID4 displayed	-

HINT:

*: **Displayed only when the ID No. is not registered.**

OK:

The registered transmitter ID codes are displayed on the Techstream.

NG ► **PERFORM REGISTRATION (TRANSMITTER ID)**

OK ► **REPLACE DOOR CONTROL RECEIVER**

2.	PERFORM REGISTRATION (TRANSMITTER ID)
-----------	--

(a) Register the transmitter IDs for all the wheels  .

NEXT

3.	CONFIRM TIRE INFLATION PRESSURE (DATA LIST)
-----------	--

(a) Turn the ignition switch off.

(b) Connect the Techstream to the DLC3.

(c) Turn the ignition switch to ON.

(d) Turn the Techstream on.

(e) Enter the following menus: Chassis / Tire Pressure Monitor / Data List.

(f) Check the values by referring to the table below.

Tire Pressure Monitor

Title: TIRE PRESSURE MONITORING: TIRE PRESSURE WARNING SYSTEM: C2177: Initialization not Completed (2013 FR-S)		

DTC	C2177	Initialization not Completed
------------	--------------	-------------------------------------

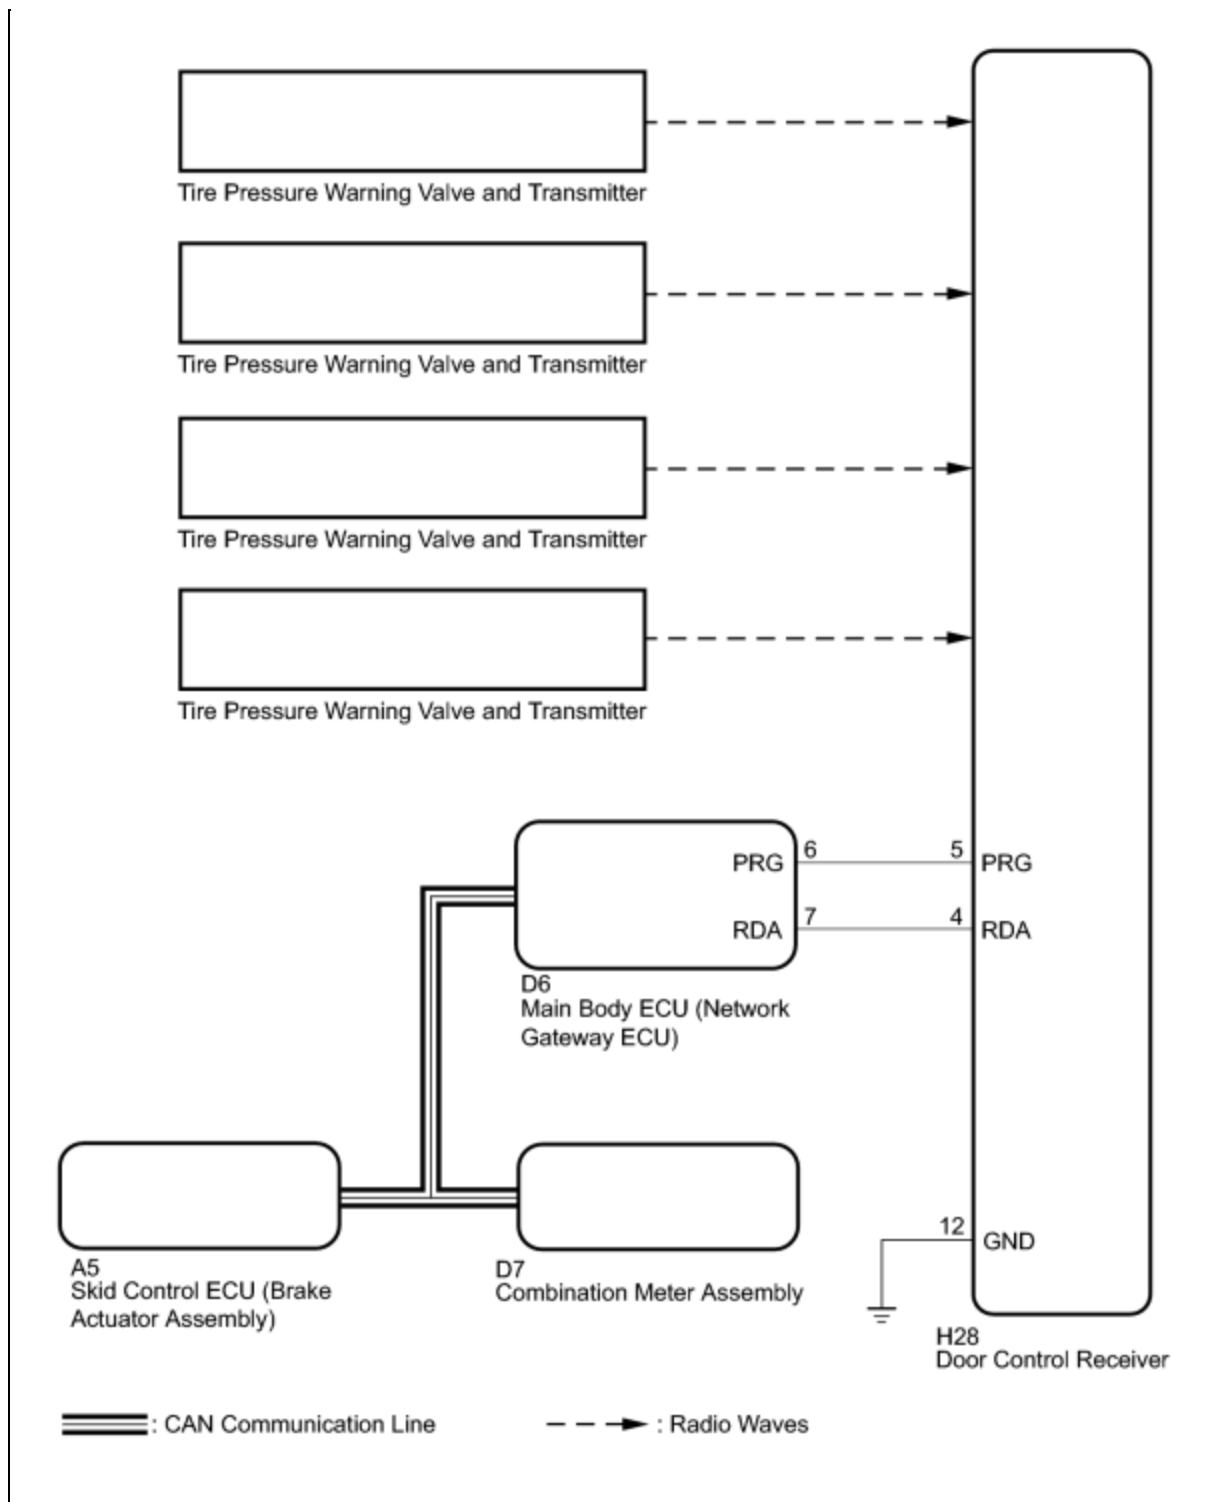

DESCRIPTION

Initialization is necessary if one of the following occurs:

- The door control receiver is replaced.
- A tire pressure warning valve and transmitter is replaced.
- Tires with a different tire standard pressure are installed.
- The tires are rotated.
- A new vehicle is delivered.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
C2177	<p>All conditions below are met:</p> <ul style="list-style-type: none"> • During initialization • Tire pressure warning valve and transmitter is not in stop mode • Signal is not received from tire pressure warning valve and transmitter for 20 minutes or more • Vehicle speed is more than 37 km/h (23 mph) for a total of 20 minutes 	<ul style="list-style-type: none"> • Tire pressure warning valve and transmitter • Wire harness or connector • Door control receiver

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- When replacing the door control receiver, read the IDs stored in the old ECU using the Techstream and write them down before removal.
- It is necessary to perform registration **INFO** of the transmitter IDs into the tire pressure warning ECU after the ECU has been replaced.
- When replacing the door control receiver on vehicles, be sure to perform Registration of Recognition Code to register the transmitter IDs after ECU replacement **INFO** .

PROCEDURE

1. CHECK FREQUENCY RECEIVING CONDITION

(a) Check that the vehicle is not located in an area such as described below:

- (1) Facilities or devices that use similar radio frequencies are located in the vicinity of the vehicle.

HINT:

If the vehicle is located in an area such as the one described above, the tire pressure warning light may come on after blinking 1 minute only in a particular area due to interfering radio frequencies.

- (2) Devices using similar radio frequencies are used in the vehicle.

OK:

Facilities, or devices that use similar radio frequencies are not located in the vicinity of the vehicle.

HINT:

Radio transmissions may be interrupted due to the surroundings, or devices installed by the user.

NG  **CHECK IF ANY DEVICE IS INSTALLED BY USER**

OK

2. CONFIRM TIRE INFLATION PRESSURE (DATA LIST)

- (a) Turn the ignition switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the ignition switch to ON.
- (d) Turn the Techstream on.
- (e) Enter the following menus: Chassis / Tire Pressure Monitor / Data List.
- (f) Check the values by referring to the table below.

Tire Pressure Monitor

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
	ID1 tire inflation pressure/ min.: Absolute pressure / 50 kPa (0.5 kgf/cm ² , 7 psi), Relative		

ID1 Tire Inflation Pressure	pressure / -50 kPa (-0.5 kgf/cm ² , -7 psi) max.: Absolute pressure / 480 kPa (4.9 kgf/cm ² , 70 psi), Relative pressure / 380 kPa (3.9 kgf/cm ² , 55 psi)	Actual tire inflation pressure	If 50 kPa (0.5 kgf/cm ² , 7 psi) is displayed for absolute pressure or -50 kPa (-0.5 kgf/cm ² , -7 psi) is displayed for relative pressure, data has not been received.*

Title: TIRE PRESSURE MONITORING: TIRE PRESSURE WARNING SYSTEM: C2179: Tire Pressure Monitor ECU Communication Stop (2013 FR-S)		

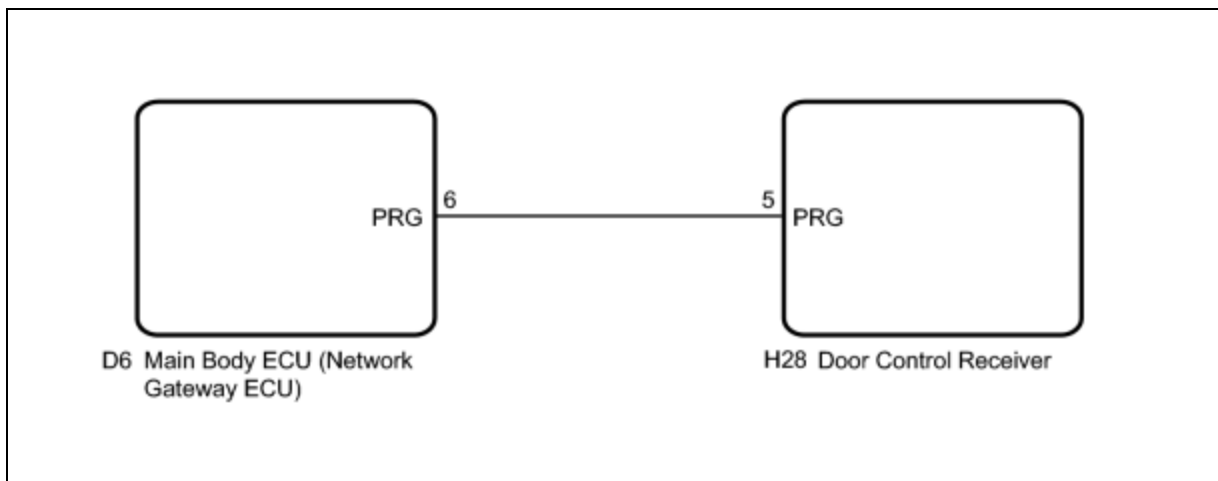

DTC	C2179	Tire Pressure Monitor ECU Communication Stop
------------	--------------	---

DESCRIPTION

The main body ECU (network gateway ECU) sends signals to the door control receiver via a direct line.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
C2179	Communication between the main body ECU (network gateway ECU) and door control receiver is interrupted for 10 seconds or more.	<ul style="list-style-type: none"> • Main body ECU (network gateway ECU) • Wire harness or connector • Door control receiver

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- When replacing the door control receiver, read the IDs stored in the old ECU using the Techstream and write them down before removal.
- It is necessary to perform registration **WFO** of the transmitter IDs into the tire pressure warning ECU after the ECU has been replaced.
- When replacing the door control receiver on vehicles, be sure to perform Registration of Recognition Code to register the transmitter IDs after ECU replacement **WFO**.

PROCEDURE

1.	CHECK HARNESS AND CONNECTOR (DOOR CONTROL RECEIVER - MAIN BODY ECU (NETWORK GATEWAY ECU))
----	--

(a) Disconnect the H28 door control receiver connector and the D6 main body ECU (network gateway ECU) connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
H28-5 (PRG) - D6-6 (PRG)	Always	Below 1 Ω
H28-5 (PRG) - Body ground	Always	10 k Ω or higher

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2.	REPLACE DOOR CONTROL RECEIVER
----	--------------------------------------

(a) Replace the door control receiver  .

NEXT

3.	CHECK DTC OUTPUT
----	-------------------------

(a) Clear the DTCs  .

(b) Turn the ignition switch off.

(c) Turn the ignition switch to ON.

(d) Check for DTCs  .

OK:

DTC C2179 is not output.

NG  **REPLACE MAIN BODY ECU (NETWORK**

GATEWAY ECU)

OK ► END

Title: TIRE PRESSURE MONITORING: TIRE PRESSURE WARNING SYSTEM: DATA LIST / ACTIVE TEST (2013 FR-S)		

DATA LIST / ACTIVE TEST

1. READ DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

- (a) Turn the ignition switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the ignition switch to ON.
- (d) Turn the Techstream on.
- (e) Enter the following menus: Chassis / Tire Pressure Monitor / Data List.
- (f) According to the display on the Techstream, read the Data List.

Tire Pressure Monitor

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE

HINT:

*1: Displayed only when the ID No. is not registered.

*2: It may take a few minutes until the values are displayed. If the values are not displayed after a few minutes, perform troubleshooting according to the inspection procedure for DTCs C2121 to C2124

*3: This item is displayed on the Techstream, however, it is not used for this vehicle.

2. PERFORM ACTIVE TEST

Using the Techstream to perform Active Tests allows the relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in trouble shooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

- (a) Turn the ignition switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the ignition switch to ON.
- (d) Turn the Techstream on.
- (e) Enter the following menus: Body Electrical / Combination Meter / Active Test.
- (f) Check the operation by referring to the table below.

Combination Meter

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Indicat. Tire Pressure Warning System	Tire pressure warning light	Tire pressure warning light OFF or ON	Confirm that the vehicle is stopped, engine idling

Last Modified: 3-27-2012	6.4 D	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000XMW081X
Title: TIRE PRESSURE MONITORING: TIRE PRESSURE WARNING SYSTEM: DIAGNOSIS SYSTEM (2013 FR-S)		

DIAGNOSIS SYSTEM

1. CHECK WARNING LIGHT

NOTICE:

- When there is a problem with the tire pressure warning system, the tire pressure warning light blinks at 0.5 second intervals, and illuminates after 1 minute.
- When the malfunction has been corrected, the tire pressure warning light does not illuminate.
- When the tire pressure warning light illuminates, immediately check the tire pressures of the tire and adjust it to the specified value(s).
- After the ignition switch is turned to ON, the tire pressure warning light illuminates for 3 seconds and then goes off. If the warning light does not illuminate for 3 seconds, proceed to the troubleshooting for the tire pressure warning light circuit INFO.

(a) Turn the ignition switch to ON.

(b) Check that the tire pressure warning light illuminates for 3 seconds.

Text in Illustration

*1	Tire Pressure Warning Light
----	-----------------------------

2. WHAT TO CONSIDER WHEN TIRE PRESSURE WARNING LIGHT ILLUMINATES

- (a) When the tire pressure warning light does not go off, or when it illuminates during driving, check the tire pressure. If the tire pressure warning light illuminates within several hours after adjusting the tire pressure, the tire may have a slow air leak.
- (b) The system is disabled in the following conditions (when the condition becomes normal, the system will work properly).
- (1) When all of the tires and wheels that have the tire pressure warning valve and transmitters registered with the door control receiver have not been installed.
 - (2) When all of the transmitter ID codes are not registered with the door control receiver.
 - (3) When the tire pressure is abnormally high (absolute pressure: 480 kPa (4.9 kgf/cm² , 70 psi) or more; relative pressure: 380 kPa (3.9 kgf/cm² , 55 psi) or more).
 - (4) When the tire pressure warning valve and transmitter battery is depleted.
- (c) The system may become disabled in the following conditions (when the condition becomes normal, the system will work properly).
- (1) When electric devices or facilities using similar radio frequencies are nearby.
 - (2) When a wireless device or other equipment operating at a similar frequency is in use in the

vehicle.

- (3) When a window tint that affects radio wave signals is installed.
- (4) When there is a lot of snow or ice on the vehicle, in particular, around the wheels or wheel housing.
- (5) When non-genuine wheels are used.
- (6) When tire chains are used.
- (7) When aftermarket tire repair sealant is used.

CAUTION:

After use of tire repair sealant, replacement of the tire pressure warning valve and transmitter is required to ensure normal system operation. (Normal system operation cannot be ensured by only repairing or replacing the tire.)

3. TIRE PRESSURE WARNING LIGHT AND INDICATOR CHART

HINT:

The table below indicates the state of the tire pressure warning light after the ignition switch is turned to ON.

	IMMEDIATELY AFTER TURNING THE IGNITION SWITCH TO ON	ALWAYS			
		WARNING LIGHT OUTPUT PATTERN			
	ILLUMINATES FOR 3 SEC.	GOES OFF	ILLUMINATES	BLINKS*1	BLINKS*2
Normal	○	○	-	-	-
Low tire pressure	○	-	○	-	-
System failure	○	-	-	○	-
Test mode (signal check mode)	○	-	-	-	○
ECU connector poorly connected	-	-	-	○	-

*1: Illuminates and goes off repeatedly at 0.5 second intervals, and illuminates after 1 minute.

Text in Illustration

*a	ON
*b	OFF
*c	0.5 sec.
*d	1 minute

*2: Illuminates and goes off repeatedly at 0.125 second intervals.

Text in Illustration

*a	ON
*b	OFF
*c	0.125 sec.

4. Normal mode DTCs

- (a) DTCs are stored in the door control receiver and output by the blinking of tire pressure warning light or by using the Techstream [INFO](#) .

5. Test mode (signal check mode) DTCs

- (a) By switching from normal mode into test mode (input signal check), you can inspect the door control receiver, each tire pressure warning valve and transmitter [INFO](#) .

6. FAIL-SAFE FUNCTION

- (a) When a system malfunction occurs in the tire pressure warning system, the tire pressure warning light illuminates after blinking for 1 minute to inform the driver of the system failure.
- (b) The result of this diagnosis code is stored in the door control receiver.

Title: TIRE PRESSURE MONITORING: TIRE PRESSURE WARNING SYSTEM: DTC CHECK / CLEAR (2013 FR-S)		

DTC CHECK / CLEAR

1. CHECK DTC (for DOOR CONTROL RECEIVER)

- (a) Turn the ignition switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the ignition switch to ON.
- (d) Turn the Techstream on.
- (e) Enter the following menus: Chassis / Tire Pressure Monitor / Trouble Codes.
- (f) Read the DTCs.

2. CHECK DTC (for MAIN BODY ECU (NETWORK GATEWAY ECU))

- (a) Turn the ignition switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the ignition switch to ON.
- (d) Turn the Techstream on.
- (e) Enter the following menus: Body Electrical / Main Body / Trouble Codes.
- (f) Read the DTCs.

3. CLEAR DTC (for DOOR CONTROL RECEIVER)

HINT:

After repairing the malfunctions, clear the DTCs.

- (a) Turn the ignition switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the ignition switch to ON.
- (d) Turn the Techstream on.
- (e) Enter the following menus: Chassis / Tire Pressure Monitor / Trouble Codes.
- (f) Clear DTCs following the prompts on the Techstream screen.

HINT:

Refer to the Techstream operator's manual for further details.

4. CLEAR DTC (for MAIN BODY ECU (NETWORK GATEWAY ECU))

HINT:

After repairing the malfunctions, clear the DTCs.

- (a) Turn the ignition switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the ignition switch to ON.

(d) Turn the Techstream on.

(e) Enter the following menus: Body Electrical / Main Body / Trouble Codes.

(f) Clear DTCs following the prompts on the Techstream screen.

HINT:

Refer to the Techstream operator's manual for further details.

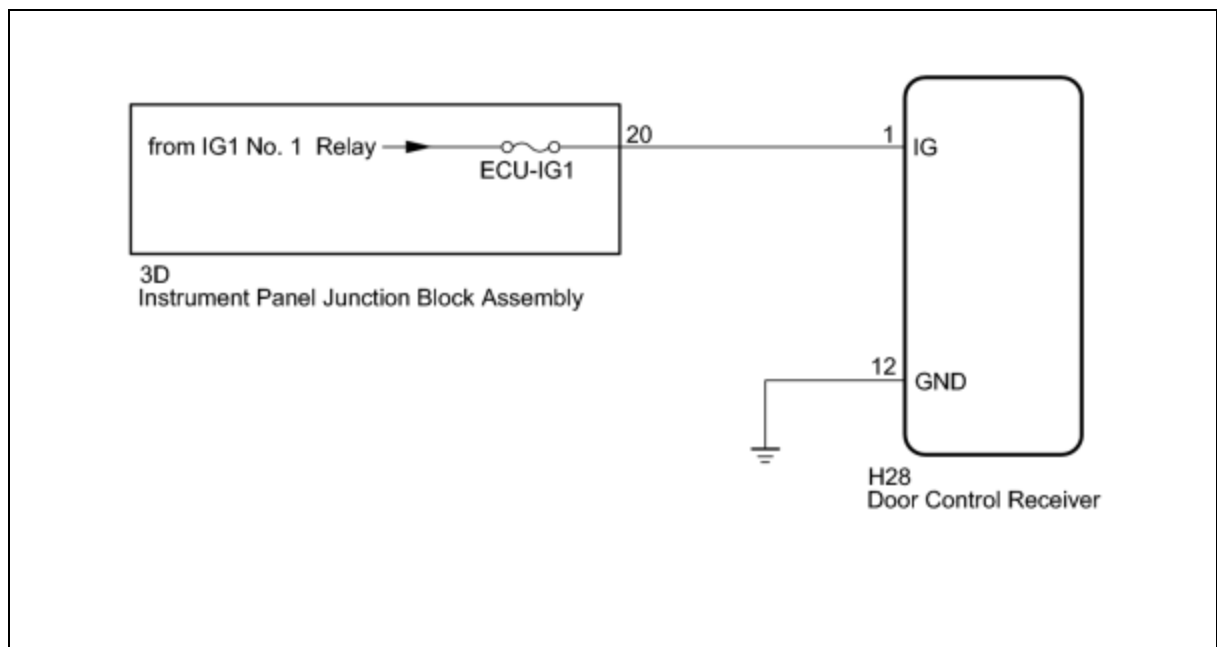

Last Modified: 3-27-2012	6.4 J	From: 201203

Title: TIRE PRESSURE MONITORING: TIRE PRESSURE WARNING SYSTEM: ECU Power Source Circuit (2013 FR-S)		

[ECU Power Source Circuit](#)

DESCRIPTION

This is the power source for the door control receiver.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- When replacing the door control receiver, read the IDs stored in the old ECU using the Techstream and write them down before removal.
- It is necessary to perform registration **INFO** of the transmitter IDs into the door control receiver after the ECU has been replaced.
- When replacing the door control receiver on vehicles, be sure to perform Registration of Recognition Code to register the transmitter IDs after ECU replacement **INFO** .

HINT:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1. CHECK HARNESS AND CONNECTOR (DOOR CONTROL RECEIVER - BATTERY AND BODY GROUND)

(a) Disconnect the H28 door control receiver connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
H28-1 (IG) - Body ground	Ignition switch ON	11 to 14 V
	Ignition switch off	Below 1 V

Text in Illustration

*a	Front view of wire harness connector (to Door Control Receiver)
----	---

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
H28-12 (GND) - Body ground	Always	Below 1 Ω

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ▶ REPLACE DOOR CONTROL RECEIVER

Last Modified: 3-27-2012	6.4 D	From: 201203

Title: TIRE PRESSURE MONITORING: TIRE PRESSURE WARNING SYSTEM: HOW TO PROCEED WITH TROUBLESHOOTING (2013 FR-S)		

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedure to troubleshoot the tire pressure warning system.
- Make sure that the wireless door lock control system has exited diagnostic mode before performing the following procedure.
- *: Use the Techstream.

1.	VEHICLE BROUGHT TO WORKSHOP
-----------	------------------------------------

NEXT

2.	CUSTOMER PROBLEM ANALYSIS
-----------	----------------------------------

- (a) Interview the customer to confirm the trouble.

HINT:

It is important to collect as much specific information as possible from the customer to allow for a quick repair.

NEXT

3.	ADJUST TIRE PRESSURE*
-----------	------------------------------

- (a) Turn the ignition switch off.
- (b) Set the all tire pressure to the specified value INFO .
- (c) Connect the Techstream to the DLC3.
- (d) Turn the ignition switch to ON.
- (e) Enter the following menus: Chassis / Tire Pressure Monitor / Data List.
- (f) Read the "ID Tire Inflation Pressure" values.
- (g) Check the Data List INFO .

HINT:

- It takes a few minutes to display the updated tire pressure data.
- If the problem is that the tire pressure decreases, wait until all of the tire pressure data is received by the ECU. If the data is received, the tire pressure warning light will go off.

Result:

CONDITION	PROCEED TO
Tire pressure warning light remains on	A
Tire pressure warning light goes off	B

B ► GO TO STEP 11

A

4.	CHECK ECU CONNECTED TO CAN BUS*
-----------	--

(a) Check the ECUs connected to the CAN bus  .

Result:

RESULT	PROCEED TO
No malfunction appears	A
Malfunction appears	B

B ► Go to CAN COMMUNICATION SYSTEM

A

5.	CHECK FOR DTC (CAN COMMUNICATION SYSTEM)*
-----------	--

(a) Check for DTCs  .

Result:

RESULT	PROCEED TO
CAN system DTC is not output	A
CAN system DTC is output	B

B  **Go to CAN COMMUNICATION SYSTEM**

A

6.	CHECK FOR DTC*
-----------	-----------------------

(a) Check for DTCs  .

Result:

RESULT	PROCEED TO
DTC is output	A
DTC is not output	B

B  **GO TO STEP 8**

A

7.	DTC CHART
-----------	------------------

(a) Refer to Diagnostic Trouble Code Chart  .

NEXT  **GO TO STEP 10**

8.	PROBLEM SYMPTOMS TABLE
-----------	-------------------------------

(a) Refer to Problem Symptoms Table  .

NEXT

9.	CIRCUIT INSPECTION*
-----------	----------------------------

(a) Refer to Electronic Circuit Inspection Procedure  .

NEXT

10.	REPAIR OR REPLACE
------------	--------------------------

(a) Repair or replace parts based on the diagnosis result.

NEXT

11.	CONFIRMATION TEST*
------------	---------------------------

(a) Check the Data List to confirm that the tire inflation pressure has been received  .

NEXT  **END**

Title: TIRE PRESSURE MONITORING: TIRE PRESSURE WARNING SYSTEM: PRECAUTION (2013 FR-S)		

PRECAUTION

1. TIRE PRESSURE WARNING SYSTEM PRECAUTION

- (a) It is necessary for the tire pressures to be adjusted periodically because tire pressure decreases naturally over time.
- (b) In winter, tire pressure may decrease due to low ambient temperatures (tire pressure decreases by approximately 10 kPa (0.1 kgf/cm², 1.5 psi) for every 10°C (50°F) drop in the ambient temperature). Therefore, the tire pressure warning system is more likely to indicate a warning if the tire pressures are not adjusted appropriately. If the daily temperature variation is large, add enough so that the tire pressures are suitable under cold conditions. As a result, unnecessary tire pressure warning operation should decrease.
- (c) Depending on the tire type, the system may not function properly even if the specified wheels are used.
- (d) To prevent damage to the tire pressure warning valve and transmitter, make sure that the tire pressure warning valve and transmitter does not interfere with the tire bead when installing or removing a tire.
- (e) To prevent damage to the tire pressure warning valve and transmitter, before disengaging the tire bead or removing the tire from the wheel, drop the tire pressure warning valve and transmitter into the wheel.
- (f) Always use a new grommet, washer and nut when installing a tire pressure warning valve and transmitter, to ensure the sealing performance.
- (g) When one or more tire pressure warning valve and transmitters or the door control receiver is replaced, the transmitter IDs for all of the tire pressure warning valve and transmitters must be re-registered. Before registering the transmitter ID of the new tire pressure warning valve and transmitter, check the Data List and record all of the transmitter IDs that are already registered.
- (h) Use only a specified cap. If an unspecified cap is used, it may seize to the tire pressure warning valve and transmitter.
- (i) The system is disabled in the following conditions (when the condition becomes normal, the system will work properly).
 - (1) When all of the tires and wheels that have the tire pressure warning valve and transmitters registered with the door control receiver have not been installed.
 - (2) When all of the transmitter ID codes are not registered with the door control receiver.
 - (3) When the tire pressure is abnormally high (absolute pressure: 480 kPa (4.9 kgf/cm², 70 psi) or more; relative pressure: 380 kPa (3.9 kgf/cm², 55 psi) or more).
 - (4) When the tire pressure warning valve and transmitter battery is depleted.
- (j) The system may become disabled in the following conditions (when the condition becomes normal, the system will work properly).
 - (1) When electric devices or facilities using similar radio frequencies are nearby.
 - (2) When a wireless device or other equipment operating at a similar frequency is in use in the vehicle.
 - (3) When a window tint that affects radio wave signals is installed.
 - (4) When there is a lot of snow or ice on the vehicle, in particular, around the wheels or wheel

housing.

- (5) When non-genuine wheels are used.
- (6) When tire chains are used.
- (7) When aftermarket tire repair sealant is used.

CAUTION:

After use of tire repair sealant, replacement of the tire pressure warning valve and transmitter is required to ensure normal system operation. (Normal system operation cannot be ensured by only repairing or replacing the tire.)

Title: TIRE PRESSURE MONITORING: TIRE PRESSURE WARNING SYSTEM: PROBLEM SYMPTOMS TABLE (2013 FR-S)		

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

Tire Pressure Warning System

SYMPTOM	SUSPECTED AREA	SEE PAGE
Tire pressure warning light does not illuminate despite tire pressure decreasing	Check Data List (ID Tire Inflation Pressure)	INFO
	ID code check (Registration)	INFO
Tire pressure warning light remains illuminated (Goes off during initial check)	Tire pressure warning light circuit	INFO

Title: TIRE PRESSURE MONITORING: TIRE PRESSURE WARNING SYSTEM: REGISTRATION (2013 FR-S)		

REGISTRATION

1. BEFORE REGISTRATION

NOTICE:

The transmitter ID is written on the tire pressure warning valve and transmitter. It is not possible to read the transmitter ID after installing the tire onto the wheel. Therefore, make a note of the transmitter ID before installing the tire.

(a) In case of door control receiver replacement:

- (1) Read the registered transmitter IDs that are stored in the old ECU using the Techstream and note them down.
- (2) If reading the stored transmitter IDs is impossible due to malfunctions of components such as the door control receiver, remove the tires from the wheels and check the IDs located on the tire pressure warning valve and transmitters.

(b) In case of tire pressure warning valve and transmitter replacement:

- (1) Take a note of the 7 digit number (transmitter ID) written on the tire pressure warning valve and transmitter.

Text in Illustration

*1	Tire Pressure Warning Valve and Transmitter	*2	Transmitter ID (7 Digit Number)
----	---	----	---------------------------------

2. REGISTER TRANSMITTER ID (USING THE TECHSTREAM)

HINT:

- The previously registered IDs will be cleared from memory when the registration is completed.
- If the ID registration step is not completed within 300 seconds, ID registration will be canceled.

- (a) Set the air pressure of all tires to the specified value(s) [INFO](#) .
- (b) Turn the ignition switch off.
- (c) Connect the Techstream to the DLC3.

- (d) Turn the ignition switch to ON and the Techstream on.
- (e) Enter the following menus: Chassis / Tire Pressure Monitor / Utility / ID Registration.
- (f) Perform the procedure displayed on the Techstream.

3. CONFIRMATION OF TRANSMITTER ID REGISTRATION

NOTICE:

- It may take up to a few minutes to update the tire pressure data. If the values are not displayed after a few minutes, perform troubleshooting according to the inspection procedure for DTCs C2121 to C2124  .
- If the IDs have not been registered, DTC C2171 is stored in the door control receiver after 3 minutes or more.
- If normal pressure values are displayed, the IDs have been registered correctly.
- If the tire pressure values are not displayed after a few minutes, the IDs may be incorrect or the system may have a malfunction.
- After all IDs are registered, DTC C2126 is stored in the door control receiver and the tire pressure warning light blinks for 1 minute and then illuminates. When the door control receiver successfully receives signals from all the transmitters whose IDs are stored in the ECU, DTC C2126 is cleared and the tire pressure warning light goes off.

- (a) Enter the following menus: Chassis / Tire Pressure Monitor / Data List.
- (b) Read the "ID Tire Inflation Pressure" values.
- (c) Confirm that the tire pressure data of all tires (except the spare tire) is displayed on the Techstream screen.

Last Modified: 3-27-2012	6.4 D	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM000000XMM081X
Title: TIRE PRESSURE MONITORING: TIRE PRESSURE WARNING SYSTEM: SYSTEM DESCRIPTION (2013 FR-S)		

SYSTEM DESCRIPTION

1. DESCRIPTION OF SYSTEM

- (a) When the tire pressure warning system detects that the tire pressure of a tire becomes lower than the threshold, it will inform the driver using a warning light.
- (b) The door control receiver receives the transmitter ID, temperature and tire pressure information from the tire pressure warning valve and transmitters shown in the following illustration. This information is used to determine when the pressure in one of the tires has dropped.

Text in Illustration

*1	Door Control Receiver	*2	Tire Pressure Warning Valve and Transmitter
*3	Combination Meter Assembly - Tire Pressure Warning Light	*4	Main Body ECU (Network Gateway ECU)
	Front	-	-

2. DESCRIPTION OF REGISTRATION

- (a) When tires and wheels are replaced, always ensure that each transmitter ID is correctly registered.
- (b) When one or more tire pressure warning valve and transmitters or the door control receiver is replaced, the transmitter IDs for all of the tire pressure warning valve and transmitters must be re-registered. Before registering the transmitter ID of the new tire pressure warning valve and

transmitter, check the Data List and record all of the transmitter IDs that are already registered.

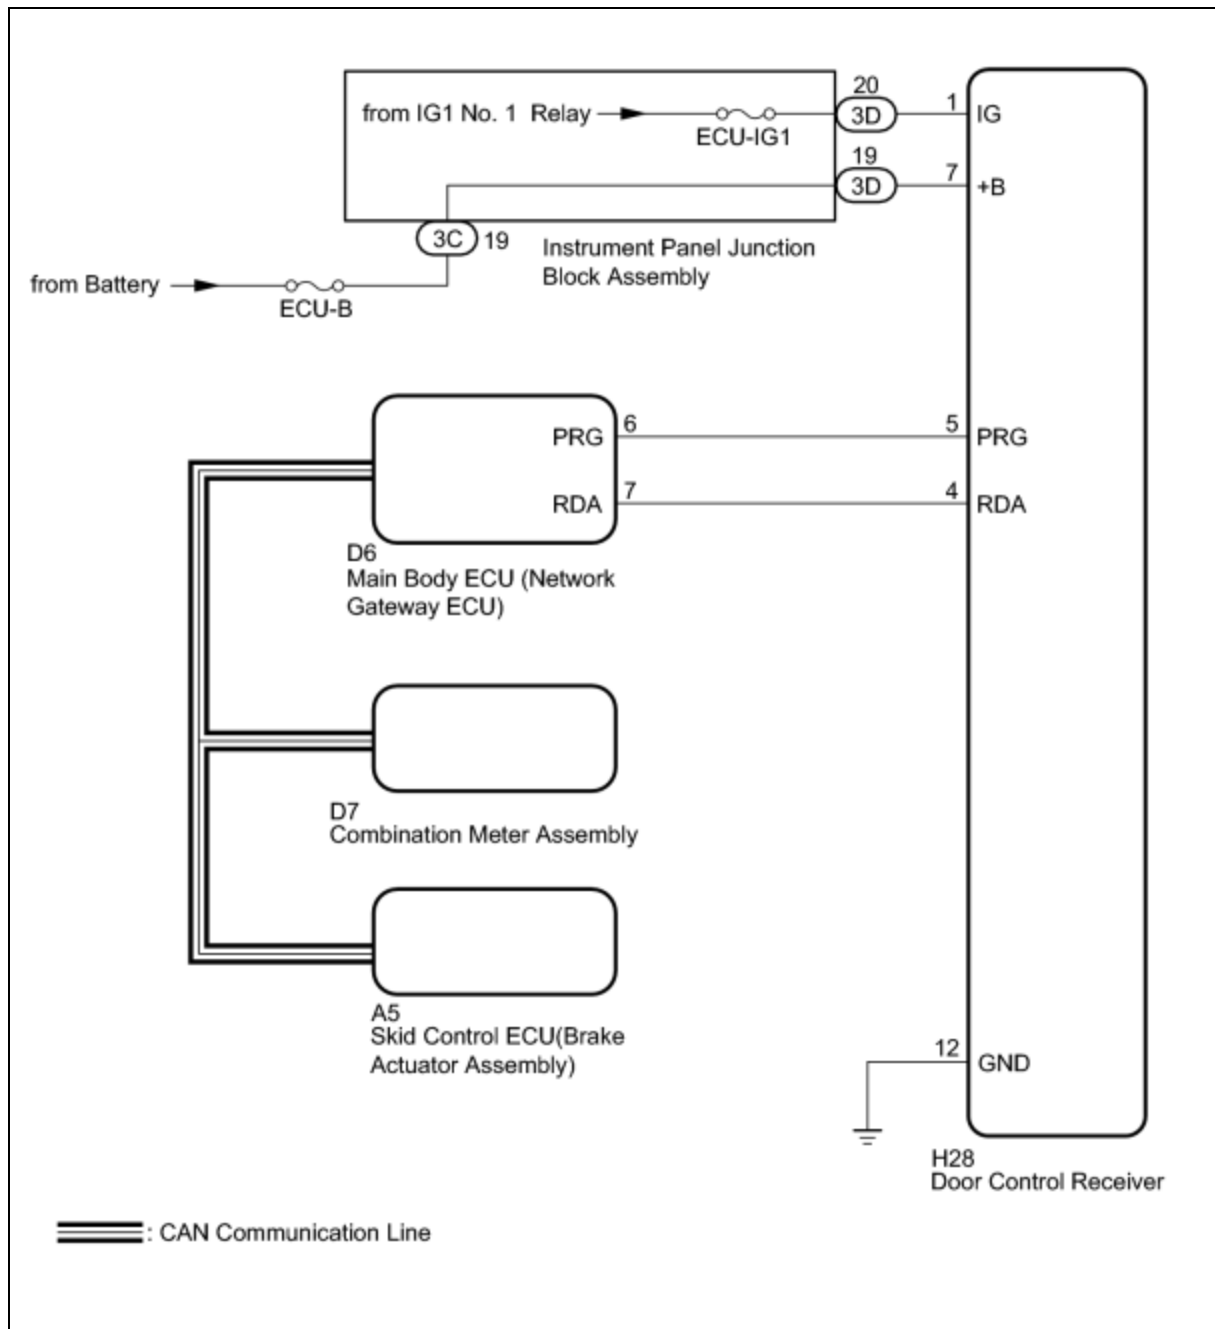

3. FUNCTION OF MAIN COMPONENTS

COMPONENT	FUNCTION
Door Control Receiver	<ul style="list-style-type: none"> • Receives the data from the tire pressure warning valve and transmitter and monitors the tire pressure. • When the door control receiver detects a drop in the tire pressure, a system malfunction, or initialization mode, it outputs the respective signal to the combination meter assembly. • When the door control receiver detects a problem with the vehicle speed signal, it uses changes in the signal strength from the tire pressure warning valve and transmitter as a judgment standard. If the ECU detects any changes in the signal strength from the tire pressure warning valve and transmitter, it determines that the vehicle is being driven.
Tire Pressure Warning Valve and Transmitter	<p>Detects the pressure and internal temperature of the tire and transmits the measured values and the ID code to the door control receiver.</p>
Combination Meter Assembly	<p>Transmits the tire pressure warning light signal to the door control receiver.</p>
Tire Pressure Warning Light	<ul style="list-style-type: none"> • Illuminates after blinking for 1 minute to warn the driver in accordance with the signal from the door control receiver. • Displays 2-digit Diagnostic Trouble Codes (DTC).
Main Body ECU (Network Gateway ECU)	<ul style="list-style-type: none"> • The main body ECU (network gateway ECU) and door control receiver are connected using 2 direct lines that they use to communicate with each other. • The main body ECU (network gateway ECU) is connected to the combination meter assembly via CAN No. 1 bus.

Title: TIRE PRESSURE MONITORING: TIRE PRESSURE WARNING SYSTEM: TERMINALS OF ECU (2013 FR-S)		

TERMINALS OF ECU

1. CHECK DOOR CONTROL RECEIVER

HINT:

Inspect the connectors from the back side while the connectors are connected.

(a) Measure the voltage and resistance according to the value(s) in the table below. If the result is not as specified, the ECU may have a malfunction.

TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
H28-1 (IG) - H28-12 (GND)	W - B	IG power source	Ignition switch ON	11 to 14 V
H28-4 (RDA) - H28-12 (GND)	R - B	Output signals	Ignition switch ON	Pulse generation (see waveform 1)
H28-5 (PRG) - H28-12 (GND)	P - B	Input signals	Ignition switch ON	Pulse generation (see waveform 1)
H28-7 (+B) - H28-12 (GND)	Y-R - B	Power Supply	Always	11 to 14 V
H28-12 (GND) - Body ground	B - Body ground	Ground	Always	Below 1 Ω

(b) Using an oscilloscope, check waveform 1.

Text in Illustration

*a	Example
*b	GND

Waveform 1:

ITEM	CONTENTS

Terminal	H28-4 (RDA) - H28-12 (GND) H28-5 (PRG) - H28-12 (GND)
Tool setting	5 V/DIV, 50 μ s./DIV.
Vehicle condition	Ignition switch ON

HINT:

The waveform shown in the illustration is an example. If the tester displays a waveform that alternates between high and low, where high is a voltage that is between the IG power source voltage and a voltage 2.2 V lower than the IG power source voltage, and where low is a voltage of between 0 and 1.2 V, the ECU can be judged normal.

Title: TIRE PRESSURE MONITORING: TIRE PRESSURE WARNING SYSTEM: TEST MODE PROCEDURE (2013 FR-S)		

TEST MODE PROCEDURE

1. TEST MODE (SIGNAL CHECK MODE) PROCEDURE

HINT:

- When entering test mode (signal check mode), the door control receiver sets all the test mode (signal check mode) DTCs first.

After the door control receiver completes the signal check for each inspection item, the DTCs for systems that are determined to be normal will be cleared.

The DTCs for other inspection items may not be cleared when only a certain signal is inspected.

- When test mode (signal check mode) returns to normal mode, all the test mode (signal check mode) DTCs will be cleared.
- Turn the ignition switch off.
 - Connect the Techstream to the DLC3.
 - Turn the ignition switch to ON and the Techstream on.
 - Enter the following menus: Chassis / Tire Pressure Monitor / Utility / Signal Check.

HINT:

Every time the test mode (signal check mode) DTC clear conditions are satisfied, the tire pressure warning light illuminated for 1 second. Following this, the tire pressure warning light blinks at 0.125 second intervals.

Text in Illustration

*a	0.125 sec.
*b	ON
*c	OFF

- Wait for 1.5 minutes with the vehicle stopped, or drive the vehicle for 1 minute (C21811 to C2184).

HINT:

The tire pressure warning valve and transmitters send signals to the door control receiver once every 1.5 minutes while the vehicle is stopped and once every minute while driving.

(f) Check that the tire pressure warning system test mode (signal check mode) DTCs are cleared.

TEST MODE (SIGNAL CHECK MODE) DTC	TEST SIGNAL	TEST MODE (SIGNAL CHECK MODE) DTC CLEAR CONDITION
C2181 to C2184	Transmitter Data	Data is received from the relevant transmitter which has a registered ID in the door control receiver.

(g) Result

HINT:

After the signal check is completed, check for test mode (signal check mode) DTCs to confirm the system status.

CONDITION	PROCEDURE
Test mode (signal check mode) DTC is output	Repair the faulty part and enter Signal Check again
Test mode (signal check mode) DTCs are cleared	No problem

(h) End of test mode (signal check mode)

(1) After completing the test mode (signal check mode), turn the ignition switch off and disconnect the Techstream.

(i) Test mode (signal check mode) DTCs

(1) If a trouble code is displayed during the test mode (signal check mode) DTC check, check the diagnosis procedure listed for that code. For details of each code, refer to See page below.

Title: TIRE PRESSURE MONITORING: TIRE PRESSURE WARNING SYSTEM: Tire Pressure Warning Light Circuit (2013 FR-S)		

Tire Pressure Warning Light Circuit

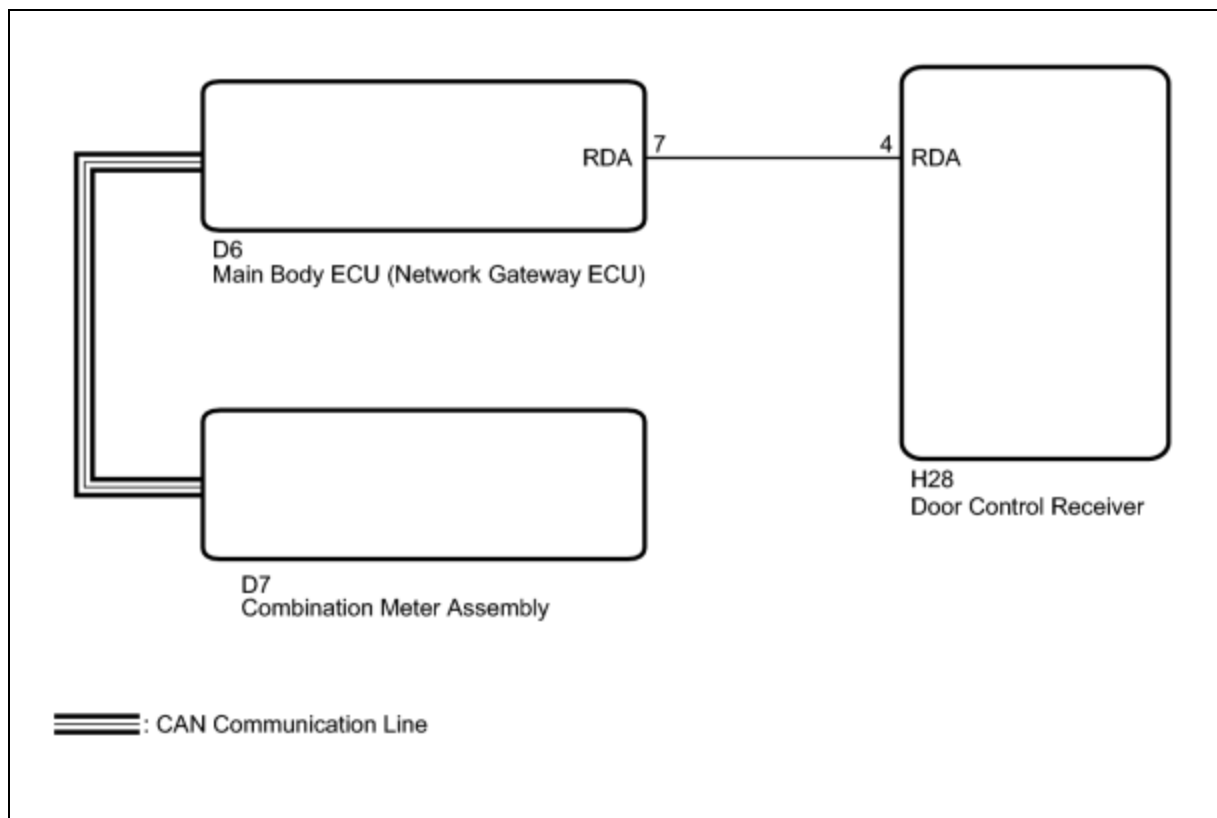

DESCRIPTION

If the door control receiver detects any problems, the tire pressure warning light blinks (stays on after blinking for 1 minute) and tire pressure monitoring is cancelled at the same time. At this time, the ECU stores a DTC in memory.

Connecting terminals TC and CG of the DLC3 makes the tire pressure warning light blink to output DTCs.

The door control receiver sends the tire pressure warning light illumination request signal to the main body ECU (network gateway ECU) via a direct line. The main body ECU (network gateway ECU) then sends the signal to the combination meter assembly via CAN communication.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- When replacing the door control receiver, read the IDs stored in the old ECU using the Techstream and write them down before removal.

- It is necessary to perform registration **INFO** of the transmitter IDs into the tire pressure warning ECU after the ECU has been replaced.
- When replacing the door control receiver on vehicles, be sure to perform Registration of Recognition Code to register the transmitter IDs after ECU replacement **INFO** .

PROCEDURE

1. CHECK FOR DTC (CAN COMMUNICATION SYSTEM)

(a) Check if a CAN communication system DTC is output **INFO** .

Result:

RESULT	PROCEED TO
DTC is not output.	A
DTC is output.	B

B ► GO TO CAN COMMUNICATION SYSTEM

A

2. CHECK DTC OUTPUT (B1247)

- (a) Clear the DTCs **INFO** .
- (b) Turn the ignition switch off.
- (c) Turn the ignition switch to ON.
- (d) Check for DTCs **INFO** .

OK:

DTC B1247 is not output.

NG ► GO TO DTC B1247

OK

3. CHECK OPERATION OF TIRE PRESSURE WARNING LIGHT (ACTIVE TEST)

- (a) Turn the ignition switch off.

- (b) Connect the Techstream to the DLC3.
- (c) Turn the ignition switch to ON.
- (d) Turn the Techstream on.
- (e) Enter the following menus: Body Electrical / Combination Meter / Active Test.
- (f) Check the condition of the tire pressure warning light by using the Techstream.

Combination Meter

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Indicat. Tire Pressure Warning System	Tire pressure warning light	Tire pressure warning light OFF or ON	Confirm that the vehicle is stopped, engine idling

OK:

The tire pressure warning light turns on or off in accordance with the Techstream operation.

NG ► **GO TO METER / GAUGE SYSTEM**

OK ► **REPLACE DOOR CONTROL RECEIVER**

Title: TIRE PRESSURE MONITORING: TIRE PRESSURE WARNING VALVE: DISPOSAL (2013 FR-S)		

DISPOSAL

HINT:

The tire pressure warning valve and transmitter is powered by a lithium battery. When disposing of the tire pressure warning valve and transmitter, remove the battery and dispose of it correctly.

1. DISPOSE OF TIRE PRESSURE WARNING VALVE AND TRANSMITTER

(a) Cut the 2 terminals that connect the battery to the base board to remove the battery.

Text in Illustration

*1	Terminal
*2	Lithium Battery

HINT:

The battery and base board are covered with urethane.

Model Year: 2013	Model: FR-S	Doc ID: RM000001F7Q04BX
Title: TIRE PRESSURE MONITORING: TIRE PRESSURE WARNING VALVE: INSTALLATION (2013 FR-S)		

INSTALLATION

NOTICE:

- Always use a new grommet, washer, nut and valve core when installing the tire pressure warning valve and transmitter.
- Make sure not to damage the urethane covered backside of the tire pressure warning valve and transmitter (the surface opposite to the side with the ID code) with anything sharp.
- If installing a new tire pressure warning valve and transmitter, write down the ID number before installation.
- Check that there is no oil, water or lubricant around the rim hole, tire pressure warning valve and transmitter, washer and nut. Failing to do so may result in improper installation.
- Use only a specified cap. If an unspecified cap is used, it may seize to the tire pressure warning valve and transmitter.

1. INSTALL TIRE PRESSURE WARNING VALVE AND TRANSMITTER

(a) Install a new grommet to the tire pressure warning valve and transmitter.

(b) Insert the tire pressure warning valve and transmitter into the valve installation hole from the inside of the rim so that the printed surface can be seen.

Text in Illustration

*a	Printed Surface
*b	7-digit Number Transmitter ID

NOTICE:

- Check that there is no visible deformation, damage, or other abnormalities on the tire pressure warning valve and transmitter.
- Check that there is no foreign matter on the grommet and around the rim hole.
- If the tire pressure warning valve and transmitter is installed upside down, it may be damaged or fail to transmit signals when driving at high speeds.

(c) From the outside of the rim, install a new washer onto the tire pressure warning valve and transmitter, and tighten a new nut.

Text in Illustration

*1	Tire Pressure Warning Valve and Transmitter
*2	Rim
*3	Grommet

*4	Washer
*5	Nut

Torque: 4.0 N·m (41 kgf·cm, 35in·lbf)

NOTICE:

- No further tightening is required once the nut is tightened to the specified torque.
- Check that there is no foreign matter on the washer and nut.

(d) Set the wheel onto the mounting machine and install the lower bead. Position the main body of the tire pressure warning valve and transmitter in the shaded area shown in the illustration.

Text in Illustration

*1	Rim
*a	Mount Tool of the Mounting Machine
*b	Area for Tire Pressure Warning Valve and Transmitter
	Rim Rotating Direction

NOTICE:

- If the tire pressure warning valve and transmitter is positioned outside this area, it will interfere with the tire bead and may be damaged.
- If the use of lubricant is required when installing the bead, do not apply lubricant directly to the tire pressure warning valve and transmitter.

(e) Install the upper bead.

NOTICE:

Make sure that the tire bead and tool do not interfere with the main body of the tire pressure warning valve and transmitter and that it is not clamped by the bead.

(f) Install the new valve core.

(g) After the tire is inflated, the valve nut may be loose. Retighten the nut to the specified torque.

Torque: 4.0 N·m (41 kgf·cm, 35in·lbf)

NOTICE:

No further tightening is required once the nut is tightened to the specified torque.

(h) Check for air leaks with soapy water.

If there is air leakage, push the valve core 2 or 3 times to remove any dirt attached to the valve core. If air continues to leak, replace the grommet, washer and nut.

(i) Install the cap.

2. INSTALL FRONT WHEEL

Torque: 120 N·m (1224 kgf·cm, 89ft·lbf)

3. INSTALL REAR WHEEL

Torque: 120 N·m (1224 kgf·cm, 89ft·lbf)

Title: TIRE PRESSURE MONITORING: TIRE PRESSURE WARNING VALVE: REMOVAL (2013 FR-S)		

REMOVAL

1. REMOVE FRONT WHEEL

2. REMOVE REAR WHEEL

3. REMOVE TIRE PRESSURE WARNING VALVE AND TRANSMITTER

- (a) Remove the cap and valve core to release the air from the tire.

NOTICE:

Keep the removed cap.

- (b) After ensuring that a sufficient amount of air has been released, remove the nut and washer used to secure the tire pressure warning valve and transmitter. Drop the tire pressure warning valve and transmitter with the grommet into the tire.

HINT:

The grommet may remain attached to the rim.

- (c) After dropping the tire pressure warning valve and transmitter into the tire, disengage the bead using the shoe of a tire remover.

Text in Illustration

*1	Tire
*2	Shoe

NOTICE:

- Be careful not to damage the tire pressure warning valve and transmitter due to interference between the valve and the tire bead.
- Set the tire remover shoe as shown in the illustration.
Width (A):
10 to 20 mm (0.394 to 0.787 in.)

- (d) Separate the upper bead.

- (e) Take out the tire pressure warning valve and transmitter with the grommet from the tire and separate the lower bead.

- (f) Remove the grommet from the tire pressure warning valve and transmitter.

Title: DOOR / HATCH: FRONT DOOR: ADJUSTMENT (2013 FR-S)		

ADJUSTMENT

HINT:

- Use the same procedure for both the RH and LH sides.
- The following procedure is for the LH side.
- Centering bolts are used to mount the door hinge to the vehicle body and door. The door cannot be adjusted with the centering bolts installed on it. Substitute the centering bolts with standard bolts when making adjustments.
- Specified torque for standard bolts is shown in the standard bolt chart [INFO](#).

Text in Illustration

*1	Centering Bolt
*2	Standard Bolt

1. INSPECT FRONT DOOR

- (a) Check that the clearance measurements of areas *a through *j are within each standard range.

Standard Clearance

AREA	DIMENSION	AREA	DIMENSION
*a	0.5 mm (0.0197 in.)	*b	7.0 mm (0.2756 in.)
*c	5.0 mm (0.1969 in.)	*d	6.7 mm (0.2638 in.)
*e	13.5 to 16.5 mm (0.5315 to 0.6496 in.)	*f	2.5 to 5.5 mm (0.0984 to 0.2165 in.)
*g	0.0 to 1.5 mm (0.0 to 0.0591 in.)	*h	4.8 to 7.8 mm (0.1890 to 0.3071 in.)
*i	3.1 to 5.6 mm (0.122 to 0.220 in.)	*j	-1.0 to 1.5 mm (-0.0394 to 0.0591 in.)

Text in Illustration

*1	Front Glass	*2	Front Door
----	-------------	----	------------

2. ADJUST FRONT DOOR GLASS

(a) Using a SST, check that the clearance measurements of areas "a" to "b" are within each standard range .

SST: 09812-18010

Text in Illustration

*1	SST
----	-----

--	--

Standard Clearance:

AREA	DIMENSION
*a	5.0 mm (0.1969 in.)
*b	6.7 mm (0.2638 in.)

(b) Adjust the front door glass so that the fitting dimensions come within the reference values.

(c) Loosen the nut on the front door sush stopper and front door rear sush stopper, and adjust the glass position.

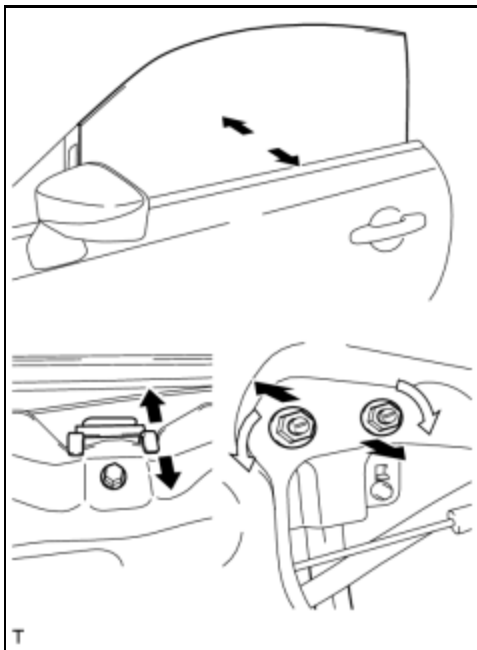

(d) After the adjustment, tighten the nut on the front door sush stopper and front door rear sush stopper.

Torque: 7.5 N·m (77 kgf·cm, 66in·lbf)

(e) Loosen the 2 nuts on the front door rear lower frame sub-assembly, and adjust the glass position.

- (f) After the adjustment, tighten the 2 nuts on the front door rear lower frame sub-assembly.
Torque: 14 N·m (143 kgf·cm, 10ft·lbf)

- (g) Loosen the bolt on the door glass inner stabilizer and adjust the glass position.

- (h) After the adjustment, tighten the bolt on the door glass inner stabilizer.

Torque: 7.5 N·m (77 kgf·cm, 66in·lbf)

- (i) Loosen the 2 nuts on the front door rear lower frame sub-assembly.

- (j) Using a screwdriver, rotate the bolts and then adjust the position of the front door glass in lateral direction.

- (k) After the adjustment, tighten the 2 nuts on the front door rear lower frame sub-assembly.

Torque: 14 N·m (143 kgf·cm, 10ft·lbf)

- (l) Using a SST, check that the clearance measurements of areas "a" to "b" are within each standard range .

SST: 09812-18020

Text in Illustration

*1	SST
----	-----

Standard Clearance:

AREA	DIMENSION
*a	2.5 to 5.5 mm (0.0984 to 0.2165 in.)
*b	5.2 to 8.2 mm (0.2047 to 0.3228 in.)

- (m) Adjust the front door sush so that the fitting dimensions come within the reference values.

(n) Loosen the nut on the front door sush and adjust the front door sash position.

(o) After the adjustment, tighten the nut on the front door sush.

Torque: 14 N·m (143 kgf·cm, 10ft·lbf)

3. ADJUST FRONT DOOR

(a) Loosen the hinge bolts on the vehicle body and adjust the door position.

(b) After the adjustment, tighten the hinge bolts on the vehicle body.

Torque: 30 N·m (306 kgf·cm, 22ft·lbf)

(c) Loosen the hinge bolts on the door and adjust the door position.

(d) After the adjustment, tighten the hinge bolts on the door.

Torque: 25 N·m (255 kgf·cm, 18ft·lbf)

(e) Adjust the striker position by slightly loosening the striker mounting screws and hitting the striker with a plastic-faced hammer.

(f) After the adjustment, tighten the striker mounting screws.

Torque: 18 N·m (184 kgf·cm, 13ft·lbf)

Title: DOOR / HATCH: FRONT DOOR: DISASSEMBLY (2013 FR-S)		

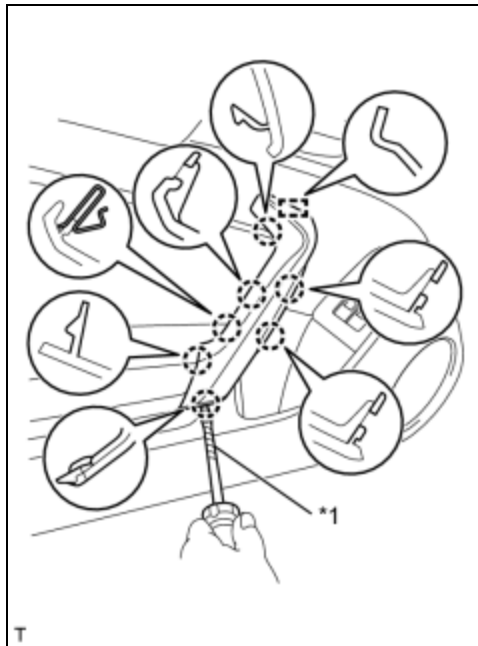

DISASSEMBLY

HINT:

- Use the same procedure for both the RH and LH sides.
- The following procedure is for the LH side.

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL INFO

2. REMOVE DOOR ARMREST COVER

(a) Using a screwdriver with its tip wrapped in protective tape, disengage the 7 claws.

(b) Disengage the guides and remove the door armrest cover.

Text in Illustration

*1	Protective Tape
----	-----------------

3. REMOVE FRONT DOOR TRIM BOARD SUB-ASSEMBLY

(a) Using a screwdriver with its tip wrapped in protective tape, open the cap.

Text in Illustration

*1	Protective Tape
----	-----------------

(b) Using a clip remover, disengage the clip.

(c) Remove the 3 screws.

(d) Using a moulding remover, disengage the 10 clips.

(e) Pull out the front door trim board sub-assembly in the direction indicated by the arrow in the illustration.

(f) Disconnect each connector.

(g) Raise the front door trim board sub-assembly and remove the front door trim board sub-assembly together with the front door glass weatherstrip inner.

(h) Disconnect the front door lock remote control cable and the front door inside locking cable.

4. REMOVE FRONT DOOR INSIDE HANDLE SUB-ASSEMBLY

(a) Remove the 2 screws.

(b) Disengage the 2 guides and remove the front door inside handle sub-assembly.

5. REMOVE POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY WITH FRONT DOOR ARMREST BASE PANEL (for Driver Side)

(a) Remove the 4 screws and power window regulator master switch assembly with front door armrest base panel.

6. REMOVE POWER WINDOW REGULATOR SWITCH ASSEMBLY WITH FRONT DOOR ARMREST BASE PANEL (for Front Passenger Side)

(a) Remove the 4 screws and power window regulator switch assembly with front door armrest base panel.

7. REMOVE DOOR ASSIST GRIP ASSEMBLY

(a) Remove the 2 screws.

(b) Disengage the guide and remove the door assist grip assembly.

8. REMOVE FRONT LOWER DOOR TRIM PAD

(a) Remove the front lower door trim pad with the 5 screws.

9. REMOVE FRONT DOOR GLASS INNER WEATHERSTRIP

(a) Put a 4 mm (0.1575 in.) drill bit into a drill.

(b) Wind tape around the drill bit approximately 5 mm (0.1969 in.) from the tip of the drill, as shown in the illustration.

HINT:

Tape the 4 mm (0.1575 in.) drill bit to prevent the drill bit from going too deep.

Text in Illustration

*1	Drill	-	-
a	5.0 mm (0.1969 in.)	-	-

(c) Lightly press the drill against the 6 rivets and drill off the flanges of the 6 rivets.

CAUTION:

Be careful of the drilled rivet as it may become hot.

NOTICE:

- Pressing the drill too firmly will cause the rivet to turn and result in the rivet not being drilled through.
- Do not pry the rivet with the drill because this may cause damage to the installation holes of the rivet or the drill bit.

(d) Disengage the 9 claws and remove the front door glass inner weatherstrip from the front door trim board sub-assembly as shown in the illustration.

10. REMOVE FRONT NO. 1 SPEAKER ASSEMBLY INFO

11. REMOVE FRONT DOOR SERVICE HOLE COVER

(a) Disconnect the outer rear view mirror sub-assembly connector.

(b) Disconnect the front door lock assembly connector.

(c) Remove the front door service hole cover.

HINT:

Remove any remaining butyl tape from the door.

12. REMOVE OUTER REAR VIEW MIRROR SUB-ASSEMBLY INFO

13. REMOVE FRONT DOOR GLASS SUB-ASSEMBLY

- (a) Provisionally install the power window regulator master switch (for driver side).
- (b) Provisionally install the power window regulator switch (for passenger side).
- (c) Connect the cable to the negative (-) battery terminal.
- (d) Move the front door glass sub-assembly until the 2 nuts can be seen through the service holes.
- (e) Disconnect the power window regulator master switch connector. (for driver side).
- (f) Disconnect the power window regulator switch connector. (for passenger side).
- (g) Disconnect the cable from the negative (-) battery terminal.

(h) Remove the 3 nuts.

(i) Shift the front door rear lower frame sub-assembly to the lower side of the door frame.

(j) Remove the 2 nuts.

(k) Loosen the door glass inner stabilizer bolt.

NOTICE:

After the 2 nuts are removed, do not allow the door glass to fall.

Text in Illustration

*1	Door Glass Inner Stabilizer Bolt
----	----------------------------------

(l) While holding the front door glass sub-assembly up, slide the front door rear lower frame sub-assembly downward, and pull the front door glass sub-assembly out from the front door rear lower frame sub-assembly.

NOTICE:

- Do not allow the door glass to fall.
- Do not damage the door glass.

(m) Partially remove the rear end of the front door weatherstrip until the front door glass sub-assembly can be removed.

(n) Remove the front door glass sub-assembly from the position indicated in the illustration.

NOTICE:

Do not damage the front door weatherstrip.

HINT:

The front glass sub-assembly can only be removed from the position indicated in the illustration.

14. REMOVE FRONT DOOR REAR LOWER FRAME SUB-ASSEMBLY

(a) Remove the front door rear lower frame sub-assembly from the front door frame.

15. REMOVE DOOR GLASS INNER STABILIZER

(a) Remove the bolt and the door glass inner stabilizer.

16. REMOVE FRONT DOOR SUSH

(a) Remove the 3 nuts.

- (b) Rotate the front door sush as indicated by the arrows in the order shown in the illustration, and remove the front door sush.

NOTICE:

- Since the front door sush attachment bolts interfere, be sure to follow the procedure shown in the illustration.
- Do not allow the front door sush to fall.
- Do not damage the front door sush.

17. REMOVE FRONT DOOR SUSH STOPPER

- (a) Remove the nut and front door sush stopper.

18. REMOVE FRONT DOOR WINDOW REGULATOR SUB-ASSEMBLY

- (a) Disconnect the connector.

- (b) Loosen the temporary bolt.

Text in Illustration

*1	Temporary Bolt
----	----------------

NOTICE:

Do not remove the temporary bolt. If the temporary bolt is removed, the front door window regulator sub-assembly may fall and cause damage.

- (c) Remove the 3 bolts and 2 nuts.
 (d) Remove the temporary bolt and the front door window regulator sub-assembly with power window regulator motor assembly.

19. REMOVE POWER WINDOW REGULATOR MOTOR ASSEMBLY INFO

20. REMOVE FRONT DOOR WEATHERSTRIP

- (a) Disengage the 2 claws and remove the screw.
 (b) Using a clip remover, disengage the 16 clips and remove the front door weatherstrip.

21. REMOVE FRONT DOOR LOCK CYLINDER ASSEMBLY (for Driver Side)

- (a) Using a T30 "TORX" socket wrench, loosen the screw and remove the front door lock cylinder assembly with front door outside handle cover LH.

HINT:

The screw cannot be removed because it is integrated into the front door outside handle frame sub-assembly.

22. REMOVE FRONT DOOR OUTSIDE HANDLE COVER LH (for Driver Side)

- (a) Using a screwdriver, disengage the claw and 2 guides and remove the front door outside handle cover LH as shown in the illustration.

23. REMOVE FRONT DOOR OUTSIDE HANDLE COVER RH (for Front Passenger Side)

- (a) Using a T30 "TORX" socket wrench, loosen the screw and remove the front door outside handle cover RH.

HINT:

The screw cannot be removed because it is integrated into the front door outside handle frame sub-assembly.

24. REMOVE FRONT DOOR LOCK ASSEMBLY

INFO

25. REMOVE FRONT DOOR OUTSIDE HANDLE ASSEMBLY

(a) Remove the front door outside handle assembly as shown in the illustration.

26. REMOVE FRONT DOOR FRONT OUTSIDE HANDLE PAD

(a) Disengage the 3 claws and remove the front door front outside handle pad.

27. REMOVE FRONT DOOR REAR OUTSIDE HANDLE PAD

(a) Disengage the 2 claws and remove the front door rear outside handle pad.

28. REMOVE FRONT DOOR OUTSIDE HANDLE FRAME SUB-ASSEMBLY

(a) Using a T30 "TORX" socket wrench, loosen the screw.

(b) Slide the front door outside handle frame sub-assembly to disengage the claw of the front door outside handle frame sub-assembly, and then remove it.

Text in Illustration

*a	Outside Vehicle
*b	Inside Vehicle

29. REMOVE FRONT DOOR LOCK OPEN ROD

(a) Remove the front door lock open rod as indicated by the arrows, in the order shown in the illustration.

30. REMOVE FRONT DOOR CHECK ASSEMBLY

(a) Remove the bolt.

(b) Remove the 2 nuts and front door check assembly.

31. REMOVE FRONT DOOR PANEL CUSHION

(a) Disengage the 2 claws and remove the 2 front door panel cushions.

32. REMOVE FRONT DOOR GLASS OUTER WEATHERSTRIP ASSEMBLY INFO

33. REMOVE DOOR SIDE AIR BAG SENSOR INFO

34. REMOVE FRONT DOOR HOLE COVER

(a) Disengage the 4 claws and remove the front door hole cover.

Last Modified: 3-27-2012	6.4 A	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM0000011QG0ATX
Title: DOOR / HATCH: FRONT DOOR: REASSEMBLY (2013 FR-S)		

REASSEMBLY

HINT:

- Use the same procedure for both the RH and LH sides.
- The following procedure is for the LH side.

1. INSTALL FRONT DOOR HOLE COVER

(a) Insert the front door hole cover with the 4 claws.

2. INSTALL DOOR SIDE AIR BAG SENSOR INFO

3. INSTALL FRONT DOOR GLASS OUTER WEATHERSTRIP ASSEMBLY INFO

4. INSTALL FRONT DOOR PANEL CUSHION

(a) Engage the 2 claws and install 2 new front door panel cushions.

5. INSTALL FRONT DOOR CHECK ASSEMBLY

(a) Apply MP grease to the sliding areas of the front door check assembly.

(b) Apply adhesive to the threads of the bolt.

Adhesive:

Toyota Genuine Adhesive 1324, Three Bond 1324 or equivalent

(c) Install the bolt.

Torque: 33 N·m (337 kgf·cm, 24ft·lbf)

(d) Install the front door check assembly with the 2 nuts.

Torque: 7.5 N·m (77 kgf·cm, 66in·lbf)

6. INSTALL FRONT DOOR LOCK OPEN ROD

(a) Install the front door lock open rod as indicated by the arrows, in the order shown in the illustration.

7. INSTALL FRONT DOOR OUTSIDE HANDLE FRAME SUB-ASSEMBLY

(a) Apply MP grease to the sliding parts on the front door outside handle frame sub-assembly.

(b) Engage the claw.

(c) Using a T30 "TORX" socket wrench, install the front door outside handle frame sub-assembly with the screw.

Torque: 7.5 N·m (77 kgf·cm, 66in·lbf)

Text in Illustration

*a	Outside Vehicle
*b	Inside Vehicle

8. INSTALL FRONT DOOR FRONT OUTSIDE HANDLE PAD

(a) Engage the 3 claws and install the front door front outside handle pad.

9. INSTALL FRONT DOOR REAR OUTSIDE HANDLE PAD

(a) Engage the 2 claws and install the front door rear outside handle pad.

10. INSTALL FRONT DOOR OUTSIDE HANDLE ASSEMBLY

- (a) Insert the front end of the front door outside handle assembly into the front door outside handle frame sub-assembly.

- (b) Insert the rear end of the front door outside handle assembly into the front door outside handle frame sub-assembly, and then slide the front door outside handle assembly toward the front of the vehicle to install it.

11. INSTALL FRONT DOOR LOCK ASSEMBLY INFO

12. INSTALL FRONT DOOR OUTSIDE HANDLE COVER LH (for Driver Side)

- (a) Engage the claw and 2 guides, and install the front door outside handle cover LH to the front door lock cylinder assembly.

13. INSTALL FRONT DOOR LOCK CYLINDER ASSEMBLY (for Driver Side)

- (a) Install the front door outside handle cover with front door lock cylinder assembly.

HINT:

Make sure that the front door lock cylinder rod is inserted into the front door lock assembly.

(b) Using a T30 "TORX" socket wrench, install the front door lock cylinder assembly with the screw.

Torque: 7.5 N·m (77 kgf·cm, 66in·lbf)

14. INSTALL FRONT DOOR OUTSIDE HANDLE COVER RH (for Front Passenger Side)

(a) Using a T30 "TORX" socket wrench, install the front door outside handle cover with the screw.

Torque: 7.5 N·m (77 kgf·cm, 66in·lbf)

15. INSTALL FRONT DOOR WEATHERSTRIP

- (a) Engage the 16 clips.
- (b) Engage the claw.
- (c) Install the front door weatherstrip with the screw.

16. INSTALL POWER WINDOW REGULATOR MOTOR ASSEMBLY INFO

17. INSTALL FRONT DOOR WINDOW REGULATOR SUB-ASSEMBLY

- (a) Apply MP grease to the sliding parts of the front door window regulator sub-assembly.
- (b) Install the temporary bolt to the front door window regulator sub-assembly.

- (c) Temporarily install the front door window regulator sub-assembly.

- (d) Tighten the 3 bolts and 2 nuts.

Torque: 7.5 N·m (77 kgf·cm, 66in·lbf)

- (e) Tighten the temporary bolt.

Torque: 7.5 N·m (77 kgf·cm, 66in·lbf)

- (f) Connect the connector.

Text in Illustration

*1	Temporary Bolt
----	----------------

18. INSTALL FRONT DOOR SUSH STOPPER

- (a) Install the front door sush stopper with the bolt.

Torque: 7.5 N·m (77 kgf·cm, 66in·lbf)

19. INSTALL FRONT DOOR SUSH

- (a) Insert the front door sush so that it is perpendicular to the front door frame, in the order shown in the illustration.

- (b) Rotate the front door sush 90°.

NOTICE:

Do not damage the front door sush.

- (c) Install the front door sush with the 3 nuts.

Nut(A) - Torque: 14 N·m (143 kgf·cm, 10ft·lbf)

Nut(B) - Torque: 7.5 N·m (77 kgf·cm, 66in·lbf)

20. INSTALL FRONT DOOR GLASS SUB-ASSEMBLY

- (a) Connect the cable to the negative (-) battery terminal.
 (b) Connect the power window regulator master switch assembly connector. (for driver side)
 (c) Connect the power window regulator switch assembly connector. (for front passenger side)
 (d) Move the front door glass sub-assembly until the 2 nuts can be seen through the service holes.
 (e) Disconnect the cable from the negative (-) battery terminal.
 (f) Disconnect the power window regulator master switch assembly connector. (for driver side)
 (g) Disconnect the power window regulator switch assembly connector. (for front passenger side)

- (h) Insert the front door glass sub-assembly into the front door frame from the position indicated in the illustration.

NOTICE:

Do not damage the front door weatherstrip.

HINT:

The front door glass sub-assembly can only be installed from the position indicated in the illustration, so install it while sliding the front door rear lower frame sub-assembly.

- (i) Insert the grommet of front door glass assembly into the rail of the front door rear lower frame sub-assembly.

- (j) Install the front door glass sub-assembly with the 2 nuts.
Torque: 7.5 N·m (77 kgf·cm, 66in·lbf)

21. INSTALL DOOR GLASS INNER STABILIZER

- (a) Install the door glass inner stabilizer with the bolt.
Torque: 7.5 N·m (77 kgf·cm, 66in·lbf)

22. INSTALL FRONT DOOR REAR LOWER FRAME SUB-ASSEMBLY

- (a) Install the front door rear lower frame sub-assembly with the 3 nuts.
Torque: 14 N·m (143 kgf·cm, 10ft·lbf)

23. INSTALL OUTER REAR VIEW MIRROR SUB-ASSEMBLY

INFO

24. ADJUST FRONT DOOR GLASS SUB-ASSEMBLY

- (a) Check the front door glass sub-assembly. **INFO**
(b) Adjust the front door glass sub-assembly. **INFO**

25. INSTALL FRONT DOOR SERVICE HOLE COVER

- (a) Apply butyl tape to the front door panel.
(b) Pass the front door lock remote control cable assembly and the front door inside locking cable assembly through a new front door service hole cover.

Text in Illustration

(c) Attach the front door service hole cover according to the reference points on the front door panel.

NOTICE:

- Overlay the butyl tape in lengths of 20 cm (7.874 in.) or more.
- Do not block the drip holes in the front door panel with butyl tape.
- Securely install the front door service hole cover preventing wrinkles and air bubbles.

(d) Connect each connector.

26. INSTALL FRONT NO. 1 SPEAKER ASSEMBLY (w/ Front Speaker)

INFO

27. INSTALL FRONT DOOR GLASS INNER WEATHERSTRIP

- (a) Engage the 9 claws and install the front door glass inner weatherstrip to the front door trim board sub-assembly as shown in the illustration.

- (b) Install a nose piece to an air riveter or hand riveter.

(c) Insert the mandrel part of a new rivet into the nose piece.

(d) Place the riveter upright against the moulding and install the 9 rivets.

HINT:

If the rivet cannot be cut, pull it once and cut it.

NOTICE:

- Do not pry the rivet with the riveter as this will cause damage to the riveter and mandrel.

Text in Illustration

*1	Riveter
*2	Mandrel
*a	Incorrect
*b	Correct

- Confirm that the rivets are seated properly against the front door glass inner weatherstrip.

Text in Illustration

*1	Riveter
*a	Incorrect
*b	Correct

- Do not tilt the riveter when installing the rivet to the front door glass inner weatherstrip
- Do not leave any space between the rivet head and front door glass inner weatherstrip.

28. INSTALL FRONT LOWER DOOR TRIM PAD

(a) Install the front lower door trim pad with the 5 screws.

29. INSTALL DOOR ASSIST GRIP ASSEMBLY

(a) Engage the guide and install the door assist grip assembly with the 2 screws.

30. INSTALL POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY WITH FRONT DOOR ARMREST BASE PANEL (for Driver Side)

(a) Install the power window regulator master switch assembly with front door armrest base panel with the 4 screws.

31. INSTALL POWER WINDOW REGULATOR SWITCH ASSEMBLY WITH FRONT DOOR ARMREST BASE PANEL (for Front Passenger Side)

(a) Install the power window regulator switch assembly with front door armrest base panel with the 4 screws.

32. INSTALL FRONT DOOR INSIDE HANDLE SUB-ASSEMBLY

(a) Engage the 2 guides.

(b) Install the front door inside handle sub-assembly to the front door trim board sub-assembly with the 2 screws.

33. INSTALL FRONT DOOR TRIM BOARD SUB-ASSEMBLY

(a) Connect the front door lock remote control cable assembly and front door inside locking cable assembly to the front door inside handle.

(b) Connect each connector.

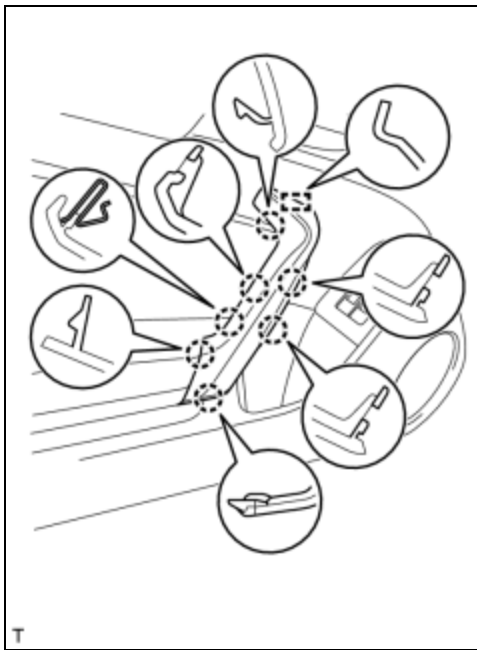

(c) Engage the 10 clips and install the front door trim board sub-assembly.

(d) Engage the clip and install the 3 screws.

(e) Engage the claw and install the cap.

34. INSTALL DOOR ARMREST COVER

(a) Engage the guide and 7 claws, and install the door armrest cover.

35. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

Torque: 6.0 N·m (61 kgf·cm, 53in·lbf)

36. INITIALIZE POWER WINDOW CONTROL SYSTEM

INFO

37. INSPECT POWER WINDOW

Title: DOOR / HATCH: FUEL LID LOCK CONTROL CABLE ASSEMBLY: INSTALLATION (2013 FR-S)		

INSTALLATION

1. INSTALL FUEL LID LOCK CONTROL CABLE SUB-ASSEMBLY

(a) Engage the 11 clamps.

(b) Check that the matchmark of the fuel lid lock control cable sub-assembly is aligned with the center of the clamp.

Text in Illustration

*a	Matchmark
----	-----------

(c) Install the fuel lid lock control cable sub-assembly as indicated by the arrows in the order shown in the illustration.

2. INSTALL FUEL LID LOCK OPEN LEVER SUB-ASSEMBLY

(a) Connect the fuel lid lock control cable sub-assembly.

(b) Install the 2 nuts and fuel lid lock open lever sub-assembly.

Torque: 7.5 N·m (77 kgf·cm, 66in·lbf)

(c) Return the floor mat.

3. INSTALL HANDLE COVER

(a) Install the handle cover with the screw.

Torque: 4.5 N·m (46 kgf·cm, 40in·lbf)

4. INSTALL NO. 2 PACKAGE TRAY TRIM SPACER

(a) Install the NO. 2 package tray trim spacer.

(b) Install the 2 clips.

5. INSTALL LUGGAGE COMPARTMENT TRIM COVER LH INFO

6. INSTALL LUGGAGE COMPARTMENT TRIM COVER RH

HINT:

Use the same procedure as for the LH side.

7. INSTALL LUGGAGE COMPARTMENT INNER TRIM COVER LH INFO

8. INSTALL LUGGAGE COMPARTMENT INNER TRIM COVER RH

(a) Install the 5 clips and the luggage compartment inner trim cover RH.

9. INSTALL REAR FLOOR FINISH PLATE INFO

Title: DOOR / HATCH: HOOD: ADJUSTMENT (2013 FR-S)		

ADJUSTMENT

HINT:

- Centering bolts are used to mount the hood hinge and hood lock. The hood and hood lock cannot be adjusted with the centering bolts installed. Substitute the centering bolts with standard bolts when making adjustments.
- Specified torque for standard bolts is shown in the standard bolt chart [INFO](#).

Text in Illustration

*1	Centering Bolt
*2	Standard Bolt

1. INSPECT HOOD SUB-ASSEMBLY [INFO](#)

2. ADJUST HOOD SUB-ASSEMBLY

- Horizontally and vertically adjust the hood.

(1) Loosen the 4 hinge bolts of the hood.

(2) Adjust the clearance between the hood and front fender by moving the hood.

(3) Tighten the 4 hinge bolts after the adjustment.

Torque: 18 N·m (184 kgf·cm, 13ft·lbf)

(b) Adjust the height of the front end of the hood using the cushion rubbers.

(1) Adjust the 2 cushion rubbers so that the heights of the hood and fender are aligned.

HINT:

Raise or lower the front end of the hood by turning the 2 cushion rubbers.

(c) Adjust the hood lock.

(1) Loosen the 3 bolts.

(2) Adjust the hood lock position so that the striker can enter it smoothly.

(3) Tighten the 3 bolts after the adjustment in the order shown in the illustration.

Torque: 33 N·m (337 kgf·cm, 24ft·lbf)

(4) Check that the striker can engage smoothly with the hood lock.

Title: DOOR / HATCH: LUGGAGE COMPARTMENT DOOR OPENER SYSTEM: DATA LIST / ACTIVE TEST (2013 FR-S)		

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Main Body / Data List.
- (e) Read the Data List according to the display on the Techstream.

Main Body

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Trunk/BDoor Open SW	Luggage door opening switch signal/ON or OFF	ON: Luggage door opening switch assembly pushed OFF: Luggage door opening switch assembly not pushed	-
Trunk Cancel Switch	Luggage door opening cancel switch signal/ON or OFF	ON: Luggage door opening cancel switch assembly pushed OFF: Luggage door opening cancel switch assembly not pushed	-

2. ACTIVE TEST

HINT:

Using the Techstream to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Main Body / Active Test.

(e) Perform the Active Test according to the display on the Techstream.

Main Body

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Trunk and Back-Door Open	Operate luggage compartment door lock motor	ON/OFF	This test will open the trunk

Title: DOOR / HATCH: LUGGAGE COMPARTMENT DOOR OPENER SYSTEM: Luggage Compartment Door Opener does not Operate (2013 FR-S)		

[Luggage Compartment Door Opener does not Operate](#)

DESCRIPTION

When the main body ECU (network gateway ECU) has received the ON signal from the luggage opening cancel switch assembly and the ON signal from the luggage door opening switch assembly, the main body ECU (network gateway ECU) activates the luggage compartment door lock motor.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

CHECK LUGGAGE COMPARTMENT DOOR OPENER SYSTEM (LUGGAGE DOOR

1. OPENING CANCEL SWITCH ASSEMBLY)

(a) When the luggage door opening cancel switch assembly is on, push the luggage door opening switch assembly and check that the luggage compartment door opens.

OK:

Luggage compartment door opener system operates normally.

(b) When the luggage door opening cancel switch assembly is off, push the luggage door opening switch assembly and check that the luggage compartment door does not open.

Text in Illustration

*1	Luggage Door Opening Cancel Switch Assembly
----	---

OK:

Luggage compartment door opener system does not operate.

NG ► **PERFORM ACTIVE TEST USING TECHSTREAM**

OK ► **END**

2. PERFORM ACTIVE TEST USING TECHSTREAM

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Main Body / Active Test.

(e) Perform the Active Test according to the display on the Techstream.

Main Body

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Trunk and Back-Door Open	Operate luggage compartment door lock motor	ON/OFF	This test will open the trunk

OK:

Luggage compartment door lock motor operates.

INSPECT LUGGAGE COMPARTMENT DOOR

OK
▼

3.	READ VALUE USING TECHSTREAM
-----------	------------------------------------

- (a) Connect the Techstream to the DLC3.
- (b) Turn the ignition switch to ON.
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Main Body / Data List.
- (e) Read the Data List according to the display on the Techstream.

Main Body

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Trunk/BDoor Open SW	Luggage door opening switch signal/ON or OFF	ON: Luggage door opening switch assembly is pushed OFF: Luggage door opening switch assembly is not pushed	-
Trunk Main SW	Luggage door opening cancel switch signal/ON or OFF	ON: Luggage door opening cancel switch assembly is pushed OFF: Luggage door opening cancel switch assembly is not pushed	-

OK:

On the Techstream screen, each item changes between ON and OFF according to the above.

Result:

RESULT	PROCEED TO
NG (Luggage door opening switch assembly is abnormal)	A
NG (Luggage door opening cancel switch assembly is abnormal)	B
OK	C

B  **INSPECT LUGGAGE DOOR OPENING CANCEL SWITCH ASSEMBLY**

C  **INSPECT LUGGAGE COMPARTMENT DOOR LOCK ASSEMBLY**

A

4.	INSPECT LUGGAGE DOOR OPENING SWITCH ASSEMBLY
-----------	---

- (a) Remove the luggage door opening switch assembly  .
- (b) Inspect the luggage door opening switch assembly  .

B  **REPLACE LUGGAGE DOOR OPENING SWITCH ASSEMBLY**

A

5.	CHECK HARNESS AND CONNECTOR (LUGGAGE DOOR OPENING SWITCH ASSEMBLY - MAIN BODY ECU (NETWORK GATEWAY ECU))
-----------	---

- (a) Disconnect the D6 main body ECU (network gateway ECU) connector and the D4 luggage door opening switch assembly.
- (b) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D6-16 (TSW) - D4-4	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D6-16 (TSW) - Body ground	Always	10 k Ω or higher
D4-1 - Body ground	Always	Below 1 Ω

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK  **REPLACE MAIN BODY ECU (NETWORK GATEWAY ECU)**

6.	INSPECT LUGGAGE DOOR OPENING CANCEL SWITCH ASSEMBLY
-----------	--

(a) Remove the luggage door opening cancel switch assembly  .

(b) Inspect the luggage door opening cancel switch assembly  .

NG  **REPLACE LUGGAGE DOOR OPENING CANCEL SWITCH ASSEMBLY**

OK

7.	CHECK HARNESS AND CONNECTOR (LUGGAGE DOOR OPENING CANCEL SWITCH ASSEMBLY - MAIN BODY ECU (NETWORK GATEWAY ECU))
-----------	--

(a) Disconnect the D5 main body ECU (network gateway ECU) connector and the H7 luggage door opening cancel switch assembly.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D5-27 - H7-1	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
D5-27 - Body ground	Always	10 k Ω or higher
H7-2 - Body ground	Always	Below 1 Ω

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK  **REPLACE MAIN BODY ECU (NETWORK GATEWAY ECU)**

8.	INSPECT LUGGAGE COMPARTMENT DOOR LOCK ASSEMBLY
-----------	---

(a) Remove the luggage compartment door lock assembly  .

(b) Inspect the luggage compartment door lock assembly  .

NG  **REPLACE LUGGAGE COMPARTMENT DOOR LOCK ASSEMBLY**

OK

9.	CHECK HARNESS AND CONNECTOR (LUGGAGE COMPARTMENT DOOR LOCK ASSEMBLY - MAIN BODY ECU (NETWORK GATEWAY ECU))
-----------	---

(a) Disconnect the 3B instrument panel junction block assembly connector and the J3 luggage compartment door lock assembly.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
J3-1 (B) - 3B-6	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
J3-1 (B) - Body ground	Always	10 k Ω or higher
J3-2 (E) - Body ground	Always	Below 1 Ω

NG **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

10.	REPLACE INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY
------------	---

(a) Temporarily replace the instrument panel junction block assembly with a new or normally functioning one  .

(b) Check the door closer operation.

OK:

Door closer operation normal.

NG **REPLACE MAIN BODY ECU (NETWORK GATEWAY ECU)**

OK **END**

Title: DOOR / HATCH: LUGGAGE COMPARTMENT DOOR OPENER SYSTEM: OPERATION CHECK (2013 FR-S)		

OPERATION CHECK

1. CHECK LUGGAGE COMPARTMENT DOOR OPENER OPERATION

NOTICE:

- To prevent inadvertent operation of the luggage compartment door, the opener does not operate while driving.
- When the theft deterrent system is in the armed state or alarm sounding state, the luggage compartment door opener does not operate.*

*: w/ Theft Deterrent System

- (a) When the luggage door opening switch is on, push the luggage door opening switch assembly and check that the luggage compartment door opens.
- (b) When the luggage door opening switch assembly is off, push the luggage door opening switch assembly and check that the luggage compartment door does not open.
- (c) While the luggage door opening cancel switch is on, check that the luggage compartment door does not open when the luggage door opening switch is pressed.

Title: DOOR / HATCH: LUGGAGE COMPARTMENT DOOR OPENER SYSTEM: PROBLEM SYMPTOMS TABLE (2013 FR-S)		

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

Title: DOOR / HATCH: LUGGAGE COMPARTMENT DOOR OPENER SYSTEM: SYSTEM DESCRIPTION (2013 FR-S)		

SYSTEM DESCRIPTION

1. LUGGAGE COMPARTMENT DOOR OPENER SYSTEM DESCRIPTION

- (a) The luggage compartment door opener is electrically controlled.
- (b) The main body ECU (network gateway ECU) activates the luggage compartment door lock motor when the ON signal from the luggage door opening switch assembly is received.
- (c) Close the luggage compartment door.
- (d) The luggage compartment door opener system operates as follows:

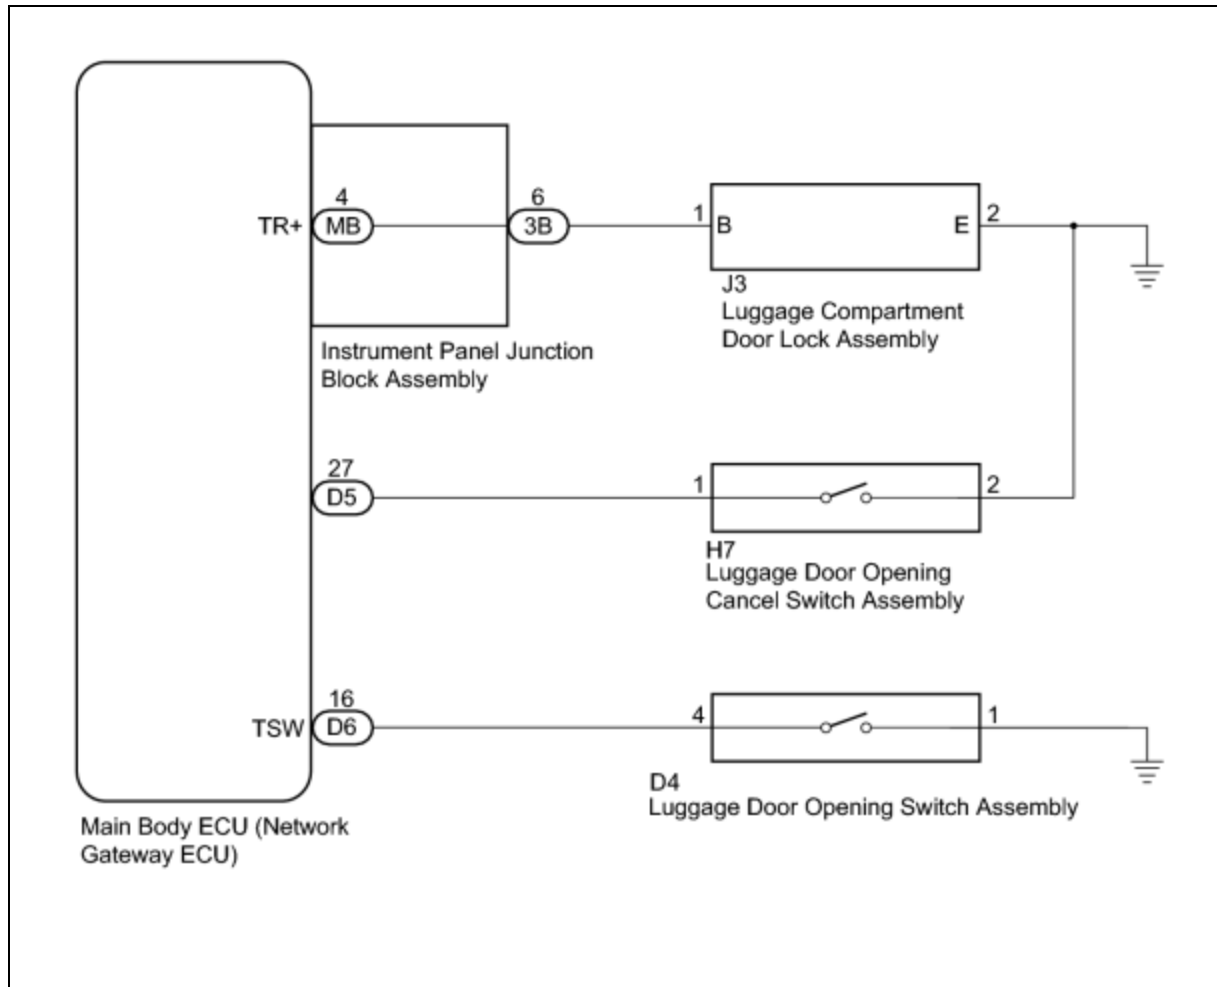

OPENING CANCEL SWITCH CONDITION	OPENING SWITCH CONDITION	LUGGAGE COMPARTMENT DOOR OPENER SYSTEM CONDITION
ON (Pushed)	Pushed (ON)	Does not operate
ON (Pushed)	Not pushed (OFF)	Does not operate
OFF (Not pushed)	Pushed (ON)	Operates
OFF (Not pushed)	Not pushed (OFF)	Does not operate

2. FUNCTION OF MAIN COMPONENTS

COMPONENT	FUNCTION
Luggage Compartment Door Lock Cylinder Assembly	Controlled by main body ECU (network gateway ECU) and unlatches luggage compartment door lock.
Luggage Door Opening Switch Assembly	When luggage door opening switch is pushed, opening switch ON signal is sent to main body ECU (network gateway ECU).
Luggage Door Opening Cancel Switch Assembly	When luggage door opening cancel switch is pushed, opening cancel switch ON signal is sent to main body ECU (network gateway ECU).
Main Body ECU (Network Gateway ECU)	When luggage door opening switch is pushed, main body ECU (network gateway ECU) receives opening switch ON signal. When luggage door opening cancel switch is pushed, main body ECU (network gateway ECU) receives opening cancel switch ON signal.

Title: DOOR / HATCH: LUGGAGE COMPARTMENT DOOR OPENER SYSTEM: TERMINALS OF ECU (2013 FR-S)		

TERMINALS OF ECU

1. CHECK MAIN BODY ECU (NETWORK GATEWAY ECU)

Text in Illustration

*1	Instrument Panel Junction Block Assembly	*2	Main Body ECU (Network Gateway ECU)
----	--	----	-------------------------------------

- (a) Remove the main body ECU (network gateway ECU) from the instrument panel junction block assembly.
- (b) Disconnect the D5 and D6 main body ECU (network gateway ECU) connectors.
- (c) Measure the resistance and voltage according to the value(s) in the table below.

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
D5-27 - Body ground	G - Body ground	Luggage door opening cancel switch signal input	Luggage door opening cancel switch assembly off	10 k Ω or higher
			Luggage door opening cancel switch assembly on	Below 1 Ω
D6-16 (TSW) - Body ground	L - Body ground	Luggage door opening switch signal input	Luggage door opening switch assembly off	10 k Ω or higher
			Luggage door opening switch assembly on	Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.

- (d) Reconnect the D5 and D6 main body ECU (network gateway ECU) connectors.
- (e) Install the main body ECU (network gateway ECU) to the instrument panel junction block assembly.
- (f) Measure the voltage according to the value(s) in the table below.

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
D5-27 - Body ground	G - Body ground	Luggage compartment door lock motor drive output	Ignition switch ON Luggage door opening cancel switch on	Below 1 V
D6-16 (TSW) - Body ground	L - Body ground	Luggage compartment door lock motor drive output	Ignition switch ON Luggage door opening switch on	Below 1 V
3B-6 - Body ground	G - Body ground	Luggage compartment door lock motor drive output	Ignition switch ON Luggage door opening switch on	11 to 14 V

If the result is not as specified, the main body ECU (network gateway ECU) or instrument panel junction block assembly may have a malfunction.

Title: DOOR / HATCH: LUGGAGE COMPARTMENT DOOR SUPPORT: DISPOSAL (2013 FR-S)		

DISPOSAL

1. DISPOSE OF LUGGAGE COMPARTMENT DOOR SUPPORT ASSEMBLY

(a) Secure the luggage compartment door support assembly horizontally in a vise with the piston rod pulled out.

(b) Wear safety glasses. Use a metal saw to slowly cut a groove between A and B, as shown in the illustration, to release the gas.

AREA	MEASUREMENT
A-B	80 mm (3.15 in.)

CAUTION:

Although the gas inside the luggage compartment door support assembly is colorless, odorless and harmless, there is a possibility that metal debris could scatter. Therefore, cover it with a piece of cloth or other material.

Title: DOOR / HATCH: LUGGAGE COMPARTMENT DOOR SUPPORT: INSTALLATION (2013 FR-S)		

INSTALLATION

HINT:

- Use the same procedure for both the RH and LH sides.
- The following procedure is for the LH side.

1. INSTALL LUGGAGE COMPARTMENT DOOR SUPPORT ASSEMBLY

NOTICE:

- Avoid touching the piston rod as much as possible to prevent foreign matter from attaching to it. Be sure to hold the cylinder while servicing.
- Do not wear cotton gloves or other similar materials when handling the piston rod. Fibers may attach to the rod and result in gas leaks.
- In order to prevent the piston rod from deforming, do not apply any horizontal load to the door support.

(a) When reusing the luggage compartment door support assembly:

(1) Install the 2 stop rings to the luggage compartment door support assembly.

(b) Install the luggage compartment door support assembly.

NOTICE:

- Install the luggage compartment door support assembly while supporting the luggage compartment door by hand.
- Check that the luggage compartment door support assembly is engaged in the ball joint and that the luggage compartment door support assembly cannot be pulled out.

Last Modified: 3-27-2012	6.4 A	From: 201203
Model Year: 2013	Model: FR-S	Doc ID: RM0000010WM00VX
Title: DOOR / HATCH: LUGGAGE COMPARTMENT DOOR SUPPORT: REMOVAL (2013 FR-S)		

REMOVAL

HINT:

- Use the same procedure for both the RH and LH sides.
- The following procedure is for the LH side.

1. REMOVE LUGGAGE COMPARTMENT DOOR SUPPORT ASSEMBLY

NOTICE:

- Avoid touching the piston rod as much as possible to prevent foreign matter from attaching to it. Be sure to hold the cylinder while servicing.
- Do not wear cotton gloves or other similar materials when handling the piston rod. Fibers may attach to the rod and result in gas leaks.
- In order to prevent the piston rod from deforming, do not apply any horizontal load to the door support.

(a) Using a screwdriver, remove the 2 stop rings along the groove.

Text in Illustration

*1	Protective Tape
*2	Stop Ring

HINT:

Tape the screwdriver tip before use.

(b) Release the ball joint and remove the luggage compartment door support.

NOTICE:

Remove the luggage compartment door support while supporting the luggage compartment door by hand.

Model Year: 2013	Model: FR-S	Doc ID: RM000000XBX03HX
Title: DOOR / HATCH: LUGGAGE COMPARTMENT DOOR: ADJUSTMENT (2013 FR-S)		

ADJUSTMENT

HINT:

- Centering bolts are used to mount the door hinge to the vehicle body and door. The door cannot be adjusted with the centering bolts on. Substitute the centering bolts with standard bolts when making adjustments.
- A bolt without a torque specification is shown in the standard bolt chart [INFO](#).

Text in Illustration

*1	Centering Bolt
*2	Standard Bolt

1. INSPECT LUGGAGE COMPARTMENT DOOR PANEL SUB-ASSEMBLY

- Check that the clearance measurements of areas *a to *f are within each standard range.

Standard Clearance

AREA	MEASUREMENT	AREA	MEASUREMENT
*a	8.2 mm (0.3228 in.)	*b	2.0 to 5.0 mm (0.0787 to 0.1969 in.)
*c	-2.0 to 1.0 mm (-0.0787 to 0.0394 in.)	*d	5.8 to 10.2 mm (0.2283 to 0.4016 in.)
*e	4.3 to 7.3 mm (0.1693 to 0.2874 in.)	*f	-2.0 to 1.0 mm (-0.0787 to 0.0394 in.)

2. ADJUST LUGGAGE COMPARTMENT DOOR PANEL SUB-ASSEMBLY

- (a) Horizontally and vertically adjust the door by loosening the door side hinge bolts.

Torque: 18 N·m (184 kgf·cm, 13ft·lbf)

(b) When adjusting the rear edge of the doors left or right, or adjusting the luggage compartment door lock, loosen the bolts before making adjustments.

(c) After the adjustment, tighten the 2 bolts on the luggage compartment door lock.

Torque: 7.5 N·m (77 kgf·cm, 66in·lbf)

INSTALLATION

HINT:

Use the same procedure for both the RH and LH sides.

1. INSTALL FRONT DOOR GLASS OUTER WEATHERSTRIP ASSEMBLY

- (a) Engage the claws to install the screw and a new front door glass outer weatherstrip assembly as shown in the illustration.

2. INSTALL FRONT DOOR SUSH [INFO](#)

3. INSTALL FRONT DOOR REAR LOWER FRAME SUB-ASSEMBLY [INFO](#)

4. INSTALL FRONT DOOR GLASS SUB-ASSEMBLY [INFO](#)

5. ADJUST FRONT DOOR GLASS SUB-ASSEMBLY

- (a) Check the front door glass sub-assembly. [INFO](#)
- (b) Adjust the front door glass sub-assembly. [INFO](#)

6. INSTALL FRONT DOOR SERVICE HOLE COVER [INFO](#)

7. INSTALL POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY WITH FRONT DOOR ARMREST BASE PANEL (for Driver Side) [INFO](#)

8. INSTALL POWER WINDOW REGULATOR SWITCH ASSEMBLY WITH FRONT DOOR ARMREST BASE PANEL (for Front Passenger Side) [INFO](#)

9. INSTALL FRONT DOOR TRIM BOARD SUB-ASSEMBLY [INFO](#)

10. INSTALL DOOR ARMREST COVER [INFO](#)

11. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

Torque: 6.0 N·m (61 kgf·cm, 53in·lbf)

12. INITIALIZE POWER WINDOW CONTROL SYSTEM

INFO

13. INSPECT POWER WINDOW OPERATION

REMOVAL

HINT:

Use the same procedure for both the RH and LH sides.

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL INFO
2. REMOVE DOOR ARMREST COVER INFO
3. REMOVE FRONT DOOR TRIM BOARD SUB-ASSEMBLY INFO
4. REMOVE POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY WITH FRONT DOOR ARMREST BASE PANEL (for Driver Side) INFO
5. REMOVE POWER WINDOW REGULATOR SWITCH ASSEMBLY WITH FRONT DOOR ARMREST BASE PANEL (for Front Passenger Side) INFO
6. REMOVE FRONT DOOR SERVICE HOLE COVER INFO
7. REMOVE FRONT DOOR GLASS SUB-ASSEMBLY INFO
8. REMOVE FRONT DOOR REAR LOWER FRAME SUB-ASSEMBLY INFO
9. REMOVE FRONT DOOR SUSH INFO
10. REMOVE FRONT DOOR GLASS OUTER WEATHERSTRIP ASSEMBLY

(a) Remove the screw.

Text in Illustration

*1	Protective Tape
----	-----------------

(b) Using a screwdriver, disengage the claw and remove the front door glass outer weatherstrip assembly.

HINT:

Tape the screwdriver tip before use.

Title: EXTERIOR PANELS / TRIM: FRONT FENDER GARNISH: INSTALLATION (2013 FR-S)		

INSTALLATION

HINT:

- Use the same procedure for both the RH and LH sides.
- The following procedure is for the LH side.

1. INSTALL FRONT FENDER MOULDING SUB-ASSEMBLY LH

(a) Clean the attachment surface.

- (1) Using an infrared light, heat the double-sided adhesive tape remaining on the front fender panel.

Heating Temperature:

ITEM	TEMPERATURE
Front Fender Panel	40 to 60°C (104 to 140°F)

CAUTION:

Do not burn yourself with the hot front fender panel or with the infrared light.

NOTICE:

Do not heat the front fender panel excessively.

- (2) Using a piece of cloth, rub the remaining double-sided tape off the front fender panel while it is hot from the infrared light.

NOTICE:

Installing the front fender moulding sub-assembly LH while any double-sided tape remains on the front fender panel may cause adhesion failure. Therefore, completely remove the double-sided adhesive tape.

- (3) Using a non-residue solvent, clean the attachment surface.

(b) Using an infrared light, heat the front fender moulding sub-assembly installation surface of the front fender panel and new front fender moulding sub-assembly.

Heating Temperature:

ITEM	TEMPERATURE
Front Fender Panel	40 to 60°C (104 to 140°F)
Front Fender Moulding Sub-Assembly	20 to 30°C (68 to 86°F)

CAUTION:

Do not burn yourself with the hot front fender panel and front fender moulding sub-assembly or with the infrared light.

NOTICE:

Do not heat the front fender panel and front fender moulding sub-assembly excessively.

(c) Install the front fender moulding sub-assembly with the 6 clips.

Title: EXTERIOR PANELS / TRIM: FRONT FENDER GARNISH: REMOVAL (2013 FR-S)		

REMOVAL

HINT:

- Use the same procedure for both the RH and LH sides.
- The following procedure is for the LH side.

1. REMOVE FRONT FENDER MOULDING SUB-ASSEMBLY LH

- (a) Apply protective tape to the front fender panel in the area around the front fender moulding sub-assembly.

Text in Illustration

*1	Protective Tape
----	-----------------

- (b) Using an infrared light, heat the front fender panel and the front fender moulding sub-assembly.

Heating Temperature:

ITEM	TEMPERATURE
Front Fender Panel	40 to 60°C (104 to 140°F)
Front Fender Moulding Sub-Assembly	20 to 30°C (68 to 86°F)

CAUTION:

Do not burn yourself with the hot front fender panel and front fender moulding sub-assembly or with the infrared light.

NOTICE:

Do not heat the front fender panel and front fender moulding sub-assembly excessively.

- (c) Insert piano wire between the front fender panel and the front fender moulding sub-assembly.

Text in Illustration

*1	Piano Wire
*2	Wooden Block

HINT:

Be careful of the boss positions.

- (d) Tie objects that can serve as handles (for example, wooden blocks) to the piano wire ends.
- (e) Pull the piano wire and scrape off the double-sided tape that holds the front fender moulding sub-assembly to the front fender panel.

NOTICE:

Be careful not to damage the front fender panel.

- (f) Using a moulding remover, disengage the 6 clips and remove the front fender moulding sub-assembly.

NOTICE:

- If reusing the garnish, take care not to damage the front fender moulding sub-assembly.
- Be careful not to damage the vehicle body.
